Are REITs underrepresented in your clients’ portfolios?

If you are among the 83% of financial professionals who recommend the use of REITs, you recognize that:

1. In addition to stocks, bonds and cash, commercial real estate is a fundamental asset class representing 16% of the U.S. investment market.

2. REITs have been a low cost, effective and liquid means of investing in this asset class, allowing your clients to build a diversified portfolio that covers the entire U.S. investment market.

3. Commercial real estate can bring unique attributes to a portfolio including:
   - A distinct economic cycle relative to most other stocks and bonds
   - Potential inflation protection
   - Reliable income returns

At 16%, commercial real estate is the third largest asset class in the U.S. investment market.

REITs are real estate working for you

The REIT approach to real estate investing provides investors with a straightforward and transparent means of accessing a fundamental asset class in order to pursue distinct goals.

Performance
The real estate market is the primary driver of REIT returns, therefore REITs may be used as a liquid proxy for gaining access to the entire commercial real estate asset class²

Liquidity
Bought and sold like other stocks, mutual funds and ETFs

Diversification
Historic low correlation with other stocks and bonds⁴

Income
Reliable income returns³ have been driven by high and growing income from rents plus capital appreciation over time

Inflation Protection
Due in part to the fact that many leases are tied to inflation and that real estate values have historically tended to increase in response to rising replacement costs

Key performance statistics through December 31, 2022 include:

- The trailing 25-year annualized total return of the Index*: 8.2%
- The total number of years out of the past 25 that the Index* has outperformed the S&P 500: 15
- The dividend yield of the Index* (which was more than double the S&P 500 dividend yield of 1.7%): 4.0%

Exploring diversification opportunities

Over the past few decades, assets have become increasingly correlated. This has challenged advisors to identify investments to better diversify their clients’ portfolios. Fortunately, REITs provide them access to meaningful diversification opportunities. In fact, according to Chatham Partners’ research, the vast majority (83%) of advisors now invest their clients in REITs and the most frequently cited attribute they cite is “portfolio diversification.” Following are illustrations of the low correlation REITs have had with the broad stock market and how they could improve a portfolio’s risk-and-return profile.

Considering the impact on risk-and-return profiles

Morningstar has found that adding an allocation of REITs to a hypothetical portfolio:

- Increased returns without increasing risk (1972-2022)
- Added meaningful diversification—other stocks are subject to the business cycle while REITs represent a separate and unique asset class subject to the real estate market cycle.

The low correlation of REITs with U.S. and global equity indexes has continued to provide meaningful diversification opportunities over a 25-year period. By contrast, employing size, style or international strategies has provided less diversification benefit.

Achieving diversification through both traditional and modern property sectors

Over the past two decades, our work, shopping, and leisure activities have become increasingly connected to the digital world. As the economy has changed, the real estate that houses the economy has also evolved.

REITs are helping investors keep pace — with an effective, low cost and liquid way to invest in commercial real estate that not only captures essential traditional property sectors but also evolving sectors driven by the modern economy.

In fact, the share of the FTSE Nareit All Equity REIT index outside of the four “traditional” REIT property types is now at 60%.

- **40%** “Traditional” sectors including:
  - Office
  - Retail
  - Residential
  - Industrial

- **60%** “Modern” sectors including:
  - Data Centers
  - Health/Science
  - Cell Towers
  - Self Storage
  - Hotels
  - Timber
  - Gaming
  - Specialty

REITs can help with other real estate diversification goals too — from a geographic footprint that can span more than 40 countries to REITs reporting best-in-class corporate responsibility profiles. Learn more
What is an appropriate allocation to REITs?

The answer will vary based on each investor’s goals, risk tolerance and investment horizon, but here are some key insights that can help:

- Multiple studies have found that the optimal REIT portfolio allocation may be between 5% and 15%.6
- David F. Swensen, PhD, noted late CIO of the Yale endowment and author of Unconventional Success: A Fundamental Approach to Personal Investment, recommended a 15% allocation to REITs in his model portfolio for investors.

Further insight comes from Chatham Partners’ research which found that advisors recommend allocations to REITs in the range of 4% to 12% – irrespective of the client’s age – from early career to in retirement.1
How do lifestages affect the optimal REIT allocation?

As this Morningstar Glide Path Model shows, an optimal allocation for certain investors could start at 18% for an investor with a 45-year investment horizon, gradually declining to 3% at retirement and 2% after 15 years in retirement.\(^8\)

The optimal allocations to global REITs and other real estate companies were found to be even higher.

REIT utilization among financial advisors

As the risks and opportunities for investors continue to unfold, a majority of advisors continue to agree on the underlying long-term fundamentals that support the inclusion of REITs within a diversified portfolio.

Monitoring trends the easy way
As in the past, Nareit’s Market Commentary Blog offers observations about REITs, outlining both short and long-term risks and opportunities for investors as they evolve.
