The CAQ engaged in two separate efforts to assess the usefulness and feasibility of the *Approach* for audit committees. First, the CAQ coordinated with 10 audit firms of various sizes to pilot test these indicators during the 2014 audit cycle. A total of 30 audit engagements participated encompassing a broad range of operations and industries. None of the selected audit engagements were identified to the CAQ and participating audit firms shared the pilot testing results on a confidential basis. During the pilot testing, audit committees were asked for feedback on the usefulness of a number of proposed AQIs in fulfilling their auditor oversight responsibilities.[5] Although the AQIs, on average, were seen as useful by audit committees, some were more relevant to certain audit committees than others. The audit committee members ranked certain AQIs related to engagement team experience and workload as the most useful indicators, including years of industry experience relevant to the audit engagement, years on the engagement, changes in audit hours between years, and audit hours spent on the audit engagement by engagement team members grouped by their seniority in the audit firm. Many audit committee members expressed a preference for flexibility in the approach to discussing AQIs and a desire to be able to tailor the discussion to include those AQIs most relevant to their company and its audit.

Secondly, in the summer of 2015, the CAQ convened four roundtables with audit committee members in London, Chicago, New York, and Singapore to further explore the issues around AQIs. Through these activities, the CAQ gathered the perspectives of audit committee members and information on current practices around the globe on the identification and communication of AQIs.

[5] Some of the AQIs in the *Approach* that were communicated to audit committees overlapped with existing audit committee communications required by professional standards. For example, Auditing Standard (AS) No. 16, *Communications with Audit Committees*, requires that the nature and extent of specialized skills or knowledge needed related to significant risks be communicated to the audit committee (AC). The *Approach* includes metrics to quantify factors related to "specialists and national office personnel involvement by significant risk area."

Major Themes From the Roundtable Discussions

Most participants supported the concept of AQIs and recognized their potential value to audit committees in execution of their auditor oversight responsibilities. However, some of the audit committee members who participated in the roundtables believed they had sufficiently robust audit evaluation and oversight processes without the need for additional AQI information. Participants agreed that deriving value from AQIs would be dependent upon their ability to tailor or customize the selection and portfolio of AQIs that best suit their specific information needs. Participants also agreed that AQIs alone, without context, cannot adequately communicate factors relevant to the audit of any particular engagement or firm. The PCAOB also notes the importance of context in its *Concept Release on Audit Quality Indicators* and emphasizes that for this reason, AQIs cannot be used as benchmarks.[6] Participants stressed that context is integral to the proper understanding of any AQI, which can lead to an enhanced dialogue between the audit engagement team and the audit committee regarding matters that affect audit quality. Using PCAOB inspections reports as an example, participants said they would find them more useful as an indicator of audit quality if it were clear how identified deficiencies relate to the facts and circumstances of their own audits. Such an understanding requires dialogue with the engagement team to understand the nature of the deficiencies identified, how they may or may not relate to the particular audit, and how the engagement team has addressed them as part of their audit plan.

Another example of the importance of context heard during earlier outreach efforts is a scenario in which an engagement team is experiencing higher than expected overtime. This could be caused by many different factors, including, for example, that the engagement team encountered an unforeseen issue that required extra time, or that the team is overburdened. A timely dialogue with the auditor regarding such matters would allow the audit committee to better understand the specific factors driving the measure and to address potential issues with the engagement team and evaluate the reasonableness of any response.

Another common theme that emerged in the roundtable discussions was that, in many cases, the drivers of the quality of an audit are not inherently quantifiable and, as a result, require evaluation of qualitative factors, such as the engagement team having the appropriate mindset to bring forth professional skepticism and requisite auditor judgment. While quantitative AQIs may inform qualitative aspects of the audit, they cannot be a substitute for an audit committee member's judgment of these qualitative aspects. Moreover, many participants pointed out that evaluating audit quality should be a multidimensional process that focuses on more than the external auditor. While recognizing that responsibility for performing an audit rests with external auditors, these participants noted that without a high-quality internal organization — management and internal audit — achieving high-quality financial reporting and the related audit is challenging.

[6] PCAOB Release No. 2015-005, July 1, 2015, p. 7.

Participants agreed that the process of identifying and evaluating AQIs needs to be driven by the audit committee and iterative. It also will require continuous assessment and refinement in order to meet an audit committee's changing information needs.

Generally, participants also believed that any disclosures of engagement-level AQI information should be voluntary, and expressed concern that mandated public disclosure of engagement-level AQIs could lead to unintended consequences in the marketplace. For example, some participants said that publication of engagement-level AQIs could lead to the production of boilerplate, or one-size-fits-all, approaches that would likely change the nature and usefulness of the information in their discussion with the external auditor. These and other key themes are discussed below.

Audit Committees Support the Concept of AQIs

As noted above, there was widespread agreement that audit quality is a function of the competency and effectiveness of the external audit team, and recognition that the same attributes in company management, internal audit, and audit committees also play critical roles in contributing to the quality of financial reporting and the related audit.[7] While a few participants felt they had what they needed, and that the development of AQIs was "a solution in search of a problem," most participants generally agreed that AQIs could enhance audit committee discussions with the auditor about the engagement team's experience and skills and lead to greater understanding of how those attributes contribute to the audit process. Participants also believed that AQIs could help focus discussions on how the engagement team allocates key resources to address and manage potentially serious audit risks, such as using a specialist to audit a significant estimate. High value

> "I particularly liked the range of AQIs that were being suggested for engagement team knowledge experience and workload because those give insights into the capability of the firm to take on the task and some check about whether what was put into the original plan — the assessment of risk and the allocation of resources — has worked out."
>
> *– Chicago Roundtable Participant*

[7] While the roundtable discussions focused on indicators that could help audit committees assess the quality of their external audit, some noted that the external auditor's performance is but one aspect of quality financial reporting, albeit a critical one.

was attributed to AQIs that could help clarify how the audit firm's tone at the top and system of quality control support the engagement team in delivering quality audit outcomes. One audit committee member said that if AQI information was distributed to the audit committee in advance of the meeting, it likely would help the committee ask more insightful questions of the auditor and increase the efficiency and impact of their limited time together.

Several participants offered that AQIs could be another tool for audit committees to use when selecting the external auditor, as some feared the primary consideration too often used by some may be the audit fee. Some audit committee members favored AQIs as a way to provide a framework supporting a deliberate process in reviewing competing audit firm proposals and ultimately choosing a new audit firm or reappointing the incumbent firm, as the case may be, during an audit tender.[8] For example, AQIs on the extent, distribution, and timing of planned audit hours could be gathered from prospective audit firms at the tendering stage. Audit committees could use the information to gain perspective on strategy and timing of work, which would help audit committees evaluate competing auditors' proposals.

> "As with anything of quality, it starts with people. For audit committees, audit quality starts with the lead audit partner — the quality, experience, background, perspective, and philosophy of how they approach client service and working with an audit committee. That's tough to quantify."
>
> *– New York Roundtable Participant*

Some participants viewed AQIs as a potentially useful tool in initiating dialogue with prospective lead engagement partners in anticipation of the current lead engagement partner rotating off the engagement. Many participants said they evaluate a prospective lead engagement partner to determine whether he or she has the right mix of skills and experience to manage audit risk and can set the right tone with the rest of the engagement team in promoting independence, objectivity, and skepticism. While many accepted that AQIs can support this process, they did not believe that analyzing quantitative AQIs alone could replace the audit committee's assessment of the independence, objectivity, and skepticism of partner candidates.

8 Participants thought this would be of growing importance when mandatory audit firm rotation becomes effective in the United Kingdom and other European Union member states in 2016.

“Quality is subjective.”

– London Roundtable Participant

Qualitative Aspects of the Audit Necessary to Inform Quality

Many participants noted that quantitative AQIs can provide a good starting point for a discussion, but by themselves cannot lead to an understanding of those factors that are the actual drivers of audit quality. Participants emphasized the importance of the external auditor's mindset in terms of the engagement team's capacity and propensity to exercise professional skepticism and question and critically assess audit evidence. To participants, the importance of this mindset went hand in hand with those skills associated with a person's emotional intelligence quotient or EQ.[9] According to participants, engagement teams with high EQ display intellectual rigor, and strong communication and influencing skills, and are highly valued for their ability to quickly and effectively resolve matters with management, the audit committee, and their firm's national office, as appropriate.

“An independent professional's skepticism is most important and is also the most immeasurable of any criteria.”

– New York Roundtable Participant

Participants acknowledged that there are AQIs that might contribute to a conversation about the competence and capacity of the engagement team to apply independent judgment and professional skepticism, but they did not believe that relying on these types of AQI data alone would be helpful in assessing such skills, as they are not easily quantified. The participants noted that they can better assess mindset and EQ through conversational discourse with the engagement team, and explained that they would value additional tools to help them consider these important qualities.

Participants agreed that an audit firm's tone at the top serves as an important indicator of the incentives that drive auditors to deliver quality outcomes. Through an audit firm's tone at the top, the leadership emphasizes audit quality and holds itself accountable for the audit firm's system of quality control. Having the proper tone at the top is essential for creating a firm culture that supports professional skepticism and the expression of EQ at the engagement level. It is also something that is difficult to capture in an AQI or set of AQIs. Some participants indicated that they do review audit firms' messaging around their tone at the top and the

[9] Emotional Intelligence Quotient (EQ) is a term created by two researchers — Peter Salavoy and John Mayer — and popularized by Dan Goleman in his 1996 book of the same name. In a workplace, this term refers to the individual's ability to sense, understand and effectively apply the power and acumen of emotions to facilitate high levels of collaboration and productivity.

> “What I depend on first and foremost is the tone at the top — the integrity of the organization.” *– New York Roundtable Participant*

measures meant to capture the effectiveness of such messaging, like employee surveys provided to the audit committee by the engagement team. In their minds, however, these measures fall short of being sufficient indicators of how audit firms incentivize their audit partners and personnel to deliver high quality audits.

Participants offered suggestions on qualitative factors that could serve to more adequately validate a firm’s tone at the top and commitment to audit quality. A recurring suggestion related to how firms structure compensation of audit partners and personnel to reward quality. Having an appropriate “compensation philosophy,” some reasoned, would be one indication that a firm has the right tone at the top. Another suggestion was to include information about the systems in place at the audit firm to strengthen quality control and detect and deter wrongdoing within its own organization.

> “You can’t have audit quality without a quality audit committee, quality management, and quality internal audit. To me, the evaluation of audit quality is more multidimensional than just focusing on those items that relate back to the audit firm and the team.”
>
> *– New York Roundtable Participant*

> “...the quality comes from the entire audit which includes the input, the audit process, as well as the output.”
>
> *– Singapore Roundtable Participant*

Several participants noted that the audit committee also plays a role in setting the right tone that supports and encourages auditors, both internal and external, to maintain a questioning mindset and work effectively with the audit committee and management to address and resolve issues. In pursuit of setting the appropriate tone, some audit committees conduct a system-wide review that includes an assessment of how well the work of internal audit was integrated into the external audit process. Some participants pointed to the fact that the audit committees on which they serve routinely undertake some form of performance self-assessment, which often included a conversation about whether the audit committee’s process for evaluating the previous year’s audit and planning for the current year audit was adequate and complete. This evaluation might be another type of indicator of audit quality. Some participants advocated for the development of additional tools that could guide audit committee self-assessments of not only their oversight of the external audit, but also that of the company’s controllership, internal audit functions, and tone at the top.

Audit Committees Should Drive Process of Using and Reporting on AQIs

> "I think indicators precipitate important conversations, but those conversations need to be tailored to the individual engagements, voluntary, and very qualitative."
>
> *– Chicago Roundtable Participant*

Because audit committees represent investors, most roundtable participants view themselves as the primary audience for AQI information as it relates to a particular company's financial reporting and audit oversight. Participants felt that as audit committee members they are best informed of the circumstances surrounding the audit engagement, and are, therefore, ideally placed to determine which AQIs are relevant to a given audit engagement. Participants also felt that audit committees are best situated to discuss AQI information with the audit engagement team and management to obtain the necessary context that gives significance to AQIs or fluctuations in AQIs over time.

There was agreement among those audit committee members who participated in the pilot testing and those who participated in the roundtables that there is no "right" set of AQIs that could, for every audit engagement, consistently add value and insight to audit committee discussions with the engagement team. This is due in part, they explained, to variations among companies' geographic locations, industries, and scope of operations. An overwhelming majority of roundtable participants agreed that the use and reporting of AQIs should remain voluntary to allow for audit committees to experiment with AQIs and tailor the information to address the unique facts and circumstances of their particular audit. For example, audit committee members who serve on boards of global companies said they would focus on AQIs that helped them evaluate how well the global aspects of the audit are being managed by the audit firm. Participants also believed that mandating the communication or reporting of specific AQIs could overburden audit committees with required or expected communications on matters that may not be relevant to the quality of their particular audit. Some participants expressed that they viewed AQIs as generators of questions for the audit committee to ask of the external auditor, as opposed to serving as sources of useful information about audit quality on their own.

Some participants thought a list of common AQIs that could be widely accepted and understood might elevate the use of AQIs among a greater population of audit committees. Over time, experimentation by audit committees may result in the fine tuning or identification of AQIs or a set of AQIs that are widely accepted as useful in the audit committee's dialogue with the auditor.

"I think we will continue to fine tune these measures or indicators and this will allow us to have a useful dialogue with the auditor."

– Singapore Roundtable Participant

"We ought to be careful not to be too prescriptive because every company is different and every audit is going to be unique."

– New York Roundtable Participant

This also could serve to promote consistency among audit firms in terms of how certain AQIs are calculated and to generate expectations for audit firms to assist in providing the data associated with these AQIs. Firm-level transparency reports or audit quality reports that are made publicly available by some of the audit firms provide an example of some level of consistency of AQI reporting across firms.[10] The CAQ has observed that among those publicly available reports issued by the largest audit firms in the United Kingdom, the United States, the Netherlands, and Australia, examples of similar types of AQIs include measuring revenue splits between audit and non-audit services, the results of externally published inspections, and a qualitative description of investor engagement. Such voluntary reporting allows for comparison of firm-wide AQI data, to the extent that two firms report the same AQIs.[11]

Audit committee members who serve on the boards of multiple companies pointed out that standardization of AQIs at the engagement level would be challenging given the variation among companies' business models, scope of operations, and risk profiles. They observed that choosing which AQIs best fit the facts and circumstances of each audit engagement requires the audit committee to apply judgment. In applying that judgment, participants said they would likely choose different AQIs on which to focus depending on the company, and that AQIs of importance to a company could change from one year's audit to the next. Even in those cases where they would look at the same AQIs across the different companies, the contextual information they would solicit from the external audit team to explain the significance of an AQI or change in that AQI over time likely would be very different. On the other hand, some participants wondered whether a core set of AQIs could be identified as particularly useful to certain types of companies, such as those in certain complex or high risk industries, or for companies with significant operations in many different countries. Others cautioned that standardization of AQIs runs the risk of turning reports of AQI information into boilerplate documents, which in turn could diminish their usefulness to audit committees.

[10] In general, these reports are intended to provide greater transparency into the public company audit process by assisting financial statement users, audit committee members, and other stakeholders in understanding how an audit firm's management and operations support the performance of high quality audits.

[11] Since 2007, the International Organization of Securities Commissions (IOSCO) has been evaluating the role of audit firm transparency reporting in protecting investors and ensuring that markets are fair, efficient and transparent. In November 2015, IOSCO issued a final report on this work which posits that high quality transparency reports issued by audit firms could reinforce audit firm internal policies and practices aimed towards improving audit quality and assist those responsible for selecting a public company auditor by providing information that would enable them to compare firms on the basis of information on a firm's audit quality. See, *Transparency of Firms that Audit Public Companies* (Final Report), available at www.IOSCO.org. See also the CAQ's *Resource on Audit Quality Reporting* (August 2013), which highlights elements of audit quality that audit firms could consider in refining or developing their own reporting regarding their public company audit practice, and which is available at http://www.thecaq.org/docs/audit-committees/caqresourceonauditqualityreporting.pdf?sfvrsn=0.

Potential Unintended Consequences of Public Reporting of AQI Information

Participants acknowledged growing interest from investors for more information about how the work of the audit committee fulfills its responsibilities. In the case of AQI information, participants observed that it is not possible for investors to be privy to the dialogue necessary to bring focus on the significance of AQIs to audit quality at the engagement level. On this basis, many participants believed it would do more harm than good to publicize engagement-level AQI information.

> "This is ultimately a judgment. It's not a math test to see whether or not you got a 90% to have quality."
>
> *– New York Roundtable Participant*

Participants expressed concern that public AQIs could turn into a set of inconsistent and misleading benchmarks or tests. Such metrics, without an accompanying dialogue to provide the appropriate context, could lead the recipient to draw incomplete or uninformed conclusions regarding the presence or lack of audit quality. Also, there could be a tendency to choose a particular set of metrics because they are easily and reliably measured rather than being relevant to audit quality. This could lead to a check-the-box compliance exercise or, worse, a misallocation of resources and overemphasis on managing select metrics to the detriment of a focus on other factors that might be more pertinent to quality performance.

> "It's an evolution, not a revolution."
>
> *– London Roundtable Participant*

Some participants observed that the audit model is also changing in response to technical improvements to audit methodologies and as new, macro and microeconomic risks emerge. For example, audit firms are developing capabilities to incorporate data analytics testing procedures on audit evidence into their audit methodologies, which should increase the efficiency and effectiveness of auditors. Accounting and auditing standards also are evolving to address emerging risks. In light of these factors, some participants posited that the development and required use of a static set of AQIs could serve to reinforce outdated audit methodologies and impede innovation in audits, which over time could risk reducing the overall relevance of the audit, the role of the auditor, and, ultimately, audit quality. To continue to be helpful and not a hindrance, AQIs, they asserted, should be allowed to evolve as well.

Conclusion

By sharing input, feedback, and findings from its multi-year effort to explore AQIs, the CAQ aims to further the dialogue and study of AQIs. This publication is intended to advance that effort. The CAQ anticipates that greater awareness, discussion, and collaboration will lead to the development of a common path forward on AQIs and, potentially, best practices for their use.

> "I am a supporter of audit quality indicators. I believe the project has great merit, and I'm glad to see people out in front of it."
>
> *– New York Roundtable Participant*

The feedback received on the *Approach* through these efforts has reinforced the view that although there is no "right" set of AQIs for every audit engagement, the *Approach* provides a good foundation for further development of tools that could advance the oversight capability of the audit committee with respect to both the quantitative and qualitative aspects of the audit process. Audit committee members expressed an appetite for more qualitative information, as well as guidance on how to use firm-level AQI information already publicly available to enhance the dialogue about their audits. Allowing audit committees to continue to explore AQIs in an audit committee-driven, voluntary environment could facilitate the development of a common principles-based framework that could promote consistency in application of AQI use and reporting while maintaining the flexibility audit committees need to tailor approaches to their specific information needs.

All stakeholders in the financial reporting and audit process can benefit from an understanding of how certain AQIs may correlate with audit quality. For its part, the CAQ will continue to monitor and engage in this exciting and important global dialogue. The CAQ looks forward to the outcome of the PCAOB's project on root cause analysis, which seeks to analyze certain measures of audit quality.[12] The CAQ also will monitor the work of other organizations around the world that have an AQI project on their agenda. The involvement of these organizations and their efforts will continue to be invaluable for driving continued stakeholder interest in identifying AQIs that are both relevant to audit quality and which can be consistently and reliably measured.

[12] PCAOB staff briefing memo, *Initiatives to Improve Audit Quality – Root Cause Analysis, Audit Quality Indicators, and Quality Control Standards*, June 24–25, 2014 SAG meeting.

The CAQ expresses its sincere thanks and gratitude to the roundtable participants, as well as the investors, academics, audit committee members, and audit firm representatives who served on the Stakeholder Advisory Panel, and the participants in the pilot testing. Their generosity with their time — and their valuable insights and perspectives — have helped to advance the discussion on this critical issue. Additionally, the CAQ extends its gratitude and appreciation to the Singapore Institute of Directors and the Singapore Accounting and Corporate Regulatory Authority for their support in organizing the Singapore roundtable. The CAQ will continue its rewarding interaction with these stakeholders as it further explores and studies AQIs.

Seven Habits of Effective Audit Fee Management

Robert Herz (http://www.complianceweek.com/authors/robert-herz) | December 22, 2015

I suspect it will come not as a surprise to readers of *Compliance Week* involved in public company reporting that external audit fees continue to rise for a majority of Securities and Exchange Commission registrants.

The 2015 Audit Fee Report issued in October by the Financial Executives Research Foundation (FERF) reported that median external audit fees increased by 3 percent, 3.5 percent, and 3.4 percent in 2012, 2013, and 2014, respectively. That outpaces the rise in the producer price index, which rose less than 2 percent in each of these years. Increased audit fees were experienced by a majority of the 7,000-8,000 public companies that report their audit fees in SEC filings.

Increased audit fees can result from a combination of higher hourly rates charged by the audit firm and increases in the hours required to complete an audit. Rising compensation and other costs incurred by audit firms can translate into increases in the hourly rates charged for audits, while higher audit hours reflect increases in audit scope. For example, more than 46 percent of the respondents to the FERF survey said the increase in their 2014 audit fees resulted from acquisitions; 36 percent attributed the increase to other changes in company structure.

Another significant factor cited by survey respondents is the heightened focus by audit firms on internal controls over financial reporting. In its inspection reports of audit firms in recent years, the Public Company Accounting Oversight Board has noted many deficiencies relating to the assessment by auditors of internal controls. Auditors are therefore looking more closely at internal controls.

Nearly 40 percent of respondents to the 2015 FERF survey said audit firms “review of manual controls resulting from PCAOB inspections and other PCAOB issues” was a significant contributor to the rise in audit fees. When I was an auditor, yes, there were situations where we increased our review of manual entity-level controls in key areas, and in areas where the company either did not have automated activity-level controls or we concluded that these could not be relied upon because the company had not instituted sufficiently robust access controls over the automated systems.

Companies can experience many benefits from improving and automating internal controls and the related processes and documentation, including helping better manage and even reduce audit fees. As one company told FERF, "Our external fees have decreased because our internal processes have gotten better."

The FERF study also found that companies that reported ineffective internal controls over financial reporting saw more than twice the increase in their audit fees, compared to companies with effective internal controls: a 6.4 percent increase in 2014 for firms reporting ineffective internal controls, compared to 3.1 percent for others.

Interestingly, although public companies face increased scrutiny of their internal controls, not all have experienced higher audit fees. FERF found that more than 40 percent of public companies reported flat or lower fees in 2014 than in the prior year, and 15 percent of the companies achieved decreases in audit fees for multiple consecutive years.

FERF has begun to explore the reasons why some companies have been able to hold their audit fees flat or reduce them over multiple years, even in the face of significant acquisition activity. While the FERF researchers have not yet completed their investigation of these matters, their findings so far are quite interesting. In interviews with companies that reported decreased audit fees for multiple consecutive years, FERF identified the following seven actions that can make a difference.

Review current processes to identify areas for improvement. One interviewee suggested that immediately after an audit, the internal team takes "inventory" of the audit processes and determines ways that they could be enhanced to address audit inefficiencies. Another interviewee reported that, after carefully considering all key controls, he concluded that the number of these controls be cut nearly in half and still achieve the desired level of coverage. Moreover, by focusing attention on a smaller number of controls, the company was able to improve the quality of control documentation and testing with fewer resources.

Improve internal controls. Interviewees reported that there were improvements in their internal controls resulting from centralization, standardization of work papers, and automation that promoted enhanced consistency of control processes and related documentation. Improving internal control can have a direct effect on the effort and cost of external audits. As Gregory Wilson, former deputy director of the PCAOB Inspection Division, put it, "Show me a company with weak internal controls, and I'll show you an expensive audit."

One of the companies FERF interviewed reduced its audit fees despite multiple acquisitions that doubled its size in recent years not once, but twice. The company's vice president of accounting policy and SOX reported that while the company did not set out to reduce audit fees, this was a byproduct of the focused effort to improve controls in the light of its recent rapid growth through acquisitions and its reconsideration of controls against the 2013 COSO Framework.

Continual communication and collaboration with external auditors. Almost all interviewees suggested that there should be regular and active communication with the external auditor during the audit. This helps identify efficiencies for both the company and the auditor, and it helps ensure that the auditors are provided the information they need on a timely basis.

Centralize the audit footprint. Respondents indicated that an audit of the financial statements of a company with centralized operations could be more efficient and less costly than that of a company with decentralized operations.

Companies also described the importance of centralizing critical information and information systems. One company achieved important efficiencies by replacing three or four different enterprise resource planning systems with a single system that was easily accessible at one location.

Automation. Interviewees suggested that automation has major benefits, especially of time-consuming, error-prone tasks. One company reported using a cloud-based solution to automate internal controls documentation and to manage and execute SOX testing documentation (including evidence of the performance of key controls), certification, and the reporting process. This system also provided the auditors with all the necessary information to review and test the company's controls. Companies also reported benefits from standardizing and automating account reconciliations. Among other benefits, such automated systems allow auditors to view reconciliations on their own without the need to involve company staff.

Overall, significant cost savings and other benefits can arise from automation via reducing the administrative burden and freeing up critical resources to focus more attention on the risks and controls that matter most.

Skilled staff. Not surprisingly, interviewees reported that having well-trained company staff involved with the audit will help reduce audit fees. One interviewee suggested that having an employee with prior audit experience is critical to this effort.

Review audit hours and fees, and don't be afraid to push back. Companies that monitor the hours auditors spend on particular audit areas are in a better position to question the number of hours they were billed for and why these hours were incurred. Companies should not just blindly accept an explanation by their auditors that they had to perform additional audit steps because "the PCAOB says so."

Sound internal controls are critical to financial reporting. Companies can experience many benefits from improving and automating internal controls and the related processes and documentation, including helping better manage and even reduce audit fees. As one company told FERF, "Our external fees have decreased because our internal processes have gotten better."

Re: Staff Consultation Paper, *Auditing Estimates and Fair Value Measurements*

Dear Board Members:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the solicitation for public comment by the Public Company Accounting Oversight Board (PCAOB or Board) with respect to the Staff Consultation Paper, *Auditing Estimates and Fair Value Measurements, August 19, 2014* (the Staff Paper).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index, which covers both Equity REITs and Mortgage REITs. This Index contained 209 companies representing an equity market capitalization of $789 billion[1] at September 30, 2014. Of these companies, 169 were Equity REITs representing

[1] http://www.reit.com/sites/default/files/reitwatch/RW1410.pdf at page 21

91.8% of total U.S. listed REIT equity market capitalization (amounting to $724.5 billion). The remainder was 40 publicly traded Mortgage REITs with a combined equity market capitalization of $64.5 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council. Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts.

NAREIT appreciates the PCAOB's efforts toward improving audit quality since its inception in 2002. However, NAREIT has significant concerns with the Staff Paper as drafted.

Why is a change to the existing audit framework for auditing estimates warranted?

NAREIT is not persuaded that a change to the audit framework for auditing estimates is necessary. In NAREIT's view, a single standard for auditing estimates and fair value measurements is an unworkable solution given the multiple iterations of accounting estimates in U.S. Generally Accepted Accounting Principles (GAAP). Additionally, NAREIT's member companies observe that external auditors currently perform a significant amount of audit work surrounding estimates pursuant to existing audit standards. For example, multiple member companies have indicated that the audit fees for auditing fair value estimates of real estate and auditing purchase price allocations in business acquisitions *exceed* the fees paid to the third party valuation companies that develop the estimates. In NAREIT's view, the suggestions in the Staff Paper would not pass a cost benefit test. The suggestions in the Staff Paper would only expand the work that auditors perform today, with no increase in the reliability or credibility of the audited financial statements. Further, as discussed below, there is no evidence that the existing auditing standards related to auditing estimates fail to detect significant errors in financial statements. In short, NAREIT sees no basis to conclude that increased audit work (and thus audit fees) would provide any measurable benefit.

What is the underlying problem that the Staff Paper is trying to solve?

NAREIT does not believe that the Staff Paper articulates a pervasive problem that would be solved by a change in auditing standards. The Staff Paper seems to be justifying a significant increase in audit work (and cost) based on the number of deficiencies found in the inspections process. While NAREIT acknowledges that PCAOB inspection reports have identified shortcomings in the audit work surrounding estimates, we observe that these criticisms could be caused by a number of factors:

- Auditors are not following the current standards;
- Auditors are performing the required procedures but are not adequately documenting the work that they perform;

- Auditors lack sufficient knowledge with respect to quantitatively sophisticated methods of developing estimates used by their clients or third party specialists and therefore are not capable of designing appropriate audit procedures to test the estimates; or,

- The expectations of the PCAOB inspection teams do not reflect the inherent uncertainties and imprecision that underlies estimates, including estimates of fair value measurements.

NAREIT is not aware of any significant audit failures (with "audit failures" defined as restatements of financial statements) driven by erroneous estimates in recent history that would necessitate standard setting by the PCAOB. NAREIT questions whether the PCAOB's inspection findings in the areas of estimates, including estimates of fair value measurements, are more likely driven by auditor shortcomings relative to existing standards rather than problems with the auditing standards themselves.

As illustrated by FASB Member Larry Smith and former FASB Chairman Robert Herz[2] at the October 2, 2014 PCAOB Standing Advisory Group Meeting, estimates are prevalent throughout financial statements prepared under U.S. GAAP. Further, accounting estimates extend above and beyond fair value measurements and the GAAP hierarchy for fair value measurements that was introduced by FAS 157 *Fair Value Measurements*. Examples of accounting estimates within the real estate industry include: depreciation and amortization, asset impairment, reserves for tenant receivables, accrued expenses, deferred revenues, commitments and contingencies, contingent rental revenue, unrealized gains and losses on derivatives, foreign currency translation adjustments, changes in value for available-for-sale securities, etc. Developing estimates and fair value measurements is not new to the accounting profession. NAREIT fails to see where audits have failed to assess the reasonableness of the financial statements in accordance with U.S. GAAP.

Why should external third parties be considered an extension of management?

NAREIT strongly objects to the portions of the Staff Paper that suggest expanding the scope of audit work in the evaluation of processes and controls when management uses a third party specialist or pricing services. NAREIT continues to believe that the auditor's testing of the accuracy of information provided to the third party is appropriate. Additionally, NAREIT considers the evaluation of information provided by third parties to be sufficient in accordance with current audit literature. However, we disagree with requiring the auditor to "test the information provided by the specialist as if it were produced by the company"[3] or to "evaluate the audit evidence obtained [from the third-party source] as if it were produced by the company.[4]" The idea that either management (in its assessment of the adequacy of the company's internal controls over financial reporting) or the external auditor (in its evaluation of management's assessment) could evaluate third parties' processes and controls is simply not operational. NAREIT notes that existing audit guidance in AU 342.04 *Auditing Accounting*

---

[2] http://pcaobus.org/News/Events/Documents/10022014_SAG/Herz_slides.pdf
[3] Staff Paper, page 38, Management's Use of a Specialist
[4] Staff Paper, page 44, Use of Third Parties

Estimates acknowledges that "[a]s estimates are based on subjective as well as objective factors, it may be difficult for management to establish controls over them.[5]" Finally, third party specialists and pricing services are separate entities from the companies that engage them. To assume otherwise is not factual.

By suggesting that the auditor treat third party specialists as part of the entity that they are auditing, the Staff Paper seems to be requiring management to understand and evaluate the operating effectiveness and sufficiency of controls at third party vendors. There are two clear business reasons why companies engage third parties to assist in the development of estimates: (i) the company does not have the requisite expertise or time to perform the work in-house; or (ii) the company's management believes that the use of third parties enhances the objectivity and reliability of its estimates. Requiring management and the auditor to evaluate the third parties' processes and controls as if they were part of the company itself would exacerbate the company's resource constraints in the first scenario and potentially discourage the company's efforts in the second scenario. As indicated earlier, in NAREIT's view, the costs of implementing such audit requirements would far outweigh any incidental benefits.

Isn't an accounting estimate, by its very nature, merely one possibility in a range of reasonable outcomes?

While NAREIT understands the importance of auditing estimates, we have to wonder whether the Staff Paper is attempting to reach a level of precision via the audit process that contradicts the inherent nature of the subject being audited.

Estimates, including fair value measurements, are used extensively in the preparation of real estate entities' financial statements. Preparers, auditors and, most importantly, investors and other users of this financial information understand the imprecision that results from the use of estimates. In the context of financial reporting, management's responsibility is to use its judgment regarding available information in making accounting estimates. AU 342.03 notes that "[m]anagement's judgment is normally based on its knowledge and experience about past and current events and its assumptions about conditions it expects to exist and courses of action it expects to take." The auditor's responsibility is *not* to conclude whether the estimate is right or wrong, but to assess whether management's accounting estimate is *reasonable.* Auditing Standard No. 14 *Evaluating Audit Results* states: "If an accounting estimate is determined in conformity with the relevant requirements of the application financial reporting framework and the amount of the estimate is reasonable, a difference between an estimated amount best supported by the audit evidence and the recorded amount of the accounting estimate ordinarily would not be considered to be a misstatement.[6]"

[5] http://pcaobus.org/standards/auditing/pages/au342.aspx
[6] http://pcaobus.org/Standards/Auditing/Pages/Auditing_Standard_14.aspx

NAREIT's recommendation: Focus on targeted improvements to identified problems

In the event that the PCAOB decides to move forward with some change to existing auditing standards, NAREIT recommends that the PCAOB use a targeted approach instead of wholesale changes to the audit framework for estimates. For example, if there are shortcomings in the use of the work of specialists, the PCAOB might consider focusing on auditing the work of specialists to further evaluate the expertise and/or objectivity of the specialist or auditing the inputs provided by the company to the specialist. Alternatively, if the shortcomings stem from inadequate documentation or insufficient subject matter knowledge, the PCAOB could consider steps that would target those issues.

As a starting point, NAREIT recommends that the PCAOB address how proposed changes to auditing literature would impact the auditor's consideration of materiality. NAREIT observes that the Staff Paper is silent on the assessment of materiality. The intersection of where estimates and materiality meet would appear to be a fundamental starting point for the PCAOB's focus in making targeted improvements to audit literature.

Summary

NAREIT appreciates the PCAOB's staff efforts in their endeavor to further audit quality. However, NAREIT does not believe that the PCAOB has identified the root cause that would necessitate further amendments to auditing standards. While the PCAOB cites fair value as a common area of "significant audit deficiencies[7]", NAREIT fails to see where these deficiencies have translated into restatements of previously reported financial results. Thus, NAREIT questions whether the Staff Paper simply represents rule-making for the sake of rule-making, without a clearly articulated underlying problem. As indicated above, in the event that the PCAOB concludes that further standard setting is required, NAREIT recommends that the Board make targeted improvements to specific sections of audit guidance as opposed to wide-ranging changes to the entire audit framework.

* * *

We thank the PCAOB for the opportunity to comment on the Staff Paper. Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the solicitation for public comment by the Public Company Accounting Oversight Board (PCAOB or Board) with respect to its *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements (PCAOB Release No. 2013-005, August 13, 2013, PCAOB Rulemaking Docket Matter No. 034)* (the Proposal).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index, which covers both Equity REITs and Mortgage REITs. This Index contained 193 companies representing an equity market capitalization of $659.6 billion[1] at September 30, 2013. Of these companies, 154 were Equity REITs representing 90.7% of total U.S. listed REIT equity market capitalization (amounting to $598.5 billion). The remainder, as of September 30, 2013, was 39 publicly traded Mortgage REITs with a combined equity market capitalization of $61.1 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council. Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts.

NAREIT appreciates the PCAOB's efforts toward improving audit quality since its inception in 2002. NAREIT acknowledges the PCAOB's substantive consideration of the feedback it received on its *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, Notice of Roundtable, (PCAOB Release No. 2011-003, June 21, 2011, PCAOB Rulemaking Docket Matter No. 34*[2]*)* (the Concept Release) that discussed alternatives for changing the auditor's reporting model. In particular, NAREIT supports the PCAOB's decisions to retain the current pass/fail model of auditor reporting and to reject the requirement for an auditor's discussion and analysis. However, NAREIT does not support a requirement for the auditor to report on "critical audit matters" (as that term is defined in the Proposal). In our view, such a requirement would not meet the PCAOB's objective of providing users of financial statements with additional meaningful information. As discussed further below, it is our view that the PCAOB's proposal for auditor reporting of critical audit matters would largely result in generic disclosures that are duplicative of information that is provided by management while simultaneously increasing audit cost.

NAREIT Comments on Critical Audit Matters

We understand that the PCAOB is trying to add value to the audit report and enhance its decision usefulness by requiring that the auditor identify and discuss critical audit matters as a part of the annual audit report. However, we believe that a requirement to disclose critical audit matters in the audit report would potentially:

- Confuse and mislead users with a piecemeal discussion of audit procedures that readers of the financial statements have no context or basis to understand;

- Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer;

- Duplicate information already disclosed by the issuer;

[1] http://returns.reit.com/reitwatch/rw1310.pdf at page 21
[2] http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf

- Increase audit fees for, among other things, the senior level time the auditor would incur describing the critical audit matters for purposes of drafting the proposed disclosure and incremental time discussing those matters and the related disclosure with management and the audit committee; and,

- Exacerbate existing time pressures to meet financial reporting deadlines.

Each of these concerns is further discussed below.

Confuse and mislead users with a piecemeal discussion of audit procedures that readers of the financial statements have no context or basis to understand

In reporting critical audit matters, auditors would likely feel compelled to describe the audit procedures they performed, consistent with the examples in the proposal. NAREIT questions whether the substantial majority of financial statement users are likely to understand a discussion of audit procedures. When the auditor discusses its audit process with the audit committee, the auditor has the opportunity to answer questions and provide additional information to the audit committee members, thus limiting the risk of confusion or misunderstanding about the nature and extent of audit procedures performed. Further, when the audit committee and auditor are discussing the audit work in discrete areas, they are doing so in the context of the audit taken as a whole. In this context, there is no potential for confusion about whether the auditor is, in some way, effectively providing a piecemeal opinion on an individual line item within the financial statements.

NAREIT believes that users would likely be confused by the discussion of audit procedures in an audit report not only because they lack an understanding of the audit process as a whole but because they lack the context for the discussion of discrete audit procedures on an individual financial statement line item. We are therefore concerned that the Proposal would widen the existing expectation gap regarding the nature and extent of audit work required by the PCAOB's auditing standards.

Introduce situations when the auditor is disclosing sensitive information that is not otherwise required to be disclosed by the issuer;

One of the examples in the Proposal (Hypothetical Auditing Scenario #3) illustrates a fact pattern in which the auditor discloses a "control deficiency less severe than a material weakness noted in the Company's internal control system."[3] This information is part of the auditor's required communication to the issuer's audit committee, under current PCAOB standards, but there is nothing in securities law that requires public reporting of either significant deficiencies in internal controls or audit adjustments.

[3] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page A5-77

The Proposal acknowledges a fact pattern whereby control deficiencies that are not material weaknesses would be disclosed by the auditor. For example, Appendix V of the Proposal states:

> Because a deficiency or deficiencies in the company's internal control over financial reporting could have a significant effect on the conduct of the audit and on the level of difficulty in gathering audit evidence or forming an opinion on the financial statements, an internal control deficiency might be an indicator of a critical audit matter.[4]

This would mean that the auditor would be disclosing sensitive information that is not otherwise required to be reported by the issuer. Furthermore, unlike the existing audit requirement to discuss such matters with the audit committee, the information is being presented to users of financial statements with limited context and no opportunity for the clarifying discussion that occurs during most audit committee meetings.

We strongly believe that an audit firm should not report sensitive information that is not required to be disclosed under existing securities laws and/or generally accepted accounting principles. We believe that existing U.S. securities laws and existing U.S. GAAP are sufficient to provide users with the appropriate amount of information to make investment decisions. Further, the expansion of existing disclosure requirements is the purview and responsibility of the SEC and the FASB. Accordingly, if the PCAOB were to go forward with this Proposal, we believe the auditor should be prohibited from disclosing any information that is not otherwise required to be disclosed by the issuer.

Duplicate information already disclosed by the issuer

We believe that the most difficult, subjective and complex audit matters encountered by the auditor are highly likely to be the critical accounting policies and estimates that the issuer is already disclosing in its Management Discussion and Analysis (MD&A). Given that the sections of MD&A that cover critical accounting policies and estimates provide the reader with management's assessment of the most judgmental aspects of the financial statements, NAREIT questions why the Board would require auditors to duplicate this information. If the PCAOB believes that this existing information is not sufficiently robust or transparent, NAREIT recommends that SEC or the Financial Accounting Standards Board (FASB) evaluate this aspect of financial reporting and provide additional guidance through the comment letter process. Another possibility would be to request that the FASB evaluate these disclosures as part of its Disclosure Framework Project.

Increase audit fees for, among other things, the senior level time the auditor will incur describing the critical audit matters for purposes of drafting the proposed disclosure and incremental time discussing those matters and the related disclosure with management and the audit committee

---

[4] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page A5-32

NAREIT acknowledges that the current audit standards require the auditor to identify and communicate significant audit matters to the audit committee. However, NAREIT believes that requiring the auditor to report critical audit matters in the audit opinion would lead to increased audit fees. At a minimum, each and every audit engagement team would incur additional senior level time in order to determine the critical audit matters (CAMs) for purposes of drafting the proposed disclosure and discussing both the CAMs and the related disclosure with management and the audit committee.

Further, given the significant degree of subjectivity involved in determining which significant audit matters are "the most critical" and the inevitable second guessing of that determination by audit committees, management, PCAOB inspection teams, SEC staff and litigators, NAREIT anticipates that audit partners would need to consult others in the firm regarding both the selection of CAMs as well as the report language. The added time and related increased risk incurred by the audit firm would directly translate into an unnecessary and avoidable increase in annual audit fees. Further, we believe that there is a risk of inconsistent disclosure of CAMs both within and among the audit firms. We sense that the added disclosure in the audit report would open both audit firms and issuers to increased litigation risk, the cost of which will be passed on to issuers (and thus investors) in the form of increased audit fees.

Exacerbate existing time pressures to meet reporting deadlines

Given the nature of the audit process, auditors are unlikely to be able to conclude definitively on "the most" significant, judgmental or complex audit matters until substantially all the audit work has been completed. That necessarily places the decisions and discussions surrounding CAMs into the very final stages of the audit and just prior to the release of the audited financial statements on Form 10-K. If the Board moves forward with this Proposal, NAREIT foresees the addition of a very time consuming step into the late stages of what is already a tight deadline for many issuers.

In light of time pressures, liability concerns and fee issues, audit firms may feel compelled to develop standardized audit report language for common critical audit matters. Thus, stepping back and looking at the sum total of our concerns, we believe there is a significant risk that the PCAOB's proposal will result in boilerplate, duplicative disclosures that add to the cost of the audit without adding to the information available to users of financial statements.

NAREIT Comments on Auditor Tenure

NAREIT understands that there is some interest amongst financial statement users about auditor tenure. We observe that for many issuers, the tenure of an audit firm can be determined by a review of the issuer's public filings. However, NAREIT does not support the Proposal that auditors report on their tenure because that information, placed in the audit report, infers a direct relationship between auditor tenure and the quality of the audit or the content of the audit report that does not exist. NAREIT is unaware of evidence indicating that auditor tenure has a direct correlation to audit quality.

Perhaps more importantly, NAREIT considers auditor tenure to be a corporate governance matter under the direct purview of the issuer's audit committee only. A statement regarding auditor tenure placed in the audit report would provide no information about how the audit committee assesses the quality of the audit work and determines that a change in auditor is appropriate. It also would provide no information regarding the most recent tendering of the audit. Some users might incorrectly infer that longer auditor tenure indicates that the audit has not been retendered when, in fact, the audit committee's decision to retain the incumbent audit firm was made after an extensive retendering process.

Therefore, NAREIT recommends that information regarding auditor tenure continue to be excluded from the audit report. If users of financial statements believe this information would provide significant value, the SEC should consider adding relevant disclosure requirements to proxy statements that are filed coincident with audit committee reports or in connection with company shareholder ratification of auditor appointments.[5]

NAREIT Comments on Other Information

We do not understand the purpose of expanding the audit report to explicitly address information that is not audited and that is often outside the expertise of an auditor. More importantly, NAREIT believes the proposed language that would be included in the audit report regarding other information would mislead users into believing that the auditor has an authoritative basis to conclude on the sufficiency, accuracy or completeness of the other, unaudited information. This, in turn, would cause auditors to do additional work and invest additional resources into the reading of the unaudited information beyond what may be required by the standard because they would be perceived as being more closely associated with that information. Inevitably, this exercise would increase the cost of the audit as well as the cost of preparing the unaudited information. The result would be more cost to shareholders without additional assurance to those same shareholders.

In NAREIT's view, there is no need to change the existing audit standard related to other information contained in a report that includes audited financial statements. We are unaware of any evidence indicating that auditors are either not meeting their existing (albeit very limited) responsibilities for other information or that users are misinformed about which elements of an SEC filing are audited and which are not. In fact, in its Proposal, the PCAOB notes that "investors generally were not supportive of auditor assurance on other information outside the financial statements."[6] To the extent that the audit committee or external third parties (*e.g.*, underwriters, institutional investors, or analysts) believe it is appropriate to obtain additional assurance on other information included in SEC filings, the PCAOB's existing standards provide auditors with the tools to meet those requests. Accordingly, nothing more is needed.

---

[5] In its Proposal, the PCAOB notes that the UK-listed companies are "required to provide information about auditor tenure in a separate section of the annual report" (page A5-16.) The approach used by the UK is consistent with our view that information about auditor tenure, while potentially of interest to investors, is a matter of corporate governance.

[6] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page 25

The PCAOB states that

> The required procedures under the proposed other information standard would focus the auditor's attention on the identification of material inconsistencies between other information and the company's audited financial statements and on the identification of material misstatements of fact, based on relevant evidence obtained and conclusions reached during the audit.[7]

NAREIT views these requirements as largely consistent with the existing audit standard which states that the auditor "should read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation appearing in the financial statements."[8] However, the proposed changes to the standard, and the related proposed language in the audit report, suggest that the auditor's responsibility should extend beyond what has been historically required. Specifically, under the Proposal the auditor would be required to state that, "in addition to auditing the financial statements and the Company's internal controls over financial reporting," the auditor would also be required to "evaluate" the other information in the filing, an evaluation that was "based on relevant audit evidence obtained and conclusions reached during the audit." What level of assurance is provided by an "evaluation?" Absent clarification by the PCAOB, users of financial statements could mistakenly perceive the audit firm's work and the level of assurance provided surrounding other information as something substantial, with no meaningful understanding as to the distinction between an "evaluation" and an "audit." This perception gap could have severe ramifications on the investment community as well as the audit profession. Instead of adding more clarity to the audit report and narrowing the expectation gap, we view this Proposal as significantly obfuscating the nature and scope of an audit and dramatically widening the expectation gap.

In NAREIT's view, this aspect of the Proposal is fraught with many issues involving each financial statement users' perspectives, and would likely lead auditors by default to performing a far more significant amount of unnecessary work on other information than under current standards due to the lack of clarity regarding the nature and scope of the auditor's responsibility. This would cause increases in audit fees when there is absolutely no demand or requirement for any type of assurance on this information and could lead to less useful information being provided to investors.

Summary

NAREIT does not believe that the changes recommended by the Proposal with respect to the audit report, disclosure of auditor tenure, and the auditor's responsibility for other information are warranted. These requirements would add costs without improving the quality of the audit. Furthermore, these proposals would be likely to confuse and in some cases even mislead users of

[7] http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf at page 7
[8] See AU 550.04

financial statements. Therefore, NAREIT recommends that the PCAOB suspend its efforts on the Proposal, and instead focus its time and resources on improving aspects of the audit procedures that would enhance audit quality so as to provide investors with more confidence that the audited financial statements are, indeed, free of material misstatement.

In the event that the PCAOB decides to move forward with the Proposal, NAREIT recommends that the Board consider conducting robust field testing. In our view, field testing should involve not only the preparer and auditor community, but also representatives from the investment community in order to fully assess both the costs and the benefits of the Proposal. This would provide the Board with evidential matter in evaluating whether the Proposal is operational, whether additional guidance is needed, whether the implementation costs outweigh the perceived benefits, and if the Proposal's objectives could actually be achieved.

Re: Staff Consultation Paper No. 2015-01 - *The Auditor's Use of the Work of Specialists*

Dear Board Members:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the solicitation for public comment by the Public Company Accounting Oversight Board (PCAOB or Board) with respect to the Staff Consultation Paper, *The Auditor's Use of the Work of Specialists* (the Staff Paper).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index which covers both Equity REITs and Mortgage REITs. This Index contained 224 companies representing an equity market capitalization of $890 billion at June 30, 2015. Of these companies, 183 were Equity REITs representing 93.5% of total U.S. stock exchange-listed REIT equity market capitalization (amounting to $832 billion)[1]. The remainder, as of June 30, 2015, is represented by 41 stock exchange-listed Mortgage REITs with a combined equity market capitalization of $58 billion.

[1] https://www.reit.com/sites/default/files/reitwatch/RW1507.pdf at page 21.

NAREIT appreciates the PCAOB's efforts toward improving audit quality since its inception in 2002. However, NAREIT has significant concerns with the Staff Paper as drafted. NAREIT's comments are primarily focused on the areas that would impact NAREIT member companies (*i.e.*, use of specialists in valuing investment properties, equity and mortgage-backed securities, and derivative positions.)

Why is a change to the existing audit framework for the auditor's use of specialists warranted?

NAREIT is not persuaded that a change to the audit framework for the auditor's use of specialists is necessary. In NAREIT's view, the expansion of audit requirements for the work of specialists is an unnecessary change given the amount of work performed by auditors today. NAREIT's member companies observe that external auditors currently perform a significant amount of audit work surrounding estimates prepared by specialists pursuant to existing audit standards. For example, multiple member companies have indicated that the audit fees for auditing fair value estimates of real estate and auditing purchase price allocations in business acquisitions *exceed* the fees paid to the third party valuation companies that develop the estimates. In NAREIT's view, the suggestions in the Staff Paper would not pass a cost benefit test. The suggestions in the Staff Paper would only expand the work that auditors perform today, with no increase in the reliability or credibility of the audited financial statements. Further, as discussed below, there is no evidence that the existing auditing standards related to the auditor's use of the work of specialists fail to detect significant errors in financial statements. In short, NAREIT sees no basis to conclude that increased audit work (and thus audit fees) would provide any measurable benefit.

What is the underlying problem that the Staff Paper is trying to solve?

NAREIT does not believe that the Staff Paper articulates a pervasive problem that would be solved by a change in auditing standards. The Staff Paper seems to be justifying a significant increase in audit work (and cost) based on academic research papers and limited circumstances where *existing* audit guidance was not followed by the auditor. Further, NAREIT is not aware of any significant audit failures (with "audit failures" defined as restatements of financial statements) driven by the inappropriate reliance on work performed by a specialist in recent history that would necessitate standard setting by the PCAOB.

Why should external third parties be considered an extension of management?

NAREIT strongly objects to the alternative of expanding the scope of audit work in the evaluation of processes and controls when management uses a third party specialist or pricing services. NAREIT continues to believe that the auditor's evaluation of the objectivity of the specialist and the accuracy of information provided to the third party are appropriate. Additionally, NAREIT considers the existing requirements for both management and auditors to evaluate the information provided by third parties to be sufficient in accordance with current audit literature.

The idea that either management (in its assessment of the adequacy of the company's internal controls over financial reporting) or the external auditor (in its evaluation of management's assessment) could evaluate third parties' processes and controls is simply not operational. NAREIT notes that existing audit guidance in AU 342.04 *Auditing Accounting Estimates* acknowledges that "[a]s estimates are based on subjective as well as objective factors, it may be difficult for management to establish controls over them.[2]" Finally, third party specialists and pricing services are separate entities from the companies that engage them. To assume otherwise is not factual.

By suggesting that the auditor treat third party specialists as part of the entity that they are auditing, the Staff Paper seems to be requiring management to understand and evaluate the operating effectiveness and sufficiency of controls at third party vendors. There are two clear business reasons why companies engage third parties to assist in the development of estimates: (i) the company does not have the requisite expertise or time to perform the work in-house; and (ii) the company's management believes that the use of third parties enhances the objectivity and reliability of its estimates. Requiring management and the auditor to evaluate the third parties' processes and controls as if they were part of the company itself would exacerbate the company's resource constraints in the first scenario and potentially discourage the company's efforts to utilize outside specialists in the second scenario. NAREIT cautions the PCAOB of the potential for the unintended consequence of management deciding not to use outside expertise in order to avoid incremental audit fees.

Summary

NAREIT appreciates the PCAOB's staff efforts in their endeavor to further audit quality. However, NAREIT does not believe that the PCAOB has identified the root cause that would necessitate further amendments to auditing standards. While the PCAOB cites academic research papers and limited examples of where the auditor failed to follow existing auditing standards, NAREIT fails to see the impetus for a change in auditing standards. In the event that the PCAOB decides to move forward with some change to existing auditing standards, NAREIT recommends that the PCAOB use a targeted approach that address the root cause of problems that are identified.

* * *

We thank the PCAOB for the opportunity to comment on the Staff Paper. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 1-202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 1-202-739-9442.

No. US2015-43
December 18, 2015

At a glance

The PCAOB adopted new rules and related amendments to its auditing standards to require public reporting of the name of the engagement partner and other accounting firms that took part in the audit.

PCAOB adopts final rules to disclose name of partner and others on new form

What happened?

On December 15, 2015, the Public Company Accounting Oversight Board ("PCAOB") adopted new rules and amendments to its auditing standards requiring disclosure of the name of the engagement partner and information about other accounting firms that took part in the audit, including other firms within the same network as the group auditor. This information will be filed with the PCAOB on a new PCAOB form, *Auditor Reporting of Certain Audit Participants* ("Form AP") and will be searchable on the PCAOB's website.

The rules and amendments to the auditing standards require disclosure for all audits of issuers, including employee stock purchase, savings, and similar plans that file annual reports on Form 11-K. At this time, the PCAOB is not extending the Form AP requirements to audits of brokers and dealers unless the broker or dealer is an issuer required to file audited financial statements. Additionally, the PCAOB is recommending the rules and amendments to its auditing standards apply to emerging growth companies, which will be subject to a separate determination by the Securities and Exchange Commission (the "SEC"), pursuant to the JOBS Act.

Disclosure requirements and effective dates

The rules require disclosure of:

- The name of the engagement partner;
- The names, locations, and extent of participation of other accounting firms that took part in the group audit, if their work constituted 5 percent or more of the total group audit hours; and
- The number and aggregate extent of participation of all other accounting firms that took part in the group audit whose individual participation was less than 5 percent of the total group audit hours.

Subject to SEC approval, disclosure of the engagement partner will be required for audit reports issued on or after January 31, 2017 (or three months after SEC approval, whichever is later), while disclosure of information about other accounting firms that took part in the audit will be required for audit reports issued on or after June 30, 2017.

Form AP

The filing deadline for Form AP will be 35 days after the date the auditor's report is first included in a document filed with the SEC, with a shorter filing deadline of 10 days for initial public offerings.

The filing of Form AP is required the first time an audit report is included in a document filed with the SEC. Subsequent inclusion of precisely the same audit report in other documents filed with the SEC does not give rise to a requirement to file another Form AP. Conversely, any changes to the auditor's report, including if it is dual-dated, requires a new Form AP even when no information on the form, other than the date of the report, changes.

For audits of mutual funds, the rules permit one Form AP to be filed in cases where multiple audit opinions are included in the same auditor's report, such as in the case for mutual fund families. If multiple audit opinions included in the same auditor's report involved different engagement partners, a Form AP will be filed for each engagement partner.

Partner identifying number

The final rules require each registered accounting firm to assign a 10-digit partner identifying number to each of its partners serving as the engagement partner on audits of issuers. The number will be assigned to a particular partner and will not be reassigned if the partner retires or otherwise ceases serving as engagement partner on issuer audits conducted by that firm.

Use of estimates

Firms may use a reasonable method to estimate audit hours of other accounting firms participating in the audit.

Why is this important?

It is intended to help the public know the name of the engagement partner and understand how much of the audit was performed by the accounting firm signing the auditor's report and how much was performed by other accounting firms.

What's next?

The PCAOB will formally submit the rules and amendments to its auditing standards to the SEC, and the SEC will consider them for approval through their normal process. PCAOB staff plans to publish guidance in 2016 to assist firms in complying with the reporting requirements of Form AP.

No. US2014-16
August 22, 2014

At a glance

The staff of the PCAOB's Office of the Chief Auditor is evaluating whether existing PCAOB standards relating to auditing accounting estimates and fair value measurements can and should be improved.

PCAOB issues staff consultation paper seeking comment on auditing accounting estimates and fair value measurements

What happened?

On August 19, 2014, the Public Company Accounting Oversight Board ("PCAOB") issued for public comment a staff consultation paper on standard-setting activities related to auditing accounting estimates and fair value measurements. The staff consultation paper discusses and solicits comment on certain issues related to auditing accounting estimates and fair value measurements in order to assist the PCAOB staff in evaluating whether the existing PCAOB auditing standards can and should be improved. The PCAOB staff is specifically seeking feedback on: (i) the potential need for changes to the PCAOB's existing auditing standards to better address changes in the financial reporting frameworks related to accounting estimates and fair value measurements, (ii) current audit practices that have evolved to address issues relating to auditing accounting estimates and fair value measurements, (iii) a possible approach to changing existing auditing standards, and the requirements of a potential new standard, and (iv) relevant economic data about potential economic impacts to inform the PCAOB's economic analysis associated with standard setting in this area.

Overview of the approach being considered by the PCAOB staff

Although the PCAOB staff identified a number of alternative approaches that the PCAOB may wish to consider, the PCAOB staff is considering developing a single standard related to auditing accounting estimates and fair value measurements instead of separate standards that exist today. The staff consultation paper discusses that the potential new standard could be designed to:

- Align with the PCAOB's risk assessment standards
- Generally retain the approaches to internal control and substantive testing from the existing standards, but include requirements that apply to both accounting estimates and fair value measurements
- Establish more specific audit requirements related to the use of third parties in developing accounting estimates and fair value measurements, and
- Create a more comprehensive standard related to auditing accounting estimates and fair value measurements to promote greater consistency and effectiveness in application

Use of third parties

A new standard could include the existing requirement related to testing assumptions for fair value measurements developed by a company's specialist, but apply it more broadly to information provided for accounting estimates. As such, if a company uses a specialist to develop an accounting estimate, a new standard could direct the auditor to test that information as if it were produced by the company. In this case, the auditor would be required, as applicable, to evaluate the appropriateness of the methods, test the data used, and evaluate the reasonableness of significant assumptions, with respect to the information provided by the specialist.

Additionally, the PCAOB staff is considering how a potential new standard could address audit evidence obtained from third-party sources, such as pricing services and broker-dealers. Given the differences in how values of financial instruments are derived and obtained, the PCAOB staff is exploring whether a new standard should set forth specific requirements for evaluating information from third-party pricing sources as part of evaluating the reliability and relevance of the evidence. For example, to evaluate reliability, the auditor could take into account the methods used by a third-party in determining fair value and whether the methodology used is in conformity with the applicable financial reporting framework. As it relates to evaluating the relevance, the auditor could determine, among other matters, when there are no transactions either for the asset or liability or comparable assets or liabilities, how the information was developed, including whether the inputs developed represent the assumptions that market participants would use when pricing the asset or liability, if applicable.

Why is this important?

Financial statements and disclosures of most companies include accounting estimates and fair value measurements.

What's next?

Comments on the staff consultation paper are due on November 3, 2014. Additionally, the PCAOB announced it will host a meeting of its Standing Advisory Group ("SAG") on October 2, 2014, in Washington, D.C., to discuss matters related to auditing accounting estimates and fair value measurements. The agenda and meeting logistics will be announced closer to the meeting date.

Questions?

PwC clients who have questions about this *In brief* should contact their engagement partner. Engagement teams who have questions should contact the National Professional Services Group (1-973-236-7800).

No. US2015-16
June 3, 2015

PCAOB issues staff consultation paper seeking comment on the auditor using the work of specialists

At a glance

The staff of the PCAOB's Office of the Chief Auditor is considering ways to improve the existing PCAOB standards that apply to the auditor using the work of a specialist, including areas related to objectivity and oversight of specialists.

What happened?

On May 28, 2015, the Public Company Accounting Oversight Board ("PCAOB") issued for public comment a staff consultation paper on potential standard-setting activities related to the auditor using the work of specialists. The staff consultation paper discusses the increased use and importance of specialists in recent years due, in part, to the increasing complexity of business transactions reported in a company's financial statements. The staff consultation paper also raises questions about whether PCAOB standards adequately address the auditor's use of the work of an auditor's or a company's specialists, and whether more rigorous standards and specific procedures are needed in this regard to help the auditor respond to the risks of material misstatement in financial statements. The PCAOB staff is seeking feedback on: (i) additional information on current practice, (ii) the potential need for changes, (iii) possible alternatives to address the issues discussed in the staff consultation paper, and (iv) relevant economic data about potential economic impacts to inform the PCAOB's economic analysis associated with standard-setting in this area. The staff consultation paper builds on feedback received on an earlier staff consultation paper related to auditing accounting estimates and fair value measurements.

Overview of the approach being considered by the PCAOB staff

This staff consultation paper describes that the PCAOB staff is considering:

- Requirements to improve the auditor's oversight and review of the work of an auditor's specialist, whether employed or engaged by the auditor, by creating consistent requirements that would apply to any auditor's specialist.
- Requirements to improve the auditor's evaluation of the objectivity of an auditor's specialist, whether employed or engaged by the auditor. Those requirements are based on the independence requirements in Rule 2-01 of Regulation S-X of the Securities and Exchange Commission. An auditor's employed specialist is already required to follow the independence requirements.
- Alternatives that would improve the auditor's evaluation of the work of a company's employed or engaged specialist. The alternatives would require more rigorous procedures than those currently required by PCAOB AU 336, *Using the Work of a Specialist* ("PCAOB AU 336").

Auditor's employed or engaged specialist

Under existing PCAOB standards, an auditor's specialist is either an employee of the audit firm and supervised by the auditor under PCAOB Auditing Standard No. 10, *Supervision of the Audit Engagement*, ("AS No. 10"), or engaged by the audit firm and overseen by the auditor under PCAOB AU 336. Under the alternatives being explored by the PCAOB staff, which include either developing a single standard for using the work of an auditor's specialist or extending the supervision requirements in AS No. 10 to an auditor's engaged specialist, the PCAOB staff would also consider including enhanced requirements for (i) evaluating the knowledge, skill, and objectivity of an auditor's specialist, (ii) informing an auditor's specialist of his or her responsibilities, including by reaching agreement in writing regarding certain matters such as nature, timing, and extent of the work that the auditor's specialist is to perform and the nature and extent of audit documentation the auditor's specialist will provide, and (iii) reviewing the auditor's specialist's work and conclusions including, if an auditor's specialist develops an independent estimate, determining whether the methods are appropriate and significant assumptions are reasonable.

The PCAOB staff is also considering revising requirements that apply to an auditor's determination of whether an auditor's specialist is capable of exercising objective and impartial judgment in his or her work. The alternatives being considered would require a more rigorous evaluation of the business, employment, and financial relationships that may impair the objectivity of an auditor's specialist, including obtaining written information of any relationships and the process used by the specialist to formulate the response.

Auditor's use of a company's specialist

Under existing PCAOB standards, auditors may use the work of a company's employed or engaged specialist to obtain audit evidence. The PCAOB staff is considering two alternatives, including (i) amending the current PCAOB standards, including removing certain provisions that may be considered to limit the extent of the auditor's testing of the specialist's work that is needed to obtain sufficient appropriate audit evidence, or (ii) rescinding the current PCAOB specialists standard. Under either alternative, the PCAOB staff is exploring whether the auditor would be required to evaluate the reasonableness of significant assumptions and appropriateness of methods used by a company's specialist in the same manner as the auditor evaluates information produced by others in the company.

Why is this important?

If the PCAOB staff alternatives are finalized in a PCAOB standard, the incremental effort may be significant for auditors, specialists, and company management, as auditors may need to use their own employed or engaged specialists and not directly use the work of a company specialist as can be done today. As a result, the staff consultation paper is seeking feedback on the likely benefits and costs of a potential new set of requirements.

What's next?

Comments on the staff consultation paper are due no later than July 31, 2015. Additionally, the PCAOB announced it will host a meeting of its Standing Advisory Group on June 18, 2015, in Washington, D.C., to discuss matters related to the auditor's use of the work of specialists. The agenda for this meeting can be found here.

No. US2015-22
July 7, 2015

PCAOB seeks comment on potential audit quality indicators

At a glance

The PCAOB is seeking comment on a portfolio of twenty-eight potential quantitative measures (audit quality indicators) that may enhance the dialogue on ways to evaluate audit quality.

What happened?

On July 1, 2015, the Public Company Accounting Oversight Board ("PCAOB") issued a concept release to seek public comment on a group of twenty-eight potential audit quality indicators ("AQIs") and the availability and value of those AQIs to audit committees, audit firms, investors, PCAOB and others. The AQIs are meant to enhance the dialogue on ways to evaluate audit quality. The concept release follows the PCAOB's outreach process through public meeting with its Standing Advisory Group and Investor Advisory Group and receipt of input from others, including the Center for Audit Quality.

The PCAOB developed the AQIs considering three principles: (i) AQIs should be quantitative wherever possible to add consistency of approach and objectivity to minimize subjective judgments, (ii) AQIs should generate data that enable users to pose critical questions, and (iii) AQIs should be used, and function together as a "balanced portfolio", as no single indicator is likely to be determinative of audit quality. The AQIs are designed to operate in an integrated manner and, although quantitative in nature, contextual information is to be provided. The AQIs pertain to three broad categories:

- Audit Professionals — measures relating to availability of resources, competence, and focus (e.g., percentage of hours by significant risk for partners, managers, and staff) of those performing the audit.
- Audit Process — measures relating to an audit firm's tone at the top and leadership, incentives, independence, attention to infrastructure (e.g., investment in audit practice as a percentage of firm revenue), and record of monitoring and remediation of identified matters impacting audit quality.
- Audit Results — measures relating to financial statements (such as the number and impact of restatements and other measures of financial reporting quality), internal control over financial reporting, going concern reporting, communications between auditors and audit committees, and enforcement and litigation.

Most of the AQIs include measures at the engagement and firm level and are further described in the concept release.

The PCAOB observes the nature of AQI data and the method for its distribution will depend on, among other things, the users involved. The PCAOB is considering one or more approaches to assisting in the distribution of the AQI data. For example, it could (i) encourage firms and engagement teams voluntarily to discuss AQI engagement- or firm-level data with audit committees, or to do so publicly, (ii) require audit teams to provide that data to audit committees, (iii) collect and make "combined" AQI data public over time, as a single set of weighted figures for comparable firms, (iv) collate and make public on a firm-by-firm basis AQIs derived from public sources, and (v) consider requiring reporting of the necessary data to the PCAOB so that the PCAOB could make it public, or even require firms to do so directly.

Areas in which feedback is being solicited

Information the PCAOB is seeking feedback, includes:

- The nature of the potential AQIs, including whether there are additional AQIs to consider and if other subgroups should be included (e.g., by office, region, or industry),
- The availability and value of AQIs to various potential users of the information, which includes whether the AQIs should be publicly available,
- How the data from which AQIs are derived might be obtained and distributed,
- Whether audit firms' use of AQIs should be voluntary or mandatory,
- The scope of audits and audit firms that may be subject to AQI reporting, and
- The possibility of phasing-in steps toward AQI reporting and use.

Why is this important?

The PCAOB is considering, among other matters, whether the AQIs will enhance the discussion around audit quality and contribute to the identification of key variables that drive audit quality. In turn, the PCAOB suggests that this will provide another objective measure for audit committees, management and others to further evaluate the performance and stimulate competition based on audit quality among the audit firms.

What's next?

Comments on the concept release are due no later than September 29, 2015. Additionally, the PCAOB will host a public roundtable to discuss views on the concept release on a date to be determined during the fourth quarter of 2015.

Questions?

PwC clients who have questions about this *In brief* should contact their engagement partner. Engagement teams who have questions should contact the National Professional Services Group (1-973-236-7800).

No. US2015-21
July 7, 2015

SEC considers changes to audit committee disclosure of auditor oversight

What happened?

On July 1, 2015, the SEC published a concept release to solicit public input on possible changes to its audit committee disclosure requirements. The concept release is focused on disclosures relating to the audit committee's oversight of the independent auditor.

At a glance

The SEC is seeking public input on whether investors would benefit from enhanced disclosure relating to the audit committee's oversight of the independent auditor and, if so, what information would be useful.

Current audit committee disclosure requirements

Audit committees play a critical role in protecting the interests of investors, and disclosures about audit committee interactions with the independent auditor promote investor confidence. The majority of the SEC's current audit committee disclosure requirements were adopted in 1999. Since that time, there have been significant changes in audit committee responsibilities, including the 2002 Congressional mandate that the audit committee of a listed issuer be directly responsible for the appointment, compensation, retention, and oversight of the work of the independent auditor.

Current audit committee disclosure requirements (e.g., that the committee has discussed certain required communications with the auditor and has received written communications relating to the auditor's independence) provide some information about the audit committee's role in overseeing the independent auditor. However, the SEC's current rules do not provide insight into how the audit committee executes its responsibilities.

Focus of the concept release

The concept release seeks public input on a number of potential changes to the SEC's audit committee disclosure requirements on topics such as:

- communications between the audit committee and the auditor;
- frequency of meetings between the audit committee and the auditor;
- discussions about the auditor's internal quality review and most recent PCAOB inspection report;
- how the audit committee assesses, promotes, and reinforces the auditor's objectivity and professional skepticism;
- how the audit committee assessed the auditor (including the auditor's independence, objectivity and audit quality) and its rationale for selecting or retaining the auditor;
- whether the audit committee sought proposals for the independent audit and if so, the process the committee undertook and the factors it considered in selecting the auditor;
- policies for an annual shareholder vote on the selection of the auditor, and the audit committee's consideration of the voting results;

- disclosures of certain individuals on the engagement team (e.g., the naming the engagement partner);
- audit committee input in selecting the engagement partner;
- the number of years the auditor has served as the company's independent auditor; and
- information relating to other firms involved in the audit.

Some of these topics (e.g., naming the engagement partner and disclosing auditor tenure) are the subject of on-going projects by the PCAOB. The SEC is also seeking input on those topics so it can evaluate whether the disclosures, if they are important, would be more appropriately placed (or perhaps repeated) in company filings where they can be made in the broader context of the audit committee's oversight of the independent auditor.

Why is this important?

High quality, independent audits are critical to the proper functioning of the capital markets because they give the public confidence in the credibility and reliability of financial statements. Audit committees promote confidence through their oversight of the independent auditors.

In this concept release, the SEC is exploring whether additional disclosure about the audit committee's oversight of the independent auditor could be beneficial to investors, for instance, by providing useful information for making investment decisions or helping inform voting decisions regarding the ratification of auditors and the election of directors who are members of the audit committee.

It is important to note the SEC's current audit committee disclosure rules establish the "floor" for audit committee disclosure, not the "ceiling." Many audit committees have already gone beyond these minimum reporting requirements to provide enhanced disclosures around their independent auditor oversight activities. In November 2013, a group of nationally recognized corporate governance and policy organizations known as the Audit Committee Collaboration published *Enhancing the Audit Committee Report: A Call to Action* to encourage audit committees to voluntarily strengthen their disclosures. The Audit Committee Collaboration recently published its *External Auditor Assessment Tool: A Reference for U.S. Audit Committees* to assist audit committees in evaluating the external auditor. Audit committees may find these resources helpful as they consider their own disclosures.

What's next?

Comments are due within 60 days after the concept release is published in the Federal Register. The SEC will use the input it receives to evaluate whether to propose changes to its rules. The issuance of the concept release is only the first step in the rulemaking process.

Questions?

PwC clients who have questions about this *In brief* should contact their engagement partner. Engagement teams who have questions should contact the National Professional Services Group (1-973-236-7800).

Part III

Department of Labor

Employee Benefits Security Administration

29 CFR Parts 2509 and 2510

Definition of the Term "Fiduciary"; Conflict of Interest Rule—Retirement Investment Advice; Proposed Rule

DEPARTMENT OF LABOR

Employee Benefits Security Administration

29 CFR Parts 2509 and 2510

RIN 1210–AB32

Definition of the Term "Fiduciary"; Conflict of Interest Rule—Retirement Investment Advice

AGENCY: Employee Benefits Security Administration, Department of Labor.

ACTION: Notice of proposed rulemaking and withdrawal of previous proposed rule.

SUMMARY: This document contains a proposed regulation defining who is a "fiduciary" of an employee benefit plan under the Employee Retirement Income Security Act of 1974 (ERISA) as a result of giving investment advice to a plan or its participants or beneficiaries. The proposal also applies to the definition of a "fiduciary" of a plan (including an individual retirement account (IRA)) under section 4975 of the Internal Revenue Code of 1986 (Code). If adopted, the proposal would treat persons who provide investment advice or recommendations to an employee benefit plan, plan fiduciary, plan participant or beneficiary, IRA, or IRA owner as fiduciaries under ERISA and the Code in a wider array of advice relationships than the existing ERISA and Code regulations, which would be replaced. The proposed rule, and related exemptions, would increase consumer protection for plan sponsors, fiduciaries, participants, beneficiaries and IRA owners. This document also withdraws a prior proposed regulation published in 2010 (2010 Proposal) concerning this same subject matter. In connection with this proposal, elsewhere in this issue of the **Federal Register**, the Department is proposing new exemptions and amendments to existing exemptions from the prohibited transaction rules applicable to fiduciaries under ERISA and the Code that would allow certain broker-dealers, insurance agents and others that act as investment advice fiduciaries to continue to receive a variety of common forms of compensation that otherwise would be prohibited as conflicts of interest.

DATES: As of April 20, 2015, the proposed rule published October 22, 2010 (75 FR 65263) is withdrawn. Submit written comments on the proposed regulation on or before July 6, 2015.

ADDRESSES: To facilitate the receipt and processing of written comment letters on the proposed regulation, EBSA encourages interested persons to submit their comments electronically. You may submit comments, identified by RIN 1210–AB32, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow instructions for submitting comments.

Email: e-ORI@dol.gov. Include RIN 1210–AB32 in the subject line of the message.

Mail: Office of Regulations and Interpretations, Employee Benefits Security Administration, Attn: Conflict of Interest Rule, Room N–5655, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210.

Hand Delivery/Courier: Office of Regulations and Interpretations, Employee Benefits Security Administration, Attn: Conflict of Interest Rule, Room N–5655, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210.

Instructions: All comments received must include the agency name and Regulatory Identifier Number (RIN) for this rulemaking (RIN 1210–AB32). Persons submitting comments electronically are encouraged not to submit paper copies. All comments received will be made available to the public, posted without change to *http://www.regulations.gov* and *http://www.dol.gov/ebsa,* and made available for public inspection at the Public Disclosure Room, N–1513, Employee Benefits Security Administration, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210, including any personal information provided.

For Questions Regarding the Proposed Prohibited Transaction Exemptions: Contact Karen Lloyd, Office of Exemption Determinations, EBSA, 202–693–8824.

For Questions Regarding the Regulatory Impact Analysis: Contact G. Christopher Cosby, Office of Policy and Research, EBSA, 202–693–8425. (These are not toll-free numbers).

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose of the Regulatory Action

Under ERISA and the Code, a person is a fiduciary to a plan or IRA to the extent that he or she engages in specified plan activities, including rendering "investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan . . ." ERISA safeguards plan participants by imposing trust law standards of care and undivided loyalty on plan fiduciaries, and by holding fiduciaries accountable when they breach those obligations. In addition, fiduciaries to plans and IRAs are not permitted to engage in "prohibited transactions," which pose special dangers to the security of retirement, health, and other benefit plans because of fiduciaries' conflicts of interest with respect to the transactions. Under this regulatory structure, fiduciary status and responsibilities are central to protecting the public interest in the integrity of retirement and other important benefits, many of which are tax-favored.

In 1975, the Department issued regulations that significantly narrowed the breadth of the statutory definition of fiduciary investment advice by creating a five-part test that must, in each instance, be satisfied before a person can be treated as a fiduciary adviser. This regulatory definition applies to both ERISA and the Code. The Department created the test in a very different context, prior to the existence of participant-directed 401(k) plans, widespread investments in IRAs, and the now commonplace rollover of plan assets from fiduciary-protected plans to IRAs. Today, as a result of the five-part test, many investment professionals, consultants, and advisers [1] have no obligation to adhere to ERISA's fiduciary standards or to the prohibited transaction rules, despite the critical role they play in guiding plan and IRA investments. Under ERISA and the Code, if these advisers are not fiduciaries, they may operate with conflicts of interest that they need not disclose and have limited liability under federal pension law for any harms resulting from the advice they provide. Non-fiduciaries may give imprudent and disloyal advice; steer plans and IRA owners to investments based on their own, rather than their customers' financial interests; and act on conflicts of interest in ways that would be prohibited if the same persons were fiduciaries. In light of the breadth and intent of ERISA and the Code's statutory

[1] By using the term "adviser," the Department does not intend to limit its use to investment advisers registered under the Investment Advisers Act of 1940 or under state law. For example, as used herein, an adviser can be an individual or entity who can be, among other things, a representative of a registered investment adviser, a bank or similar financial institution, an insurance company, or a broker-dealer.

definition, the growth of participant-directed investment arrangements and IRAs, and the need for plans and IRA owners to seek out and rely on sophisticated financial advisers to make critical investment decisions in an increasingly complex financial marketplace, the Department believes it is appropriate to revisit its 1975 regulatory definition as well as the Code's virtually identical regulation. With this regulatory action, the Department proposes to replace the 1975 regulations with a definition of fiduciary investment advice that better reflects the broad scope of the statutory text and its purposes and better protects plans, participants, beneficiaries, and IRA owners from conflicts of interest, imprudence, and disloyalty.

The Department has also sought to preserve beneficial business models for delivery of investment advice by separately proposing new exemptions from ERISA's prohibited transaction rules that would broadly permit firms to continue common fee and compensation practices, as long as they are willing to adhere to basic standards aimed at ensuring that their advice is in the best interest of their customers. Rather than create a highly prescriptive set of transaction-specific exemptions, the Department instead is proposing a set of exemptions that flexibly accommodate a wide range of current business practices, while minimizing the harmful impact of conflicts of interest on the quality of advice.

In particular, the Department is proposing a new exemption (the "Best Interest Contract Exemption") that would provide conditional relief for common compensation, such as commissions and revenue sharing, that an adviser and the adviser's employing firm might receive in connection with investment advice to retail retirement investors.[2] In order to protect the interests of plans, participants and beneficiaries, and IRA owners, the exemption requires the firm and the adviser to contractually acknowledge fiduciary status, commit to adhere to basic standards of impartial conduct, adopt policies and procedures reasonably designed to minimize the harmful impact of conflicts of interest, and disclose basic information on their conflicts of interest and on the cost of their advice. Central to the exemption is the adviser and firm's agreement to meet fundamental obligations of fair dealing and fiduciary conduct—to give advice that is in the customer's best interest; avoid misleading statements; receive no more than reasonable compensation; and comply with applicable federal and state laws governing advice. This principles-based approach aligns the adviser's interests with those of the plan participant or IRA owner, while leaving the adviser and employing firm with the flexibility and discretion necessary to determine how best to satisfy these basic standards in light of the unique attributes of their business. The Department is similarly proposing to amend existing exemptions for a wide range of fiduciary advisers to ensure adherence to these basic standards of fiduciary conduct. In addition, the Department is proposing a new exemption for "principal transactions" in which advisers sell certain debt securities to plans and IRAs out of their own inventory, as well as an amendment to an existing exemption that would permit advisers to receive compensation for extending credit to plans or IRAs to avoid failed securities transactions. In addition to the Best Interest Contract Exemption, the Department is also seeking public comment on whether it should issue a separate streamlined exemption that would allow advisers to receive otherwise prohibited compensation in connection with plan, participant and beneficiary accounts, and IRA investments in certain high-quality low-fee investments, subject to fewer conditions. This is discussed in greater detail in the **Federal Register** notice related to the proposed Best Interest Contract Exemption.

This broad regulatory package aims to enable advisers and their firms to give advice that is in the best interest of their customers, without disrupting common compensation arrangements under conditions designed to ensure the adviser is acting in the best interest of the advice recipient. The proposed new exemptions and amendments to existing exemptions are published elsewhere in today's edition of the **Federal Register**.

B. Summary of the Major Provisions of the Proposed Rule

The proposed rule clarifies and rationalizes the definition of fiduciary investment advice subject to specific carve-outs for particular types of communications that are best understood as non-fiduciary in nature. Under the definition, a person renders investment advice by (1) providing investment or investment management recommendations or appraisals to an employee benefit plan, a plan fiduciary, participant or beneficiary, or an IRA owner or fiduciary, and (2) either (a) acknowledging the fiduciary nature of the advice, or (b) acting pursuant to an agreement, arrangement, or understanding with the advice recipient that the advice is individualized to, or specifically directed to, the recipient for consideration in making investment or management decisions regarding plan assets. When such advice is provided for a fee or other compensation, direct or indirect, the person giving the advice is a fiduciary.

Although the new general definition of investment advice avoids the weaknesses of the current regulation, standing alone it could sweep in some relationships that are not appropriately regarded as fiduciary in nature and that the Department does not believe Congress intended to cover as fiduciary relationships. Accordingly, the proposed regulation includes a number of specific carve-outs to the general definition. For example, the regulation draws an important distinction between fiduciary investment advice and non-fiduciary investment or retirement education. Similarly, under the "seller's carve-out,"[3] the proposal would not treat as fiduciary advice recommendations made to a plan in an arm's length transaction where there is generally no expectation of fiduciary investment advice, provided that the carve-out's specific conditions are met. In addition, the proposal includes specific carve-outs for advice rendered by employees of the plan sponsor, platform providers, and persons who offer or enter into swaps or security-based swaps with plans. All of the rule's carve-outs are subject to conditions designed to draw an appropriate line between fiduciary and non-fiduciary communications, consistent with the text and purpose of the statutory provisions.

Finally, in addition to the new proposal in this Notice, the Department is simultaneously proposing a new Best Interest Contract Exemption, revising other exemptions from the prohibited transaction rules of ERISA and the Code and is exploring through a request for comments the concept of an additional low-fee exemption.

[2] For purposes of the exemption, retail investors include (1) the participants and beneficiaries of participant-directed plans, (2) IRA owners, and (3) the sponsors (including employees, officers, or directors thereof) of non participant-directed plans with fewer than 100 participants to the extent the sponsors (including employees, officers, or directors thereof) act as a fiduciary with respect to plan investment decisions.

[3] Although referred to herein as the "seller's carve-out," we note that the carve-out provided in paragraph (b)(1)(i) of the proposal is not limited to sales and would apply to incidental advice provided in connection with an arm's length sale, purchase, loan, or bilateral contract between a plan investor with financial expertise and the adviser.

C. Gains to Investors and Compliance Costs

When the Department promulgated the 1975 rule, 401(k) plans did not exist, IRAs had only just been authorized, and the majority of retirement plan assets were managed by professionals, rather than directed by individual investors. Today, individual retirement investors have much greater responsibility for directing their own investments, but they seldom have the training or specialized expertise necessary to prudently manage retirement assets on their own. As a result, they often depend on investment advice for guidance on how to manage their savings to achieve a secure retirement. In the current marketplace for retirement investment advice, however, advisers commonly have direct and substantial conflicts of interest, which encourage investment recommendations that generate higher fees for the advisers at the expense of their customers and often result in lower returns for customers even before fees.

A wide body of economic evidence supports a finding that the impact of these conflicts of interest on retirement investment outcomes is large and, from the perspective of advice recipients, negative. As detailed in the Department's Regulatory Impact Analysis (available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf*), the supporting evidence includes, among other things, statistical analyses of conflicted investment channels, experimental studies, government reports documenting abuse, and basic economic theory on the dangers posed by conflicts of interest and by the asymmetries of information and expertise that characterize interactions between ordinary retirement investors and conflicted advisers. This evidence takes into account existing protections under ERISA as well as other federal and state laws. A review of this data, which consistently points to substantial failures in the market for retirement advice, suggests that IRA holders receiving conflicted investment advice can expect their investments to underperform by an average of 100 basis points per year over the next 20 years. The underperformance associated with conflicts of interest—in the mutual funds segment alone—could cost IRA investors more than $210 billion over the next 10 years and nearly $500 billion over the next 20 years. Some studies suggest that the underperformance of broker-sold mutual funds may be even higher than 100 basis points, possibly due to loads that are taken off the top and/or poor timing of broker sold investments. If the true underperformance of broker-sold funds is 200 basis points, IRA mutual fund holders could suffer from underperformance amounting to $430 billion over 10 years and nearly $1 trillion across the next 20 years. While the estimates based on the mutual fund market are large, the total market impact could be much larger. Insurance products, Exchange Traded Funds (ETFs), individual stocks and bonds, and other products are all sold by agents and brokers with conflicts of interest.

The Department expects the proposal would deliver large gains for retirement investors. Because of data constraints, only some of these gains can be quantified with confidence. Focusing only on how load shares paid to brokers affect the size of loads paid by IRA investors holding load funds and the returns they achieve, the Department estimates the proposal would deliver to IRA investors gains of between $40 billion and $44 billion over 10 years and between $88 billion and $100 billion over 20 years. These estimates assume that the rule would eliminate (rather than just reduce) underperformance associated with the practice of incentivizing broker recommendations through variable front-end-load sharing; if the rule's effectiveness in this area is substantially below 100 percent, these estimates may overstate these particular gains to investors in the front-load mutual fund segment of the IRA market. The Department nonetheless believes that these gains alone would far exceed the proposal's compliance cost. For example, if only 75 percent of anticipated gains were realized, the quantified subset of such gains—specific to the front-load mutual fund segment of the IRA market—would amount to between $30 billion and $33 billion over 10 years. If only 50 percent were realized, this subset of expected gains would total between $20 billion and $22 billion over 10 years, or several times the proposal's estimated compliance cost of $2.4 billion to 5.7 billion over the same 10 years. These gain estimates also exclude additional potential gains to investors resulting from reducing or eliminating the effects of conflicts in financial products other than front-end-load mutual funds. The Department invites input that would make it possible to quantify the magnitude of the rule's effectiveness and of any additional, not-yet-quantified gains for investors.

These estimates account for only a fraction of potential conflicts, associated losses, and affected retirement assets. The total gains to IRA investors attributable to the rule may be much higher than these quantified gains alone for several reasons. The Department expects the proposal to yield large, additional gains for IRA investors, including potential reductions in excessive trading and associated transaction costs and timing errors (such as might be associated with return chasing), improvements in the performance of IRA investments other than front-load mutual funds, and improvements in the performance of defined contribution (DC) plan investments. As noted above, under current rules, adviser conflicts could cost IRA investors as much as $410 billion over 10 years and $1 trillion over 20 years, so the potential additional gains to IRA investors from this proposal could be very large.

The following accounting table summarizes the Department's conclusions:

TABLE 1—PARTIAL GAINS TO INVESTORS AND COMPLIANCE COSTS ACCOUNTING TABLE

Category	Primary estimate	Low estimate	High estimate	Year dollar	Discount rate (9%)	Period covered
Partial Gains to Investors						
Annualized, Monetized ($millions/year)	$4,243	$3,830		2015	7	2017–2026
	$5,170	4,666		2015	3	2017–2026

TABLE 1—PARTIAL GAINS TO INVESTORS AND COMPLIANCE COSTS ACCOUNTING TABLE—Continued

Category	Primary estimate	Low estimate	High estimate	Year dollar	Discount rate (9%)	Period covered
Notes: The proposal is expected to deliver large gains for retirement investors. Because of limitations of the literature and other available evidence, only some of these gains can be quantified. The estimates in this table focus only on how load shares paid to brokers affect the size of loads IRA investors holding load funds pay and the returns they achieve. These estimates assume that the rule will eliminate (rather than just reduce) underperformance associated with the practice of incentivizing broker recommendations through variable front-end-load sharing. If, however, the rule's effectiveness in reducing underperformance is substantially below 100 percent, these estimates may overstate these particular gains to investors in the front-end-load mutual fund segment of the IRA market. However, these estimates account for only a fraction of potential conflicts, associated losses, and affected retirement assets. The total gains to IRA investors attributable to the rule may be higher than the quantified gains alone for several reasons. For example, the proposal is expected to yield additional gains for IRA investors, including potential reductions in excessive trading and associated transaction costs and timing errors (such as might be associated with return chasing), improvements in the performance of IRA investments other than front-load mutual funds, and improvements in the performance of DC plan investments. The partial-gains-to-investors estimates include both economic efficiency benefits and transfers from the financial services industry to IRA holders. The partial gains estimates are discounted to December 31, 2015.						
Compliance Costs						
Annualized, Monetized ($millions/year)	$348 328		$706 664	2015 2015	7 3	2016–2025 2016–2025
Notes: The compliance costs of the current proposal including the cost of compliance reviews, comprehensive compliance and supervisory system changes, policies and procedures and training programs updates, insurance increases, disclosure preparation and distribution, and some costs of changes in other business practices. Compliance costs incurred by mutual funds or other asset providers have not been estimated.						
Insurance Premium Transfers						
Annualized Monetized ($millions/year)	$63 63			2015 2015	7 3	2016–2025 2016–2025
From/To	From: Service providers facing increased insurance premiums due to increased liability risk			To: Plans, participants, beneficiaries, and IRA investors through the payment of recoveries—funded from a portion of the increased insurance premiums		

OMB Circular A–4 requires the presentation of a social welfare accounting table that summarizes a regulation's benefits, costs and transfers (monetized, where possible). A summary of this type would differ from and expand upon Table I in several ways:

• In the language of social welfare economics as reflected in Circular A–4, investor gains comprise two parts: Social welfare "benefits" attributable to improvements in economic efficiency and "transfers" of welfare to retirement investors from the financial services industry. Due to limitations of the literature and other available evidence, the investor gains estimates presented in Table I have not been broken down into benefits and transfer components, but making the distinction between these categories of impacts is key for a social welfare accounting statement.

• The estimates in Table I reflect only a subset of the gains to investors resulting from the rule, but may overstate this subset. As noted in Table I, the Department's estimates of partial gains to investors reflect an assumption that the rule will eliminate, rather than just reduce, underperformance associated with the practice of incentivizing broker recommendations through variable front-end-load sharing. If, however, the rule's effectiveness is substantially below 100 percent, these estimates would overstate these partial gains to investors in the front-load mutual fund segment of the IRA market. The estimates in Table I also exclude additional potential gains to investors resulting from reducing or eliminating the effects of conflicts in financial products other than front-end-load mutual funds in the IRA market, and all potential gains to investors in the plan market. The Department invites input that would make it possible to quantify the magnitude of the rule's effectiveness and of any additional, not-yet-quantified gains for investors.

• Generally, the gains to investors consist of multiple parts: Transfers to IRA investors from advisers and others in the supply chain, benefits to the overall economy from a shift in the allocation of investment dollars to projects that have higher returns, and resource savings associated with, for example, reductions in excessive turnover and wasteful and unsuccessful efforts to outperform the market. Some of these gains are partially quantified in Table I. Also, the estimates in Table I assume the gains to investors arise gradually as the fraction of wealth invested based on conflicted investment advice slowly declines over time based on historical patterns of asset turnover. However, the estimates do not account for potential transition costs associated with a shift of investments to higher-performing vehicles. These transition costs have not been quantified due to lack of granularity in the literature or availability of other evidence on both the portion of investor gains that consists of resource savings, as opposed to transfers, and the amount of transitional cost that would be incurred per unit of resource savings.

• Other categories of costs not yet quantified include compliance costs incurred by mutual funds or other asset providers. Enforcement costs or other costs borne by the government are also not quantified.

The Department requests detailed comment, data, and analysis on all of the issues outlined above for incorporation into the social welfare analysis at the finalization stage of the rulemaking process.

For a detailed discussion of the gains to investors and compliance costs of the current proposal, please see Section J. Regulatory Impact Analysis, below.

II. Overview

A. Rulemaking Background

The market for retirement advice has changed dramatically since the Department first promulgated the 1975 regulation. Individuals, rather than large employers and professional money managers, have become increasingly responsible for managing retirement assets as IRAs and participant-directed plans, such as 401(k) plans, have supplanted defined benefit pensions. At the same time, the variety and complexity of financial products have increased, widening the information gap between advisers and their clients. Plan fiduciaries, plan participants and IRA investors must often rely on experts for advice, but are unable to assess the quality of the expert's advice or effectively guard against the adviser's conflicts of interest. This challenge is especially true of small retail investors who typically do not have financial expertise and can ill-afford lower returns to their retirement savings caused by conflicts. As baby boomers retire, they are increasingly moving money from ERISA-covered plans, where their employer has both the incentive and the fiduciary duty to facilitate sound investment choices, to IRAs where both good and bad investment choices are myriad and advice that is conflicted is commonplace. Such "rollovers" will total more than $2 trillion over the next 5 years. These trends were not apparent when the Department promulgated the 1975 rule. At that time, 401(k) plans did not yet exist and IRAs had only just been authorized. These changes in the marketplace, as well as the Department's experience with the rule since 1975, support the Department's efforts to reevaluate and revise the rule through a public process of notice and comment rulemaking.

On October 22, 2010, the Department published a proposed rule in the **Federal Register** (75 FR 65263) (2010 Proposal) proposing to amend 29 CFR 2510.3–21(c) (40 FR 50843, Oct. 31, 1975), which defines when a person renders investment advice to an employee benefit plan, and consequently acts as a fiduciary under ERISA section 3(21)(A)(ii) (29 U.S.C. 1002(21)(A)(ii)). In response to this proposal, the Department received over 300 comment letters. A public hearing on the 2010 Proposal was held in Washington, DC on March 1 and 2, 2011, at which 38 speakers testified. The transcript of the hearing was made available for additional public comment and the Department received over 60 additional comment letters. In addition, the Department has held many meetings with interested parties.

A number of commenters urged consideration of other means to attain the objectives of the 2010 Proposal and of additional analysis of the proposal's expected costs and benefits. In light of these comments and because of the significance of this rule, the Department decided to issue a new proposed regulation. On September 19, 2011 the Department announced that it would withdraw the 2010 Proposal and propose a new rule defining the term "fiduciary" for purposes of section 3(21)(A)(ii) of ERISA. This document fulfills that announcement in publishing both a new proposed regulation and withdrawing the 2010 Proposal. Consistent with the President's Executive Orders 12866 and 13563, extending the rulemaking process will give the public a full opportunity to evaluate and comment on the revised proposal and updated economic analysis. In addition, we are simultaneously publishing proposed new and amended exemptions from ERISA and the Code's prohibited transaction rules designed to allow certain broker-dealers, insurance agents and others that act as investment advice fiduciaries to nevertheless continue to receive common forms of compensation that would otherwise be prohibited, subject to appropriate safeguards. The existing class exemptions will otherwise remain in place, affording flexibility to fiduciaries who currently use the exemptions or who wish to use the exemptions in the future. The proposed new regulatory package takes into account robust public comment and input and represents a substantial change from the 2010 Proposal, balancing long overdue consumer protections with flexibility for the industry in order to minimize disruptions to current business models.

In crafting the current regulatory package, the Department has benefitted from the views and perspectives expressed in public comments to the 2010 Proposal. For example, the Department has responded to concerns about the impact of the prohibited transaction rules on the marketplace for retail advice by proposing a broad package of exemptions that are intended to ensure that advisers and their firms make recommendations that are in the best interest of plan participants and IRA owners, without disrupting common fee arrangements. In response to commenters, the Department has also determined not to include, as fiduciary in nature, appraisals or valuations of employer securities provided to ESOPs or to certain collective investment funds holding assets of plan investors. On a more technical point, the Department also followed recommendations that it not automatically assign fiduciary status to investment advisers under the Advisers Act, but instead follow an entirely functional approach to fiduciary status. In light of public comments, the new proposal also makes a number of other changes to the regulatory proposal. For example, the Department has addressed concerns that it could be misread to extend fiduciary status to persons that prepare newsletters, television commentaries, or conference speeches that contain recommendations made to the general public. Similarly, the rule makes clear that fiduciary status does not extend to internal company personnel who give advice on behalf of their plan sponsor as part of their duties, but receive no compensation beyond their salary for the provision of advice. The Department is appreciative of the comments it received to the 2010 Proposal, and more fully discusses a number of the comments that influenced change in the sections that follow. In addition, the Department is eager to receive comments on the new proposal in general, and requests public comment on a number of specific aspects of the package as indicated below.

The following discussion summarizes the 2010 Proposal, describes some of the concerns and issues raised by commenters, and explains the new proposed regulation, which is published with this notice.

B. The Statute and Existing Regulation

ERISA (or the "Act") is a comprehensive statute designed to protect the interests of plan participants and beneficiaries, the integrity of employee benefit plans, and the security of retirement, health, and other critical benefits. The broad public interest in ERISA-covered plans is reflected in the Act's imposition of stringent fiduciary responsibilities on parties engaging in important plan activities, as well as in the tax-favored status of plan assets and investments. One of the chief ways in which ERISA protects employee benefit plans is by requiring that plan fiduciaries comply with fundamental obligations rooted in the law of trusts. In particular, plan fiduciaries must manage plan assets prudently and with undivided loyalty to the plans and their participants and beneficiaries.[4] In addition, they must refrain from

[4] ERISA section 404(a).

engaging in "prohibited transactions," which the Act does not permit because of the dangers to the interests of the plan and IRA posed by the transactions.[5] When fiduciaries violate ERISA's fiduciary duties or the prohibited transaction rules, they may be held personally liable for any losses to the investor resulting from the breach.[6] In addition, violations of the prohibited transaction rules are subject to excise taxes under the Code.

The Code also protects individuals who save for retirement through tax-favored accounts that are not generally covered by ERISA, such as IRAs, through a more limited regulation of fiduciary conduct. Although ERISA's general fiduciary obligations of prudence and loyalty do not govern the fiduciaries of IRAs and other plans not covered by ERISA, these fiduciaries are subject to the prohibited transaction rules of the Code. In this context, however, the sole statutory sanction for engaging in the illegal transactions is the assessment of an excise tax enforced by the Internal Revenue Service (IRS). Thus, unlike participants in plans covered by Title I of ERISA, IRA owners do not have a statutory right to bring suit against fiduciaries under ERISA for violation of the prohibited transaction rules and fiduciaries are not personally liable to IRA owners for the losses caused by their misconduct.

Under this statutory framework, the determination of who is a "fiduciary" is of central importance. Many of ERISA's and the Code's protections, duties, and liabilities hinge on fiduciary status. In relevant part, section 3(21)(A) of ERISA provides that a person is a fiduciary with respect to a plan to the extent he or she (i) exercises any discretionary authority or discretionary control with respect to management of such plan or exercises any authority or control with respect to management or disposition of its assets; (ii) renders investment advice for a fee or other compensation, direct or indirect, with respect to any moneys or other property of such plan, or has any authority or responsibility to do so; or, (iii) has any discretionary authority or discretionary responsibility in the administration of such plan. Section 4975(e)(3) of the IRC identically defines "fiduciary" for purposes of the prohibited transaction rules set forth in Code section 4975.

The statutory definition contained in section 3(21)(A) deliberately casts a wide net in assigning fiduciary responsibility with respect to plan assets. Thus, "any authority or control" over plan assets is sufficient to confer fiduciary status, and any person who renders "investment advice for a fee or other compensation, direct or indirect" is an investment advice fiduciary, regardless of whether they have direct control over the plan's assets, and regardless of their status as an investment adviser and/or broker under the federal securities laws. The statutory definition and associated fiduciary responsibilities were enacted to ensure that plans can depend on persons who provide investment advice for a fee to make recommendations that are prudent, loyal, and untainted by conflicts of interest. In the absence of fiduciary status, persons who provide investment advice would neither be subject to ERISA's fundamental fiduciary standards, nor accountable under ERISA or the Code for imprudent, disloyal, or tainted advice, no matter how egregious the misconduct or how substantial the losses. Plans, individual participants and beneficiaries, and IRA owners often are not financial experts and consequently must rely on professional advice to make critical investment decisions. The statutory definition, prohibitions on conflicts of interest, and core fiduciary obligations of prudence and loyalty, all reflect Congress' recognition in 1974 of the fundamental importance of such advice to protect savers' retirement nest eggs. In the years since then, the significance of financial advice has become still greater with increased reliance on participant-directed plans and self-directed IRAs for the provision of retirement benefits.

In 1975, the Department issued a regulation, at 29 CFR 2510.3–21(c) defining the circumstances under which a person is treated as providing "investment advice" to an employee benefit plan within the meaning of section 3(21)(A)(ii) of ERISA (the "1975 regulation"), and the Department of the Treasury issued a virtually identical regulation under the Code.[7] The regulation narrowed the scope of the statutory definition of fiduciary investment advice by creating a five-part test that must be satisfied before a person can be treated as rendering investment advice for a fee. Under the regulation, for advice to constitute "investment advice," an adviser who is not a fiduciary under another provision of the statute must—(1) render advice as to the value of securities or other property, or make recommendations as to the advisability of investing in, purchasing or selling securities or other property (2) on a regular basis (3) pursuant to a mutual agreement, arrangement or understanding, with the plan or a plan fiduciary that (4) the advice will serve as a primary basis for investment decisions with respect to plan assets, and that (5) the advice will be individualized based on the particular needs of the plan or IRA. The regulation provides that an adviser is a fiduciary with respect to any particular instance of advice only if he or she meets each and every element of the five-part test with respect to the particular advice recipient or plan at issue.

As the marketplace for financial services has developed in the years since 1975, the five-part test may now undermine, rather than promote, the statutes' text and purposes. The narrowness of the 1975 regulation allows advisers, brokers, consultants and valuation firms to play a central role in shaping plan and IRA investments, without ensuring the accountability that Congress intended for persons having such influence and responsibility. Even when plan sponsors, participants, beneficiaries, and IRA owners clearly rely on paid advisers for impartial guidance, the regulation allows many advisers to avoid fiduciary status and disregard ERISA's fiduciary obligations of care and prohibitions on disloyal and conflicted transactions. As a consequence, these advisers can steer customers to investments based on their own self-interest (*e.g.*, products that generate higher fees for the adviser even if there are identical lower-fee products available), give imprudent advice, and engage in transactions that would otherwise not be permitted by ERISA and the Code without fear of accountability under either ERISA or the Code.

Instead of ensuring that trusted advisers give prudent and unbiased advice in accordance with fiduciary norms, the current regulation erects a multi-part series of technical impediments to fiduciary responsibility. The Department is concerned that the specific elements of the five-part test—which are not found in the text of the Act or Code—now work to frustrate statutory goals and defeat advice recipients' legitimate expectations. In

[5] ERISA section 406. The Act also prohibits certain transactions between a plan and a "party in interest."

[6] ERISA section 409; *see also* ERISA section 405.

[7] See 26 CFR 54.4975–9(c), which interprets Code section 4975(e)(3). 40 FR 50840 (Oct. 31, 1975). Under section 102 of Reorganization Plan No. 4 of 1978, the authority of the Secretary of the Treasury to interpret section 4975 of the Code has been transferred, with certain exceptions not here relevant, to the Secretary of Labor. References in this document to sections of ERISA should be read to refer also to the corresponding sections of the Code.

light of the importance of the proper management of plan and IRA assets, it is critical that the regulation defining investment advice draws appropriate distinctions between the sorts of advice relationships that should be treated as fiduciary in nature and those that should not. In practice, the current regulation appears not to do so. Instead, the lines drawn by the five-part test frequently permit evasion of fiduciary status and responsibility in ways that undermine the statutory text and purposes.

One example of the five-part test's shortcomings is the requirement that advice be furnished on a "regular basis." As a result of the requirement, if a small plan hires an investment professional or appraiser on a one-time basis for an investment recommendation or valuation opinion on a large, complex investment, the adviser has no fiduciary obligation to the plan under ERISA. Even if the plan is considering investing all or substantially all of the plan's assets, lacks the specialized expertise necessary to evaluate the complex transaction on its own, and the consultant fully understands the plan's dependence on his professional judgment, the consultant is not a fiduciary because he does not advise the plan on a "regular basis." The plan could be investing hundreds of millions of dollars in plan assets, and it could be the most critical investment decision the plan ever makes, but the adviser would have no fiduciary responsibility under the 1975 regulation. While a consultant who regularly makes less significant investment recommendations to the plan would be a fiduciary if he satisfies the other four prongs of the regulatory test, the one-time consultant on an enormous transaction has no fiduciary responsibility.

In such cases, the "regular basis" requirement, which is not found in the text of ERISA or the Code, fails to draw a sensible line between fiduciary and non-fiduciary conduct, and undermines the law's protective purposes. A specific example is the one-time purchase of a group annuity to cover all of the benefits promised to substantially all of a plan's participants for the rest of their lives when a defined benefit plan terminates or a plan's expenditure of hundreds of millions of dollars on a single real estate transaction with the assistance of a financial adviser hired for purposes of that one transaction. Despite the clear importance of the decisions and the clear reliance on paid advisers, the advisers would not be plan fiduciaries. On a smaller scale that is still immensely important for the affected individual, the "regular basis" requirement also deprives individual participants and IRA owners of statutory protection when they seek specialized advice on a one-time basis, even if the advice concerns the investment of all or substantially all of the assets held in their account (*e.g.*, as in the case of an annuity purchase or a roll-over from a plan to an IRA or from one IRA to another).

Under the five-part test, fiduciary status can also be defeated by arguing that the parties did not have a *mutual* agreement, arrangement, or understanding that the advice would serve as a *primary basis* for investment decisions. Investment professionals in today's marketplace frequently market retirement investment services in ways that clearly suggest the provision of tailored or individualized advice, while at the same time disclaiming in fine print the requisite "mutual" understanding that the advice will be used as a primary basis for investment decisions.

Similarly, there appears to be a widespread belief among broker-dealers that they are not fiduciaries with respect to plans or IRAs because they do not hold themselves out as registered investment advisers, even though they often market their services as financial or retirement planners. The import of such disclaimers—and of the fine legal distinctions between brokers and registered investment advisers—is often completely lost on plan participants and IRA owners who receive investment advice. As shown in a study conducted by the RAND Institute for Civil Justice for the Securities and Exchange Commission (SEC), consumers often do not read the legal documents and do not understand the difference between brokers and registered investment advisers particularly when brokers adopt such titles as "financial adviser" and "financial manager." [8]

Even in the absence of boilerplate fine print disclaimers, however, it is far from evident how the "primary basis" element of the five-part test promotes the statutory text or purposes of ERISA and the Code. If, for example, a plan hires multiple specialized advisers for an especially complex transaction, it should be able to rely upon all of the consultants' advice, regardless of whether one could characterize any particular consultant's advice as primary, secondary, or tertiary. Presumably, paid consultants make recommendations—and retirement investors pay for them—with the hope or expectation that the recommendations could, in fact, be relied upon in making important decisions. When a plan, participant, beneficiary, or IRA owner directly or indirectly pays for advice upon which it can rely, there appears to be little statutory basis for drawing distinctions based on a subjective characterization of the advice as "primary," "secondary," or other.

In other respects, the current regulatory definition could also benefit from clarification. For example, a number of parties have argued that the regulation, as currently drafted, does not encompass advice as to the selection of money managers or mutual funds. Similarly, they have argued that the regulation does not cover advice given to the managers of pooled investment vehicles that hold plan assets contributed by many plans, as opposed to advice given to particular plans. Parties have even argued that advice was insufficiently "individualized" to fall within the scope of the regulation because the advice provider had failed to prudently consider the "particular needs of the plan," notwithstanding the fact that both the advice provider and the plan agreed that individualized advice based on the plan's needs would be provided, and the adviser actually made specific investment recommendations to the plan. Although the Department disagrees with each of these interpretations of the current regulation, the arguments nevertheless suggest that clarifying regulatory text could be helpful.

Changes in the financial marketplace have enlarged the gap between the 1975 regulation's effect and the Congressional intent of the statutory definition. The greatest change is the predominance of individual account plans, many of which require participants to make investment decisions for their own accounts. In 1975, private-sector defined benefit pensions—mostly large, professionally managed funds—covered over 27 million active participants and held assets totaling almost $186 billion. This compared with just 11 million active participants in individual account defined contribution plans with assets of just $74 billion.[9] Moreover, the great majority of defined contribution plans at that time were professionally

[9] U.S. Department of Labor, *Private Pension Plan Bulletin Historical Tables and Graphs*, (Dec. 2014), at *http://www.dol.gov/ebsa/pdf/historicaltables.pdf*.

managed, not participant-directed. In 1975, 401(k) plans did not yet exist and IRAs had just been authorized as part of ERISA's enactment the prior year. In contrast, by 2012 defined benefit plans covered just under 16 million active participants, while individual account-based defined contribution plans covered over 68 million active participants— including 63 million participants in 401(k)-type plans that are participant-directed.[10]

With this transformation, plan participants, beneficiaries and IRA owners have become major consumers of investment advice that is paid for directly or indirectly. By 2012, 97 percent of 401(k) participants were responsible for directing the investment of all or part of their own account, up from 86 percent as recently as 1999.[11] Also, in 2013, more than 34 million households owned IRAs.[12]

Many of the consultants and advisers who provide investment-related advice and recommendations receive compensation from the financial institutions whose investment products they recommend. This gives the consultants and advisers a strong bias, conscious or unconscious, to favor investments that provide them greater compensation rather than those that may be most appropriate for the participants. Unless they are fiduciaries, however, these consultants and advisers are free under ERISA and the Code, not only to receive such conflicted compensation, but also to act on their conflicts of interest to the detriment of their customers. In addition, plans, participants, beneficiaries, and IRA owners now have a much greater variety of investments to choose from, creating a greater need for expert advice. Consolidation of the financial services industry and innovations in compensation arrangements have multiplied the opportunities for self-dealing and reduced the transparency of fees.

The absence of adequate fiduciary protections and safeguards is especially problematic in light of the growth of participant-directed plans and self-directed IRAs; the gap in expertise and information between advisers and the customers who depend upon them for guidance; and the advisers' significant conflicts of interest.

When Congress enacted ERISA in 1974, it made a judgment that plan advisers should be subject to ERISA's fiduciary regime and that plan participants, beneficiaries and IRA owners should be protected from conflicted transactions by the prohibited transaction rules. More fundamentally, however, the statutory language was designed to cover a much broader category of persons who provide fiduciary investment advice based on their functions and to limit their ability to engage in self-dealing and other conflicts of interest than is currently reflected in the five-part test. While many advisers are committed to providing high-quality advice and always put their customers' best interests first, the 1975 regulation makes it far too easy for advisers in today's marketplace not to do so and to avoid fiduciary responsibility even when they clearly purport to give individualized advice and to act in the client's best interest, rather than their own.

C. The 2010 Proposal

In 2010, the Department proposed a new regulation that would have replaced the five-part test with a new definition of what counted as fiduciary investment advice for a fee. At that time, the Department did not propose any new prohibited transaction exemptions and acknowledged uncertainty regarding whether existing exemptions would be available, but specifically invited comments on whether new or amended exemptions should be proposed. The proposal also provided carve-outs for conduct that would not result in fiduciary status. The general definition included the following types of advice: (1) Appraisals or fairness opinions concerning the value of securities or other property; (2) recommendations as to the advisability of investing in, purchasing, holding or selling securities or other property; and (3) recommendations as to the management of securities or other property. Reflecting the Department's longstanding interpretation of the 1975 regulations, the 2010 Proposal made clear that investment advice under the proposal includes advice provided to plan participants, beneficiaries and IRA owners as well as to plan fiduciaries.

Under the 2010 Proposal, a paid adviser would have been treated as a fiduciary if the adviser provided one of the above types of advice and either: (1) Represented that he or she was acting as an ERISA fiduciary; (2) was already an ERISA fiduciary to the plan by virtue of having control over the management or disposition of plan assets, or by having discretionary authority over the administration of the plan; (3) was already an investment adviser under the Investment Advisers Act of 1940 (Advisers Act); or (4) provided the advice pursuant to an agreement or understanding that the advice may be considered in connection with plan investment or asset management decisions and would be individualized to the needs of the plan, plan participant or beneficiary, or IRA owner. The 2010 Proposal also provided that, for purposes of the fiduciary definition, relevant fees included any direct or indirect fees received by the adviser or an affiliate from any source. Direct fees are payments made by the advice recipient to the adviser including transaction-based fees, such as brokerage, mutual fund or insurance sales commissions. Indirect fees are payments to the adviser from any source other than the advice recipient such as revenue sharing payments from a mutual fund.

The 2010 Proposal included specific carve-outs for the following actions that the Department believed should not result in fiduciary status. In particular, a person would not have become a fiduciary by—

1. Providing recommendations as a seller or purchaser with interests adverse to the plan, its participants, or IRA owners, if the advice recipient reasonably should have known that the adviser was not providing impartial investment advice and the adviser had not acknowledged fiduciary status.

2. Providing investment education information and materials in connection with an individual account plan.

3. Marketing or making available a menu of investment alternatives that a plan fiduciary could choose from, and providing general financial information to assist in selecting and monitoring those investments, if these activities include a written disclosure that the adviser was not providing impartial investment advice.

4. Preparing reports necessary to comply with ERISA, the Code, or regulations or forms issued thereunder, unless the report valued assets that lack a generally recognized market, or served as a basis for making plan distributions.

The 2010 Proposal applied to the definition of an "investment advice fiduciary" in section 4975(e)(3)(B) of the Code as well as to the parallel ERISA definition. These provisions apply to both certain ERISA covered plans, and certain non-ERISA plans such as individual retirement accounts.

[12] Brien, Michael J., and Constantijn W.A. Panis. Analysis of Financial Asset Holdings of Households on the United States: 2013 Update. Advanced Analytic Consulting Group and Deloitte, Report Prepared for the U.S. Department of Labor, 2014.

In the preamble to the 2010 Proposal, the Department also noted that it had previously interpreted the 1975 regulation as providing that a recommendation to a plan participant on how to invest the proceeds of a contemplated plan distribution was not fiduciary investment advice. Advisory Opinion 2005–23A (Dec. 7, 2005). The Department specifically asked for comments as to whether the final rule should include such recommendations as fiduciary advice.

The 2010 Proposal prompted a large number of comments and a vigorous debate. As noted above, the Department made special efforts to encourage the regulated community's participation in this rulemaking. In addition to an extended comment period, the Department held a two-day public hearing. Additional time for comments was allowed following the hearing and publication of the hearing transcript on the Department's Web site and Department representatives held numerous meetings with interested parties. Many of the comments concerned the Department's conclusions regarding the likely economic impact of the proposal, if adopted. A number of commenters urged the Department to undertake additional analysis of expected costs and benefits particularly with regard to the 2010 Proposal's coverage of IRAs. After consideration of these comments and in light of the significance of this rulemaking to the retirement plan service provider industry, plan sponsors and participants, beneficiaries and IRA owners, the Department decided to take more time for review and to issue a new proposed regulation for comment.

D. The New Proposal

The new proposed rule makes many revisions to the 2010 Proposal, although it also retains aspects of that proposal's essential framework. The new proposal broadly updates the definition of fiduciary investment advice, and also provides a series of carve-outs from the fiduciary investment advice definition for communications that should not be viewed as fiduciary in nature. The definition generally covers the following categories of advice: (1) Investment recommendations, (2) investment management recommendations, (3) appraisals of investments, or (4) recommendations of persons to provide investment advice for a fee or to manage plan assets. Persons who provide such advice fall within the general definition of a fiduciary if they either (a) represent that they are acting as a fiduciary under ERISA or the Code or (b) provide the advice pursuant to an agreement, arrangement, or understanding that the advice is individualized or specifically directed to the recipient for consideration in making investment or investment management decisions regarding plan assets.

The new proposal includes several carve-outs for persons who do not represent that they are acting as ERISA fiduciaries, some of which were included in some form in the 2010 Proposal but many of which were not. Subject to specified conditions, these carve-outs cover—

(1) Statements or recommendations made to a "large plan investor with financial expertise" by a counterparty acting in an arm's length transaction;

(2) offers or recommendations to plan fiduciaries of ERISA plans to enter into a swap or security-based swap that is regulated under the Securities Exchange Act or the Commodity Exchange Act;

(3) statements or recommendations provided to a plan fiduciary of an ERISA plan by an employee of the plan sponsor if the employee receives no fee beyond his or her normal compensation;

(4) marketing or making available a platform of investment alternatives to be selected by a plan fiduciary for an ERISA participant-directed individual account plan;

(5) the identification of investment alternatives that meet objective criteria specified by a plan fiduciary of an ERISA plan or the provision of objective financial data to such fiduciary;

(6) the provision of an appraisal, fairness opinion or a statement of value to an ESOP regarding employer securities, to a collective investment vehicle holding plan assets, or to a plan for meeting reporting and disclosure requirements; and

(7) information and materials that constitute "investment education" or "retirement education."

The new proposal applies the same definition of "investment advice" to the definition of "fiduciary" in section 4975(e)(3) of the Code and thus applies to investment advice rendered to IRAs. "Plan" is defined in the new proposal to mean any employee benefit plan described in section 3(3) of the Act and any plan described in section 4975(e)(1)(A) of the Code. For ease of reference in this proposal, the term "IRA" has been inclusively defined to mean any account described in Code section 4975(e)(1)(B) through (F), such as a true individual retirement account described under Code section 408(a) and a health savings account described in section 223(d) of the Code.[13]

Many of the differences between the new proposal and the 2010 Proposal reflect the input of commenters on the 2010 Proposal as part of the public notice and comment process. For example, some commenters argued that the 2010 Proposal swept too broadly by making investment recommendations fiduciary in nature simply because the adviser was a plan fiduciary for purposes unconnected with the advice or an investment adviser under the Advisers Act. In their view, such status-based criteria were in tension with the Act's functional approach to fiduciary status and would have resulted in unwarranted and unintended compliance issues and costs. Other commenters objected to the lack of a requirement for these status-based categories that the advice be individualized to the needs of the advice recipient. The new proposal incorporates these suggestions: An adviser's status as an investment adviser under the Advisers Act or as an ERISA fiduciary for reasons unrelated to advice are no longer factors in the definition. In addition, unless the adviser represents that he or she is a fiduciary with respect to advice, the advice must be provided pursuant to an agreement, arrangement, or understanding that the advice is individualized or specifically directed to the recipient to be treated as fiduciary advice.

Furthermore, the carve-outs that treat certain conduct as non-fiduciary in nature have been modified, clarified, and expanded in response to comments. For example, the carve-out for certain valuations from the definition of fiduciary investment advice has been modified and expanded. Under the 2010 Proposal, appraisals and valuations for compliance with certain reporting and disclosure requirements were not treated as fiduciary advice. The new proposal additionally provides a carve-out from fiduciary treatment for appraisal and fairness opinions for ESOPs regarding employer securities. Although, the Department remains concerned about valuation advice concerning an ESOP's purchase of employer stock and about a plan's reliance on that advice, the Department has concluded that the concerns regarding valuations of closely held employer stock in ESOP transactions raise unique issues that are more

[13] As discussed below in Section E. Coverage of IRAs and Other Non-ERISA Plans, in recognition of differences among the various types of non-ERISA plan arrangements described in Code section 4975(e)(1)(B) through (F), the Department solicits comments on whether it is appropriate for the regulation to cover the full range of these arrangements. These non-ERISA plan arrangements are tax favored vehicles under the Code like IRAs, but are not intended for retirement savings.

appropriately addressed in a separate regulatory initiative. Additionally, the carve-out for valuations conducted for reporting and disclosure purposes has been expanded to include reporting and disclosure obligations outside of ERISA and the Code, and is applicable to both ERISA plans and IRAs. Many other modifications to the other carve-outs from fiduciary status, as well as new carve-outs and prohibited transaction exemptions, are described below in Section IV—"The Provisions of the New Proposal."

III. Coordination With Other Federal Agencies

Many comments to the 2010 rulemaking emphasized the need to harmonize the Department's efforts with rulemaking activities under the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. Law No. 111–203, 124 Stat. 1376 (2010), (Dodd-Frank Act), in particular, the Security and Exchange Commission's (SEC) standards of care for providing investment advice and the Commodity Futures Trading Commission's (CFTC) business conduct standards for swap dealers. While the 2010 Proposal discussed statutes over which the SEC and CFTC have jurisdiction, it did not specifically describe inter-agency coordination efforts. In addition, commenters questioned the adequacy of coordination with other agencies regarding IRA products and services. They argued that subjecting SEC-regulated investment advisers and broker-dealers to a special set of ERISA rules for plans and IRAs could lead to additional costs and complexities for individuals who may have several different types of accounts at the same financial institution some of which may be subject only to the SEC rules, and others of which may be subject to both SEC rules and new regulatory requirements under ERISA.

In the course of developing the new proposal and the related proposed prohibited transaction exemptions, the Department has consulted with staff of the SEC and other regulators on an ongoing basis regarding whether the proposals would subject investment advisers and broker-dealers who provide investment advice to requirements that create an undue compliance burden or conflict with their obligations under other federal laws. As part of this consultative process, SEC staff has provided technical assistance and information with respect to retail investors, the marketplace for investment advice and coordinating, to the extent possible, the agencies' separate regulatory provisions and responsibilities. As the Department moves forward with this project in accordance with the specific provisions of ERISA and the Code, it will continue to consult with staff of the SEC and other regulators on its proposals and their impact on retail investors and other regulatory regimes. One result of these discussions, particularly with staff of the CFTC and SEC, is the new provision at paragraph (b)(1)(ii) of the proposed regulations concerning counterparty transactions with swap dealers, major swap participants, security-based swap dealers, and major security-based swap participants. Under the terms of that paragraph, such persons would not be treated as ERISA fiduciaries merely because, when acting as counterparties to swap or security-based swap transactions, they give information and perform actions required for compliance with the requirements of the business conduct standards of the Dodd-Frank Act and its implementing regulations.

In pursuing these consultations, the Department has aimed to coordinate and minimize conflicting or duplicative provisions between ERISA, the Code and federal securities laws, to the extent possible. However, the governing statutes do not permit the Department to make the obligations of fiduciary investment advisers under ERISA and the Code identical to the duties of advice providers under the securities laws. ERISA and the Code establish consumer protections for some investment advice that does not fall within the ambit of federal securities laws, and vice versa. Even if each of the relevant agencies were to adopt an identical definition of "fiduciary", the legal consequences of the fiduciary designation would vary between agencies because of differences in the specific duties and remedies established by the different federal laws at issue. ERISA and the Code place special emphasis on the elimination or mitigation of conflicts of interest and adherence to substantive standards of conduct, as reflected in the prohibited transaction rules and ERISA's standards of fiduciary conduct. The specific duties imposed on fiduciaries by ERISA and the Code stem from legislative judgments on the best way to protect the public interest in tax-preferred benefit arrangements that are critical to workers' financial and physical health. The Department has taken great care to honor ERISA and the Code's specific text and purposes.

At the same time, the Department has worked hard to understand the impact of the proposed rule on firms subject to the securities laws and other federal laws, and to take the effects of those laws into account so as to appropriately calibrate the impact of the rule on those firms. The proposed regulation reflects these efforts. In the Department's view, it neither undermines, nor contradicts, the provisions or purposes of the securities laws, but instead works in harmony with them. The Department has coordinated—and will continue to coordinate—its efforts with other federal agencies to ensure that the various legal regimes are harmonized to the fullest extent possible.

The Department has also consulted with the Department of the Treasury and the IRS, particularly on the subject of IRAs. Although the Department has responsibility for issuing regulations and prohibited transaction exemptions under section 4975 of the Code, which applies to IRAs, the IRS maintains general responsibility for enforcing the tax laws. The IRS' responsibilities extend to the imposition of excise taxes on fiduciaries who participate in prohibited transactions.[14] As a result, the Department and the IRS share responsibility for combating self-dealing by fiduciary investment advisers to tax-qualified plans and IRAs. Paragraph (e) of the proposed regulation, in particular, recognizes this jurisdictional intersection.

When the Department announced that it would issue a new proposal, it stated that it would consider proposing new and/or amended prohibited transaction exemptions to address the concerns of commenters about the broader scope of the fiduciary definition and its impact on the fee practices of brokers and other advisers. Commenters had expressed concern about whether longstanding exemptions granted by the Department allowing advisers, despite their fiduciary status under ERISA, to receive commissions in connection with mutual funds, securities and insurance products would remain applicable under the new rule. As explained more fully below, the Department is simultaneously publishing in the notice section of today's **Federal Register** proposed prohibited transaction class exemptions to address these concerns. The Department believes that existing exemptions and these new proposed exemptions would preserve the ability to engage in common fee arrangements, while protecting plan participants, beneficiaries and IRA owners from abusive practices that may result from conflicts of interest.

The terms of these new exemptions are discussed in more detail below and in the preambles to the proposed

[14] Reorganization Plan No. 4 of 1978.

exemptions. While the exemptions differ in terms and coverage, each imposes a "best interest" standard on fiduciary investment advisers. Thus, for example, the Best Interest Contract Exemption requires the investment advice fiduciary and associated financial institution to expressly agree to provide advice that is in the "best interest" of the advice recipient. As proposed, the best interest standard is intended to mirror the duties of prudence and loyalty, as applied in the context of fiduciary investment advice under sections 404(a)(1)(A) and (B) of ERISA. Thus, the "best interest" standard is rooted in the longstanding trust-law duties of prudence and loyalty adopted in section 404 of ERISA and in the cases interpreting those standards.

Accordingly, the Best Interest Contract Exemption provides:

> Investment advice is in the "Best Interest" of the Retirement Investor when the Adviser and Financial Institution providing the advice act with the care, skill, prudence, and diligence under the circumstances then prevailing that a prudent person would exercise based on the investment objectives, risk tolerance, financial circumstances and needs of the Retirement Investor, without regard to the financial or other interests of the Adviser, Financial Institution, any Affiliate, Related Entity, or other party.

This "best interest" standard is not intended to add to or expand the ERISA section 404 standards of prudence and loyalty as they apply to the provision of investment advice to ERISA covered plans. Advisers to ERISA-covered plans are already required to adhere to the fundamental standards of prudence and loyalty, and can be held accountable for violations of the standards. Rather, the primary impact of the "best interest" standard is on the IRA market. Under the Code, advisers to IRAs are subject only to the prohibited transaction rules. Incorporating the best interest standard in the proposed Best Interest Contract Exemption effectively requires advisers to comply with these basic fiduciary standards as a condition of engaging in transactions that would otherwise be prohibited because of the conflicts of interest they create. Additionally, the exemption ensures that IRA owners and investors have a contract-based claim to hold their fiduciary advisers accountable if they violate these basic obligations of prudence and loyalty. As under current law, no private right of action under ERISA is available to IRA owners.

IV. The Provisions of the New Proposal

The new proposal would amend the definition of investment advice in 29 CFR 2510.3–21 (1975) of the regulation to replace the restrictive five-part test with a new definition that better comports with the statutory language in ERISA and the Code.[15] As explained below, the proposal accomplishes this by first describing the kinds of communications and relationships that would generally constitute fiduciary investment advice if the adviser receives a fee or other compensation. Rather than add additional elements that must be met in all instances, as under the current regulation, the proposal describes several specific types of advice or communications that would not be treated as investment advice. In the Department's view, this structure is faithful to the remedial purpose of the statute, but avoids burdening activities that do not implicate relationships of trust and expectations of impartiality.

A. Categories of Advice or Recommendations

Paragraph (a)(1) of the proposal sets forth the following types of advice, which, when provided in exchange for a fee or other compensation, whether directly or indirectly, and given under circumstances described in paragraph (a)(2), would be "investment advice" unless one of the carve-outs in paragraph (b) applies. The listed types of advice are—

(i) A recommendation as to the advisability of acquiring, holding, disposing of or exchanging securities or other property, including a recommendation to take a distribution of benefits or a recommendation as to the investment of securities or other property to be rolled over or otherwise distributed from the plan or IRA;

(ii) A recommendation as to the management of securities or other property, including recommendations as to the management of securities or other property to be rolled over or otherwise distributed from the plan or IRA;

(iii) An appraisal, fairness opinion, or similar statement whether verbal or written concerning the value of securities or other property if provided in connection with a specific transaction or transactions involving the acquisition, disposition, or exchange, of such securities or other property by the plan or IRA; or

(iv) A recommendation of a person who is also going to receive a fee or other compensation to provide any of the types of advice described in paragraphs (i) through (iii) above.

Except for the prong of the definition concerning appraisals and valuations discussed below, the proposal is structured so that communications must constitute a "recommendation" to fall within the scope of fiduciary investment advice. In that regard, as stated earlier in Section III concerning coordination with other Federal Agencies, the Department has consulted with staff of other agencies with rulemaking authority over investment advisers and broker-dealers. FINRA Policy Statement 01–23 sets forth guidelines to assist brokers in evaluating whether a particular communication could be viewed as a recommendation, thereby triggering application of FINRA's Rule 2111 that requires that a firm or associated person have a reasonable basis to believe that a recommended transaction or investment strategy involving a security or securities is suitable for the customer.[16] Although the regulatory context for the FINRA guidance is somewhat different, the Department believes that it provides useful standards and guideposts for distinguishing investment education from investment advice under ERISA. Accordingly, the Department specifically solicits comments on whether it should adopt some or all of the standards developed by FINRA in defining communications that rise to the level of a recommendation for purposes of distinguishing between investment education and investment advice under ERISA.

Additionally, as paragraph (d) of the proposal makes clear, the regulation does not treat the mere execution of a securities transaction at the direction of

[15] For purposes of readability, this proposed rulemaking republishes 29 CFR 2510.3–21 in its entirety, as revised, rather than only the specific amendments to this section. See 29 CFR 2510.3–21(d)—Execution of securities transactions.

[16] See also FINRA's Regulatory Notice 11–02, 12–25 and 12–55. Regulatory Notice 11–02 includes the following discussion:

> For instance, a communication's content, context and presentation are important aspects of the inquiry. The determination of whether a "recommendation" has been made, moreover, is an objective rather than subjective inquiry. An important factor in this regard is whether—given its content, context and manner of presentation—a particular communication from a firm or associated person to a customer reasonably would be viewed as a suggestion that the customer take action or refrain from taking action regarding a security or investment strategy. In addition, the more individually tailored the communication is to a particular customer or customers about a specific security or investment strategy, the more likely the communication will be viewed as a recommendation. Furthermore, a series of actions that may not constitute recommendations when viewed individually may amount to a recommendation when considered in the aggregate. It also makes no difference whether the communication was initiated by a person or a computer software program. These guiding principles, together with numerous litigated decisions and the facts and circumstances of any particular case, inform the determination of whether the communication is a recommendation for purposes of FINRA's suitability rule.

a plan or IRA owner as fiduciary activity. This paragraph remains unchanged from the 1975 regulation other than to update references to the proposal's structure. The definition's scope remains limited to advice relationships, as delineated in its text and does not impact merely administrative or ministerial activities necessary for a plan or IRA's functioning. It also does not apply to order taking where no advice is provided.

(1) Recommendations To Distribute Plan Assets

Paragraph (a)(1)(i) specifically includes recommendations concerning the investment of securities to be rolled over or otherwise distributed from the plan or IRA. Noting the Department's position in Advisory Opinion 2005–23A that it is not fiduciary advice to make a recommendation as to distribution options even if that is accompanied by a recommendation as to where the distribution would be invested, (Dec. 7, 2005), the 2010 Proposal did not include this type of advice, but the Department requested comments on whether it should be included in a final regulation. Some commenters stated that exclusion of this advice from the final rule would fail to protect participant accounts from conflicted advice in connection with one of the most significant financial decisions that participants make concerning retirement savings. Other commenters argued that including this advice would give rise to prohibited transactions that could disrupt the routine process that occurs when a worker leaves a job, contacts a financial services firm for help rolling over a 401(k) balance, and the firm explains the investments it offers and the benefits of a rollover.

The proposed regulation, if finalized, would supersede Advisory Opinion 2005–23A. Thus, recommendations to take distributions (and thereby withdraw assets from existing plan or IRA investments or roll over into a plan or IRA) or to entrust plan or IRA assets to particular money managers, advisers, or investments would fall within the scope of covered advice. However, as the proposal's text makes clear, one does not act as a fiduciary merely by providing participants with information about plan or IRA distribution options, including the consequences associated with the available types of benefit distributions. In this regard, the new proposal draws an important distinction between fiduciary investment advice and non-fiduciary investment information and educational materials. The Department believes that the proposal's treatment of such non-fiduciary educational and informational materials adequately covers the common types of distribution-related information that participants find useful, including information relating to annuitizations and other forms of lifetime income payment options, but welcomes input on other types of information that would help clarify the line between advice and education in this context.

(2) Recommendations as to the Management of Plan Investments

The preamble to the 2010 Proposal stated that the "management of securities or other property" would include advice and recommendations as to the exercise of rights appurtenant to shares of stock (*e.g.*, voting proxies). 75 FR 65266 (Oct. 22, 2010). The Department has long viewed the exercise of ownership rights as a fiduciary responsibility because of its material effect on plan investment goals. 29 CFR 2509.08–2 (2008). Consequently, individualized or specifically directed advice and recommendations on the exercise of proxy or other ownership rights are appropriately treated as fiduciary in nature. Accordingly, the proposed regulation's provision on advice regarding the management of securities or other property would continue to cover individualized advice or recommendations as to proxy voting and the management of retirement assets in paragraph (a)(1)(ii).

We received comments on the 2010 proposal seeking some clarification regarding its application to certain practices. In this regard, it is the Department's view that guidelines or other information on voting policies for proxies that are provided to a broad class of investors without regard to a client's individual interests or investment policy, and which are not directed or presented as a recommended policy for the plan or IRA to adopt, would not rise to the level of fiduciary investment advice under the proposal. Additionally, a recommendation addressed to all shareholders in a proxy statement would not result in fiduciary status on the part of the issuer of the statement or the person who distributes the proxy statement. These positions are clarified in the proposed regulation.

(3) Appraisals

The new proposal, like the current regulation which includes "advice as to the value of securities or other property," continues to cover certain appraisals and valuation reports. However, it is considerably more focused than the 2010 Proposal. Responding to comments, the proposal in paragraph (a)(1)(iii) covers only appraisals, fairness opinions, or similar statements that relate to a particular transaction. The Department also expanded the 2010 Proposal's carve-out for general reports or statements of value provided to satisfy required reporting and disclosure rules under ERISA or the Code. The carve-out in the 2010 proposal covered general reports or statements of value that merely reflected the value of an investment of a plan or a participant or beneficiary, and provided for purposes of compliance with the reporting and disclosure requirements of ERISA, the Code, and the regulations, forms and schedules issued thereunder, unless the reports involved assets for which there was not a generally recognized market and served as a basis on which a plan could make distributions to plan participants and beneficiaries. The carve-out was broadened in this proposal to includes valuations provided solely for purposes of compliance with the reporting and disclosure provisions under the Act, the Code, and the regulations, forms and schedules issued thereunder, or any applicable reporting or disclosure requirement under a Federal or state law, or rule or regulation or self-regulatory organization (*e.g.*, FINRA) without regard to the type of asset involved. In this manner, the new proposal focuses on instances where the plan or IRA owner is looking to the appraiser for advice on the market value of an asset that the investor is considering to acquire, dispose, or exchange. In many cases the most important investment advice that an investor receives is advice as to how much it can or should pay for hard-to-value assets. In response to comments, the proposal also contains an entirely new carve-out at paragraph (b)(5)(ii) specifically addressing valuations or appraisals provided to an investment fund (*e.g.*, collective investment fund or pooled separate account) holding assets of various investors in addition to at least one plan or IRA. Also, as mentioned, the Department has decided not to extend fiduciary coverage to valuations or appraisals for ESOPs relating to employer securities at this time because the Department has concluded that its concerns in this space raise unique issues that are more appropriately addressed in a separate regulatory initiative. The proposal's carve-outs do not apply, however, if the provider of the valuation represents or acknowledges that it is acting as a fiduciary with respect to the advice.

Some representatives of the appraisal industry submitted comments on the 2010 Proposal arguing that ERISA's fiduciary duty to act solely in the interest of the plan and its participants and beneficiaries is inconsistent with the duty of appraisers to provide objective, independent value determinations. The Department disagrees. A biased or inaccurate appraisal does not help a plan, a participant or a beneficiary make prudent investment decisions. Like other forms of investment advice, an appraisal is a tool for plan fiduciaries, participants, beneficiaries, and IRA owners to use in deciding what price to pay for assets and whether to accept or decline proposed transactions. An appraiser complies with his or her obligations as an appraiser—and as a loyal fiduciary—by giving plan fiduciaries or participants an impartial and accurate assessment of the value of an asset in accordance with appraisers' professional standard of care. Nothing in ERISA or this regulation should be read as compelling an appraiser to slant valuation opinions to reflect what the plan wishes the asset were worth rather than what it is really worth. As stated in the preamble to the 2010 Proposal, the Department would expect a fiduciary appraiser's determination of value to be unbiased, fair and objective and to be made in good faith based on a prudent investigation under the prevailing circumstances then known to the appraiser. In the Department's view, these fiduciary standards are fully consistent with professional standards, such as the Uniform Standards of Professional Appraisal Practice (USPAP).[17]

(4) Recommendations of a Person To Provide Investment Advice or Management Services

The proposal would treat recommendations on the selection of investment managers or advisers as fiduciary investment advice. In the Department's view, the current regulation already covers such advice. The proposal simply revises the regulation's text to remove any possible ambiguity. The Department believes that such advice should be treated as fiduciary in nature if provided under the circumstances in paragraph (a)(1)(iv) and for direct or indirect compensation. Covered advice would include recommendations of persons to perform asset management services or to make investment recommendations. Advice as to the identity of the person entrusted with investment authority over retirement assets is often critical to the proper management and investment of those assets. On the other hand, general advice as to the types of qualitative and quantitative criteria to consider in hiring an investment manager would not rise to the level of a recommendation of a person to manage plan investments nor would a trade journal's endorsement of an investment manager. Similarly, the proposed regulation would not cover recommendations of administrative service providers, property managers, or other service providers who do not provide investment services.

B. The Circumstances Under Which Advice Is Provided

As provided in paragraph (a)(2) of the proposal, unless a carve-out applies, a category of advice listed in the proposal would constitute "investment advice" if the person providing the advice, either directly or indirectly (*e.g.,* through or together with any affiliate)—

(i) Represents or acknowledges that it is acting as a fiduciary within the meaning of the Act or Code with respect to the advice described in paragraph (a)(1); or

(ii) Renders the advice pursuant to a written or verbal agreement, arrangement or understanding that the advice is individualized to, or that such advice is specifically directed to, the advice recipient for consideration in making investment or management decisions with respect to securities or other property of the plan or IRA.

Under paragraph (a)(2)(i), advisers who claim fiduciary status under ERISA or the Code in providing advice would be taken at their word. They may not later argue that the advice was not fiduciary in nature. Nor may they rely upon the carve-outs described in paragraph (b) on the scope of the definition of fiduciary investment advice.

The 2010 Proposal provided that investment recommendations provided by an investment adviser under the Advisers Act would, in the absence of a carve-out, automatically be treated as investment advice. In response to comments, the new proposal drops this provision. Thus, the proposal avoids making such persons fiduciaries based solely on their or an affiliate's status as an investment adviser under the Advisers Act. Instead, their fiduciary status would be determined by reference to the same functional test that applies to all persons under the regulation.

Paragraph (a)(2)(ii) of the proposal avoids treating recommendations made to the general public, or to no one in particular, as investment advice and thus addresses concerns that the general circulation of newsletters, television talk show commentary, or remarks in speeches and presentations at financial industry educational conferences would result in the person being treated as a fiduciary. This paragraph requires an agreement, arrangement, or understanding that advice is directed to, a specific recipient for consideration in making investment decisions. The parties need not have a meeting of the minds on the extent to which the advice recipient will actually rely on the advice, but they must agree or understand that the advice is individualized or specifically directed to the particular advice recipient for consideration in making investment decisions. In this respect, paragraph (a)(2)(ii) differs significantly from its counterpart in the 2010 Proposal. In particular, and in response to comments, the proposal does not require that advice be individualized to the needs of the plan, participant or beneficiary or IRA owner if the advice is specifically directed to such recipient. Under the proposal, advisers could not specifically direct investment recommendations to individual persons, but then deny fiduciary responsibility on the basis that they did not, in fact, consider the advice recipient's individual needs or intend that the recipient base investment decisions on their recommendations. Nor could they continue the practice of advertising advice or counseling that is one-on-one or that a reasonable person would believe would be tailored to their individual needs and then disclaim that the recommendations are fiduciary investment advice in boilerplate language in the advertisement or in the paperwork provided to the client.

Like the 2010 Proposal, and unlike the 1975 regulation, the new proposal does not require that advice be provided on a regular basis. Investment advice that meets the requirements of the proposal, even if provided only once, can be critical to important investment decisions. If the adviser received a direct or indirect fee in connection with its advice, the advice recipients should reasonably expect adherence to fiduciary standards on the same terms as other retirement investors who get

[17] A number of commenters also pointed to such professional standards as alternatives to fiduciary treatment under ERISA. While the Department believes that such professional standards are fully consistent with the fiduciary duties, the rights, remedies and sanctions under both ERISA and the Code importantly turn on fiduciary status, and advice on the value of an asset is often the most critical investment advice a plan receives. As a result, treating appraisals as fiduciary advice provides an additional layer of protection for consumers without conflicting with the duties of appraisers.

recommendations from the adviser on a more routine basis.

C. Carve-Outs From the General Definition

The Department recognizes that in many circumstances, plan fiduciaries, participants, beneficiaries, and IRA owners may receive recommendations or appraisals that, notwithstanding the general definition set forth in paragraph (a) of the proposal, should not be treated as fiduciary investment advice. Accordingly, paragraph (b) contains a number of specific carve-outs from the scope of the general definition. The carve-out at paragraph (b)(5) of the proposal concerning financial reports and valuations was discussed above in connection with appraisals. The carve-out in paragraph (b)(5)(iii) covers communications to a plan, a plan fiduciary, a plan participant or beneficiary, an IRA or IRA owner solely for purposes of compliance with the reporting and disclosure provisions under the Act, the Code, and the regulations, forms and schedules issued thereunder, or any applicable reporting or disclosure requirement under a Federal or state law, rule or regulation or self-regulatory organization rule or regulation. The carve-out in paragraph (b)(6) covers education. The other carve-outs are limited to communications with plans and plan fiduciaries and do not cover communications to participants, beneficiaries or IRA owners. These more limited carve-outs are described more fully below. In each instance, the proposed carve-outs are for communications that the Department believes Congress did not intend to cover as fiduciary "investment advice" and that parties would not ordinarily view as communications characterized by a relationship of trust or impartiality. None of the carve-outs apply where the adviser represents or acknowledges that it is acting as a fiduciary under ERISA with respect to the advice.

(1) Seller's and Swap Carve-Outs

(a) The "Seller's Carve-Out" [18]

Paragraph (b)(1)(i) of the proposed regulation provides a carve-out from the general definition for incidental advice provided in connection with an arm's length sale, purchase, loan, or bilateral contract between an expert plan investor and the adviser. It also applies in connection with an offer to enter into such a transaction or when the person providing the advice is acting as a representative, such as an agent, for the plan's counterparty. This carve-out is subject to the following conditions.

First, the person must provide advice to an ERISA plan fiduciary who is independent of such person and who exercises authority or control respecting the management or disposition of the plan's assets, with respect to an arm's length sale, purchase, loan or bilateral contract between the plan and the counterparty, or with respect to a proposal to enter into such a sale, purchase, loan or bilateral contract.

Second, either of two alternative sets of conditions must be met. Under alternative one, prior to providing any recommendation with respect to the transaction, such person:

(1) Obtains a written representation from the plan fiduciary that he/she is a fiduciary who exercises authority or control with respect to the management or disposition of the employee benefit plan's assets (as described in section 3(21)(A)(i) of the Act), that the employee benefit plan has 100 or more participants covered under the plan, and that the fiduciary will not rely on the person to act in the best interests of the plan, to provide impartial investment advice, or to give advice in a fiduciary capacity;

(2) fairly informs the plan fiduciary of the existence and nature of the person's financial interests in the transaction;

(3) does not receive a fee or other compensation directly from the plan, or plan fiduciary, for the provision of investment advice in connection with the transaction (this does not preclude a person from receiving a fee or compensation for other services);

(4) knows or reasonably believes that the independent plan fiduciary has sufficient expertise to evaluate the transaction and to determine whether the transaction is prudent and in the best interest of the plan participants (such person may rely on written representations from the plan or the plan fiduciary to satisfy this condition).

The second alternative applies if the person knows or reasonably believes that the independent plan fiduciary has responsibility for managing at least $100 million in employee benefit plan assets (for purposes of this condition, when dealing with an individual employee benefit plan, a person may rely on the information on the most recent Form 5500 Annual Return/Report filed by the plan to determine the value of plan assets, and, in the case of an independent fiduciary acting as an asset manager for multiple employee benefit plans, a person may rely on representations from the independent plan fiduciary regarding the value of employee benefit plan assets under management). In that circumstance, the adviser need not obtain written representations from its counterparty to avail itself of the carve-out, but must fairly inform the independent plan fiduciary that the adviser is not undertaking to provide impartial investment advice, or to give advice in a fiduciary capacity; and cannot receive a fee or other compensation directly from the plan, or plan fiduciary, for the provision of investment advice in connection with the transaction. In that circumstance, the adviser must also reasonably believe that the independent plan fiduciary has sufficient expertise to prudently evaluate the transaction.

The overall purpose of this carve-out is to avoid imposing ERISA fiduciary obligations on sales pitches that are part of arm's length transactions where neither side assumes that the counterparty to the plan is acting as an impartial trusted adviser, but the seller is making representations about the value and benefits of proposed deals. Under appropriate circumstances, reflected in the conditions to this carve-out, these counterparties to the plan do not suggest that they are an impartial fiduciary and plans do not expect a relationship of undivided loyalty or trust. Both sides of such transactions understand that they are acting at arm's length, and neither party expects that recommendations will necessarily be based on the buyer's best interests. In such a sales transaction, the buyer understands that it is buying an investment product, not advice about whether it is a good product, from a seller who has opposing financial interests. The seller's invitation to buy the product is understood as a sales pitch, not a recommendation. Also, a representative for the plan's counterparty, such as a broker, in such a transaction, would be able to use the carve-out if the conditions are met.

Although the 2010 Proposal also had a carve-out for sellers and other counterparties, the carve-out in the new proposal is significantly different. The changes are designed to ensure that the carve-out appropriately distinguishes incidental advice as part of an arm's length transactions with no expectation of trust or acting in the customer's best interest, from those instances of advice where customers may be expecting unbiased investment advice that is in their best interest. For example, the seller's carve-out is unavailable to an adviser if the plan directly pays a fee for investment advice. If a plan expressly

[18] Although the preamble uses the shorthand expression "seller's carve-out," we note that the carve-out provided in paragraph (b)(1)(i) of the proposal is not limited to sales but rather would apply to incidental advice provided in connection with an arm's length sale, purchase, loan, or bilateral contract between a plan investor with financial expertise and an adviser.

pays a fee for advice, the essence of the relationship is advisory, and the statute clearly contemplates fiduciary status. Thus, a service provider may not charge the plan a direct fee to act as an adviser, and then disclaim responsibility as a fiduciary adviser by asserting that he or she is merely an arm's length counterparty.

Commenters on the 2010 Proposal differed on whether the carve-out should apply to transactions involving plan participants, beneficiaries or IRA owners. After carefully considering the issue and the public comments, the Department does not believe such a carve-out can or should be crafted to cover recommendations to retail investors, including small plans, IRA owners and plan participants and beneficiaries. As a rule, investment recommendations to such retail customers do not fit the "arm's length" characteristics that the seller's carve-out is designed to preserve. Recommendations to retail investors and small plan providers are routinely presented as advice, consulting, or financial planning services. In the securities markets, brokers' suitability obligations generally require a significant degree of individualization. Research has shown that disclaimers are ineffective in alerting retail investors to the potential costs imposed by conflicts of interest, or the fact that advice is not necessarily in their best interest, and may even exacerbate these costs.[19] Most retail investors and many small plan sponsors are not financial experts, are unaware of the magnitude and impact of conflicts of interest, and are unable effectively to assess the quality of the advice they receive. IRA owners are especially at risk because they lack the protection of having a menu of investment options chosen by a plan fiduciary who is charged to protect the interests of the IRA owner. Similarly, small plan sponsors are typically experts in the day-to-day business of running an operating company, not in managing financial investments for others. In this retail market, a seller's carve-out would run the risk of creating a loophole that would result in the rule failing to improve consumer protections by permitting the same type of boilerplate disclaimers that some advisers now use to avoid fiduciary status under the current "five-part test" regulation. Persons making investment recommendations should be required to put the interests of the investors they serve ahead of their own. The Department has addressed legitimate concerns about preserving existing fee practices and minimizing market disruptions through proposed prohibited transaction exemptions detailed below, rather than through a blanket carve-out from fiduciary status.

Moreover, excluding retail investors from the seller's carve-out is consistent with recent congressional action, the Pension Protection Act of 2006 (PPA). Specifically, the PPA created a new statutory exemption that allows fiduciaries giving investment advice to individuals (pension plan participants, beneficiaries and IRA owners) to receive compensation from investment vehicles that they recommend in certain circumstances. 29 U.S.C. 1108(b)(14); 26 U.S.C. 4975(d)(17). Recognizing the risks presented when advisers receive fees from the investments they recommend to individuals, Congress placed important constraints on such advice arrangements that are calculated to limit the potential for abuse and self-dealing, including requirements for fee-leveling or the use of independently certified computer models. The Department has issued regulations implementing this provision at 29 CFR 2550.408g–1 and 408g–2. Including retail investors in the seller's carve-out would undermine the protections for retail investors that Congress required under this PPA provision.

Although the seller's carve-out may not be available in the retail market, the proposal is intended to ensure that small plan fiduciaries, plan participants, beneficiaries and IRA owners would be able to obtain essential information regarding important decisions they make regarding their investments without the providers of that information crossing the line into fiduciary status. Under the platform provider carve-out under paragraph (b)(3), platform providers (*i.e.,* persons that provide access to securities or other property through a platform or similar mechanism) and persons that help plan fiduciaries select or monitor investment alternatives for their plans can perform those services without incurring fiduciary status. Similarly, under the investment education carve-out of paragraph (b)(6), general plan information, financial, investment and retirement information, and information and education regarding asset allocation models would all be available to a plan, plan fiduciary, participant, beneficiary or IRA owner and would not constitute the provision of investment advice, irrespective of who receives that information. The Department invites comments on whether the proposed seller's carve-out should be available for advice given directly to plan participants, beneficiaries, and IRA owners. Further, the Department invites comments on the scope of the seller's carve-out and whether the plan size limitation of 100 plan participants and 100 million dollar asset requirement in the proposal are appropriate conditions or whether other conditions would be more appropriate proxies for identifying persons with sufficient investment-related expertise to be included in a seller's carve-out.[20] The Department is also interested in whether existing and proposed prohibited transaction exemptions eliminate or mitigate the need for any seller's carve-out.

(b) Swap and Security-Based Swap Transactions

Paragraph (b)(1)(ii) of the proposal specifically addresses advice and other communications by counterparties in connection with certain swap or security-based swap transactions under the Commodity Exchange Act or the Securities Exchange Act. This broad class of financial transactions is defined and regulated under amendments to the Commodity Exchange Act and the Securities Exchange Act by the Dodd-Frank Act. Section 4s(h) of the Commodity Exchange Act (7 U.S.C. 6s(h)), and section 15F of the Securities

[19] Loewenstein, George, Daylian Cain, Sunita Sah, *The Limits of Transparence: Pitfalls and Potential of Disclosing Conflicts of Interest,* American Economic Review: Papers and Proceedings 101, no. 3 (2011).

[20] The proposed thresholds of 100 or more participants and assets of $100 million are consistent with thresholds used for similar purposes under existing rules and practices. For example, administrators of plans with 100 or more participants, unlike smaller plans, generally are required to report to the Department details on the identity, function, and compensation of their services providers; file a schedule of assets held for investments; and submit audit reports to the Department. Smaller plans are not subject to these same filing requirements that are imposed on large plans. The vast majority of plans with fewer than 100 participants have 10 or less participants. They are much more similar to individual retail investors than to large financially sophisticated institutional investors, who employ lawyers and have the time and expertise to scrutinize advice they receive for bias. Similarly, Congress established a $100 million asset threshold in enacting the PPA statutory cross-trading exemption under ERISA section 408(b)(19). In the transactions covered by 408(b)(19), an investment manager has discretion with respect to separate client accounts that are on opposite sides of the trade. The cross trade can create efficiencies for both clients, but it also gives rise to a prohibited transaction under ERISA § 406(b)(2) because the adviser or manager is "representing" both sides of the transaction and, therefore, has a conflict of interest. The exemption generally allows an investment manager to effect cash purchases and sales of securities for which market quotations are readily available between large sophisticated plans with at least $100 million in assets and another account under management by the investment manager, subject to certain conditions. In this context, the $100 million threshold serves as a proxy for identifying institutional fiduciaries that can be expected to have the expertise to protect their own interests in the conflicted transaction.

Exchange Act of 1934 (15 U.S.C. 78o–10(h) establishes similar business conduct standards for dealers and major participants in swaps or security-based swaps. Special rules apply for transactions involving "special entities," a term that includes employee benefit plans under ERISA, but not IRAs and other non-ERISA plans.

In outline, paragraph (b)(1)(ii) of the proposal would allow swap dealers, security-based swap dealers, major swap participants and security-based major swap participants who make recommendations to plans to avoid becoming ERISA investment advice fiduciaries when acting as counterparties to a swap or security-based swap transaction. Under the swap carve out, if the person providing recommendations is a swap dealer or security-based swap dealer, it must not be acting as an adviser to the plan, within the meaning of the applicable business conduct standards regulations of the CFTC or the SEC. In addition, before providing any recommendations with respect to the transaction, the person providing recommendations must obtain a written representation from the independent plan fiduciary, that the fiduciary will not rely on recommendations provided by the person.

Under the Commodity Exchange Act, swap dealers or major swap participants that act as counterparties to ERISA plans, must have a reasonable basis to believe that the plans have independent representatives who are fiduciaries under ERISA. 7 U.S.C. 6s(h)(5). Similar requirements apply for security-based swap transactions. 15 U.S.C 78o–10(h)(4) and (5). The CFTC has issued a final rule to implement these requirements and the SEC has issued a proposed rule that would cover security-based swaps. 17 CFR 23.400 to 23.451 (2012).

Paragraph (b)(1)(ii) reflects the Department's coordination of its efforts with staff of the SEC and CFTC, and is intended to provide a clear road-map for swap counterparties to avoid ERISA fiduciary status in arm's length transactions with plans. The provision addresses commenters' concerns that the conduct required for compliance with the Dodd-Frank Act's business conduct standards could constitute fiduciary investment advice under ERISA even in connection with arm's length transactions with plans that are separately represented by independent fiduciaries who are not looking to their counterparties for disinterested advice. If that were the case, swaps and security-based swaps with plans would often constitute prohibited transactions under ERISA. Commenters also argued that their obligations under the business conduct standards could effectively preclude them from relying on the carve-out for counterparties in the 2010 Proposal. Although the Department does not agree that the carve-out in the 2010 Proposal would have been unavailable to plan's swap counterparty (see letter dated April 28, 2011, to CFTC Chairman Gary Gensler from EBSA's Assistant Secretary Phyllis Borzi), the separate proposed carve-out for swap and security-based swap transactions in the proposal should avoid any uncertainty.[21] The Department will continue to coordinate its efforts with staff of the SEC and CFTC to ensure that any final regulation is consistent with the agencies' work in connection with the Dodd-Frank Act's business conduct standards.

(2) Employees of the Plan Sponsor

The proposal at paragraph (b)(2) provides that employees of a plan sponsor of an ERISA plan would not be treated as investment advice fiduciaries with respect to advice they provide to the fiduciaries of the sponsor's plan as long as they receive no compensation for the advice beyond their normal compensation as employees of the plan sponsor. This carve-out from the scope of the fiduciary investment advice definition recognizes that internal employees, such as members of a company's human resources department, routinely develop reports and recommendations for investment committees and other named fiduciaries of the sponsors' plans, without acting as paid fiduciary advisers. The carve-out responds to and addresses the concerns of commenters who said that these personnel should not be treated as fiduciaries because their advice is largely incidental to their duties on behalf of the plan sponsor and they receive no compensation for these advice-related functions.

(3) Platform Providers/Selection and Monitoring Assistance

The carve-out at paragraph (b)(3) of the proposal is directed to service providers, such as recordkeepers and third party administrators, that offer a "platform" or selection of investment vehicles to participant-directed individual account plans under ERISA. Under the terms of the carve-out, the plan fiduciaries must choose the specific investment alternatives that will be made available to participants for investing their individual accounts. The carve-out merely makes clear that persons would not act as investment advice fiduciaries simply by marketing or making available such investment vehicles, without regard to the individualized needs of the plan or its participants and beneficiaries, as long as they disclose in writing that they are not undertaking to provide impartial investment advice or to give advice in a fiduciary capacity.

Similarly, a separate provision at paragraph (b)(4) carves out certain common activities that platform providers may carry out to assist plan fiduciaries in selecting and monitoring the investment alternatives that they make available to plan participants. Under paragraph (b)(4), merely identifying offered investment alternatives meeting objective criteria specified by the plan fiduciary or providing objective financial data regarding available alternatives to the plan fiduciary would not cause a platform provider to be a fiduciary investment adviser. These two carve-outs are clarifying modifications to the corresponding provisions of the 2010 Proposal. They address certain common practices that have developed with the growth of participant-directed individual account plans and recognize circumstances where the platform provider and the plan fiduciary clearly understand that the provider has financial or other relationships with the offered investments and is not purporting to provide impartial investment advice. It also accommodates the fact that platform providers often provide general financial information that falls short of constituting actual investment advice or recommendations, such as information on the historic performance of asset classes and of the investments available through the provider. The carve-outs also reflect the Department's agreement with commenters that a platform provider who merely identifies investment alternatives using objective third-party criteria (*e.g.*, expense ratios, fund size, or asset type specified by the plan fiduciary) to assist in selecting and monitoring investment alternatives should not be considered to be rendering investment advice.

While recognizing the utility of the provisions in paragraphs (b)(3) and (b)(4) for the effective and efficient operation of plans by plan sponsors, plan fiduciaries and plan service providers, the Department reiterates its longstanding view, recently codified in 29 CFR 2550.404a–5(f) and 2550.404c–1(d)(2)(iv) (2010), that a fiduciary is always responsible for prudently selecting and monitoring providers of services to the plan or designated

[21] *http://www.dol.gov/ebsa/pdf/cftc20110428.pdf.*

investment alternatives offered under the plan.

Several commenters also asked the Department to clarify that the platform provider carve-out is available in the 403(b) plan marketplace. In the Department's view, a 403(b) plan that is subject to Title I of ERISA would be an individual account plan within the meaning of ERISA section 3(34) of the Act for purposes of the proposed regulation, so the platform provider carve-out would be available with respect to such plans.

Other commenters asked that the platform provider provision be generally extended to apply to IRAs. In the IRA context, however, there typically is no separate independent "plan fiduciary" who interacts with the platform provider to protect the interests of the account owners. As a result, it is much more difficult to conclude that the transaction is truly arm's length or to draw a bright line between fiduciary and non-fiduciary communications on investment options. Consequently, the proposed regulation declines to extend application of this carve-out to IRAs and other non-ERISA plans. As the Department continues its work on this regulatory project, however, it requests specific comment as to the types of platforms and options that may be offered to IRA owners, how they may be similar to or different from platforms offered in connection with participant-directed individual account plans, and whether it would be appropriate for service providers not to be treated as fiduciaries under this carve-out when marketing such platforms to IRA owners. We also invite comments, alternatively, on whether the scope of this carve-out should be limited to large plans, similar to the scope of the "Seller's Carve-out" discussed above.

As a corollary to the proposal's restriction of the applicability of the platform provider carve-out to only ERISA plans, the selection and monitoring assistance carve-out is similarly not available in the IRA and other non-ERISA plans context. Commenters on the platform provider restriction are encouraged to offer their views on the effect of this restriction in the non-ERISA plan marketplace.

(4) Investment Education

Paragraph (b)(6) of the proposed regulation is similar to a carve-out in the 2010 Proposal for the provision of investment education information and materials within the meaning of an earlier Interpretive Bulletin issued by the Department in 1996. 29 CFR 2509.96–1 (IB 96–1). Paragraph (b)(6) incorporates much of IB 96–1's operative text, but with the important exceptions explained below. Paragraph (b)(6) of the proposed regulation, if finalized, would supersede IB 96–1. Consistent with IB 96–1, paragraph (b)(6) makes clear that furnishing or making available the specified categories of information and materials to a plan, plan fiduciary, participant, beneficiary or IRA owner will not constitute the rendering of investment advice, irrespective of who provides the information (*e.g.*, plan sponsor, fiduciary or service provider), the frequency with which the information is shared, the form in which the information and materials are provided (*e.g.*, on an individual or group basis, in writing or orally, via a call center, or by way of video or computer software), or whether an identified category of information and materials is furnished or made available alone or in combination with other categories of investment or retirement information and materials identified in paragraph (b)(6), or the type of plan or IRA involved. As a departure from IB 96–1, a new condition of the carve-out for investment education is that the information and materials not include advice or recommendations as to specific investment products, specific investment managers, or the value of particular securities or other property. The paragraph reflects the Department's view that the statutory reference to "investment advice" is not meant to encompass general investment information and educational materials, but rather is targeted at more specific recommendations and advice on the investment of plan and IRA assets.

Similar to IB 96–1, paragraph (b)(6) of the proposed regulation divides investment education information and materials into four general categories: (i) Plan information; (ii) general financial, investment and retirement information; (iii) asset allocation models; and (iv) interactive investment materials. The proposed regulation in paragraph (b)(6)(v) also adopts the provision from IB 96–1 stating that there may be other examples of information, materials and educational services which, if furnished, would not constitute investment advice or recommendations within the meaning of the proposed regulation and that no inference should be drawn regarding materials or information which are not specifically included in paragraph (b)(6)(i) through (iv).

Although paragraph (b)(6) incorporates most of the relevant text of IB 96–1, there are important changes. One change from IB 96–1 is that paragraph (b)(6) makes clear that the distinction between non-fiduciary education and fiduciary advice applies equally to information provided to plan fiduciaries as well as information provided to plan participants and beneficiaries and IRA owners, and that it applies equally to participant-directed plans and other plans. In addition, the provision applies without regard to whether the information is provided by a plan sponsor, fiduciary, or service provider.

Based on public input received in connection with its joint examination of lifetime income issues with the Department of the Treasury, the Department is persuaded that additional guidance may help improve retirement security by facilitating the provision of information and education relating to retirement needs that extend beyond a participant's or beneficiary's date of retirement. Accordingly, paragraph (b)(6) of the proposal includes specific language to make clear that the provision of certain general information that helps an individual assess and understand retirement income needs past retirement and associated risks (*e.g.*, longevity and inflation risk), or explains general methods for the individual to manage those risks both within and outside the plan, would not result in fiduciary status under the proposal.[22]

[22] Although the proposal would formally remove IB 96–1 from the CFR, the Department notes that paragraph (e) of IB 96–1 provides generalized guidance under section 405 and 404(c) of ERISA with respect to the selection by employers and plan fiduciaries of investment educators and the lack of responsibility of employers and fiduciaries with respect to investment educators selected by participants. Specifically, paragraph (e) states:

As with any designation of a service provider to a plan, the designation of a person(s) to provide investment educational services or investment advice to plan participants and beneficiaries is an exercise of discretionary authority or control with respect to management of the plan; therefore, persons making the designation must act prudently and solely in the interest of the plan participants and beneficiaries, both in making the designation(s) and in continuing such designation(s). See ERISA sections 3(21)(A)(i) and 404(a), 29 U.S.C. 1002 (21)(A)(i) and 1104(a). In addition, the designation of an investment advisor to serve as a fiduciary may give rise to co-fiduciary liability if the person making and continuing such designation in doing so fails to act prudently and solely in the interest of plan participants and beneficiaries; or knowingly participates in, conceals or fails to make reasonable efforts to correct a known breach by the investment advisor. See ERISA section 405(a), 29 U.S.C. 1105(a). The Department notes, however, that, in the context of an ERISA section 404(c) plan, neither the designation of a person to provide education nor the designation of a fiduciary to provide investment advice to participants and beneficiaries would, in itself, give rise to fiduciary liability for loss, or with respect to any breach of part 4 of title I of ERISA, that is the direct and necessary result of a participant's or beneficiary's exercise of independent control. 29 CFR 2550.404c–1(d). The Department also notes that a plan sponsor or

As noted, another change is that the Department is not incorporating the provisions at paragraph (d)(3)(iii) and (4)(iv) of IB 96–1. Those provisions of IB 96–1 permit the use of asset allocation models that refer to specific investment products available under the plan or IRA, as long as those references to specific products are accompanied by a statement that other investment alternatives having similar risk and return characteristics may be available. Based on its experience with the IB 96–1 since publication, as well as views expressed by commenters to the 2010 Proposal, the Department now believes that, even when accompanied by a statement as to the availability of other investment alternatives, these types of specific asset allocations that identify specific investment alternatives function as tailored, individualized investment recommendations, and can effectively steer recipients to particular investments, but without adequate protections against potential abuse.[23]

In particular, the Department agrees with those commenters to the 2010 Proposal who argued that cautionary disclosures to participants, beneficiaries, and IRA owners may have limited effectiveness in alerting them to the merit and wisdom of evaluating investment alternatives not used in the model. In practice, asset allocation models concerning hypothetical individuals, and interactive materials which arrive at specific investment products and plan alternatives, can be indistinguishable to the average retirement investor from individualized recommendations, regardless of caveats. Accordingly, paragraphs (b)(6)(iii) and (iv) relating to asset allocation models and interactive investment materials preclude the identification of specific investment alternatives available under the plan or IRA in order for the materials described in those paragraphs to be considered investment education. Thus, for example, we would not treat an asset allocation model as mere education if it called for a certain percentage of the investor's assets to be invested in large cap mutual funds, and accompanied that proposed allocation with the identity of a specific fund or provider. In that circumstance, the adviser has made a specific investment recommendation that should be treated as fiduciary advice and adhere to fiduciary standards. Further, materials that identify specific plan investment alternatives also appear to fall within the definition of "recommendation" in paragraph (f)(1) of the proposal, and could result in fiduciary status on the part of a provider if the other provisions of the proposal are met. The Department believes that effective and useful asset allocation education materials can be prepared and delivered to participants and IRA owners without including specific investment products and alternatives available under the plan. The Department understands that not incorporating the provisions of IB 96–1 at paragraph (d)(3)(iii) and (4)(iv) into the proposal represents a significant change in the information and materials that may constitute investment education. Accordingly, the Department invites comments on whether this change is appropriate.[24]

D. Fee or Other Compensation

A necessary element of fiduciary status under section 3(21)(A)(ii) of ERISA is that the investment advice be for a "fee or other compensation, direct or indirect." Consistent with the statute, paragraph (f)(6) of the proposed regulation defines this phrase to mean any fee or compensation for the advice received by the advice provider (or by an affiliate) from any source and any fee or compensation incident to the transaction in which the investment advice has been rendered or will be rendered. It further provides that the term "fee or compensation" includes, but is not limited to, brokerage fees, mutual fund sales, and insurance sales commissions.

Paragraph (c)(3) of the 2010 Proposal used similar language, but it also provided that the term included fees and compensation based on multiple transactions involving different parties. Commenters found this provision confusing and it does not appear in the new proposal. The provision was intended to confirm the Department's position that fees charged on a so-called "omnibus" basis (*e.g.*, compensation paid based on business placed or retained that includes plan or IRA business) would constitute fees and compensation for purposes of the rule.

Direct or indirect compensation also includes any compensation received by affiliates of the adviser that is connected to the transaction in which the advice was provided. For example, when a fiduciary adviser recommends that a participant or IRA owner invest in a mutual fund, it is not unusual for an affiliated adviser to the mutual fund to receive a fee. The receipt by the affiliate of advisory fees from the mutual fund is indirect compensation in connection with the rendering of investment advice to the participant.

Some commenters additionally suggested that call center employees should not be treated as investment advice fiduciaries where they are not specifically paid to provide investment advice and their compensation does not change based on their communications with participants and beneficiaries. The carve-out from the fiduciary investment advice definition for investment education provides guidelines under which call center staff and other employees providing similar investor assistance services may avoid fiduciary status. However, commenters stated that a specific carve-out for such call centers would provide a greater level of certainty so as not to inhibit mutual funds, insurance companies, broker-dealers, recordkeepers and other financial service providers from continuing to make such assistance available to participants and beneficiaries in 401(k) and similar participant-directed plans. In the Department's view, such a carve-out would be inappropriate. The fiduciary definition is intended to apply broadly to all persons who engage in the activities set forth in the regulation, regardless of job title or position, or whether the advice is rendered in person, in writing or by phone. If, in the performance of their jobs, call center employees make specific investment recommendations to plan participants or IRA owners under the circumstances

---

fiduciary would have no fiduciary responsibility or liability with respect to the actions of a third party selected by a participant or beneficiary to provide education or investment advice where the plan sponsor or fiduciary neither selects nor endorses the educator or advisor, nor otherwise makes arrangements with the educator or advisor to provide such services.

Unlike the remainder of the IB, this text does not belong in the investment advice regulation. Also, the principles articulated in paragraph (e) are generally understood and accepted such that retaining the paragraph as a stand-alone IB does not appear necessary or appropriate.

[23] When the Department issued IB 96–1, it expressed concern that service providers could effectively steer participants to a specific investment alternative by identifying only one particular fund available under the plan in connection with an asset allocation model. As a result, where it was possible to do so, the Department encouraged service providers to identify other investment alternatives within an asset class as part of a model. Ultimately, however, when asset allocation models and interactive investment materials identified any specific investment alternative available under the plan, the Department required an accompanying statement both indicating that other investment alternatives having similar risk and return characteristics may be available under the plan and identifying where information on those investment alternatives could be obtained. 61 FR 29586, 29587 (June 11, 1996).

[24] As indicated earlier in this Notice, the Department believes that FINRA's guidance in this area may provide useful standards and guideposts for distinguishing investment education from investment advice under ERISA. The Department specifically solicits comments on the discussion in FINRA's "Frequently Asked Questions, FINRA Rule 2111 (Suitability)" of the term "recommendation" in the context of asset allocation models and general investment strategies.

described in the proposal, it is appropriate to treat them, and possibly their employers, as fiduciaries unless they meet the conditions of one of the carve-outs set forth above.

E. Coverage of IRAs and Other Non-ERISA Plans

Certain provisions of Title I of ERISA, 29 U.S.C. 1001–1108, such as those relating to participation, benefit accrual, and prohibited transactions also appear in the Code. This parallel structure ensures that the relevant provisions apply to all tax-qualified plans, including IRAs. With regard to prohibited transactions, the Title I provisions generally authorize recovery of losses from, and imposition of civil penalties on, the responsible plan fiduciaries, while the Code provisions impose excise taxes on persons engaging in the prohibited transactions. The definition of fiduciary with respect to a plan is the same in section 4975(e)(3)(B) of the IRC as the definition in section 3(21)(A)(ii) of ERISA, 29 U.S.C. 1002(21)(A)(ii), and the Department's 1975 regulation defining fiduciary investment advice is virtually identical to regulations that define the term "fiduciary" under the Code. 26 CFR 54.4975–9(c) (1975).

To rationalize the administration and interpretation of dual provisions under ERISA and the Code, Reorganization Plan No. 4 of 1978 divided the interpretive and rulemaking authority for these provisions between the Secretaries of Labor and of the Treasury, so that, in general, the agency with responsibility for a given provision of Title I of ERISA would also have responsibility for the corresponding provision in the Code. Among the sections transferred to the Department were the prohibited transaction provisions and the definition of a fiduciary in both Title I of ERISA and in the Code. ERISA's prohibited transaction rules, 29 U.S.C. 1106–1108, apply to ERISA-covered plans, and the Code's corresponding prohibited transaction rules, 26 U.S.C. 4975(c), apply both to ERISA-covered pension plans that are tax-qualified pension plans, as well as other tax-advantaged arrangements, such as IRAs, that are not subject to the fiduciary responsibility and prohibited transaction rules in ERISA.[25]

Given this statutory structure, and the dual nature of the 1975 regulation, the proposal would apply to both the definition of "fiduciary" in section 3(21)(A)(ii) of ERISA and the definition's counterpart in section 4975(e)(3)(B) of the Code. As a result, it applies to persons who give investment advice to IRAs. In this respect, the new proposal is the same as the 2010 Proposal.

Many comments on the 2010 Proposal concerned its impact on IRAs and questioned whether the Department had adequately considered possible negative impacts. Some commenters were especially concerned that application of the new rule could disrupt existing brokerage arrangements that they believe are beneficial to customers. In particular, brokers often receive revenue sharing, 12b–1 fees, and other compensation from the parties whose investment products they recommend. If the brokers were treated as fiduciaries, the receipt of such fees could violate the Code's prohibited transaction rules, unless eligible for a prohibited transaction exemption. According to these commenters, the disruption of such current fee arrangements could result in a reduced level of assistance to investors, higher up-front fees, and less investment advice, particularly to investors with small accounts. In addition, some commenters expressed skepticism that the imposition of fiduciary standards would result in improved advice and questioned the view that current compensation arrangements could cause sub-optimal advice. Additionally, commenters stressed the need for coordination between the Department and other regulatory agencies, such as the SEC, CFTC, and Treasury.

As discussed above, to better align the regulatory definition of fiduciary with the statutory provisions and underlying Congressional goals, the Department is proposing a definition of a fiduciary investment advice that would encompass investment recommendations that are individualized or specifically directed to plans, participants, beneficiaries or IRA owners, if the adviser receives a direct or indirect fee. Neither the relevant statutory provisions, nor the current regulation, draw a distinction between brokers and other advisers or carve brokers out of the scope of the fiduciary provisions of ERISA and of the Code. The relevant statutory provisions, and accordingly the proposed regulation, establish a functional test based on the service provider's actions, rather than the provider's title (*e.g.,* broker or registered investment adviser). If one engages in specified activities, such as the provision of investment advice for a direct or indirect fee, the person engaging in those activities is a fiduciary, irrespective of labels. Moreover, the statutory definition of fiduciary advice is identical under both ERISA and the Code. There is no indication that the definition should vary between plans and IRAs.

In light of this statutory framework, the Department does not believe it would be appropriate to carve out a special rule for IRAs, or for brokers or others who make specific investment recommendations to IRA owners or to other participants in non-ERISA plans for direct or indirect fees. When Congress enacted ERISA and the corresponding Code provisions, it chose to impose fiduciary status on persons who provide investment advice to plans, participants, beneficiaries and IRA owners, and to specifically prohibit a wide variety of transactions in which the fiduciary has financial interests that potentially conflict with the fiduciary's obligation to the plan or IRA. It did not provide a special carve-out for brokers or IRAs, and the Department does not believe it would be appropriate to write such a carve-out into the regulation implementing the statutory definition.

Indeed, brokers who give investment advice to IRA owners or plan participants, and who otherwise meet the terms of the current five-part test, are already fiduciaries under the existing fiduciary regulation. If, for example, a broker regularly advises an individual IRA owner on specific investments, the IRA owner routinely follows the recommendations, and both parties understand that the IRA owner relies upon the broker's advice, the broker is almost certainly a fiduciary. In such circumstances, the broker is already subject to the excise tax on prohibited transactions if he or she receives fees from a third party in connection with recommendations to invest IRA assets in the third party's investment products, unless the broker satisfies the conditions of a prohibited transaction exemption that covers the particular fees. Indeed, broker-dealers today can provide fiduciary investment advice by complying with prohibited transaction exemptions that permit the receipt of commission-based compensation for the sale of mutual funds and other securities. Moreover, both ERISA and the Code were amended as part of the PPA to include a new prohibited transaction exemption that applies to investment advice in both the plan and IRA context. The PPA exemption clearly reflects the longstanding concern under ERISA and the Code about the dangers posed by conflicts of interest, and the need for appropriate safeguards in both the plan and IRA markets. Under the terms of the

[25] The Secretary of Labor also was transferred authority to grant administrative exemptions from the prohibited transaction provisions of the Code.

exemption, the investment recommendations must either result from the application of an unbiased and independently certified computer program or the fiduciary's fees must be level (*i.e.*, the fiduciary's compensation cannot vary based on his or her particular investment recommendations).

Moreover, as discussed in the regulatory impact analysis below, there is substantial evidence to support the statutory concern about conflicts of interest. As the analysis reflects, unmitigated conflicts can cause significant harm to investors. The available evidence supports a finding that the negative impacts are present and often times large. The proposal would curtail the harms to investors from such conflicts and thus deliver significant benefits to plan participants and IRA owners. Plans, plan participants, beneficiaries and IRA owners would all benefit from advice that is impartial and puts their interests first. Moreover, broker-dealer interactions with plan fiduciaries, participants, and IRA owners present some of the most obvious conflict of interest problems in this area. Accordingly, in the Department's view, broker-dealers that provide investment advice should be subject to fiduciary duties to mitigate conflicts of interest and increase investor protections.

Some commenters additionally suggested that the application of special fiduciary rules in the retail investment market to IRA accounts, but not savings outside of tax-preferred retirement accounts, is inappropriate and could lead to confusion among investors and service providers. The distinction between IRAs and other retail accounts, however, is a direct result of a statutory structure that draws a sensible distinction between tax-favored IRAs and other retail investment accounts. The Code itself treats IRAs differently, bestowing uniquely favorable tax treatment on such accounts and prohibiting self-dealing by persons providing investment advice for a fee. In these respects, and in light of the special public interest in retirement security, IRAs are more like plans than like other retail accounts. Indeed, as noted above, the vast majority of IRA assets today are attributable to rollovers from plans.[26] In addition, IRA owners may be at even greater risk from conflicted advice than plan participants. Unlike ERISA plan participants, IRA owners do not have the benefit of an independent plan fiduciary to represent their interests in selecting a menu of investment options or structuring advice arrangements. They cannot sue fiduciary advisers under ERISA for losses arising from fiduciary breaches, nor can the Department sue on their behalf. Compared to participants with ERISA plan accounts, IRA owners often have larger account balances and are more likely to be elderly. Thus, limiting the harms to IRA investors resulting from conflicts of interest of advisers is at least as important as protecting ERISA plans and plan participants from such harms.

The Department believes that it is important to address the concerns of brokers and others providing investment advice to IRA owners about undue disruptions to current fee arrangements, but also believes that such concerns are best resolved within a fiduciary framework, rather than by simply relieving advisers from fiduciary responsibility. As previously discussed, the proposed regulation permits investment professionals to provide important financial information and education, without acting as fiduciaries or being subject to the prohibited transaction rules. Moreover, ERISA and the Code create a flexible process that enables the Department to grant class and individual exemptions from the prohibited transaction rules for fee practices that it determines are beneficial to plan participants and IRA owners. For example, existing prohibited transaction exemptions already allow brokers who provide fiduciary advice to receive commissions generating conflicts of interest for trading the types of securities and funds that make up the large majority of IRA assets today. In addition, simultaneous with the publication of this proposed regulation, the Department is publishing new exemption proposals that would permit common fee practices, while at the same time protecting plan participants, beneficiaries and IRA owners from abuse and conflicts of interest. As noted above, in contrast with many previously adopted PTE exemptions that are transaction-specific, the Best Interest Contract PTE described below reflects a more flexible approach that accommodates a wide range of current business practices while minimizing the impact of conflicts of interest and ensuring that plans and IRAs receive investment recommendations that are in their best interests.

As discussed, the Department received extensive comment on the application of the 2010 Proposal's provisions to IRAs, but comments regarding other non-ERISA plans such as Health Savings Accounts (HSAs), Archer Medical Savings Accounts and Coverdell Education Savings Accounts were less prolific. The Department notes that these accounts are given tax preferences as are IRAs. Further, some of the accounts, such as HSAs, can be used as long term savings accounts for retiree health care expenses. These types of accounts also are expressly defined by Code section 4975(e)(1) as plans that are subject to the Code's prohibited transaction rules. Thus, although they generally may hold fewer assets and may exist for shorter durations than IRAs, the owners of these accounts or the persons for whom these accounts were established are entitled to receive the same protections from conflicted investment advice as IRA owners. Accordingly, these accounts are included in the scope of covered plans in paragraph (f)(2) of the new proposal. However, the Department solicits specific comment as to whether it is appropriate to cover and treat these plans under the proposed regulation in a manner similar to IRAs as to both coverage and applicable carve-outs.

F. Administrative Prohibited Transaction Exemptions

In addition to the new proposal in this Notice, the Department is also proposing, elsewhere in this edition of the **Federal Register**, certain administrative class exemptions from the prohibited transaction provisions of ERISA (29 U.S.C. 1106), and the Code (26 U.S.C. 4975(c)(1)) as well as proposed amendments to previously adopted exemptions. The proposed exemptions and amendments would allow, subject to appropriate safeguards, certain broker-dealers, insurance agents and others that act as investment advice fiduciaries to nevertheless continue to receive a variety of forms of compensation that would otherwise violate prohibited transaction rules and trigger excise taxes. The proposed exemptions would supplement statutory exemptions at 29 U.S.C. 1108 and 26 U.S.C. 4975(d), and previously adopted class exemptions.

Investment advice fiduciaries to plans and plan participants must meet ERISA's standards of prudence and loyalty to their plan customers. Such fiduciaries also face taxes, remedies and other sanctions for engaging in certain transactions, such as self-dealing with plan assets or receiving payments from third parties in connection with plan transactions, unless the transactions are permitted by an exemption from ERISA's and the Code's prohibited transaction rules. IRA fiduciaries do not

[26] Peter Brady, Sarah Holden, and Erin Shon, *The U.S. Retirement Market, 2009*, Investment Company Institute, Research Fundamentals, Vol. 19, No. 3, May 2010, *at http://www.ici.org/pdf/fm-v19n3.pdf.*

have the same general fiduciary obligations of prudence and loyalty under the statute, but they too must adhere to the prohibited transaction rules or they must pay an excise tax. The prohibited transaction rules help ensure that investment advice provided to plan participants and IRA owners is not driven by the adviser's financial self-interest.

Proposed Best Interest Contract Exemption (Best Interest Contract PTE)

The proposed Best Interest Contract PTE would provide broad and flexible relief from the prohibited transaction restrictions on certain compensation received by investment advice fiduciaries as a result of a plan's or IRA's purchase, sale or holding of specifically identified investments. The conditions of the exemption are generally principles-based rather than prescriptive and require, in particular, that advice be provided in the best interest of the plan or IRA. This exemption was developed partly in response to comments received that suggested such an approach. It is a significant departure from existing exemptions, examples of which are discussed below, which are limited to much narrower categories of investments under more prescriptive and less flexible and adaptable conditions.

The proposed Best Interest Contract PTE was developed to promote the provision of investment advice that is in the best interest of retail investors, such as plan participants and beneficiaries, IRA owners, and small plans. The proposed exemption would apply to compensation received by individual investment advice fiduciaries (including individual advisers [27] and firms that employ or otherwise contract with such individuals) as well as their affiliates and related entities, that is provided in connection with the purchase, sale or holding of certain assets by the plans, participants and beneficiaries, and IRAs. In order to protect the interests of these investors, the exemption requires the firm and the adviser to contractually acknowledge fiduciary status, commit to adhere to basic standards of impartial conduct, warrant that they will comply with applicable federal and state laws governing advice and that they have adopted policies and procedures reasonably designed to mitigate any harmful impact of conflicts of interest, and disclose basic information on their conflicts of interest and on the cost of their advice. The standards of impartial conduct to which the adviser and firm must commit are basic obligations of fair dealing and fiduciary conduct to which the Department believes advisers and firms often informally commit—to give advice that is in the customer's best interest; avoid misleading statements; and receive no more than reasonable compensation. This standards-based approach aligns the adviser's interests with those of the plan or IRA customer, while leaving the adviser and employing firm the flexibility and discretion necessary to determine how best to satisfy these basic standards in light of the unique attributes of their business.

As an additional protection for retail investors, the exemption would not apply if the contract contains exculpatory provisions disclaiming or otherwise limiting liability of the adviser or financial institution for violation of the contract's terms. Adopting the approach taken by FINRA, the contract could require the parties to arbitrate individual claims, but it could not limit the rights of the plan, participant, beneficiary, or IRA owner to bring or participate in a class action against the adviser or financial institution.

Additional conditions would apply to firms that limit the products that their advisers can recommend based on the receipt of third party payments or the proprietary nature of the products (*i.e.*, products offered or managed by the firm or its affiliates) or for other reasons. The conditions require, among other things, that such firms provide notice of the limitations to plans, participants and beneficiaries and IRA owners, as well as make a written finding that the limitations do not prevent advisers from providing advice in those investors' best interest.

Finally, certain notice and data collection requirements would apply to all firms relying on the exemption. Specifically, firms would be required to notify the Department in advance of doing so, and they would have to maintain certain data, and make it available to the Department upon request, to help evaluate the effectiveness of the exemption in safeguarding the interests of plan and IRA investors.

The Department's intent in crafting the Best Interest Contract PTE is to permit common compensation structures that create conflicts of interest, while minimizing the costs imposed on investors by such conflicts. The exemption is designed both to impose broad fiduciary standards of conduct on advisers and financial institutions, and to give them sufficient flexibility to accommodate a wide range of business practices and compensation structures that currently exist or that may develop in the future.

The Department is also considering an additional streamlined exemption that would apply to compensation received in connection with investments by plans, participants and beneficiaries, and IRA owners, in certain high-quality, low-fee investments, subject to fewer conditions than in the proposed Best Interest Contract PTE. If properly crafted, the streamlined exemption could achieve important goals of minimizing compliance burdens for advisers and financial institutions when they offer investment products with little potential for material conflicts of interest. The Department is not proposing text for such a streamlined exemption due to the difficulty in operationalizing this concept. However the Department is eager to receive comments on whether such an exemption would be worthwhile and, as part of the notice proposing the Best Interest Contract PTE, is soliciting comments on a number of issues relating to the design of a streamlined exemption.

Proposed Principal Transaction Exemption (Principal Transaction PTE)

Broker-dealers and other advisers commonly sell debt securities out of their own inventory to plans, participants and beneficiaries and IRA owners in a type of transaction known as a "principal transaction." Fiduciaries trigger taxes, remedies and other legal sanctions when they engage in such activities, unless they qualify for an exemption from the prohibited transaction rules. These principal transactions raise issues similar to those addressed in the Best Interest Contract PTE, but also raise unique concerns because the conflicts of interest are particularly acute. In these transactions, the adviser sells the security directly from its own inventory, and may be able to dictate the price that the plan, participant or beneficiary, or IRA owner pays.

Because of the prevalence of the practice in the market for fixed income securities, the Department has proposed a separate Principal Transactions PTE that would permit principal transactions in certain debt securities between a plan or IRA owner and an investment advice fiduciary, under certain circumstances.

[27] By using the term "adviser," the Department does not intend to limit the exemption to investment advisers registered under the Investment Advisers Act of 1940; under the exemption an adviser is individual who can be a representative of a registered investment adviser, a bank or similar financial institution, an insurance company, or a broker-dealer.

The Principal Transaction PTE would include all of the contract requirements of the Best Interest Contract PTE. In addition, however, it would include specific conditions related to the price of the debt security involved in the transaction. The adviser would have to obtain two price quotes from unaffiliated counterparties for the same or a similar security, and the transaction would have to occur at a price at least as favorable to the plan or IRA as the two price quotes. Additionally, the adviser would have to disclose the amount of compensation and profit (sometimes referred to as a "mark up" or "mark down") that it expects to receive on the transaction.

Amendments to Existing PTEs

In addition to the Best Interest Contract PTE and the Principal Transaction PTE, the Department is also proposing elsewhere in the **Federal Register** amendments to certain existing PTEs.

Prohibited Transaction Exemption 86–128

Prohibited Transaction Exemption (PTE) 86–128 [28] currently allows an investment advice fiduciary to cause the recipient plan or IRA to pay the investment advice fiduciary or its affiliate a fee for effecting or executing securities transactions as agent. To prevent churning, the exemption does not apply if such transactions are excessive in either amount or frequency. The exemption also allows the investment advice fiduciary to act as an agent for both the plan and the other party to the transaction (*i.e.,* the buyer and the seller of securities) and receive a reasonable fee. To use the exemption, the fiduciary cannot be a plan administrator or employer, unless all profits earned by these parties are returned to the plan. The conditions of the exemption require that a plan fiduciary independent of the investment advice fiduciary receive certain disclosures and authorize the transaction. In addition, the independent fiduciary must receive confirmations and an annual "portfolio turnover ratio" demonstrating the amount of turnover in the account during that year. These conditions are not presently applicable to transactions involving IRAs.

The Department is proposing to amend PTE 86–128 to require all fiduciaries relying on the exemption to adhere to the same impartial conduct standards required in the Best Interest Contract PTE. At the same time, the proposed amendment would eliminate relief for investment advice fiduciaries to IRA owners; instead they would be required to rely on the Best Interest Contract PTE for an exemption for such compensation. In the Department's view, the provisions in the Best Interest Contract Exemption better address the interests of IRAs with respect to transactions otherwise covered by PTE 86–128 and, unlike plan participants and beneficiaries, there is no separate plan fiduciary in the IRA market to review and authorize the transaction. Investment advice fiduciaries to plans would remain eligible for relief under the exemption, as would investment managers with full investment discretion over the investments of plans and IRA owners, but they would be required to comply with all the protective conditions, described above. Finally, the Department is proposing that PTE 86–128 extend to a new covered transaction, for fiduciaries who sell mutual fund shares out of their own inventory (*i.e.,* acting as principals, rather than agents) to plans and IRAs and to receive commissions for doing so. This transaction is currently the subject of another exemption, PTE 75–1, Part II(2) (discussed below) that the Department is proposing to revoke.

Several changes are proposed with respect to PTE 75–1, a multi-part exemption for securities transactions involving broker dealers and banks, and plans and IRAs.[29] Part I(b) and (c) currently provide relief for certain non-fiduciary services to plans and IRAs. The Department is proposing to revoke these provisions, and require persons seeking to engage in such transactions to rely instead on the existing statutory exemptions provided in ERISA section 408(b)(2) and Code section 4975(d)(2), and the Department's implementing regulations at 29 CFR 2550.408b–2. The Department believes the conditions of the statutory exemptions are more appropriate for the provision of these services.

PTE 75–1, Part II(2), currently provides relief for fiduciaries selling mutual fund shares to plans and IRAs in a principal transaction to receive commissions. PTE 75–1, Part II(2) currently provides relief for fiduciaries to receive commissions for selling mutual fund shares to plans and IRAs in a principal transaction. As described above, the Department is proposing to provide relief for these types of transactions in PTE 86–128, and so is proposing to revoke PTE 75–1, Part II(2), in its entirety. As discussed in more detail in the notice of proposed amendment/revocation, the Department believes the conditions of PTE 86–128 are more appropriate for these transactions.

PTE 75–1, Part V, currently permits broker-dealers to extend credit to a plan or IRA in connection with the purchase or sale of securities. The exemption does not permit broker-dealers that are fiduciaries to receive compensation when doing so. The Department is proposing to amend PTE 75–1, Part V, to permit investment advice fiduciaries to receive compensation for lending money or otherwise extending credit, but only for the limited purpose of avoiding a failed securities transaction.

Prohibited Transaction Exemption 84–24

PTE 84–24 [30] covers transactions involving mutual fund shares, or insurance or annuity contracts, sold to plans or IRA investors by pension consultants, insurance agents, brokers, and mutual fund principal underwriters who are fiduciaries as a result of advice they give in connection with these transactions. The exemption allows these investment advice fiduciaries to receive a sales commission with respect to products purchased by plans or IRA investors. The exemption is limited to sales commissions that are reasonable under the circumstances. The investment advice fiduciary must provide disclosure of the amount of the commission and other terms of the transaction to an independent fiduciary of the plan or IRA, and obtain approval for the transaction. To use this exemption, the investment advice fiduciary may not have certain roles with respect to the plan or IRA such as trustee, plan administrator, fiduciary with written authorization to manage the plan's assets and employers. However it is available to investment advice fiduciaries regardless of whether they expressly acknowledge their fiduciary status or are simply functional or "inadvertent" fiduciaries that have not expressly agreed to act as fiduciary advisers, provided there is no written authorization granting them discretion to acquire or dispose of the assets of the plan or IRA.

[28] Class Exemption for Securities Transactions Involving Employee Benefit Plans and Broker-Dealers, 51 FR 41686 (Nov. 18, 1986), amended at 67 FR 64137 (Oct. 17, 2002).

[29] Exemptions from Prohibitions Respecting Certain Classes of Transactions Involving Employee Benefit Plans and Certain Broker-Dealers, Reporting Dealers and Banks, 40 FR 50845 (Oct. 31, 1975), as amended at 71 FR 5883 (Feb. 3, 2006).

[30] Class Exemption for Certain Transactions Involving Insurance Agents and Brokers, Pension Consultants, Insurance Companies, Investment Companies and Investment Company Principal Underwriters, 49 FR 13208 (Apr. 3, 1984), amended at 71 FR 5887 (Feb. 3, 2006).

The Department is proposing to amend PTE 84–24 to require all fiduciaries relying on the exemption to adhere to the same impartial conduct standards required in the Best Interest Contract Exemption. At the same time, the proposed amendment would revoke PTE 84–24 in part so that investment advice fiduciaries to IRA owners would not be able to rely on PTE 84–24 with respect to (1) transactions involving variable annuity contracts and other annuity contracts that constitute securities under federal securities laws, and (2) transactions involving the purchase of mutual fund shares. Investment advice fiduciaries to IRA owners would instead be required to rely on the Best Interest Contract Exemption for most common forms of compensation received in connection with these transactions. The Department believes that investment advice transactions involving annuity contracts that are treated as securities and transactions involving the purchase of mutual fund shares should occur under the conditions of the Best Interest Contract Exemption due to the similarity of these investments, including their distribution channels and disclosure obligations, to other investments covered in the Best Interest Contract Exemption. Investment advice fiduciaries to ERISA plans would remain eligible for relief under the exemption with respect to transactions involving all insurance and annuity contracts and mutual fund shares and the receipt of commissions allowable under that exemption. Investment advice fiduciaries to IRAs could still receive commissions for transactions involving non-securities insurance and annuity contracts, but they would be required to comply with all the protective conditions, described above.

Finally, the Department is proposing amendments to certain other existing class exemptions to require adherence to the impartial conduct standards required in the Best Interest Contract PTE. Specifically, PTEs 75–1, Part III, 75–1, Part IV, 77–4, 80–83, and 83–1, would be amended. These existing class exemptions will otherwise remain in place, affording flexibility to fiduciaries who currently use the exemptions or who wish to use the exemptions in the future.

The proposed dates on which the new exemptions and amendments to existing exemptions would be effective are summarized below.

G. The Provision of Professional Services Other Than Investment Advice

Several commenters asserted that it was unclear whether investment advice under the scope of the 2010 Proposal would include the provision of information and plan services that traditionally have been performed in a non-fiduciary capacity. For example, they requested that the proposal be revised to make clear that actuaries, accountants, and attorneys, who have historically not been treated as ERISA fiduciaries for plan clients, would not become fiduciary investment advisers by reason of providing actuarial, accounting and legal services. They said that if individuals providing these services were classified as fiduciaries, the associated costs would almost certainly increase because of the need to account for their new potential fiduciary liability. This was not the intent of the 2010 proposal.

The new proposal clarifies that attorneys, accountants, and actuaries would not be treated as fiduciaries merely because they provide such professional assistance in connection with a particular investment transaction. Only when these professionals act outside their normal roles and recommend specific investments or render valuation opinions in connection with particular investment transactions, would they be subject to the proposed fiduciary definition.

Similarly, the new proposal does not alter the principle articulated in ERISA Interpretive Bulletin 75–8, D–2 at 29 CFR 2509.75–8 (1975). Under the bulletin, the plan sponsor's human resources personnel or plan service providers who have no power to make decisions as to plan policy, interpretations, practices or procedures, but who perform purely administrative functions for an employee benefit plan, within a framework of policies, interpretations, rules, practices and procedures made by other persons, are not fiduciaries with respect to the plan.

H. Effective Date; Applicability Date

Final Rule

Commenters on the 2010 Proposal asked the Department to provide sufficient time for orderly and efficient compliance, and to make it clear that the final rule would not apply in connection with advice provided before the effective date of the final rule. Many commenters also expressed concern with the provision in the Department's 2010 Proposal that the final regulation and class exemptions would be effective 90 days after their publication in the **Federal Register**. Some commenters suggested that these effective dates should be extended to as much as 12 months or longer following publication of the new rule to allow service providers sufficient time to make necessary changes in business practices, recordkeeping, communication materials, sales processes, compensation arrangements, and related agreements, as well as the time necessary to obtain and adjust to any additional individual or class exemptions. Several said that applicability of any changes in the 1975 regulation should be no earlier than two years after the promulgation of a final regulation. Other commenters thought that the effective dates in the 2010 proposal were reasonable and asked that the final rules should go into effect promptly in order to reduce ongoing harms to savers.

In response to these concerns, the Department has revised the date by which the final rule would apply. Specifically, the final rule would be effective 60 days after publication in the **Federal Register** and the requirements of the final rule would generally become applicable eight months after publication of a final rule, with the potential exceptions noted below. This modification is intended to balance the concerns raised by commenters about the need for prompt action with concerns raised about the cost and burden associated with transitioning current and future contracts or arrangements to satisfy the requirements of the final rule and any accompanying prohibited transaction exemptions.

Administrative Prohibited Transaction Exemptions

The Department proposes to make the Best Interest Contract Exemption, if granted, available on the final rule's applicability date, *i.e.,* eight months after publication of a final rule. Further, the department proposes that the other new and revised PTEs that it is proposing go into effect as of the final rule's applicability date.[31]

For those fiduciary investment advisers who choose to avail themselves of the Best Interest Contract Exemption, the Department recognizes that compliance with certain requirements of the new exemption may be difficult within the eight-month timeframe. The Department therefore is soliciting comments on whether to delay the application of certain requirements of the Best Interest Contract Exemption for several months (for example, certain data collection requirements), thereby enabling firms and advisers to benefit from the Best Interest Contract Exemption without meeting all the

[31] See the notices with respect to these proposals, published elsewhere in this issue of the **Federal Register**.

requirements for a limited period of time. Although the Department does not believe that a general delay in the application of the exemption's requirements is warranted, it recognizes that a short-term delay of some requirements may be appropriate and may not compromise the overall protections created by the proposed rule and exemptions. As discussed in more detail in the Notice proposing the Best Interest Contract Exemption published elsewhere in this issue of the **Federal Register**, the Department requests comments on this approach.

I. Public Hearing

The Department plans to hold an administrative hearing within 30 days of the close of the comment period. As with the 2010 Proposal, the Department will ensure ample opportunity for public comment by reopening the record following the hearing and publication of the hearing transcript. Specific information regarding the date, location and submission of requests to testify will be published in a notice in the **Federal Register**.

J. Regulatory Impact Analysis

Under Executive Order 12866, "significant" regulatory actions are subject to the requirements of the Executive Order and review by the Office of Management and Budget (OMB). Section 3(f) of the executive order defines a "significant regulatory action" as an action that is likely to result in a rule (1) having an annual effect on the economy of $100 million or more, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or tribal governments or communities (also referred to as "economically significant"); (2) creating serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order. OMB has determined that this proposed rule is economically significant within the meaning of section 3(f)(1) of the Executive Order, because it would be likely to have an effect on the economy of $100 million in at least one year. Accordingly, OMB has reviewed the rule pursuant to the Executive Order.

The Department's complete Regulatory Impact Analysis is available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf*. It is summarized below.

Tax-preferred retirement savings, in the form of private-sector, employer-sponsored retirement plans, such as 401(k) plans ("plans"), and Individual Retirement Accounts ("IRAs"), are critical to the retirement security of most U.S. workers. Investment professionals play a major role in guiding their investment decisions. However, these professional advisers often are compensated in ways that create conflicts of interest, which can bias the investment advice they render and erode plan and IRA investment results. In order to limit or mitigate conflicts of interest and thereby improve retirement security, the Department of Labor ("the Department") is proposing to attach fiduciary status to more of the advice rendered to plan officials, participants, and beneficiaries (plan investors) and IRA investors.

Since the Department issued its 1975 rule, the retirement savings market has changed profoundly. Financial products are increasingly varied and complex. Individuals, rather than large employers, are increasingly responsible for their investment decisions as IRAs and 401(k)-type defined contribution plans have supplanted defined benefit pensions as the primary means of providing retirement security. Plan and IRA investors often lack investment expertise and must rely on experts—but are unable to assess the quality of the expert's advice or police its conflicts of interest. Most have no idea how "advisers" are compensated for selling them products. Many are bewildered by complex choices that require substantial financial literacy and welcome "free" advice. The risks are growing as baby boomers retire and move money from plans, where their employer has both the incentive and the fiduciary duty to facilitate sound investment choices, to IRAs, where both good and bad investment choices are myriad and most advice is conflicted. These "rollovers" are expected to approach $2.5 trillion over the next 5 years.[32] These rollovers, which will be one-time and not "on a regular basis" and thus not covered by the 1975 standard, will be the most important financial decisions that many consumers make in their lifetime. An ERISA plan investor who rolls her retirement savings into an IRA could lose 12 to 24 percent of the value of her savings over 30 years of retirement by accepting advice from a conflicted financial advisor.[33] Timely regulatory action to redress advisers' conflicts is warranted to avert such losses.

In the retail IRA marketplace, growing consumer demand for personalized advice, together with competition from online discount brokerage firms, has pushed brokers to offer more comprehensive guidance services rather than just transaction support. Unfortunately, their traditional compensation sources—such as brokerage commissions, revenue shared by mutual funds and funds' asset managers, and mark-ups on bonds sold from their own inventory—can introduce acute conflicts of interest. Brokers and others advising IRA investors are often able to calibrate their business practices to steer around the narrow 1975 rule and thereby avoid fiduciary status and prohibited transactions for accepting conflict-laden compensation. Many brokers market retirement investment services in ways that clearly suggest the provision of tailored or individualized advice, while at the same time relying on the 1975 rule to disclaim any fiduciary responsibility in the fine print of contracts and marketing materials. Thus, at the same time that marketing materials may characterize the financial adviser's relationship with the customer as one-on-one, personalized, and based on the client's best interest, footnotes and legal boilerplate disclaim the requisite mutual agreement, arrangement, or understanding that the advice is individualized or should serve as a primary basis for investment decisions. What is presented to an IRA investor as trusted advice is often paid for by a financial product vendor in the form of a sales commission or shelf-space fee, without adequate counter-balancing consumer protections that are designed to ensure that the advice is in the investor's best interest. In another variant of the same problem, brokers and others provide apparently tailored advice to customers under the guise of general education to avoid triggering fiduciary status and responsibility.

[32] Cerulli Associates, "Retirement Markets 2014: Sizing Opportunities in Private and Public Retirement Plans," 2014.

[33] For example, an ERISA plan investor who rolls $200,000 into an IRA, earns a 6% nominal rate of return with 3% inflation, and aims to spend down her savings in 30 years, would be able to consume $10,204 per year for the 30 year period. A similar investor whose assets underperform by 1 or 2 percentage points per year would only be able to consume $8,930 or $7,750 per year, respectively, in each of the 30 years. The 1 to 2 percentage point underperformance comes from a careful review of a large and growing body of literature which consistently points to a substantial failure of the market for retirement advice. The literature is discussed in the Department's complete Regulatory Impact Analysis (available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf*).

Likewise in the plan market, pension consultants and advisers that plan sponsors rely on to guide their decisions often avoid fiduciary status under the five-part test and are conflicted. For example, if a plan hires an investment professional or appraiser on a one-time basis for an investment recommendation on a large, complex investment, the adviser has no fiduciary obligation to the plan under ERISA. Even if the plan official, who lacks the specialized expertise necessary to evaluate the complex transaction on his or her own, invests all or substantially all of the plan's assets in reliance on the consultant's professional judgment, the consultant is not a fiduciary because he or she does not advise the plan on a "regular basis" and therefore may stand to profit from the plan's investment due to a conflict of interest that could affect the consultant's best judgment. Too much has changed since 1975, and too many investment decisions are made as one-time decisions and not advice on a regular basis for the five-part test to be a meaningful safeguard any longer.

The proposed definition of fiduciary investment advice included in this NPRM generally covers specific recommendations on investments, investment management, the selection of persons to provide investment advice or management, and appraisals in connection with investment decisions. Persons who provide such advice would fall within the proposed regulation's ambit if they either (a) represent that they are acting as an ERISA fiduciary or (b) make investment recommendations pursuant to an agreement, arrangement, or understanding that the advice is individualized or specifically directed to the recipient for consideration in making investment or investment management decisions regarding plan or IRA assets.

The current proposal specifically includes as fiduciary investment advice recommendations concerning the investment of assets that are rolled over or otherwise distributed from a plan. This would supersede guidance the Department provided in a 2005 advisory opinion,[34] which concluded that such recommendations did not constitute fiduciary advice. However, the current proposal provides that an adviser does not act as a fiduciary merely by providing plan investors with information about plan distribution options, including the tax consequences associated with the available types of benefit distributions.

The current proposal adopts what the Department intends to be a balanced approach to prohibited transaction exemptions. The proposal narrows and attaches new protective conditions to some existing PTEs. At the same time it includes some new PTEs with broad but targeted combined scope and strong protective conditions. These elements of the proposal reflect the Department's effort to ensure that advice is impartial while avoiding larger and costlier than necessary disruptions to existing business arrangements or constraints on future innovation.

In developing the current proposal, the Department conducted an in-depth economic assessment of the market for retirement investment advice. As further discussed below, the Department found that conflicted advice is widespread, causing serious harm to plan and IRA investors, and that disclosing conflicts alone would fail to adequately mitigate the conflicts or remedy the harm. By extending fiduciary status to more providers of advice and providing broad but targeted and protective PTEs, the Department believes the current proposal would mitigate conflicts, support consumer choice, and deliver substantial gains for retirement investors and economic benefits that more than justify its costs.

Advisers' conflicts take a variety of forms and can bias their advice in a variety of ways. For example, advisers often are paid more for selling some mutual funds than others, and to execute larger and more frequent trades of mutual fund shares or other securities. Broker-dealers reap price spreads from principal transactions, so advisers may be encouraged to recommend larger and more frequent trades. These and other adviser compensation arrangements introduce direct and serious conflicts of interest between advisers and retirement investors. Advisers often are paid a great deal more if they recommend investments and transactions that are highly profitable to the financial industry, even if they are not in investors' best interests. These financial incentives can and do bias the advisers' recommendations.

Following such biased advice can inflict losses on investors in several ways. They may choose more expensive and/or poorer performing investments. They may trade too much and thereby incur excessive transaction costs, and they may incur more costly timing errors, which are a common consequence of chasing returns.

A wide body of economic evidence, reviewed in the Department's full Regulatory Impact Analysis (available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf*), supports a finding that the impact of these conflicts of interest on investment outcomes is large and negative. The supporting evidence includes, among other things, statistical analyses of conflicted investment channels, experimental studies, government reports documenting abuse, and economic theory on the dangers posed by conflicts of interest and by the asymmetries of information and expertise that characterize interactions between ordinary retirement investors and conflicted advisers. A review of this data, which consistently points to a substantial failure of the market for retirement advice, suggests that IRA holders receiving conflicted investment advice can expect their investments to underperform by an average of 100 basis points per year over the next 20 years. The underperformance associated with conflicts of interest—in the mutual funds segment alone—could cost IRA investors more than $210 billion over the next 10 years and nearly $500 over the next 20 years. Some studies suggest that the underperformance of broker-sold mutual funds may be even higher than 100 basis points. If the true underperformance of broker-sold funds is 200 basis points, IRA mutual fund holders could suffer from underperformance amounting to $430 billion over 10 years and nearly $1 trillion across the next 20 years. While the estimates based on the mutual fund market are large, the total market impact could be much larger. Insurance products, Exchange Traded Funds (ETFs), individual stocks and bonds, and other products are all sold by brokers with conflicts of interest.

Disclosure alone has proven ineffective to mitigate conflicts in advice. Extensive research has demonstrated that most investors have little understanding of their advisers' conflicts, and little awareness of what they are paying via indirect channels for the conflicted advice. Even if they understand the scope of the advisers' conflicts, most consumers generally cannot distinguish good advice, or even good investment results, from bad. The same gap in expertise that makes investment advice necessary frequently also prevents investors from recognizing bad advice or understanding advisers' disclosures. Recent research suggests that even if disclosure about conflicts could be made simple and clear, it would be ineffective—or even harmful.[35]

[34] DOL Advisory Opinion 2005–23A (Dec. 7, 2005).

[35] See Loewenstein *et al.*, (2011) for a summary of some relevant literature.

Excessive fees and substandard investment performance in DC plans or IRAs, which can result when advisers' conflicts bias their advice, erode benefit security. This proposal aims to ensure that advice is impartial, thereby rooting out excessive fees and substandard performance otherwise attributable to advisers' conflicts, producing gains for retirement investors. Delivering these gains would entail compliance costs—namely, the cost incurred by new fiduciary advisers to avoid the prohibited transaction rules and/or satisfy relevant PTE conditions. The Department expects investor gains would be very large relative to compliance costs, and therefore believes this proposal is economically justified and sound.

Because of limitations of the literature and other evidence, only some of these gains can be quantified with confidence. Focusing only on how load shares paid to brokers affect the size of loads IRA investors holding front-end load funds pay and the returns they achieve, we estimate the proposal would deliver to IRA investors gains of between $40 billion and $44 billion over 10 years and between $88 and $100 billion over 20 years. These estimates assume that the rule will eliminate (rather than just reduce) underperformance associated with the practice of incentivizing broker recommendations through variable front-end-load sharing; if the rule's effectiveness in this area is substantially below 100 percent, these estimates may overstate these particular gains to investors in the front-load mutual fund segment of the IRA market. The Department nonetheless believes that these gains alone would far exceed the proposal's compliance cost which are estimated to be between $2.4 billion and $5.7 billion over 10 years, mostly reflecting the cost incurred by new fiduciary advisers to satisfy relevant PTE conditions (these costs are also front-loaded and will be less in subsequent years). For example, if only 75 percent of the potential gains were realized in the subset of the market that was analyzed (the front-load mutual fund segment of the IRA market), the gains would amount to between $30 billion and $33 billion over 10 years. If only 50 percent were realized, the expected gains in this subset of the market would total between $20 billion and $22 billion over 10 years, still several times the proposal's estimated compliance cost

These estimates account for only a fraction of potential conflicts, associated losses, and affected retirement assets. The total gains to IRA investors attributable to the rule may be much higher than these quantified gains alone. The Department expects the proposal to yield large, additional gains for IRA investors, including improvements in the performance of IRA investments other than front-load mutual funds and potential reductions in excessive trading and associated transaction costs and timing errors (such as might be associated with return chasing). As noted above, under current rules, adviser conflicts could cost IRA investors as much as $410 billion over 10 years and $1 trillion over 20 years, so the potential additional gains to IRA investors from this proposal could be very large.

Just as with IRAs, there is evidence that conflicts of interest in the investment advice market also erode plan assets. For example, the U.S. Government Accountability Office (GAO) found that defined benefit pension plans using consultants with undisclosed conflicts of interest earned 1.3 percentage points per year less than other plans.[36] Other GAO reports point out how adviser conflicts may cause plan participants to roll plan assets into IRAs that charge high fees or 401(k) plan officials to include expensive or underperforming funds in investment menus.[37] A number of academic studies find that 401(k) plan investment options underperform the market,[38] and at least one study attributes such underperformance to excessive reliance on funds that are proprietary to plan service providers who may be providing investment advice to plan officials that choose the investment options.[39]

The Department expects the current proposal's positive effects to extend well beyond improved investment results for retirement investors. The IRA and plan markets for fiduciary advice and other services may become more efficient as a result of more transparent pricing and greater certainty about the fiduciary status of advisers and about the impartiality of their advice. There may be benefits from the increased flexibility that the current proposal's PTEs would provide with respect to fiduciary investment advice currently falling within the ambit of the 1975 rule. The current proposal's defined boundaries between fiduciary advice, education, and sales activity directed at large plans, may bring greater clarity to the IRA and plan services markets. Innovation in new advice business models, including technology-driven models, may be accelerated, and nudged away from conflicts and toward transparency, thereby promoting healthy competition in the fiduciary advice market.

A major expected positive effect of the current proposal in the plan advice market is improved compliance and associated improved security of plan assets and benefits. Clarity about advisers' fiduciary status would strengthen EBSA's enforcement activities resulting in fuller and faster correction, and stronger deterrence, of ERISA violations.

In conclusion, the Department believes that the current proposal would mitigate adviser conflicts and thereby improve plan and IRA investment results, while avoiding greater than necessary disruption of existing business practices and would deliver large gains to retirement investors and a variety of other economic benefits, which would more than justify its costs.

K. Initial Regulatory Flexibility Analysis

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and which are likely to have a significant economic impact on a substantial number of small entities. Unless an agency determines that a proposal is not likely to have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present an initial regulatory flexibility analysis (IRFA) of the proposed rule. The Department's IRFA of the proposed rule is provided below.

The Department believes that amending the current regulation by broadening the scope of service providers, regardless of size, that would be considered fiduciaries would enhance the Department's ability to redress service provider abuses that currently exist in the plan service provider market, such as undisclosed fees, misrepresentation of compensation arrangements, and biased appraisals of the value of plan investments.

The Department's complete Initial Regulatory Flexibility Analysis is available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf.* It is summarized below.

The Department believes that the proposal would provide benefits to small plans and their related small employers and IRA holders, and impose costs on small service providers

[36] GAO Report, Publication No. GAO–09–503T, 2009.

[37] GAO Report, Publication No. GAO–11–119, 2011.

[38] See *e.g.* Elton *et al.* (2013).

[39] See Pool *et al.* (2014).

providing investment advice to ERISA plans, ERISA plan participants and IRA holders. Small service providers affected by this rule are defined to include broker-dealers, registered investment advisers, consultants, appraisers, and others providing investment advice to small ERISA plans and IRA that have less than $38.5 million in revenue.

The Department anticipates that broker-dealers would experience the largest impact from the proposed rule and associated proposed exemptions. Registered investment advisers and other ERISA plan service providers would experience less of a burden from the rule. The Department assumes that firms would utilize whichever PTEs would be most cost effective for their business models. Regardless of which PTEs they use, small affected entities would incur costs associated with developing and implementing new compliance policies and procedures to minimize conflicts of interest; creating and distributing new disclosures; maintaining additional compliance records; familiarizing and training staff on new requirements; and obtaining additional liability insurance.

As discussed previously, the Department estimated the costs of implementing new compliance policies and procedures, training staff, and creating disclosures for small broker-dealers. The Department estimates that small broker-dealers could expend on average approximately $53,000 in the first year and $21,000 in subsequent years; small registered investment advisers would spend approximately $5,300 in the first year and $500 in subsequent years; and small service providers would spend approximately $5,300 in the first year and $500 in subsequent years. The estimated cost for small broker-dealers is believed to be an overestimate, especially for the smallest firms as they are believed to have on average simpler arrangements and they may have relationships with larger firms that help with compliance, thus lowering their costs. Additionally, broker-dealers and service providers would incur an expense of about $300 in additional liability insurance premiums for each representative or other individual who would now be considered a fiduciary. Of this expense, $150 is estimated to be paid to the insuring firms and the other $150 is estimated to be paid out as compensation to those harmed, which is counted as a transfer. Any disclosures produced by affected entities would cost, on average, about $1.53 in the first year and about $1.15 in subsequent years. These per-representative and per-disclosure costs are not expected to disproportionately affect small entities.

Although the PTEs allow firms to maintain their existing business models, some small affected entities may determine that it is more cost effective to shift business models. In this scenario, some BDs might incur the costs of switching to becoming RIAs, including training, testing, and licensing costs, at a cost of approximately $5,600 per representative.

Some small service providers may find that the increased costs associated with ERISA fiduciary status outweigh the benefit of continuing to service the ERISA plan market or the IRA market. The Department does not believe that this outcome would be widespread or that it would result in a diminution of the amount or quality of advice available to small or other retirement savers. It is also possible that the economic impact of the rule on small entities would not be as significant as it would be for large entities, because anecdotal evidence indicates that some small entities do not have as many business arrangements that give rise to conflicts of interest. Therefore, they would not be confronted with the same costs to restructure transactions that would be faced by large entities.

L. Paperwork Reduction Act

As part of its continuing effort to reduce paperwork and respondent burden, the Department of Labor conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that the public understands the Department's collection instructions; respondents can provide the requested data in the desired format; reporting burden (time and financial resources) is minimized; collection instruments are clearly understood; and the Department can properly assess the impact of collection requirements on respondents.

Currently, the Department is soliciting comments concerning the proposed information collection requests (ICRs) included in the "carve-outs" section of its proposal to amend its 1975 rule that defines when a person who provides investment advice to an employee benefit plan becomes an ERISA fiduciary. A copy of the ICRs may be obtained by contacting the PRA addressee shown below or at *http://www.RegInfo.gov.*

The Department has submitted a copy of the Conflict of Interest Proposed Rule Carveout Disclosure Requirements to the Office of Management and Budget (OMB) in accordance with 44 U.S.C. 3507(d) for review of its information collections. The Department and OMB are particularly interested in comments that:

• Evaluate whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information would have practical utility;

• Evaluate the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

• Enhance the quality, utility, and clarity of the information to be collected; and

• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Comments should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503; Attention: Desk Officer for the Employee Benefits Security Administration. OMB requests that comments be received within 30 days of publication of the Proposed Investment Advice Initiative to ensure their consideration.

PRA Addressee: Address requests for copies of the ICR to G. Christopher Cosby, Office of Policy and Research, U.S. Department of Labor, Employee Benefits Security Administration, 200 Constitution Avenue NW., Room N–5718, Washington, DC 20210. Telephone (202) 693–8410; Fax: (202) 219–5333. These are not toll-free numbers. ICRs submitted to OMB also are available at *http://www.RegInfo.gov.*

As discussed in detail above, Paragraph (b)(1)(i) of the proposed regulation provides a carve-out to the general definition for advice provided in connection with an arm's length sale, purchase, loan, or bilateral contract between a sophisticated plan investor, which has 100 or more plan participants, and the adviser ("seller's carve-out"). It also applies in connection with an offer to enter into such a transaction or when the person providing the advice is acting as an agent or appraiser for the plan's counterparty. In order to rely on this carve-out, the person must provide advice to a plan fiduciary who is independent of such person and who exercises authority or control respecting the management or disposition of the plan's assets, with respect to an arm's length sale, purchase, loan or bilateral contract between the plan and the counterparty, or with respect to a proposal to enter into such a sale, purchase, loan or bilateral contract.

The seller's carve-out applies if certain conditions are met. Among these conditions are the following: The adviser must obtain a written representation from the plan fiduciary that (1) the plan fiduciary is a fiduciary who exercises authority or control respecting the management or disposition of the employee benefit plan's assets (as described in section 3(21)(A)(i) of the Act), (2) that the employee benefit plan has 100 or more participants covered under the plan, and that (3) the fiduciary will not rely on the person to act in the best interests of the plan, to provide impartial investment advice, or to give advice in a fiduciary capacity.

Paragraph (b)(3) of the proposed regulation provides a carve-out making clear that persons who merely market and make available, securities or other property through a platform or similar mechanism to an employee benefit plan without regard to the individualized needs of the plan, its participants, or beneficiaries do not act as investment advice fiduciaries. This carve-out applies if the person discloses in writing to the plan fiduciary that the person is not undertaking to provide impartial investment advice or to give advice in a fiduciary capacity.

Paragraph (b)(6) of the proposal makes clear that furnishing and providing certain specified investment educational information and materials (including certain investment allocation models and interactive plan materials) to a plan, plan fiduciary, participant, beneficiary or IRA owner would not constitute the rendering of investment advice if certain conditions are met. One of the conditions is that the asset allocation models or interactive materials must explain all material facts and assumptions on which the models and materials are based and include a statement indicating that, in applying particular asset allocation models to their individual situations, participants, beneficiaries, or IRA owners should consider their other assets, income, and investments in addition to their interests in the plan or IRA to the extent they are not taken into account in the model or estimate.

The seller's carve-out written representation, platform provider carve-out disclosure, and the education carve-out disclosures for asset allocation models and interactive investment materials are information collection requests (ICRs) subject to the Paperwork Reduction Act. The Department has made the following assumptions in order to establish a reasonable estimate of the paperwork burden associated with these ICRs:

- Approximately 43,000 plans would utilize the seller's carve-out;
- Approximately 1,800 service providers would utilize the platform provider carve-out;
- Approximately 2,800 financial institutions would utilize the education carve-out;
- Plans and advisers using the seller's carve-out are entities with financial expertise and would distribute substantially all of the disclosures electronically via means already used in their normal course of business and the costs arising from electronic distribution would be negligible;
- Service providers using the platform provider carve-out already maintain contracts with their customers as a regular and customary business practice and the materials costs arising from inserting the platform provider carve-out into the existing contracts would be negligible;
- Materials costs arising from inserting the required education carve-out disclosure into existing models and interactive materials would be negligible;
- Advisers would use existing in-house resources to prepare the disclosures; and
- The tasks associated with the ICRs would be performed by clerical personnel at an hourly rate of $30.42 and legal professionals at an hourly rate of $129.94.[40]

The Department estimates that each plan would require one hour of legal professional time and 30 minutes of clerical time to produce the seller's carve-out representation. Therefore, the seller's carve-out representation would result in approximately 43,000 hours of legal time at an equivalent cost of approximately $5.6 million. It would also result in approximately 21,000 hours of clerical time at an equivalent cost of approximately $653,000. In total, the burden associated with the seller's carve-out representation is approximately 64,000 hours at an equivalent cost of $6.2 million.

The Department estimates that each service provider using the platform provider carve-out would require ten minutes of legal professional time to draft the needed disclosure. Therefore, the platform provider carve-out disclosure would result in approximately 300 hours of legal time at an equivalent cost of approximately $39,000.

The Department estimates that each financial institution using the education carve-out would require twenty minutes of legal professional time to draft the disclosure. Therefore, this carve-out disclosure would result in approximately 900 hours of legal time at an equivalent cost of approximately $121,000.

In total, the hour burden for the representation and disclosures required by the carve-outs is approximately 66,000 hours at an equivalent cost of $6.4 million.

Because the Department assumes that all disclosures would be distributed electronically or require small amounts of space to include in existing materials, the Department has not associated any cost burden with these ICRs.

These paperwork burden estimates are summarized as follows:

Type of Review: New collection (Request for new OMB Control Number).

Agency: Employee Benefits Security Administration, Department of Labor.

Title: Conflict of Interest Proposed Rule Carveout Disclosure Requirements.

OMB Control Number: 1210—NEW.

Affected Public: Business or other for-profit.

Estimated Number of Respondents: 47,532.

Estimated Number of Annual Responses: 47,532.

Frequency of Response: When engaging in excepted transaction.

Estimated Total Annual Burden Hours: 65,631 hours.

Estimated Total Annual Burden Cost: $0.

M. Congressional Review Act

The proposed rule is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and, if finalized,

[40] The Department's estimated 2015 hourly labor rates include wages, other benefits, and overhead are calculated as follows: Mean wage from the 2013 National Occupational Employment Survey (April 2014, Bureau of Labor Statistics *http://www.bls.gov/news.release/pdf/ocwage.pdf*); wages as a percent of total compensation from the Employer Cost for Employee Compensation (June 2014, Bureau of Labor Statistics *http://www.bls.gov/news.release/ecec.t02.htm*); overhead as a multiple of compensation is assumed to be 25 percent of total compensation for paraprofessionals, 20 percent of compensation for clerical, and 35 percent of compensation for professional; annual inflation assumed to be 2.3 percent annual growth of total labor cost since 2013 (Employment Costs Index data for private industry, September 2014 *http://www.bls.gov/news.release/eci.nr0.htm*).

would be transmitted to Congress and the Comptroller General for review. The proposed rule is a "major rule" as that term is defined in 5 U.S.C. 804, because it is likely to result in an annual effect on the economy of $100 million or more.

N. Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) requires each Federal agency to prepare a written statement assessing the effects of any Federal mandate in a proposed or final agency rule that may result in an expenditure of $100 million or more (adjusted annually for inflation with the base year 1995) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector. Such a mandate is deemed to be a "significant regulatory action." The current proposal is expected to have such an impact on the private sector, and the Department therefore hereby provides such an assessment.

The Department is issuing the current proposal under ERISA section 3(21)(A)(ii) (29 U.S.C. 1002(21)(a)(ii)).[41] The Department is charged with interpreting the ERISA and Code provisions that attach fiduciary status to anyone who is paid to provide investment advice to plan or IRA investors. The current proposal would update and supersede the 1975 rule[42] that currently interprets these statutory provisions.

The Department assessed the anticipated benefits and costs of the current proposal pursuant to Executive Order 12866 in the Regulatory Impact Analysis for the current proposal and concluded that its benefits would justify its costs. The Department's complete Regulatory Impact Analysis is available at *www.dol.gov/ebsa/pdf/conflictsofinterestria.pdf.* To summarize, the current proposals' material benefits and costs generally would be confined to the private sector, where plans and IRA investors would, in the Department's estimation, benefit on net, partly at the expense of their fiduciary advisers and upstream financial service and product producers. The Department itself would benefit from increased efficiency in its enforcement activity. The public and overall US economy would benefit from increased compliance with ERISA and the Code and confidence in advisers, as well as from more efficient allocation of investment capital, and gains to investors.

The current proposal is not expected to have any material economic impacts on State, local or tribal governments, or on health, safety, or the natural environment. The North American Securities Administrators Association commented in support of the Department's 2010 proposal.[43]

O. Federalism Statement

Executive Order 13132 (August 4, 1999) outlines fundamental principles of federalism, and requires the adherence to specific criteria by Federal agencies in the process of their formulation and implementation of policies that have substantial direct effects on the States, the relationship between the national government and States, or on the distribution of power and responsibilities among the various levels of government. This proposed rule does not have federalism implications because it has no substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Section 514 of ERISA provides, with certain exceptions specifically enumerated, that the provisions of Titles I and IV of ERISA supersede any and all laws of the States as they relate to any employee benefit plan covered under ERISA. The requirements implemented in the proposed rule do not alter the fundamental reporting and disclosure requirements of the statute with respect to employee benefit plans, and as such have no implications for the States or the relationship or distribution of power between the national government and the States.

Statutory Authority

This regulation is proposed pursuant to the authority in section 505 of ERISA (Pub. L. 93–406, 88 Stat. 894; 29 U.S.C. 1135) and section 102 of Plan No. 4 of 1978 (43 FR 47713, October 17, 1978), effective December 31, 1978 (44 FR 1065, January 3, 1979), 3 CFR 1978 Comp. 332, and under Secretary of Labor's Order No. 1–2011, 77 FR 1088 (Jan. 9, 2012).

Withdrawal of Proposed Regulation

Paragraph (c) of the proposed regulation relating to the definition of fiduciary (proposed 29 CFR 2510.3(21)) that was published in the **Federal Register** on October 20, 2010 (75 FR 65263) is hereby withdrawn.

List of Subjects in 29 CFR Parts 2509 and 2510

Employee benefit plans, Employee Retirement Income Security Act, Pensions, Plan assets.

For the reasons set forth in the preamble, the Department is proposing to amend parts 2509 and 2510 of subchapters A and B of Chapter XXV of Title 29 of the Code of Federal Regulations as follows:

SUBCHAPTER A—GENERAL

PART 2509—INTERPRETIVE BULLETINS RELATING TO THE EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

■ 1. The authority citation for part 2509 continues to read as follows:

Authority: 29 U.S.C. 1135. Secretary of Labor's Order 1–2011, 77 FR 1088 (Jan. 9, 2012). Sections 2509.75–10 and 2509.75–2 issued under 29 U.S.C. 1052, 1053, 1054. Sec. 2509.75–5 also issued under 29 U.S.C. 1002. Sec. 2509.95–1 also issued under sec. 625, Pub. L. 109–280, 120 Stat. 780.

§ 2509.96–1 [Removed]

■ 2. Remove § 2509.96–1.

SUBCHAPTER B—DEFINITIONS AND COVERAGE UNDER THE EMPLOYEE RETIREMENT INCOME SECURITY ACT OF 1974

PART 2510—DEFINITIONS OF TERMS USED IN SUBCHAPTERS C, D, E, F, AND G OF THIS CHAPTER

■ 3. The authority citation for part 2510 is revised to read as follows:

Authority: 29 U.S.C. 1002(2), 1002(21), 1002(37), 1002(38), 1002(40), 1031, and 1135; Secretary of Labor's Order 1–2011, 77 FR 1088; Secs. 2510.3–21, 2510.3–101 and 2510.3–102 also issued under Sec. 102 of Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 237. Section 2510.3–38 also issued under Pub. L. 105–72, Sec. 1(b), 111 Stat. 1457 (1997).

■ 4. Revise § 2510.3–21 to read as follows:

§ 2510.3–21 Definition of "Fiduciary."

(a) *Investment advice.* For purposes of section 3(21)(A)(ii) of the Employee Retirement Income Security Act of 1974 (Act) and section 4975(e)(3)(B) of the Internal Revenue Code (Code), except as provided in paragraph (b) of this section, a person renders investment advice with respect to moneys or other property of a plan or IRA described in paragraph (f)(2) of this section if—

(1) Such person provides, directly to a plan, plan fiduciary, plan participant or beneficiary, IRA, or IRA owner the

[41] Under section 102 of the Reorganization Plan No. 4 of 1978, the authority of the Secretary of the Treasury to interpret section 4975 of the Code has been transferred, with exceptions not relevant here, to the Secretary of Labor.

[42] 29 CFR 2510.3–21(c).

[43] Available at *http://www.dol.gov/ebsa/pdf/1210-AB32-PH007.pdf.*

following types of advice in exchange for a fee or other compensation, whether direct or indirect:

(i) A recommendation as to the advisability of acquiring, holding, disposing or exchanging securities or other property, including a recommendation to take a distribution of benefits or a recommendation as to the investment of securities or other property to be rolled over or otherwise distributed from the plan or IRA;

(ii) A recommendation as to the management of securities or other property, including recommendations as to the management of securities or other property to be rolled over or otherwise distributed from the plan or IRA;

(iii) An appraisal, fairness opinion, or similar statement whether verbal or written concerning the value of securities or other property if provided in connection with a specific transaction or transactions involving the acquisition, disposition, or exchange, of such securities or other property by the plan or IRA;

(iv) A recommendation of a person who is also going to receive a fee or other compensation for providing any of the types of advice described in paragraphs (i) through (iii); and

(2) Such person, either directly or indirectly (*e.g.,* through or together with any affiliate),—

(i) Represents or acknowledges that it is acting as a fiduciary within the meaning of the Act with respect to the advice described in paragraph (a)(1) of this section; or

(ii) Renders the advice pursuant to a written or verbal agreement, arrangement or understanding that the advice is individualized to, or that such advice is specifically directed to, the advice recipient for consideration in making investment or management decisions with respect to securities or other property of the plan or IRA.

(b) *Carve-outs—investment advice.* Except for persons described in paragraph (a)(2)(i) of this section, the rendering of advice or other communications in conformance with a carve-out set forth in paragraph (b)(1) through (6) of this section shall not cause the person who renders the advice to be treated as a fiduciary under paragraph (a) of this section.

(1) *Counterparties to the plan*—(i) *Counterparty transaction with plan fiduciary with financial expertise.* (A) In such person's capacity as a counterparty (or representative of a counterparty) to an employee benefit plan (as described in section 3(3) of the Act), the person provides advice to a plan fiduciary who is independent of such person and who exercises authority or control with respect to the management or disposition of the plan's assets, with respect to an arm's length sale, purchase, loan or bilateral contract between the plan and the counterparty, or with respect to a proposal to enter into such a sale, purchase, loan or bilateral contract, if, prior to providing any recommendation with respect to the transaction, such person satisfies the requirements of either paragraph (b)(1)(i)(B) or (C) of this section.

(B) Such person—

(*1*) Obtains a written representation from the independent plan fiduciary that the independent fiduciary exercises authority or control with respect to the management or disposition of the employee benefit plan's assets (as described in section 3(21)(A)(i) of the Act), that the employee benefit plan has 100 or more participants covered under the plan, and that the independent fiduciary will not rely on the person to act in the best interests of the plan, to provide impartial investment advice, or to give advice in a fiduciary capacity;

(*2*) Fairly informs the independent plan fiduciary of the existence and nature of the person's financial interests in the transaction;

(*3*) Does not receive a fee or other compensation directly from the plan, or plan fiduciary, for the provision of investment advice (as opposed to other services) in connection with the transaction; and

(*4*) Knows or reasonably believes that the independent plan fiduciary has sufficient expertise to evaluate the transaction and to determine whether the transaction is prudent and in the best interest of the plan participants (the person may rely on written representations from the plan or the plan fiduciary to satisfy this subsection (b)(1)(i)(B)(*4*)).

(C) Such person—

(*1*) Knows or reasonably believes that the independent plan fiduciary has responsibility for managing at least $100 million in employee benefit plan assets (for purposes of this paragraph (b)(1)(i)(C), when dealing with an individual employee benefit plan, a person may rely on the information on the most recent Form 5500 Annual Return/Report filed for the plan to determine the value and, in the case of an independent fiduciary acting as an asset manager for multiple employee benefit plans, a person may rely on representations from the independent plan fiduciary regarding the value of employee benefit plan assets under management);

(*2*) Fairly informs the independent plan fiduciary that the person is not undertaking to provide impartial investment advice, or to give advice in a fiduciary capacity; and

(*3*) Does not receive a fee or other compensation directly from the plan, or plan fiduciary, for the provision of investment advice (as opposed to other services) in connection with the transaction.

(ii) *Swap and security-based swap transactions.* The person is a counterparty to an employee benefit plan (as described in section 3(3) of the Act) in connection with a swap or security-based swap, as defined in section 1(a) of the Commodity Exchange Act (7 U.S.C. 1(a) and section 3(a) of the Securities Exchange Act (15 U.S.C. 78c(a)), if—

(A) The plan is represented by a fiduciary independent of the person;

(B) The person is a swap dealer, security-based swap dealer, major swap participant, or major security-based swap participant;

(C) The person (if a swap dealer or security-based swap dealer), is not acting as an advisor to the plan (within the meaning of section 4s(h) of the Commodity Exchange Act or section 15F(h) of the Securities Exchange Act of 1934) in connection with the transaction; and

(D) In advance of providing any recommendations with respect to the transaction, the person obtains a written representation from the independent plan fiduciary, that the fiduciary will not rely on recommendations provided by the person.

(2) *Employees.* In his or her capacity as an employee of any employer or employee organization sponsoring the employee benefit plan (as described in section 3(3) of the Act), the person provides the advice to a plan fiduciary, and he or she receives no fee or other compensation, direct or indirect, in connection with the advice beyond the employee's normal compensation for work performed for the employer or employee organization.

(3) *Platform providers.* The person merely markets and makes available to an employee benefit plan (as described in section 3(3) of the Act), without regard to the individualized needs of the plan, its participants, or beneficiaries, securities or other property through a platform or similar mechanism from which a plan fiduciary may select or monitor investment alternatives, including qualified default investment alternatives, into which plan participants or beneficiaries may direct the investment of assets held in, or contributed to, their individual accounts, if the person discloses in writing to the plan fiduciary that the person is not undertaking to provide

impartial investment advice or to give advice in a fiduciary capacity.

(4) *Selection and monitoring assistance.* In connection with the activities described in paragraph (b)(3) of this section with respect to an employee benefit plan (as described in section 3(3) of the Act), the person—

(i) Merely identifies investment alternatives that meet objective criteria specified by the plan fiduciary (*e.g.,* stated parameters concerning expense ratios, size of fund, type of asset, credit quality); or

(ii) Merely provides objective financial data and comparisons with independent benchmarks to the plan fiduciary.

(5) *Financial reports and valuations.* The person provides an appraisal, fairness opinion, or statement of value to—

(i) An employee stock ownership plan (as defined in section 407(d)(6) of the Act) regarding employer securities (as defined section 407(d)(5) of the Act);

(ii) An investment fund, such as a collective investment fund or pooled separate account, in which more than one unaffiliated plan has an investment, or which holds plan assets of more than one unaffiliated plan under 29 CFR 2510.3–101; or

(iii) A plan, a plan fiduciary, a plan participant or beneficiary, an IRA or IRA owner solely for purposes of compliance with the reporting and disclosure provisions under the Act, the Code, and the regulations, forms and schedules issued thereunder, or any applicable reporting or disclosure requirement under a Federal or state law, rule or regulation or self-regulatory organization rule or regulation.

(6) *Investment education.* The person furnishes or makes available any of the following categories of investment-related information and materials described in paragraphs (b)(6)(i) through (iv) of this section to a plan, plan fiduciary, participant or beneficiary, IRA or IRA owner irrespective of who provides or makes available the information and materials (*e.g.,* plan sponsor, fiduciary or service provider), the frequency with which the information and materials are provided, the form in which the information and materials are provided (*e.g.,* on an individual or group basis, in writing or orally, or via call center, video or computer software), or whether an identified category of information and materials is furnished or made available alone or in combination with other categories of information and materials identified in paragraphs (b)(6)(i) through (iv), provided that the information and materials do not include (standing alone or in combination with other materials) recommendations with respect to specific investment products or specific plan or IRA alternatives, or recommendations on investment, management, or value of a particular security or securities, or other property.

(i) *Plan information.* Information and materials that, without reference to the appropriateness of any individual investment alternative or any individual benefit distribution option for the plan or IRA, or a particular participant or beneficiary or IRA owner, describe the terms or operation of the plan or IRA, inform a plan fiduciary, participant, beneficiary, or IRA owner about the benefits of plan or IRA participation, the benefits of increasing plan or IRA contributions, the impact of preretirement withdrawals on retirement income, retirement income needs, varying forms of distributions, including rollovers, annuitization and other forms of lifetime income payment options (*e.g.,* immediate annuity, deferred annuity, or incremental purchase of deferred annuity), advantages, disadvantages and risks of different forms of distributions, or describe investment objectives and philosophies, risk and return characteristics, historical return information or related prospectuses of investment alternatives under the plan or IRA.

(ii) *General financial, investment and retirement information.* Information and materials on financial, investment and retirement matters that do not address specific investment products, specific plan or IRA alternatives or distribution options available to the plan or IRA or to participants, beneficiaries and IRA owners, or specific alternatives or services offered outside the plan or IRA, and inform the plan fiduciary, participant or beneficiary, or IRA owner about—

(A) General financial and investment concepts, such as risk and return, diversification, dollar cost averaging, compounded return, and tax deferred investment;

(B) Historic differences in rates of return between different asset classes (*e.g.,* equities, bonds, or cash) based on standard market indices;

(C) Effects of inflation;

(D) Estimating future retirement income needs;

(E) Determining investment time horizons;

(F) Assessing risk tolerance;

(G) Retirement-related risks (*e.g.,* longevity risks, market/interest rates, inflation, health care and other expenses); and

(H) General methods and strategies for managing assets in retirement (*e.g.,* systematic withdrawal payments, annuitization, guaranteed minimum withdrawal benefits), including those offered outside the plan or IRA.

(iii) *Asset allocation models.* Information and materials (*e.g.,* pie charts, graphs, or case studies) that provide a plan fiduciary, participant or beneficiary, or IRA owner with models of asset allocation portfolios of hypothetical individuals with different time horizons (which may extend beyond an individual's retirement date) and risk profiles, where—

(A) Such models are based on generally accepted investments theories that take into account the historic returns of different asset classes (*e.g.,* equities, bonds, or cash) over defined periods of time;

(B) All material facts and assumptions on which such models are based (*e.g.,* retirement ages, life expectancies, income levels, financial resources, replacement income ratios, inflation rates, and rates of return) accompany the models;

(C) Such models do not include or identify any specific investment product or specific alternative available under the plan or IRA; and

(D) The asset allocation models are accompanied by a statement indicating that, in applying particular asset allocation models to their individual situations, participants, beneficiaries, or IRA owners should consider their other assets, income, and investments (*e.g.,* equity in a home, Social Security benefits, individual retirement plan investments, savings accounts and interests in other qualified and non-qualified plans) in addition to their interests in the plan or IRA, to the extent those items are not taken into account in the model or estimate.

(iv) *Interactive investment materials.* Questionnaires, worksheets, software, and similar materials which provide a plan fiduciary, participant or beneficiary, or IRA owners the means to estimate future retirement income needs and assess the impact of different asset allocations on retirement income; questionnaires, worksheets, software and similar materials which allow a plan fiduciary, participant or beneficiary, or IRA owners to evaluate distribution options, products or vehicles by providing information under paragraphs (b)(6)(i) and (ii) of this section; questionnaires, worksheets, software, and similar materials that provide a plan fiduciary, participant or beneficiary, or IRA owner the means to estimate a retirement income stream that could be generated by an actual or hypothetical account balance, where—

(A) Such materials are based on generally accepted investment theories that take into account the historic returns of different asset classes (*e.g.*, equities, bonds, or cash) over defined periods of time;

(B) There is an objective correlation between the asset allocations generated by the materials and the information and data supplied by the participant, beneficiary or IRA owner;

(C) There is an objective correlation between the income stream generated by the materials and the information and data supplied by the participant, beneficiary or IRA owner;

(D) All material facts and assumptions (*e.g.*, retirement ages, life expectancies, income levels, financial resources, replacement income ratios, inflation rates, rates of return and other features and rates specific to income annuities or systematic withdrawal plan) that may affect a participant's, beneficiary's or IRA owner's assessment of the different asset allocations or different income streams accompany the materials or are specified by the participant, beneficiary or IRA owner;

(E) The materials do not include or identify any specific investment alternative available or distribution option available under the plan or IRA, unless such alternative or option is specified by the participant, beneficiary or IRA owner; and

(F) The materials either take into account other assets, income and investments (*e.g.*, equity in a home, Social Security benefits, individual retirement account/annuity investments, savings accounts, and interests in other qualified and non-qualified plans) or are accompanied by a statement indicating that, in applying particular asset allocations to their individual situations, or in assessing the adequacy of an estimated income stream, participants, beneficiaries or IRA owners should consider their other assets, income, and investments in addition to their interests in the plan or IRA.

(v) The information and materials described in paragraphs (b)(6)(i) through (iv) of this section represent examples of the type of information and materials that may be furnished to participants, beneficiaries and IRA owners without such information and materials constituting investment advice. Determinations as to whether the provision of any information, materials or educational services not described herein constitutes the rendering of investment advice must be made by reference to the criteria set forth in paragraph (a) of this section.

(c) *Scope of fiduciary duty—investment advice.* A person who is a fiduciary with respect to an employee benefit plan or IRA by reason of rendering investment advice (as defined in paragraph (a) of this section) for a fee or other compensation, direct or indirect, with respect to any securities or other property of such plan, or having any authority or responsibility to do so, shall not be deemed to be a fiduciary regarding any assets of the plan or IRA with respect to which such person does not have any discretionary authority, discretionary control or discretionary responsibility, does not exercise any authority or control, does not render investment advice (as defined in paragraph (a)(1) of this section) for a fee or other compensation, and does not have any authority or responsibility to render such investment advice, provided that nothing in this paragraph shall be deemed to:

(1) Exempt such person from the provisions of section 405(a) of the Act concerning liability for fiduciary breaches by other fiduciaries with respect to any assets of the plan; or

(2) Exclude such person from the definition of the term "party in interest" (as set forth in section 3(14)(B) of the Act or "disqualified person" as set forth in section 4975(e)(2) of the Code) with respect to a plan.

(d) *Execution of securities transactions.* (1) A person who is a broker or dealer registered under the Securities Exchange Act of 1934, a reporting dealer who makes primary markets in securities of the United States Government or of an agency of the United States Government and reports daily to the Federal Reserve Bank of New York its positions with respect to such securities and borrowings thereon, or a bank supervised by the United States or a State, shall not be deemed to be a fiduciary, within the meaning of section 3(21)(A) of the Act or section 4975(e)(3)(B) of the Code, with respect to an employee benefit plan or IRA solely because such person executes transactions for the purchase or sale of securities on behalf of such plan in the ordinary course of its business as a broker, dealer, or bank, pursuant to instructions of a fiduciary with respect to such plan or IRA, if:

(i) Neither the fiduciary nor any affiliate of such fiduciary is such broker, dealer, or bank; and

(ii) The instructions specify:

(A) The security to be purchased or sold;

(B) A price range within which such security is to be purchased or sold, or, if such security is issued by an open-end investment company registered under the Investment Company Act of 1940 (15 U.S.C. 80a–1, *et seq.*), a price which is determined in accordance with Rule 22c1 under the Investment Company Act of 1940 (17 CFR270.22c1);

(C) A time span during which such security may be purchased or sold (not to exceed five business days); and

(D) The minimum or maximum quantity of such security which may be purchased or sold within such price range, or, in the case of a security issued by an open-end investment company registered under the Investment Company Act of 1940, the minimum or maximum quantity of such security which may be purchased or sold, or the value of such security in dollar amount which may be purchased or sold, at the price referred to in paragraph (d)(1)(ii)(B) of this section.

(2) A person who is a broker-dealer, reporting dealer, or bank which is a fiduciary with respect to an employee benefit plan or IRA solely by reason of the possession or exercise of discretionary authority or discretionary control in the management of the plan or IRA, or the management or disposition of plan or IRA assets in connection with the execution of a transaction or transactions for the purchase or sale of securities on behalf of such plan or IRA which fails to comply with the provisions of paragraph (d)(1) of this section, shall not be deemed to be a fiduciary regarding any assets of the plan or IRA with respect to which such broker-dealer, reporting dealer or bank does not have any discretionary authority, discretionary control or discretionary responsibility, does not exercise any authority or control, does not render investment advice (as defined in paragraph (a) of this section) for a fee or other compensation, and does not have any authority or responsibility to render such investment advice, provided that nothing in this paragraph shall be deemed to:

(i) Exempt such broker-dealer, reporting dealer, or bank from the provisions of section 405(a) of the Act concerning liability for fiduciary breaches by other fiduciaries with respect to any assets of the plan; or

(ii) Exclude such broker-dealer, reporting dealer, or bank from the definition of the term party in interest (as set forth in section 3(14)(B) of the Act) or disqualified person 4975(e)(2) of the Code with respect to any assets of the plan or IRA.

(e) *Internal Revenue Code.* Section 4975(e)(3) of the Code contains provisions parallel to section 3(21)(A) of the Act which define the term "fiduciary" for purposes of the prohibited transaction provisions in Code section 4975. Effective December 31, 1978, section 102 of the Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 237 transferred the authority of the Secretary of the Treasury to promulgate regulations of the type published herein to the Secretary of Labor. All references herein to section 3(21)(A) of the Act should be read to include reference to the parallel provisions of section 4975(e)(3) of the Code. Furthermore, the provisions of this section shall apply for purposes of the application of Code section 4975 with respect to any plan described in Code section 4975(e)(1).

(f) *Definitions.* For purposes of this section—

(1) "Recommendation" means a communication that, based on its content, context, and presentation, would reasonably be viewed as a suggestion that the advice recipient engage in or refrain from taking a particular course of action.

(2)(i) "Plan" means any employee benefit plan described in section 3(3) of the Act and any plan described in section 4975(e)(1)(A) of the Code, and

(ii) "IRA" means any trust, account or annuity described in Code section 4975(e)(1)(B) through (F), including, for example, an individual retirement account described in section 408(a) of the Code and a health savings account described in section 223(d) of the Code.

(3) "Plan participant" means for a plan described in section 3(3) of the Act, a person described in section 3(7) of the Act.

(4) "IRA owner" means with respect to an IRA either the person who is the owner of the IRA or the person for whose benefit the IRA was established.

(5) "Plan fiduciary" means a person described in section (3)(21) of the Act and 4975(e)(3) of the Code.

(6) "Fee or other compensation, direct or indirect" for purposes of this section and section 3(21)(A)(ii) of the Act, means any fee or compensation for the advice received by the person (or by an affiliate) from any source and any fee or compensation incident to the transaction in which the investment advice has been rendered or will be rendered. The term fee or other compensation includes, for example, brokerage fees, mutual fund and insurance sales commissions.

(7) "Affiliate" includes: Any person directly or indirectly, through one or more intermediaries, controlling, controlled by, or under common control with such person; any officer, director, partner, employee or relative (as defined in section 3(15) of the Act) of such person; and any corporation or partnership of which such person is an officer, director or partner.

(8) "Control" for purposes of paragraph (f)(7) of this section means the power to exercise a controlling influence over the management or policies of a person other than an individual.

Signed at Washington, DC, this 14th day of April, 2015.

Phyllis C. Borzi,

Assistant Secretary, Employee Benefits Security Administration, Department of Labor.

[Application No. D–11712]

ZRIN 1210–ZA25

Proposed Best Interest Contract Exemption

AGENCY: Employee Benefits Security Administration (EBSA), U.S. Department of Labor.

ACTION: Notice of Proposed Class Exemption.

SUMMARY: This document contains a notice of pendency before the U.S. Department of Labor of a proposed exemption from certain prohibited transactions provisions of the Employee Retirement Income Security Act of 1974 (ERISA) and the Internal Revenue Code (the Code). The provisions at issue generally prohibit fiduciaries with respect to employee benefit plans and individual retirement accounts (IRAs) from engaging in self-dealing and receiving compensation from third parties in connection with transactions involving the plans and IRAs. The exemption proposed in this notice would allow entities such as broker-dealers and insurance agents that are fiduciaries by reason of the provision of investment advice to receive such compensation when plan participants and beneficiaries, IRA owners, and certain small plans purchase, hold or sell certain investment products in accordance with the fiduciaries' advice, under protective conditions to safeguard the interests of the plans, participants and beneficiaries, and IRA owners. The proposed exemption would affect participants and beneficiaries of plans, IRA owners and fiduciaries with respect to such plans and IRAs.

DATES: *Comments:* Written comments concerning the proposed class exemption must be received by the Department on or before July 6, 2015.

Applicability: The Department proposes to make this exemption available eight months after publication of the final exemption in the **Federal Register**. We request comment below on whether the applicability date of certain conditions should be delayed.

ADDRESSES: All written comments concerning the proposed class exemption should be sent to the Office of Exemption Determinations by any of the following methods, identified by ZRIN: 1210–ZA25:

Federal eRulemaking Portal: http://www.regulations.gov at Docket ID number: EBSA–2014–0016. Follow the instructions for submitting comments.

Email to: e-OED@dol.gov.

Fax to: (202) 693–8474.

Mail: Office of Exemption Determinations, Employee Benefits Security Administration, (Attention: D–11712), U.S. Department of Labor, 200 Constitution Avenue NW., Suite 400, Washington DC 20210.

Hand Delivery/Courier: Office of Exemption Determinations, Employee Benefits Security Administration, (Attention: D–11712), U.S. Department of Labor, 122 C St. NW., Suite 400, Washington DC 20001.

Instructions. All comments must be received by the end of the comment period. The comments received will be available for public inspection in the Public Disclosure Room of the Employee Benefits Security Administration, U.S. Department of Labor, Room N–1513, 200 Constitution Avenue NW., Washington, DC 20210. Comments will also be available online at *www.regulations.gov,* at Docket ID number: EBSA–2014–0016 and *www.dol.gov/ebsa,* at no charge.

Warning: All comments will be made available to the public. Do not include any personally identifiable information (such as Social Security number, name, address, or other contact information) or confidential business information that you do not want publicly disclosed. All comments may be posted on the Internet and can be retrieved by most Internet search engines.

FOR FURTHER INFORMATION CONTACT: Karen E. Lloyd or Brian L. Shiker, Office of Exemption Determinations, Employee Benefits Security Administration, U.S. Department of Labor (202) 693–8824 (this is not a toll-free number).

Re: Definition of the Term "Fiduciary" (RIN 1210-AB32);
Best Interest Contract Exemption (ZRIN 1210-ZA25)

Ladies and Gentlemen:

Thank you for the opportunity to review the Department's regulatory package expanding the definition of fiduciary investment advice and preventing conflicts of interest in advice provided to ERISA-covered retirement plans and Individual Retirement Accounts ("IRAs").

We share the Department's goal of improving the quality of investment advice provided to plans, plan participants and IRA owners. Retirement investors should receive advice in their best interests. We believe that this goal is best achieved without limiting retirement investors' access to the full range of investment products and services available to plans and IRAs.

One of the legal obligations of a prudent investment fiduciary is to diversify investments within the investment portfolio, taking into account the role various asset classes play within the portfolio's investment strategy.[1] Preserving the ability of retirement plan investors and their advisors to construct portfolios from a wide array of asset classes, including a broad range of real estate investments, is vitally important to proper diversification

About REITs:

REITs were established by Congress in 1960 to enable all Americans to enjoy the benefits of investment in real estate. There are two main types of REITs, generally referred to as equity REITs and mortgage REITs. Equity REITs invest in "bricks and mortar" real estate by acquiring leasable space in properties, such as apartments, shopping malls, office buildings, and other properties, and collecting rents from their tenants. Mortgage REITs primarily invest in

[1] *See* ERISA §404(a)(1)(C) and 29 CFR §2550.404a-1(b).

mortgages and mortgage-backed securities, providing financing for residential and commercial properties. More than 2 million single-family homes are estimated to be currently financed by mortgages owned by mortgage REITs.

REITs in the United States may be public companies whose securities are registered with the Securities and Exchange Commission (SEC) and listed on a stock exchange (so-called Listed REITs); public companies whose securities are registered with the SEC, but which are not listed on a stock exchange (so-called, "Public Non-Listed REITS" or PNLRs); or private companies[2]. At the end of June 2015, 327 REITs were registered with the SEC, and 229 of these REITs were Listed REITs on U.S. stock exchanges, primarily the New York Stock Exchange (NYSE).

Like Listed REITs, PNLRs own, manage and lease investment-grade, income-producing commercial real estate in nearly all property sectors. PNLRs are subject to the same IRS requirements that a Listed REIT must meet, including distributing all of their taxable income to shareholders annually to be subject to just one level of taxation. In addition, PNLRs are required to make regular SEC disclosures, including quarterly and yearly financial reports. All of these PNLR filings are publicly available through the SEC's EDGAR database. PNLRs are primarily sold by broker-dealers registered with and regulated by the SEC, the Financial Industry Regulatory Association (FINRA), and the relevant state securities regulatory authorities.

About NAREIT:

The National Association of Real Estate Investment Trusts ("NAREIT") is the worldwide voice for REITs and real estate companies with interests in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate.

PNLRs participate at NAREIT through the Public Non-Listed REIT Council (the "PNLR Council"), which consists of 44 NAREIT PNLR corporate members. The mission of the PNLR Council is to advise NAREIT's Executive Board on matters of interest and importance to PNLRs.

NAREIT's PNLR Council has carefully reviewed the proposed regulation redefining fiduciary investment advice under ERISA §3(21)(A)(ii) (the "Proposal"),[3] and the new proposed prohibited transaction class exemption, the

[2] Private REITs are not traded on stock exchanges or registered with the SEC. They are regulated by the SEC, and are sold to accredited investors under Regulation D and to qualified institutional buyers (QIBs) under Rule 144A.

Re: Definition of the Term "Fiduciary" (RIN 1210-AB32);
Best Interest Contract Exemption (ZRIN 1210-ZA25)

Ladies and Gentlemen:

The Public Non-Listed REIT Council (PNLR Council) of the National Association of Real Estate Investment Trusts (NAREIT) submits the following comment with respect to the Department's regulatory package redefining fiduciary investment advice. Specifically, we submit comments on the proposed regulation (the Proposal)[1] redefining the term "fiduciary" with respect to investment advice under ERISA §3(21)(A)(ii), and the proposed prohibited transaction class exemption "Best Interest Contract Exemption" (the BIC Exemption).[2] The PNLR Council appreciates the opportunity to comment on these very important regulatory initiatives.

The PNLR Council supports the Department's goal of ensuring that financial advisors put the best interests of retirement plans, plan participants and IRA owners first. We agree that it is prudent and reasonable to update the 40 year-old fiduciary advice definition in the current regulation, given the significant changes that have occurred in retirement savings since 1975.

However, we have a number of specific concerns about the negative effect the Proposal and the BIC Exemption would have on the availability of investments, like Public Non-Listed REITs (PNLRs), used by IRA owners and participants to diversify their retirement portfolios. In addition to our specific comments below, we want to associate ourselves with, and formally endorse, the comment letters filed by the Investment Program Association and the U.S. Chamber of Commerce. These letters raise important concerns on this issue and many others that the Department should consider during its development of any final rule.

About PNLRs

PNLRs are public companies whose securities are registered with the SEC, though not listed on a stock exchange. PNLRs own, manage and lease investment-grade, income-producing commercial real estate in nearly all property sectors. PNLRs are subject to IRS requirements that include distributing all of their taxable income to shareholders annually in order to be subject to just one level of taxation, and must make regular SEC disclosures, including quarterly and yearly

[1] 80 Fed. Reg. 21,928 (Apr. 20, 2015).
[2] Id at 21,960.

financial reports, which are publicly available through the SEC's EDGAR database. Interests in a PNLR are public offerings, exchanged primarily through broker-dealers registered with and regulated by the SEC, the Financial Industry Regulatory Association ("FINRA"), and the relevant state securities regulatory authorities.

PNLRs help build diversified portfolios for retirement plan investors. Typically paying meaningful dividends due to the IRS REIT distribution requirements, PNLRs also provide the potential for moderate, long-term capital appreciation. As the leases, rents, properties and other underlying investments have tended to be responsive to inflation, PNLRs generally offer the potential for some protection from inflation risks. Further, PNLRs potentially provide an additional source of portfolio diversification because their investment returns reflect the performance of income-producing real estate, which typically has been only moderately correlated with the returns of other assets over long investment horizons.

As with mutual funds or any other pooled investment, there are a variety of fees charged in connection with PNLRs that are reflected in net returns and clearly disclosed in the prospectus, which is publicly available from the SEC. These fees will become even more transparent to PNLR shareholders when FINRA Regulatory Notice 15-02 comes into effect next year.

Specific Concerns with the Proposal and BIC Exemption

The PNLR Council is concerned that as currently written, the Proposal and the BIC Exemption would prevent many IRA owners and plan participants from having access to investments, like PNLRs, that can play an important role in diversifying retirement investment portfolios.[3] We are particularly concerned with the BIC Exemption's definition of "assets" in Sec. VIII(c)[4] of the proposed exemption. In this definition, the Department lists only certain types of investments, and PNLRs are not on the list. Investments not on the list cannot be the subject of advice provided in connection with the exemption. As a result, many advisors would be effectively prohibited from being able to discuss PNLRs at all, no matter how much doing so might be in the best interests of their clients.

This inability to discuss PNLRs would be particularly harmful if the advisor provides an investment analysis and recommendations for a client's total portfolio and the client owns shares in PNLRs outside of his or her retirement accounts. For example, advisors would be effectively unable to advise clients to use such assets inside retirement accounts, preventing them, for example, from taking into account tax efficiency in investing. Placing such limitations on the information, analysis and recommendations of investment advisers in such circumstances would inevitably compromise the ensuing advice and would depart from "best practices" dictating that assessments and recommendations be based on comprehensive information about the investors'

[3] The Investment Program Association estimates that nearly half of the PNLRs owned by retail investors are held in IRAs, although plan participants may hold PNLRs through a brokerage window.
[4] 80 Fed. Reg. 21,987 (Apr. 20, 2015).

assets and accounts."[5] Such information limits could also conflict with other regulatory requirements applicable to advisers.[6]

It is a decidedly odd result that a regulation intended to prevent conflicts that could cause an advisor to act against your best interest would actually prohibit an advisor from acting in your best interest. Further, the asset definition does not provide any additional conflict protection to IRA owners and participants. We believe the Department should not attempt to restrict the type of investments about which IRA owners or participants may receive advice, or attempt to restrict investments by IRA owners and participants that are otherwise permitted by law.

- **The Definition of Assets Should Be Removed from the BIC Exemption**

A close review of the Department's rationale for including the definition of assets, as well as the practical effects of the definition in operation, lead us to ask that the Department remove the definition from the BIC Exemption entirely. It serves only to limit investment and advice options for IRA owners and participants, while offering them no additional benefits.

The Asset Definition Provides No Additional Protection from Advisor Conflicts

The BIC Exemption's asset definition provides no additional protection against conflicts beyond those already provided by the Proposal and the BIC Exemption conduct and compensation conditions. Instead, the asset definition simply would limit the types of investments IRA owners and plan participants would be advised to make.

The Proposal would impose a general level-fee requirement on advisors by defining them to be fiduciaries for the purposes of the prohibited transaction rules. Under this general rule, advisors to plan participants and IRAs could have no financial incentive to recommend one investment over another. The BIC Exemption also would prohibit advisors from receiving compensation that would affect their advice. While the BIC Exemption would be a limited exception to the prohibited transaction rules, it generally would not allow the advisor to receive differential compensation.[7] According to Section II(d)(4), the advisor could not receive compensation incenting him or her to act against the best interest of the IRA owner or participant, and may not

[5] *See, e.g.*, "Questions Advisers Should Ask While Establishing or Reviewing Their Compliance Programs," SEC, May 2006, available at https://www.sec.gov/info/cco/adviser_compliance_questions.htm, last accessed July 19, 2015, (SEC registered investment advisers should "maintain *current and complete* information regarding each client's financial and family circumstances, investment objectives and restrictions, and risk tolerance.." and this information should be the basis for "…provid[ing]clients suitable investment advice."); FINRA Rule 2090 (Know Your Customer**)** (requiring a broker to seek to obtain and consider all relevant customer-specific information when making a recommendation); and FINRA Rule 2111 (Suitability) (requiring brokers to exercise "reasonable diligence" to ascertain the customer's investment profile prior to making a recommendation).

[6] *See, e.g.*, 31 U.S.C. §§ 5311-5330 (Bank Secrecy Act), and associated regulations 31 C.F.R. §§ 1023 et seq., and FINRA Rule 3310 (Anti-Money Laundering Compliance Program).

[7] While the BIC Exemption might permit a rollover to take place despite the fact that the advisor typically receives a higher proportional fee in an IRA than in a plan, the differential compensation in such a rollover is due to the structural differences in cost between a retail IRA and an institutionally-priced plan.

receive differential compensation unless it is in connection with a "neutral factor" that presents no conflict.[8]

Removing the asset definition from the BIC Exemption would not diminish the Department's efforts to reduce conflicts in any way.

The Asset Definition would be Contrary to the Intent of the BIC Exemption, ERISA's History, and the Practical Realities of Retirement Investing

The structure of the asset definition—its narrow application only to specifically identified assets—would be exactly contrary to the Department's stated intentions in crafting the exemption. In the Preamble to the BIC Exemption, the Department writes, "Rather than create a set of highly prescriptive transaction-specific exemptions…the proposed exemption would flexibly accommodate a wide range of current business practices…The Department has [taken] a standards-based approach…"[9] In other words, the Department's intent was to permit flexibility in the execution of principles that protect participants and IRA owners from conflicted advisors.

The Asset Definition, by contrast, would apply rigidly with no flexibility—an asset is either on the list, or not. Given the significance of the asset definition in limiting the scope of the exemption, the change in approach makes a material difference in the application of the exemption.

This list-based approach also contradicts ERISA's legislative and regulatory history. Plans and IRAs are permitted wide latitude under the law to invest in vehicles they deem prudent and appropriate—indeed, other than prohibited transaction restrictions that prevent the plan sponsor or IRA owner from inappropriately using the plan or IRA to benefit themselves, the few prohibitions on investments for plans and IRAs, pertain to certain "collectibles" and special rules for precious metals.[10] Other than these restrictions, virtually any asset class is permissible as a potential investment under ERISA.

The Department historically has rejected investment category limitations, instead focusing on the prudent selection and monitoring of such investments. Rather than telling plans what they could invest in, the Department instead issued guidance and regulations governing the investment decision process. In adopting its regulations governing the prudent investment process, the Department wrote that it,"…does not consider it appropriate to include in the regulation any list of investments, classes of investments, or investment techniques…no such list could be complete; moreover, the Department does not intent to create or suggest a 'legal list' of investments for plan fiduciaries."[11] The Department should retain this approach in the BIC Exemption and rely on the fiduciary process employed by advisors to IRA owners and participants to determine which investments should be considered for any individual's account.

---

[8] 80 Fed. Reg. 21,984 (Apr. 20, 2015).
[9] Id. at 21,961
[10] *See,* 26 USC §408(m).
[11] 44 Fed. Reg. 31,639 (June 1, 1979).

Finally, as the Department explained in its rejection of a “legal list” of investments in 1979, no list could ever be complete. If the Department in any final exemption provides an asset definition that includes a specific list, it would be fixed as of that point in time. No new investments would be eligible for the BIC exemption absent a separate regulatory approval granted on a case-by-case basis. This would result in a rule and an exemption that would not adapt to an evolving marketplace, and an ever-growing number of IRA owners and participants would not be exposed to these investment opportunities arising after the adoption of the exemption.

For all of these reasons, we ask the Department to remove the asset definition from any final exemption. It would not provide any additional conflict protection to IRA owners and plan participants, but it would result in additional costs through reduced access to investment advice. In effect, the Department would be substituting its own judgment, on a one-size-fits-all basis, regarding which investment categories are appropriate for individual retirement investors, for the professional, impartial, and individualized decisions of financial advisors. The universe of individual retirement investors encompasses a diverse pool of Americans with a range of retirement needs and investment requirements, whose retirement needs are best served by considered financial advice. A contrary result disserves the statutory purpose of ERISA, to facilitate the retirement savings of all Americans.

- **If the Definition of Assets is Retained, PNLRs Should Be Added to the List**

In the Preamble to the BIC Exemption, the Department explained that the asset definition included those assets it determined were “commonly purchased”[12] by retirement plans and IRAs. The Department did not provide much additional insight into how it concluded which investments were “commonly” utilized, but suggested the listed assets should contribute to a “basic diversified portfolio” with investments that are “relatively transparent and liquid,” but it did not require a “ready market price” for inclusion.[13] We believe that PNLRs meet these criteria, and request that they be added to the asset definition.

<u>Commonly Purchased</u>

Large numbers of Americans are now invested in PNLRs, including thousands now held in IRA accounts. More than $15.6 billion was invested in in PNLRs in 2014,[14]and as indicated previously the Investment Program Association estimates that roughly half of PNLR investments are through IRAs. Investors have invested an additional $8.7 billion to date in 2015.[15] While we recognize that there may be other retirement plan investments that are more common than PNLRs, these numbers demonstrate that they are a common investment for a large number of IRA owners.

[12] 80 Fed. Reg. 21,968 (Apr. 20, 2015).
[13] Id.
[14] *The Stanger Report* ™ (Winter 2015).
[15] *The Stanger Report* ™ (Summer 2015).

Contribution to a Basic Diversified Portfolio

As the Department notes, diversification is a basic legal obligation of a prudent investment fiduciary, taking into account the role various asset classes play within the portfolio's investment strategy.[16] PNLRs can play an important role in basic diversification as they offer access to a portfolio of real estate assets that typically are not closely correlated with fixed income or equity markets, and that can offer potential inflation protection. The dividends required of PNLRs can also offer assistance in meeting cash flow requirements in various investments.

Relatively Transparent and Liquid

PNLRs are transparent public companies registered with the SEC and providing annual and quarterly reporting. In public offerings, PNLRs provide a prospectus describing the fees, risks, investment strategies and other material information for advisors and investors to make informed decisions. While they are not traded on an exchange, and thus do not have a daily market price, PNLRs are not illiquid—the terms and conditions under which distributions are made are clearly disclosed, as are any redemption fees or other charges. We note that other investments on the "approved" asset list are not traded on an exchange and have redemption fees or other restrictions applicable to investments—these features apparently do not disqualify an investment from inclusion as an eligible asset.

- **The Existing Arrangement or "Grandfather" Clause in the BIC Exemption Is Too Limited and Does Not Apply to Assets Not Covered by the Exemption, Including PNLRs. The Effective Date of the General Rule Should Be Amended to Apply Prospectively to New or Renewed Advice Arrangements, Leaving Existing Arrangements in Place Until Their Normal Expiration.**

The Department suggests that the new fiduciary definition and its associated exemptions would take effect eight months following the publication of the final rule in the Federal Register. Without a transition rule, this would result in tens of millions of existing advice arrangements having to be fundamentally reformed on a single day. Unfortunately, the only transition rule provided by the Department is in Section VII(b)(3) of the BIC Exemption, which would permit only certain eligible existing arrangements to continue, and only up to the point that additional advice would be provided after the effective date. If additional advice would be provided, the existing arrangement would have to be modified. This approach to the effective date is fundamentally flawed.

First, PNLRs and other investments not on the "legal list" of assets set forth in the BIC Exemption would be ineligible for even this limited transition rule. There is no logical rationale for a transition rule that discriminates among various asset categories, all of which were lawful prior to the effective date. Such a rule would result in the anomalous outcome that even within the same account, certain assets would be allowed to remain under the prior arrangement (at least until additional advice is provided) while other assets would immediately force account holders to negotiate a different advice arrangement. This is another example of why the asset limitations

[16] *See* ERISA §404(a)(1)(C) and 29 CFR §2550.404a-1(b).

under the BIC Exemption should be removed—they affect the entire structure of the exemption in ways unrelated to the goal of preventing conflicted advice to account holders.

Additional deleterious collateral consequences would follow from this limited transition rule. Permitting existing arrangements to stand only until such point that additional advice is provided would deny IRA owners and participants the benefit of the original bargain they made for advisory services, and create obvious disincentives to advisers to provide further advice. Many IRA owners have paid an up-front fee for advice to be provided in the future. Compelling the dissolution of such arrangements would deny account holders the benefit of the advice they have already paid for, and force the reformation of previously lawful contracts under then prevailing market conditions (favorable or otherwise). We question whether the Department has the legal authority to force two private parties who entered into a valid and legal contract for services to dissolve the contract to the detriment of the IRA owner or participant.

Accordingly, we ask the Department to adopt the following clear and straightforward "grandfather rule" applicable to all account assets acquired prior to the effective date of any final rule. With respect to new advice arrangements entered into on or after the effective date, the new regulatory standards would apply. With respect to existing advice arrangements entered into prior to the effective date —including assets acquired pursuant to such previous arrangements—the previous regulatory standards governing these arrangements would remain in effect, unless or until, they would be terminated or renewed by the parties. To do otherwise would violate common sense principles of due process respecting the rights of private parties to make and keep contracts legally entered into.

We further request that this effective date language be included in the general rule, not in the BIC Exemption. The asset definition in the BIC Exemption is linked to the "grandfather" clause, giving rise to the anomalous result that the same account could include assets that are "grandfathered" and assets that are not, further illustrating the unworkability of the BIC Exemption asset list.

In proposing the grandfather rule above, we acknowledge the difficulties posed in attempting to devise a fair BIC Exemption transition rule applicable to existing account assets acquired pursuant previous lawful arrangements. We respectfully submit that this, too, points to the impracticability of any rule prescribing "legal assets" in this manner and furthers supports our earlier arguments that this asset list should be eliminated altogether.

- **Conclusion**

We believe IRA owners and plan participants would be best served by removing the asset definition in the BIC Exemption. This would ensure they get individualized advice from financial advisors to determine what is in their individual best interests, rather than having the Department make that decision for IRA owners and plan participants. If the Department decides to retain the asset definition, we urge the Department to add PNLRs to that list.

The PNLR Council looks forward to working with the Department as it continues its efforts on this important regulatory project. We would be pleased to answer any questions the Department may have regarding PNLRs or REITs generally.

We appreciate your consideration of our comments, and please feel free to contact me if you would like to discuss our positions in greater detail.

Re: Definition of the Term "Fiduciary" (RIN 1210-AB32);
Best Interest Contract Exemption (ZRIN 1210-ZA25)

Ladies and Gentlemen:

We appreciate the opportunity to offer additional comments regarding the Department's regulatory package expanding the definition of fiduciary investment advice and preventing conflicts of interest in advice provided to ERISA-covered retirement plans and Individual Retirement Accounts ("IRAs").

The extensive comments received by the Department and the four days of public hearings on the proposed rule and the accompanying prohibited transaction exemptions demonstrated the significant public interest in these issues. This interest is quite appropriate given the Department's goal of changing the way investment advice is provided to all ERISA-covered retirement plans and to all Individual Retirement Accounts ("IRAs"), representing many trillions of dollars in retirement savings. These public hearings also served to highlight the fact that there are many discrete items of discussion within the broader package, some of which are quite controversial.

As we previously wrote[1], NAREIT shares the Department's goal of improving the quality of investment advice provided to plans, plan participants and IRA owners, and of ensuring such advice is in their best interests. However, we remain very concerned that the Department must achieve this goal without limiting retirement investors' access to the full range of investment products and services available to plans and IRAs.

---

[1] See, letter from the Executive Committee of the Public Non-listed REIT Council of the National Association of Real Estate Investment Trusts (NAREIT), July 21, 2015 to the Department of Labor *available at*. http://www.dol.gov/ebsa/regs/cmt-1210-AB32-2.html

As a number of witnesses testified during the public hearings, retirement investors must be able to diversify their holdings across a broad spectrum of risks as part of a prudent retirement portfolio. Further, each plan, each participant, and each IRA owner has individualized retirement needs and objectives. Consequently, the Department's regulatory efforts must ensure that advisors to these plans, participants, and IRA owners are able to discuss all available investment alternatives, not just selected asset types. Those alternatives must include a broad range of real estate investments to allow advisors to act in the best interest of retirement investors.

About NAREIT:

The National Association of Real Estate Investment Trusts ("NAREIT") is the worldwide voice for REITs and real estate companies with interests in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate. Public Non-Listed REITS ("PNLR") participate at NAREIT through the Public Non-Listed REIT Council (the "PNLR Council"), which consists of 42 NAREIT PNLR corporate members. The mission of the PNLR Council is to advise NAREIT's Executive Board on matters of interest and importance to PNLRs.

NAREIT's PNLR Council has reviewed the public comments filed in July and the testimony presented at the August hearings, and has developed the attached additional comment letter for submission and consideration by the Department.

NAREIT and its PNLR Council look forward to working with the Department as it works on developing a final rule and final prohibited transaction class exemptions, and we would be pleased to answer any questions the Department may have.

Please feel free to contact me if you would like to discuss our positions in greater detail.

Re: Definition of the Term "Fiduciary" (RIN 1210-AB32);
Best Interest Contract Exemption (ZRIN 1210-ZA25)

Ladies and Gentlemen:

The Public Non-Listed REIT Council ("PNLR Council") of the National Association of Real Estate Investment Trusts ("NAREIT") appreciates the opportunity to submit these additional comments following the public hearings on the Department's regulatory efforts to redefine fiduciary investment advice provided to ERISA plans, plan participants and beneficiaries, and IRA owners. Specifically, we submit additional comments on the proposed regulation (the "Proposal")[1] redefining the term "fiduciary" with respect to investment advice under ERISA §3(21)(A)(ii), and the proposed prohibited transaction class exemption "Best Interest Contract Exemption" (the "BIC Exemption").[2]

<u>About PNLRs:</u>

As we discussed in our July 21, 2015 letter to the Department[3], PNLRs are valuable investment options for many investors and are commonly found in IRA portfolios. They are public companies whose securities are registered with the SEC, though not listed on a stock exchange. PNLRs are subject to IRS requirements that include distributing all of their taxable income to shareholders annually in order to be subject to just one level of taxation, and must make regular SEC disclosures, including quarterly and yearly financial reports, which are publicly available through the SEC's EDGAR database. As with mutual funds or any other pooled investment, there are a variety of fees charged in connection with PNLRs that are reflected in net returns and clearly disclosed in the prospectus, which is publicly available from the SEC. These fees will become even more transparent to PNLR shareholders when FINRA Regulatory Notice 15-02 comes into effect next year.

Overview:

As we explained in our July 21, 2015 comment letter, the PNLR Council supports the goals behind the Department's regulatory efforts. We agree that retirement investors should receive advice that is in their best interest—the needs of the participant or IRA owner should come first.

---

[1] 80 Fed. Reg. 21,928 (Apr. 20, 2015).
[2] Id at 21,960.
[3] See, letter from the Executive Committee of the Public Non-listed REIT Council of the National Association of Real Estate Investment Trusts (NAREIT), July 21, 2015 to the Department of Labor *available at* http://www.dol.gov/ebsa/regs/cmt-1210-AB32-2.html.

In fact, it is precisely because of our strong belief in this core principle that we are again writing to ask the Department to remove the limited definition of "asset" in the Best Interest Contract Exemption (the "BIC Exemption"). The practical effect of the limited list of assets in the definition is to prevent advisors from putting the participant or IRA owner first—an advisor using the BIC Exemption is simply not allowed to discuss assets not on the list, no matter how much those assets are in the best interest of the participant. This outcome is inconsistent with the Department's purpose in proposing the rule.

The BIC Exemption Should Allow Advisors to Provide Individualized Advice in the Best Interest of Investors Planning for Retirement:

The Department received extensive comments on this regulatory package, and heard testimony from witnesses for four full days at the recent administrative hearings. This public interest is due to a basic but crucial fact—the Department's decisions will have significant consequences on the adequacy of the retirement savings of America's workers. We reviewed many of these comments, and followed the testimony presented at the hearings, particularly as they related to the BIC Exemption.

This review suggests a contradiction between the Department's policy goals and the effect of the BIC Exemption. The purpose of the regulatory package is to ensure retirement investors get quality, impartial, individualized advice from financial professionals. The Proposal and the BIC Exemption are both designed to do this by removing conflicts of interest. Yet the list of "approved" assets in the BIC Exemption prevents those same advisors from giving quality, impartial, individualized advice about any asset not on the list. Regardless of the individual circumstances of the IRA owner, her impartial advisor cannot discuss an asset not on the Department's one-size-fits-all list of assets if the advisor is using the BIC Exemption.

Obviously, each retirement investor has different needs, different retirement objectives, and different types of personal assets outside of retirement accounts—all of this must be taken into account when an advisor makes an investment recommendation. Advice in the retirement investor's best interest is individualized, and an investment right for one person may not be right for another. Logically then, it doesn't make sense for the Department to exclude entire asset classes from advice available to tens of millions of retirement investors, especially when doing so adds no additional protection from conflicts of interest.

The BIC Exemption Must Be Redrafted to Avoid Negative Consequences for Participants and IRA Owners:

In an exchange regarding the BIC Exemption asset list between a hearing witness and a Department official, the official suggested that the asset list didn't prevent an advisor from giving advice on any asset so long as that advice occurred outside of the BIC Exemption.[4] While this is technically true, it does not address the fundamental problem. The BIC Exemption will likely be necessary for a large number of plan transactions. For example, the BIC Exemption will likely be necessary for advisors assisting plan participants with IRA rollovers. It is also

[4] Raw transcript of testimony presented on August 11, 2015, at 638, accessed on September 21, 2015 at http://www.dol.gov/ebsa/pdf/1210-AB32-2-HearingTranscript2.pdf.

likely that the BIC Exemption could become a preferred compliance method for advisors operating under the new rules to address other situations. Consequently, our concerns regarding the asset list underscore a fundamental flaw in the structure of the BIC Exemption and the entire regulatory package.

For all of these reasons, the PNLR Council continues to believe that the Department must address this issue in the final rule. As written, the Proposal and the BIC Exemption would have a negative effect on the availability of quality investments, like PNLRs, used by IRA owners and participants to diversify their retirement portfolios.

- **Remove the List from the Asset Definition**

Our preferred solution to the problem would be to amend the BIC Exemption definition of assets in Sec. VIII(c)[5] to remove the list entirely. It serves only to limit investment and advice options for IRA owners and participants, while offering them no additional benefits.

As discussed above and in our July 21, 2015 comment letter, the Proposal and the BIC Exemption already prohibit conflicts of interest—the asset list provides no additional protection against conflicts. Further, the structure of the asset list is contrary to the purpose of the BIC Exemption, which was to "…flexibly accommodate a wide range of current business practices…" through a principles-based exemption.[6] The asset list is anything but flexible—it is a bright line dividing assets into those that can and can't be discussed, regardless of their merits to any particular individual.

Finally, as we highlighted in our previous letter, the Department historically has rejected investment asset class limits, writing, "no such list could be complete…"[7] This is a very good point—an asset list in BIC would be fixed as of that point in time. No new investments would be eligible for the BIC exemption absent a separate regulatory approval granted on a case-by-case basis.

- **Other Alternatives**

If the Department will not remove the asset list from the BIC Exemption, we ask that the definition be modified to permit important investments like PNLRs that help IRA owners achieve diversified portfolios composed of asset classes with relatively uncorrelated risks and returns.

One solution would be to add PNLRs to the list of assets in the definition. As we discussed in our July 21, 2015 comment letter, we believe PNLRs meet the criteria identified in the Preamble to the BIC Exemption that investments be "commonly purchased"[8] by retirement plans and IRAs, and contribute to a "basic diversified portfolio" with investments that are "relatively transparent and liquid" even if there is no "ready market price."[9]

[5] 80 Fed. Reg. 21,987 (Apr. 20, 2015).
[6] Id. at 21,961
[7] 44 Fed. Reg. 31,639 (June 1, 1979).
[8] 80 Fed. Reg. 21,968 (Apr. 20, 2015).
[9] Id.

We also urge the Department to consider the promising approach proposed by the Investment Program Association ("IPA") in its September 24, 2015 comment letter, which sets forth an expanded set of Policies and Procedures applicable solely to retirement plan investments in "Public Products" (including PNLRs). We would welcome the opportunity to discuss these ideas further with the Department.

The Proposal and the BIC Exemption Need a Reasonable Transition Rule:

As the Department heard from a number of witnesses in the hearings, the transition rule for the Proposal and the BIC Exemption does not work as proposed. The Department suggests that the new fiduciary definition and its associated exemptions would take effect eight months following the publication of the final rule in the Federal Register. Without a transition rule, this would result in tens of millions of existing advice arrangements having to be fundamentally reformed on a single day. Unfortunately, the only transition rule provided by the Department is in Section VII(b)(3) of the BIC Exemption, which would permit only certain eligible existing arrangements to continue, and only up to the point that additional advice would be provided after the effective date. If additional advice would be provided, the existing arrangement would have to be modified. The PNLR Council initially raised this in its July 21, 2015 comment letter and our review of the hearing testimony has reinforced our view that the Proposal's approach to the effective date is fundamentally flawed in a number of ways.

First, the asset definition would affect the BIC Exemption transition rule; PNLRs and other investments not on the "legal list" of assets set forth in the BIC Exemption would be ineligible. Thus, the same IRA account might have assets to which the transition rule applies, and assets to which it does not. Further, the Proposal would disrupt legal contracts entered into voluntarily by willing parties under the prior rule—it is questionable whether the Department can disrupt these otherwise valid contracts.

Accordingly, we reiterate our request that the Department adopt the following clear and straightforward transition rule: With respect to new advice arrangements entered into on or after the effective date, the new regulatory standards would apply. With respect to existing advice arrangements entered into prior to the effective date —including assets acquired pursuant to such previous arrangements—the previous regulatory standards governing these arrangements would remain in effect until they are terminated or renewed by the parties.

We further request that this effective date language be included in the general rule, not in the BIC Exemption only, so that this sensible approach is generally applicable.

Conclusion:

We continue to believe IRA owners and plan participants would be best served by removing the asset list from the asset definition in the BIC Exemption. This would ensure advisors are able to act in their client's individualized best interest, rather than having the Department make that decision for IRA owners and plan participants. We also urge the Department to adopt a clear, straightforward and traditional transition rule permitting contractual arrangements agreed to prior to the effective date to be governed by the regulatory standards in place at that time.

The PNLR Council looks forward to working with the Department, and we would be pleased to answer any questions the Department may have regarding PNLRs or REITs generally.

Thank you for your consideration of our comments, and please feel free to contact me if you would like to discuss our positions in greater detail.

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1

2016

Public Non-Listed REITs

Ross Prindle

March 30-April 1, 2016

FINRA Regulatory Notice 15-02

The SEC approved amendments to NASD Rule 2340 (Customer Account Statements) to modify the requirements relating to the inclusion of per share estimated values for public non-listed real estate investment trust (REIT) securities on account statements.

The amendments becomes effective on April 11, 2016.

Salient rule changes that will affect disclosure and practice are as follows:

- FINRA proposes two methodologies under which reported values are to be presumed reliable and included on customer account statements: (1) Net Investment, and (2) Independent Valuation.

- Net Investment may be used no longer than 2 years plus 150 days after breaking escrow. Net Investment is defined as the gross operating share price less selling commissions & organizational offering expenses.

- Guidance on valuation methodology and practice is referenced in FINRA 15-02 to the Investment Program Association (IPA) guidance on the valuation of public non-listed REITs

Valuation – Best Practices & IPA Guidelines

- Objectives of the IPA Guidelines are as follows:
  - ✓ Promote improved uniformity and consistency of valuation techniques by public non-listed REITs (“PNLRs”);
  - ✓ Establish standards with respect to the timing of implementation and reporting of estimated valuations and enhance the disclosure of valuations and of the methodology used to develop such valuations;
  - ✓ Enhance public confidence in the PNLR industry by improving the transparency of valuations of PNLRs;
  - ✓ Provide information useful to assist fiduciaries of tax qualified pension, stock-bonus or profit-sharing plans,
  - ✓ Assist broker/dealers and registered investment advisors who require valuation information for client account statement reporting, due diligence reviews, and for ongoing monitoring of investment performance; and

Valuation – Best Practices & IPA Guidelines

The term “Valuation” as used herein refers to an estimated value per share reported by the PNLR distinct from the offering price of the PNLR’s security.

- Basis of Valuations- Valuation of PNLR securities be based upon the PNLR’s net asset value per share (“NAV Per Share”).

- NAV Valuation Definition

  - ✓ Net Asset Value: *The fair value of real estate, real estate-related investments and all other assets less the fair value of total liabilities.*

  - ✓ Fair value: The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Valuation – Best Practices & IPA Guidelines

- Independence of Valuations & Management of Process - Establishment of a Valuation Committee comprised of independent directors responsible for oversight of the valuation process.

    - ✓ Engage third party valuation firms - ensure that valuation performed is in accordance with USPAP as well as certified by MAI members of the Appraisal Institute
    - ✓ Enterprise Value and/or Portfolio Premium is NOT to be considered
    - ✓ Review and approve the proposed valuation process and methodology to be used to determine the valuation
    - ✓ Review the reasonableness of the valuation or range of values resulting from the process
    - ✓ Recommend the final proposed Valuation for approval by the board of directors.

Valuation – Best Practices & IPA Guidelines

- As Of Valuation Date(s) and Frequency of Valuations

  ✓ Once Valuations commence, in accordance with 15-02 the IPA recommends that Valuations be produced at least annually thereafter (15-02 also promulgates annual valuation at a minimum)

  ✓ IPA guidelines state that valuations are to be completed by an independent third-party every 2 years or may be performed by the Company or its advisor in the intervening years, provided the PNLR engages a qualified third-party valuation expert to provide assistance in and confirmation of the valuation process and resulting valuation. (In reality, most have had independent appraisals completed as it has better optics with broker-dealer community.)

Valuation – Best Practices & IPA Guidelines

- Reporting of Valuations & Recommended Disclosure

  ✓ The IPA recommends that: (i) per share valuations be reported in public filings and in annual reports sent to investors; and (ii) such reporting be accompanied by disclosure text sufficient to allow broker-dealers to provide information on customer account statements consistent with the requirements of FINRA Rule 2340 and for Stakeholders to understand the nature and quality of the valuation. **<u>The IPA also recommends that the NL REIT disclose its valuation policies and, to the extent practicable given the specificity of its investment portfolio, valuation procedures including the anticipated role of third-party valuation experts, in its prospectus or other offering materials filed with the SEC.</u>**

  ✓ The IPA also recommends that PNLRs either maintain a written Valuation Policy which can be provided to broker-dealer due diligence personnel and other selected Stakeholders in accordance with policies established by the PNLR

Valuation – Best Practices & IPA Guidelines

Each PNLR is encouraged to consider the applicability of including the following items in summary disclosures relating to the valuation:

- ✓ the process by which the valuations were conducted;
- ✓ the roles of the Valuation Committee, the PNLR's management and advisor, and third-parties involved in the process;
- ✓ the identification of the third-party valuation expert(s) their qualifications;
- ✓ the process by which independent external valuation services are conducted and their relationship to internal valuations, if any;
- ✓ the frequency of valuations, the date of the valuation being reported, and the age of the data utilized for the Valuation;
- ✓ general description of the methodology used to value the PNLR's real estate and real estate-related investments;

Valuation – Best Practices & IPA Guidelines

Each PNLR is encouraged to consider the applicability of including the following items in summary disclosures relating to the valuation:

- ✓ description of the key valuation assumptions and any specific valuation parameters utilized, including but not limited to: (i) the weighted average and range, as applicable to the valuation method(s) used, of going-in and terminal capitalization rates, discount rates, and per unit values; and (ii) the holding period utilized;
- ✓ a statement of valuation sensitivity reflecting the impact on the estimated per share valuation of a 5% change in average discount rates in the case of discounted cash flow analysis or a 5% change in going-in capitalization rates in the case of direct capitalization analysis;
- ✓ general overview of procedures used to value debt and other balance sheet assets and liabilities and;
- ✓ general overview of procedures used to determine allocations of the PNLR's gross equity value among various classes of securities holders or unitholders, the PNLR's management/advisor and other minority interest holders;

Valuation – Best Practices & IPA Guidelines

- ✓ disclosure of the limitations inherent in any estimated valuation and any specific limitations and qualifications relating to the Valuation disclosed by the PNLR.
- ✓ disclosure that the Valuation has been performed in accordance with the Investment Program Association Practice Guideline 2013-01, Valuations of Public Non-Listed REITs.
- ✓ disclosure concerning potential conflicts of interest with respect to the engagement of third-party valuation expert

Valuation – Best Practices & IPA Guidelines

- **Accessibility of Non-Public Valuation Information for Broker-Dealer Confidential Use In Connection with Due Diligence**

✓ The IPA recommends that PNLR's allow reasonable access by broker-dealer personnel or designated due diligence representatives or consultants ("Due Diligence Representatives") to review supporting materials related to the valuation and deemed relevant to evaluating the nature and quality of the valuation, subject to the following provisions:

  ➢ the broker-dealer and its Due Diligence Representatives enter into mutually satisfactory non-disclosure agreements with the PNLR and the valuation expert;

  ➢ the broker-dealer and/or its Due Diligence Representatives acknowledge their observance of the proscriptions on use and communication of nonpublic information as set forth in SEC Regulation FD; and

  ➢ the broker-dealer and/or its due diligence representatives agree that PNLR representatives be given the opportunity to participate in any discussions between the broker-dealer or its due diligence representatives and the independent valuation expert(s) concerning the valuation process and results.

Investor Alerts and Bulletins

Investor Bulletin: Non-traded REITs

Aug. 31, 2015

The SEC's Office of Investor Education and Advocacy is issuing this bulletin to educate investors about investing in non-traded REITs.

What are REITs?

A *REIT*, or real estate investment trust, is a company that owns – and typically operates – income-producing real estate or real estate-related assets. The income-producing real estate assets owned by a REIT may include real assets (*e.g.*, an apartment or commercial building) or real estate-related debt (*e.g.*, mortgages). Most REITs specialize in a single type of real estate – for example, apartment communities. There are retail REITs, office REITs, residential REITs, healthcare REITs and industrial REITs, to name a few.

What is the difference between publicly traded REITs and non-traded REITs?

Publicly traded REITs (also called *exchange-traded REITs*) are registered with the SEC, file regular reports with the SEC and are listed on an exchange such as the NYSE or NASDAQ. As with stocks listed on an exchange, you can buy and sell a publicly traded REIT with relative ease. An investment in publicly traded REITs is typically a liquid investment. Similarly, you can easily assess the value of the publicly traded REIT by noting the share price at which the REIT is trading on the exchange.

In contrast, there are also ***non-traded REITs*** that are registered with the SEC, file regular reports with the SEC, but are ***not*** listed on an exchange and are ***not*** publicly traded. An investment in a non-traded REIT poses risks different than an investment in a publicly traded REIT.

Some risks of non-traded REITs to consider before investing

- ***Lack of liquidity.*** Non-traded REITs are illiquid investments, which mean that they cannot be sold readily in the market. Instead, investors generally must wait until the non-traded REIT lists its shares on an exchange or liquidates its assets to achieve liquidity. These liquidity events, however, might not occur until more than 10 years after your investment.

  Non-traded REITs usually offer investors' opportunities to redeem their shares early but these share redemption programs are typically subject to significant limitations and may be discontinued at the discretion of the REIT without notice. Redemption programs also may require that shares be redeemed at a discount, meaning investors lose part of their investment if they redeem their shares.

  For these reasons, investors with short time horizons or who may need to sell an asset to raise money quickly may not be able to do so with shares of a non-traded REIT.

- ***High fees.*** Non-traded REITs typically charge high upfront fees to compensate a firm or individual selling the investment and to lower their offering and organizational costs. ***These fees can represent up to 15 percent of the offering price, which lowers the value and return of your investment and leaves less money for the REIT to invest.*** In addition to the high upfront fees, non-traded REITs may have significant transaction costs, such as property acquisition fees and asset management fees.

> ***Check your broker or investment adviser.*** Whether working with a broker or an investment adviser, it is important to check that they are registered with the SEC or a state securities regulator. ***If the person is not registered, it could be a red flag for fraud.*** You can find out if someone is registered and obtain information about the person by visiting the SEC's Investment Adviser Public Disclosure (IAPD) website or FINRA's BrokerCheck website. You can also check with your state securities regulator about the person soliciting your investment.

- ***Distributions may come from principal.*** Investors may be attracted to non-traded REITs by their high distributions, which may be referred to as dividend yields, compared to other investment options, including publicly traded REITs. However, the initial distributions may not represent earnings from operations since non-traded REITs often declare these distributions prior to acquiring significant assets. Investors should consider the total return of a non-traded REIT – capital appreciation plus distributions – instead of focusing exclusively on the high distributions. ***Non-traded REITs may use offering proceeds, which includes the money you invested, and borrowings to pay distributions. This practice reduces the value of the shares and reduces the cash available to the REIT to purchase real estate assets***.

- ***Lack of share value transparency.*** Because non-traded REITs are not publicly traded, there is no market price readily available. Consequently, it can be difficult to determine the value of a share of a non-traded REIT or the performance of your investment. In addition, any share valuation will be based on periodic or annual appraisals of the properties owned by the non-traded REIT, and therefore may not be accurate or timely. ***As a result, you may not be able to assess the value or performance of your non-traded REIT investment for significant time periods.***

- ***Conflicts of interest.*** Non-traded REITs are typically externally managed – meaning the REITs do not have their own employees. ***As noted above, the external manager may be paid significant transaction fees by the REIT for services that may not necessarily align with the interests of shareholders, such as fees based on the amount of property acquisitions and assets under management.*** In addition, the external manager may manage or be affiliated with other companies that may compete with the REIT in which you are invested or that are paid by the REIT for services provided, such as property management or leasing fees.

Where can I get information about a non-traded REIT?

When offered an opportunity to invest in a non-traded REIT, your financial professional should provide you with a copy of a *prospectus* for the investment. The prospectus is the offering document describing the REIT's investment strategy, offering terms, risks and other information that you should consider when deciding whether to invest. There may also be *supplements* to the prospectus detailing changes since the original date of the prospectus. ***You should carefully review the prospectus and any prospectus supplements before making any investment decision.*** The prospectus and any supplements can also be found through the SEC's EDGAR database usually identified as a "424B3" filing.

Non-traded REITs that are registered with the SEC also must regularly file quarterly and annual reports detailing the financial results of the non-traded REIT. These reports can be found on the SEC's EDGAR database and are identified as a Form 10-Q for a quarterly report and a Form 10-K for an annual report. Forms 8-K may also be filed in connection with the occurrence of certain events that require disclosure. ***You should carefully review these reports before investing.***

Chart comparing REIT types

	Publicly traded REITs	**Non-traded REITs**
Overview	REITs that file with the SEC and whose shares trade on national stock exchanges.	REITs that file with the SEC but who shares do not trade on national stock exchanges.
Liquidity	Shares are listed and traded, like any publicly traded stock, on major stock exchanges. Most are NYSE listed.	Shares are not traded on public stoc exchanges. Redemption programs fc shares vary by company and are lim Generally a minimum holding period investment exists. Investor exit strat generally linked to a required liquidat after some period of time (often 10 years) or, instead, the listing of the stock on a national stock exchange such time.
Transaction costs	Brokerage costs the same as for buying or selling any other publicly traded stock.	Typically, fees of 10-15 percent of th investment are charged for broker-de commissions and other up-front cost Ongoing management fees and expenses also are typical. Back-end fees may be charged.
Management	Typically self-advised and self-managed.	Typically externally advised and managed.

Minimum investment amount	One share.	Typically $1,000 - $2,500.
Performance measurement	Numerous independent performance benchmarks available for tracking listed REIT industry. Wide range of analyst reports available to the public.	No independent source of performan data available.

Source: National Association of Real Estate Investment Trusts (NAREIT)

Private REITs. In addition to publicly traded REITs and non-traded REITs, there are also *private REITs*. Similar to non-traded REITs, private REITs are not listed making them hard to value and trade. Private REITs also do not regularly file disclosure reports with the SEC possibly making it difficult for you to keep informed of your investment. Instead, private REIT offerings are private placements and rely on an exemption from the obligation to register with the SEC. Investors are typically limited to accredited investors.

Additional Information

See FINRA's investor alert about non-traded REITs for more information.

U.S. REIT M&A Transactions Since 2000

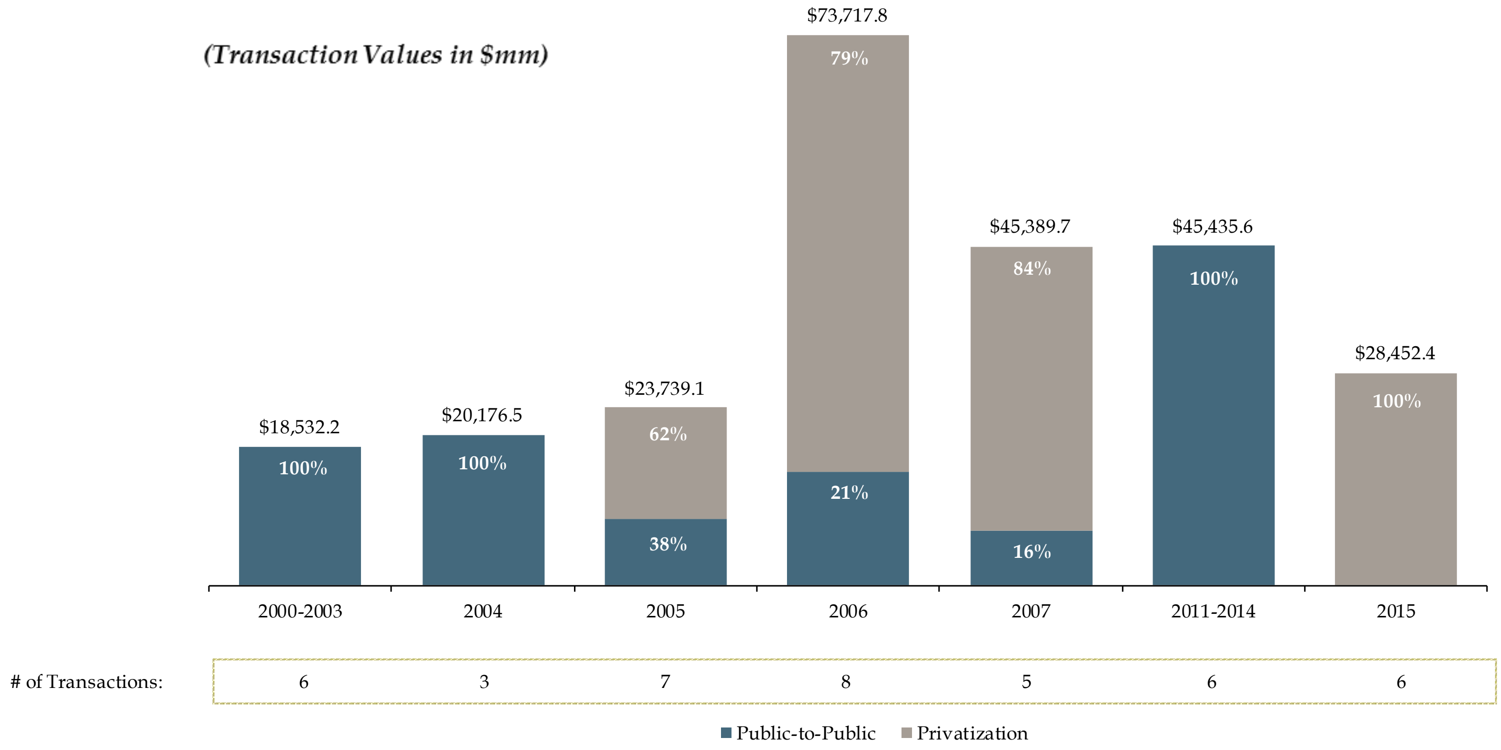
(Over $1bn) (Cont'd)

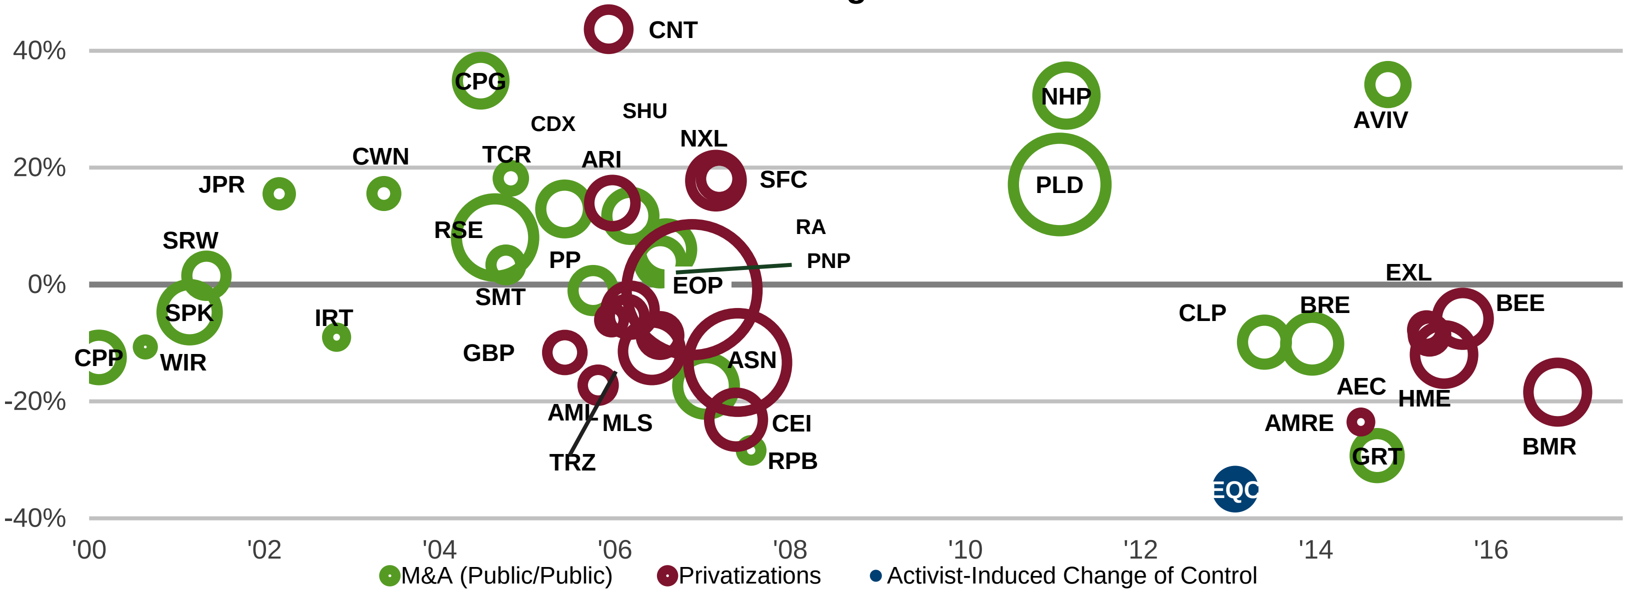


Source: Green Street Advisors, Company Filings

M&A Volume

- Thirty-two REIT M&A deals[1] occurred from '00 through mid-'07. Only seven were executed between mid-'07 and '14. Since the beginning of 2015, there have been five deals, and large NAV discounts for most REITs will continue to promote additional M&A chatter.

NAV Premium of Target Prior to Deal

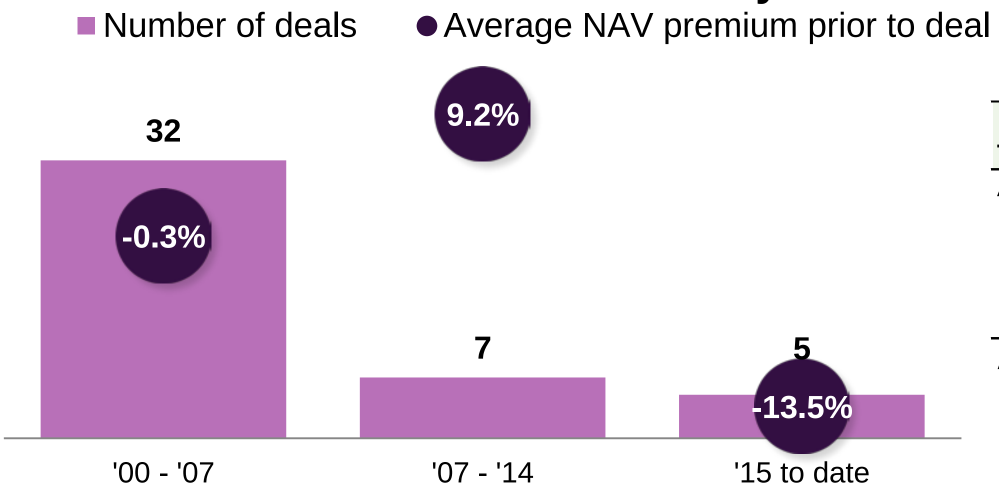


1. Deals include target companies that are tracked, either formally or informally, by Green Street Advisors.

Pricing Over Time

- During the M&A wave of ’00-’07, acquired companies were trading at ~NAV on average when suitors came along. From ’08-’14, public-to-public deals involving targeted companies trading at NAV premiums became common. Since ’15, the average deal has priced near NAV while the REITs traded at substantial discounts.

Deal Volume & NAV Premiums by Period



Recent Deals

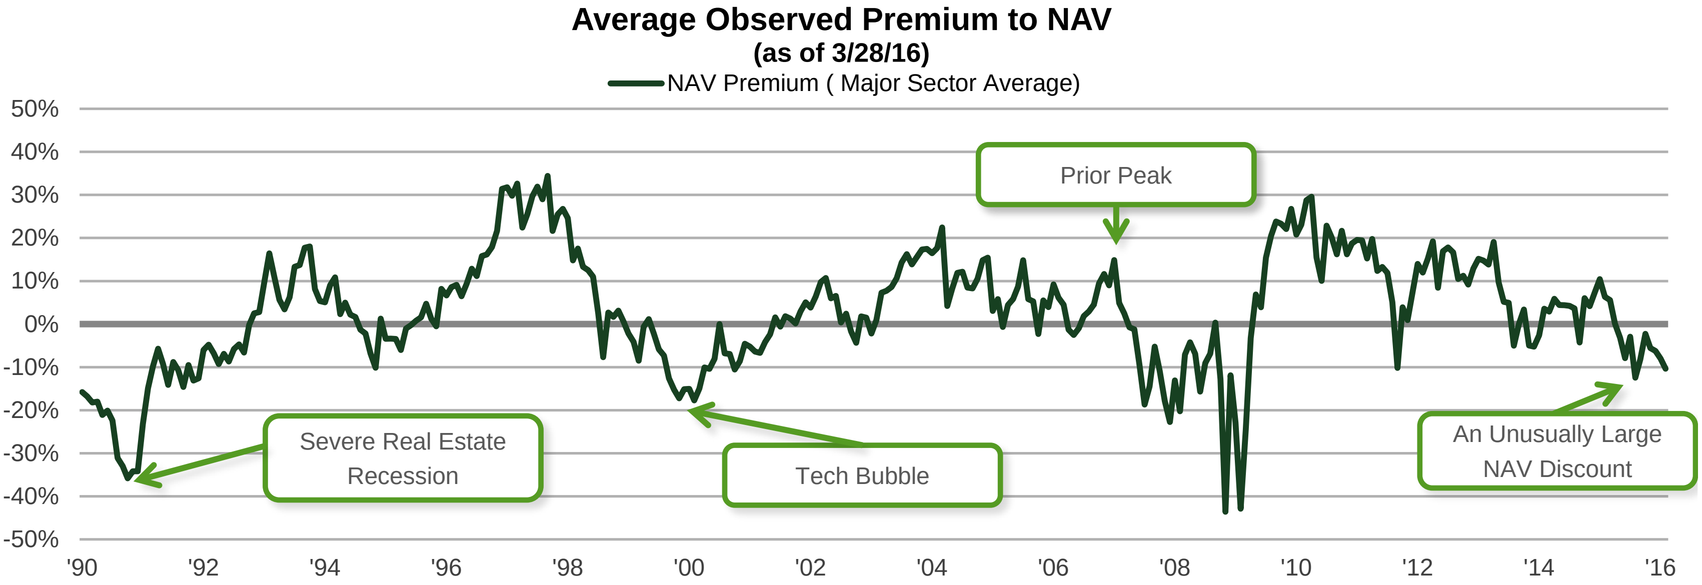
Target	Public Price	NAV	Deal Price	Prem. to Share Price	Deal NAV Premium
AEC	$24.22	$26.50	$28.75	18.7%	8.5%
EXL	$13.84	$15.00	$15.85	14.5%	5.7%
HME	$68.87	$80.00	$75.23	9.2%	-6.0%
BEE	$12.97	$14.50	$14.25	9.9%	-1.7%
BMR	$19.74	$23.25	$23.75	20.3%	2.2%
Avg[1]				***13.9%***	***(0.4%)***

Source: Green Street Advisors

1. Weighted average by deal size.

Relative Pricing

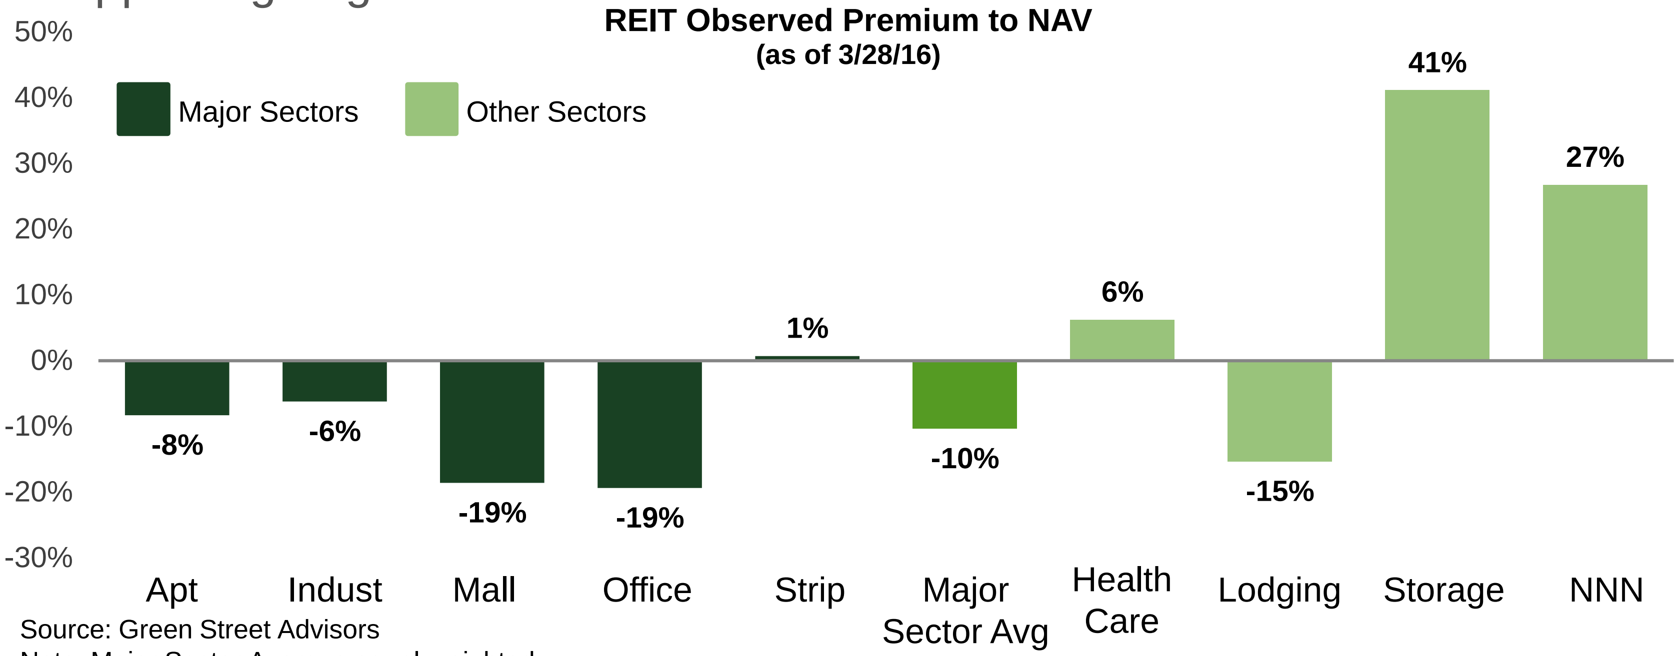
- On average, REITs trade near NAV. But at certain times, they trade at large premiums and discounts. The current discount is unusually wide. Commercial real estate can clearly be acquired more cheaply on Wall Street than on Main Street given current REIT share prices.



Source: Green Street Advisors

Potential Targets

- The average REIT in each of the major property sectors is now trading at a double-digit NAV discount. With a large pool of capital committed to buying U.S. real estate, REITs trading at sizable NAV discounts should represent appealing targets.



Source: Green Street Advisors
Note: Major Sector Average equal-weighted.

REIT and Real Estate M&A in 2016

Following are some of the key trends we are following as we enter 2016, while keeping a weather eye on macro market turmoil:

1. M&A activity should continue at a steady pace, with a number of public-to-private and public-to-public REIT mergers already in the works.

2. We are not expecting an avalanche of REIT buyouts a la 2006-7, but many of the same drivers are apparent, as we noted last October in Taking REITs Private – The Playbook is Back in Play, and a number of significant transactions are likely.

3. Hostile transactions remain viable in the REIT world, and we expect the same factors – including institutional investor and activist support – that have led to current record-high levels across all industries to result in more hostile REIT acquisitions.

4. Succession planning and executive compensation will continue to be a major focus for boards, especially given the "maturation" of a significant number of management teams and changed equity market and interest rate environments.

5. While tax-free REIT spinoffs by real estate-rich corporations are no longer possible, we expect the trend to unlock real estate value to continue (albeit at a slower pace) utilizing taxable spins, sale-leasebacks, rights offerings, joint ventures and other structures, particularly in distress situations or where NOLs are available.

6. REIT-REIT spin-offs and spins of REITs' taxable subsidiaries can still be done tax free, and are expected to continue.

7. Activists are reworking their REIT playbooks to factor in the new REIT legislation and interest rate environment, but they aren't going anywhere. Dedicated funds for activism have never been more of a force, nor has institutional investor support. One of the key challenges for targeted companies will be both maintaining focus on the business, and being thoughtful about the merits of activists' suggestions and how best to respond.

8. Congress' FIRPTA relief should increase already robust deal volume from foreign investors, particularly as investors in stumbling or slowing-growth economies seek safe havens.

9. Interest by U.S. REITs in non-U.S. acquisitions is mixed, with divergent views in different sectors and companies. The debate is likely to continue and we don't expect volume to grow dramatically.

10. The dislocation in the non-traded REIT sector could lead to increased deal activity, but may also complicate migration into the public markets given due diligence concerns.

11. Ripple effects of e-commerce continue to reshape a number of property types, driving up cap rates in some sectors and continuing to drive industrial, data center and cell tower REIT expansion. Clearly, this is just the beginning.

Taking REITs Private – The Playbook is Back in Play

With many REITs now trading at meaningful discounts to their net asset value, we are already seeing signs of an increase in REIT buyouts. Many of the drivers of the $100 billion-plus of public-to-private REIT M&A transactions that preceded the financial crisis are apparent again, including higher valuations in the private real estate markets than in the public REIT markets, highly liquid private markets that facilitate wholesale-to-retail executions, debt that is still both cheap and plentiful for certain transactions, large pools of low-cost private equity seeking deals (and willing to accept low cap rates), and a sizeable pipeline of REITs and REIT executives who are seeking a graceful exit. More recent trends such as the increasing interest of sovereign wealth funds and other sources of international capital in the U.S. real estate sector may also drive future REIT privatizations.

In recent months we have dusted off our public-to-private playbook, including some of the lessons from the last privatization wave:

1. **Market Checks**. Boards of REITs considering a going-private transaction (or a sale of any kind) should bear in mind that while a pre-market check is not always required as a legal matter – particularly in Maryland, where many REITs are incorporated – the decision of how to conduct a sale process and on what basis to strike a deal is probably the most intensely reviewed decision a board can make. Even when there is no explicit pre- or post-signing market-check or shopping period when selling a public REIT, the sale of every non-controlled public company will include a market test, if only through the absence of preclusive lock-up arrangements. Boards should carefully consider the alternatives – pre-signing full auction, limited auction, accepting a preemptive bid with a subsequent market check, go-shops, low break-fee deals (sometimes viewed as an auction with a floor), full-on accepting a blockbuster bid with a standard fiduciary out and break-fee, or combinations and variations on these options – and determine which course is most likely to enhance shareholder value under the relevant circumstances. Boards should also consider, in evaluating their options, how to best communicate the rationale for their chosen strategy to shareholders in order to facilitate shareholder approval. Courts in both Maryland and Delaware will generally respect the board's decision if an appropriate process was followed (including, as noted below, with regard to any conflicts of interest) and is demonstrable from the record.

2. **Executive Compensation and Retention**. It is often important to private equity buyers to retain some or all of the target REIT's senior management. In constructing the best approval process for employment arrangements with the buyer, or retention arrangements with the target, entered into prior to the signing or closing of a transaction, it is important to distinguish between those situations where there is a management conflict of interest necessitating a special committee (discussed below) and routine retention arrangements, which may be approved by the target board or compensation committee in the ordinary course. Employment agreements between executives and a buyer negotiated after the major deal terms have been agreed and which do not affect the price to be paid to shareholders are common and perfectly acceptable, even if executed prior to or simultaneously with the definitive deal documents. From the buyer's standpoint these agreements should be carefully crafted to create the best possible alignment between the buyer and the executives, both on the downside (by requiring a rollover of significant equity and/or a cash investment) and on the upside (through promote structures and other compensation mechanisms). Equity compensation arrangements in a REIT which has been taken private typically will be more heavily weighted than when the REIT was public toward performance-based vesting and payout, and less toward being earned solely based on continued service. On the sell side, consideration should be given to ensuring that any management arrangements are compatible with the fiduciary-out or market-check aspects of a deal.

3. **Change of Control Employment Arrangements**. All public companies, including REITS, can and should address "change of control" protections well in advance of any potential transaction, before deal pressures mount, in order to create an environment that is best suited to maximizing shareholder value and retaining executive loyalty and focus when they are needed most. Properly-structured change of control protections are both legal and proper and serve to align the interests of key decision makers with the interests of shareholders. It is not in the interests of public REITs or their shareholders for senior management to have an incentive to avoid shareholder value-creating transactions out of a fear of the impact of those transactions on their own financial situation, or to prefer a transaction involving the opportunity of continued employment over one – perhaps better for shareholders – in which there is no ongoing role for management. However, boards should also be aware of the scrutiny that shareholder advisory groups and activist investors give to change of control employment arrangements which provide for excessive severance, "single-trigger" payments (i.e., those made upon a change of control, irrespective of continued employment), or benefits which are, at the moment, out of public favor generally (such as gross-up payments relating to the "golden parachute" excise tax), and consider how best to balance these concerns with the needs of the company.

4. **Special Considerations for UPREIT Transactions**. Acquisitions involving UPREITs present their own unique set of challenges that can make or break the deal. Tax protection agreements (designed to perpetuate a contributing operating partnership unitholder's tax deferral by requiring tax gross-ups if the contributed property is sold), and more general unitholder protections enshrined in the operating partnership's governing documents, can frustrate plans to "slice and dice" the acquired portfolio through rapid sale of some or all of the assets. Careful thought must be given both to any unitholder voting, notice, or consent rights that might be triggered by the acquisition and to the form of consideration to be offered in the transaction to unitholders who prefer to extend their tax deferral by rolling over their equity rather than taking the cash consideration offered to REIT shareholders. In private equity acquisitions, there is no surviving public equity, so the flexibility and protections previously available through conversion of operating partnership units into stock or its cash equivalent often must be replaced with a security that satisfies the unitholders needs. For example, unitholders may be offered a fixed-return preferred security or combination consideration including a mixture of cash and preferred securities. Issues to consider include the yield, windows for puts and calls, voting rights (if any), and continuing tax protection arrangements (no sale or refinancing of certain assets, the ability to guarantee debt, etc.). Along the same lines, if executives and other employees hold equity compensation awards in the form of operating partnership units which are profits interests for tax purposes (commonly known as "LTIP Units"), care must be taken to preserve the favorable tax attributes of those awards for the holders.

5. **The CEO, the Board, Special Committees**. Any sale process should be overseen by the board, which should provide management with direction as to any process or potential process. In most circumstances it is proper for the CEO or other senior management to explore whether there are attractive private equity options, among others, that the board should consider, but management should take care not to get out over their skis (as demonstrated by some spectacular recent flameouts). Whenever a buyer seeks to retain some or all of the target REIT's senior management, it will be essential to ensure that critical decisions – including the method of sale, selection of bidders, deal protections, access to due diligence materials, and negotiation of the price and other deal terms – fully involve unconflicted directors. In situations going beyond a straightforward desire by the buyer to retain current senior management (for instance when a management team or affiliated stockholder or unitholder seeks out a private equity buyer to submit a joint bid to acquire the company, or in other circumstances presenting more complicated or extensive conflicts), the best way to address the conflict may be to establish a special committee. In situations where directors are also operating partnership unitholders, the board should consider any possible differing interests as between unitholders and shareholders. When a special committee is formed, it should be firmly in control of the process, retain the services of independent legal and financial advisors, and have a clearly defined role, the ability to negotiate independently, and the power to say no. The best way to address conflicts will always depend on the

circumstances, however, and care should be taken not to reflexively establish formalistic special committees or otherwise implement drastic measures that end up hurting the process by, for example, depriving the board and bidders of critical access to key executives and their base of knowledge and experience or creating the impression of conflict where it does not truly exist.

6. **Club Deals**. Successful club deals require careful management of a number of buy-side complications, particularly the danger of a club bid being dragged down by its weakest member; defections by renegade club members; lack of alignment with regard to bidding, operating or exit strategies; and excessively complex or impractical governance and bidding arrangements. On the sell-side, careful thought should be given to allowing clubbing with the board's consent, recognizing that, depending on the circumstances, the size of the deal and field of potential acquirors, a club prohibition could hurt as much or more than it helps.

7. **Debt and Equity Bridges**. The conditionality of bridge and other financing commitments should be carefully scrutinized by the selling board and the private equity buyer, and should inform negotiations around reverse break fees (discussed below). The goal, of course, is to eliminate any daylight between the closing conditions in the merger agreement and the financing commitments. In light of the strong bargaining power of private equity borrowers and the favorable debt markets, market MACs, diligence conditions and the usual extensive list of contingencies in lender forms can often be eliminated.

8. **Reverse Break Fees and Capped Guarantees**. Reverse break-up fees and caps on guarantees provided by private equity firms are fairly standard in public-to-private REIT deals which typically involve reverse termination fees, or liquidated damages provisions, of roughly 7 - 10% of overall transaction value. In some ways, these provisions represent a regression to traditional real estate deposits and liquidated damages provisions, but they tend to be far more complicated in operation. Recent reverse break fees have been asymmetrical, exceeding (often substantially) the termination fees payable by the target. From the selling board's perspective, careful thought should be given to the odds and consequences of a failed deal and the limited recourse available in such circumstances. The reputation and track record of the private equity shop will be relevant, as will be the conditionality of the buyer's financing commitment.

9. **Strategic v. Financial**. In an auction context, careful consideration should be given to including the right mix of potential bidders to maximize value. Strategic bidders often will have different views of value than financial bidders, since they may be able to capitalize on synergies not otherwise available to financial bidders or because an acquisition fulfills a strategic need or, conversely, because of constraints on their ability to utilize cheap leverage and concerns about dilution. These considerations need to be weighed against concerns with providing confidential information to a competitor and the fact that strategic bidders sometimes need a longer time to conduct diligence and decide on a process.

10. **Litigation**. Nearly every REIT deal now attracts shareholder litigation and take-private transactions are an especially attractive target for the stockholder plaintiffs' bar. What this means is that a selling board's actions, including its decisions with respect to all the issues outlined above, are likely to face post-signing scrutiny in court. Careful and well-documented board and committee processes are therefore critical in these deals, because they allow bidders, sellers and trustees to minimize the costs and risks of litigation and in many cases obtain favorable settlements or early dismissal when the inevitable lawsuits materialize.

Concurrent Session: REIT Tax Issues When You Arrive at Work

Friday, April 1st
11am – 12:15pm
Marriott Marquis, Washington DC

Moderator:
Carol Bradshaw, SVP-Tax, Westfield Corporation

Panelists:
Joshua Cox, VP-Tax, Tanger Factory Outlet Centers, Inc.
Mark Patterson, VP-Taxation, Duke Realty Corporation
Charles Temkin, Director, Deloitte LLP

Updated Earnings and Profits Rules for REITs

To qualify as a real estate investment trust ("REIT"), an entity, among other things, must make a minimum "dividend" distribution to its shareholders. REITs generally can deduct these dividends for corporate-level income tax purposes. Since 1960, unique rules modified a REIT's earnings and profits ("E&P") determination so that sufficient E&P existed to support the treatment of distributions as "dividends," allowing the REIT to satisfy its distribution requirement while lowering corporate-level tax. This article explains how the Protecting Americans from Tax Hikes Act of 2015 (the "PATH Act") amended these modification rules to eliminate potential double taxation of "deemed" E&P to REIT shareholders, but why the PATH Act also created—or highlighted—other ambiguities.

February 15, 2016

by Armando Giannese, Federal Tax, and David Lee, Washington National Tax

Armando Giannese is a tax managing director with the Federal Tax practice (Chicago). David Lee is a partner in the Passthroughs group of Washington National Tax ("WNT").

Overview

On December 18, 2015, the PATH Act was enacted as part of Pub. Law 114-113, the "Consolidated Appropriations Act, 2016." The new law includes many significant changes to the REIT rules, such as favorable treatment under the Foreign Investment in Real Property Tax Act ("FIRPTA") regime for investments in U.S. real estate through REITs. The new law also modifies the unique REIT E&P rules designed to provide REITs with sufficient E&P to support the dividend distribution requirement by eliminating the potential double taxation to shareholders of the "deemed" E&P. For many REITs, the revised and simplified rules will require minimal efforts to follow. However, for others, guidance from the IRS may be needed to coordinate the interplay between a REIT's E&P determination and certain other provisions.

This article first discusses the E&P operating rules prior to the enactment of the PATH Act. It then reviews the revised provisions that are effective for tax years beginning after December 31, 2015, and the effects that presumably were intended. Finally, the article highlights potential uncertainties that may require further clarifications or guidance from the IRS.

REIT E&P Rules Prior to PATH Act

Generally, a dividend is a distribution of property by a corporation to its shareholders out of the corporation's accumulated E&P or current E&P,[1] and a REIT and its shareholders are subject to the tax rules applicable to a domestic corporation.[2] For various reasons, a corporation's taxable income and E&P for a given year may differ. For example, a corporation is required to use longer cost recovery periods in computing depreciation in determining its E&P and cannot reduce its current E&P following the energy efficient commercial buildings provision.[3] Furthermore, an expense that is not allowed as a deduction in computing taxable income (i.e., permanently disallowed) usually is reflected in E&P except when the Code specifically provides otherwise.[4] Finally, a corporation's E&P is reduced by a loss recognized on the sale or disposition of property even though the loss is not allowed as a deduction (or may be deferred until capital gains are recognized) by the operation of section 267 or 1211 (e.g., net capital loss).[5]

A REIT is a tax-efficient vehicle for owning and operating real estate because, while it is taxed as a corporation, it can avoid corporate-level tax on its taxable income by claiming a deduction for dividends paid to its shareholders.[6] To qualify and maintain status as a REIT, the entity must, among other things, distribute generally 90 percent of its "ordinary" taxable income in the form of "dividends."[7] Thus, absent special rules, a REIT may lack E&P to treat distributions as dividends, and thus, may fail to meet this distribution requirement or incur corporate-level tax because of

---

1 Section 316(a).

2 Section 1.856-1(e).

3 Section 312(k)(3).

4 Rev. Rul. 71-165, 1971-1 C.B. 111, stated "[a]n expense of an accrual basis corporation that under the Code is never an allowable deduction in computing taxable income usually is reflected in earnings and profits in the year to which it is attributable, except where the Code specifically provides that the corporation's earnings and profits shall not be reduced by any amount which is not allowable as a deduction in computing its taxable income."

5 Section 1.312-7(b)(1).

6 Section 857(b)(1) and (2).

7 Specifically, pursuant to section 857(a)(1), a REIT must make distributions that qualify for a dividends paid deduction (without regard to capital gain dividends) equal to at least the sum of 90 percent of the REIT taxable income for the tax year (determined without regard to the deduction for dividends paid and by excluding any net capital gain), and 90 percent of the excess of the net income from foreclosure property over the tax imposed on such income, minus any "excess noncash income."

Unless otherwise indicated, section references are to the Internal Revenue Code of 1986, as amended (the "Code") or the applicable regulations promulgated pursuant to the Code (the "regulations").

the disparity between its taxable income and E&P. To this end, prior to the enactment of the PATH Act, a REIT's determination of E&P was subject to the following rules:

- Section 857(d)(1)–A REIT's current E&P is not reduced by any amount that is not allowable in computing its taxable income for such taxable year.
- Section 562(e)–For purposes of computing the dividends paid deduction, a REIT's current E&P is increased by the total amount of gain (if any) on the sale or exchange of real property by the REIT during such taxable year.

The following illustrates how these rules have been applied.

Example 1

A REIT acquires a single residential apartment building for $1,000 and computes depreciation over 27.5 years and 40 years, respectively, for taxable income and E&P purposes. The REIT distributes all its available cash every year and has no accumulated E&P at the beginning of Year 30, which suggests that its shareholders have recognized dividend income based on smaller annual E&P depreciation deductions. The REIT distributes $90 to its shareholders in Year 30, has a pre-depreciation taxable income of $90 for Year 30, and computes its depreciation for taxable income and E&P purposes to be $0 and $25, respectively. Under former section 857(d)(1), the excess E&P depreciation of $25 for Year 30 would not be allowable in determining Year 30's taxable income because it was claimed in prior years, so such amount could not reduce REIT's current E&P for Year 30, resulting in a current E&P balance of $90. Accordingly, the REIT would be able to claim a dividends paid deduction of $90 to eliminate its taxable income. However, notwithstanding that in this example REIT's shareholders have already recognized dividend income based on smaller E&P depreciation deductions and have not benefited from larger tax depreciation deductions in prior years, the shareholders would recognize dividend income of $90 reflecting the "deemed" E&P of $25.

Example 2

Continuing with the example above, the REIT sells the building for $1,000 in Year 31 and computes its gain for taxable income and E&P purposes as $1,000 and $750, respectively, ignoring the mid-month convention. The

REIT has no accumulated E&P at the beginning of Year 31, has no other activities in Year 31, and distributes $1,000 to its shareholders. Under former section 562(e), the REIT would treat its tax gain of $1,000 as its E&P gain for purposes of determining the dividends paid deduction. Accordingly, the REIT could claim a dividends paid deduction of $1,000 to eliminate its taxable income, and its shareholders would recognize dividend income of only $750 (because the modification under former section 562(e) was only for purposes of determining the dividends paid deduction).

It is worth noting that, while Congress crafted these provisions to allow REITs to have sufficient E&P for purposes of satisfying the minimum distribution requirement or avoiding corporate-level tax,[8] the above modifications were not always effective. For example, certain income items that are treated differently between taxable income and E&P were not captured under a literal reading of former section 857(d)(1) and required private letter rulings from the IRS. In Private Letter Rulings 201537020 and 201503010, the IRS relied on the legislative history accompanying the Tax Reform Act of 1986, which amended former section 857(d)(1),[9] to treat a REIT as having sufficient E&P

---

[8] For example, Congress included section 562(e) as part of the Technical Corrections Act of 1982, and the accompanying legislative history explained "[w]here the amount of taxable gain from the sale or disposition of real property is greater than the current or accumulated earnings and profits because of the different recovery periods used for computing taxable income and earnings and profits, the real estate investment trust may not have sufficient earnings and profits to pay enough dividends to meet the 95-percent test [currently a 90-percent test] or to avoid taxation of all income from the sale or other disposition of the real property through dividend distributions to its shareholders." See S. Rep. No. 97-592, 97th Cong., 2d Sess. (1982).

[9] Prior to 1986, section 857(d) read "[t]he earnings and profits of a real estate investment trust for any taxable year (but not its accumulated earnings and profits) shall not be reduced by any amount which is not allowable *as a deduction* in computing its taxable income for such taxable year." [Emphasis added] As part of the legislative process of the Tax Reform Act of 1986, the Senate proposed and passed amendments to (1) delete the phrase "as a deduction" and (2) to insert a new provision providing that a REIT's current E&P would not be less than its REIT taxable income before the dividends paid deduction. S. Rep. 99-313, 99th Cong., 2d Sess. (May 29, 1986). In conference, the Senate's amendment to delete the phrase "as a deduction" from section 857(d) was adopted. However, the addition to ensure REIT's current E&P would in no event be less than its REIT taxable income before the dividends paid deduction was not adopted "since the conferees believe that this provision is a restatement of present law." H.R. Conf. Rep. No. 99-841, at 218 (1986).

notwithstanding that the REIT's positive section 481(a) adjustment for taxable income purposes was greater than the amount for E&P purposes.

REIT E&P Rules under the PATH Act

To address the potential double taxation of "deemed" E&P under former section 857(d)(1), the PATH Act provides a somewhat circuitous solution. It first modifies section 857(d)(1), so that current E&P is not reduced for amounts that have not been allowable for computing taxable income in the current "*or*" prior taxable years. For purposes of the dividends paid deduction, new section 857(d)(5) cross-references amended section 562(e)(1) for special rules, which then applies section 857(d)(1) without regard to the provision relating to prior taxable years. The net result is that, for purposes of the dividends paid deduction, section 857(d)(1) (as modified by section 562(e)(1)(B)) would prevent a current year reduction of E&P for amounts that are attributable to prior year taxable income deductions.

As amended, the determination rules are now as follows:

- Section 857(d)(1)–A REIT's current E&P is not reduced by any amount that
  - (A) Is not allowable in computing its taxable income for such taxable year, and
  - (B) Was not allowable in computing its taxable income for any prior taxable year.
- Section 562(e)(1)--For purposes of computing the dividends paid deduction,
  - (A) REIT's current E&P is increased by the amount of gain (if any) on the sale or exchange of real property that is taken into account in determining the taxable income for such taxable year, and
  - (B) Section 857(d)(1) is applied without regard to section 857(d)(1)(B).

Amounts subject to amended section 857(d)(1) continue to include items that are permanently disallowed in determining taxable income, such as nondeductible penalties and disallowed entertainment expenses.

Amended section 857(d)(1) also applies to amounts that would ordinarily reduce E&P, but the deduction for which might be deferred to a future year for taxable income purposes, such as a net capital loss or a disallowed section 163(j) interest.[10] However, for purposes of determining the taxability of distributions to shareholders (i.e., Form 1099-DIV), this change means that an item—such as the excess of E&P depreciation over tax depreciation in later years due to the use of different recovery periods—is no longer subject to amended section 857(d)(1). This means the normal current year E&P adjustments (negative), which in fact are attributable to prior year taxable income deductions, would be permitted. This reduces the amount of current year distributions that would otherwise be taxable as dividends to shareholders.

On the other hand, for determining the dividends paid deduction (and not for Form 1099-DIV), such excess amount cannot reduce the REIT's current E&P pursuant to amended section 562(e)(1)(B). Thus, under Example 1 above, the REIT would have sufficient E&P (i.e., $90) to support a dividends paid deduction large enough to offset its current taxable income, but the shareholder would recognize a smaller amount of dividend income (i.e., Form 1099-DIV of $65), to the extent that all prior year E&P was previously distributed as taxable dividends.

Uncertainties under the PATH Act

While the amendment appears to accomplish the apparent objective of eliminating the potential double taxation of the "deemed" E&P, it also raises questions over how certain provisions that are affected by E&P, such as the January dividend, the throwback dividend, and the consent dividend, should operate under the new determination rules.

Relevant to a REIT, the term "deduction for dividends paid" includes generally the sum of the dividends paid during the tax year and consent dividend for the tax year.[11] For this purpose, dividends paid by a REIT during the year following a relevant year may be included. For example, under section 857(b)(9) (or the so-called January dividend), any dividend declared by a REIT in October, November, or December of any calendar year and payable to shareholders of record on a specified date in one of

---

[10] Section 1.163(j)-1(e) provides "[t]he disallowance and carryforward of a deduction for interest expense under this section shall not affect whether or when such interest expense reduces earnings and profits of the payor corporation."

[11] Sections 857(b)(2)(B), 561, and 562.

those months is deemed paid by the REIT on December 31 of that calendar year if the dividend is paid during January of the following calendar year. This special timing rule also treats shareholders as receiving the dividend on December 31. Further, section 858 (or the throwback dividend) provides that a REIT may elect to treat a dividend declared before the return due date (including extension) for a relevant year and distributed in the 12-month period following the relevant year as being paid during the relevant year. However, contrary to the January dividend, the elected amount is treated as being received by shareholders in the distribution year. Because of this timing difference (i.e., deducted by a REIT earlier than recognized as income by shareholders), Congress passed section 4981, under which a REIT is subject to a four-percent excise tax if it relies on the throwback dividend generally for more than 15 percent of its ordinary income.[12] Finally, pursuant to section 565(a) (or the consent dividend), a REIT's common shareholder(s) may elect to treat as a dividend the amount specified in such election (i.e., a hypothetical distribution deemed occurring on December 31).[13]

Consistent with the term "dividend" (rather than "distribution") being used in the statute for these provisions, the income tax regulations specifically limit the application of a throwback dividend and a consent dividend to the E&P of the relevant tax year. For example, section 1.858-1(b)(2) provides in part that a REIT can elect a throwback dividend "to the extent that the earnings and profits of the taxable year (computed with the application of sections 857(d) and 1.857-7) exceed the total amount of distributions out of such earnings and profits actually made during the taxable year." Thus, if a REIT has taxable income and E&P of $100,000 for Year 1, distributes $85,000 in Year 1, and elects on its Year 1 return to treat $40,000 paid in Year 2 as a dividend paid during Year 1 pursuant to

---

[12] Pursuant to section 4981, a REIT is subject to a tax equal to generally four percent of the excess of the required distribution over the sum of (1) the amounts actually distributed during the calendar year, (2) retained amounts on which income tax is paid, and (3) the excess of dividends paid deductions over REIT taxable income before such deductions of prior years. For this purpose, the required distribution is the sum of (1) 85 percent of its ordinary income, (2) 95 percent of its capital gain net income, and (3) any prior-year undistributed income.

[13] Section 1.565-3(a) provides in part that "[t]he amount of the consent dividend... shall be considered, for all purposes of the Code, as if it were distributed in money by the corporation to the shareholder on the last day of the taxable year of the corporation, received by the shareholder on such day, and immediately contributed by the shareholder as paid-in capital to the corporation on such day."

section 858, the election is valid only to the extent of $15,000.[14] Similarly, for a consent dividend, section 1.565-2(c)(1) treats an elected amount as effective not exceeding "the amounts which would constitute a dividend (as defined in section 316) if the corporation had distributed the total specified amounts in money to shareholders on the last day of the taxable year of the corporation."

Considering that a REIT now may have two different current E&P amounts (i.e., section 857(d)(1) vs. section 562(e)(1)), the threshold question then is: Which E&P amount serves as the limitation for these purposes (including the January dividend)?[15]

Pursuant to section 1.565-1(b)(1), a consent dividend election is made on Form 972, *Consent of Shareholder To Include Specific Amount in Gross Income*. If the amount so elected is limited to only the amount that a consent shareholder will include in its gross income, the use of a consent dividend may not be possible in certain circumstances. For example, assume that the REIT in Example 1 above intends to rely solely on the consent dividend (rather than the actual distribution of cash). If the amount specified on Form 972 cannot exceed $65 (i.e., the E&P determined for Form 1099-DIV), the REIT would fail to satisfy the minimum distribution requirement. It should be noted that section 1.565-2(c)(1) provides if only a portion of the specified amount would constitute a dividend (i.e., due to insufficient E&P), then only a corresponding portion of each specified amount is treated as a consent dividend. Thus, can common stockholders of the REIT under Example 1 above specify $90 on Form 972 but recognize only $65 as dividend income on their tax returns?[16]

---

[14] See Example 2 of section 1.858-1(d).

[15] Technically, except in the case of a sale of property, the special E&P adjustments are all made pursuant to section 857(d)(1). The application of section 857(d)(1) is then modified by section 562(e)(1)(B) for purposes of the dividends paid deduction. For simplicity, we refer to the two different E&P calculations as made pursuant to section 857(d)(1) for shareholder purposes, or section 562(e)(1) for dividends paid deduction purposes.

[16] The example under section 1.565-2(c)(2) provides:

> The X Corporation, a corporation described in §1.565-(a)(1) or (2), which makes its income tax returns on the calendar year basis, has only one class of stock outstanding, owned in equal amounts by A and B. It makes no distributions during the taxable year 1987. Its earnings and profits for the calendar year 1987 amount to $8,000, there being at the beginning of such year no accumulated earnings or profits. A and B execute proper consents to include $5,000 each in their gross income as a dividend received by them on December 31, 1987. The sum of the amounts

With respect to the January dividend and throwback dividend, it is possible that a distribution that may not qualify as a January dividend, because of the application of section 857(d)(1), may be eligible for the throwback dividend election. Thus, which E&P determination controls may be more complex and may require further coordination as illustrated below:

Example 3

Continuing with Example 1 above, and for Year 30 and Year 31, the REIT's current E&P is $90 and $65, respectively, as determined under amended sections 562(e)(1) and 857(d)(1). The REIT has no accumulated E&P at the beginning of Year 30 and makes quarterly distributions of $22.50 each in Year 30 and Year 31. The REIT declares the 4th quarter distribution of $22.50 in December of Year 30 and Year 31 and pays such amount in January of Year 31 and Year 32.

	Year 30	Year 31	Year 32
REIT taxable income before the dividends paid deduction	90	90	
E&P - section 562(e)(1)	90	90	
E&P - section 857(d)(1)	65	65	
Declared			
March	22.5	22.5	
June	22.5	22.5	
September	22.5	22.5	
December	22.5	22.5	
Paid			
January		22.5	22.5
April	22.5	22.5	
July	22.5	22.5	
October	22.5	22.5	
	67.5	90	22.5

specified in the consents executed by A and B is $10,000, but if $10,000 had actually been distributed by the X corporation on December 31, 1987, only $8,000 would have constituted a dividend under section 316(a). The amount which could be considered as consent dividends in computing the dividends paid deduction for purposes of the accumulated earnings tax is limited to $8,000, or $4,000 of the $5,000 specified in each consent. The remaining $1,000 in each consent is disregarded for all tax purposes.

Option #1

If, for purposes of section 857(b)(9), E&P is determined under section 857(d)(1) and not modified by section 562(e)(1)(B), (i.e., $65, E&P for shareholder purposes), then the distribution in January may not be treated as relating back to December 31, as there is insufficient E&P to treat it as a dividend. On the other hand, an argument may be made that, for purposes of section 858, the relevant E&P calculation for the prior year should be that which is made for corporate-level purposes (i.e., the section 562(e)(1) calculation), rather than shareholder-level purposes (i.e., section 857(d)(1)), since section 858 only carries back the corporate-level dividend paid deduction to the prior year.[17] Under this approach, the relevant E&P calculation is $90 for Year 30, which would permit the REIT to fully offset its taxable income using a throwback dividend election. However, such election could subject the REIT to an excise tax of $0.36 (i.e., 85% of $90 minus $67.5 times 4%), since the REIT would fail to distribute at least 85 percent of its ordinary taxable income during Year 30 for purposes of the excise tax. That said, for purposes of the excise tax, a REIT generally can include the excess of its prior-year dividend distributions over its prior-year taxable income for purposes of satisfying its current-year required distribution.[18] Thus, the REIT in this example may not have such excise tax exposure. However, for a REIT that has acquired depreciable property in a carryover basis transaction with higher E&P basis and that has no prior-year over-distributions, it may be subject to an excise tax.

Option #2

Alternatively, if the REIT is permitted to use the E&P calculation under section 562(e)(1) (i.e., $90) for purposes of applying section 857(b)(9) to the January dividend, then the REIT would have sufficient distributions made in Year 30 (i.e., no risk of the four-percent excise tax) to offset its taxable income. However, because the REIT would have total distributions of $90 but current E&P of $65 for Form 1099-DIV purposes, a portion of every such distribution would be reported as a non-dividend distribution

---

[17] Section 1.858-1(a) provides, in part, "[u]nder section 858, a real estate investment trust may elect to treat certain dividends that are distributed within a specified period after the close of a taxable year as having been paid during the taxable year," and "[t]he dividend is taken into account *in determining the deduction for dividends paid* for the taxable year in which it is treated as paid." [Emphasis added]

[18] That is, treat as prior year "overdistributions." Section 4981(c)(2).

for purposes of Form 1099-DIV.[19] It should be noted that, if the REIT believes Option #2 is the better alternative, it would not make a throwback dividend election with respect to the amount paid in January, which could lead to insufficient "dividend" distributions for the year if the IRS disagrees with such view.

For a REIT, the E&P determination is critical because it affects not only its shareholders, but also its minimum distribution requirement and the imposition of corporate-level tax. The amended rules should help avoid double taxation of "deemed" E&P to shareholders. Hopefully, as more REITs start applying these new rules to their own situations, uncertainties can be identified and addressed to minimize risks and simplify the already complicated REIT rules.

***What's News in Tax* is a publication from the Washington National Tax practice of KPMG LLP ("KPMG") that contains thoughtful analysis of new developments and practical, relevant discussions of existing rules and recurring tax issues.**

[19] Section 1.316-2(b) provides that if distributions made during the year consist only of money and exceed the earnings and profits of such year, then that proportion of each distribution that the total of the earnings and profits of the year bears to the total distributions made during the year shall be regarded as out of the earnings and profits of that year.

Non-Customary Services Furnished By Taxable REIT Subsidiaries

By Paul W. Decker, David H. Kaplan, and Ameek Ashok Ponda

Paul W. Decker, David H. Kaplan, and Ameek Ashok Ponda are tax attorneys in the Boston office of Sullivan & Worcester LLP. Ponda is also an adjunct professor with the Boston University School of Law and a recent lecturer on law with the Harvard Law School. The authors wish to thank Cathryn Arnell, Bradley Borden, Patrick Fiel, Dean Halfacre, Brian Hammell, Laura Miller, and Anne Ross for their helpful comments on this report. Any errors or omissions remain the authors' own.

In this report, the authors argue that real estate investment trust revenues from tenants for non-customary services provided by taxable REIT subsidiaries constitute rents from real property under section 856(d) regardless of whether the services are billed to tenants separately or as part of a bundled charge.

Table of Contents

I. Introduction

The typical real estate investment trust is a taxpayer, otherwise taxable as a regular C corporation, that continuously complies with numerous, stringent requirements under the code and Treasury regulations, such as the following:

- its share ownership must be sufficiently diversified such that the REIT is neither closely held nor 10 percent-or-more affiliated with its tenants;
- its assets must be principally real property or related to real property leasing, with the possibility of investing in the portfolio securities of other issuers being very limited;
- its gross income must be principally rental revenues and fees for related services, with the balance of any gross income being principally composed of passive investment income such as interest, dividends, and capital gains;
- its subsidiaries, assets, and operations must be properly divided among disregarded entities and partnerships on one hand, and section 856(l) taxable REIT subsidiaries (TRSs) on the other; and
- its distributions to shareholders must be meticulously in sync with its underlying organic documents, pro rata within each class of outstanding shares, and sufficiently large and timely to contemporaneously (or nearly contemporaneously) distribute to shareholders all of its taxable income and any accumulated earnings and profits inherited from regular C corporations.[1]

---

[1]*See generally* sections 561, 562, 565, 856-860, and 4981. Meeting these numerous, stringent standards requires a REIT to have the right ownership, assets, income streams, and distribution amounts, all accompanied by continuous monitoring. But even so, the financial and tax press contain some shrill voices opposed to the recent (and likely transitory) phenomenon of so-called REIT conversions, with "REIT nativist" commentators decrying any taxpayer or type of real estate being treated as REIT-compliant if it did not come over on the "REIT Mayflower," *i.e.*, either by being a company originally set up as a REIT or investing in a property type held by REITs since 1960. *See, e.g.*, Bradley T. Borden, "Rethinking the Tax-Revenue Effect of REIT Taxation," 17 *Fla. T. Rev.* 527, 530 (2015) ("The comparison of REIT spinoffs to [transactions that potentially harm the fisc] borders on misplaced hysteria."); Richard M. Nugent, "REIT Spinoffs: Passive REITs, Active Businesses," *Tax Notes*, Mar. 23, 2015, p. 1513, at p. 1514 ("Traditional REIT spinoffs are fairly well supported by current law and [the] common criticisms of these transactions generally miss the mark."); Nugent, "REIT Spinoffs: Passive REITs, Active Businesses, Part 2," *Tax Notes*, Mar. 30, 2015, p. 1635, at p. 1648 ("Some have suggested

(Footnote continued on next page.)

In general, a REIT pays no regular corporate income tax because it receives a deduction for taxable income distributed to its shareholders;[2] however, REITs still pay entity-level income and excise taxes in several circumstances designed to protect the integrity of the corporate income tax base.[3] More important, a REIT's distribution of its taxable income to shareholders will generally be treated as ordinary dividend income (or sometimes as capital gain dividend income)[4] that is subject to far more fulsome taxation at the shareholder level than the dividends paid to shareholders by non-REITs.[5]

As demonstrated by the requirements above, a REIT's primary function under the code is to hold and lease real property for occupancy. As with all landlords, REITs must also provide a variety of related services to their tenants. The extent to which a REIT's revenues from those tenant services qualify for purposes of the 75 percent and 95

---

restricting only the spinoff element of REIT spinoffs. It is unclear what purpose that ban would serve, because REIT spinoffs typically satisfy all the policy and technical requirements of section 355.''). More sober voices, including Treasury and the IRS, recognize that the standards for what constitute real estate have remained essentially unchanged over time, even though the particular types of real estate crucial to the national and global economy will (and should) evolve. For example, the preamble to the proposed REIT real property regulations, REG-150760-13, states that Treasury and the IRS ''view these proposed regulations as a clarification of the existing definition of real property and not as a modification that will cause a significant reclassification of property.'' 79 F.R. 27508, 27510 (May 14, 2014). The preamble makes clear that the definition of real property was never as plain vanilla as the REIT nativists contend, citing published and private rulings dating back to 1969, which for all practical purposes is the dawn of the REIT statute:

> The IRS issued revenue rulings between 1969 and 1975 addressing whether certain assets qualify as real property for purposes of section 856. Specifically, the published rulings describe assets such as railroad properties, mobile home units permanently installed in a planned community, air rights over real property, interests in mortgage loans secured by total energy systems, and mortgage loans secured by microwave transmission property, and the rulings address whether the assets qualify as either real property or interests in real property under section 856. Since these published rulings were issued, REITs have sought to invest in various types of assets that are not directly addressed by the regulations or the published rulings, and have asked for and received letter rulings from the IRS addressing certain of these assets.

Id. at 27508 (footnotes omitted).

Practitioners commended the proposed regulations for their conformity with existing precedent and their articulation of a workable legal standard. *See*, *e.g.*, comments by the National Association of Real Estate Investment Trusts (NAREIT) on proposed REIT regulations (Aug. 12, 2014); comments by Ameek Ashok Ponda on proposed REIT regulations (Aug. 11, 2014). Indeed, some 55 years ago, REITs may have owned factories to house manufacturing tenants, whereas today a REIT is more likely to own data centers that house technology tenants whose equipment form the backbone of Internet and cloud commerce. *Compare* H.R. Rep. No. 86-2020, at 4 (1960) (stating that REITs can alleviate shortages of private capital ''for individual homes, apartment houses, office buildings, factories, and hotels'') *with* prop. reg. section 1.856-10(g), Example 6 (concluding that a data center's core building systems are real property). For a discussion of some of the more esoteric aspects of REIT conversions, see Ponda, ''How Much Gain Would a REIT Defer if a REIT Could Defer Gain?'' *Tax Notes*, June 4, 2012, p. 1249.

[2]*See generally* sections 561, 562(a), 562(c), 562(e), 565, 857(b)(1)-(3), 857(b)(9), 858, and 860.

[3]*See generally* sections 55(a) (tax on alternative minimum tax items); 337(d)(1) and 1374 (tax on reorganization or liquidation of a C corporation cannot be circumvented through use of REITs); 856(c)(7) (tax on asset test failure remediation); 856(g)(5) (tax on miscellaneous remediation); 857(b)(1)-(3) (tax on income not distributed to shareholders); 857(b)(4) (tax on income from foreclosure property); 857(b)(5) (tax on income test failure remediation); 857(b)(6) (tax on prohibited transactions, such as dealer property gains); 857(b)(7) (tax on misallocations or mispricing involving a TRS); 860 (interest and additions to tax for deficiency dividends); and 4981 (excise tax on delayed distributions to shareholders). Also applicable are reg. sections 1.337(d)-7 (tax on recognized built-in gains inherited from C corporations) and 1.857-11 (interest charge on delayed distributions to shareholders). Further, a REIT's TRSs are regular C corporations under the code, subject to the same corporate income taxes on their income as all other C corporations. *See* sections 11, 163(j), 856(l), and 857(b)(7).

[4]*See* section 857(b)(3).

[5]For example, a REIT's dividend to its shareholders generally cannot qualify for the preferential tax rates on qualified dividend income for noncorporate taxpayers (sections 1(h)(11)(D)(iii) and 857(c)(2)); cannot qualify for the dividends received deduction for corporate taxpayers (sections 243(d)(3) and 857(c)(1)); can be subject to tax as unrelated business taxable income (section 856(h)(3)(C)); can be subject to tax as income effectively connected with a U.S. trade or business (sections 897(h) and 1445(e)(6)-(7); reg. section 1.1445-8; Ponda, ''Foreign Pension Plans Investing in Shares of a U.S. REIT,'' *Tax Notes*, Mar. 24, 1997, p. 1593); and can qualify only under restricted circumstances for the otherwise generally applicable treaty-based reductions in U.S. withholding and income taxes on dividends paid to non-U.S. shareholders (Ponda, *id.*; 2006 U.S. model income tax treaty (Nov. 15, 2006), art. 10, para. 4, at 16-17). *See also* Borden, *supra* note 1, at 579-589 (concerns that REIT conversions damage the fisc are grossly exaggerated, given that over a variety of realistic assumptions regarding shareholder composition and corporate payout ratios, the erosion in the corporate income tax base is generally offset by the higher tax rates (and higher taxes) on the REIT's dividends to its shareholders; thus, REIT conversions generally have only a modest, insignificant net effect on total revenues of the fisc and in some cases may even have a positive impact on those revenues). Moreover, a REIT cannot pass foreign tax credits and similar tax attributes through to its shareholders (unlike a partnership or limited liability company taxed under subchapter K), meaning that the REIT structure can result in those tax attributes being lost forever (section 702; Ponda, ''REITs Abroad,'' in Practising Law Institute's *Tax Strategies for Corporate Acquisitions, Dispositions, Spin-Offs, Joint Ventures, Financings, Reorganizations & Restructurings* (2006-2008), para. I(F); *cf.* section 853 (regulated investment company passthrough of FTCs, but no analogous provision for REITs in sections 856-860)).

percent REIT gross income qualification tests of section 856(c)(2) and (3)[6] has been revisited many times since REITs were introduced in 1960, with each visit by Congress producing more expansive qualification. As discussed below, two intertwined and critical inquiries have generally been at the crux of each iteration of congressional expansion: (1) Is the service customarily provided by similarly situated landlords to similarly situated tenants, and (2) who is the service provider?

The advent of affiliated TRSs as providers of non-customary services to REIT tenants introduced a novel structural paradigm for addressing those critical inquiries. It was also a watershed moment in the effectiveness of the REIT statute[7] and the full realization of the REIT model of real estate ownership and operation.[8] By approaching both critical inquiries in a new way, the TRS structure created the foundation for asking and resolving a third critical question that did not arise under prior law: For purposes of the 75 percent and 95 percent REIT gross income qualification tests, how should a REIT's gross income from tenants for non-customary services supplied through TRSs be treated?

[6]*See supra* text accompanying note 1, and in particular the third bullet point there. The 75 percent REIT gross income qualification test of section 856(c)(3) mandates that 75 percent of the REIT's gross income consist of rental revenues and fees for related services (as well as a few other elements of income consistent with that classification), and the 95 percent REIT gross income qualification test of section 856(c)(2) mandates that 95 percent of the REIT's gross income consist of income qualifying under the 75 percent REIT gross income test plus passive investment income such as interest, dividends, and capital gains.

[7]*See* NAREIT, "REIT Industry Timeline: Celebrating 50 Years of REITs and NAREIT," *available at* http://www.reit.com/timeline/timeline.php.

[8]The REIT model of real estate ownership and operation has many advantages, including providing access to the real estate market for smaller investors, providing investor liquidity, reducing leverage, and generating investor income. As 2013 economics Nobel Prize winner Robert Shiller of Yale University said:

> REITs were created by law in 1960 to democratize the real estate market and make it possible for a broad base of investors to participate in this huge asset class. That was absolutely the right thing to do, because portfolio theory tells us people should diversify across major asset classes, and real estate is one of them.

NAREIT, "The REIT Story," *available at* https://www.reit.com/sites/default/files/media/PDFs/The-Reit-Story.pdf. Another prominent real estate economist, Timothy Riddiough of the University of Wisconsin, found that a "well-structured real estate securitization market," to which REITs contribute, moderates "construction boom and bust tendencies" and thus generates "positive spillover benefits to the economy at large." *Id.*

Although this question was both posed and resolved favorably by Rev. Rul. 2002-38,[9] which concluded that the gross income constitutes section 856(d) rents from real property,[10] the ruling's analysis and conclusions are extremely subtle and become clear only after examining the evolution of the REIT statute. To illuminate the full application of Rev. Rul. 2002-38, this report explains and analyzes the treatment of REIT revenues from tenants for services provided to those tenants by a REIT's TRS (1) in cases in which those revenues do not represent section 856(d)(1)(B) charges for services customarily furnished or rendered in connection with the rental of real property[11] and (2) regardless of whether the services are billed to tenants separately or as part of a bundled charge.[12] For purposes of

[9]2002-2 C.B. 4.

[10]Section 856(d) rents from real property satisfy both the 95 percent REIT gross income qualification test and the 75 percent REIT gross income qualification test. *See* section 856(c)(2)(C) and (c)(3)(A).

[11]Section 856(d)(1)(B). *See also* reg. section 1.856-4(b)(1), which states:

> The term "rents from real property", for purposes of paragraphs (2) and (3) of section 856(c), includes charges for services customarily furnished or rendered in connection with the rental of real property, whether or not the charges are separately stated. Services furnished to the tenants of a particular building will be considered as customary if, in the geographic market in which the building is located, tenants in buildings which are of a similar class (such as luxury apartment buildings) are customarily provided with the service. . . . To qualify as a service customarily furnished, the service must be furnished or rendered to the tenants of the [REIT] or, primarily for the convenience or benefit of the tenant, to the guests, customers, or subtenants of the tenant.

In this report, we refer to the standard created by Congress in section 856(d)(1)(B), as implemented by reg. section 1.856-4(b)(1), as the "section 856(d)(1)(B) standard." The section 856(d)(1)(B) standard and its use of the term "customary" is not coterminous with the use of "customary" under reg. section 1.512(b)-1(c)(5) (described *infra* in notes 47-51 and their accompanying text), in which the term has been interpreted in a slightly more limited fashion. *See infra* notes 49, 51, and 57. For purposes of this report, the section 856(d)(1)(B) standard will be used throughout, unless the discussion or context specifically references section 512(b)(3) and reg. section 1.512(b)-1(c)(5) (referred to in this report as the "section 512(b)(3) standard").

[12]The IRS recently opened a regulations project regarding "clarifying the definition of income in section 856(c)(3) for purposes of the [REIT] qualification tests." Treasury, "2014-2015 Priority Guidance Plan," at 12, item 11 (Aug. 26, 2014). During a NAREIT conference on March 31, 2015, a branch chief noted that the IRS was "looking at all of the different aspects of REIT income testing. There's a lot in there. It's a lot more complex than what is real property." Amy S. Elliott, "REIT Industry Stressed Over Preferential Dividend Ruling," *Tax Notes*, Apr. 6, 2015, p. 58. This report illustrates that complexity and provides an analysis consistent with the code and prior guidance. We recommend that the conclusions of Rev. Rul. 2002-38, as articulated and explicated in this report, be preserved in any future regulations that touch on the topic.

this report, the term "subject revenues" refers to a REIT's section 61 gross income from all revenues for TRS-provided non-customary services, whether the associated charges to tenants are itemized separately or part of an overall bundled charge to tenants.[13]

II. The REIT World Before TRSs

A. The 1960 Standard

When REITs were created in 1960, Congress excluded from the definition of rents from real property amounts when the REIT directly furnished or rendered services to the tenants or managed the property.[14] Thus, initially, Congress did not want REITs to provide services to their tenants directly. Instead, as a practical matter, the statute permitted a REIT to provide those services only through an independent contractor.[15]

To implement the law, regulations first proposed in 1961 stated that all REIT income attributable to tenant services (and, through guilt by association, apparently all income from a property where the REIT performed tenant services) did not constitute rents from real property. Accordingly, a REIT could not perform those services without running afoul of the REIT gross income tests, and any fees for those services had to be included in the income of an independent contractor rather than the REIT.[16] However, the final regulations issued in 1962, T.D. 6598,[17] "extensively revised the proposed regulations on the issue of 'independent contractor'" and introduced the concept of "customarily provided services" to the REIT lexicon.[18] They retained the proposed regulations' requirement that all services provided by a REIT landlord to its tenants be provided through an independent contractor, but they created two separate regimes for those services: one for services for which no separate charge was made (limited to customarily provided services)[19] and one for all services for which a separate charge was made (including customarily provided services with a separate charge *and* all non-customarily provided services).[20] The combination of the 1960 code and the 1962 final regulations is referred to in this report as "the 1960 standard."

The 1960 standard made a slight bow to commercial reality by treating the full amount received by a REIT landlord from its tenant as rents from real property in the case of customary services for which no separate charge was made.[21] However, a REIT was still required to furnish those services through an independent contractor, and the facilities through an which those services were furnished were required to be maintained and operated by an independent contractor[22] that had to be "adequately compensated" by the REIT.[23] Meanwhile,

---

[13]As Rev. Rul. 2002-38 makes abundantly clear, in a typical commercial setting, the REIT itself bills and collects for subject revenues, and accordingly the REIT itself has section 61 gross income for those amounts, which is the starting point for REIT 75 percent and 95 percent gross income testing under section 856(c)(2) and -(3), according to reg. section 1.856-2(c)(1).

[14]H. Rep. No. 86-2020 (June 28, 1960). *See* former section 856(d)(3) (1960).

[15]*Id.*

[16]Prop. reg. section 1.856-4(b)(3)(i) (Jan. 19, 1961). To be precise, this proposed regulation provided that "certain amounts, although received or accrued for the use of, or the right to use, real property of the [REIT], will not be includible as 'rents for real property' for the purposes of the gross income requirements," including:

> any amount received or accrued, directly or indirectly, with respect to any real property if the [REIT] furnishes or renders services to the tenants of such property, or manages or operates such property, other than through an independent contractor from whom the [REIT] itself does not derive or receive any income. . . . If any services are performed for tenants, such services must be performed by, and the charges therefor (whether such charges are separately stated or included in the amount paid as rent) must be included in the income of, an independent contractor. . . . Thus, the [REIT] must not receive any income which is attributable to the services performed for the tenants of the [REIT] by an independent contractor.

Thus, the amount that the REIT landlord would have to pay the independent contractor would have to at least equal the amount that the REIT received from the tenants for the services (or the amount it was deemed to receive, in the case of bundled service charges). Apparently, if the REIT retained even a penny of services income, the entire amount of rent that it received (including for basic occupancy) would fail to qualify as rents from real property. However, then as now, normal commercial practice required landlords to provide services to tenants. *See infra* text accompanying note 28. As a result, a contemporary commentator noted that "more time was devoted to the concept of 'independent contractor' at the hearings [on] the [proposed] regulations than to all the other problems combined." Theodore Lynn, "Real Estate Investment Trusts: Problems and Prospects," 31 *Fordham L. Rev.* 73, 90 (1962).

[17]27 F.R. 4089 (Apr. 28, 1962).

[18]Lynn, *supra* note 16, at 91.

[19]Former reg. section 1.856-4(b)(3)(i)(*b*) (1962). New subdivision (*b*) was titled "Customary Services for Which No Separate Charge Is Made."

[20]Former reg. section 1.856-4(b)(3)(i)(*c*) (1962). New subdivision (*c*) was titled "Services for Which a Separate Charge Is Made."

[21]Former reg. section 1.856-4(b)(3)(i)(*b*) (1962). This result was achieved by stating in new subdivision (*b*) (but not in (*c*)) that:

> for purposes of [the REIT provisions], an amount will not be disqualified as "rent" if services, such as are usually or customarily furnished or rendered in connection with the mere rental of real property, are furnished or rendered to tenants of the property through an independent contractor.

[22]*Id.*

[23]Former reg. section 1.856-4(b)(3)(i)(*d*) (1962). The term "adequately compensated" was given a lengthy definition that

(Footnote continued on next page.)

services for which a separate charge was made, regardless of whether the services were customary or non-customary, required the independent contractor to bear the cost of the services and to receive and retain the entire amount of the separate charge.[24] The 1962 final regulations enumerated services that may be customary and services that were usually non-customary,[25] although it provided no means of discerning if or when the services were to be considered customary.

Although the 1962 final regulations were a substantial improvement over the 1961 proposed regulations, the 1960 standard's shortcomings remained obvious to many. As a former commissioner of internal revenue noted at the time regarding the new regime, "Favorable tax treatment does not assure favorable investment."[26] He believed that the most difficult aspect of the 1960 standard was the relationship between the REIT and the independent contractor.[27] Another commentator of the time expressed the problem succinctly:

> The emphasis on the distinction between active and passive income probably devolved from the fact that mutual funds have only passive income; yet the ownership of securities differs substantially from that of real estate. Ownership of real estate today is hopelessly encumbered with management functions, as well as the duty to provide certain incidental services, and these management functions and services result in income, "active" income no less. Needless to say, it is often "good management" and the incidental services which make one multiple-occupancy building more desirable (and hence more valuable) than another.[28]

A third commentator noted that the "independent contractor concept, so vague in theory, may become chaos in practice."[29] Congress kept revisiting tenant services and the independent contractor/REIT relationship over the next 40 years to bring order to the chaos.

B. The 1976 Revisions

The weaknesses of the 1960 standard, including the differentiated treatment between customary services bundled in the rental charge versus customary services for which a separate charge was made, did not permit the REIT format to be a useful vehicle for real estate ownership and investment, defeating the very purpose of the statute.[30] In 1976 Congress made a first attempt to address those weaknesses. The Tax Reform Act of 1976 (P.L. 94-455) provided that rents from real property included "charges for services customarily furnished or rendered in connection with the rental of real property, whether or not such charges are separately stated."[31] It also set standards regarding when services provided by a landlord to a tenant should be considered customary.[32] In explaining those changes, the Senate report stated:

> Under present law, amounts received by a REIT for services rendered to tenants, where no separate charge is made, will qualify for the

---

can be summarized as a requirement that the independent contractor receive fair market value for its services.

[24]Former reg. section 1.856-4(b)(3)(i)(*c*) (1962). This requirement was broken into two parts. For non-customary services:

> The cost of such services must be borne by the independent contractor, a separate charge must be made therefor, and the amount thereof must be received and retained by the independent contractor; no amount attributable to such services shall be included in the gross income of the [REIT].

And for customary services:

> If a separate charge is made for the customary services described in (b) of this subdivision, such charge must be made, and the amount thereof must be received and retained, by the independent contractor rather than by the [REIT].

[25]*See* former reg. section 1.856-4(b)(3)(i)(*b*)-(*c*) (1962).

[28]J.B. Riggs Parker, "REIT Trustees and the 'Independent Contractor,'" 48 *Va. L. Rev.* 1048, 1051 (1962). This commentator

(Footnote continued in next column.)

also examined the 1960 standard and found it wanting because the REIT itself was merely an aggregation of individual properties requiring the management and services that the 1960 standard forbade the REIT from supplying directly:

> The apparent conclusion is that only a true *uncontrolled, unsupervised* "agency law" type of independent contractor will qualify under the REIT tax provisions. . . . The REIT trustees are, in effect, *required by the Code* to delegate to a real estate management company the duty of managing individual properties and providing services to the tenants of such properties if such services are necessary or desirable and proper, and to *relinquish control* over the real estate management company in the performance of those management functions. . . . [The regulation] seems to assume that the distinction between the REIT trustee's fiduciary duty to manage the "trust itself" and managing or "operating the property" of the trust is obvious. Such an assumption appears to be at least an oversimplification. What is the "trust itself" other than an agglomeration of properties which must be individually managed? [Emphasis in original.]

Id. at 1053-1054.

[29]Lynn, *supra* note 16, at 92.

[30]A Goldman Sachs report from 1996 stated that only 10 REITs of any real size existed during the 1960s but that those REITs had "miniscule" portfolios of real property when compared with other property owners. *See* Ralph L. Block, *Investing in REITs: Real Estate Investment Trusts* 110-111 (2006) (quoting the report's finding that REIT industry-wide real estate investments in the 1960s amounted to slightly more than $200 million).

[31]Section 856(d)(1)(B), which is still in effect today.

[32]*See supra* text accompanying note 25.

> 75-percent and 95-percent source tests if the services are customary and are furnished by an independent contractor. However, if a separate charge is made for customary services furnished by an independent contractor, the income tax regulations take the position that the amount of the charge must be received and retained by the independent contractor and not by the REIT. This restriction on separate charges for customarily furnished services does not follow normal commercial practice. Consequently, the committee amendment and House bill provide that amounts received by a REIT as charges for services customarily furnished or rendered in connection with the rental of real property will be treated as rents from real property whether or not the charges are separately stated.[33]

At the same time, TRA 1976 created a standard for determining the circumstances under which services should be considered customary for section 856(d) purposes:

> The committee intends that, with respect to any particular building, services provided to tenants should be regarded as customary if, in the geographic market within which the building is located, tenants in buildings which are of a similar class (for example, luxury apartment buildings) are customarily provided with the service.[34]

Thus, TRA 1976 followed normal commercial practice and overturned the artificial differentiation in the 1960 standard between bundled customary services and separately stated customary services. Accordingly, after TRA 1976 all amounts received by a REIT for customary services constituted rents from real property under section 856(d)(1)(B), regardless of whether a separate charge or an allocation was made. However, the prohibition on a REIT providing services directly instead of through an independent contractor remained in the code.[35]

In response to TRA 1976, the IRS revised the regulations governing section 856(d) rents from real property.[36] In the revised regulations, all services (whether customary or non-customary) still had to be provided through an independent contractor,[37] but a REIT could now treat any amounts received from tenants from the provision of customary services as rents from real property (whether those services were bundled with the rent or separately stated).[38] A new regulation addressing the treatment of independent contractors was put in place to address the rendering of non-customary services, which was substantially similar to the provision in the 1960 standard.[39] Under this new regulation, the only way a REIT landlord could deliver non-customary services to its tenants was to meet each of the following six requirements of the code and Treasury regulations:

[33]S. Rep. No. 94-938, at 473-474 (June 10, 1976).

[34]*Id.* As part of its customary services analysis in TRA 1976, the legislative history also stated that the submetering of electricity (and, by extension, other utilities) by a REIT landlord should be considered a customary service. For the long-standing definition of submetering, see Morway Picket, "The Legal Status of the Submeterer of Electric Current," 37 *Col. L. Rev.* 227 (1937) ("Submetering is the term applied to the remetering and resale of public utility services, purchased by the building owners through a master meter at wholesale rate, to their tenants at retail rates."). Before TRA 1976 it was unclear how submetering should be treated by a REIT landlord. It was clear that the provision of utilities by a landlord was a customary service for a tax-exempt landlord under the section 512(b)(3) standard. *See*, *e.g.*, Rev. Rul. 69-178, 1969-1 C.B. 158 (the rental of a meeting hall where only usual and customary services — but including all utilities — were provided by the landlord-generated rents from real property for a tax-exempt entity). But in the 1960 standard, submetering was listed under "services for which a separate charge is made," a provision that included both separately charged customary services and all non-customary services. *See* former reg. section 1.856-4(b)(3)(i)(*c*) (1962). In Rev. Rul. 75-340, 1975-2 C.B. 270, the IRS implied that submetering was a non-customary service, differentiating between the situation where "a separate charge is made for a usual or customary service" and the situation "where electric current is purchased by the [REIT] and then sold to tenants at a price in excess of the purchase price (for example, submetered)." After TRA 1976, however, the IRS abandoned this implied nuance.

[35]*See* former section 856(d)(2)(C) (1976):

> For purposes of paragraphs (2) and (3) of subsection (c), the term "rents from real property" does not include . . . any amount received or accrued, directly or indirectly, with respect to any real or personal property if the [REIT] furnishes or renders services to the tenants of such property, or manages or operates such property, other than through an independent contractor from whom the [REIT] itself does not derive or receive any income.

Even with TRA 1976's improvements to the REIT structure, the public equity market capitalization of the REIT industry was smaller at the end of 1979 than it had been at the end of 1972. *See* Block, *supra* note 30, at 113.

[36]The IRS proposed new regulations on July 7, 1978, and finalized them with only minor, inconsequential changes in T.D. 7767, 46 F.R. 11282 (Feb. 6, 1981). In a key revision, the TRA 1976 standard adopted by Congress for determining which services should be considered customary (see *supra* text accompanying note 34) replaced the enumerated lists of customary and non-customary services in the 1960 standard. The version of reg. section 1.856-4(b)(1) that was adopted as part of T.D. 7767 is still in effect today.

[37]*See*, *e.g.*, reg. section 1.856-4(b)(1): "The service must be furnished through an independent contractor from which the [REIT] does not derive or receive any income."

[38]*Id. See supra* text accompanying note 31.

[39]*See infra* note 42.

- the REIT and the independent contractor had to be less than 35 percent affiliated;[40]
- the REIT could not earn interest, dividend, rental, or other income from the independent contractor;[41]
- the charges for the services had to be separately stated;
- the service revenues had to be collected by the independent contractor;
- the service revenues had to be retained by the independent contractor; and
- the independent contractor had to be adequately compensated.[42]

These six independent contractor rules were split in applicability: the first two applied to all services provided by independent contractors, whereas the last four applied only to the provision of noncustomary services by the independent contractor. Yet, even after all the useful changes made by TRA 1976, there was still the fundamental problem of the 1960 structure for both customary and noncustomary services: a REIT was required to "relinquish control" over the services to an "uncontrolled, unsupervised" agent.[43]

C. The 1986 Revisions

Congress returned to the REIT provisions a decade later, in the Tax Reform Act of 1986 (P.L. 99-514). Again, a main focus was the REIT's inability to control the services provided to tenants. TRA 1986 was the first legislation to provide that a REIT could actively provide services to tenants without using an independent contractor. As the 1986 blue book put it:

> The Congress believed that [the] requirements of present law, that are intended to assure that the REIT is more a passive entity than one engaged in an active trade or business, may be overly restrictive and should be liberalized consistent with maintaining the essential passivity of the REIT. Congress believed that REITs should be permitted to perform certain services in connection with the rental of real property without being required to use an independent contractor (to assure that rents from such property are considered to qualify as "rent from real property"). The Congress believed that the same standard should be applied to REITs for the purpose of determining whether amounts being received are from the passive rental of real property or from an active trade or business, that is applied to tax-exempt entities in determining whether amounts are treated as income from an "unrelated trade or business."[44]

This liberalization was implemented by TRA 1986, which added a new exception to former section 856(d)(2)[45] to treat as qualifying rents from real property "any amount if such amount would be excluded from unrelated business taxable income under section 512(b)(3) if received by an organization described in section 511(a)(2)."[46] The new exception explicitly made reg. section 1.512(b)-1(c)(5) and the section 512(b)(3) a standard part of the REIT rules.[47] Accordingly, the test used by the IRS exempt organizations group to determine

[40]*See* section 856(d)(3).

[41]*See infra* note 42. *See also* section 856(d)(7)(C)(i).

[42]*See* reg. section 1.856-4(b)(5)(i):

No amount . . . qualifies as "rents from real property" if the [REIT] furnishes or renders services to the tenants of the property . . . other than through an independent contractor from whom the [REIT] itself does not derive or receive any income. . . . To the extent that services (other than those customarily furnished or rendered in connection with the rental of real property) are rendered to the tenants of the property by the independent contractor, the cost of the services must be borne by the independent contractor, a separate charge must be made for the services, the amount of the separate charge must be received and retained by the independent contractor, and the independent contractor must be adequately compensated for the services.

[43]*See supra* note 28.

[44]Joint Committee on Taxation, "General Explanation of the Tax Reform Act of 1986," at 391 (1986 blue book).

[45]*See supra* note 35.

[46]Former section 856(d)(2) (last sentence) (1986), reformulated in 1997 as section 856(d)(7)(C)(ii), which is still in effect today. As Rev. Rul. 98-60, 1998-2 C.B. 751, makes clear, section 856(d)(7)(C)(ii) and its incorporated section 512(b)(3) standard are not concerned with a too-literal application of the statutory "would be [as] if" wording, but instead create an outright exemption for any property-related services that a tax-exempt organization may perform without being in receipt of unrelated business taxable income.

[47]When Congress originally created the rules governing UBTI for some nonprofits, it left to the regulations most of the tough choices regarding real estate rental and services income. *See, e.g.*, S. Rep. No. 81-2375 (1950) (noting that some types of investment income "have long been recognized as a proper source of revenue for educational and charitable organizations and trusts"). Reg. section 1.512(b)-1(c)(2), included in T.D. 6301, 23 F.R. 5192 (July 9, 1958), provided the first real guidance for those nonprofits regarding the treatment of investment income from rental real estate and services — and, with the exception of a few minor, insignificant changes (including the substitution of the term "rents from real property" for the term "rentals from real estate" and its later renumbering as reg. section 1.512(b)-1(c)(5)), this same regulation has provided the standard for nonprofits to use in differentiating UBTI from nontaxable rents from real property for more than 55 years. A variant of the section 512(b)(3) standard is also used in other areas of the code and regulations. *See, e.g.*, the self-employment regulations, reg. section 1.1402(a)-4(c)(1)-(2) (titled, respectively, "No services rendered for occupants" and "Services rendered for occupants").

whether services performed for a tenant of a nonprofit organization give rise to rents from real property under the section 512(b)(3) standard became the standard for services that a REIT could perform directly for its tenants without needing to use an independent contractor. The plain, unambiguous language[48] of reg. section 1.512(b)-1(c)(5) sets out a two-prong test[49]:

> For purposes of this paragraph, payments for the use or occupancy of rooms and other space where services are also rendered to the occupant [do] not constitute rent from real property. Generally, services are considered rendered to the occupant *if* they are provided primarily for his convenience *and* are other than those usually or customarily rendered in connection with the rental of rooms or other space for occupancy only.[50] [Emphasis added.]

Accordingly, clearing either prong of the above test would mean that the particular service is not considered rendered to the occupant, and the associated payments would therefore not be disqualified from section 512(b)(3) rents from real property.

Thus, by incorporating the section 512(b)(3) standard, TRA 1986 permitted REITs (for the first time) to directly render customary services to tenants without using an independent contractor and to include the amounts received for those services in section 856(d) rents from real property. If the section 512(b)(3) standard (and thus, as a practical matter, also the section 856(d)(1)(B) standard)[51] were satisfied, *all* revenues from the provision of those services qualified as rents from real property, regardless of whether they were bundled or separately stated under section 856(d)(1)(B) and regardless of whether they were provided at cost or at a markup over cost.[52]

For example, the archetypal service performed by a landlord, and explicitly noted as a customary service in the 1960 standard, is the provision of

---

[48]As the Supreme Court has repeatedly confirmed, the ''plain meaning rule'' of statutory construction means that the plain meaning of a statute or regulation ''must prevail.'' *Atlantic Mutual Insurance v. Commissioner*, 523 U.S. 382, 387 (1998). *See, e.g.*, *Gitlitz v. Commissioner*, 531 U.S. 206, 219-220 (2001) (holding that the plain meaning of the code permitted S corporation shareholders to deduct previously suspended losses).

[49]Both the IRS and the courts have interpreted reg. section 1.512(b)-1(c)(5) as containing a two-prong test. *See, e.g.*, Internal Revenue Manual section 7.27.6.7.4.5, ''Rendering of Personal Services,'' which, similar to, and using wording almost identical to, reg. section 1.512(b)-1(c)(5), shows two prongs as separate requirements introduced by an ''if'' and connected by the conjunction ''and'':

> 1. Payment for the use or occupancy of rooms or other space where services are also rendered to the occupant does not constitute rent from real property. . . .
>
> 2. Generally, services are considered rendered to the occupant *if* they are primarily for his/her convenience *and* are different from those usually or customarily rendered in connection with the rental of rooms or space for occupancy only. [Emphasis added.]

See also Ocean Pines Association, Inc. v. Commissioner, 135 T.C. 276, 287 (2010):

> But the test in the regulation for determining whether the services are rendered to the occupant (and therefore disqualify the organization from using the rental exception) is not whether the services provided are substantial, but whether the services are (1) ''primarily'' for the ''convenience'' of the occupant and (2) are ''other than those usually or customarily rendered in connection with the rental of rooms or other space for occupancy only.''

IRS private letter rulings have also noted the two-prong test. *See, e.g.*, LTR 200241050 (requested ruling 7) (''Even if the Service determines that the marketing and promotional activities related to the Property fail to meet the *two-prong test* of section 1.512(b)-1(c)(5) of the Income Tax Regulations'' (emphasis added).).

[50]The regulations do not explain further what is meant by ''provided primarily for [the tenant's] convenience.'' On closer inspection, some services that might seem oriented to tenant convenience are in fact more closely related to property-wide safety and security. *See, e.g.*, LTR 9014022, in which an apartment REIT:

(Footnote continued in next column.)

> will continue a longstanding practice of changing light bulbs in certain built-in light fixtures located in particular apartments. These fixtures constitute valuable and integral components of the apartment properties and the Company's policy of insisting that light bulbs (which are paid for by the tenant) in these fixtures be removed and replaced only by management personnel is designed to reduce breakage of these valuable fixtures.

See also LTR 8914048 (apartment REIT may ''install and/or remove air conditioning units during a tenant's lease term as is also usual and customary. In connection with the installment and removal of such units [the REIT] may charge a small fee'').

[51]In theory, this exception for section 512(b)(3) in former section 856(d)(2) (now in section 856(d)(7)(C)(ii)) did not mean that any service qualifying under the section 512(b)(3) standard automatically satisfied the section 856(d)(1)(B) standard, but in practice this is so. *Cf.* LTR 200101012 (holding that the provision of Internet, telephone, cable television, security services, and computer room facilities in some apartment complexes is exempt under section 512(b)(3) (and also under the section 856(d)(1)(B) standard), but the provision of private shuttle bus services for tenants of the apartment complexes is exempt only under the section 856(d)(1)(B) standard enumerated in section 856(d)(7)(C)(i)). In words often attributed to Yogi Berra: ''In theory there is no difference between theory and practice. In practice there is.''

[52]For example, on submetering of utilities, LTR 200148074 and LTR 200147058 both clearly state that the landlord ''will retain the difference between the price it charges its tenants and the amount it owes the utility provider for the Utility Services, which may result in a profit to the'' landlord and conclude that:

> any income derived by the [landlord] in connection with the provision of electricity, water, sewer and gas service is not service income, but is includable in ''rents from real property'' within the meaning of section 512(b)(3) of the Code, whether or not the charges for electricity, water, sewer or gas service are separately stated or are incorporated into the tenant's rental obligations.

utilities.[53] Under TRA 1986, REITs could now provide utility services directly without any involvement from an independent contractor.[54] Accordingly, REITs could now be engaged in the active trade or business of providing customary services satisfying the section 512(b)(3) standard to tenants. In response to TRA 1986, the IRS published a ruling appropriately changing its position about REIT involvement in a trade or business.[55]

Of course, REITs could also continue to provide customary services through independent contractors and continue to treat the amounts received for those services as rents from real property.[56] In effect, TRA 1986 created a middle ground for REIT tenant services that satisfy the section 856(d)(1)(B) standard but not the section 512(b)(3) standard. Those middle ground services could not be performed by the REIT directly but could be performed by an independent contractor under an arrangement with the REIT that had to satisfy the first two (but not necessarily the last four) independent contractor rules discussed in Section II.B.[57] However, TRA 1986 did not affect the treatment of non-customary services provided by a REIT to its tenants. Those still had to be performed by an independent contractor under an arrangement that satisfied all six rules in reg. section 1.856-4(b)(5)(i), meaning that a REIT was still required to relinquish control over some of its customary services and all of its non-customary services to an uncontrolled, unsupervised agent.[58]

III. The Advent of TRSs

After almost 40 years of REITs being handicapped in attracting and competing for tenants, the REIT Modernization Act of 1999 (RMA) finally removed the barrier that prevented REIT landlords from being able to control and supervise the offering of non-customary services to their tenants. The RMA was included in the Ticket to Work and Work Incentives Improvement Act of 1999 (P.L. 106-170) and became effective January 1, 2001. It created a new type of REIT subsidiary, the section 856(l) TRS, that would be permitted to perform non-customary services for tenants that otherwise would have to be done by one or more independent contractors. The tradeoff was that unlike other REIT subsidiaries (but like an independent contractor), a TRS would be fully taxable. When introducing the RMA in the House, then-Rep. Bill Thomas, the principal sponsor of the act, said:

> Our legislation would allow REITs to create taxable subsidiaries that would be allowed to

---

[53]*See supra* note 34. Reg. section 1.512(b)-1(c)(5) specifies that "the furnishing of heat and light" is a service that clears the two-prong test, even though at some level furnishing a utility is for the benefit of the tenant and in theory does not pass the first prong of the section 512(b)(3) standard — yet, it is considered so basic to the rental relationship that it has been designated as the archetypical good service that satisfies reg. section 1.512(b)-1(c)(5). *See, e.g.*, Rev. Rul. 69-178; LTR 199952084 (ruling in favor of a REIT when "the telecommunication services provided to tenants of the Properties are similar to the provision of services by public utilities and are essential for business communications and information transmission"). *Cf.* reg. section 1.856-4(b)(1) ("The furnishing of water, heat, light, and air-conditioning . . . are examples of services which are customarily furnished to" tenants); prop. reg. section 1.856-10(d)(3)(iii)(D) (performance of "a utility-like function" supports real property treatment).

[54]*See supra* text accompanying note 47.

[55]*See supra* text accompanying note 44. In Rev. Rul. 2001-29, 2001-1 C.B. 1348, the IRS acknowledged the impact of the TRA 1986 change:

> Consequently, as a result of the 1986 amendment, a REIT is permitted to perform activities that can constitute active and substantial management and operational functions with respect to rental activity that produces income qualifying as rents from real property under section 856(d).
>
> * * *
>
> A REIT can be engaged in the active conduct of a trade or business within the meaning of section 355(b) solely by virtue of functions with respect to rental activity that produces income qualifying as rents from real property within the meaning of section 856(d).

[56]As the 1986 blue book, *supra* note 44, at 395, clearly explained: "The Act does not alter the provision of prior law under which amounts received by a REIT are treated as rents from real property if the REIT provides customarily furnished services to its tenants through an independent contractor."

For a general background on customary services performed by REITs under these code provisions and their associated regulations (including reg. section 1.856-4(b)(1)), see, *e.g.*, Peter J. Genz, "REIT Customary Services Issues," 2007 *ABATAX-CLE* 0928051 (Sept. 6, 2007), updated Feb. 20, 2015 (manuscript in possession of the authors).

[57]*See, e.g.*, Rev. Rul. 2004-24, 2004-1 C.B. 550 ("The definition of rents from real property in section 856(d), which applies to REITs, differs significantly in scope and structure from the definition of rents from real property under section 512(b)(3), which applies to exempt organizations."); LTR 200101012 (holding that the provision of Internet, telephone, cable television, security services, and computer room facilities in some apartment complexes are exempt under section 512(b)(3) (which, as described *supra* at text accompanying note 51, is as a practical matter encompassed by the section 856(d)(1)(B) standard), but the provision of private shuttle bus services for tenants of the apartment complexes meets only the section 856(d)(1)(B) standard). *See also* LTR 200008036, LTR 9642027, and LTR 9316024 (involving various transportation services apparently provided to tenants under the section 856(d)(1)(B) standard but not the section 512(b)(3) standard, although the facts and exposition are not entirely clear). Significantly, according to reg. section 1.856-4(b)(5)(i), these middle-ground services need to meet only the first two, but not all six, of the independent contractor requirements enumerated in Section II.B. *See supra* text accompanying notes 40-42.

[58]*See supra* note 28.

perform noncustomary services to REIT tenants without disqualifying the rents a REIT collects from tenants, that is, performance of these services would no longer trigger a technical violation of the REIT rules.[59]

In his introductory remarks for the RMA in the Senate, then-Sen. Connie Mack concurred:

> As a result [of the customary services rule], REITs increasingly have been unable to compete with privately-held partnerships and other more exclusive forms of ownership. Today, the rules prevent REITs from offering the same types of customer services as their competitors, even as such services are becoming more central to marketing efforts.
>
> * * *
>
> Certainly, this is not consistent with what Congress intended when it created REITs, and when it modified the REIT rules over the years. In keeping with the Congressional mandate to provide a sensible and effective way for the average investor to benefit from ownership of income-producing real estate, REITs should be able to provide *a range of services* through taxable subsidiaries.[60] [Emphasis added.]

The Senate report noted the control issue that existed under the independent contractor regime, stating:

> Certain kinds of activities that relate to the REIT's real estate investments should be permitted to be performed *under the control of the REIT*, through the establishment of a "taxable REIT subsidiary" where there are rules that limit the amount of the subsidiary's income that can be reduced through transactions with the REIT.[61] [Emphasis added.]

Thus, with the introduction of TRSs, REITs could finally compete for tenants with other, more flexible types of landlords without first involving an uncontrolled and unsupervised agent.[62] But with the advent of TRSs creating a novel structural paradigm for tenant services by permitting for the first time a REIT-controlled entity to be the provider for noncustomary services, the TRS structure created the foundation for asking and resolving an entirely new third question: Do subject revenues qualify as section 856(d) rents from real property?[63]

In the figure, subject revenues compose the outermost ring, which is shaded green (for unbundled service charges) and orange (for bundled service charges). The inner circle consists of charges for services that qualify as usual and customary under both reg. sections 1.512(b)-1(c)(5) (the section 512(b)(3) standard) and 1.856-4(b)(1) (the section 856(d)(1)(B) standard), while the middle ring consists of charges for services that qualify as customary only under reg. section 1.856-4(b)(1) (only the

[59]145 *Cong. Rec.* E795 (Apr. 28, 1999).

[60]145 *Cong. Rec.* S5377 (May 14, 1999).

[61]S. Rep. No. 106-201, at 57 (Oct. 6, 1999). The Clinton administration also agreed with this change, as shown in its proposed 2000 budget:

> Many of the businesses performed by the REIT subsidiaries are natural outgrowths of a REIT's traditional operations, such as third-party management and development businesses. While it is inappropriate for the earnings from these non-REIT businesses to be sheltered through a REIT, it also is counter-intuitive to prevent these entities from taking advantage of their evolving experiences and expanding into areas where their expertise may be of significant value.

Treasury, "Explanation of the REIT-Related Items in the Fiscal Year 2000 Budget" (Feb. 1, 1999). The administration's caveat was satisfied in the enacted legislation in two ways: (1) the TRS vehicle created to render non-customary services is fully taxable, so all of its revenue is fully exposed to federal income tax;

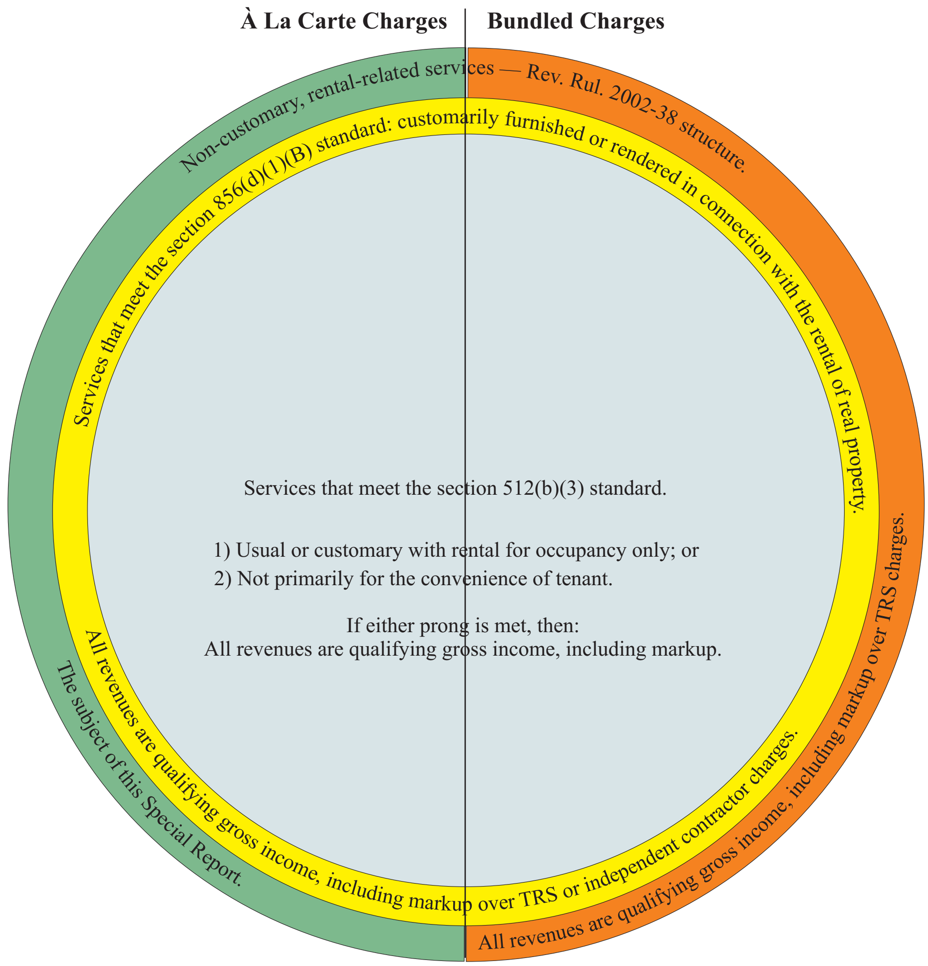
(Footnote continued in next column.)

and (2) improper allocations of revenues between the REIT and its TRS could trigger the 100 percent "redetermined rents" penalty tax discussed in Section IV.B *infra*.

[62]*See supra* note 28. In general, a TRS may engage in any manner of business activity, regardless of whether it is related to the provision of services to REIT tenants, except that section 856(l)(3) prohibits a TRS from operating or managing a lodging facility or a healthcare facility (as well as providing specific franchise or license rights for those facilities). This prohibition concerns day-to-day management and operations, not the type of supervisory functions described in reg. section 1.856-4(b)(5)(ii) and LTR 7930040. *See, e.g.*, LTR 201232032; *see also* section 856(d)(7)(A), (d)(8)(B) (second sentence), (d)(9)(A), (d)(9)(B), and (d)(9)(E). Further, a REIT's investment in the equity and debt of its TRSs, together with other nonqualifying assets, generally cannot exceed 25 percent of the REIT's total assets. *See* section 856(c)(4)(A) (25 percent limit as the mathematical complement of the 75 percent REIT asset test requirement) and section (c)(4)(B)(ii) (direct limit of 25 percent on securities of TRSs); and text accompanying note 1 (in particular the second and fourth bullet points there). For these purposes, however, a REIT's investment in TRS debt securities, to the extent secured by mortgages on real property, or a REIT's investment in TRS equity or debt securities, to the extent and for the duration qualifying as a temporary investment of new capital, will qualify as a real estate asset that counts toward the 75 percent REIT asset test requirement and is therefore not a security subjected to the 25 percent limit. *See* section 856(c)(4)(A), (c)(4)(B), (c)(5)(B), and (c)(5)(D); reg. section 1.856-3(c) ("The term 'securities' does not include 'interests in real property' or 'real estate assets' as those terms are defined in section 856 and" reg. section 1.856-3); LTR 201503010, LTR 201431020, LTR 201315007, LTR 201129007, LTR 200705001, and LTR 200630010 (debt securities of a TRS adequately secured by real estate are not securities for purposes of section 856(c)(4)(B)(ii)); and LTR 9342021 (long-term investment can qualify as a temporary investment of new capital for a temporary duration).

[63]*See supra* text accompanying notes 6-13.

Services at REIT-Owned Properties



section 856(d)(1)(B) standard).[64] Both inner circle and middle ring services have been acknowledged since TRA 1976 and TRA 1986 to represent section 856(d) rents from real property, whether bundled with the rent or separately charged. But what about subject revenues? If collected by the REIT, do they also represent rents from real property? Does it matter if they are bundled or separately charged? Should it matter?

The treatment of subject revenues from bundled services charges was answered clearly by Rev. Rul. 2002-38.[65] As discussed in Section IV.C below, when analyzing a fact pattern that involved bundled charges for a non-customary housekeeping service, Rev. Rul. 2002-38 concluded that the entire amount received by the REIT (including the bundled service charges for non-customary services) constituted rents from real property and were thus subject to any required redetermination of rents under section 857(b)(7). However, some have posited a distinction, similar to the 1960 standard,[66] between bundled subject revenues versus separately stated subject revenues, whereby separately stated subject revenues collected by a REIT might not represent section 856(d) rents from real property.

IV. Subject Revenues as Qualifying Rents

There are at least six interconnected and mutually reinforcing reasons why subject revenues (whether bundled or separately stated) constitute section 856(d) rents from real property.

A. Congressional Intent

As shown below, Congress intended that all subject revenues be treated as section 856(d) rents

[64] *See supra* note 57.
[65] *See supra* note 9.
[66] *See supra* text accompanying notes 19-24.

from real property. The RMA itself does not distinguish between separately stated versus bundled subject revenues, so the legislative history must be examined to see if that differentiation was intended.

The principal sources of legislative history regarding the treatment of TRS activities are the Senate report for the RMA and the 2000 blue book, the latter of which says:

> A taxable REIT subsidiary can engage in certain business activities that under prior law could disqualify the REIT because, but for the provision, the taxable REIT subsidiary's activities and relationship with the REIT would have prevented certain income from qualifying as rents from real property. Specifically, the subsidiary can provide services to tenants of REIT property (even if such services were not considered services customarily furnished in connection with the rental of real property [under the section 856(d)(1)(B) standard]), and can manage or operate properties, generally for third parties, without causing *amounts received or accrued* directly or indirectly *by the REIT for such activities* to fail to be treated as rents from real property.[67] [Emphasis added.]

In parsing the above legislative intent, three points stand out. First, the legislative history uses the phrase "amounts received or accrued" rather than "rents received or accrued," which implies that *all amounts* received by a REIT, including amounts for non-customary services, are intended to be included in rents from real property. That is, the legislative intent is clearly to include all of a REIT's receipts or accruals, not just charges for occupancy and customary services. Second, the term "such activities" specifically refers to services provided to tenants of REIT property that give rise to subject revenues, which again makes clear that subject revenues are encompassed by the legislative intent. Third, the legislative history makes no distinction between subject revenues that are separately stated versus those that are bundled with basic rent or customary services charges, and Congress has never created that distinction. (In fact, with TRA 1976, Congress overturned the distinction that the IRS created in the 1960 standard.[68]) Accordingly, there is no basis in the legislative history to distinguish between separately stated versus bundled subject revenues.

While the above legislative history uses double negatives ("without causing [subject revenues] to fail to be treated" as section 856(d) rents from real property), the rule that it created is in fact meant as an affirmative rule, particularly when read in the context of how tenant services were treated before the RMA[69]: Subject revenues *are* section 856(d) rents from real property. As explained below, this affirmative rule is confirmed by the structure of section 857(b)(7) and by Rev. Rul. 2002-38.

B. The Section 857(b)(7) Structure

As shown below, the statutory structure of the section 857(b)(7) 100 percent penalty tax is predicated on, and only consistent with, treating subject revenues as rents from real property. With the advent of TRSs as providers of services to REIT tenants, Congress gave the IRS a powerful new antiabuse tool: section 857(b)(7) (reproduced in the Appendix, *infra* Section VI), which was designed to prevent REITs from profiting through the misallocation of revenue or profit in arrangements involving their TRSs.[70] Added to the code by the RMA,[71] section 857(b)(7) provides for a 100 percent penalty tax that can be imposed only on redetermined rents, redetermined deductions, and excess interest, each as defined in section 857(b)(7). Redetermined rents are defined to include only section 856(d) rents from real property.[72] When the penalty tax is applied, it supersedes the application of section 482 remedies,[73] because it is a more powerful tool. However, this tool can be applied only to amounts that constitute section 856(d) rents from real property in the first place. Thus, for the entire legislative structure of penalties to work as intended for TRS-provided services, subject revenues must constitute rents from real property.

[67]JCT, "General Explanation of Tax Legislation Enacted in the 106th Congress," JCS-2-01, at 70 (Apr. 19, 2001) (2000 blue book); *see also* S. Rep. No. 106-201, at 59 (Oct. 6, 1999) (using identical language to the 2000 blue book except for verb tenses and a typo).

[68]*See supra* Section II.

[69]*See supra* Section II.

[70]*See supra* note 61.

[71]The wording of section 857(b)(7) in the RMA was corrected by a technical corrections bill (fixing a nit in section 857(b)(7)(B)(ii) that referenced paragraph "(7)(C)(i)" instead of "(7)(C)(ii)") before the January 1, 2001, effective date of the TRS provisions. *See* Consolidated Appropriations Act of 2001 (P.L. 106-554), Appendix G (H.R. 5662), section 311(b). The corrected wording, which represents the wording of this provision as of January 1, 2001, is used in the Appendix, *infra* Section VI.

[72]*See* section 857(b)(7)(B)(i). That redetermined rents must first be section 856(d) rents from real property has been true throughout the entire existence of section 857(b)(7), as amended from time to time. The section 857(b)(7) concepts of redetermined deductions and excess interest are limited to deductions by the TRS for payments to the REIT; by definition, they cannot cover a REIT's undercompensation of its TRS for services provided by the TRS to REIT tenants, because only redetermined rents can do that. *See* section 857(b)(7)(C)-(D).

[73]*See* section 857(b)(7)(E).

The above point is particularly obvious in light of former section 857(b)(7)(B)(ii), which was deleted in a 2004 legislative change but was still in effect when Rev. Rul. 2002-38 was issued.[74] Former section 857(b)(7)(B)(ii) exempted services described within section 856(d)(1)(B) or section 512(b)(3) from the then reach of the 100 percent penalty tax. Sections 856(d)(1)(B) and 512(b)(3) cover all customarily provided services performed by REITs or their TRSs. Thus, under the statutory structure initially created by the RMA, if section 857(b)(7) redetermined rents did not apply to subject revenues, the provision would have applied to nothing at all because former section 857(b)(7)(B)(ii) exempted everything that satisfied the section 856(d)(1)(B) standard.[75]

Accordingly, an interpretation under which subject revenues were not rents from real property would have rendered the section 857(b)(7) redetermined rents provision entirely superfluous. One of the few universally accepted canons of statutory construction is that any interpretation that renders a statutory term as surplusage or a nullity is strongly disfavored.[76] In sum, subject revenues must have been section 856(d) rents from real property; otherwise, section 857(b) redetermined rents as initially created by the RMA would be surplusage. The later amendment to section 857(b)(7) has not affected the original intent to include subject revenues within section 856(d) rents from real property and thus within the reach of the section 857(b)(7) 100 percent penalty tax.[77]

Further, former section 857(b)(7)(B)(v) (current section 857(b)(7)(B)(iv)) specifically excluded some separately charged services from the reach of the 100 percent penalty tax on redetermined rents. If separately charged subject revenues were not intended by the RMA to be included in section 856(d) rents from real property, this exclusion would have been mere surplusage because *all* separately charged subject revenues would have been excluded from the reach of section 857(b)(7) as not being section 856(d) rents from real property in the first place. That is, such a view of separately charged subject revenues would render former section 857(b)(7)(B)(v) a nullity and thus is incorrect.[78] Accordingly, former section 857(b)(7)(B)(v) illustrates that Congress intended separately charged subject revenues, and not just bundled subject revenues, to constitute section 856(d) rents from real property under the RMA.

In sum, without applying section 857(b)(7) and its 100 percent penalty tax to subject revenues (whether bundled or separately stated), there would have been no purpose for section 857(b)(7) redetermined rents after the RMA. Because section 857(b)(7)(B)(i) applies only to section 856(d) rents from real property, subject revenues must have been intended to constitute rents from real property. Further — and again, to avoid interpretations that render statutory terms as surplusage or nullities — the fact that only some separately charged subject revenues are specifically excluded from the reach of section 857(b)(7)(B)(i) means that Congress intended that separately charged subject revenues generally (as well as bundled subject revenues) constitute section 856(d) rents from real property.

C. Rev. Rul. 2002-38

Rev. Rul. 2002-38 confirms that subject revenues, including unbundled subject revenues, are treated as rents from real property. Rev. Rul. 2002-38 analyzes an apartment REIT that provides noncustomary housekeeping services to its tenants through a wholly owned TRS that administers and

[74]As the 2004 legislative history indicates, the deletion of former section 857(b)(7)(B)(ii) was intended to eliminate the "free pass" given to payments made by a REIT to its TRS for customary services and instead subject those payments to the rigor of section 857(b)(7). *See* H. Rep. No. 108-755, at 333 (Oct. 7, 2004).

[75]*See supra* Section III, particularly the figure.

[76]*See*, *e.g.*, *Duncan v. Walker*, 533 U.S. 167, 174 (2001) (refusing to adopt a construction of a statute that would leave a statutory term "insignificant, if not wholly superfluous"); *Williams v. Taylor*, 529 U.S. 362, 404 (2000) (describing this rule as a "cardinal principle of statutory construction"); *United States v. Menasche*, 348 U.S. 528, 538-539 (1955) ("It is our duty 'to give effect, if possible, to every clause and word of a statute'" (quoting *Montclair v. Ramsdell*, 107 U.S. 147, 152 (1883)).); *Market Co. v. Hoffman*, 101 U.S. 112, 115 (1879) ("As early as in Bacon's Abridgment, sec. 2, it was said that 'a statute ought, upon the whole, to be so construed that, if it can be prevented, no clause, sentence, or word shall be superfluous, void, or insignificant.'"); and *BLAK Investments v. Commissioner*, 133 T.C. 431 (2009) (quoting *Menasche*). The IRS has adopted this doctrine in its own interpretations. *See* TAM 9637008 (rejecting an interpretation of section 58(h) that would leave section 56(b) as "statutory deadwood"); and TAM 8940005 (rejecting an interpretation of reg. section 1.864-4(c)(2)(ii) that would make the word "otherwise" in reg. section 1.864-4(c)(2)(ii)(c) meaningless).

Moreover, because former section 857(b)(7)(B)(ii) was corrected in 2000 (see *supra* note 71), the very next year after it was added to the code by the RMA, section 857(b)(7) redetermined rents would most likely have been entirely deleted at that point, not revised, were it intended to be a nullity. Therefore, section 857(b)(7) redetermined rents must have been intended to apply to subject revenues.

[77]Although the 2004 amendment that deleted former clause (ii) commensurately expanded the scope of section 857(b)(7) redetermined rents, that amendment did not alter the RMA treatment of subject revenues. As Section IV.B clearly illustrates, subject revenues were originally intended by Congress to come within the ambit of redetermined rents, and to do so they had to have been section 856(d) rents from real property in the first place. *See supra* note 74.

[78]*See supra* note 76.

manages the services and bears all the related costs. The housekeeping services are bundled as part of the monthly rent charge to tenants, and the REIT pays the TRS for providing the services to the REIT's tenants. In Situation 1, the REIT pays the TRS 160 percent of the cost of the services. In Situation 2, the REIT pays the TRS only 125 percent of the cost of the services, which is stipulated to be less than the arm's-length transfer price under section 482. Rev. Rul. 2002-38 concludes that all the subject revenues in both situations — even when the TRS is undercompensated by the REIT in Situation 2 — constitute section 856(d) rents from real property.

In analyzing this extreme fact pattern of bundled charges,[79] Rev. Rul. 2002-38 concludes as an intermediate step that the non-customary housekeeping services performed by the TRS "do not give rise to impermissible tenant service income and thus do not cause any portion of the rents[80] received by [the REIT] to fail to qualify as rents from real property under section 856(d)."[81]

But the legal exposition and analysis do not end there. Rev. Rul. 2002-38 adds in the very next line: "As rents from real property, those rents[82] are subject to being treated as redetermined rents under section 857(b)(7)(B)(i)."[83] This is important because, by definition, redetermination under section 857(b)(7)(B)(i) can be performed only for amounts that first constitute section 856(d) rents from real property.[84] Thus, the remainder of the analysis and the conclusions in Rev. Rul. 2002-38 are predicated on a determination that all the amounts received by the REIT (which included both occupancy charges and services charges, bundled together as "rents") constitute section 856(d) rents from real property. That is, Rev. Rul. 2002-38 both explicitly and implicitly concluded that the appropriate treatment of the subject revenues was as section 856(d) rents from real property. In short, the genius of Rev. Rul. 2002-38 is that for subject revenues, it both creates a workable rule for REIT gross income testing[85] and imposes the discipline of the section 857(b)(7) 100 percent penalty tax,[86] all as Congress and the statutory structure intended.

Some have wondered whether Rev. Rul. 2002-38 might have come to a different conclusion if subject revenues had been separately stated as opposed to bundled with occupancy charges. For several reasons, that would not have been the case. First, nothing in the legislative history or structure of the RMA indicates that result. In fact, those authorities suggest the opposite: that all subject revenues, whether bundled or unbundled, constitute section 856(d) rents from real property.

Second, the scenarios considered in Rev. Rul. 2002-38 were meant to be the hardest, most extreme situations possible. The facts of the revenue ruling represent an explicit rejection of the older independent contractor requirements of reg. section 1.856-4(b)(5) for non-customary services and thus demonstrate the utility and flexibility of a TRS as a provider of non-customary services to REIT tenants.[87] Necessarily then, simpler and easier facts, including compliance with the old independent

[79]*See infra* text accompanying notes 87-88. The fact pattern in Rev. Rul. 2002-38 was "extreme" because of its intentional contrast to the six requirements of the prior independent contractor regime for non-customary services, one of those prior requirements being that service fees be separately stated. *See supra* text accompanying notes 39-43.

[80]Rev. Rul. 2002-38 used the word "rents" in this instance to include the service charges bundled therein in the facts of the revenue ruling (which states that "no service charges are separately stated from the tenants' rents"). 2002-2 C.B. 4, 5. As shown in Sections III and IV.A above, the legislative history is clear that all amounts received by the REIT, including amounts for services such as subject revenues, are also properly covered by the RMA.

[81]Rev. Rul. 2002-38, 2002-2 C.B. 4, 5.

[82]*See supra* note 80.

[83]*See supra* note 81.

[84]*See supra* Section IV.B.

[85]*See infra* Section IV.D.

[86]*See supra* Section IV.B.

[87]As discussed in Section II, before the creation of the TRS regime, the six independent contractor requirements represented the only way for a REIT to provide tenants services that could not meet the section 856(d)(1)(B) standard. That is, these six requirements applied to both halves of the outer ring in the figure of Section III. To demonstrate the utility and flexibility of TRSs as providers of non-customary services, Rev. Rul. 2002-38 recited extreme, expansive facts to reject each of the six independent contractor (IK) requirements as having any application to TRS arrangements:

Under the IK Regime:	Rev. Rul. 2002-38 Facts:
• The REIT and the independent contractor (IK) must have been less than 35 percent affiliated.	• The REIT and the TRS were 100 percent affiliated, well beyond the 35 percent threshold.
• The REIT could not earn interest, dividend, rental or other income from the IK.	• The REIT expected to earn dividends and rent from its TRS.
• The charges for the services had to be separately stated.	• There was no separate charge to tenants for the housekeeping services.
• The service revenues had to be collected by the IK.	• Revenues for the TRS services (which happened to be part of the bundled charge) were collected from the tenants by the REIT, and the existence and role of the TRS were opaque to the tenant.

(Footnote continued on next page.)

contractor rule of separately stated charges, are subsumed into the conclusion of Rev. Rul. 2002-38.[88] The IRS has apparently concluded in at least two private letter rulings that subject revenues are section 856(d) rents from real property.[89] Although both cases involved bundled subject revenues, the same conclusion would apply to unbundled subject revenues. To suggest that the liberation from separately stated charges in Rev. Rul. 2002-38 has somehow become a requirement to use bundled charges is to misread Rev. Rul. 2002-38 and get its intent backwards.

D. Industry Practice

As shown below, the treatment of subject revenues as section 856(d) rents from real property faithfully and fairly applies the REIT gross income tests, and treating subject revenues in this fashion is critical to many traditional public REITs. Consistent with the critical commentary regarding the 1960 standard, REITs today use their TRSs as a control point for property access and the provision of services to REIT tenants. Many activities that require widespread access through the landlord's property (including over and under the rented space of other REIT tenants) are now performed by TRSs for the orderly leasing and maintenance of the property, not primarily for the convenience of the tenant.[90] Otherwise, giving an independent party that access would create safety and security vulnerabilities for the other tenants of the property.[91] Also, the performance of non-customary services by a TRS of a REIT landlord increases the tenants' clout and comfort regarding the quality and reliability of service. This occurs because the REIT (unlike an

---

Under the IK Regime:	Rev. Rul. 2002-38 Facts:
• The service revenues had to be retained by the IK.	• Revenues for the TRS services collected by the REIT from the tenants (which happened to be part of the bundled charge) were not paid over to the TRS, but instead the REIT hired the TRS under a subcontract and paid the TRS for its services based on an intercompany contractual arrangement.
• The IK had to be adequately compensated.	• In the first of the two situations, the TRS may not have been adequately compensated by the REIT, and in the second of the two situations, the TRS definitely was not adequately compensated by the REIT.

As this comparison demonstrates, the facts of Rev. Rul. 2002-38 are consciously liberated from the six independent contractor requirements, creating a system in which the separate existence of the TRS could remain opaque to REIT tenants, as the existence and use of subsidiaries already could be for non-REIT landlords. In the RMA, Congress intended its new TRS legislation to produce those benefits for REITs. *See supra* Sections III and IV.A, and in particular text accompanying notes 60, 67, and 69.

[88]This reading of Rev. Rul. 2002-38 is confirmed by the following passage from the text of the published ruling, which shows that the bundled charges were intended to make the underlying facts harder, not easier:

> In *Situations 1* and *2*, charges to the tenants for the housekeeping services are not separately stated from the rents that the tenants pay to *R* for the use of their apartments. As a result, the amounts of the rents reflect the availability and use of those services. In other words, *R* receives greater rental payments than it would have received if the services had not been provided to its tenants. However, the structure of the 100 percent tax on redetermined rents indicates that Congress did not intend the lack of a separately stated service charge, by itself, to cause services to be treated as rendered by a REIT, rather than its TRS.

2002-2, C.B. 4, 5. From this passage, it is clear that Rev. Rul. 2002-38 is focused on the substance of the arrangement (*viz.*, that the rents therein included fees for services) rather than the form of the arrangement (*viz.*, that somehow the mere act of bundling service fees with rents transmutes service fees into rents).

[89]*See* LTR 201317001 and LTR 201320007. These two private letter rulings indicate that some of the services provided by prison REITs under their tenant contracts and through their TRSs are outside the section 856(d)(1)(B) standard (*e.g.*, in LTR 201317001's description of halfway houses: "A few of the halfway houses employ a psychologist, but generally no other medical care is available onsite. One halfway house employs a nurse who provides basic medical services"). Despite that, all subject revenues in these private letter rulings are held to be section 856(d) rents from real property (to quote, each of the rulings states that "the *entire contract fee* will be treated as 'rents from real property' within the meaning of section 856(d)" (emphasis added)). *See also* LTR 201503010 (storage REIT's "related services"). By contrast, to our knowledge, there is not a single published or private letter ruling that concludes that subject revenues do not qualify as section 856(d) rents from real property. If there were, that would be expressly contrary to the structure of the statute, the legislative intent of the RMA, and Rev. Rul. 2002-38.

[90]*Cf.* reg. section 1.512(b)-1(c)(5) (first prong), *supra* text accompanying notes 49-51.

[91]Given the heightened security demands that tenants have placed on landlords (particularly after September 11, 2001, and in general when permitting access to confidential business-critical systems), REITs would prefer to use their own TRSs to provide any services that do not meet the section 856(d)(1)(B) standard, rather than rely on independent contractors to perform these sensitive roles. *Cf.* LTR 9014022 and LTR 8914048, *supra* note 50.

independent contractor) has an extensive lease relationship with the tenant, which it wants to protect. That gives the tenant significant commercial leverage if problems arise.

The correct interpretation of Rev. Rul. 2002-38 — namely, that subject revenues are section 856(d) rents from real property — is heavily relied on by many public REITs across a variety of real estate property sectors. The following is a non-exhaustive list of common situations in which public REITs treat subject revenues as rents from real property and might otherwise fail the 95 percent REIT gross income qualification test of section 856(c)(2):

- office REITs with separate charges for building amenities such as fitness center memberships and personal trainers, conference center and reception area catering, carwashes, shuttle services, daycare services, and subsidized cafeterias;
- apartment REITs with separate charges for amenities such as housekeeping services, pet care services, daycare services, dry cleaning services, and concierge services;
- shopping mall REITs with separate charges for advertising services and promotional services; and
- self-storage REITs with separate charges for pickup, packing, and delivery services, and for inspection and disposal services.

Further, the above interpretation of Rev. Rul. 2002-38 is not being abused by public REITs to ''hype'' their qualifying gross income and therefore more easily pass the REIT gross income tests. That interpretation is being used because it is the correct interpretation. This point is best illustrated by a realistic example. Suppose a public REIT has the following items of gross income under section 61 and reg. section 1.856-2(c)(1):

- $98 million of qualifying rent from occupancy charges and from charges such as utilities that are clearly covered by section 856(d)(1)(B);
- $2 million of revenue that is definitely nonqualifying because it is outside section 856(c)(2) altogether — for example, third-party management fees or the like; and
- at most $7 million of subject revenues.

If the subject revenues were merely excluded from REIT gross income testing altogether (say, under section 856(c)(5)(J)(i)), the REIT's gross income test percentage would be equal to 98 percent (98/(98+2)), and it would pass the 95 percent REIT gross income qualification test of section 856(c)(2). By contrast, if the subject revenues are properly included as rents from real property under Rev. Rul. 2002-38,[92] the REIT's gross income percentage would be equal to 98.13 percent ((98+7)/(98+2+7)), which is only immaterially higher.[93] The truly unfair outcome here would be to treat the subject revenues as section 61 nonqualifying income, whereby the REIT's gross income test percentage would equal only 91.6 percent (98/(98+2+7)), and the REIT would not pass the 95 percent REIT gross income qualification test of section 856(c)(2). That interpretation would reduce or even block the use of TRSs, which would contradict the express intent of Congress when it created the TRS structure in the RMA.

E. Section 856(c)(5)(J)(ii)

The lack of an explicit rule of inclusion for subject revenues in the RMA was offset by the later addition of section 856(c)(5)(J)(ii), which grants the IRS authority to designate otherwise nonqualifying items of income or gain as qualifying income under section 856(c)(2) or (3). When section 856(d) was reformulated under TRA 1976, section 856(d)(1) and (2) then served a clear purpose, as noted in their titles: ''Amounts included'' for section 856(d)(1) and ''Amounts excluded'' for section 856(d)(2).[94]

It is true but irrelevant that an explicit inclusion for subject revenues was not drafted into section 856(d)(1) as part of the RMA.[95] What is relevant is that Rev. Rul. 2002-38 incorporates the intended

[92]The correct interpretation of Rev. Rul. 2002-38 is tantamount to a rule of inclusion for subject revenues under section 856(c)(5)(J)(ii). Given that there is already a prescribed treatment for subject revenues under Rev. Rul. 2002-38, it would be inappropriate and confusing to fashion a new exclusion rule for the same under section 856(c)(5)(J)(i). Moreover, a ruling under section 856(c)(5)(J)(i) would remove subject revenues from the ambit of section 856(d) rents from real property and thus from the reach of the section 857(b)(7) 100 percent penalty tax. As explained in Sections IV.A-C, that was not the intent of Congress or the IRS and would result in inappropriate and incorrect conclusions.

[93]This numerical example shows that in practical terms and real-world cases, there is very little difference between the Rev. Rul. 2002-38 approach to subject revenues and an alternative approach under section 856(c)(5)(J)(i). ''Hyping'' qualifying revenue is not a concern: Mathematically, compliance with the 95 percent REIT gross income qualification test is anchored by the $2 million of nonqualifying revenue, and it matters little whether the denominator is $100 million or $107 million; that is, the REIT's so-called 5 percent bad basket (which is the mathematical complement of the 95 percent REIT gross income qualification test of section 856(c)(2)) has everything to do with the $2 million and very little to do with the $100 million or $107 million, which is as it should be.

[94]*See* TRA 1976.

[95]Because the RMA did so much and had so little legislative history, some rough patches were inevitable. To see another example of rough patches in the RMA concerning the TRS provisions, see Paul W. Decker, Ponda, and Jonathan Stein, ''Toward a Workable Definition of REIT Healthcare Facility,'' *Tax Notes*, Dec. 5, 2011, p. 1231.

inclusion rule from the legislative history: Subject revenues are in fact intended to be section 856(d) rents from real property — both to assist in compliance with the 95 percent REIT gross income qualification test of section 856(c)(2) and to make sense of the 100 percent penalty tax of section 857(b)(7), all in accordance with the legislative intent of the RMA — and in fact Rev. Rul. 2002-38 accomplishes this despite the lack of an explicit inclusion in section 856(d)(1). Perhaps Rev. Rul. 2002-38 was purposefully subtle in its reasoning and conclusions because of the lack of an explicit inclusion for subject revenues in section 856(d)(1).

Today, however, because of the 2008 addition of the IRS's clear authority to include those amounts as qualifying income under section 856(c)(5)(J)(ii), the published conclusion of Rev. Rul. 2002-38 rests on unquestionably solid ground.

F. No Contrary Authority

There is no contrary published authority that would indicate or compel a different conclusion. Although the absence of negative authority is not definitive proof of the positive, it shows that no authority in over a decade has interpreted any of the primary legal authorities — the structure of the statute, the legislative history of the RMA, or Rev. Rul. 2002-38 — in a way that reaches a conclusion different from the one presented in this report. As noted above, both bundled and separately stated subject revenues are common among public REITs, which interpret this provision in the same manner as discussed in this report.

For example, LTR 201334033 involves a situation in which the REIT "expects to collect all, or nearly all, of the amounts owing from tenants," including amounts for TRS-provided services that "may not be customary services within the meaning of [reg. section] 1.856-4(b)(1)," and some services provided by the TRSs to tenants "may be listed as separate line items on invoices to tenants."[96] There is no published authority that indicates or compels a conclusion that subject revenues *are not* section 856(d) rents from real property, and the reasons presented in this report compel a conclusion that subject revenues *are* section 856(d) rents from real property.[97]

[96]That is, for the taxpayer in LTR 201334033, the TRS-provided services may be outside the section 856(d)(1)(B) standard and may be separately itemized and thus give rise to separately stated subject revenues.

[97]As we discuss in *supra* note 12, we recommend that these conclusions, which are consistent with the code and with prior guidance, be preserved in any future regulations.

V. Conclusion

As this report illustrates, subject revenues, whether separately stated or bundled, constitute section 856(d) rents from real property for the following reasons:

1. according to the legislative history of the RMA, Congress intended that all subject revenues be treated as rents from real property;
2. the statutory structure of the section 857(b)(7) 100 percent penalty tax is predicated on, and consistent only with, treating all subject revenues as rents from real property;
3. Rev. Rul. 2002-38 confirms that subject revenues are treated as rents from real property, and that conclusion applies equally to separately stated subject revenues;
4. the treatment of all subject revenues as rents from real property faithfully and fairly applies the REIT gross income tests, and treating subject revenues this way is critical to many traditional public REITs;
5. the lack of an explicit rule of inclusion for subject revenues in the RMA is offset by the later addition of section 856(c)(5)(J)(ii); and
6. we are unaware of any contrary authority that would indicate or compel a different conclusion.

Accordingly, subject revenues constitute section 856(d) rents from real property, regardless of whether they are billed to tenants separately or as part of a bundled charge.

VI. Appendix

Section 857(b) (2001)

(7) Income from redetermined rents, redetermined deductions, and excess interest.

(A) Imposition of tax. There is hereby imposed for each taxable year of the real estate investment trust a tax equal to 100 percent of redetermined rents, redetermined deductions, and excess interest.

(B) Redetermined rents.

(i) In general. The term "redetermined rents" means rents from real property (as defined in section 856(d)) the amount of which would (but for subparagraph (E)) be reduced on distribution, apportionment, or allocation under section 482 to clearly reflect income as a result of services furnished or rendered by a taxable REIT subsidiary of the real estate investment trust to a tenant of such trust.

(ii) Exception for certain amounts. Clause (i) shall not apply to amounts received directly or indirectly by a real estate investment trust —

(I) for services furnished or rendered by a taxable REIT subsidiary that are described in paragraph (1)(B) of section 856(d), or

(II) from a taxable REIT subsidiary that are described in paragraph (7)(C)(ii) of such section.

(iii) Exception for de minimis amounts. Clause (i) shall not apply to amounts described in section 856(d)(7)(A) with respect to a property to the extent such amounts do not exceed the one percent threshold described in section 856(d)(7)(B) with respect to such property.

(iv) Exception for comparably priced services. Clause (i) shall not apply to any service rendered by a taxable REIT subsidiary of a real estate investment trust to a tenant of such trust if —

(I) such subsidiary renders a significant amount of similar services to persons other than such trust and tenants of such trust who are unrelated (within the meaning of section 856(d)(8)(F)) to such subsidiary, trust, and tenants, but

(II) only to the extent the charge for such service so rendered is substantially comparable to the charge for the similar services rendered to persons referred to in subclause (I).

(v) Exception for certain separately charged services. Clause (i) shall not apply to any service rendered by a taxable REIT subsidiary of a real estate investment trust to a tenant of such trust if —

(I) the rents paid to the trust by tenants (leasing at least 25 percent of the net leasable space in the trust's property) who are not receiving such service from such subsidiary are substantially comparable to the rents paid by tenants leasing comparable space who are receiving such service from such subsidiary, and

(II) the charge for such service from such subsidiary is separately stated.

(vi) Exception for certain services based on subsidiary's income from the services. Clause (i) shall not apply to any service rendered by a taxable REIT subsidiary of a real estate investment trust to a tenant of such trust if the gross income of such subsidiary from such service is not less than 150 percent of such subsidiary's direct cost in furnishing or rendering the service.

(vii) Exceptions granted by Secretary. The Secretary may waive the tax otherwise imposed by subparagraph (A) if the trust establishes to the satisfaction of the Secretary that rents charged to tenants were established on an arms' length basis even though a taxable REIT subsidiary of the trust provided services to such tenants.

(C) Redetermined deductions. The term ''redetermined deductions'' means deductions (other than redetermined rents) of a taxable REIT subsidiary of a real estate investment trust if the amount of such deductions would (but for subparagraph (E)) be decreased on distribution, apportionment, or allocation under section 482 to clearly reflect income as between such subsidiary and such trust.

(D) Excess interest. The term ''excess interest'' means any deductions for interest payments by a taxable REIT subsidiary of a real estate investment trust to such trust to the extent that the interest payments are in excess of a rate that is commercially reasonable.

(E) Coordination with section 482. The imposition of tax under subparagraph (A) shall be in lieu of any distribution, apportionment, or allocation under section 482.

(F) Regulatory authority. The Secretary shall prescribe such regulations as may be necessary or appropriate to carry out the purposes of this paragraph. Until the Secretary prescribes such regulations, real estate investment trusts and their taxable REIT subsidiaries may base their allocations on any reasonable method.

One Hundred Fourteenth Congress of the United States of America

AT THE FIRST SESSION

Begun and held at the City of Washington on Tuesday, the sixth day of January, two thousand and fifteen

An Act

Making appropriations for military construction, the Department of Veterans Affairs, and related agencies for the fiscal year ending September 30, 2016, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the "Consolidated Appropriations Act, 2016".

SEC. 2. TABLE OF CONTENTS.

The table of contents of this Act is as follows:

SEC. 3. REFERENCES.

Except as expressly provided otherwise, any reference to “this Act” contained in any division of this Act shall be treated as referring only to the provisions of that division.

SEC. 4. EXPLANATORY STATEMENT.

The explanatory statement regarding this Act, printed in the House of Representatives section of the Congressional Record on or about December 17, 2015 by the Chairman of the Committee on Appropriations of the House, shall have the same effect with respect to the allocation of funds and implementation of divisions A through L of this Act as if it were a joint explanatory statement of a committee of conference.

SEC. 5. STATEMENT OF APPROPRIATIONS.

The following sums in this Act are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending September 30, 2016.

SEC. 6. AVAILABILITY OF FUNDS.

Each amount designated in this Act by the Congress for Overseas Contingency Operations/Global War on Terrorism pursuant to section 251(b)(2)(A)(ii) of the Balanced Budget and Emergency Deficit Control Act of 1985 shall be available (or rescinded, if applicable) only if the President subsequently so designates all such amounts and transmits such designations to the Congress.

SEC. 7. TECHNICAL ALLOWANCE FOR ESTIMATING DIFFERENCES.

If, for fiscal year 2016, new budget authority provided in appropriations Acts exceeds the discretionary spending limit for any category set forth in section 251(c) of the Balanced Budget and Emergency Deficit Control Act of 1985 due to estimating differences with the Congressional Budget Office, an adjustment to the discretionary spending limit in such category for fiscal year 2016 shall be made by the Director of the Office of Management and Budget in the amount of the excess but the total of all such adjustments shall not exceed 0.2 percent of the sum of the adjusted discretionary spending limits for all categories for that fiscal year.

SEC. 8. CORRECTIONS.

The Continuing Appropriations Act, 2016 (Public Law 114–53) is amended—

(1) by changing the long title so as to read: “Making continuing appropriations for the fiscal year ending September 30, 2016, and for other purposes.”;

(2) by inserting after the enacting clause (before section 1) the following: “**DIVISION A—TSA OFFICE OF INSPECTION ACCOUNTABILITY ACT OF 2015**”;

"(3) in the case of property placed in service after December 31, 2020, and before January 1, 2022, 22 percent.".

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on January 1, 2017.

SEC. 305. TREATMENT OF TRANSPORTATION COSTS OF INDEPENDENT REFINERS.

(a) IN GENERAL.—Paragraph (3) of section 199(c) of the Internal Revenue Code of 1986 is amended by adding at the end the following new subparagraph:

"(C) TRANSPORTATION COSTS OF INDEPENDENT REFINERS.—

"(i) IN GENERAL.—In the case of any taxpayer who is in the trade or business of refining crude oil and who is not a major integrated oil company (as defined in section 167(h)(5)(B), determined without regard to clause (iii) thereof) for the taxable year, in computing oil related qualified production activities income under subsection (d)(9)(B), the amount allocated to domestic production gross receipts under paragraph (1)(B) for costs related to the transportation of oil shall be 25 percent of the amount properly allocable under such paragraph (determined without regard to this subparagraph).

"(ii) TERMINATION.—Clause (i) shall not apply to any taxable year beginning after December 31, 2021.".

(b) EFFECTIVE DATE.—The amendment made by this section shall apply to taxable years beginning after December 31, 2015.

DIVISION Q—PROTECTING AMERICANS FROM TAX HIKES ACT OF 2015

SECTION 1. SHORT TITLE, ETC.

(a) SHORT TITLE.—This division may be cited as the "Protecting Americans from Tax Hikes Act of 2015".

(b) AMENDMENT OF 1986 CODE.—Except as otherwise expressly provided, whenever in this division an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1986.

(c) TABLE OF CONTENTS.—The table of contents for this division is as follows:

SEC. 314. REPEAL OF PREFERENTIAL DIVIDEND RULE FOR PUBLICLY OFFERED REITS.

(a) IN GENERAL.—Section 562(c) is amended by inserting "or a publicly offered REIT" after "a publicly offered regulated investment company (as defined in section 67(c)(2)(B))".

(b) PUBLICLY OFFERED REIT.—Section 562(c), as amended by subsection (a), is amended—

(1) by striking "Except in the case of" and inserting the following:

"(1) IN GENERAL.—Except in the case of", and

(2) by adding at the end the following new paragraph:

"(2) PUBLICLY OFFERED REIT.—For purposes of this subsection, the term 'publicly offered REIT' means a real estate investment trust which is required to file annual and periodic reports with the Securities and Exchange Commission under the Securities Exchange Act of 1934.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to distributions in taxable years beginning after December 31, 2014.

SEC. 315. AUTHORITY FOR ALTERNATIVE REMEDIES TO ADDRESS CERTAIN REIT DISTRIBUTION FAILURES.

(a) IN GENERAL.—Subsection (e) of section 562 is amended—

(1) by striking "In the case of a real estate investment trust" and inserting the following:

"(1) DETERMINATION OF EARNINGS AND PROFITS FOR PURPOSES OF DIVIDENDS PAID DEDUCTION.—In the case of a real estate investment trust", and

(2) by adding at the end the following new paragraph:

"(2) AUTHORITY TO PROVIDE ALTERNATIVE REMEDIES FOR CERTAIN FAILURES.—In the case of a failure of a distribution by a real estate investment trust to comply with the requirements of subsection (c), the Secretary may provide an appropriate remedy to cure such failure in lieu of not considering the distribution to be a dividend for purposes of computing the dividends paid deduction if—

"(A) the Secretary determines that such failure is inadvertent or is due to reasonable cause and not due to willful neglect, or

"(B) such failure is of a type of failure which the Secretary has identified for purposes of this paragraph as being described in subparagraph (A).".

(b) EFFECTIVE DATE.—The amendments made by this section shall apply to distributions in taxable years beginning after December 31, 2015.

SEC. 316. LIMITATIONS ON DESIGNATION OF DIVIDENDS BY REITS.

(a) IN GENERAL.—Section 857 is amended by redesignating subsection (g) as subsection (h) and by inserting after subsection (f) the following new subsection:

"(g) LIMITATIONS ON DESIGNATION OF DIVIDENDS.—

"(1) OVERALL LIMITATION.—The aggregate amount of dividends designated by a real estate investment trust under subsections (b)(3)(C) and (c)(2)(A) with respect to any taxable year may not exceed the dividends paid by such trust with respect to such year. For purposes of the preceding sentence, dividends to in subclause (I) if such position were ordinary property,

any income of such trust from any position referred to in subclause (I) and from any transaction referred to in subclause (III) (including gain from the termination of any such position or transaction) shall not constitute gross income under paragraphs (2) and (3) to the extent that such transaction hedges such position.".

(b) IDENTIFICATION REQUIREMENTS.—

(1) IN GENERAL.—Subparagraph (G) of section 856(c)(5), as amended by subsection (a), is amended by striking "and" at the end of clause (ii), by striking the period at the end of clause (iii) and inserting ", and", and by adding at the end the following new clause:

"(iv) clauses (i), (ii), and (iii) shall not apply with respect to any transaction unless such transaction satisfies the identification requirement described in section 1221(a)(7) (determined after taking into account any curative provisions provided under the regulations referred to therein).".

(2) CONFORMING AMENDMENTS.—Subparagraph (G) of section 856(c)(5) is amended—

(A) by striking "which is clearly identified pursuant to section 1221(a)(7)" in clause (i), and

(B) by striking ", but only if such transaction is clearly identified as such before the close of the day on which it was acquired, originated, or entered into (or such other time as the Secretary may prescribe)" in clause (ii).

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2015.

SEC. 320. MODIFICATION OF REIT EARNINGS AND PROFITS CALCULATION TO AVOID DUPLICATE TAXATION.

(a) EARNINGS AND PROFITS NOT INCREASED BY AMOUNTS ALLOWED IN COMPUTING TAXABLE INCOME IN PRIOR YEARS.—Section 857(d) is amended—

(1) by amending paragraph (1) to read as follows:

"(1) IN GENERAL.—The earnings and profits of a real estate investment trust for any taxable year (but not its accumulated earnings) shall not be reduced by any amount which—

"(A) is not allowable in computing its taxable income for such taxable year, and

"(B) was not allowable in computing its taxable income for any prior taxable year.", and

(2) by adding at the end the following new paragraphs:

"(4) REAL ESTATE INVESTMENT TRUST.—For purposes of this subsection, the term 'real estate investment trust' includes a domestic corporation, trust, or association which is a real estate investment trust determined without regard to the requirements of subsection (a).

"(5) SPECIAL RULES FOR DETERMINING EARNINGS AND PROFITS FOR PURPOSES OF THE DEDUCTION FOR DIVIDENDS PAID.—For special rules for determining the earnings and profits of a real estate investment trust for purposes of the deduction for dividends paid, see section 562(e)(1).".

(b) EXCEPTION FOR PURPOSES OF DETERMINING DIVIDENDS PAID DEDUCTION.—Section 562(e)(1), as amended by the preceding provisions of this Act, is amended by striking "deduction, the earnings" and all that follows and inserting the following: "deduction—

"(A) the earnings and profits of such trust for any taxable year (but not its accumulated earnings) shall be increased by the amount of gain (if any) on the sale or exchange of real property which is taken into account in determining the taxable income of such trust for such taxable year (and not otherwise taken into account in determining such earnings and profits), and

"(B) section 857(d)(1) shall be applied without regard to subparagraph (B) thereof.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 2015.

SEC. 321. TREATMENT OF CERTAIN SERVICES PROVIDED BY TAXABLE REIT SUBSIDIARIES.

(a) TAXABLE REIT SUBSIDIARIES TREATED IN SAME MANNER AS INDEPENDENT CONTRACTORS FOR CERTAIN PURPOSES.—

(1) MARKETING AND DEVELOPMENT EXPENSES UNDER RENTAL PROPERTY SAFE HARBOR.—Clause (v) of section 857(b)(6)(C) is amended by inserting "or a taxable REIT subsidiary" before the period at the end.

(2) MARKETING EXPENSES UNDER TIMBER SAFE HARBOR.—Clause (v) of section 857(b)(6)(D) is amended by striking ", in the case of a sale on or before the termination date,".

(3) FORECLOSURE PROPERTY GRACE PERIOD.—Subparagraph (C) of section 856(e)(4) is amended by inserting "or through a taxable REIT subsidiary" after "receive any income".

(b) TAX ON REDETERMINED TRS SERVICE INCOME.—

(1) IN GENERAL.—Subparagraph (A) of section 857(b)(7) is amended by striking "and excess interest" and inserting "excess interest, and redetermined TRS service income".

(2) REDETERMINED TRS SERVICE INCOME.—Paragraph (7) of section 857(b) is amended by redesignating subparagraphs (E) and (F) as subparagraphs (F) and (G), respectively, and inserting after subparagraph (D) the following new subparagraph:

"(E) REDETERMINED TRS SERVICE INCOME.—

"(i) IN GENERAL.—The term 'redetermined TRS service income' means gross income of a taxable REIT subsidiary of a real estate investment trust attributable to services provided to, or on behalf of, such trust (less deductions properly allocable thereto) to the extent the amount of such income (less such deductions) would (but for subparagraph (F)) be increased on distribution, apportionment, or allocation under section 482.

"(ii) COORDINATION WITH REDETERMINED RENTS.—Clause (i) shall not apply with respect to gross income attributable to services furnished or rendered to a tenant of the real estate investment trust (or to deductions properly allocable thereto).".

(3) CONFORMING AMENDMENTS.—Subparagraphs (B)(i) and (C) of section 857(b)(7) are each amended by striking "subparagraph (E)" and inserting "subparagraph (F)".

Total	**7,854,652.17**	**85,956.42**	**7,940,608.59**	**233,036.06**	**8,173,644.65**	**(97,744.46)**	**8,075,900.19**

Benefits

- Realize annual cost savings (an annuity)
  - Some apps run for 7-10 years without updates
  - Tax preparation time for $1 Billion JV reduced by 80 to 90%
- Building blocks (unit record)
- Scalability
  - Can handle unlimited number of JVs
  - Blackstone sale

Benefits (continued)

- Benefits to other departments
  - Asset strategy roadmap
  - Equity compensation
  - GAAP depreciation
- Not tied to any single 3rd party provider
  - Conversion costs
  - Flexibility

Benefits (continued)

- Spot issues/trends earlier (interim reviews)
- Eliminate transposition/polarity/excel formula errors
- Create better audit trail (extreme detail)
- Standardized results (next man up)
- Fosters better work morale (less overtime)

Future Tax Automation

- Integrated/modular based solutions
- Platform independent solution
  - Abstraction layer(s)
- Cloud computing
  - Data encryption
  - Multi-factor authentication

Primary Data Accumulation

- General Ledger data sources (e.g., CTI, Timberline, Yardi)
- Fixed Asset data sources (e.g., BNA, FAS)
- Automate data retrieval
- Summarize results
- Reconcile results to financial statements/reports

Secondary Data Sources

- True tax locations
- Budgeted/projected information
- Expected sales/exchanges
- Managed property systems
- Purchase card systems

Tax Books

- Tax chart of accounts
- Tax versus legal entity accounting
- Tax and book ownership differences
- Account mapping of trial balance to tax report headers
- Account mapping to tax returns

Adjusting Journal Entries

- Identify tax sensitive accounts/subaccounts
- Automate standard adjusting journal entries from CTI, FAS, etc.
- Differentiate between types of adjusting journal entries
- Manual adjusting journal entries
- Archive adjusting journal entries each year

Standard Adjusting Journal Entries

- Book to tax depreciation differences
- Book to tax property sale differences
- Prepaid rents
- Bad debt expense
- Other as identified in G/L

Reporting

- Identify relevant worksheets
- Collaborate on worksheet format
- Automate basic calculations (totals/subtotals)
- Automate diagnostics
- Allow for tax workbook updating

Assorted ITSI Issues

- The main steps in addressing ITSI
- Treatment of income from noncustomary services performed by TRS

Assorted ITSI Issues

- Restaurant, café, food services
  - If this is customary in the geographic area for comparable properties, which is frequently the case, can a REIT use an IK? Does the REIT receive any net profits or have to pay for any net losses—i.e., the IK gets a management fee and no exposure? Do the profits and losses get reflected on the REIT's books? Could the tax on prohibited transactions apply?
  - Can the REIT lease the facilities to an operator at below-market rent, assuming that the facilities do not need any additional subsidy beyond the discount on the rent? Apparently so. See PLR 199917039 (*See* NAREIT Compendium Memorandum 1999-9).

Assorted ITSI Issues

- Restaurant, café, food services
  - If the REIT engages its TRS to provide the food service, and the TRS hires the IK, do the operations on the facility go on the IK's books, the TRS's books, or the REIT's books? If the REIT pays the TRS a premium on top of any anticipated fees to the IK and overall subsidy, and the REIT is not entitled to any share of profits if there are any, are the operations then on the TRS's books? Does the TRS need to have employees of its own, since it will be relying on the IK? Does the REIT have to charge the TRS any rent?

Assorted ITSI Issues

- Restaurant, café, food services
  - Note that if the TRS is paid less than an arm's length amount, the REIT will be liable to a 100% penalty on the shortfall, either because there is redetermined rent or because it is redetermined TRS service income (added by the PATH Act).
  - What is a reasonable rate? There is a 150%-of-expenses safe harbor for redetermined rent; did someone forget the safe harbor for redetermined TRS service income?

Assorted ITSI Issues

- Gyms/sports facilities
  - Easy if unattended facilities with workout machines and little else. See, e.g., PLR 200101012 (unattended fitness center); PLR 9510030 (same).
  - One step up is facilities that are unattended, except that there are classes provided by personal trainers. PLR 9646027 (fitness instruction provided by IKs) *(See* NAREIT Compendium Memorandum 1996-20*).* Is there a risk in using individuals as IKs?

Assorted ITSI Issues

- Gyms/sports facilities
  - Frequently so upscale that unclear if customary, with both significant personal services (classes, personal trainers) and retail sales. It is therefore more common to involve a TRS.
  - Similar issues to food services.

Assorted ITSI Issues

- Strictly speaking, not ITSI, but related: if the REIT receives income from a noncustomary service provided by a TRS, is the income rent from real property?
  - Income from a customary service is rent, whether or not separately stated. Section 856(d)(1)(B).
  - Rev. Rul. 2002-38 (*See* NAREIT Compendium Memorandum 2002-3) concluded that where the charges for a noncustomary service are not separately stated, the rent is, in its entirety, rents from real property. Is it significant whether the charge for the service is or is not separately stated?
  - P. Decker, D. Kaplan, and A. Ponda, "Non-customary Services Furnished by Taxable REIT Subsidiaries," Tax Notes Today (July 28, 2015).

Sec. 1033(g)(3) is not just for Lamar & CBS Outdoor

- Legislative history of 1033(g)
- Advertising as REIT qualifying income is not new
- Billboard structures as real estate is not new
- Implementation
- UBTI considerations

Sec. 1033(g)(3) is not just for Lamar & CBS Outdoor

- Legislative history of 1033(g)(3)
- Highway Beautification Act of 1965 - LBJ and Lady Bird Johnson
- This legislation called for the control of outdoor advertising along the nation's highways. Condemnation and removal of advertising billboards that don't comply with the standards is one way to enforce compliance with the law.
- Highway Beautification Act anticipated billboards would be characterized as real property for purposes of this rule. By 1976 a number of courts had concluded that billboards were personal property and not eligible for exchange treatment.

Sec. 1033(g)(3) is not just for Lamar & CBS Outdoor

- Tax Reform Act of 1976

- In response to the court cases and billboard lobby, Congress enacted Code section 1033(g)(3) allowing a taxpayer to elect to treat its “outdoor advertising displays” as real property. This applies to Chapter 1 of the Code which includes the REIT provisions and UBTI provisions.

- 1033(g)(3)(C) - The term “outdoor advertising display” is defined as a rigidly assembled sign, display, or device permanently affixed to the ground or permanently attached to a building or other inherently permanent structure constituting, or used for the display of, a commercial or other advertisement to the public.

Sec. 1033(g)(3) is not just for Lamar & CBS Outdoor

- Opportunities for non-billboard REITs
  - Any REIT with road frontage that wants to erect billboards: Timber, Farmland, Prison, Student housing, Industrial, Retail
  - Office REITs that add permanent signs on sides of buildings
  - Signs on building walls inside and out in shopping centers
  - Strip center retail REITs

Sec. 1033(g)(3) is not just for Lamar & CBS Outdoor

- Leasing of advertising space by REITs is not new
  - PLR 8830076, the Service ruled that the income derived by the REIT from its proposed leasing advertising space in shopping center common areas would qualify as rents from real property
  - PLR 9808011 *(See* NAREIT Compendium Memorandum 1998-5), the Service ruled that the REIT's share of amounts "received pursuant to tenant and licensee arrangements with respect to … space on mall directories and other locations at the retail projects for the placement of advertisements will qualify as 'rents from real property' under section 856(d)

Billboards - Eligibility

- Permanency of Structures
  - May be properly classified as real property
  - Asset class 00.3 vs 57.1
  - Is 1033(g) election necessary? Consider if leasing sign structure as well as other components not typically classified as real property.
- Sign Structures Eligible for Sec.1033(g) election
  - PLR 201450004 Sign structures leased to unrelated 3rd party for FMV rent
    - Sign structures inherently permanent
    - Ancillary housing structures/sign assets are dedicated and integral parts of sign structures, i.e. parts of the outdoor advertising display since necessary to make sign function and therefore the Sec. 1033(g) election applies to these assets as well.

Billboards – Property Depreciation

- 1033 (g) Election
  - Change in use rules seem to indicate no tax accounting method change in year election is made
  - See Reg. Sec. 1.168(i)-4(d) through (f)
  - PLR 200041027 & PLR 201450001
    - Generally, if sign structures/outdoor advertising displays already classified as land improvements under asset classes 00.3 or 57.1, then election has no impact on depreciation method or life
    - If some or all of the sign structure assets classified as tangible personal property (and depreciated accordingly), the change of classification to real property constitutes a change in use of the property and not a change in method of accounting

Billboards – Digital Boards

- The 2014-2015 “Billboard” PLRs state that “certain Qualified Outdoor Advertising Displays allow for multiple Rental Agreements to be in place at one time.”
  - Use of the defined term “Qualified Outdoor Advertising Displays” from IRC 1033(g)(3) means the taxpayer is treating the digital board as well as the structure to which it is affixed as real property.
  - The digital board must be attached to the structure in a way intended to remain for the duration of its useful life.
  - As real property, the digital board must be depreciated as real property, not personal property.

Billboards – Short Term Rentals

- Recent Billboard REIT PLRs address short term rentals as small part of billboard revenue
  - 201522002 (*See* NAREIT Tax Report 2015-8)
    - Specifies that the portion of its revenue attributable to such short-term Rental Agreements will not be material
  - 201431020 (*See* NAREIT Tax Report 2014-27)
    - Specifies short term rentals are approximately 3% of total revenues from billboards
  - 201431018 (*See* NAREIT Tax Report 2014-26)
    - specifies short term rentals of x weeks are approximately 2% of total revenues from billboards
- Consider the standard industry contract duration for advertising

Billboards – Election Statement

- Sample 1033 (g) Election

Election to Treat Outdoor Advertising Displays as Real Property

Pursuant to Code Sec. 1033(g)(3)

Pursuant to Reg. Sec. 1.1033(g)-1, TAXPAYER hereby elects, beginning with the taxable year ending 12/31/20xx, that outdoor advertising displays owned by taxpayer be treated as real property in accordance with the provisions of Code Sec. 1033(g). TAXPAYER has not elected to expense under Code Section 179(a) any part of the cost of the above mentioned advertising displays.

Billboards - ITSI

- PLR 201143011 (*See* NAREIT Tax Report 2011-34) REIT leased sign structures, rent did not include payments for non-customary services
  - Some rent based on gross receipts, which such receipts only included those from customary services
  - Non customary services such as installation services provided by TRS (Rev. Rul. 2002-38)
- PLR 201204006 (*See* NAREIT Tax Report 2012-2)
  - Sign Superstructures constituted real property and therefore so did use rights
  - License fees considered similar to rental payments required under a lease and therefore consider rents from real property
  - Installation services provided by independent contractors represented by taxpayer as customary in geographic market

Billboards – UBTI

- Gross advertising income is defined in Reg. 1.512(a)–1(f)(3) as all amounts derived from the unrelated advertising activities of the exempt organization.
- IRC Sec. 1033(g)(3) applies for all purposes of Chapter 1 of the Code
- UBTI rulings re revenue from short term contracts is rent from real property:
  - Rev Rul 69-178, TAM 199924059 & PLR 200222030
    - Short term rentals of space are rental income for purposes of IRC Sec. 512(b)(3)
- Payments for occupancy of space where services are also rendered to the occupant are not rents from real property per Reg. Sec. 1.512(b) – 1(c)(5)
- Personal property included in the lease may not exceed 10% of the total value per Reg. Sec. 1.512(b) – 1(c)(2)
- Use a lease form and not a license form of agreement

Managing Taxable Income

- Communication with senior management
- Like kind exchanges
- Tangible property regulations

Managing Taxable Income

- Questions to Consider
  - Is your 90% test under pressure?
  - Will you have enough dividend to cover taxable income?
  - Do you have a plan for tax department communication with senior management and/or the Board of Directors regarding:
    - Dividend rate increases
    - Special dividend payments
- Recommendation: Develop a formal plan and present to CFO and other senior management to gain buy in and educate
  - Pinpoint key dates during year where dividend planning/updates are on the agenda

Managing Taxable Income Con't.

- Like Kind Exchange
  - Deferring gain may not always be the best strategy.
  - Questions to Consider
    - Are we currently estimating return of capital distributions for the year?
    - How large is the gain and therefore how large is the potential distribution required?
    - Are there any other losses or deductions that can be taken in the current tax year to offset the gain?

Managing Taxable Income Con't.

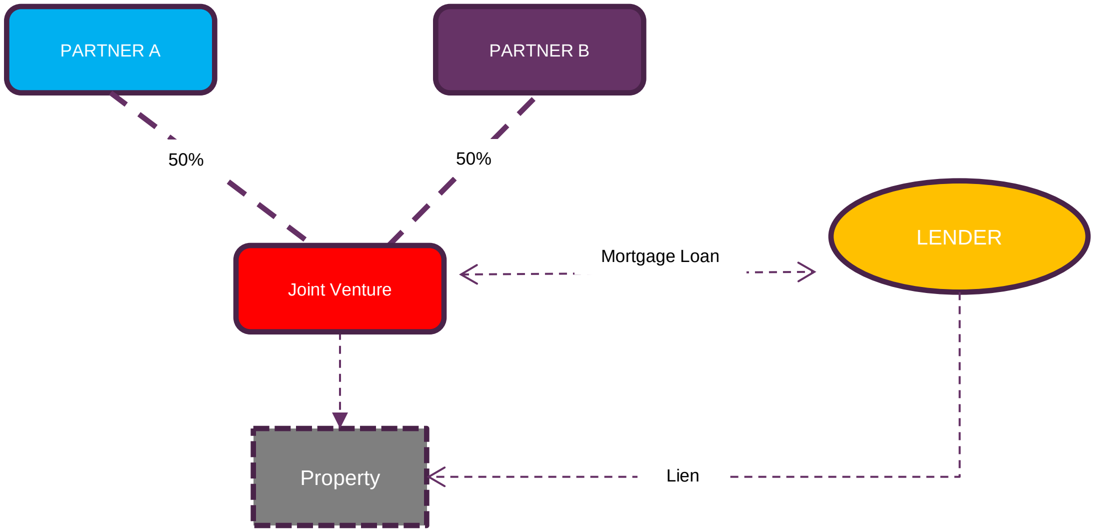
- Like Kind Exchange
  - Questions
    - Is there visible replacement property?
    - How will gain deferral/lack of gain deferral impact my shareholders/unitholders?
    - Can the company afford lost depreciation deductions in the future?
    - Are there any state tax implications that should be considered?

Managing Taxable Income Con't.

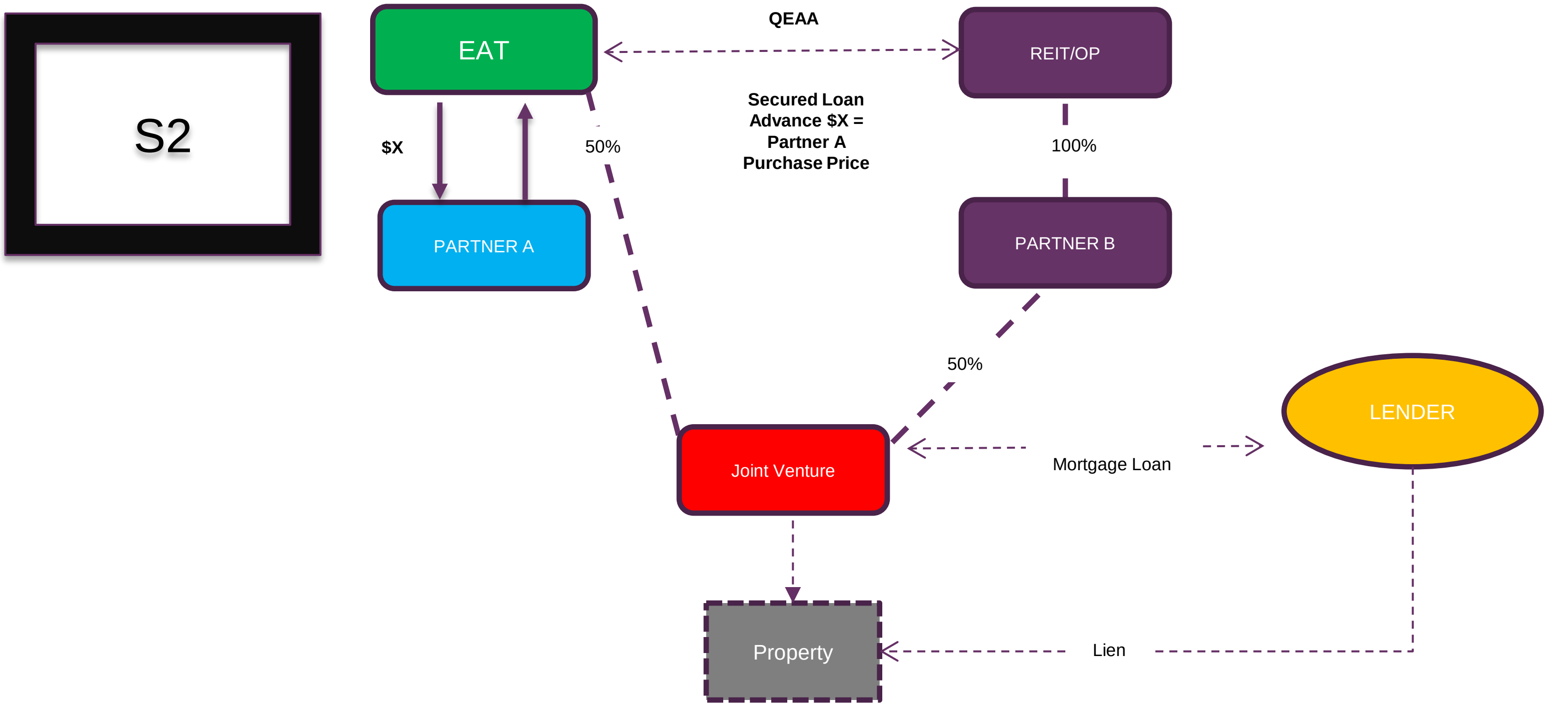
- Like Kind Exchange
  - Using an Exchange Accommodator Titleholder (EAT) to unencumber property
    - To defer 100% of gain on sale, replacement property must equal or exceed both the relinquished property FMV and taxpayer's net equity in the property
    - In some instances, an EAT can be used to purchase encumbered replacement property and facilitate a debt paydown or payoff prior to the taxpayer's purchase of the replacement property
    - Potentially useful in JV partner buyouts where there is property level debt (see following step charts S1 – S5 for example)

Managing Taxable Income Con't.

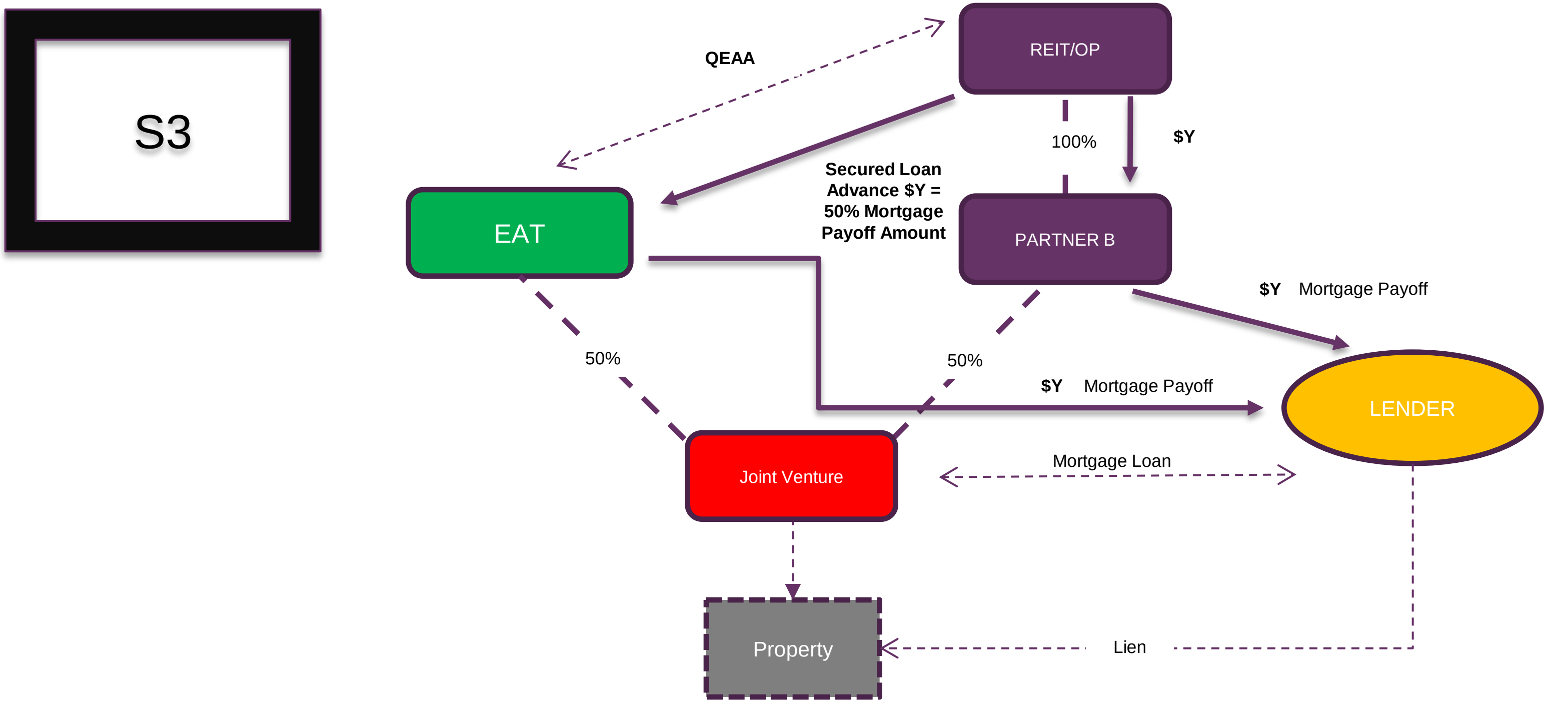
S1
Current
Structure



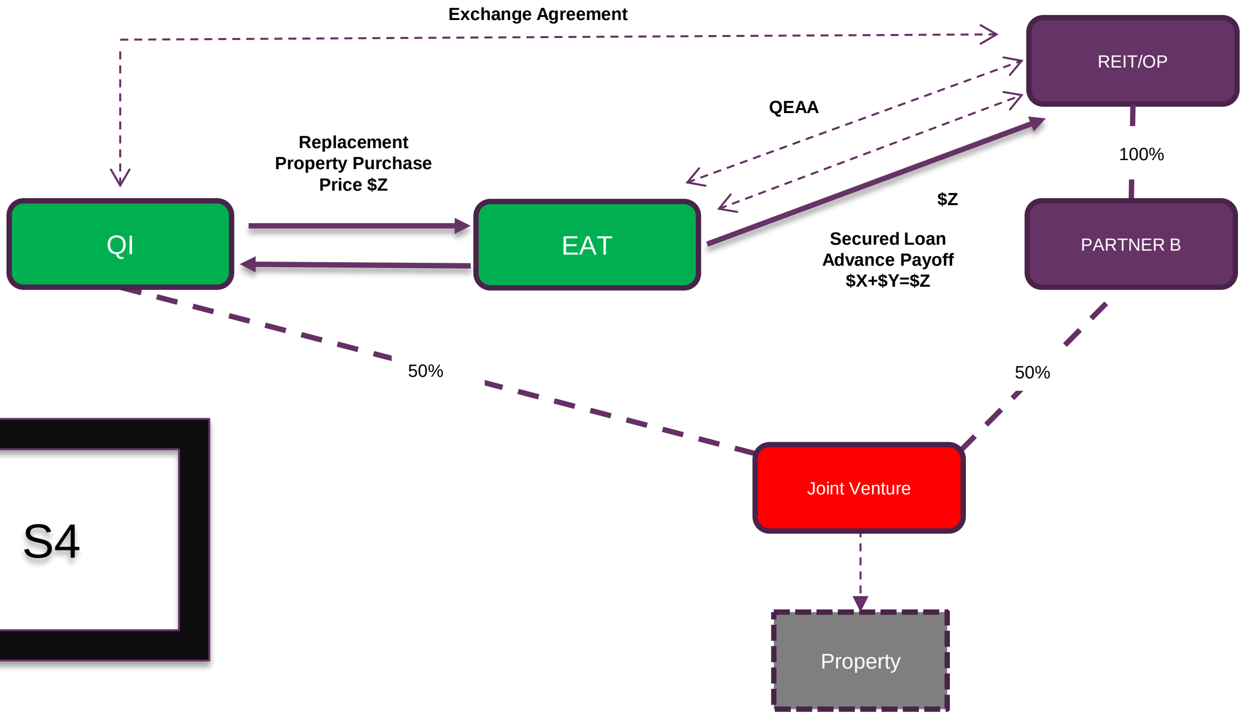
Managing Taxable Income Con’t.



Managing Taxable Income Con't.

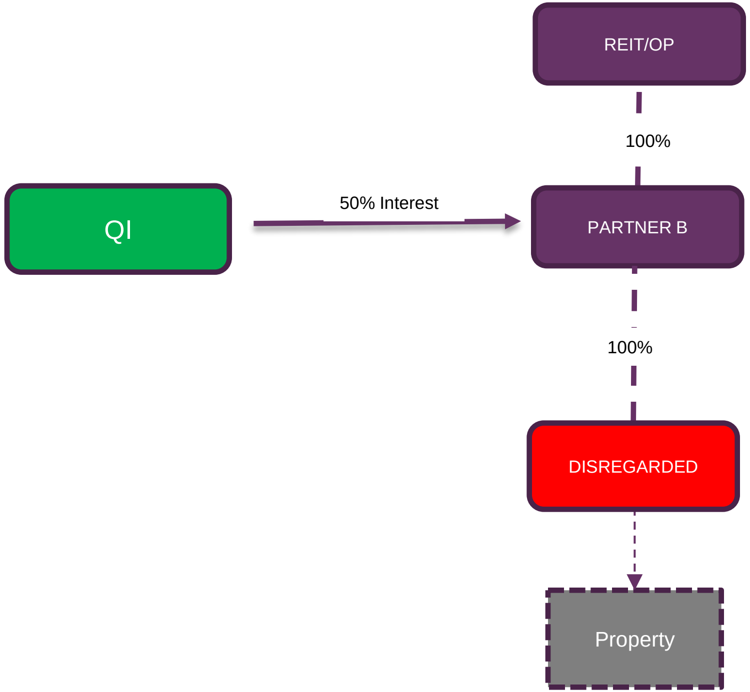


Managing Taxable Income Con’t.



S4

Managing Taxable Income Con't.



S5

Managing Taxable Income Con't.

- Like Kind Exchange
  - Option for Extending the 180 day window
    - Lease structure in which properties are constructed and/or acquired pursuant to an operating lease and the assets are later acquired by the taxpayer from the lessor to use as replacement property
    - Requires a financing partner willing to invest capital into the project and agreeable to lease terms conducive to facilitating a LKE
      - Interest only payments during construction period
      - Purchase option at cost
      - No obligation to purchase, can remain in lease
    - Purchase Option allows taxpayer to time purchase to match LKE needs
    - Can potentially extend parking period up to 2 years

Managing Taxable Income Con't.

- Making the Most of the Tangible Property Regulations
  - Tenant Allowance expensing - Regs 1.162-4(a); Automatic change #184; Rev Proc 2015-13 Sec 5.01(1)
    - Disposition rules can impact deductibility - 1.263(a)-3(k)
    - Interplay with Section 110 – Regs 1.263(a)-3(f)(3)(i)
    - "2nd Generation" allowances – Regs 1.162-4, 1.263(a)-1(a)(1)
    - Consider the impact of previous method changes and IRS adjustments
    - Industry Issue Resolution for Retail and Restaurant taxpayers (Rev. Proc. 2015-56) provides a safe harbor for treating a portion of remodel/refresh costs as currently deductible

Managing Taxable Income Con't.

- Additional Tenant Allowance Opportunities
  - QLI Method Change – (from 39 to 15 year lives) - Automatic Change # 7 - Impermissible to permissible method - 1.446-1(e)(2)(ii)(d)(2)(i)
  - Lease Incentive Review – Automatic Change # 7 - Impermissible to permissible method - 1.446-1(e)(2)(ii)(d)(2)(i)
  - LHI Review for Personal property - take shorter lived depreciation based on property for QLI's at centers - (change from 39 to 7 or 5 year life) - Automatic Change #199; Regs - 1.167(a)-4(a)

Managing Taxable Income Con't.

- Making the Most of the Tangible Property Regulations
  - Election to follow GAAP and forego otherwise deductible repairs
    - Year by year analysis/election
    - Reg. Section 1.263(a)-3(n)
    - Made with timely filed tax return
  - Consider if made a previous method change to deduct repair and maintenance costs under Reg. Section 1.262-4.

Managing Taxable Income Con't.

- Sample Election

Section 1.263(a)-3(n) Election

For the Tax Year Ended: 12/31/20XX

[Taxpayer] is electing to capitalize repair and maintenance costs under § 1.263(a)-3(n) of the Final Repair Regulations (T.D. 9636) for the taxable year that began January 1, 20XX and ended December 31, 20XX.

[Taxpayer] is electing to treat any amounts paid for repairs and maintenance that are capitalized on the taxpayer's books and records as improvements to tangible property and began to depreciate the cost of such improvements when they were placed in service.

Managing Taxable Income Con't.

- Other Opportunities to Consider
  - Prepaid Payment Liability Acceleration
    - Automatic Change # 78
    - Reg. Section 1.263(a)-4(f), "12 month rule"
    - Insurance, software maintenance contracts, warranty contracts, annual dues
    - Year 1 481(a) adjustment and then favorable/unfavorable fluctuates depending on increasing/decreasing rates and periods to which payment relates

Managing Taxable Income Con't.

- Other Opportunities Continued
  - Timing of Incurring Real Property Taxes (and other taxes)
    - Rev. Proc. 2015-14 Automatic Change # 43
    - Utilize the recurring item exception to accelerate property tax deductions under 461(h)(3) and Reg. Sec. 1.461-5(b)(1)
    - Change from deducting ratably over period to which tax relates, typically following GAAP, to deducting:
      - In the year that all events have occurred to establish the liability
      - The amount of the liability can be determined with reasonable accuracy
      - Economic Performance occurs on or before the earlier of the date the taxpayer files a timely return (including extensions), or September 15th
    - Great for companies with property in NY, CA, CT, MI, NH, MD… among others

Managing Taxable Income Con't.

- Other Opportunities Continued
  - 467 Rental Agreements
    - Automatic Change #136
    - Possibility to defer prepaid rents pursuant to Reg. Sec. 1.467-1(d)(2)(iii)
    - Check with your lease accounting team regarding the ability to run queries in your general ledger/lease accounting software
    - Taxpayer only receives limited audit protection in the case of disqualified leasebacks and long-term agreements described in Reg. Sec. 1.467-(3)(b)
    - See also Rev. Proc. 2011-14, Section 20.01

The PATH Act Changes to E&P

- PATH Act changes to E&P rules for
  - REIT’s DPD
  - Shareholders’ treatment of distributions
  - Clarification of other provisions that reference E&P
- Capital loss carryover issues
- § 163(j)
- E&P after a preferential dividend

The PATH Act Changes to E&P

- Determination of E&P for purposes of determining the DPD largely the same
  - Under revised § 562(e)(1), E&P for any taxable year (but not accumulated E&P) is increased by the amount of gain on the sale of real property taken into account during the year (and not otherwise taken into account).
  - This is very similar to prior law, except that it does not require that the sale itself occur during the year, and so this would apply to installment sales.

The PATH Act Changes to E&P

- Determination of E&P for purposes of determining the DPD largely the same
  - In addition, § 857(d)(1)(A), which is the same as prior § 857(d)(1), is also applied.
  - Therefore, a REIT is entitled to receive a DPD for distributions corresponding to gains on the sale of real property and other income of the REIT, both as determined for income tax purposes, even though the gain as determined for E&P purposes would be lower or amounts not allowable for income tax purposes would otherwise have reduced E&P.

The PATH Act Changes to E&P and Capital Losses

- Determination of E&P for § § 301 and 316 purposes—i.e., shareholder treatment of distributions as dividends or returns of capital
  - § 857(d)(1)(A) applies as just described, unless it is also the case that the amounts not allowable for income tax purposes in the current taxable year were allowable in a prior year, in which case § 857(d)(1)(B) cancels § 857(d)(1)(A).

The PATH Act Changes to E&P and Capital Losses

- Determination of E&P for § § 301 and 316 purposes—i.e., shareholder treatment of distributions as dividends or returns of capital
  - To restate this in something that more closely resembles English, if there is a deduction for E&P purposes in the present year that does not correspond to a deduction for regular income tax purposes in the current year, but does correspond to a deduction for regular income tax purposes in a prior year, then the deduction reduces current year E&P.

The PATH Act Changes to E&P and Capital Losses

- Determination of E&P for § § 301 and 316 purposes—i.e., shareholder treatment of distributions as dividends or returns of capital
  - The technical explanation to the PATH Act makes clear that new rules were intended to permit a REIT to get the DPD it needs to zero out taxable income, but without subjecting its shareholders to double taxation. Prior law permitted the REIT to get the DPD, but at the cost of the shareholders having to treat the additional E&P as increasing the amount of the dividend as well.

The PATH Act Changes to E&P and Capital Losses

- Determination of E&P for purposes of applying other REIT rules:
  - Section 857(b)(9)
  - Section 858
  - Section 565
  - Section 4981
- *See* A. Giannese and D. Lee, "PATH Act Updates Earnings and Profits Rules for REITs," 41 Daily Tax Report J-1 (March 2, 2016).

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - For the treatment of capital losses, see Rev. Rul. 76-299, 1976-2 CB 211.
  - In the year the item occurs, the REIT can get a DPD under § § 562(e)(1) and 857(d)(1)(A) for its full taxable income, even though E&P would otherwise be reduced by the item. The shareholders, however, do not appear to get any benefit from § 857(d)(1)(B), since there was no deduction in an earlier year. Consequently, they are taxed on the full amount of the distribution as a dividend.

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - In the year when the deduction becomes available (e.g., there were capital losses in an earlier year, and they were carried forward to reduce capital gain in the current year), the deduction does not reduce current E&P. Consequently, if the REIT does not limit its distribution to its taxable income as determined by taking into account the now-available deduction, the shareholders will be taxable to the extent of the full current year E&P.

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - The best fix would appear to require legislation to change § 857(d)(1)(B) so that it would apply whether the item was taken into account for income tax purposes in a prior year or could be taken into account in a later year. That way, the E&P for determining the DPD in the first year would be increased, but not the E&P for determining shareholder dividends.

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - Failing a legislative remedy, the existing regulations should be revised. At present, Treas. Reg. § 1.857-7(b) provides that if the REIT takes advantage of § 857(d)(1), and distributes the full amount of its taxable income, the accumulated E&P of the subsequent year will not reflect the reduction of E&P in the earlier year.

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - The mechanism for reaching this result is that the distribution corresponding to the excess of the actual distribution over the actual E&P (that is, without applying the § 857(d)(1) limitation) is treated as a return of paid-in capital. An odd result, both because paid-in capital is not a tax concept and because the shareholders are treated for tax purposes as getting a dividend, not a return of capital.

The PATH Act Changes to E&P and Capital Losses

- Problem with items like capital losses or interest limited by § 163(j), where there is a full E&P reduction in the item occurs, but where the deduction is allowable (if at all) in a later year.
  - Even if the regulation were amended so that the earlier reduction in E&P reduced accumulated E&P, that would be only occasionally helpful, because dividend treatment is determined initially based upon current year E&P, which would not be affected.

Preferential Dividends

- Following a preferential dividend, does E&P remain so that it is possible for the REIT to get a DPD for a nonpreferential dividend (either during the same year, through a § 858 carryback, or through a § 860 deficiency dividend)?
  - In PLR 200729021 (*See* NAREIT Compendium Memorandum 2007-24), the Service ruled that a preferential dividend does not reduce E&P, on the rationale that under § 858(d)(1), deductions not allowable in computing a REIT's taxable income do not reduce current E&P. A good result, but this approach raises questions as to the proper treatment of the preferential dividend by the shareholders. The Service has indicated that they would not now issue a ruling to this effect.
  - In PLR 201503010 (*See* NAREIT Tax Report 2015-2) and PLR 201537020 (*See* NAREIT Tax Report 2015-32), the Service ruled that, in the case of a § 481(a) adjustment relating to depreciation, even if the § 481(a) exceeded the correlative E&P adjustment, there would be enough E&P for the REIT to get a DPD to offset the adjustment. The rationale, based on the legislative history of the TRA of 1986, was that Congress indicated its belief that this is how the REIT rules operate. Any such dividend would appear to be treated as a dividend both for DPD purposes and by the shareholders.

Concurrent Session: REIT Taxes All Around Us

Thursday, March 31st
2:45pm – 4pm
Marriott Marquis, Washington DC

Moderator:
Brian Wood, SVP & Chief Tax Officer, Ventas, Inc.

REITWise 2016 – REIT Taxes All Around Us

REIT Investments in Non-Controlled Partnerships

Sample Provision[1]

ARTICLE I
REIT PROTECTION PROVISIONS.

Section 1.1 Generally.

The Members acknowledge and agree that the REIT Member is an Affiliate of REIT Parent and that REIT Parent is a real estate investment trust for U.S. federal income tax purposes (a "REIT") and is therefore subject to the requirements set forth in Code Sections 856 through 859. Notwithstanding anything herein to the contrary, each Member acknowledges and agrees that, for so long as REIT Parent (which term also refers to any successor to REIT Parent, whether by merger or otherwise, that also is intended to qualify as a REIT) directly or indirectly owns interests in the Company, through REIT Member or otherwise, it is intended that the Company and each Subsidiary shall be operated in such a manner so that REIT Parent may continue to so qualify as a REIT and avoid U.S. federal income and excise tax liability to the extent permitted under the Code. The Company shall, promptly upon the request of REIT Member, make available to REIT Member all data and information in the possession of the Company which is determined by REIT Member to be necessary or helpful to (1) determine the tax treatment of REIT Parent, or (2) monitor REIT Parent's compliance with the requirements relating to the status of REIT Parent as a REIT. In the event of any conflict or inconsistency between the terms of this Article I and any other provision of this Agreement, the terms of this Article I shall control.

Section 1.2 Covenants.

Notwithstanding anything in the Agreement to the contrary, the Members acknowledge and agree that neither the Company nor any Subsidiary shall, without the prior written consent of REIT Member:

(A) own assets other than interests in real property, furniture, fixtures, equipment and intangible property associated with such real property, cash, bank time deposits, interests in money market accounts or receivables which arise in the ordinary course of its rental business, such as for rent from occupancy of space;

(B) directly or indirectly acquire (whether by purchase, contribution, distribution, operation of law, or otherwise) or own any equity interest in any corporation, partnership, limited

---

1 This provision may not be appropriate for any particular joint venture. The provision used for any joint venture should be drafted to address the specific circumstances.

liability company, trust, or other entity, except in the case of interests in money market accounts or in an entity that is either (1) disregarded as separate from the Company for U.S. federal income tax purposes or (2) with the prior written consent of REIT Member not to be unreasonably withheld, treated as a partnership for U.S. federal income tax purposes (subject to the condition that such disregarded entity or partnership shall have agreed to be bound by the entirety of this Article I);

(C) directly or indirectly acquire (whether by purchase, contribution, distribution, operation of law, or otherwise), own, or originate any loan or debt instrument, or consent to any modification, alteration, or amendment of any of the same; provided that this Section 1.2(C) shall not restrict the Company's ownership of bank time deposits or interests in money market accounts;

(D) directly or indirectly derive income in any taxable year other than rent from occupancy of real property and associated personal property, interest income from bank time deposits or money market accounts, or gain from sale of properties that satisfy the requirements of the prohibited transaction safe harbor set forth in Section 857(b)(6)(C) of the Code with respect to REIT Parent, [to the extent such income would exceed X percent (X%) of the total gross income of the Company for such year];

(E) enter into any lease of space for a term of less than thirty (30) days;

(F) directly or indirectly enter into any lease with a Person (A) that is a corporation for U.S. federal income tax purposes, if REIT Parent would be considered to own (x) ten percent (10%) or more of the total value of shares of all classes of stock of such Person or (y) stock of such Person possessing ten percent (10%) or more of the total combined voting power of all classes of stock of such Person entitled to vote, or (B) that is an entity that is not a corporation for U.S. federal income tax purposes, if REIT Parent would be considered to own an interest of ten percent (10%) or more in the assets or net profits of such Person, with ownership by REIT Parent in either case determined taking into account the rules for constructive ownership described in Section 318(a) of the Code, as modified by Section 856(d)(5) of the Code (a "Related Party Tenant");

(G) directly or indirectly enter into any lease which provides for rent based on any Person's net income or profits;

(H) directly or indirectly permit any sublease or license of any portion of any Property if either (A) the rent or other amounts to be paid by the proposed subtenant or licensee thereunder would be based, in whole or in part, on the income or profits derived by such proposed subtenant or licensee from the property, or (B) the sublessee or licensee, as the case may be, would be a Related Party Tenant;

(I) directly or indirectly permit any assignment of a lease (or sublease or license) of all or any portion of any Property if either (A) any amounts to be paid by the proposed assignee thereunder to the assignor would be based, in whole or in part, on the income or profits derived by such proposed subtenant or licensee from any property, or (B) the assignee would be a Related Party Tenant;

(J) enter into any lease which provides for the rental of personal property, except a lease which provides for the rental of both personal property and real property and in which the rent attributable to such personal property for the taxable year does not exceed [ten percent (10%)] of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, such lease (as determined pursuant to Code Section 856(d)(1));

(K) directly or indirectly derive in any year, “impermissible tenant service income” (as defined under Code Section 856(d)(7)) with respect to any property, which exceeds [0.8%] of all income received or accrued during such taxable year from such property;

(L) provide services or amenities at any Property that are (i) not customarily provided to tenants of comparable properties in the same geographic area, unless such services or amenities are provided by an entity that is a “taxable REIT subsidiary” (as defined in Section 856(l) of the Code) with respect to REIT Parent (a “TRS”), or (ii) primarily for the convenience of the tenant, unless such services or amenities are provided either by an entity that (A) is a TRS or (B) qualifies as an “independent contractor” (within the meaning of Section 856(d)(3) of the Code) with respect to REIT Parent and from which REIT Parent does not directly or indirectly derive any income;

(M) fail to [use commercially reasonable efforts to] cause the Company to make distributions to Members so that the annual distributions paid to REIT Member are an amount equal to or greater than the amount of taxable income derived by REIT Member from the Company for each taxable year;

(N) elect to be taxed as, or take any other action or position the effect or import of which would be that the Company, any Subsidiary, or any of their subsidiaries is or would be treated as, other than a partnership or disregarded entity for U.S. federal income tax purposes;

(O) take any other action, if the Company or any Subsidiary is informed in writing by REIT Member in the exercise of REIT Member’s reasonable judgment, that such action could cause REIT Parent to lose its qualification as a REIT; or[2]

(P) commit to do any of the foregoing.

---

2 Due to its uncertainty, the REIT may need to offer to indemnify the other partner for any losses associated with the use of this provision.

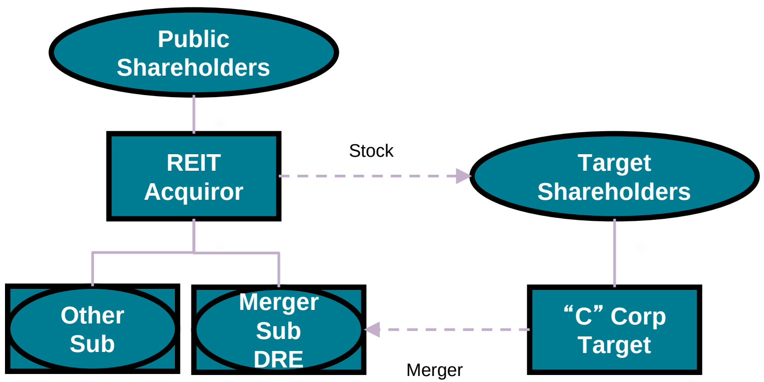
REIT’s Acquisition of a C Corporation

REIT’s Acquisition of a C Corporation

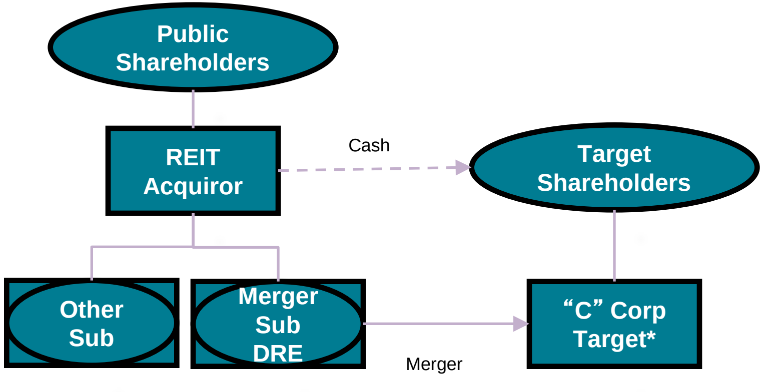
- Many REIT-able assets (e.g., infrastructure, healthcare, etc.) may potentially be separated from operations and acquired via carve-out transactions.
- Tax-exempt and foreign investors may sometimes favor ownership and operation of REIT-able assets in leveraged “C” blockers and may be exempt from U.S. tax on sales of “blocker” shares.
- A REIT is likely a longer term investor and can wait out the recognition period on “converted” assets (now being reduced to 5 years under the PATH Act).
- Recent transactions in data-center, healthcare, communications towers, record storage, office, etc.
- Common structures
  - Forward subsidiary merger (stock)
  - Reverse subsidiary merger (stock or cash)
  - Cash purchase

Potential Structure - Forward Sub Merger (Stock)



- Section 1.368-2(b)(1)(iii) - Example 2 - Merger of a target corporation into a disregarded entity in exchange for stock of the owner - This transaction could qualify as a statutory merger or consolidation for purposes of section 368(a)(1)(A) if other requirements are satisfied.
- Intended to be non-recognition to both Target and its shareholders; carryover-basis transaction and non-REIT E&P.
  - If recognition, see Rev. Rul. 69-6 (deemed sale of assets by Target).

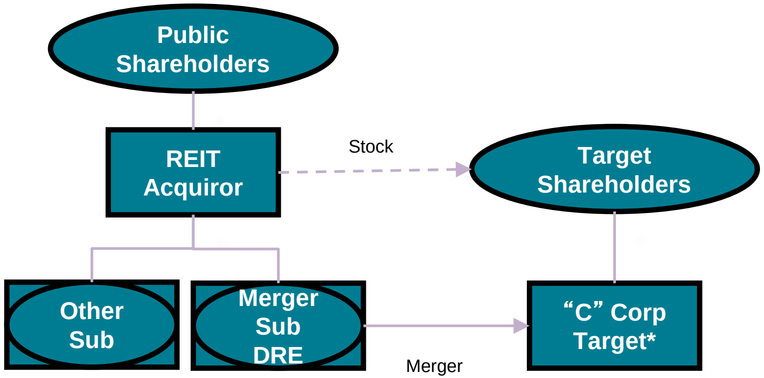
Potential Structure - Reverse Sub Merger (Cash)



*Target becomes a QRS (unless making TRS election) and is deemed liquidated into Acquiror REIT

- Rev. Rul. 90-95 (Situation 2) - P acquired all of the stock of T in a reverse cash merger and promptly liquidated T by merging T upstream into P. The ruling held that the transaction was properly treated as a taxable stock purchase followed by a tax free section 332 liquidation, and not as a taxable purchase of T's assets by P under the Kimbell-Diamond case.
- Target becoming a QRS and deemed liquidated into Acquiror REIT; carryover-basis transaction and non-REIT E&P.

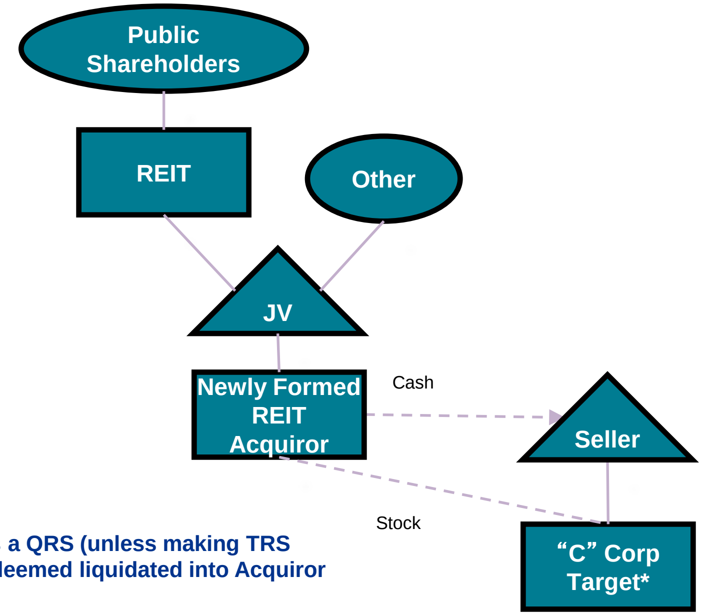
Potential Structure - Reverse Sub Merger (Stock)



***Target becomes a QRS (unless making TRS election) and is deemed liquidated into Acquiror REIT**

- Section 1.368-2(b)(1)(iii) - Example 6 - Merger of a disregarded entity into a corporation - The transaction cannot qualify as a statutory merger or consolidation for purposes of section 368(a)(1)(A).
- However, can this qualify as a stock-for-assets reorganization of section 368(a)(1)(C) – Target transferred its assets to Acquiror in exchange for Acquiror voting stock and then distributing such stock to Target shareholders in liquidation?
- Target becoming a QRS and deemed liquidated into Acquiror REIT; carryover-basis transaction and non-REIT E&P.

Potential Structure – Cash Purchase



***Target becomes a QRS (unless making TRS election) and is deemed liquidated into Acquiror REIT**

- Taxable sale of Target stock
- Target becoming a QRS and deemed liquidated into Acquiror REIT; carryover-basis transaction and non-REIT E&P.

Why Should We Care?

- A REIT must comply with specific asset-holding and income-source requirements.
- A REIT must distribute 90 percent of its “ordinary” taxable income and is taxed on any undistributed taxable income.
- A REIT must not have any non-REIT E&P at a year end.
- A REIT is subject to corporate level tax on net built-in gain recognized (during the recognition period) on assets acquired from a “C” corporation in a carryover-basis transaction.
- A REIT is subject to a 100-percent tax on prohibited transactions.
- A “C” corporation is subject to corporate level tax on its taxable income, including income recognized as the result of being acquired by a REIT.

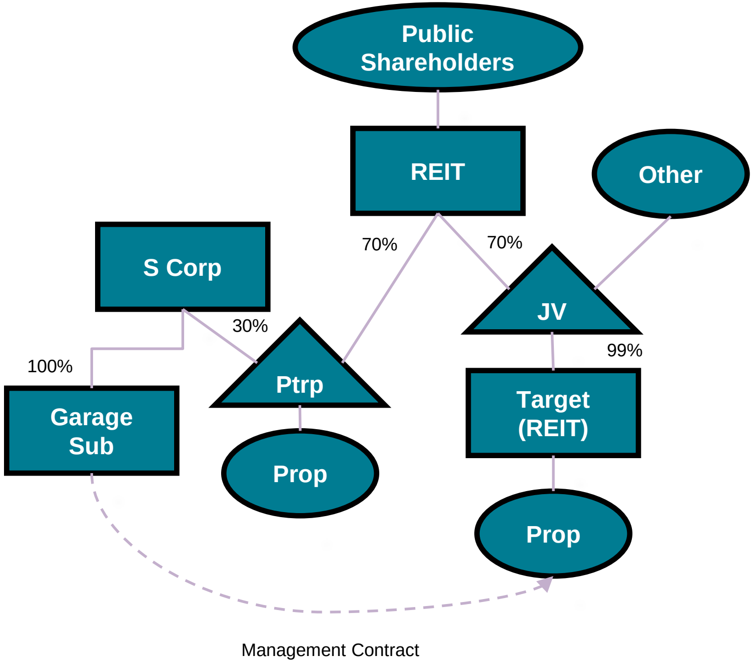
Tax Considerations - Asset & Income

- Typical property acquisition due diligence (e.g., lease vs. management contract; lease vs. financing; lease review; related tenants; TRS limited rental; cross-checking tenants/IKs; customary determination; impermissible tenant services; garage's predominate-use documentation; TRS election and service agreements; cost reimbursements; etc.)
- Review of acquired assets (e.g., intangibles; non-tenant receivables; section 467 loans; partner loan in connection with a defaulted capital contribution; mezzanine loan with bad boy carve-outs; other securities; etc.)
- Corporate (e.g., investments in corporate or partnership subsidiaries; beneficiary interest in trusts; pure preferred equity investments; guaranteed payments; identification of qualified derivative instruments; 481(a) adjustments; etc.)

Tax Considerations – Distribution Requirement

- For a taxable stock transaction, can Acquiror REIT preserve its ability to obtain FMV basis with respect to Target's assets by converting Target to a REIT, and waiting out the recognition period under section 1374?
  - After the recognition period has expired, Target may be liquidated in a taxable transaction (i.e., recognizing a gain on the distributed property under section 336(a) and may claim a deduction for dividend paid based on the liquidation distribution under section 562(b)(1)(B) to eliminate section 336(a) gain.
- What are the risks of maintaining a subsidiary REIT? E.g., inadvertent/foot faults, ownership attrition and related tenants/IKs, etc.

Tax Considerations – Distribution Requirement (continued)



- Ownership attribution risk?
  - REIT's charter typically contains excess share provisions to ensure REIT compliance.
  - Can such provisions be effective to prevent Target (REIT) from having a disqualified IK?
  - Pursuant to modified section 318(a)(3)(A) and then 318(a)(3)(C), Garage Sub would be deemed to own Target and not qualify as an IK.

Tax Considerations - Non-REIT E&P

- What if the determined and distributed amount is low? - Section 1.857-11(c) directs REITs to section 852(e) (procedures similar to deficiency dividend) for non-REIT E&P.
- What is the risk of a pre-transaction distribution by Target being re-characterized as part of the stock purchase price?
  - Rev. Rul. 75-493 held that a cash amount to a sole shareholder prior to the sale of the stock was a dividend, where the buyer had no legal obligation to purchase the stock upon the declaration and payment of the dividend.
  - Waterman Steamship Corp. v. Commissioner, 430 F.2d 1185 (5th Cir. 1970) and TSN Liquidating Corp., Inc. v. United States, 624 F.2d 1328 (5th Cir. 1980)
  - PLR 9717036 - The IRS respected the pre-sale distribution (including the issuance of promissory notes if cash reserves are insufficient) because "the Notes will be paid with cash from the continuing operations of Target and the Subsidiaries or from loans against their assets, and not from the assets of [the buyer REIT]."

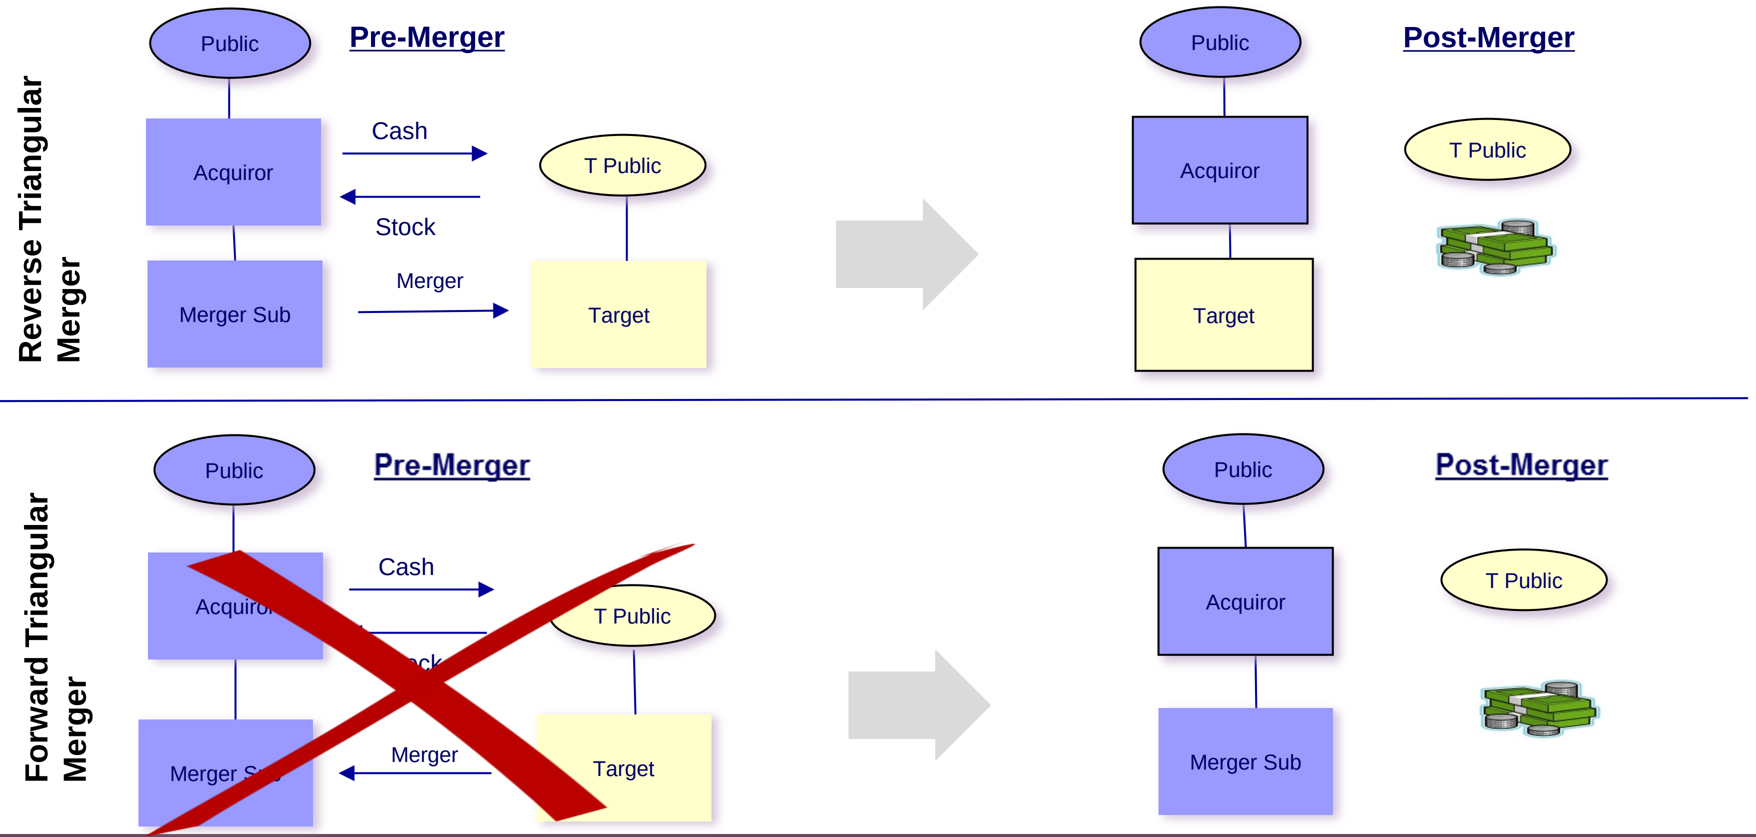
Tax Considerations - Income Tax Exposures

- If consolidated group, Target's excess loss account (akin to negative basis; to recapture P's negative adjustments with respect to S stock to the extent the negative adjustments exceed P's basis in the stock)
- Built-in gain
- Sale of unwanted assets and prohibited transactions
- If Target claims to be a QRS of another REIT, can it have any income tax exposures?
- If intended to be a reorganization, is Target an undiversified investment company?

REIT-to-REIT M&A

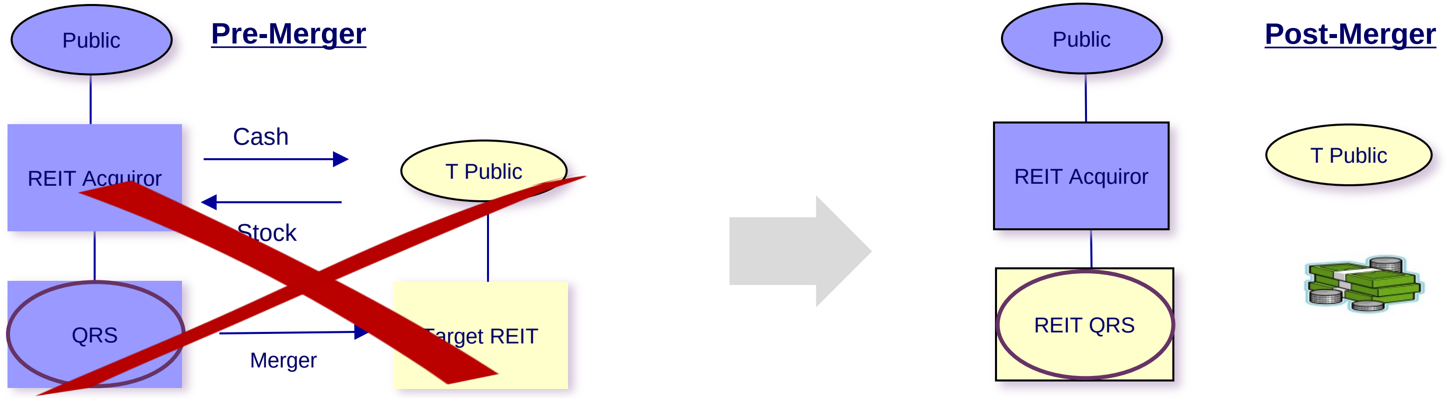
Taxable Deals

Triangular Mergers – T is Not a REIT

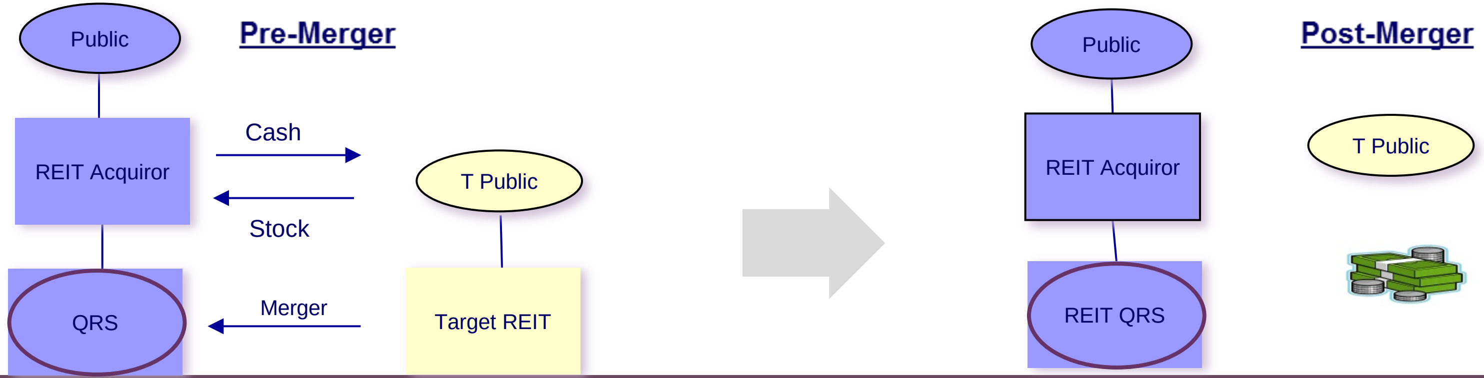


Triangular Mergers – T is a REIT

Reverse Triangular Merger

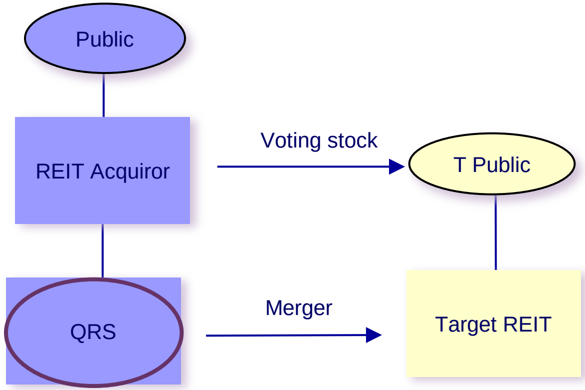


Forward Triangular Merger

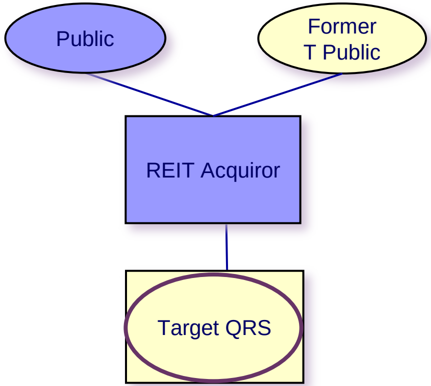


Reverse Subsidiary Merger: A2E, B or C?

Pre-Merger



Post-Merger



To qualify as a reorganization under § 368(a)(2)(E), the consideration in a reverse subsidiary merger must consist of at least 80% voting stock (i.e., ≤ 20% boot).

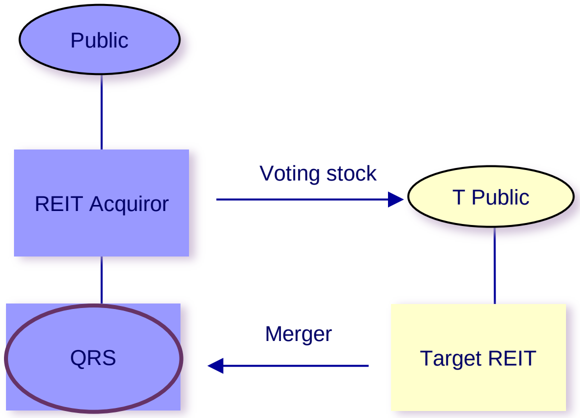
Because the merger subsidiary is a QRS and the target REIT will become a QRS, the merger cannot qualify as a reorganization under § 368(a)(2)(E) (or § 368(a)(1)(B)).

Because the target REIT is deemed to liquidate after the merger, the merger qualifies as a reorganization under § 368(a)(1)(C) (Rev. Rul. 67-274)

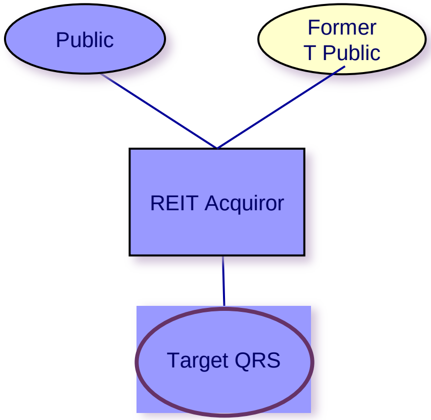
If the merger consideration had included any boot, it would generally be treated as a fully taxable stock purchase followed by a liquidation (Rev. Rul. 90-95)

Forward Subsidiary Merger: A2D or A?

Pre-Merger



Post-Merger



To qualify as a reorganization under § 368(a)(2)(D), the consideration in a forward subsidiary merger must consist of at least <u>40%</u> stock (<u>i.e.</u>, ≤ 60% boot).

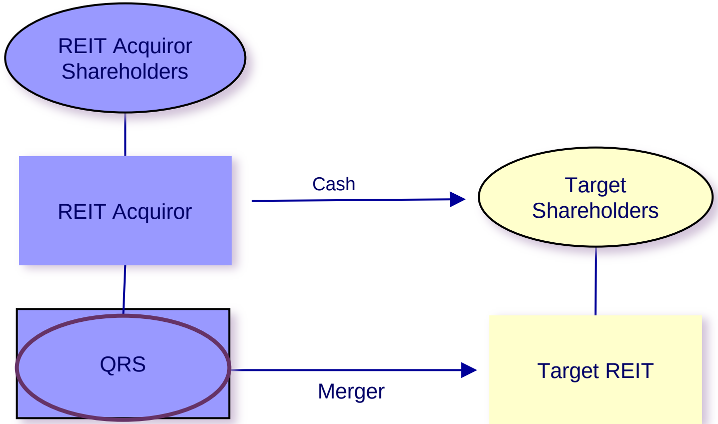
Because the merger subsidiary is a QRS and the target REIT will <u>become</u> a QRS, the merger cannot qualify as a reorganization under § 368(a)(2)(D).

Because the target REIT is deemed to merge directly into the acquiring REIT, the merger should qualify as a reorganization under § 368(a)(1)(A).

If more than 60% of the merger consideration is cash or other property, the merger will be treated as a taxable sale of assets followed by a liquidation. (Rev. Rul. 69-6)

Achieving a Basis Step-Up in a Cash Merger

Reverse Subsidiary Merger?



Tax Result:

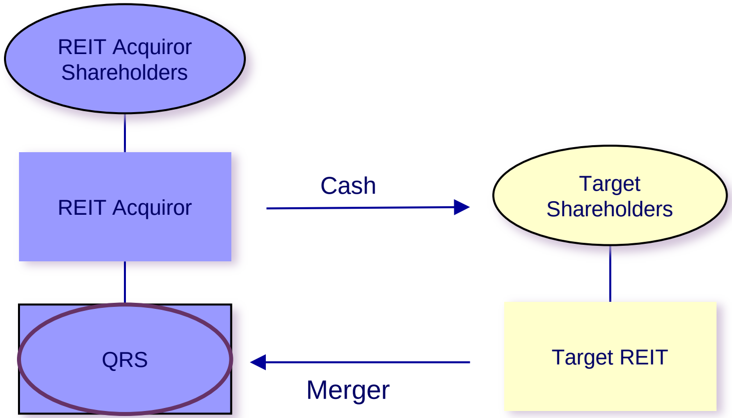
Because the merger subsidiary is a QRS, the merger is treated as a qualified stock purchase by the acquiring REIT.

Because it will become a QRS after the merger, the target REIT will be deemed to transfer its assets and liabilities to the acquiring REIT in a § 332 liquidation.

1. No Basis Step Up
2. Tax at shareholder level
3. What about FIRPTA?

Achieving a Basis Step-Up in a Cash Merger

Forward Subsidiary Merger?



In a forward subsidiary merger, the target recognizes gain in a deemed sale of assets followed by a liquidation. (Rev. Rul. 69-6)

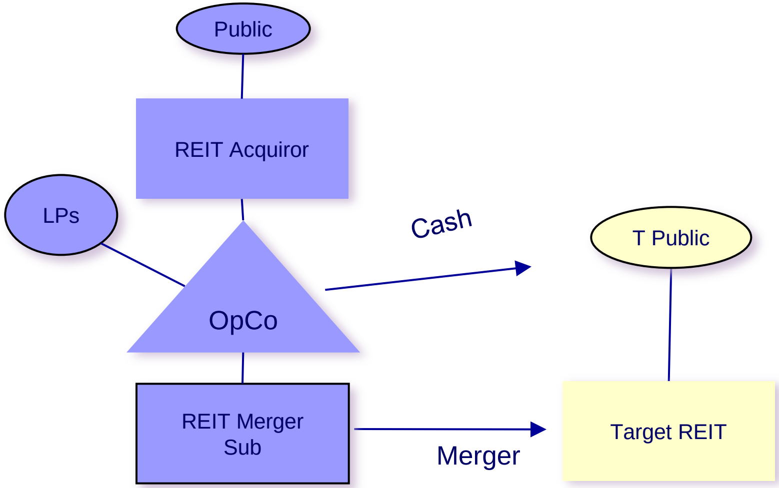
If the target is a REIT, the liquidating distribution should qualify for the dividends paid deduction (DPD) under § 562(b).

Tax Result:

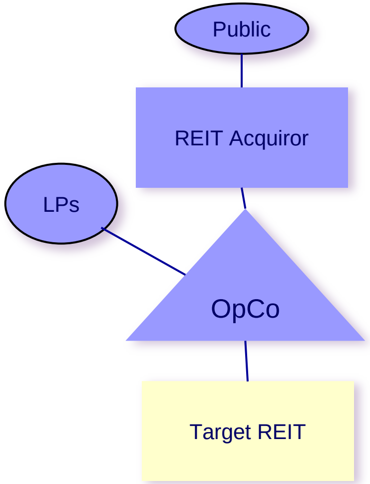
1. Taxable Sale of Assets
2. DPD Shelters the Gain
3. Full Basis Step Up
4. Capital Gain to Shareholders
5. What about FIRPTA?

Reverse Subsidiary Merger with a Partnership

Pre-Merger



Post-Merger



Because Opco (rather than the REIT parent) owns the Target REIT after the merger, the liquidation of the Target REIT is taxable.

Although the Target recognizes § 311 gain in the liquidation, the gain is sheltered by the DPD.

Opco recognizes no gain b/c it has a FMV basis in the Target stock.

Tax Result:

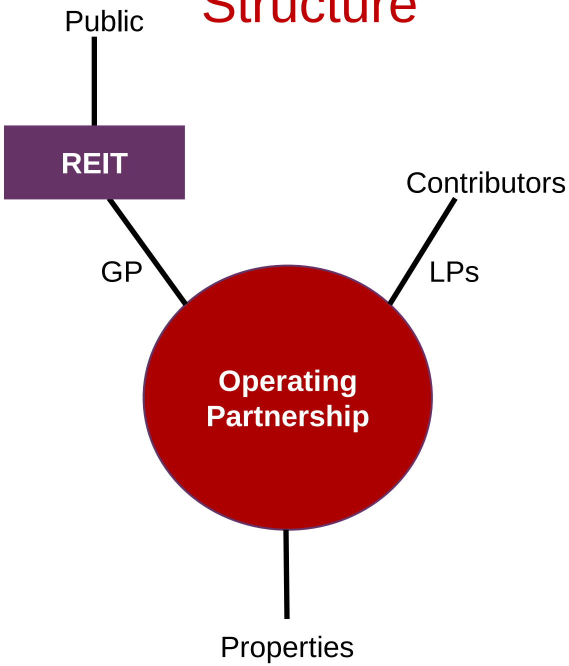
1. Full Basis Step Up
2. No Add'l Tax to Public
3. Avoids FIRPTA?

Operating Partnership
M&A Transactions

What is an UPREIT and Why Contribute to It?

- In a typical REIT IPO, a sponsor creates a new UPREIT structure, including a REIT parent and an OP subsidiary.
- The OP acquires the sponsor's management business and properties through a series of merger or contribution transactions, referred to as a roll-up.
- Participants in the roll-up receive cash, OP units or REIT shares.

Typical UPREIT Structure



Why Use an UPREIT?

- A transfer of property to a REIT in exchange for its shares would be fully taxable to the transferor in most cases.
- The UPREIT structure allows for property contributions to the OP in exchange for OP units on a tax-deferred basis.
- One REIT share and one OP unit each represent an undivided and equal slice of a single pool of assets (i.e., the assets owned by the OP), so there is economic fungibility.
- REIT shares and OP units are typically entitled to identical distributions.
- An OP Unitholder has the right to put some or all of its OP units to the OP in exchange for cash based on the current REIT stock price.
- Alternatively, the REIT has the right to acquire the OP units in exchange for REIT shares on a one-for-one basis.
- The redemption or exchange is taxable.

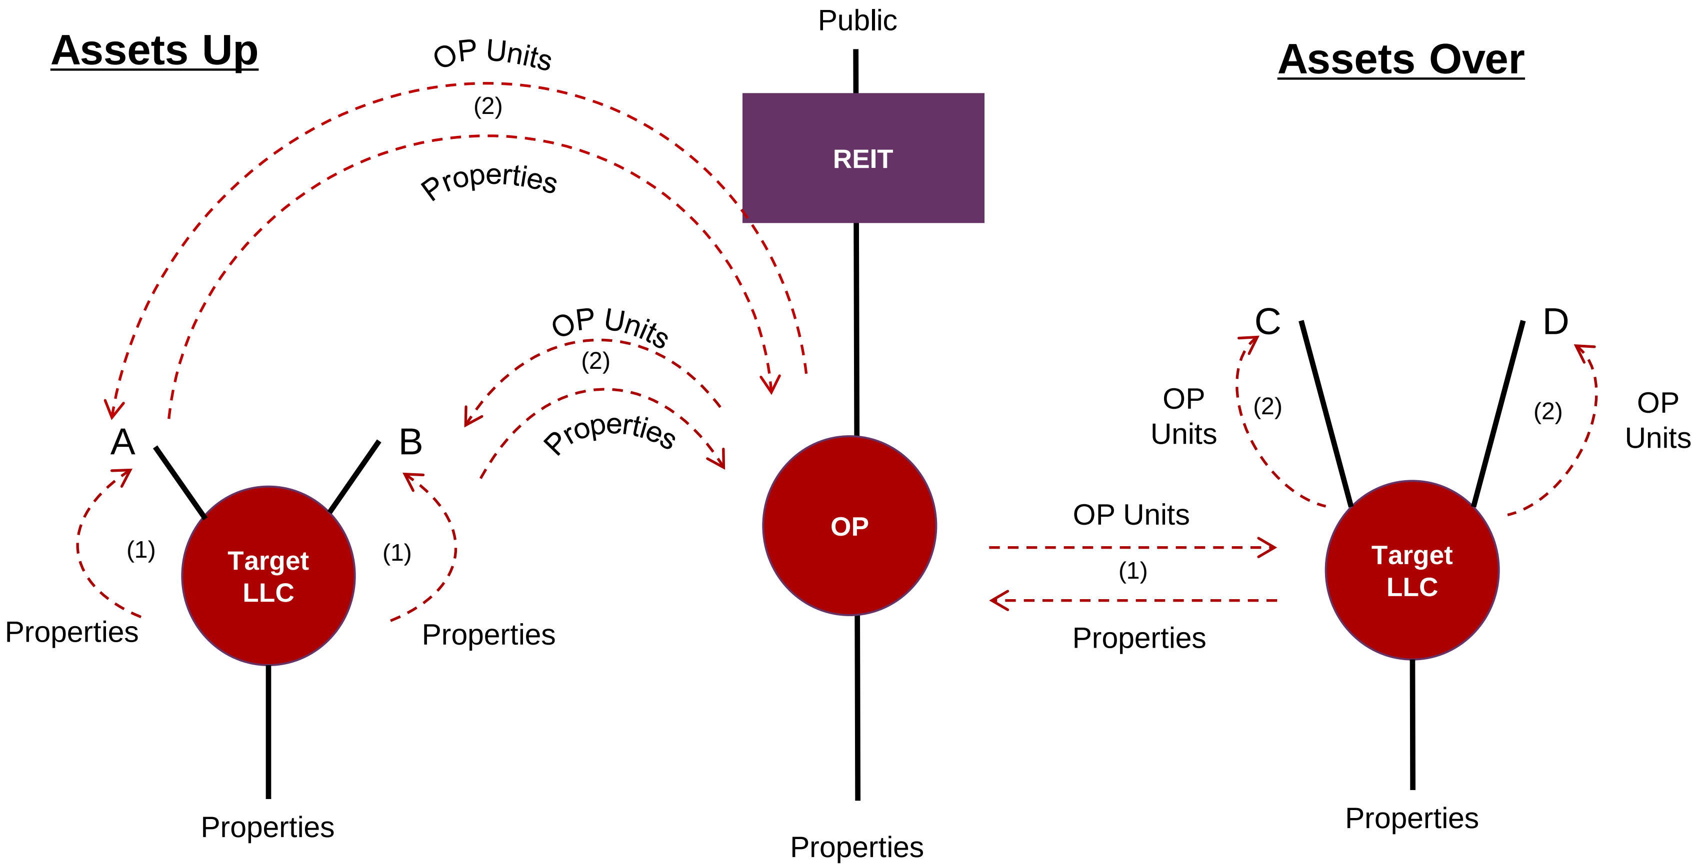
Merger and Contribution Issues

- The merger and contribution issues discussed in these slides may arise in:
  - Private contributions of property or partnership interests in exchange for OP units.
  - Merger and acquisition transactions between two UPREITs or DOWN REITs.
  - A REIT’s acquisition of a C corporation, followed by the REIT’s contribution of the assets of the corporation to its OP.

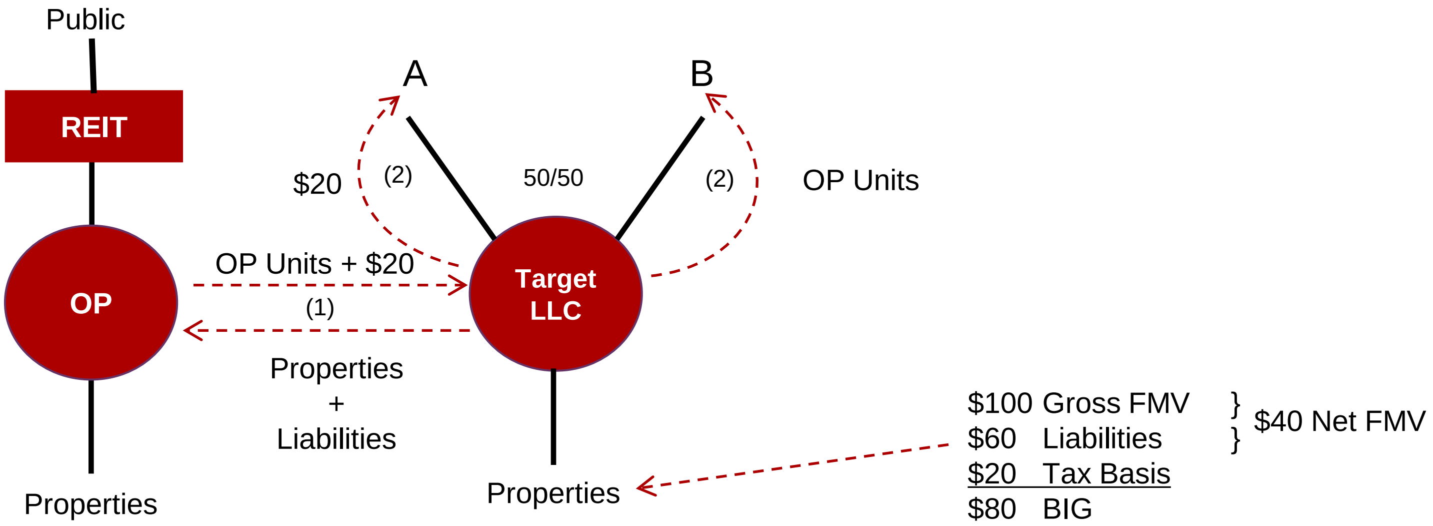
Partnership Mergers

- Code and Treasury Regulations do not define partnership mergers.
- Working Definition – Transaction in which:
  - Assets/liabilities of a target partnership are transferred to acquiring partnership.
  - At least one partner in the target partnership becomes a partner in the acquiring partnership.
  - Target partnership ceases to exist for Federal income tax purposes.
- TR § 1.708-1(c)(1) determines the direction of the merger (i.e., which partnership survives)
  - The resulting partnership is the continuation of any merging partnership whose partners own more than 50% of the capital and profits in the resulting partnership.
  - If the above could be more than one partnership, it's the partnership which contributed the most net assets.
  - The direction of the merger under these rules may differ from the direction taken in form.
- The direction of the merger may affect the need to make tax elections, and the tax consequences of the merger (e.g., the applicability of § 704(c) and the mixing-bowl rules).
- TR § 1.708-1(c)(3) determines the form of the merger.

UPREIT: Form of Merger

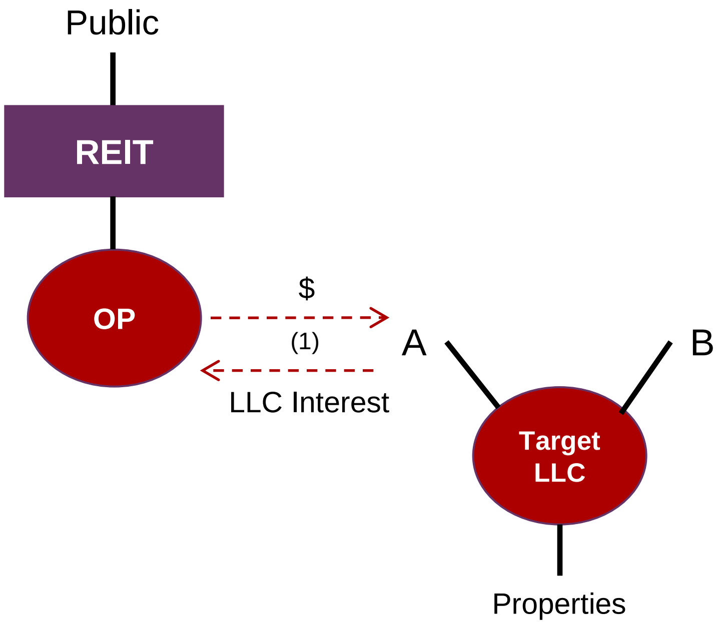


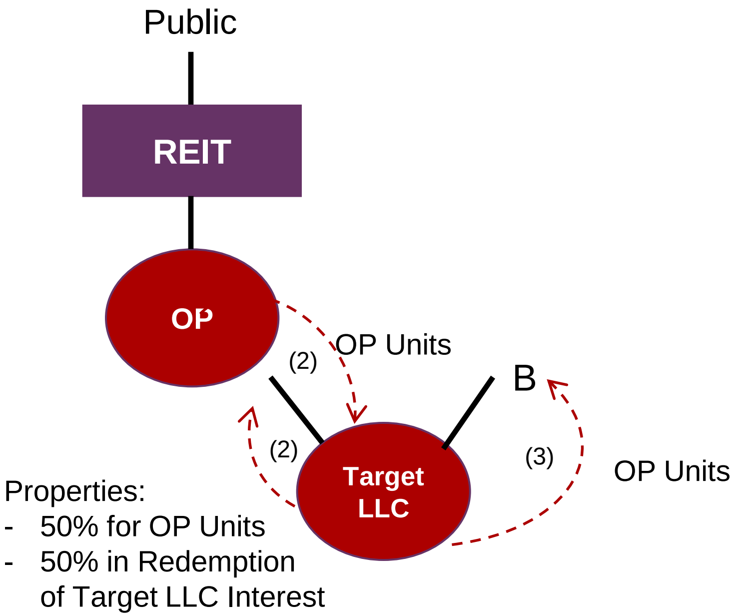
Simple UPREIT Contribution Example: Assets over Merger



- Cash causes Target LLC to recognize $40 [$80 BIG x 50%] of gain.
- Gain would be allocated $20 (50%) to A and $20 (50%) to B, even though B received no cash.
- B could recognize additional gain due to a reduction in liabilities (discussed later).

Simple UPREIT Contribution Example: Deemed Sale Election – TR § 1.708-1(c)(4)

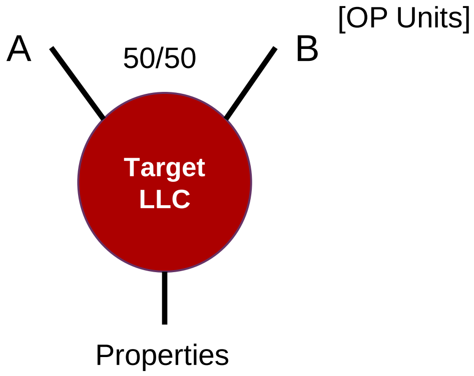




- Avoids gain recognition to B because no cash is received by Target LLC.
- Deemed sale election must be made with A's consent given prior to or contemporaneous with the transaction.

Simple UPREIT Contribution Example: Gain from Deemed Cash Distributions

- Partnership liabilities are allocated to its partners.
- A reduction in a partner's share of partnership liabilities is treated as a cash distribution.
- B received OP units and expects tax deferral.
- Suppose B's share of OP liabilities is $5:
  - $30 Target LLC liabilities - $5 OP liabilities = $25 deemed cash distribution
  - $25 distribution - $10 tax basis = $15 gain recognition
- Treasury Regulations provide alternatives for debt allocations.
- B may be able to increase non-recourse debt allocation from OP (reducing its gain) with a more favorable alternative for non-recourse liabilities or by a guarantee of OP debt.
- If B also guaranteed $15 of OP debt, it would not recognize gain.



$100 Gross FMV
$60 Liabilities
<u>$20 Tax Basis</u>

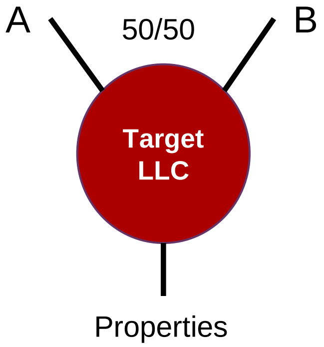
Assume A + B each have:
- $10 tax basis in LLC interest
- $30 share of LLC liabilities

Simple UPREIT Contribution Example: Other Ways to Recognize Gain on Contributions

- At-Risk Rules
  - Will recognize gain to extent of prior losses if negative amount at-risk.
  - Rules operate similar to tax basis rules, but there are differences.
- Disguised Sale Rules
  - A partnership's distribution of cash or other property to a partner within 2 years of a property contribution are presumed to be a sale of the property to the partnership.
  - A contrary position requires that the facts/circumstances "clearly establish" that the transfers do not constitute a sale, and requires tax return disclosure.
  - Applicable to deemed distributions of cash resulting from a reduction of liabilities other than "qualified liabilities," and in limited circumstances, a reduction of "qualified liabilities."
- Mixing-Bowl Rules – May apply if a partner contributed property to Target LLC in the prior 7 years.

Simple UPREIT Contribution Example: Sale of Contributed Property - § 704(c) Issues

- B received OP units and expects tax deferral.
- If OP sells the former Target LLC property, gain attributable to B's share of the $80 BIG ($40, subject to adjustments) is specially allocated back to B.
- B may be subject to substantial tax without a commensurate cash distribution.
- Any gain in excess of B's share of the BIG is generally allocated to all partners.



$100 Gross FMV
$20 Tax Basis
$80 BIG

Simple UPREIT Contribution Example: Tax Matters Agreement

- Debt Allocation - May require OP to make a tax indemnity payment to contributing partner if OP fails to use agreed upon method of allocating non-recourse debt or to make OP liabilities available for guarantee.
- Sale Limit - May require OP to make a tax indemnity payment to contributing partner if OP sells contributed property in a taxable transaction.
- Allocations - May require the OP to make use of a particular 704(c) method (e.g., the “traditional method”) to account for the difference between the book (or contribution) value of the contributed property and its tax basis.
  - Issues potentially subject to heavy negotiation include:
  - Number of properties subject to the sale limit.
  - The duration of the sale limit and debt assurances.
  - Risk profile restrictions on the debt to be guaranteed.
  - The remedy for a violation of the restrictions:
    - Full tax obligation versus time value of money.
    - Gross up for tax on the indemnity payment.

UPREIT Contributions
Tax Deferred Receipt of Cash or REIT Shares

- A contributor’s receipt of cash or REIT shares from the OP will generally be taxable, but there are limited exceptions allowing for the receipt of cash on a tax deferred basis.
  - CapEx - If the contributors have made capital expenditures with respect to the contributed property during the 2 years preceding the contribution date, the contributors may be permitted to receive cash from the OP on a tax-deferred basis to the extent of some or all of such capital expenditures.
  - Debt Financed Distribution - A cash distribution may be structured as a debt financed distribution (i.e., a distribution of the proceeds of a new loan made to the OP). Generally requires that the contributors guarantee such loan (among other requirements).
  - Loan - It may also be possible for the OP to loan cash to the contributors, secured by their OP units (and, most likely, recourse to the contributors).

UPREIT Contributions Conclusion

- A contribution of property to an OP may be an attractive alternative for property owners seeing to dispose of their property. It may allow the contributors to -
  - Diversify their investment, acquiring OP interests with common, preferred or other economic rights,
  - Obtain increased liquidity and transparency as to value, and
  - Receive a limited amount of cash or loan proceeds.
- The contributors in most cases should be able to accomplish the outcome described above on a tax efficient basis.
- Similar issues arise in the context of an UPREIT merger and acquisition transaction.

Can a REIT be a market leader with customary services?

Can a REIT be a market leader with customary services?

- Generally speaking, a REIT cannot be a market leader with customary services because a REIT’s realization of impermissible tenant service income may cause a failure to meet the income tests, and significant uncertainties may exist with respect to the “customary” determination.

- However, a REIT may evaluate the potential effects of offering cutting-edge services on its ability to satisfy the income tests and follow strictly a set of pre-established procedures to prevent adverse effects, including the appropriate use of its taxable REIT subsidiary.

Why “Customary” Matters

- A REIT must derives 75% and 95% of its gross income (subject to certain adjustments) from statutorily defined sources, including rents from real property.
- Rents from real property are generally amounts received for the use of, or the right to use, real property and include charges (whether separately stated or not) for services customarily furnished in connection with the rental of real property.
- However, rents from real property do not include impermissible tenant service income (ITSI).
  - If ITSI exceeds 1% of gross amounts received from property, then ITSI includes all such amounts (i.e., all rents are tainted).
  - Impermissible tenant service income (ITSI) means with respect to any real or personal property, any amount received by a REIT (i) for services furnished or rendered by the REIT to tenants of the property, or (ii) for managing or operating the property.

Why “Customary” Matters (continued)

- ITSI exceptions
  - Unrelated business taxable income (UBTI) exception – REIT may directly perform services that are not primarily for the tenant’s convenience <u>and</u> are usually or customarily rendered in connection with the rental of rooms or other space for occupancy only, e.g., furnishing of heat and light, the cleaning of public entrances, exits, stairways, and lobbies, the collection of trash… [Different from geographic market determination]
  - Independent contractor (IK)/taxable REIT subsidiary (TRS) exception - Services or management provided through an IK from whom the REIT does not derive income, or through TRS are not considered furnished by the REIT.
    - The use of an IK for noncustomary services is subject to the separate charge requirement, i.e., the cost of the services must be borne by the IK; a separate charge must be made for the services and received and retained by the IK; and the IK must be adequately compensated for the services.

Why “Customary” Matters (continued)

- In summary, a REIT risks of failing the income tests, if
  - It realizes ITSI, which itself is nonqualifying income but could also taint property’s otherwise qualifying rents, because
    - It uses its employees or a nonqualifying IK for noncustomary services, or
    - It uses an IK for noncustomary services but keeps the separate charges.
  - It realizes too much income attributable to noncustomary services even if it uses its taxable REIT subsidiary.

Services – Customary Determination

- "Services furnished to the tenants of a particular building will be considered as customary if, in the geographic market in which the building is located, tenants in buildings which are of a similar class (such as luxury apartment buildings) are customarily provided with the service." [See § 1.856-4(b)(1)]

- Uncertainties exist with respect to the determination of "geographic market," "similar class," and "customarily provided".
  - Some questions – How is the geographic market defined? What are buildings of a similar class? How many such buildings must offer the service in question for it to be considered customary? What is the service? How about "the only property in town"?

Geographic Market

- Transfer pricing – section 1.482-1(d)(4)(ii)(A) - "any geographic area in which the economic conditions for the relevant product or service are substantially the same."
- GCM 39726 – for section 482 purposes – "an area in which sellers compete and around which there exist economic barriers that significantly impede the entry of new competitors" and "[t]he physical boundaries… cannot be precisely drawn at any given point in time."
- In Re/Max Int'l, Inc. v. Realty One, Inc. (an antitrust case), 173 F.3d 995, the Court of Appeals for the Sixth Circuit stated:
  - "Although [a geographic market or an area of effective competition] is not subject to definition by metes and bounds, it is the locale in which consumers of a product or service can turn for alternative sources of supply. Obviously, at the outer edges of a bona fide geographic market, buyers may be able to cross into other territory for their supply of a product or service; however, this fact alone does not require a rejection of the claimed market." [Citation omitted]

Use of Taxable REIT Subsidiary

- Congress enacted the TRS provisions to, among other things, provide tenant services to remain competitive “that might not be considered customary because they are relatively new or ‘cutting-edge’,” and “simplify such rental operations since uncertainty whether a particular service provided by a subsidiary is ‘customary’ will not affect the parent's qualification as a REIT.”
- Rev. Rul. 2002-38 – a REIT pays its TRS to provide noncustomary housekeeping services to tenants. The REIT does not separately state charges to tenants for the services. Thus, a portion of the amounts received by the REIT from tenants represents an amount received for services provided by the TRS. TRS employees perform all of the services and TRS pays all of the costs of providing the services. The TRS also rents space from the REIT for carrying out its services to tenants.
  - The ruling held that the services provided to the REIT's tenants are considered to be rendered by the TRS, rather than the REIT. Accordingly, the services do not give rise to ITSI and do not cause any portion of the rents received by the REIT to fail to qualify as rents from real property.

Use of Taxable REIT Subsidiary (continued)

- Rev. Rul. 2002-38 stated “[a]ll relevant facts and circumstances must be considered in determining the provider of the services for [ITSI] purpose.”
- Many REITs have their employees housed one place and shared among affiliates (i.e., TRS may have no employees of its own). Thus, the use of a TRS for tenant services typically involves issues, such as
  - Is TRS respected as a tax entity? Are employees performing activities on behalf of TRS or REIT? If REIT assigns rights and obligations to TRS to avoid separately-stated noncustomary service income, is such assignment effective?
  - Note – Rev. Rul. 2002-38 does not suggest that the TRS has entered into contracts with tenants for the housekeeping services.
  - Considerations - doctrines of corporate identity and anticipatory assignment of income. [Transfer pricing being discussed elsewhere.]

Doctrine of Corporate Identity

- In *Moline Properties v. Commissioner*, 319 U.S. 436 (1943), the U.S. Supreme Court discussed:
  - “Whether the purpose be to gain an advantage under the law of the state of incorporation… or to serve the creator's personal or undisclosed convenience, so long as that purpose is the equivalent of business activity or is followed by the carrying on of business by the corporation, the corporation remains a separate taxable entity.”
- *National Carbide Corp. v. Commissioner*, 336 U.S. 422 (1949) - “when a corporation carries on business activity the fact that the owner retains direction of its affairs down to the minutest detail, provides all of its assets and takes all of its profits can make no difference tax-wise.”
- In short, it does not take much for TRS to be respected as a tax entity.

Anticipatory Assignment of Income Doctrine

- The U.S. Supreme Court in *Lucas v. Earl*, 281 U.S. 111 (1930), stated:
  - “There is no doubt that the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skillfully devised to prevent the salary when paid from vesting even for a second in the man who earned it. That seems to us the import of the statute…”
- In *Iowa Bridge Co. v. Commissioner*, 39 F.2d 777 (8th Cir. 1930), the taxpayer, a corporation, entered into certain contracts for the construction of certain bridges. Subsequently, the taxpayer’s stockholders adopted a resolution selling, assigning, and transferring to the corporation’s president, who was also the major stockholder of the taxpayer, certain contracts and parts of the bridge contracts for which the work had not been completed. Then, all correspondence relative to the bridge construction and the performance of the contract work conducted in and under the president’s trade-name. No formal notice of assignment was given to the surety companies nor customers of the contracts.

Anticipatory Assignment of Income Doctrine (continued)

- *Iowa Bridge Co*. – The court reasoned:
  - “Unless expressly prohibited by statute, all ordinary business contracts, which are not necessarily personal in character, are assignable… There was nothing in the nature of these contracts which required the personal services of either of the contracting parties, and it appears from the stipulation that contracts of this character were frequently sublet... There was clearly a novation. The contracts were performed by the assignee and the performance thereof was accepted by the contracting parties.”
- The court rejected the decision of the Board of Tax Appeals that contracting profits were the profits of Iowa Bridge Company.

Anticipatory Assignment of Income Doctrine (continued)

- In *Alan M. Mantell, Executor v. Commissioner*, T.C. Memo. 1993-420, the taxpayer entered into an agreement to receive a fee for his involvement with a development project, including raising capital, supervising the collection of sums due to the project from the investors, and an operating deficit guarantee. Subsequently, the taxpayer formed A. Mantell, Inc. and assigned the agreement to A. Mantell, Inc., including obligations and rights to income. The taxpayer informed the project coordinator orally of the assignment of the obligations but never received a release from these obligations. To perform its obligation under the assumption agreement, A. Mantell, Inc., on its own letterhead, wrote letters to the investors who were in default to obtain collection of the funds, monitored the collection process in general, and regularly corresponded with the investors on every payment date. The Tax Court discussed:
  - "… the principles of *Lucas v. Earl*, supra, are not applicable where the income is derived from the assumption of a fully assignable bilateral contract obligation to be performed by the assignee, is not for personal services, did not represent fees for income earned prior to assignment, and was accrued by a corporation that served a legitimate business purpose…"

Anticipatory Assignment of Income Doctrine (continued)

- To avoid ITSI, it is imperative that the TRS be respected as the provider of the services (e.g., with available resources to furnish the services and corporate formality being followed).
  - Define in a TRS Service Agreement the specific services to be furnished before such services being actually rendered to service recipients
  - Make resources available to the TRS via employee sharing agreement, lease or ownership of property required for the services, contract with 3rd– party service providers, etc.
  - Maintain books and records consistent with the TRS Service Agreement (including employee costs)

REIT Investments in Non-Controlled Partnerships

REIT Investments in Partnerships

- REIT Qualification Requirements - To qualify as a REIT, a corporation must meet a number of asset and income tests, and distribution requirements.
- Partnership Look-Through - TR § 1.856-3(g) provides that if a REIT is a partner in a partnership -
  - The REIT will be deemed to own its proportionate share of each of the assets of the partnership, and
  - The REIT will be deemed to be entitled to the income of the partnership attributable to such share.
- Monitoring - As a result, a REIT must monitor the assets and income of a partnership* in which it invests to the same extent as its own assets and income.

* References to a partnership include an LLC that is taxed as a partnership.

Control of the Partnership

- No-Control - If a REIT does not, or may not always, control the partnership (e.g., as general partner*), it needs the partnership agreement to restrict the partnership's activities to REIT-acceptable activities.
- Control - Even if a REIT does control the partnership, it is good practice to include a similar provision (although perhaps less specific), so that it's clear the REIT may use its power to control the partnership in a REIT acceptable fashion, even if it's contrary to the interests of its non-REIT partners.
- LP Duties - Unless the partnership agreement states otherwise, a general partner may owe default fiduciary duties (loyalty, care) to limited partners.

* Or managing member of an LLC

REIT Compliance Issues: REIT Income Tests

- General Limitation
  - The partnership should produce income that will qualify under REIT income tests.
  - Depending on the business of the partnership, the agreement could require that at least 95% of the partnership’s income be “rents from real property” to the REIT partner, or otherwise be qualifying income.
- More Specific Rent Limitations -
  - Rent not based on income or profits.
  - Tenant Services
    - Not permitted to the extent they produce impermissible tenant service income (ITSI), or possibly more than 1% ITSI with respect to any property.
    - Must be customary in the geographic area, unless provided by a taxable REIT subsidiary (TRS).
    - Must not be primarily for the convenience of the tenants, unless provided by an independent contractor (IK) from whom the REIT derives no income or a TRS.
  - Personal property - Limited to 15% of the leased property.
  - No related party tenants with respect to the REIT partner.

REIT Compliance Issues:
REIT Income Tests – Service Issues

- Service Issues - Suppose the REIT's partner wants the partnership to provide non-customary services to tenants.
  - Use of TRS - Partnership could form a subsidiary TRS to provide such services, but the REIT's partner may not like the tax cost associated with using a TRS.
  - Use of Services Partnership - REIT and its partner could form a second partnership (the service partnership) to provide the services.
    - REIT partner could participate through a TRS
    - Rev. Rul. 2003-86 concludes that the use of this structure to provide non-customary services will not cause rent to fail to qualify as "rents from real property" where –
      - JV partner participates through a corporation which is an IK from whom REIT derives no income; and
      - The tenants separately contract with the service partnership for the provision of services.

REIT Compliance Issues: Asset Tests

- REIT Asset Tests
  - General Limitation
    - The partnership should own assets that will qualify under REIT asset tests.
    - Depending on the business of the partnership, these tests could require that at least 75% of the partnership's assets be real estate assets, cash or ordinary course receivables.
  - More Specific Asset Test Limitations –
    - Equity - No equity interests in other entities, except
      - Interests in disregarded entity subsidiaries or partnerships, in each case which are subject to the same REIT restrictions.
      - Money market investments.
    - Loans - No loans, or possibly no loans other than loans adequately secured by real property.

REIT Compliance Issues: Distribution Requirements and Information Rights

- REIT Distribution Requirements
  - Annual Distributions - Require partnership to make annual distributions so that the REIT partner's share of such distributions is at least equal to the REIT partner's allocable share of taxable income from the partnership.
- Information Rights
  - The agreement should provide the REIT partner with the right to obtain information from the partnership which will allow the REIT partner to monitor its qualification and taxation as a REIT.

Prohibited Transactions Tax Issues

- Prohibited Transactions Tax - 100% on dealer sales.
- Partnership Look Through - TR § 1.856-3(g) provides that if a REIT is a partner in a partnership that holds property primarily for sale to customers in the ordinary course of its trade or business, then the REIT will be treated as holding its proportionate share of such property primarily for the same purpose.
- Type of Sale - Prohibited transactions tax issues could arise because the partnership sells its property, or because the REIT sells its interest in the partnership (including pursuant to a buy-sell arrangement between partners).
- Limitation
  - Ideally, require that any partnership property sales, or triggering of the buy-sell arrangement, must satisfy the prohibited transactions tax safe-harbor with respect to the REIT partner.
  - Not always possible to include this provision, in which case the REIT partner may need to be the buyer, not the seller.

Buy – Sell Arrangements

- Pricing - Need to make sure pricing is fair, and that the non-REIT partner may not manipulate the pricing mechanics.
  - Typical Buy-Sell - Assume on a deadlock (or other events), a partner (the electing partner) may set a value for the partnership, and the other partner (the responding partner) may elect to either sell its partnership interest to the electing partner, or buy the electing partner's partnership interest, in each case, based on the value set by the electing partner.
  - Manipulation - If the responding partner is the REIT, and the electing partner is aware the REIT does not want to be a seller (e.g., due to prohibited transactions tax issues), the electing partner may set an unreasonably high price, expecting to be a seller.
  - Appraisal - Use of an appraisal mechanism to determine value of the partnership may be preferable, to avoid this risk.

Buy – Sell Arrangements

- Single Tax Basis - Under Rev. Rul. 84-53, a partner only has one tax basis in its partnership interest, even if portions of its partnership interest were acquired at different times and prices.
- Separate Entity - If the REIT partner may resell the acquired interest (e.g., it bought because it was concerned about prohibited transaction issues, or because it thought the price was favorable), the REIT may want to purchase the interest through a separate entity to preserve the higher tax basis in that partnership interest.
- TRS - If the REIT expects to promptly resell the interest, it may want to purchase the interest through a TRS to eliminate the risk of a prohibited transactions tax on the sale of the interest.

Single Property Issues

- Example –
  - The partnership owns many properties, but only one will be sold.
  - The REIT is concerned about gain recognition or prohibited transactions tax issues, so it elects to purchase the property.
- Purchase from Partnership - If REIT buys the property from the partnership, a portion of the gain on sale would be allocated back to the REIT, and could still raise prohibited transaction issues, or at least increase the REIT's income and distribution requirement.
- Alternative
  - The agreement could provide that the property (or interests in the LLC that owns the property) will be distributed to the partners, and the REIT will purchase the other partner's interest in the property (or such LLC).
  - This should avoid the recognition of gain with respect to the REIT's share of the property.

REIT Status Catch-All

- Traps – There may be situations that were not anticipated, but which could adversely affect REIT status.
- Example – Partnership invests in securities of an issuer which also issued debt to the REIT, intended to qualify as straight-debt.
  - REIT's deemed ownership of the partnership's securities could cause the REIT's debt to fail the straight-debt safe-harbor. § 856(m)(2)(C).
- Example – Partnership derives income from a party which is an IK of the REIT, and from whom the REIT may derive no income.
  - Could taint the rental income at the REIT properties where the independent contractor provides services. § 856(d)(7)(C)(i).
- Catch-All - The partnership agreement could provide that the partnership is not permitted to take any other action which could jeopardize the REIT's qualification as such.
  - May require written notice from the REIT partner.
  - Due to its potentially broad application, REIT may need to offer an indemnity to its partner for any losses arising from the use of this provision.

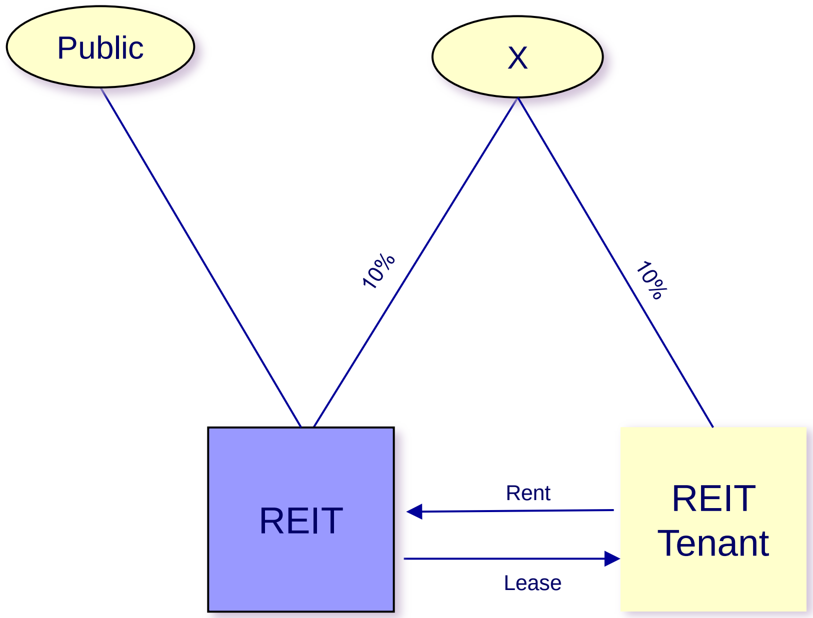
Charter Restrictions

Why Charter Restrictions?

- to facilitate compliance with Five or Fewer rule
- to facilitate compliance with 100 shareholder rule
- to minimize risk of related party rent
- to qualify foreign holders for FIRPTA relief under "domestically controlled" exception
- to minimize risk of UBTI to pension fund shareholders

Most REITs Prohibit Stock Ownership in Excess of 9.8%

- prevents violations of Five or Fewer rule
  - 9.8% x 5 < 50%
- avoids related party rent
  - related party rent does not qualify as “rents from real property” to a REIT
  - if a REIT owns 10% or more of the stock of a tenant, the rent from such tenant is related party rent
  - a REIT is deemed to own stock of any tenant held by a 10% or greater shareholder



Not Rent from Real Property!

What Happens to the “Excess Shares”?

- share ownership in excess of 9.8% triggers “excess share” provisions of charter
- under most REIT charters, the excess shares are transferred to a trust
  - REIT appoints a charity as the trust beneficiary
  - no voting rights or dividends to offending shareholder
- trustee sells shares on the market and retains any profits
  - offending shareholder receives lesser of original purchase price or sales proceeds

Charter Amendment vs Poison Pills

- Although most REITs impose these restrictions by charter, some adopt shareholder rights plans (i.e, a poison pill).
- Unlike most charter restrictions, a shareholder rights plan does not void, nullify or deny economic rights to the transferred shares; it penalizes the violator by economic dilution.
- A REIT with a shareholder rights plan must rely on *the in terrorem* effect of the pill to avoid violations of REIT ownership limitations.

Impact on REIT				
	Shareholder Approval?	**Quick to Implement?**	**Tax Impact on REIT if Violated**	**Enforceable?**
Charter Amendment	Yes	No (in most cases)	Excess share purchase treated as if it never occurred	Not against shareholders who voted against amendment
Poison Pill	No	Yes	•Related party rent? •Five or fewer? •100 shareholder? •Domestically-controlled?	Generally enforceable for future stock acquisitions; existing shareholders usually grandfathered

Concurrent Session: SEC Legal Issues

Thursday, March 31st
2:45pm – 4pm
Marriott Marquis, Washington DC

Moderator:
Michael McTiernan, Partner, Hogan Lovells LLP

Panelists:
Sonia Barros, Assistant Director-Division of Corporation Finance, Securities and Exchange Commission
Judith Fryer, Shareholder, Greenberg Traurig, LLP
Jeffrey Miller, SVP, General Counsel & Secretary, Highwoods Properties, Inc.

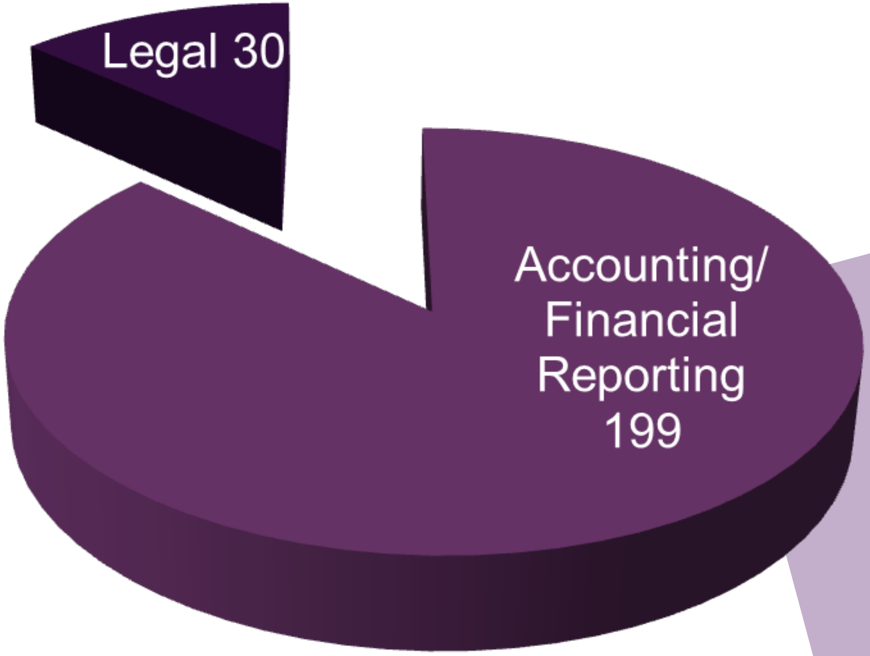
Analysis of 2015 SEC Comment Letters On Form 10-Ks Filed by REITs

Michael McTiernan, Partner
Hogan Lovells US LLP

Scope of Survey

- Reviewed Comment letters issued March 1, 2015 to September 30, 2015 on Form 10-Ks Filed in 2015
- Limited to Traded REITs (Equity and Mortgage)
- Review Covered 91 Letters and 229 comments

General Types of Comments



Summary of Legal Comments

- Most Frequent Topic of Comments:
  - Property Operating Metrics:
    - average rents
    - Occupancy
    - geographic/tenant diversification
- Other Topics:
  - Related Party Transactions
  - Certifications

Summary of Accounting/Financial Reporting Comments

- Most Frequent Topics of Comments:
  - Non-GAAP Measures
  - MD&A
    - results of operations
    - liquidity and capital resources
- Other Topics:
  - Significant Accounting Policies
  - Fair Value

Summary of Non-GAAP Comments

- Most Frequent Topics of Non-GAAP Comments:
  - Labeling issues—primarily clarifying whether FFO includes amounts allocable to unitholders
  - Questioning whether a particular Non-GAAP measure not disclosed in 10-K is a “key performance indicator” or “key liquidity indicator” that should be disclosed in MD&A
  - Failure to comply with Item 10(e) requirements
  - When FFO is identified as “NAREIT FFO”, questioning whether certain adjustments are consistent with the NAREIT definition

Supreme Court Guidance on Opinions in Registration Statements

From the Experts

Robert A. Horowitz, Steven M. Malina and Brian D. Straw

Faced with the new test enunciated by the U.S. Supreme Court this year in Omnicare v. Laborers District Council Construction Industry Pension Fund, corporate securities lawyers will have to make extremely difficult and subjective decisions when it comes to advising their clients whether to disclose opinions in registration statements and, if so, whether the opinions might be considered materially misleading if not accompanied by disclosure of facts that might contradict the opinion.

The case arose out of a registration statement Omnicare filed in connection with its 2005 stock offering. Two sentences expressed the company's opinion concerning its compliance with the law:

- "We believe our contract arrangements with other health care providers, our pharmaceutical suppliers and our pharmacy practice are in compliance with applicable federal and state laws."
- "We believe that our contracts with pharmaceutical manufacturers are legally and economically valid arrangements that bring value to the health care system and the patients that we serve."

The company's opinion turned out to be wrong. Several years after Omnicare filed the registration statement, the federal government commenced a civil False Claims Act suit alleging that its receipt of payments from drug manufacturers violated anti-kickback laws. Citing these suits, certain pension funds that purchased stock in Omnicare's public offering sued the company and certain directors and officers under Section 11, alleging that the company's statement of opinion about its legal compliance was false and misleading.

The district court granted Omnicare's motion to dismiss, holding that a statement of opinion is not actionable unless it was "subjectively false," i.e., the speaker did not honestly hold the opinion at the time. The U.S. Court of Appeals for the Sixth Circuit reversed, holding it sufficient for the pension funds to allege that the stated belief was "objectively false" as evidenced by the fact that it turned out to be false, regardless of whether the funds alleged that anyone at Omnicare disbelieved the opinion. The Supreme Court granted Omnicare's writ of certiorari to consider when statements of opinion are actionable under Section 11 of the Act.

The Court disagreed with both the district court and the Sixth Circuit. It announced a new test for determining whether a statement of opinion in a registration statement may give rise to liability for a material omission:

"[I]f a registration statement omits material facts about the issuer's inquiry into or knowledge concerning a statement of opinion, and if those facts conflict with what a reasonable investor would take from the statement itself, the § 11's omissions clause creates liability."

The Court stressed that a statement of opinion is not necessarily misleading merely because the issuer is aware of particular facts that cut against the opinion. Only if the withheld facts would lead a reasonable investor to disregard the stated opinion would the issuer be liable for failing to disclose those facts.

The Court then went on to discuss the plaintiff's burden to plead a Section 11 violation based upon a statement of opinion that omits to state material facts that cut against the opinion:

"The investor must identify particular (and material) facts going to the basis for the issuer's opinion—facts about the inquiry the issuer did or did not conduct or the knowledge it did or did not have—whose omission makes the opinion statement at issue misleading to a reasonable person reading the statement fairly and in context. . . That is no small task for an investor."

The difficulty in applying the Supreme Court's test is exemplified by the Omnicare facts with which the district court will have to deal on remand. Omnicare's opinions that it was in compliance with applicable federal and state law were accompanied by caveats. Omnicare cited several state-initiated enforcement actions against pharmaceutical manufacturers for offering payments to pharmacies that dispensed their products, and then cautioned that future interpretation and application of the laws relating to such rebates might be inconsistent with its current interpretation. Omnicare also noted that the federal government had expressed "significant concerns" about some manufacturers' rebates to pharmacies. However, Omnicare failed to disclose that an attorney warned that one of Omnicare's contracts presented a "heightened risk of legal exposure" under anti-kickback rules.

Faced with the warning, what should Omnicare have done? Expressed its opinion as it did without any reference to the warning? Expressed its opinion, but disclosed the attorney's warning as a third caveat? Refrained from expressing its opinion?

In light of the new test, if a company chooses to express an opinion in a registration statement, its corporate securities attorney must inquire as to the basis for the opinion and all facts that might undermine the opinion in any way, and then advise the company whether a reasonable investor might consider those facts to be material. How will that play out in practice?

After Omnicare, is the corporate securities lawyer supposed to advise his client that any time an attorney raises an issue that creates doubt as to the opinion expressed, the company must disclose the otherwise privileged communication? The Supreme Court addressed an easy example: the fact that an issuer did not disclose that a single junior attorney expressed doubts about a practice's legality when six of his more senior colleagues gave a stamp of approval would not make the opinion that the issuer is in legal compliance misleading.

But what if the attorney who expressed doubts about a practice's legality is outside counsel who specializes in the compliance issue at hand, but in-house counsel and the business folks conclude the practice is legal? Is the fact that outside counsel raised an issue a material fact that must be disclosed? If so, what would the disclosure look like? Perhaps: "We believe we are in compliance with federal and state regulations. Our outside counsel raised an issue concerning our compliance and we considered the concern he raised, but we continue to believe we are in compliance." Even if such a disclosure were otherwise realistic, disclosure of otherwise privileged communications is fraught with obvious dangers.

For those issuers concluding from this uncertainty that the better course might be not to consult an attorney before expressing the opinion, the Supreme Court anticipated that conclusion and knocked it down. The Court noted an issuer that states it believes its conduct is lawful without disclosing it did not consult counsel would be making a misleading statement actionable under Section 11. As Omnicare argued to the Supreme Court, the new test might simply cause companies not to express opinions in their registration statements.

While issuers can breathe a sigh of relief as a result of the Court's rejection of the Sixth Circuit's view that issuers can be held liable under Section 11 for sincerely held opinions that turn out to be false, the Supreme Court's decision creates enormous uncertainties as to when an issuer can safely state an opinion and what facts it would need to disclose to protect itself from Section 11 claims should its opinions prove to be false.

Fortunately, the Court made clear that reasonable investors should not expect every fact known to an issuer to support its opinions, and that such statements should be read in light of all its surrounding text, including hedges and disclaimers. Nevertheless, the prudent course for an issuer may be to refrain from offering any opinions, a result that would not be welcomed by investors and is not necessarily consistent with the disclosure-based regulatory regime underlying the '33 Act.

Robert A. Horowitz is co-chair of the securities litigation practice and a shareholder in the financial and regulatory compliance practice at Greenberg Traurig. Steven M. Malina is a shareholder in the securities litigation practice and financial services litigation practice at the firm. Brian D. Straw is an associate in the litigation practice at the firm.

Deloitte.

SEC Comment Letters — Including Industry Insights
What "Edgar" Told Us

Ninth Edition
October 2015

Deloitte.

To our clients, colleagues, and other friends:

We are frequently asked to provide our perspective on the topics the SEC staff focuses on in its comment letters to registrants. The ninth edition of *SEC Comment Letters — Including Industry Insights: What "Edgar" Told Us* offers such perspective. In addition to extracts of letters and links to relevant related resources, it contains analysis of staff comments to help registrants understand trends and improve their financial statements and disclosures.

Over the past year, the SEC staff has continued to address most topics discussed in our eighth edition, and it remains focused on the clarity of registrants' disclosures. This ninth edition reflects current SEC comments on registrants' financial statements and other aspects of their filings and includes the following appendixes: (1) Appendix A, which lists comment letter trends discussed in our eighth edition that no longer represent recent trends; (2) Appendix B, which gives a glimpse into the SEC staff's review and comment letter process; (3) Appendix C, which discusses best practices for managing unresolved SEC comments; (4) Appendix D, which provides helpful tips on searching the SEC's EDGAR database for comment letters; (5) Appendix E, which lists the titles (or links to titles) of the standards referred to in this publication; and (6) Appendix F, which defines the abbreviations we used.

Our ninth edition captures developments on relevant financial reporting topics through the date of publication. The SEC and its staff will continue to provide registrants with information that is pertinent to their filings by means of rulemaking and written interpretive guidance as well as speeches delivered at various forums, of which the AICPA Conference is a prime example. Deloitte's US GAAP Plus Web site is a resource you can use to keep current on the SEC's latest activities related to financial reporting matters — including the SEC staff's participation at the next AICPA Conference, which is scheduled for December 9–11, 2015, and will be discussed in an upcoming issue of our *Heads Up* newsletter.

We hope you find our ninth edition of this publication — and other publications on US GAAP Plus — useful resources as you prepare your annual reports and plan for the upcoming year.

In keeping with recent SEC staff remarks about how registrants can make their disclosures more effective, we encourage you to consider materiality, relevance, and redundancy as you assess whether to provide additional disclosures or enhance existing ones.

As always, we encourage you to contact us for additional information and assistance, and we welcome your feedback.

Sincerely,

Rob — Christine

Acknowledgments

This ninth edition of *SEC Comment Letters — Including Industry Insights: What "Edgar" Told Us* would not have been possible without the significant contributions of the Accounting Services, Audit and Assurance Services, and SEC Services departments and the industry specialists at Deloitte & Touche LLP. Specifically, we wish to thank Lisa Mitrovich for the insights and dedication that she brings to this publication each year, as well as Jeff Naumann and Deloitte's Disclosure Analytics team for the insight into comment letter trend statistics that they provided this year. In addition, we are grateful to Ana Zelic for her tireless contributions and the many late nights that she dedicated to managing the development of this publication. We would also like to thank Teri Asarito, Geri Driscoll, David Eisenberg, Michael Lorenzo, Jeanine Pagliaro, and Lora Spickler-Alot for delivering the first-class editorial and production effort that we have come to rely on for all of Deloitte's financial reporting publications. Special thanks go to Derek Gillespie for supervising the overall development of this ninth edition with his trademark enthusiasm, creativity, and dedication. Finally, we want to acknowledge Joe DiLeo, whose supervision of past editions of this publication provided the foundation on which we have built this year's edition.

Executive Summary

As we approach the start of the 2015 annual reporting cycle, it seems natural to look back at the strategic priorities of the SEC over the past 12 months.

Since Mary Jo White took the helm of the SEC in April 2013 as its 31st chairman, the aggressive pursuit of investor protection has been a key focus of the Commission. The SEC recently announced that in its fiscal year ended September 2015, it filed 807 enforcement actions and obtained orders totaling approximately $4.2 billion in disgorgements and penalties. Further, as technology and business practices have continued to evolve, the SEC's Division of Enforcement has increased its focus on cybersecurity. For example, the SEC recently announced the settlement of a cybersecurity case against an investment adviser that had failed to establish the required cybersecurity policies and procedures before a breach.

Convergence of U.S. GAAP and IFRSs is another topic of interest for the SEC — particularly its Office of the Chief Accountant headed by James Schnurr, who continues to monitor this as well as the progress the FASB and the IASB are making in identifying and addressing implementation issues related to the new converged revenue standard. While the chief accountant seems generally pleased with the progress toward implementation that has been achieved to date, it appears from his remarks at the 2015 AICPA Banking Conference that he is focusing on the role of industry groups in the implementation process. Regarding whether and, if so, how to incorporate IFRSs in the U.S. financial reporting system, Mr. Schnurr has publicly stated that in the foreseeable future, continued collaboration between the boards seems to be the most realistic path forward.

The Division of Corporation Finance (the "Division") has been busy undertaking its own priorities over the past year. In the period leading up to the five-year anniversary of the Dodd-Frank Act, the Division continued to help the SEC fulfill its responsibilities under the Act's mandatory rulemaking provisions. For example, the SEC issued (1) a proposed rule[1] that would require disclosure of the relationship between executive compensation paid by a registrant and the registrant's financial performance ("pay versus performance") and (2) a proposed rule[2] that would require registrants to adopt clawback policies on executive compensation. The SEC also issued a final rule[3] on pay ratio disclosure that requires a registrant to disclose the ratio of the compensation of its CEO to the median compensation of its employees.

In addition, the Division facilitated the SEC's issuance of a concept release[4] in July 2015 that requested input on audit committee disclosure requirements with a focus on audit committees' oversight of independent auditors. The Division has also been working on the SEC's "disclosure effectiveness project,"[5] which began in earnest in December 2013 and resulted in the September 2015 issuance of a release[6] that requests public comment on the effectiveness of the financial disclosure requirements in Regulation S-X that apply to certain entities other than the registrant.[7]

Further, the Division continues to help the SEC meet its responsibilities under the Sarbanes-Oxley Act to review registrants at least once every three years. In this ninth edition of our publication, we, in turn, continue our tradition of highlighting trends in SEC staff comments by analyzing comments issued by the staff over the past year.

1 SEC Proposed Rule Release No. 34-74835, *Pay Versus Performance*.

2 SEC Proposed Rule Release No. 33-9861, *Listing Standards for Recovery of Erroneously Awarded Compensation*.

3 SEC Final Rule Release No. 33-9877, *Pay Ratio Disclosure*.

4 SEC Release No. 33-9862, *Possible Revisions to Audit Committee Disclosures*.

7 For additional information, see Deloitte's October 6, 2015, *Heads Up*.

The table below summarizes comment letter trends in the 12-month periods ended July 31, 2015, and July 31, 2014:[8]

Topic	12 Months Ended July 31, 2015				12 Months Ended July 31, 2014		
	Number of 10-K and 10-Q Reviews With Comment Letters That Include a Comment on Topic	Percentage of All Comment Letter–Yielding 10-K and 10-Q Reviews That Include a Comment on Topic	Rank	Change in Rank From Prior Year	Number of 10-K and 10-Q Reviews With Comment Letters That Include a Comment on Topic	Percentage of All Comment Letter–Yielding 10-K and 10-Q Reviews That Include a Comment on Topic	Rank
MD&A:[9]			1	—			1
• Results of operations	379	23%			516	23%	
• Liquidity issues	187	11%			336	15%	
• Critical accounting policies and estimates	147	9%			248	11%	
Fair value measurement and estimates	358	22%	2	—	544	25%	2
Revenue recognition	246	15%	3	↑ 1	318	14%	4
Non-GAAP measures	235	14%	4	↑ 2	277	13%	6
Signatures, exhibits, and agreements	205	12%	5	↓ 2	370	17%	3
Income taxes	184	11%	6	↓ 1	291	13%	5
Segment reporting	164	10%	7	↑ 3	219	10%	10
Acquisitions, mergers, and business combinations	162	10%	8	↓ 1	254	12%	7
Property, plant, and equipment; intangible assets; and goodwill	146	9%	9	↓ 1	244	11%	8
Debt, warrants, and equity securities	134	8%	10	↑ 1	218	10%	11

In the 12 months ended July 31, 2015, there was a sharp decline from the previous 12-month period in the number of registrants that received a comment letter as a result of the SEC staff's review of Form 10-K and Form 10-Q filings. That significant decline is reflected in the reduced number of Form 10-K and Form 10-Q reviews that yielded comment letters that include a comment related to one of the top 10 topics noted in the table above.

As the table indicates, MD&A is again the leading source of SEC staff comments, many of which reflect the staff's continuing sentiment that registrants should "tell their story" in MD&A to allow investors to see the company "through the eyes of management." In reviewing registrants' analysis and disclosure of results of operations, the staff has continued to focus on encouraging registrants to (1) disclose known trends or uncertainties, (2) quantify components of overall changes in financial statement line items, and (3) enhance their analysis of the underlying factors that cause such changes.

8 Comment letter trend information in the table was derived from data provided by Audit Analytics.

9 Statistics related to three MD&A subtopics are noted below.

Highlights of comment letters issued over the past year also include:

- *Fair value* — The SEC staff continues to ask registrants about (1) valuation techniques and inputs used to determine fair value, (2) sensitivity of Level 3 measurements, (3) categorization of assets and liabilities in the fair value hierarchy, and (4) the use of third-party pricing services.
- *Revenue recognition* — Although many preparers are focused on the forthcoming revenue recognition standard, application of the current standard continues to draw the staff's attention. Revenue recognition issues addressed in comment letters include (1) the completeness and consistency of disclosures about revenue recognition policies, (2) accounting for multiple-element arrangements, and (3) principal-versus-agent analysis (i.e., gross versus net reporting).
- *Non-GAAP financial measures and key metrics* — Staff comments on non-GAAP financial measures and key metrics have focused on asking registrants to (1) explain why such measures and metrics are useful to investors, (2) reconcile non-GAAP financial measures to the appropriate GAAP measures and avoid attaching "undue prominence" to the non-GAAP measures, and (3) explain how key metrics are calculated and describe how a key metric is related to current or future results of operations.
- *Income taxes* — The SEC staff remains focused on (1) the potential tax and liquidity ramifications related to the repatriation of foreign earnings, (2) valuation allowances, (3) rate reconciliation, and (4) unrecognized tax benefits.
- *Segment reporting* — The staff continues to ask registrants about (1) the identification of the chief operating decision maker (CODM); (2) the identification of operating segments; and (3) the analysis supporting the aggregation of operating segments, including consideration of qualitative factors (e.g., similar products and customers).
- *Business combinations* — M&A activity has remained high over the past couple of years, and so has the number of related SEC comments. Like past SEC staff comments on business combinations, recent ones have centered on (1) purchase price allocation, (2) contingent consideration, (3) bargain purchases, and (4) disclosures.

Many of the recent comment letter trends noted above and current industry-specific trends[10] are likely to continue in the coming year. In addition, while it is difficult to predict what new comment letter trends are on the horizon, history tells us that new trends are often prompted by events such as (1) the enactment of new rules and (2) changes in economic cycles and trends:

- *New rules* — Whether they are accounting- or reporting-related, new rules typically make for a comment letter–rich environment as registrants work through accounting and system implementation issues and familiarize themselves with the new requirements. Accordingly, since U.S. GAAP guidance on consolidation is once again in flux, an uptick in related comments is likely in the coming year.
- *Changes in economic cycles and trends* — As the economy fluctuates between periods of contraction and expansion and other economic trends develop on a global or regional basis, tension is placed on different accounting and reporting rules. Given the current state of play, we may see an increase in SEC staff comments related to (1) the release of loan allowances and DTAs (timing and amount) and (2) requests for additional disclosures when a registrant's results of operations are significantly affected by depressed commodity prices or hyperinflationary currencies.

[10] For a discussion of comment letter trends related to particular industries, see Industry-Specific Topics below.

Financial Statement Accounting and Disclosure Topics

Business Combinations

Purchase Price Allocation

Example of an SEC Comment

In regard to your preliminary purchase price allocation . . . , please provide further supporting disclosure for each purchase price adjustment to each tangible and intangible asset acquired and liability assumed. This disclosure should explain in greater detail what the adjustment represents and how the increase or decrease was determined, including a brief explanation of the factors and assumptions involved in the calculation. For example, please disclose and explain how you determined the increase in property, plant and equipment, franchises and customer relationships.

The SEC staff frequently asks registrants how they have assigned amounts to assets acquired and liabilities assumed in business combinations. In particular, the staff asks registrants that have recorded a significant amount of goodwill why they have not attributed value to identifiable intangible assets. The staff also compares disclosures provided in press releases, the business section, and MD&A to the purchase price allocation in the financial statements. For example, the SEC staff may ask why a registrant did not recognize a customer-related intangible asset if it discloses in MD&A that it acquired customers in a business combination. In addition, the SEC staff may ask detailed questions about (1) how a registrant determined that intangible assets would have finite or indefinite useful lives; (2) the useful lives of identified intangible assets determined to have finite useful lives; and (3) material revisions to the initial accounting for a business combination, including what significant assumptions have changed to support a revision to the value of intangible assets.

Contingent Consideration

Example of an SEC Comment

Please note that ASC 805-30-50-1(c) requires a description of contingent consideration arrangements in the financial statements including the basis for determining the amount of any payments. Also, disclosure of the changes in the range of outcomes and reasons for those changes is required to be disclosed in accordance with ASC 805-30-50-4. Given these disclosure requirements, please provide draft disclosure to be included in future filings to disclose both the nature and terms of the contingent consideration arrangement including the metrics which must be achieved for payments to occur, and the nature and timing of the changes in facts and circumstances that resulted in your reversal of the previously recorded expense for future incentive payments of $[X] during the fourth quarter of the fiscal year ended February 1, 2014. As part of your revised disclosure, please also explain why your determination that the financial metrics would not be achieved did not occur until the fourth quarter of your fiscal year ended February 1, 2014.

The SEC staff often asks registrants to provide additional disclosures about the nature and terms of a contingent consideration arrangement and the conditions that must be met for the arrangement to become payable. Since ASC 805 requires entities to recognize contingent consideration at fair value as of the acquisition date, the staff may ask registrants to disclose how they determined the fair value of the contingent consideration. In addition, the staff may ask whether the change in the fair value of contingent consideration should be reflected as a retrospective adjustment to the amount of goodwill (i.e., if the adjustment is due to new information obtained during the measurement period about facts or circumstances that existed as of the acquisition date) or in current earnings under ASC 805-10-25-13 through 25-19 and ASC 805-10-30-3. The staff may also ask for disclosure of the total amount of contingent consideration that could become payable under the terms of the arrangement.

Bargain Purchases

Example of an SEC Comment

Please fully explain to us how you determined the fair value of the property, plant and equipment you acquired from [Company A]. Please specifically address why the gain on bargain purchase you recognized was so significant relative to the purchase price. Please also address if you have performed any subsequent impairment analysis for the assets you acquired and, if applicable, tell us the significant assumptions you used.

When a registrant recognizes a gain related to a bargain purchase, the SEC staff will typically issue comments on how the registrant determined and reassessed the purchase price allocation. A gain from a bargain purchase occurs when the net of the acquisition-date fair value of the identifiable assets acquired and the liabilities assumed is greater than the sum of the acquisition-date fair value of (1) the consideration transferred,[1] (2) the noncontrolling interest in the acquiree, and (3) any equity interests previously held by the acquirer. Before recognizing the gain, a registrant is required to perform a reassessment of the bargain purchase gain by verifying that all assets acquired and liabilities assumed were properly identified. The SEC staff has asked registrants to (1) explain their process, (2) provide the results of the reassessment, and (3) disclose that a reassessment was performed. In addition, the staff has inquired about whether any subsequent impairment analyses for the assets acquired have been performed.

Disclosures

Example of an SEC Comment

Please revise [the notes] to disclose the amounts of revenue and earnings of [Company A] and [Company B] since the acquisition date which have been included in the consolidated income statement for the reporting period in which the acquisitions occurred. Also, please revise to disclose the revenue and earnings of the combined entity for the current reporting period as though the acquisition date for all business combinations that occurred during the period had been as of the beginning of the annual reporting period. Comparable information for the prior annual period should also be presented as if these acquisitions had occurred at the beginning of the comparable prior annual reporting period. Refer to the disclosure requirements outlined in ASC 805-10-50-2(h).

The SEC staff has commented when a registrant fails to provide pro forma disclosures under ASC 805-10-50 about the effects of an acquisition as of the beginning of a reporting period. ASC 805-10-50-2(h)(3) states that the disclosure requirements for comparative financial statements are as follows:

> [F]or a calendar year-end entity, disclosures would be provided for a business combination that occurs in 20X2, as if it occurred on January 1, 20X1. Such disclosures would not be revised if 20X2 is presented for comparative purposes with the 20X3 financial statements (even if 20X2 is the earliest period presented).

In accordance with ASC 805-10-50, registrants must also disclose the nature and amount of material, nonrecurring pro forma adjustments directly attributable to the business combinations that are recognized in the reported pro forma information.

If certain criteria are met (e.g., if a significant business combination has occurred or is probable), registrants may also be required to (1) comply with Regulation S-X, Rule 3-05, and (2) provide pro forma financial information that complies with Regulation S-X, Article 11, in a registration statement, proxy statement, or Form 8-K. For additional information, see the SEC Reporting section.

[1] Certain share-based payment awards are not measured at fair value.

The SEC staff has also asked registrants:

- Whether an acquisition meets the definition of a business under ASC 805-10-20.
- To indicate which specific elements related to their use of the acquisition method of accounting are not yet complete and why they have not been finalized.
- To identify and disclose the income statement classification of acquisition-related costs they incurred (e.g., due diligence fees, legal fees).
- Whether individually immaterial acquisitions are collectively material, which would require them to disclose certain information.
- Whether a transaction is considered to be an acquisition of an entity under common control.

Consolidation

ASC 810 provides guidance on entities that are subject to consolidation under either the voting interest entity model or the variable interest entity (VIE) model. Recent SEC comments on this topic have focused primarily on the VIE model. For example, such comments have addressed:

- The consolidation conclusions reached under the VIE model, including those related to:
  - The determination of whether an entity is a VIE.
  - The determination of whether the reporting entity is the primary beneficiary of a VIE (including reassessment of whether the reporting entity continues to be the primary beneficiary).
- Presentation of assets and liabilities of consolidated VIEs.

Determining Whether an Entity Is a VIE and Whether the Reporting Entity Is a VIE's Primary Beneficiary

Examples of SEC Comments

- Please provide us with your detailed analysis of the accounting model and the authoritative accounting guidance you considered in your conclusion to consolidate [the legal entity]. Tell us whether [the legal entity] is subject to the consolidation guidance related to variable interest entities and what consideration was given to the guidance in ASC 810-10-15-14(b)(1). If it is subject to this guidance, explain how you determined that you have the characteristics of a controlling financial interest per ASC 810-10-25-38A.
- You disclosed that at December 31, 2013, you consolidated an investment in [an] LLC where you were determined to be the primary beneficiary due to a related party affiliation. At June 30, 2014, you were no longer considered the primary beneficiary of this LLC and therefore deconsolidated this LLC in accordance with ASC 810. Please tell us how you determined that it was appropriate to deconsolidate this LLC. Please also tell us how you accounted for this deconsolidation and tell us whether you recognized a gain or loss in net income attributable to the parent. Refer to ASC 810-10-40.
- We note that during the year ended December 31, 2013 and the subsequent quarterly period ended March 31, 2014, amendments of existing operating agreements governing certain properties resulted in you gaining control of these properties. Please tell us and describe the pre-existing terms and the changes that were made to these operating agreements. In addition, please cite the specific authoritative guidance within [ASC 810] relied upon that resulted in the change from equity method to consolidation treatment.

To determine whether it is required to consolidate another entity, a reporting entity must evaluate whether the other entity is a VIE under ASC 810-10 and, if so, whether the reporting entity is the VIE's primary beneficiary.[1] To be the primary beneficiary of a VIE and, therefore, the party that is required to consolidate it, the reporting entity must have (1) the power to direct the activities of the VIE that most significantly affect the VIE's economic performance and (2) the obligation to absorb losses of, or the right to receive benefits from, the VIE that could potentially be significant to the VIE.[2] Given that the SEC staff continues to focus on consolidation conclusions under ASC 810-10, it often asks registrants to (1) explain their involvement with, and the structure of, VIEs; (2) provide detailed support for their conclusions about whether an entity is a VIE (including the consolidation model they ultimately used); (3) discuss the basis for their determination of whether they are the primary beneficiary of a VIE; and (4) discuss any events affecting their previous consolidation conclusion (e.g., events that result in deconsolidation).

[1] The comment letter trends discussed in this section are applicable to consolidation analyses that do not qualify for the deferral under ASU 2010-10 and are subject to the consolidation guidance in ASC 810-10 as amended by ASU 2009-17.

[2] Registrants should consider whether consolidating a VIE meets the significance thresholds for reporting under Item 2.01 of Form 8-K and Rule 3-05 of Regulation S-X. For additional information about Rule 3-05, see the SEC Reporting section.

Presentation of Assets and Liabilities of Consolidated VIEs

Example of an SEC Comment

We note that you separately present the assets and liabilities held by variable interest entities on your balance sheet. In future filings, please recast your balance sheet to present the consolidated totals for each line item required by Rule 5-02 of Regulation S-X. Please note that you may state parenthetically after each line item the amount that relates to consolidated VIEs, or you may include a table following the consolidated balance sheets to present assets and liabilities of consolidated VIEs that have been included in the preceding balance sheet.

SEC staff comments have addressed the reporting entity's presentation of assets and liabilities of consolidated VIEs. When presenting assets, liabilities, and noncontrolling interests of a consolidated VIE, a reporting entity should present those items in the consolidated financial statements as if the basis for consolidating the VIE had been voting interests. ASC 810-10-45-25 requires a reporting entity to present on the face of the statement of financial position the (1) "[a]ssets of a consolidated [VIE] that can be used only to settle obligations of the consolidated VIE" and (2) "[l]iabilities of a consolidated VIE for which creditors (or beneficial interest holders) do not have recourse to the general credit of the primary beneficiary." A reporting entity must also satisfy the requirements related to (1) the elimination of intra-entity balances and transactions and (2) other matters discussed in ASC 810-10-45.

Contingencies

Because registrants' contingency disclosures have improved, the SEC staff has commented on this topic less frequently than in prior years. However, the staff continues to monitor registrants' contingency disclosures, and it comments when such disclosures do not comply with U.S. GAAP or SEC rules and regulations.

The staff has continued to comment on:

- Lack of specificity regarding the nature of the matter.
- Lack of quantification of amounts accrued, if any, and possible loss or range of loss (or disclosure about why such an estimate cannot be made).
- Lack of disclosure or insufficient detail about what triggered a significant current-period accrual for a contingency when no loss or a significantly lower amount was accrued in prior periods.
- Insufficient detail about judgments and assumptions underlying significant accruals.
- Insufficient detail about (and untimely reporting of) new developments related to loss contingencies and the effect of such developments on current and future periods.
- Inconsistency among disclosures in the footnotes, in other sections of the filing (e.g., risk factors and legal proceedings), and outside the filing (e.g., in press releases and earnings calls). In addition, if different registrants are parties to a claim, the SEC staff may also review the counterparty's filings and comment if the information is not consistent.
- Use of unclear language in disclosures (e.g., not using terms that are consistent with accounting literature, such as "probable" or "reasonably possible") and failure to consider the disclosure requirements in ASC 450, SAB Topic 5.Y, and Regulation S-K, Item 103.
- Lack of disclosure of an accounting policy related to accounting for legal costs (when material) and uncertainties in loss contingency recoveries, including (1) whether ranges of reasonably possible losses are disclosed gross or net of anticipated recoveries from third parties, (2) risks regarding the collectibility of anticipated recoveries, and (3) the accounting policy for uncertain recoveries.

Loss Contingencies

Examples of SEC Comments

- We note [your assertion] that "given the uncertainty of litigation combined with the fact that such matters are each in their very preliminary stages[,]" you cannot provide the "range of potential losses." Please supplementally explain to us the procedures you undertake on a quarterly basis to attempt to develop a range of reasonably possible loss for disclosure and tell us the specific factors that are causing the inability to estimate a range for each material matter. We recognize that there are a number of uncertainties and potential outcomes associated with loss contingencies. Nonetheless, an effort should be made to develop estimates for purposes of disclosure, including determining which of the potential outcomes are reasonably possible and what the reasonably possible range of losses would be for those reasonably possible outcomes.

  Additionally, ASC 450 does not use the term "potential"; therefore, in future filings please provide disclosure relative to reasonably possible losses.
- You state that "At this time, no assessment can be made as to the likely outcome of these lawsuits or whether the outcome will be material to the Company." We do not believe that this disclosure meets the requirements of ASC 450-20-50-3 and 50-4. Please provide us proposed disclosure to be included in future periodic reports for all legal proceedings to include an estimate of the possible loss or range of loss or a statement that such an estimate cannot be made for loss contingencies that are at least reasonably possible but not accrued, either because it is not probable that a loss has been incurred or the amount of loss cannot be reasonably estimated.

The SEC staff often asks about estimates of reasonably possible losses or comments when a registrant omits disclosure of a loss or range of losses because its estimates lack "precision and confidence." If an estimate of the loss or range of losses cannot be made, the staff expects registrants to (1) disclose, in accordance with ASC 450-20-50-4, that such an estimate cannot be made and (2) demonstrate that they at least attempted to estimate the loss or range of losses before concluding that an estimate cannot be made. In such cases, the staff has commented that registrants should disclose the specific factors that limited their ability to reasonably estimate the loss or range of losses and has asked about registrants' quarterly procedures related to such estimates. The specific factors disclosed should be specific to the loss contingency in question and could include representations that (1) claims do not specify an amount of damages, (2) there are a large number of plaintiffs, or (3) the case is in its early stages.

Many comments from the SEC staff have focused on comparing current-year disclosures with those in prior-year filings. Staff questions commonly include (1) whether additional reasonably possible losses have been incurred since the initial disclosure of a reasonably possible loss, (2) why the accrual amount for the current year is different from that reported in previous filings, and (3) whether there are any changes in facts and circumstances that may affect the accrual amount. Further, if a registrant discusses a potential contingency in its earnings calls, the SEC staff is likely to seek more information about the contingency and to inquire about whether the related disclosures are appropriate. The SEC staff encourages registrants to clearly disclose the "full story" regarding their loss contingencies because recognition of such contingencies requires a high degree of professional judgment. Further, the staff has noted that disclosures related to loss contingencies should be continually evaluated over time as facts and circumstances change.

The SEC staff may also ask about (1) the basis for a registrant's accrual (e.g., factors supporting an accrual, such as trends in claims received and rejected), (2) the timing of a loss contingency's recognition, and (3) disclosure of a loss contingency. In addition, when a material settlement is disclosed during the period, the staff may review prior-period disclosures to determine whether such disclosures were appropriate (i.e., whether the registrant should have provided early-warning disclosures about the possibility of incurring or settling a loss in future periods to help users understand these risks and how they could potentially affect the financial statements) or whether an accrual should have been recognized in a prior period. See the Management's Discussion and Analysis section for additional information about early-warning disclosures.

Litigation Contingencies

Example of an SEC Comment

We note your disclosure . . . regarding the [merger] litigation that the company believes the claims in the Illinois and Delaware actions are without merit. Your introductory disclosure regarding litigation . . . quantifies the accrued aggregate liability for pending legal matters, but does not address reasonably possible losses in excess of amounts accrued. If there is at least a reasonable possibility that a loss exceeding amounts already recognized may have been incurred, you must either disclose an estimate of the additional loss or range of loss that is reasonably possible, or state that such an estimate cannot be made. Such disclosure may be provided in the aggregate. Please tell us how your disclosures comply with paragraphs 50-3 through 50-5 of ASC 450-20-50 and SAB Topic [5.Y].

The SEC staff often asks registrants to expand their disclosures about litigation contingencies. If a registrant discloses that the impact of pending or threatened litigation is not expected to be material to its financial statements, the staff is likely to request that the registrant disclose the estimated loss or range of reasonably possible losses in excess of amounts accrued in accordance with ASC 450-20-50-4(b) and SAB Topic 5.Y.[1]

In addition to complying with ASC 450, public entities must separately meet the requirements of Regulation S-K, Item 103, when disclosing litigation matters because while those requirements are similar to the requirements of ASC 450, they are not identical. Also, to address concerns related to a registrant's contention that providing too much information may be detrimental to efforts to litigate or settle matters, the SEC staff has indicated that registrants do not need to separately disclose each asserted claim; rather, they may aggregate asserted claims in a logical manner as long as the disclosure complies with ASC 450.

[1] Specifically, the interpretive response to Question 2 of SAB Topic 5.Y indicates that "a statement that the contingency is not expected to be material does not satisfy the requirements of FASB ASC Topic 450 if there is at least a reasonable possibility that a loss exceeding amounts already recognized may have been incurred and the amount of that additional loss would be material to a decision to buy or sell the registrant's securities. In that case, the registrant must either (a) disclose the estimated additional loss, or range of loss, that is reasonably possible, or (b) state that such an estimate cannot be made."

Debt

Restrictions

Example of an SEC Comment

We note your disclosure . . . that credit facilities of certain subsidiaries include financial covenants. Please tell us whether these covenants and/or any other third party or regulatory restrictions on your subsidiaries or investments accounted for by the equity method restrict the ability to transfer funds to you in the form of loans, advances or cash dividends without consent. If so, please tell us: (i) the amount of restricted net assets of consolidated subsidiaries and your equity in the undistributed earnings of investments accounted for by the equity method as of the most recent balance sheet date and how you computed the amount; (ii) your consideration of providing the disclosures required by Rule 4-08(e)(3)(i) and (ii) of Regulation S-X; and (iii) your consideration of providing the condensed financial information prescribed by Rule 12-04 of Regulation S-X in accordance with Rule 5-04 of Regulation S-X.

When the transfer of assets (cash or other funds) to the parent company/registrant from its subsidiary (or subsidiaries) or equity method investee is materially restricted, limited, or in need of a third party's approval, Regulation S-X, Rules 4-08(e), 5-04, and 12-04, may require:

- Footnote disclosure of the restriction or limitation (Rule 4-08(e)).
- Presentation of condensed parent-company financial data in a financial statement schedule (i.e., Schedule I).
- Both footnote and Schedule I disclosures.

Rule 4-08(e) disclosures are intended to inform investors of restrictions on a registrant's ability to pay dividends or transfer funds within a consolidated group. Such restrictions may result from a contractual agreement (e.g., a debt agreement) or a regulatory body. Without appropriate disclosures of such restrictions, an investor may presume that the registrant (at the parent or subsidiary level) has more discretion to transfer funds or pay cash dividends than is actually the case.

If Rule 4-08(e) applies, registrants must disclose in the notes to the financial statements a description of "the most significant restrictions, other than as reported under [Rule 4-08(d)], on the payment of dividends by the registrant, indicating their sources, their pertinent provisions, and the amount of retained earnings or net income restricted or free of restrictions."

Disclosure is also required under Rule 4-08(e)(3) if the total restricted net assets of subsidiaries, plus the parent's equity in the undistributed earnings of 50 percent or less owned entities, exceed 25 percent of consolidated net assets. SAB Topic 6.K provides further guidance on determining the restricted net assets of subsidiaries. Disclosures required under Rule 4-08(e)(3) include:

- The "nature of any restrictions on the ability of consolidated subsidiaries and unconsolidated subsidiaries to transfer funds to the registrant in the form of cash dividends, loans or advances."
- Separate disclosure of "the amounts of such restricted net assets for unconsolidated subsidiaries and consolidated subsidiaries as of the end of the most recently completed fiscal year."

In addition, to give investors separate information about the parent company, registrants are required under Rule 5-04 to file Schedule I "when the restricted net assets [of the registrant's] consolidated subsidiaries exceed 25 percent of consolidated net assets as of the end of the most recently completed fiscal year."

The calculations under Rule 4-08(e) are different from those under Rule 5-04, which governs Schedule I, so registrants must perform both tests to determine what is required. If Schedule I is required, footnote disclosures under Rule 4-08(e) are also required. However, if Rule 4-08(e) disclosures are required, Schedule I may not be required. In addition, a registrant's filing of Schedule I does not necessarily mean that the registrant has satisfied the disclosure requirements of Rule 4-08(e), which are separate and distinct.

Refinancing

Example of an SEC Comment

Please provide us your analysis under ASC 470-50-40 supporting your conclusion that the January 23, 2014 second amendment to the credit agreement was a modification and not an extinguishment.

The SEC staff's comments on refinancings have focused on registrants' (1) conclusions about whether debt refinancing transactions should be accounted for as debt extinguishments under ASC 470-50 and (2) disclosures about the significant components of the gains or losses recorded on a debt extinguishment and how registrants calculated the components.

Financial Covenant Disclosures

Example of an SEC Comment

We note you received a waiver from the Lender for non-compliance with a financial covenant and the lender modified various financial covenants relating to fiscal 2014. We further note your disclosure . . . that states the Credit Agreement requires maximum levels of cash usage and minimum levels of liquidity, as defined, and provides for increased liquidity levels if operating results are not achieved. It appears to us that your Credit Agreement is a material agreement, that the covenants are material terms of the Credit Agreement and that information about the covenants would be material to an investor's understanding of the Company's financial condition and liquidity. Please describe to us the nature of the waiver received from the Lender to cure non-compliance with the financial covenant. In addition, please provide us with draft disclosure of the following information to be included in future filings:

- The material terms of the debt covenants, including quantification of the amount or limit required for compliance with any financial covenants as compared to your actual results.
- The likelihood of failing a financial covenant or obtaining a waiver in the future.
- The actual or reasonably likely effects of compliance or non-compliance with the covenants on the Company's financial condition and liquidity.

It is important for a registrant to consider providing disclosures about covenant compliance in MD&A to illustrate its financial condition and liquidity. These disclosures may include a discussion of (1) the terms of the most severe covenants and how the registrant has complied with those covenants, (2) waivers obtained from lenders and the likelihood of failing a covenant or obtaining a waiver in the future, and (3) the impact of noncompliance on the registrant's financial condition and liquidity. In addition, a registrant may present a table that compares its most material actual debt covenant ratios as of the latest balance sheet date with the minimum and maximum amounts permitted under debt agreements. Such transparent disclosures will enable investors to better understand the risk of future covenant noncompliance by the registrant.

For additional discussion on liquidity, see the Management's Discussion and Analysis section.

Classification as Debt or Equity

Under ASC 480, certain financial instruments that embody an obligation of the issuer should be accounted for as liabilities even if their legal form is that of equity or they involve obligations to repurchase or issue the entity's equity shares. In addition, the guidance in ASC 480-10-S99-3A states that "ASR 268 requires preferred securities that are redeemable for cash or other assets to be classified outside of permanent equity if they are redeemable (1) at a fixed or determinable price on a fixed or determinable date, (2) at the option of the holder, or (3) upon the occurrence of an event that is not solely within the control of the issuer." ASC 480-10-S99-3A also notes the SEC staff's belief that ASR 268 can be applied analogously to other redeemable instruments.

Consequently, the SEC staff frequently asks registrants with redeemable securities — including registrants undergoing IPO transactions — to support the basis for their classification of such securities as either debt or equity. In addition, the staff often asks registrants about the accounting for conversion features in convertible instruments, including convertible preferred securities.

See the Noncontrolling Interests section for more information about redeemable NCIs. See the Financial Instruments section for considerations related to embedded conversion features.

Discontinued Operations, Assets Held for Sale, and Restructuring Charges

Discontinued Operations and Assets Held for Sale

Examples of SEC Comments

- We note the disclosure that as part of a strategic repositioning and refocusing of [Company A], a decision was made to sell [Facility A and Facility B] in 2013. In light of the fact that [Facility B has] not been sold as of December 31, 2014 and you expect a final determination for [Facility B] to occur in 2015, whereby [Company A] is currently weighing all of its disposal options, please tell us why [Company A] continues to believe that the fixed assets are appropriately classified as held for sale and the results of operations classified in discontinued operations as of December 31, 2014. Please tell us the specific considerations given to ASC 360-10-45-9 through ASC 360-10-45-11 in concluding that the assets continue to meet the held for sale criteria as of December 31, 2014.
- With reference to ASC 205-20-45-1, please tell us why your expected sale of [Component A] is not reflected as held for sale and discontinued operations. In this regard, we note . . . that you entered into a definitive agreement in December 2014 and the sale is expected to close in the first half of 2015 pending receipt of customary regulatory approvals. See also ASC 360-10-45-9.

The SEC staff continues to ask registrants whether the operations they have disposed of should be accounted for as discontinued operations. The staff may challenge whether the operations are a "component of an entity" under ASC 205-20. Specifically, it may ask whether the operations and cash flows "can be clearly distinguished, operationally and for financial reporting purposes, from the rest of the entity."

Whether components qualify as discontinued operations must be carefully considered.[1] Further, the staff has asked registrants to discuss whether assets meet the held-for-sale criteria in ASC 360 and to explain how they considered the related required disclosures. The staff may inquire about items such as:

- The timeline of events leading to an asset sale.
- The factors used to determine whether to present assets held for sale separately on the balance sheet.
- Sales agreements and how they affected the determination of whether particular assets should be classified as held for sale.

The SEC staff may also question the appropriateness and timeliness of a registrant's impairment tests when assets or components (1) are disposed of, (2) are discontinued, or (3) appear misclassified on the basis of other information in the filing. For example, the staff may ask whether assets that the registrant was expected to sell or dispose of were tested for impairment in prior periods or subject to an impairment charge in the current period (i.e., classified as held for use and thus not recorded at net realizable value). See the Impairments of Goodwill and Other Long-Lived Assets and Management's Discussion and Analysis sections for further discussion of long-lived-asset impairment testing and early-warning disclosures, respectively.

The SEC staff has also asked registrants about why they did not disclose the gain or loss on a sale after disposition.[2]

[1] See ASC 205-20-45.

[2] Before its amendment by ASU 2014-08, ASC 205-20-45-3 provided that gains or losses on disposal transactions "shall be disclosed either on the face of the income statement or in the notes to financial statements."

Restructuring Charges

Example of an SEC Comment

In your February 24, 2015 earnings call, your CEO indicated that you implemented approximately $[X] in cost reduction actions, including [an X]% head count reduction to your global workforce. You disclose . . . that you implemented a number of cost reduction actions during the quarter, including the planned closure of a manufacturing facility in [Location A]. Please describe to us the nature and extent of any workforce reduction actions undertaken during the year ended December 31, 2014 and the quarter ended March 31, 2015 and tell us how you considered providing the disclosures required by ASC 420-10-50.

The SEC staff has inquired about corporate reorganizations and restructurings and registrants' disclosures about such activities. Comments primarily stem from workforce reductions and facility closures.
In accordance with ASC 420-10-50-1, registrants should disclose specific information in "notes to financial statements that include the period in which an exit or disposal activity is initiated and any subsequent period until the activity is completed." Such information would include a description of the exit or disposal activity, its expected completion date, where in the income statement the amounts are presented, and quantitative information about each major type of cost associated with the activity and about each reportable segment. Further, in accordance with ASC 420-10-50-1(e), when "a liability for a cost associated with the activity is not recognized because fair value cannot be reasonably estimated," registrants should disclose "that fact and the reasons why." The SEC staff has also directed registrants to comply with the guidance in SAB Topic 5.P.4 on disclosures related to material restructuring activities.

Earnings per Share

Two-Class Method

> **Example of an SEC Comment**
>
> We note from your disclosure . . . that recipients of restricted stock receive all dividends with respect to the shares, whether or not the shares have vested. Please tell us whether you consider the restricted stock to be participating securities that would be included in your computation of earnings per share under the two-class method. Refer to ASC 260-10-45-61A.

Under ASC 260-10-45-59A, the two-class method applies to the following securities:

> a. Securities that may participate in dividends with common stocks according to a predetermined formula (for example, two for one) with, at times, an upper limit on the extent of participation (for example, up to, but not beyond, a specified amount per share)
>
> b. A class of common stock with different dividend rates from those of another class of common stock but without prior or senior rights.

When a filing indicates that the registrant has two classes of common stock (or one class of common stock and participating securities) that have been treated as a single class in the calculation of EPS, the SEC staff often asks whether application of the two-class method in the computation of EPS under ASC 260-10-45-59A through 45-70 is required.

The SEC staff may ask a registrant to substantiate the method used to calculate EPS (e.g., the two-class method or the if-converted method), and it may request additional information or disclosures about each of the registrant's classes of common stock, preferred stock, and common-stock equivalents (such as convertible securities, warrants, or options).

Further, the SEC staff expects that a registrant with two classes of common stock will present both basic and diluted EPS for each class regardless of whether either class has conversion rights. See the Financial Instruments section for more information about conversion features.

In assessing registrants' conclusions related to the two-class method, the SEC staff has focused on understanding the terms of arrangements, including (1) classes and types of common (or preferred) stock, (2) such stock's dividend rates, and (3) the rights and privileges associated with each class (or type) of stock. When a registrant has preferred shares, the SEC staff may seek to determine whether the preferred stockholders have contractual rights to share in profits and losses of the registrant beyond the stated dividend rate. Similarly, the SEC staff may ask registrants about the dividend rights of restricted stock unit awards or other share-based payment awards and how those rights are considered in the calculation of EPS.

EPS Disclosures

> **Example of an SEC Comment**
>
> We note your diluted [EPS] reflect the potential reduction in EPS using the treasury stock method to reflect the impact of common stock equivalents if stock options, [stock appreciation rights,] and warrants were exercised. Related to your reconciliation of basic and diluted EPS computations . . . , please confirm that you will disaggregate the dilutive [effect] of these share based awards by the award type (e.g., options, warrants, etc.) in future filings similar to the illustration provided in ASC 260-10-55-51 and [55-52].

The SEC staff may comment on whether a registrant has met the requirements of ASC 260-10-50-1, under which an entity must disclose all of the following for each period in which an income statement is presented:

> a. A reconciliation of the numerators and the denominators of the basic and diluted per-share computations for income from continuing operations. . . .
>
> b. The effect that has been given to preferred dividends in arriving at income available to common stockholders in computing basic EPS.
>
> c. Securities . . . that could potentially dilute basic EPS in the future that were not included in the computation of diluted EPS because to do so would have been antidilutive for the period(s) presented.

In addition, the SEC staff may ask registrants to elaborate on their calculation of EPS by disclosing:

- How unvested shares, unvested share units, unvested restricted share units, and performance shares are treated in basic and diluted EPS.
- Whether unvested share-based payment awards that contain nonforfeitable rights to dividends or dividend equivalents (paid or unpaid) are treated as participating securities and factored into the calculation of EPS.
- The nature of incentive distribution rights.

Fair Value

Valuation Techniques and Inputs

Examples of SEC Comments

- [P]lease provide us, for each "class" of level 2 fixed maturity securities, the valuation technique(s) and inputs used in your fair value measurement. To the extent that you use more than one technique in a class, tell us:
  - [T]he extent to which you use each technique for the class;
  - [W]hat determines when each technique is used in the class; and
  - [T]he inputs for each technique in the class.
- Please tell us, and revise future filings, to include the disclosure requirements of ASC 820-10-50-2.bbb, specifically quantitative information about the significant unobservable inputs used in the fair value measurement for fair value measurements categorized within Level 3 of the fair value hierarchy for impaired loans and other real estate owned. Refer to ASC 820-10-55-103 for a proposed template for disclosing this information in future filings.

The SEC staff has requested more specific information from registrants related to valuation techniques and inputs used in fair value measurements. Registrants should consider how the fair value disclosure requirements in ASC 820-10-50 apply to their recurring and nonrecurring fair value measurements. More specifically, registrants should provide information about (1) the methods and techniques used to determine fair value and (2) the inputs to those models.

Under ASC 820-10-50-2(bbb), entities are required to disclose quantitative information about the significant unobservable inputs used in Level 3 fair value measurements. Although this provision contains no explicit guidance on the types of quantitative information an entity should disclose, the example in ASC 820-10-55-103 illustrates quantitative information an entity "might disclose" to meet the requirement in ASC 820-10-50-2(bbb). According to the example, such information includes the entity's valuation technique, its significant unobservable inputs, and the range and weighted average of those inputs.

Some may have interpreted from the example in ASC 820-10-55-103 that an entity is not required to disclose the weighted average of significant unobservable inputs used in a Level 3 fair value measurement. However, the SEC staff may inquire about weighted averages when registrants do not disclose them.[1] The staff has suggested that if a weighted average would not be meaningful, a registrant could instead present qualitative information about the distribution of the range of values. Ideally, such qualitative disclosures would address each significant input and describe the reason for the wide range, the drivers of dispersion (e.g., a particular position or instrument type), and data point concentrations within the range.

Sensitivity of Level 3 Measurements

Example of an SEC Comment

You disclose the significant unobservable inputs used in developing the fair value of your warrants which are classified as a Level 3 measurement. Given that your warrants carried at fair value are a critical accounting policy, please revise your future filings to address the sensitivity disclosures required by ASC 820-10-50-2(g).

[1] Such inquiries are consistent with SEC staff remarks at the 2012 AICPA Conference. For more information about the conference, see Deloitte's December 11, 2012, *Heads Up*.

The SEC staff continues to comment when a registrant omits disclosures about the sensitivity of Level 3 measurements and may ask for disclosures about changes in significant unobservable inputs to be more granular and transparent. In addition, the staff has noted that it may be helpful for registrants to discuss the specific inputs that changed in the sensitivity analysis and the effect of changing those significant unobservable inputs.

Fair Value Hierarchy

> **Example of an SEC Comment**
>
> We note your disclosure . . . that you estimate the fair value of your "non-centrally cleared" interest rate swaps using inputs from counterparty and third-party pricing models to estimate the net present value of the future cash flows. We further note that these assets and liabilities are classified within Level 2 of the fair value hierarchy. Please provide us with additional details to support your Level 2 classification.

The SEC staff has asked registrants for additional information that supports their categorization of assets and liabilities in the fair value hierarchy. In addition, when assets or liabilities are transferred between levels in the fair value hierarchy, the staff has requested expanded disclosures to explain the amounts of any transfers, the reasons for those transfers, and the registrant's policy for determining when transfers between levels are deemed to have occurred.

Use of Third-Party Pricing Services

> **Example of an SEC Comment**
>
> We note that you use third-party pricing services to determine the fair value of your investments in [available-for-sale] securities. Please revise your future filings to disclose if you adjust prices obtained from pricing services and if so, the underlying reason for the adjustment and methods used to determine the adjustment. Please also revise to describe the procedures you perform to validate the valuations received from such third-party pricing services. Please refer to ASC 820-10-50-2(bbb) for further guidance.

The SEC staff continues to ask registrants to describe the procedures they perform to validate fair value measurements obtained from third-party pricing services. The staff has also asked registrants to clarify when and how often they use adjusted rather than unadjusted quoted market prices and to disclose why prices obtained from pricing services and securities dealers were adjusted. If multiple quotes were obtained, the SEC staff may request information about how the registrant determined the ultimate value used in the financial statements.

Financial Instruments

Because of the complexity associated with determining whether certain financial instruments should be accounted for as derivatives, debt instruments, or equity, SEC staff comments related to financial instruments have focused on (1) accounting for embedded derivatives in hybrid instruments,[1] (2) classification of warrants on a company's own stock, and (3) identification and calculation of beneficial conversion features (BCFs).

Embedded Derivatives in Hybrid Financial Instruments

Examples of SEC Comments

- It appears the exchangeable senior notes issued in August 2014 contain redemption features. Provide us your analysis that supports your conclusion that none of the redemption features are required to be bifurcated in accordance with ASC 815-15. Specifically address whether the debt involves a substantial discount in accordance with ASC 815-15-25-40 through [25-43].
- We note your disclosure that the 1.25% Notes contain an embedded cash conversion option and that you have determined that this option is a derivative financial instrument that is required to be separated from the notes. Please provide us with the details of your analysis in determining that this conversion option should be accounted for separately as a derivative and refer to the specific accounting literature you relied on.

The SEC staff continues to focus on whether registrants have reached appropriate accounting conclusions regarding whether embedded features in hybrid instruments should be bifurcated from the host contract. ASC 815-15-25 provides guidance on whether an embedded feature (e.g., a put option embedded in a company's preferred stock) should be separated from the host contract and accounted for as a stand-alone derivative instrument in accordance with ASC 815-10. If it is determined that an embedded feature is not clearly and closely related to the host contract, the embedded feature may need to be bifurcated from the host contract depending on whether certain other criteria are met and whether the embedded feature qualifies for any scope exceptions. For example, if the features in a hybrid instrument are predominantly debt-like, the entity would conclude that the host contract is more akin to debt; in such a case, an equity-like feature (e.g., a conversion option) would not be considered clearly and closely related to a debt host. Given the complexity involved in determining whether a host contract is debt-like or equity-like, registrants can expect the SEC staff to continue asking about the terms and features of convertible instruments to determine whether the registrant has (1) properly determined the nature of the host contract and (2) accounted for embedded features as stand-alone financial instruments when necessary. After adopting the guidance in ASU 2014-16, registrants should consider the ASU's disclosure requirements when making disclosures about the nature of the host contract.

Classification of Warrants on a Company's Own Stock

Example of an SEC Comment

Please tell us why the warrants you sold in this transaction are properly classified in equity and reference for us the authoritative literature you relied upon to support your accounting. In your response, specifically tell us how the strike price of these warrants can be adjusted and why these adjustments do not trigger derivative accounting.

[1] The ASC Master Glossary defines a hybrid instrument as a "contract that embodies both an embedded derivative and a host contract."

If certain criteria are met, warrants issued in connection with debt and equity offerings are accounted for on a separate basis (i.e., as freestanding financial instruments[2]). Under U.S. GAAP, an issuer of a stock purchase warrant is required to first determine whether the warrant should be classified as a liability under ASC 480. If the warrant is not classified as a liability under ASC 480, liability classification may still result under ASC 815. Specifically, the warrant's classification as either a liability or equity may hinge on whether the instrument meets the definition of a derivative and qualifies for any scope exceptions under ASC 815-10-15. When a warrant is accounted for as a freestanding financial instrument, the manner in which offering proceeds are allocated to the issued instrument and to the warrant depends on whether the warrant is classified as an equity instrument or as a liability instrument. Consequently, the SEC staff has asked registrants to explain the basis for their determination of how warrants should be classified, including the application of relevant accounting literature.

Identification and Calculation of BCFs

Examples of SEC Comments

- Please submit the analyses you performed in determining whether these classes of preferred shares contain [BCFs].
- Please tell us how you calculated the [BCF] you recorded in connection with the issuance of [convertible shares]. Further, please provide to us your accounting analysis which supports recognizing the BCF as a non-cash distribution that is recognized ratably from the issuance date through the conversion date in equity.

The SEC staff frequently comments on the recognition and calculation of BCFs. ASC 470-20 requires the issuer of a convertible security to measure the amount of any embedded BCF at the intrinsic value of the embedded conversion option, which is computed on the basis of the effective conversion price (i.e., the issuer computes the intrinsic value of the embedded conversion option by multiplying (1) the amount by which the fair value of the common stock or other securities into which the security is convertible exceeds the effective conversion price by (2) the number of shares into which the security is convertible). Accordingly, registrants can expect the SEC staff to ask how they calculated the value of a BCF that was recorded in connection with the issuance of a hybrid financial instrument. In addition, the SEC staff frequently asks registrants to provide the accounting analysis that supports the BCF calculation.

[2] The ASC Master Glossary defines a freestanding financial instrument as a financial instrument that either (1) "is entered into separately and apart from any of the entity's other financial instruments or equity transactions" or (2) "is entered into in conjunction with some other transaction and is legally detachable and separately exercisable."

Financial Statement Classification, Including Other Comprehensive Income

The SEC staff frequently comments on registrants' classification of items in the financial statements, namely on whether their balance sheets, income statements, statements of cash flows, and statements of comprehensive income comply with the requirements of Regulation S-X and U.S. GAAP.

Balance Sheet Classification

Separate Presentation

> **Example of an SEC Comment**
>
> We note that "Other accrued expenses" comprises more than 13% of total current liabilities as of November 30, 2014. Please tell us what consideration you gave to separately presenting any individual items within this category that were in excess of 5% of total current liabilities pursuant to Regulation S-X Rule 5-02(20).

In accordance with Regulation S-X, Rule 5-02, commercial and industrial registrants should state separately on the face of the balance sheet or in a note to the financial statements (1) other current assets and other current liabilities in excess of 5 percent of total current assets and total current liabilities, respectively, and (2) other noncurrent assets and other noncurrent liabilities in excess of 5 percent of total assets and total liabilities, respectively. Consequently, the SEC staff may ask a registrant to confirm whether the reported balances of other current assets and other current liabilities (or other noncurrent assets and other noncurrent liabilities) include any items in excess of 5 percent of total current assets and total current liabilities (or total assets and total liabilities). If the registrant confirms that any such items are included, the SEC staff will ask the registrant to state those items individually on the face of the balance sheet or in the notes.

Restricted Cash

> **Example of an SEC Comment**
>
> Please refer to Rule 5-02 of Regulation S-X and tell us how you considered presenting or disclosing restricted cash associated with the company's participation in programs administrated by the Department of Education and Department of Defense.

Rule 5-02 includes a provision requiring commercial and industrial registrants to (1) separately disclose cash and cash items that are subject to restrictions on withdrawal or usage and (2) describe the provisions of those restrictions in a note to the financial statements. Consequently, the SEC staff has issued comments asking registrants to explain how they considered presenting or disclosing restricted cash in accordance with Rule 5-02.

Income Statement Classification

The SEC staff has commented on registrants' compliance with the technical requirements of Regulation S-X, Rule 5-03, which lists the captions and details that commercial and industrial registrants must present in their income statements. For example, the SEC staff has asked registrants to explain why they have excluded certain line items required by Rule 5-03 from the face of their income statements. In addition, the SEC staff has reminded registrants that when alternative classifications are permissible, they should disclose their policies and apply them consistently in accordance with ASC 235-10.

Separate Presentation

> **Example of an SEC Comment**
>
> To the extent that Other expenses remains material to the income statement, please consider disaggregating its components on the face of the statement or in a note to the financial statements.

Among the requirements of Rule 5-03 is separate presentation of certain material (1) other operating costs and expenses and (2) other general expenses. The SEC staff frequently comments when registrants present material amounts in "other expenses" (or similarly phrased line items) and, in certain instances, has asked registrants to consider disaggregating the components of such line items on the face of the income statement or in the notes to the financial statements.

Further, the SEC staff has focused on the distinction between product and service revenue. Under Rule 5-03, if product or service revenue is greater than 10 percent of total revenue, disclosure of such component is required as a separate line item on the face of the income statement, and costs and expenses related to the product or service revenue should be presented in the same manner. Accordingly, registrants that combined the presentation of product and service revenue when such revenue met the separate presentation threshold have received SEC staff comments directing them to revise their consolidated statement of operations.

Cost of Sales

> **Example of an SEC Comment**
>
> We note that you present a subtotal for gross profit on your consolidated statements of income and that this profit measure reflects revenues less the cost of food and retail merchandise sold, which you label as "Cost of goods sold." We note that costs of goods sold does not reflect certain costs of goods and services such as labor, benefits, rent, depreciation, and amortization, among others. Please tell us the basis for your determination of the types of costs included in cost of goods sold and your consideration of S-X Rule 5-03.2, S-K Item 302, and SAB Topic 11.B.

The SEC staff often asks registrants to disclose the types of expenses that are included in or excluded from the cost-of-sales line item. For example, the SEC staff has issued comments to registrants that did not allocate depreciation and amortization to cost of sales. SAB Topic 11.B states, in part:

> If cost of sales or operating expenses exclude charges for depreciation, depletion and amortization of property, plant and equipment, the description of the line item should read somewhat as follows: "Cost of goods sold (exclusive of items shown separately below)" or "Cost of goods sold (exclusive of depreciation shown separately below)." [D]epreciation, depletion and amortization should not be positioned in the income statement in a manner which results in reporting a figure for income before depreciation.

Most of the SEC staff's comments on this matter have stemmed from registrants' lack of awareness or incorrect application of the guidance in SAB Topic 11.B, particularly their inappropriate reporting of an amount for gross profit before depreciation and amortization.

Operating Versus Nonoperating Income

> **Example of an SEC Comment**
>
> We note that you classified the net gain of $[X] from the sale of your microphone product line within non-operating income. We also note that the microphone product line was not considered to be a component of the company. Please tell us why you classified the amount as non-operating income and not within operating income. Include a discussion of your consideration of FASB ASC 360-10-45-5.

The SEC staff has commented about items that registrants have included in, or excluded from, operating income. Under Rule 5-03, a subtotal line item for operating income is not required on the face of the income statement. However, if a registrant presents a subtotal for operating income, it should generally present the following items (which are sometimes incorrectly excluded) in operating income:

- Gains or losses on asset sales.
- Litigation settlements.
- Insurance proceeds.
- Restructuring charges.

The following items should generally be excluded from operating income (but are sometimes incorrectly included):

- Dividends.
- Interest on securities.
- Profits on securities (net of losses).
- Interest and amortization of debt discount and expense.
- Earnings from equity method investments (or unconsolidated affiliates).
- Noncontrolling interest in income of consolidated subsidiaries.

Cash Flow Statement Classification

Category Classification

> **Example of an SEC Comment**
>
> We note you classified dividends received from your banking subsidiary of $[X] in 2014, $[X] in 2013, and $[X] in 2012 as cash flows from investing activities. Please tell us why you classified these cash inflows to the parent company as investing cash flows as opposed to operating cash flows. Please refer to ASC 230-10-45-16(b) for specific guidance on how to classify dividends received on a statement of cash flows.

Many of the SEC staff's comments are related to misclassification among the three cash flow categories: operating, investing, and financing. ASC 230 distinguishes between returns **of** investment, which should be classified as inflows from investing activities (see ASC 230-10-45-12(b)), and returns **on** investment, which should be classified as inflows from operating activities (see ASC 230-10-45-16(b)). Under ASC 230-10-45-16(b), cash inflows from operating activities include "[c]ash receipts from returns on loans, other debt instruments of other entities, and equity securities — interest and dividends."

At the 2014 AICPA Conference, the SEC staff noted that it has observed an increased number of classification errors in registrants' statements of cash flows. Further, such errors are generally not attributable to complex fact patterns. The SEC staff identified various actions that registrants could take when preparing the statement of cash flows to potentially reduce the likelihood of errors, including:

- Evaluating the completeness and accuracy of the information collected for preparation of the statement.
- Standardizing and automating required reports and other information.
- Separately considering the effect of nonrecurring transactions in the statement.
- Preparing the statement earlier to allow for adequate review.
- Selecting employees that have the appropriate expertise to prepare the statement of cash flows and providing them with sufficient training on the accounting requirements related to the statement.
- Incorporating risk assessment and monitoring controls in addition to control activities.

For information about SEC staff comments on how registrants' errors could affect their conclusions about DC&P and ICFR, see the Disclosure Controls and Procedures and Internal Control Over Financial Reporting sections.

Net Versus Gross Presentation

Example of an SEC Comment

Please note that borrowings and payments on your revolving credit facility should be recorded on a gross basis in the statement of cash flows unless the original maturity of the borrowings is three months or less. Refer to ASC 230-10-45-9 and advise us why the borrowings and payments were not reflected on a gross basis.

The SEC staff may challenge whether it is appropriate to report the net amount of certain cash receipts and cash payments on the face of the statement of cash flows. ASC 230-10-45-7 through 45-9 state that although reporting gross cash receipts and cash payments provides more relevant information, financial statement users sometimes may not need gross reporting to understand certain activities. The SEC staff may ask a registrant to revise the presentation or to explain (in accordance with ASC 230) why it is appropriate to report certain cash flows on a net basis rather than on a gross basis.

Comprehensive Income — Disclosure

Examples of SEC Comments

- Please tell us your consideration of disclosing in the notes to the financial statements the gross changes, along with the related tax expense or benefit, of each classification of other comprehensive income. Refer to ASC 220-10-45-12 and [ASC] 220-10-45-17.
- Please provide the disclosures required by ASU 2013-02 related to amounts reclassified out of accumulated other comprehensive income or tell us why this authoritative literature does not apply to you.

Entities are required to report components of comprehensive income in either (1) a continuous statement of comprehensive income or (2) two separate but consecutive statements.

The SEC staff has commented when registrants have not provided information required by ASC 220 (ASU 2013-02) about the amounts reclassified out of accumulated OCI. For example, the staff frequently reminds registrants to "present the amount of income tax expense or benefit allocated to each component of other comprehensive income, including reclassification adjustments," for each reporting period either on the face of the statement where those items are presented or in the footnotes.

Foreign Currency

Quantification of Foreign Currency Adjustments

Example of an SEC Comment

Throughout MD&A, you indicate that results were negatively impacted by the effects of foreign currency translation. Please expand your discussion to quantify the impact of foreign currency translation on each segment, where applicable. Please also discuss any trends related to foreign currency currently impacting your results of operations and indicate whether they are expected to continue (i.e. whether currency has strengthened or weakened from period to period).

The SEC staff's comments on quantitative disclosures related to foreign currency adjustments reflect published staff views[1] on the topic, under which registrants should:

- "[R]eview management's discussion and analysis and the notes to financial statements to ensure that disclosures are sufficient to inform investors of the nature and extent of the currency risks to which the registrant is exposed and to explain the effects of changes in exchange rates on its financial statements."
- Describe in their MD&A "any material effects of changes in currency exchange rates on reported revenues, costs, and business practices and plans."
- Identify "the currencies of the environments in which material business operations are conducted [when] exposures are material."
- "[Q]uantify the extent to which material trends in amounts are attributable to changes in the value of the reporting currency relative to the functional currency of the underlying operations [and analyze] any materially different trends in operations or liquidity that would be apparent if reported in the functional currency."

The foreign operations of many registrants may be subject to material risks and uncertainties that should be disclosed, including those related to the foreign jurisdiction's political environment, its business climate, currency, and taxation. The effects on a registrant's consolidated operations of an adverse event related to these risks may be disproportionate relative to the size of the registrant's foreign operations. Therefore, the registrant's segment information or MD&A may need to describe the trends, risks, and uncertainties related to its operations in individual countries or geographic areas and possibly supplement such disclosures with disaggregated financial information about those operations.

A registrant's assessment of whether it needs to provide disaggregated financial information about its foreign operations in its MD&A would need to take into account more than just the percentage of consolidated revenues, net income, or assets contributed by foreign operations. The registrant also should consider how the foreign operations might affect the consolidated entity's liquidity. For example, a foreign operation that holds significant liquid assets may have an exposure to exchange-rate fluctuations or restrictions that could affect the registrant's overall liquidity.

Accounting and Disclosure Considerations Related to Venezuelan Operations

The SEC staff continues to focus on accounting and disclosure considerations related to the foreign currency exchange environment in Venezuela. Business operations in Venezuela may give rise to accounting questions about (1) which exchange rate is appropriate for remeasurement and (2) whether such operations should be deconsolidated or considered impaired. For additional accounting and disclosure considerations related to the foreign currency exchange environment in Venezuela, see (1) the October 2, 2015, Deloitte Accounting Journal entry and (2) Deloitte's Financial Reporting Alerts 15-1,[2] 14-5,[3] and 14-1.[4]

4 Financial Reporting Alert 14-1, "Foreign Currency Exchange Accounting Implications of Recent Government Actions in Venezuela."

Impairments of Goodwill and Other Long-Lived Assets

Goodwill

Disclosures

Example of an SEC Comment

We note your disclosure . . . that the fair value of [Reporting Unit A] substantially exceeded the related carrying value as of your annual assessment in the fourth quarter of fiscal 2014. We also note that operating income of [Reporting Unit A] declined [X]%, from $[X] million to $[X] million, during fiscal year 2014 primarily as a result of a decrease in gross margin rates and increases in buying, distribution and occupancy costs and depreciation expense. Please provide the following:

- [T]he percentage by which [Reporting Unit A]´s fair value exceeded its carrying value as of June 26, 2014;
- [A]n explanation of how the decline in operating income that occurred during fiscal year 2014 was considered in your goodwill impairment analysis. Please specifically address the fact that the lower gross margin rate was mainly attributable to higher promotional markdowns, which resulted from increased promotional activity required to sell through seasonal merchandise; and
- [W]hether you believe the continued decline in [Reporting Unit A]'s operating income through the quarter ending October 25, 2014 puts it at risk for potential impairment of its related goodwill as of October 25, 2014.

Section 9510 of the FRM discusses the SEC staff's views on when goodwill impairment disclosures in the critical accounting estimates section of MD&A are appropriate and the extent of such disclosures. The SEC staff has commented on a registrant's compliance with the disclosure requirements in Regulation S-K, Item 303(a)(3)(ii), to discuss a known uncertainty — specifically, to disclose the potential for a material impairment charge — in light of potential impairment triggers. The staff has noted that it may use these disclosures to assess whether a registrant's goodwill impairment analysis is reasonable or whether the registrant should have performed an interim goodwill impairment analysis.

While registrants often provide the appropriate disclosures before incurring an impairment charge, the SEC staff has noted instances in which registrants did not disclose the specific events and circumstances that led to the charge in the period of impairment. After performing an interim impairment test, a registrant should consider disclosing (1) that it performed the test, (2) the event that triggered the test, and (3) the test result regardless of whether goodwill was determined to be impaired. Further, registrants should avoid attributing an impairment charge to general factors such as "soft market conditions" or expected reductions in sales price or sales volume. Instead, the disclosures should discuss (1) why the changes occurred, (2) why the change in forecasts or results occurred in the particular period of the impairment charge, and (3) what known developments or other doubts could affect the reporting unit's fair value estimate.

Reporting Units

Example of an SEC Comment

Please revise [your critical accounting policy discussion of goodwill and other intangible assets as follows]:

- Clarify the number of reporting units identified for impairment testing and how they were determined (e.g., operating segments or components) and how goodwill is assigned to reporting units;
- If you aggregate more than one component into a single reporting unit, provide the specific facts and circumstances supporting a conclusion that aggregation is appropriate;
- Clarify whether the optional qualitative assessment was performed for any reporting units;
- Please disclose whether or not your reporting units' fair value is substantially in excess of [their carrying value]. To the extent that any of your reporting units have estimated fair values that are not substantially in excess of the carrying value and to the extent that goodwill for these reporting units, in the aggregate or individually, if impaired, could materially impact your operating results, please provide the following disclosures for each of these reporting units:
    - Identify the reporting unit;
    - The percentage by which fair value exceeds the carrying value as of the most recent step-one test;
    - The amount of goodwill;
    - A description of the assumptions that drive the estimated fair value;
    - A discussion of the uncertainty associated with the key assumptions; and
    - A discussion of any potential events and/or circumstances that could have a negative effect on the estimated fair value.

The SEC staff continues to comment on asset grouping for goodwill impairment testing (e.g., the identification and composition of reporting units), especially when a registrant does not clearly state that it tests goodwill at the reporting-unit level or when changes appear to have been made to a registrant's reportable segments (e.g., as the result of a reorganization or acquisition). Given the interaction between the guidance on reporting units in ASC 350-20 and the guidance on operating segments in ASC 280, the staff may also ask questions to better understand (1) how the reporting units were identified; (2) how many reporting units were identified; (3) how the reporting units align with the registrant's segment reporting; (4) whether and, if so, how the registrant aggregated reporting units to perform goodwill impairment testing; and (5) how the fair value of the reporting units was determined. For additional information about the identification and aggregation of operating segments, see the Segment Reporting section.

Interim Impairment Tests

Example of an SEC Comment

We note your goodwill impairment charge of $[X] recorded in the fourth quarter of 2014 as a result of your annual goodwill impairment test. Please tell us whether you performed an interim goodwill test as a result of a triggering event described in ASC 350-20-35-3C. If an interim impairment test was performed, please tell us the triggering event that caused the evaluation, the results of the impairment test and the percentage that fair value exceeded carrying value for each of your reporting units. If no interim impairment test was completed, please confirm that there were no triggering events described in ASC 350-20-35-3C and explain in detail why each factor did not trigger an interim impairment test. Please be specific when explaining the factor in ASC 350-20-35-3C(d). Refer to 350-20-35-30.

ASC 350-20 requires entities to test goodwill for impairment annually and also between annual tests if facts and circumstances indicate that goodwill may be impaired. The SEC staff has asked registrants about negative trends that could trigger the requirement to test for impairment between annual tests and often asks them to describe the events leading up to the recording of an impairment charge, including how circumstances changed from prior quarters and from when the registrant had performed its previous annual goodwill impairment test. The SEC staff may also request an explanation of how the impairment had not been reasonably foreseen during management's prior-period assessments. Specifically, the staff may question why management did not identify an impairment during a previous quarter.

Other Long-Lived Assets

Example of an SEC Comment

We note that in the second quarter 2014 earnings conference call you stated that you plan to close [X] stores with a majority of the closures occurring in the fourth quarter of 2014. In light of the planned closures, please tell us if you have tested the related long-lived assets for impairment and reviewed their depreciation estimates, as of August 2, 2014. See ASC 360-10-35-21 and 35-22. If so tell us the outcome of your evaluations. If you have not [recorded an impairment] or revised depreciation estimates for these assets, please tell us your accounting basis for not doing so. We have reviewed your policy for impairment testing; however, it does not appear to address long-lived assets associated with planned store closings.

In its comments on impairments of long-lived assets, the SEC staff may ask a registrant that is recording, or is at risk of recording, impairment charges to either disclose or inform the SEC staff about the following:

- The adequacy and frequency of the registrant's asset impairment tests, including the date of its most recent test.
- The factors or indicators (or both) used by management to evaluate whether the carrying value of other long-lived assets may not be recoverable.
- The methods and assumptions used in impairment tests, including how assumptions compare to recent operating performance, the amount of uncertainty associated with the assumptions, and the sensitivity of the estimate of fair value of the assets to changes in the assumptions.
- The timing of the impairment, especially if events that could result in an impairment had occurred in periods before the registrant recorded the impairment. In these circumstances, the SEC staff may ask registrants to justify why the impairment was not recorded in the previous period.
- The types of events that could result in impairments.
- In the critical accounting policies section of MD&A, the registrant's process for assessing impairments.
- The facts and circumstances that led to the impairments, along with a reminder that a registrant may be required to disclose in MD&A risks and uncertainties associated with the recoverability of assets in the periods before an impairment charge is recorded. For example, even if an impairment charge is not required, a reassessment of the useful life over which depreciation or amortization is being recognized may be appropriate.

Income Taxes

The SEC staff's comments about income taxes continue to focus on (1) the potential tax and liquidity ramifications related to the repatriation of foreign earnings, (2) valuation allowances, (3) rate reconciliation, and (4) unrecognized tax benefits.

Further, the staff continues to ask registrants to provide early-warning disclosures to help financial statement users understand these items and how they potentially affect the financial statements. For additional information about early-warning disclosures, see the Management's Discussion and Analysis section.

At the 2014 AICPA Conference, the staff stated that boilerplate language should be avoided with respect to income tax disclosures within MD&A and that approaches more conducive to effective disclosure would include:

- Using the income tax rate reconciliation as a starting point and describing the details of the material items.
- Discussing significant foreign jurisdictions, including statutory rates, effective rates, and the current and future impact of reconciling items.
- Providing meaningful disclosures about known trends and uncertainties, including expectations regarding the countries where registrants operate.

Repatriation of Foreign Earnings and Liquidity Ramifications

Example of an SEC Comment

You disclose that during fiscal 2014, 2013 and 2012, you provided for U.S. and non-U.S. income and withholding taxes in the amount of $[X], $[X] and $[X], respectively, on earnings that were or are intended to be repatriated. You further indicate that, in general, the remaining earnings of your subsidiaries are considered to be permanently reinvested and that you have approximately $[X] of undistributed earnings that are considered to be permanently reinvested. Please quantify the amounts repatriated for each period presented and tell us the facts and circumstances for repatriating your subsidiaries earnings. Substantiate how your assertion that the remaining portion will be permanently reinvested meets the indefinite reinvestment criteria in ASC 740-30-25. In this regard, since you did or intend to repatriate earnings in each of the periods presented and indicated the related tax amounts for each of those periods, please tell us why your assertion that it is not practicable to determine the cumulative amount of tax liability that would arise if these earnings were remitted is reasonable.

In accordance with ASC 740, when the earnings of a foreign subsidiary are indefinitely reinvested, registrants should disclose the nature and amount of the temporary difference for which no deferred tax liability (DTL) has been recognized as well as the changes in circumstances that could render the temporary difference taxable. In addition, registrants should disclose either (1) the amount of the unrecorded DTL related to that temporary difference or (2) a statement that determining that liability is not practicable.

Registrants may need to repatriate cash from foreign subsidiaries. ASC 740-30-25-19 states that "[i]f circumstances change and it becomes apparent that some or all of the undistributed earnings of a subsidiary will be remitted in the foreseeable future but income taxes have not been recognized by the parent entity, [the parent entity] shall accrue as an expense of the current period income taxes attributable to that remittance."

The SEC staff continues to (1) ask for additional information when registrants claim that it is not practicable to determine the amount of unrecognized DTL and (2) request that registrants expand disclosures in MD&A about their indefinitely reinvested foreign earnings. In addition, the staff has indicated that it evaluates such an assertion by taking into account registrants' potential liquidity needs and the availability of funds in U.S. and foreign jurisdictions. Recently, the staff has focused on situations in which registrants have repatriated a portion of their foreign earnings but continue to assert that the remaining earnings are considered to be permanently invested.

Disclosures in an MD&A liquidity analysis should include:

- The amount of cash and short-term investments held by foreign subsidiaries that would not be available to fund domestic operations unless the funds were repatriated.
- A statement that the company would need to accrue and pay taxes if the funds are repatriated.
- If true, a statement that the company does not intend to repatriate those funds.

Valuation Allowances

Examples of SEC Comments

- We note . . . that during 2014, you released $[X] of the valuation allowance that existed at the beginning of the year. We further note that you considered your income from operations and reduction in interest expense as a result of refinancings as positive evidence supporting this release. Given that you have three years of cumulative losses from pre-tax income, please help us better understand how you determined it was appropriate to release the valuation allowance during 2014. Your response should tell us how you weighted all of the positive and negative evidence, including your consideration of the extent to which it can be objectively verified, in reaching the conclusion to reverse the valuation allowance. Refer to paragraphs 30-21 through 30-23 of ASC 740-10-30.
- Given your recurring losses before income taxes, please disclose in future filings the nature of the deferred tax assets that have not been offset by a valuation allowance and how you determined they would be realized. Please also disclose the following:
  - The nature of the positive and negative evidence you considered, how that evidence was weighted, and how that evidence led you to determine it was not appropriate to record a valuation allowance on the remaining deferred tax assets;
  - The amount of any pre-tax income you need to generate to realize the deferred tax assets;
  - The anticipated future trends included in any projections of future taxable income; and
  - State, if true, that the deferred tax liabilities you are relying on in your assessment of the realizability of your deferred tax assets will reverse in the same period and jurisdiction and are of the same character as the temporary differences giving rise to the deferred tax assets.

ASC 740-10-30-5(e) requires entities to reduce deferred tax assets (DTAs) by "a valuation allowance if, based on the weight of available evidence, it is more likely than not (a likelihood of more than 50 percent) that some portion or all of the [DTAs] will not be realized. The valuation allowance shall be sufficient to reduce the [DTA] to the amount that is more likely than not to be realized." ASC 740-10-30-16 through 30-23 provide additional guidance. In light of this guidance, the SEC staff has commented when registrants' filings indicate that no valuation allowance has been recorded, or when it seems that the valuation allowance recorded is insufficient. More recently, the staff has asked registrants about reversals of, or other changes in, their valuation allowances.

The staff has reminded registrants that in assessing the realizability of DTAs, they should consider cumulative losses in recent years to be significant negative evidence and that to avoid recognizing a valuation allowance, they would need to overcome such evidence with significant objective and verifiable positive evidence.

The SEC staff has indicated that factors for registrants to consider in making a determination about whether they should reverse a previously recognized valuation allowance would include:

- The magnitude and duration of past losses.
- The magnitude and duration of current profitability.
- Changes in the above two factors that drove losses in the past and those currently driving profitability.

Further, the staff has noted that registrants should bear in mind that the goal of the assessment is to determine whether sufficient positive evidence outweighs existing negative evidence. The staff has emphasized the importance of evidence that is objectively verifiable and has noted that such evidence carries more weight than evidence that is not. In addition, registrants should (1) assess the sustainability of profits in jurisdictions in which an entity was previously in a cumulative loss position and (2) consider their track record of accurately forecasting future financial results. Doubts about the sustainability of profitability in a period of economic uncertainty may give rise to evidence that would carry less weight in a valuation allowance assessment. Likewise, a registrant's poor track record of accurately forecasting future results would also result in future profit projections that may be very uncertain and should carry less weight in the overall assessment.

The SEC staff has also pointed out that registrants' disclosures should include a discussion of the specific factors or reasons that led to a reversal of a valuation allowance to effectively answer the question, why now? Such disclosures would include a comprehensive analysis of all available positive and negative evidence and how the registrant weighed each piece of evidence in its assessment. In addition, the SEC staff has reminded registrants that the same disclosures would be expected when there is significant negative evidence and a registrant concludes that a valuation allowance is necessary.

Rate Reconciliation

Examples of SEC Comments

- We note your tax benefit from non-U.S. net earnings as depicted in the tax reconciliation table. Please discuss and disclose in your MD&A the identities of specific jurisdictions that materially affect your effective tax rate (currently, [X]%), the tax rates and incentives in those specific jurisdictions, earnings within those jurisdictions and information about the effects of such foreign jurisdictions (e.g., magnitude, mix), including but not limited to [Country A], on the current and future effective tax rate.
- We note the foreign tax rate differential is significantly lower than the federal statutory rate in the income tax rate reconciliation. In light of the significantly lower impact of taxes imposed on foreign earnings to your operating results, in future filings please explain in MD&A the relationship between foreign pre-tax income and the foreign effective tax rate in greater detail. We refer you to Section III.B of SEC Release 33-8350. Please provide us with your proposed revised disclosure.

In accordance with ASC 740 and Regulation S-X, Rule 4-08(h)(2), registrants must disclose a reconciliation that uses percentages or dollar amounts of income tax expense or benefit attributable to continuing operations with the amount that would have resulted from applying domestic federal statutory tax rates (the regular rate, not the alternative minimum tax rate) to pretax income from continuing operations.

Further, registrants should disclose the estimated amount and the nature of each significant reconciling item. ASC 740-10-50 does not define "significant." However, Rule 4-08(h) states that public entities should disclose (on an individual basis) all reconciling items that constitute 5 percent or more of the computed amount (i.e., income before tax multiplied by the applicable domestic federal statutory tax rate). Reconciling items may be aggregated in the disclosure if they are individually less than 5 percent of the computed amount.

The SEC staff has noted the following issues related to registrants' tax rate reconciliation disclosures:

- Labels related to reconciling items were unclear, and disclosures about material reconciling items did not adequately describe the underlying nature of these items.
- For material reconciling items related to foreign tax jurisdictions, registrants did not disclose in MD&A (1) each material foreign jurisdiction and its tax rate and (2) how each jurisdiction affects the amount in the tax rate reconciliation.
- Registrants have inappropriately aggregated material reconciling items that are greater than 5 percent of the amount they calculated by multiplying the pretax income by the statutory tax rate.
- Amounts reflected in the tax rate reconciliation were inconsistent with related amounts disclosed elsewhere in a registrant's filing.
- Corrections of errors were inappropriately reflected as changes in estimates.

Unrecognized Tax Benefits

Example of an SEC Comment

We note [an $X] increase in unrecognized tax benefits related to additions for prior year tax positions. Please describe for us in greater detail the significant components of this increase in unrecognized tax benefits. Please also describe whether this increase relates to the tax audit by the [Country A] tax authorities . . . . In this regard, please tell us how you have concluded that no other major jurisdictions outside the U.S. are required to be disclosed under FASB ASC 740-10-50-15(e).

Under ASC 740-10-25-6, entities cannot recognize a tax benefit related to a tax position unless it is "more likely than not" that tax authorities will sustain the tax position solely on technical merits. The tax benefit recognized is measured as the largest amount of the tax benefit that is more than 50 percent likely to be realized. The difference between a tax position taken or expected to be taken in a tax return and the benefit recognized and measured under ASC 740-10 is referred to as an "unrecognized tax benefit." Generally, if the unrecognized tax benefit would be settled by offsetting it with an available loss or tax credit carryforward in the same jurisdiction, it should be netted against the related DTA. Otherwise, the amount of the unrecognized tax benefit is presented as a liability in the statement of financial position. The SEC staff has commented when registrants omit disclosures required under ASC 740-10-50-15 and 50-15A about unrecognized tax benefits, which include a tabular reconciliation of such benefits.

In addition, the SEC staff may ask registrants about their conclusions regarding disclosures about reasonably possible changes in unrecognized tax benefits. Because the guidance on the acceptable level of aggregation of information for these disclosures is not prescriptive and permits judgment, the SEC staff evaluates a registrant's level of disclosure on a case-by-case basis.

Examples of what registrants should disclose under ASC 740-10-50-15(d) include:

- Information related to scheduled expiration of the tax position's statute of limitations. A registrant should disclose this information if (1) the statute of limitations is scheduled to expire within 12 months of the financial statement's date and (2) management believes it is reasonably possible that the statute's expiration will cause the total amounts of unrecognized tax benefits to significantly increase or decrease.
- Significant unrecognized tax benefits for tax positions that the registrant believes will be effectively settled within 12 months in accordance with ASC 740-10-25-9.

Other Deloitte Resources

January 2015, *A Roadmap to Accounting for Income Taxes*.

Leases

Lease Classification

Examples of SEC Comments

- We note your disclosure that during fiscal 2014 you entered into [X] agreements covered under a master lease agreement to lease back the equipment. Please provide us with your analysis of the guidance in ASC 840-10-25-1 supporting your classification of these as operating leases, including your consideration of the renewal option and transfer of ownership at the end of the lease term.
- [T]ell us how you determine that the exercise of a bargain renewal option is reasonably assured, including whether you consider historical experience in determining such exercises. Further, quantify for us the number of leases in your portfolio that have bargain renewal options. In your response, tell us the accounting literature relied upon and the basis for your conclusions.

The lease classification criteria in ASC 840-10-25-1 are based on the concept that a lease that transfers substantially all of the benefits and risks incident to the ownership of property should be accounted for (1) as the acquisition of an asset and the incurrence of an obligation by the lessee and (2) as a sale or financing by the lessor. All other leases should be accounted for as operating leases. The evaluation of the four lease classification criteria in ASC 840-10-25-1 and the subsequent conclusion about whether to classify a particular lease as an operating lease or a capital lease can have material effects on an entity's financial statements and disclosures. A lessee recognizes a capital lease as an asset and obligation on its balance sheet. Operating leases, on the other hand, are not recognized on the balance sheet but result in charges to expense by the lessee (reported as income by the lessor) over the lease term.

The SEC staff has asked registrants to further explain their considerations of the lease classification criteria. Many of the comments have focused on criteria (a) and (b) of ASC 840-10-25-1, which are related to transfer of ownership by the end of the lease term and bargain purchase options, respectively. If a lease transfers title to the lessee by the end of the lease term or shortly thereafter for no additional consideration or for nominal consideration, the lease would be classified by the lessee as a capital lease. Further, if the lease contains a bargain purchase option, it also would be classified by the lessee as a capital lease. Determining whether a purchase option is a bargain requires judgment (e.g., determining whether the exercise price is sufficiently lower than the expected fair value of the asset at the date of exercise to make exercise of the option reasonably assured), and there are no bright lines in this regard. The SEC staff may ask questions related to how the registrant determined that a bargain purchase option is reasonably assured or, in turn, how the registrant determined that it has not met the bargain purchase option criteria.

Sale-and-Leaseback Transactions Involving Fixed-Price Renewal Options

In the past, the SEC staff has commented on how registrants considered fixed-price renewal options in evaluating whether a real estate transaction qualifies for sale-and-leaseback accounting. A fixed-price renewal option in a leaseback may preclude a real estate transfer from qualifying for sale accounting (in which case, the real estate would remain on the seller's books and be treated as a financing arrangement). Renewal options that cover substantially all of the useful life of the real estate and enable the seller-lessee to participate in the appreciation of the underlying property (i.e., through favorable rental rates) are a prohibited form of continuing involvement.

Although comments have focused on fixed-price renewal options, the SEC staff may ask about any renewal terms that allow the seller-lessee to participate in increases in the value of the underlying real estate, including fixed base rents during the renewal period that a registrant calculates by using an inflationary index to adjust the current base rents. While these are not technically fixed-price renewals, they do have the potential to give the seller-lessee upside participation to the extent that market rates for rents exceed the rate of inflation.

Materiality

Example of an SEC Comment

We note that you concluded that the errors related to deferred tax assets were immaterial to the previously reported amounts contained in your periodic reports. Please tell us the following concerning these errors:

- Explain to us in greater detail the nature of the errors and how they were determined and remediated;
- Tell us if there was any impact on the evaluation of your disclosure controls and procedures and your conclusion on Internal Control over Financial Reporting; and
- Provide us with your SAB 99 materiality analysis beginning with the initial time period in which the errors were detected, addressing how you concluded that these errors were immaterial to the previously reported amounts contained in your periodic reports.

Registrants perform materiality analyses to determine the impact of identified misstatements on their (1) financial statements and (2) previous conclusions about ICFR and DC&P.

ASC 250-10-45-27 provides guidance on materiality determinations related to the correction of errors, and SAB Topics 1.M (SAB 99) and 1.N (SAB 108) contain the SEC staff's guidance on assessing the materiality of misstatements identified as part of the audit process or during the preparation of financial statements.

SAB Topic 1.M indicates that a "matter is 'material' if there is a substantial likelihood that a reasonable person would consider it important." The definition of materiality is based on FASB Concepts Statement 2[1] and on legal precedent in interpretations of the federal securities laws. The SEC staff has noted that in Supreme Court cases, the Court has followed precedent regarding materiality — namely, that the materiality requirement is met when there is a "substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available."

SAB Topic 1.M also indicates that registrants should consider (1) each misstatement individually and (2) the aggregate effect of all misstatements. SAB Topic 1.N provides guidance on how a registrant should consider the effects of prior-year misstatements when quantifying misstatements in current-year financial statements.

To understand registrants' materiality assessments and conclusions, the SEC staff frequently asks registrants about the nature of an error, the quantitative and qualitative factors that registrants considered, and an error's impact on their conclusions about (1) the effectiveness of their ICFR and DC&P and (2) other reporting requirements, such as the need to file a Form 8-K. Similarly, the staff challenges registrants' conclusions that errors are immaterial (e.g., whether the method of correcting the error is appropriate; whether restatement language is presented; and whether an Item 4.02 Form 8-K, indicating nonreliance on previously issued financial statements, was required).

Accordingly, a registrant should first decide whether an individual error is material by considering (1) the affected line item subtotals and totals in the financial statements and (2) the financial statements as a whole. Then, if the registrant concludes that an individual error has not caused the financial statements as a whole to be materially misstated, it should consider other errors, including offsetting errors, in determining whether the errors taken as a whole are materially misleading. In reaching this conclusion, the registrant should consider individual line items, subtotals and totals in the financial statements, and the financial statements as a whole. The SEC staff has cautioned registrants to avoid bright-line rules or litmus tests and "not to succumb" to rules of thumb or percentage thresholds when determining materiality because no one factor can be viewed as determinative.[2]

SAB Topic 1.M specifies quantitative and qualitative factors a registrant should consider when assessing the materiality of known errors to its financial statements. However, in observing that registrants' materiality assessments are often presented in a "checklist" fashion in which only the factors in

[1] FASB Concepts Statement 2, which has been superseded by FASB Concepts Statement 8, defined materiality as the "magnitude of an omission or misstatement of accounting information that, in the light of surrounding circumstances, makes it probable that the judgment of a reasonable person relying on the information would have been changed or influenced by the omission or misstatement."

[2] The SEC commented on this topic at the 2011 AICPA Conference. See Deloitte's December 14, 2011, *Heads Up* for additional information.

SAB Topic 1.M are considered, the SEC staff has indicated that registrants should (1) describe all factors that are relevant to their materiality assessment (i.e., not just those factors noted in SAB Topic 1.M) and (2) explain how each of those factors was considered. That is, a registrant should provide a detailed, thoughtful analysis that takes into account the registrant's specific circumstances and is relevant to its investors and financial statement users.[3] In addition, the SEC staff has stressed that quantitative considerations in registrants' materiality assessments continue to be overemphasized while qualitative factors are often insufficiently evaluated.[4]

The SEC staff has also indicated that registrants should consider company-specific trends, performance metrics that may influence investment decisions, and the effects of unrelated circumstances on factors that are important to reasonable investors (such as the magnification of an error in the income statement simply because it occurs in a period in which net income is "abnormally small" relative to historical and expected trends).

In considering company-specific trends and performance metrics, a registrant should address in its materiality assessments what metrics it deemed important enough to include in press releases and earnings calls as well as what analysts cover in their reports. The SEC staff often considers analysts' reports and investor calls as it assesses the registrant's assertion of what is important to investors.

When considering whether net income is abnormally small, management should determine whether a decline in operating performance is an abnormal event or whether it represents a new normal. Management should also determine whether "unusual" or infrequent events or transactions, such as an asset sale or impairment that would affect trends, are reflected in the results. In those instances, it sometimes may be appropriate to evaluate the relative significance of the identified error by using adjusted or "normalized" metrics, which may cause an otherwise quantitatively significant error to be less significant. Documentation of such considerations should be included in management's analysis.

The SEC staff has also observed that certain registrants have argued that a quantitatively large error in the GAAP financial statements is immaterial when it has a quantitatively small impact on non-GAAP metrics. While the staff has indicated that it may be appropriate for a registrant to look at metrics other than those that are GAAP-based in determining whether the financial statements taken as a whole are materially misstated, the SEC staff will most likely focus on the GAAP metrics until a registrant can demonstrate why other metrics are more important to its investors. In addition, the SEC staff has acknowledged that while it is possible for quantitatively small errors to be material and for quantitatively large errors to be immaterial,[5] a quantitatively material GAAP error does not become immaterial simply because of the presentation of non-GAAP measures.[6] Further, there may be circumstances in which an error that is otherwise immaterial to the GAAP financial statements — when taken as a whole and depending on the focus that management, investors, and financial statement users have historically placed on non-GAAP information — is material in the context of non-GAAP information.[7]

In addition to inquiring about a registrant's materiality analysis under SAB Topics 1.M and 1.N, the SEC staff often asks questions about the errors themselves. Registrants should consider the impact that misstatements (and immaterial restatements) may have on their previous conclusions about ICFR and DC&P. As a result of such misstatements, the SEC staff may question whether a material weakness existed at the time of the initial assessment. For additional considerations, see the Disclosure Controls and Procedures and Internal Control Over Financial Reporting sections.

After reaching a materiality conclusion, registrants should also consider whether they are required to file Form 8-K. Under Item 4.02(a) of Form 8-K, a registrant must file Form 8-K when it has concluded that previously issued financial statements, covering either an annual or interim period, should no longer be relied on because of an error.

3 In an October 2010 joint webcast with the CAQ, the SEC staff provided its views about registrants' materiality assessments.

4 The SEC staff discussed qualitative and quantitative factors at the 2012 AICPA Conference. For more information, see Deloitte's December 11, 2012, *Heads Up*.

5 At the 2007 and 2008 AICPA conferences, the SEC staff addressed these topics. For more information, see Deloitte's December 20, 2007, and December 18, 2008, *Heads Up* newsletters.

6 At the 2010 AICPA Conference, the staff expressed its views on this topic. See Deloitte's December 16, 2010, *Heads Up* on the conference.

7 In its October 2010 joint webcast with the CAQ, the SEC staff also discussed non-GAAP financial measures in the context of materiality.

Noncontrolling Interests

Examples of SEC Comments

- We note the reconciliation of net income (loss) to net loss attributable to [your stockholders] on your consolidated statements of income (loss). Please tell us the basis for the attributing amounts to the parent and the non-controlling interests and tell us how amounts are calculated as it relates to your non-controlling interests, such as net (income) loss attributable to non-controlling interests on the consolidated statements of income (loss).
- We note that your non-controlling interests of the [consolidated entities include] both redeemable non-controlling interests reported outside of the permanent capital section (when investors have the right to redeem their interest) and equity attributable to non-controlling interests of [the consolidated entities] reported inside the permanent capital section (when investors do not have the right to redeem their interests). In the interest of transparency, please revise throughout your filing to label your redeemable non-controlling interests as redeemable non-controlling interests of [the consolidated entities].

SEC staff comments related to noncontrolling interests (NCIs) continue to focus on the allocation of net income (loss) to the NCI and the parent. Consequently, the staff frequently asks registrants to provide it with detailed information about how the registrant determined the allocation, particularly when the allocation is disproportionate to the NCI holder's investment.

The SEC staff also continues to comment on registrants' accounting for redeemable NCIs since SEC rules still prohibit registrants from including redeemable equity in any caption titled "total equity." ASC 480-10-S99-3A(2) indicates that equity instruments are required to be classified outside of permanent equity if they are redeemable for cash or other assets in one of the following ways:

- "[A]t a fixed or determinable price on a fixed or determinable date."
- "[A]t the option of the holder."
- "[U]pon the occurrence of an event that is not solely within the control of the issuer."

Thus, the SEC staff has indicated that "registrants with redeemable noncontrolling interests, redeemable preferred stock or other redeemable equity classified outside permanent equity should not include these items in any total or subtotal caption titled 'total equity.'" Further, changing "the caption in the statement of changes in shareholders' equity [from] 'total equity' to 'total' does not make the inclusion of redeemable equity acceptable."[1]

For additional information about classification of redeemable securities, see the Debt section.

[1] Quoted text is from the highlights of the June 2009 CAQ SEC Regulations Committee joint meeting with the SEC staff.

Pensions and Other Postretirement Benefits

The SEC staff continues to comment on disclosures related to how registrants account for pension and other postretirement benefit plans and how key assumptions and investment strategies affect their financial statements. Further, registrants may be asked how they concluded that assumptions used for their pension and other postretirement benefit accounting are reasonable relative to (1) current market trends and (2) assumptions used by other registrants with similar characteristics.

Critical Accounting Estimates

Examples of SEC Comments

- In future filings, please provide a more robust discussion of your critical accounting policies and estimates to focus on the assumptions and uncertainties that underlie your critical accounting estimates rather than duplicating the accounting policy disclosures in the financial statement footnotes. Please quantify, where material, and provide an analysis of the impact of critical accounting estimates on your financial position and results of operations for the periods presented. In addition, please include a qualitative and quantitative analysis of the sensitivity of reported results to changes in your assumptions, judgments, and estimates, including the likelihood of obtaining materially different results if different assumptions are applied. For example, if reasonably likely changes in the discount rate or long-term rate of return used in accounting for your pension plans would have a material effect on your financial condition or results of operations, the impact that could result given the range of reasonable outcomes should be disclosed and quantified. Please refer to SEC Release No. 34-48960. In your response, please show us what your disclosure would have looked like if these changes were made in your most recently filed Form 10-K.
- Please tell us how you determined the discount rates used in the measurement of plan obligations at the most recent balance sheet date and why you believe the discount rates are reasonable based on the expected dates and amounts of cash outflows associated with retiree pension benefits.

Because of factors such as the low-interest-rate environment, optionality in U.S. GAAP accounting methods, and significant assumptions used in benefit obligation valuation, the SEC staff has continued to ask registrants about assumptions related to their pension and other postretirement benefit plans. For example, the staff has requested more quantitative and qualitative information about the nature of registrants' assumptions. In particular, the staff has focused on the discount rate and the expected return on plan assets. Further, the staff has asked registrants how their disclosures in the critical accounting estimates section of MD&A align with their accounting policy disclosures in the notes to the financial statements.

In addition, the SEC staff has indicated that it may be appropriate for a registrant to disclose the following:

- Whether a corridor[1] is used to amortize the actuarial gains and losses; and, if so, how the corridor is determined and the period for amortization of the actuarial gains and losses in excess of the corridor.
- A sensitivity analysis estimating the impact of a change in expected returns on income. This estimate should be based on a reasonable range of likely outcomes.
- Regarding the extent to which historical performance was used to develop the expected rate of return assumption, if use of the arithmetic mean to calculate the historical returns yields results that are materially different from the results yielded when the geometric mean is used to perform this calculation, it may be appropriate for the registrant to disclose both calculations.
- The reasons why the expected return has changed or is expected to change in the future.

[1] ASC 715-30-35-24 provides guidance on net periodic pension benefit cost and defines the corridor as "10 percent of the greater of the projected benefit obligation or the market-related value of plan assets." Similarly, ASC 715-60-35-29 provides guidance on net periodic postretirement benefit cost and defines the corridor as "10 percent of the greater of the accumulated postretirement benefit obligation or the market-related value of plan assets."

- The effect of plan asset contributions during the period on profit or loss, when this effect is significant. The SEC staff has indicated that additional plan asset contributions reduce net pension costs even if actual asset returns are negative because the amount included in profit or loss is determined through the use of expected and not actual returns. Consequently, such information can provide an understanding of unusual or nonrecurring items or other significant fluctuations so that investors can ascertain the likelihood that past performance is indicative of future performance.

Liquidity and Capital Resources

Example of an SEC Comment

We note . . . that you had changes in both your discount rate and mortality assumptions during 2014 that have significantly affected your benefit obligations and related funding status. Particularly, your unfunded obligations have increased by approximately $[X] since 2013. We further note from your risk factor . . . that you "could" experience increases in your pension expense due to such changes as decreases in discount rates. In this regard, please revise your Liquidity section of MD&A to identify and discuss any known trends, demands, commitments, events, or uncertainties that will result in or that are reasonably likely to result in your liquidity increasing or decreasing in any material way. Your revised disclosure should clearly explain the significant increase in both your benefit obligations at December 31, 2014 and your unfunded status and the related impacts on your financial statements and liquidity. Please refer to Item 303(a)(1) of Regulation S-K.

Registrants should sufficiently disclose how changes to their plan assets and obligations may affect their liquidity and capital resources. The SEC staff has encouraged registrants to explain the trends and uncertainties related to pension or other postretirement benefit obligations (e.g., a registrant's funding requirements may be affected by changes in the measurement of its plan obligations and assets). A registrant also may want to disclose in both qualitative and quantitative terms what its plan contributions have been in the past and the expected changes to those contributions.

Registrants may take steps to "de-risk" their pension plans by acquiring bonds for their plan asset portfolios whose expected maturities match the expected timing of the plans' obligations. The SEC staff has reminded registrants that they are required to disclose their plan investment strategy. MD&A should inform investors about any changes to that investment strategy, the reasons for those changes, and how a change in strategy affects the underlying plan assumptions and the registrant's ability to fund the plans. For example, a decision to invest more in fixed-income securities could be expected to lower the overall rate of return on plan assets.

When a pension plan is funded with a noncash transaction (e.g., the registrant's own stock), it may be appropriate to disclose how management funded the pension plan, with a reference to the associated cash flow statement line items.

When commenting on other postretirement benefit plans, which are usually funded as the related benefit payments become due, the SEC staff has noted that the footnote disclosures should include the plan's expected future benefit payments for each of the next five years and in the aggregate for the five years thereafter. This information may provide insight into a registrant's expected liquidity requirements, which could then warrant discussion in the liquidity section of MD&A or in the contractual obligations table.

Fair Value of Plan Assets

The disclosures required by ASC 715 for fair value measurements for retirement plan assets are similar to the disclosures about fair value measurements required by ASC 820. These disclosures include employers' investment strategies, major categories of plan assets, concentrations of risk within plan assets, and valuation techniques used to measure the fair value of plan assets. The SEC staff may ask registrants about their compliance with such disclosure requirements. For more information, see the Fair Value section. A registrant also should disclose whether the fair value or calculated value[2] of plan assets is used to determine the expected return on plan assets and, if the calculated value is used, how this value is determined.

Immediate Recognition of Gains and Losses

The SEC staff has noted instances in which registrants have changed their method of accounting for the amortization of actuarial gains and losses in net periodic pension or other postretirement benefit cost. For example, some registrants have decided to move to an approach under which they immediately recognize all actuarial gains and losses or, alternatively, all actuarial gains and losses outside the corridor, as a component of net periodic pension cost. In accordance with ASC 250, such registrants have retrospectively applied this change in accounting principles to their financial statements.

Once an entity adopts a policy of immediately recognizing gains and losses, changing to a less preferable method (i.e., a subsequent change to a method that results in slower amortization) would be difficult to support. When entities adopt a policy of immediately recognizing actuarial gains and losses as a component of net periodic pension cost, they often present non-GAAP financial measures that "remove the actual gain or loss from the performance measure and include an expected long-term rate of return."[3] The SEC staff will generally comment when (1) the disclosures are not clear and the pension-related adjustment (e.g., actuarial gains or losses) is not labeled; (2) an adjustment is labeled as a "noncash" pension expense, because the pension liability will ultimately be settled in cash; and (3) context about adjustments related to actuarial gains and losses is not provided.

Mortality Assumption

Example of an SEC Comment

We understand that the Society of Actuaries developed an update[d] set of mortality assumptions presented in its RP-2014 Mortality Tables Report issued in October 2014. We also understand that the RP-2014 mortality tables represent the most current and complete benchmarks of U.S. private pension plan mortality experience. Please tell us what consideration you gave to changing the mortality table used to calculate the present value of pension and postretirement plan liabilities. If you did not adopt the new mortality assumptions, please tell us the mortality table used to calculate the present value of pension and postretirement plan liabilities and why you believe the mortality rate assumptions [reflect] the best estimate of expected mortality rates for your participant population. If you adopted the RP-2014 mortality tables, please tell us the impact on pension and postretirement plan liabilities.

The SEC believes that the RP-2014 mortality tables released by the Society of Actuaries (SOA) in October 2014 should not be disregarded in the development of the best estimate[4] of mortality since entities have historically used the data issued by the SOA. Further, since a change in the mortality assumption may have a significant effect on the entity's result of operations, registrants should consider the requirement in ASC 715-20-50-1(r) to disclose an "explanation of any significant change in the benefit obligation or plan assets not otherwise apparent in the other disclosures required by [ASC 715-20]." In addition to footnote disclosures, registrants should consider the need to highlight in MD&A the effects of a change in the mortality assumption.[5]

[2] ASC 715-30-20 defines the market-related value of plan assets as follows: "A balance used to calculate the expected return on plan assets. The market-related value of plan assets is either fair value **or a calculated value** that recognizes changes in fair value in a systematic and rational manner over not more than five years. Different ways of calculating market-related value may be used for different classes of assets" (emphasis added).

[3] For more information, see the highlights of the June 2012 CAQ SEC Regulations Committee joint meeting with the SEC staff.

[4] Under ASC 715-20 and ASC 715-60, each assumption should represent the "best estimate" for that assumption as of the current measurement date.

[5] For more information, see Deloitte's December 15, 2014, *Heads Up* on the 2014 AICPA Conference.

Disclosures Related to Non-U.S. Plans

ASC 715-20-50-4 states that a "U.S. reporting entity may combine disclosures about pension plans or other postretirement benefit plans outside the United States with those for U.S. plans unless the benefit obligations of the plans outside the United States are significant relative to the total benefit obligation and those plans use significantly different assumptions." The SEC staff may ask registrants to explain the basis for combining pension and other postretirement benefit plan disclosures related to U.S. and non-U.S. plans. When there are significant differences in trends and assumptions between the U.S. and non-U.S. plans and the benefit obligation of the foreign plan is significant, the SEC staff has required registrants to provide disaggregated footnote disclosure for the U.S. and non-U.S. plans.

Revenue Recognition

Revenue Recognition Disclosures

Examples of SEC Comments

- We see that your revenue recognition policy cites the four general criteria from SAB Topic 13. Please tell us how you apply the criteria from your disclosure in determining the appropriate timing of revenue recognition. For instance, describe what you consider to be pervasive evidence of an arrangement, tell us when title and risk of loss transfer to your customers, and describe the factors you consider in concluding that the price is fixed and determinable and that collection is reasonably assured.
- Please tell us and revise to clarify how your revenue recognition policy addresses each type of revenue discussed . . . . In this regard, [you describe] data analytics, subscriptions and data-driven intervention platform services but your revenue recognition policy [in your financial statements] describes data analytics and data-driven intervention platforms and multiple element arrangements. Clarify how each of the revenue components . . . is accounted for [in your financial statements], the nature of the services being subscribed for and which product and service offerings are subject to software accounting under ASC 985-605.

In addition to requesting general policy information, the SEC staff often asks that registrants clearly state whether and, if so, how a revenue recognition policy complies with SAB Topic 13, particularly the four criteria that generally must be met for revenue to be recognized. The staff may also ask how a criterion has been applied in the context of a particular transaction or group of transactions. For example, the SEC staff may inquire about whether collectibility is “reasonably assured” and whether the sales price the registrant charges resellers for products is “fixed or determinable.”

When reviewing the disclosures in a registrant’s revenue policy footnote, the SEC staff often checks for completeness and consistency with the revenue streams described in the business section, in MD&A, and on the registrant’s Web site. Registrants should consider expanding or clarifying their revenue recognition disclosures to include:

- The type, nature, and terms of significant revenue-generating transactions.
- The specific revenue recognition policy (including the manner in which revenue is recognized) for each type of revenue-generating transaction, including policies related to discounts, promotions, sales returns, post-shipment obligations, customer acceptance, warranties, credits, rebates, and price protection.
- The specific events or actions that trigger revenue recognition (i.e., avoid “boilerplate language”).
- Relevant information about significant uncertainties related to revenue recognition (e.g., rights of return or variable consideration).
- A detailed breakdown of revenue by product/service line or business segment when the disclosure of revenue in the filing is less granular than the discussion of the registrant’s results of operations in other publicly available information in or outside the filing.

The SEC staff may request more specific disclosures on the basis of the complexity or subjectivity of registrants’ revenue recognition policies.[1]

[1] The SEC staff discussed its expectations related to the completeness and consistency of revenue policy footnotes at the 2013 AICPA Conference.

Sales Returns

Examples of SEC Comments

- Please tell us whether your wholesale customers have the right to return goods and, if so, confirm to us that you record an estimate for anticipated returns when sales are recorded. Also confirm to us that you will revise your revenue recognition disclosure in future filings to clarify your wholesale customers' return rights and your policy for estimating returns on wholesale sales; and provide us with your draft disclosure in your response letter.
- We note your statement that the sales return reserve represents the gross profit effect of sales returns. Please explain to us in more detail how you determine and record your sales return reserve. It is unclear to us if you are reducing sales for the gross profit of expected returns or if you are reducing sales and cost of sales to reflect estimated returns. Please refer to ASC 605-15-45-1.

The SEC staff continues to comment on registrants' failure to separately present or disclose information about their sales returns, particularly when other information in a registrant's filing or in other public communications suggests that sales returns may be material. In addition, the SEC staff will comment if it appears that a registrant has accounted for sales returns as a reduction in revenue on the basis of the gross profit of the related transactions instead of as a reduction in both sales and cost of sales as required by ASC 605-15. Comments on these topics are particularly prevalent in the retail industry.

Multiple-Element Arrangements

Examples of SEC Comments

- We note that you have multiple-element arrangements. . . . In future filings please disclose the following as required by FASB ASC 605-25-50-1:
    - o Disclose the significant deliverables within the arrangement including your maintenance and service agreements or tell us why the maintenance and service agreements are not part of the arrangements;
    - o Disclose the general timing of delivery or performance of services for the deliverables in the arrangement;
    - o Discuss the significant factors, inputs, assumptions, and methods used to determine selling price for the significant deliverables; and
    - o Disclose whether the significant deliverables in the arrangement qualify as separate units of accounting, and the reasons that they do not qualify as separate units of accounting, if applicable.

  Please provide us with your proposed disclosure.
- Your disclosure . . . indicates that some of the revenue from non-refundable upfront fees is recognized over the estimated customer life . . . . If any of the non-refundable upfront fees are recognized over the estimated customer life, please tell us whether the non-refundable upfront fees have standalone values and are considered separate units of account and tell us your basis for recognizing the revenue over the estimated customer life. If you do not have non-refundable upfront fees that are recognized over the estimated customer life, please remove the reference from your disclosure in future filings.

The SEC staff often asks registrants about the nature of, and accounting for, their multiple-element arrangements and whether they evaluated these arrangements under ASC 605-25. The staff typically asks for additional information, and sometimes requests more disclosure, about multiple-element arrangements, including:

- A description of the registrant's rights and obligations under the arrangement.
- The registrant's method for determining whether certain deliverables in an arrangement qualify as separate units of accounting and the factors the registrant considered in making this assessment.
- The registrant's accounting policy for allocating and recognizing revenue for each deliverable.
- The registrant's support for its conclusion that a delivered item has stand-alone value.
- An analysis of how the transaction price was allocated to each deliverable, including how the selling price used for each unit of accounting was determined (i.e., VSOE, TPE, or estimated selling price).
- The period over which each unit of accounting is recognized.

The SEC staff has also focused on registrants' accounting for up-front fees. It has asked registrants to explain whether such fees are related to specific performance obligations and how they determined the period over which the up-front fees are recognized.

Principal-Versus-Agent Considerations

Example of an SEC Comment

We note your disclosure . . . that you act as a billing and collection agent for many nominees. We specifically note that you collect the fees and remit to nominees any difference between the fees that the nominees are entitled to collect and the amount that the nominees have agreed to pay you for your services. Please tell us how you recognize revenues from these transactions and how you considered including disclosures in your revenue recognition accounting policies explaining whether you record such revenues gross as a principal or net as an agent. Please refer to ASC 605-45.

The SEC staff often inquires about principal-versus-agent considerations. ASC 605-45 discusses factors that an entity should consider in determining whether it acts as a principal (and records revenue at the gross amount billed to a customer) or as an agent (and records revenue at the net amount retained). The staff has asked registrants to explain how they determined gross or net reporting to be appropriate for certain revenue transactions under ASC 605-45. In addition, the SEC staff may request detailed information about the rights and obligations of the parties involved in a registrant's revenue transactions. The staff may ask registrants to provide expanded disclosures that describe the nature of these transactions and the factors they considered when determining whether revenue from such transactions should be recorded on a gross or a net basis.

The focus of these disclosures is to provide information that would enable an investor to understand whether title is transferred and who is the primary obligor. The SEC staff has stated that the analysis it applies to identify the primary obligor focuses on (1) identifying the product or service that is desired by the customer and (2) determining whether the registrant is responsible for providing that product or service.

Revenue Recognition for Long-Term Construction-Type and Production-Type Contracts

Examples of SEC Comments

- For the long-term [Product X] manufacturing contracts you enter into, please tell us the following:
  - The nature and terms of these contracts;
  - The amount of revenue recognized for each period presented related to these contracts; and
  - Expand your disclosure to include the method of measuring the extent of progress toward completion for your percentage of completion contracts in accordance with ASC 605-35-50-2.
- It appears $[X] of operating income . . . resulted from a change in estimates underlying your percentage-of-completion accounting on long-term contracts. [P]lease provide a discussion of the underlying reasons for the significant changes in estimates, including quantified information where available and useful for an investor's understanding of contract performance, the impact on operations, and the potential impact on future operations.

ASC 605-35 provides guidance on how and when to recognize revenue and costs for certain long-term construction-type and production-type contracts. The SEC staff may ask registrants to clarify their treatment of these contracts under ASC 605-35. For instance, the staff may inquire about:

- How the registrant developed its estimate of total contract costs and how those costs are directly related to contract performance.
- How the registrant treated precontract and early-stage contract costs, which should normally be expensed.
- The nature, status, amounts, and types of change orders and claims that occurred during the periods presented and how the registrant accounted for those change orders and claims.
- Policy disclosures, including which contract accounting method was used (i.e., percentage-of-completion or completed-contract) and which method was used to measure progress toward completion (e.g., cost-to-cost, units of work).
- The historical accuracy of the registrant's past estimates and the likelihood of changes in its estimates in the future.
- The amount of contract losses recorded during each period presented.
- Disclosures (under ASC 250-10-50-4) related to the effect of any changes in estimates in the financial statements (e.g., the estimate of percentage complete or amount of profit recognized on claims).
- For transactions for which revenue is recognized under the completed-contract method, the specific criteria used to determine when a contract is substantially completed.

In addition, registrants that use the percentage-of-completion method should be aware that the SEC staff has asked some registrants to enhance their disclosures in MD&A about the effect of changes in contract estimates. For example, the SEC staff may ask registrants to add disclosures in MD&A about gross aggregate favorable and gross aggregate unfavorable changes in contract estimates for each period presented.

SAB Topic 11.M (SAB 74) — Disclosures About the Impact of Recently Issued Accounting Pronouncements

Example of an SEC Comment

Please revise to include a discussion of the potential effects that recently issued accounting standards will have on your financial statements when adopted in a future period. Refer to SAB Topic 11.M. For example, please revise to disclose the potential effect of ASU No. 2014-09, Revenue from Contracts with Customers.

SAB Topic 11.M (SAB 74) indicates that a registrant should disclose the effects of recently issued ASUs and SABs that are not yet effective "unless the impact on [the registrant's] financial position and results of operations is not expected to be material" (footnote omitted). These disclosures are meant to help financial statement users assess the effect that new standards will have once adopted. Disclosure is not required when a registrant will adopt a new accounting standard that will not affect the reported results (i.e., when only enhanced disclosures would be required by the new accounting standard).

According to SAB Topic 11.M, a registrant should consider including the following disclosures in MD&A and the footnotes to the financial statements:

- A brief description of the new standard, the date that adoption is required and the date that the registrant plans to adopt, if earlier.
- A discussion of the methods of adoption allowed by the standard and the method expected to be utilized by the registrant, if determined.
- A discussion of the impact that adoption of the standard is expected to have on the financial statements of the registrant, unless not known or reasonably estimable. In that case, a statement to that effect may be made.
- Disclosure of the potential impact of other significant matters that the registrant believes might result from the adoption of the standard (such as technical violations of debt covenant agreements, planned or intended changes in business practices . . .).

The SEC staff does not expect the disclosures to include a "laundry list" of new standards that registrants state will have no material effect on their financial statements; only those ASUs that are expected to have a material impact should be described in the financial statements. Further, the staff expects disclosures about the potential effects of a new standard to be increasingly clear and precise as the standard's effective date approaches.

Accordingly, the SEC staff has commented on the following items related to SAB Topic 11.M disclosures:

- Failure to provide the required disclosures.
- Inadequate discussion of the accounting changes and how they will be adopted (i.e., whether retrospectively or prospectively and what periods will be affected).
- Disclosures about prospective accounting standards that are exactly the same in both the notes to the financial statements and MD&A. For example, registrants may consider the effect of adoption on their operations, financial condition, or liquidity in future periods and provide related disclosures in their MD&A. Disclosures in the financial statements should focus on whether the historical financial information will change (e.g., as a result of the retrospective application of the standard).

Segment Reporting

Segment reporting remains a perennial topic of SEC staff comments. Like those issued in previous years, recent SEC staff comments have specifically addressed (1) the identification and aggregation of operating segments, (2) changes in reportable segments, (3) product and service revenue by segment, (4) operating segments and goodwill impairment, and (5) information about geographic areas.

Identification and Aggregation of Operating Segments

In asking registrants about the identification and aggregation of their operating segments, the SEC staff's comments have focused on (1) the identification of the chief operating decision maker (CODM), (2) how registrants identify operating segments and support their process for identifying them, (3) the quantitative and qualitative factors used to support the aggregation of operating segments, and (4) how registrants have considered whether their previous conclusions about the identification and aggregation of operating segments remain appropriate (i.e., how they have continued to assess such conclusions in light of changes in their management or operations).

Example of an SEC Comment

We note that your [CODM] is provided an income statement overview by business unit and that your CODM holds team meetings with your functional leaders and segment managers for [Segment A] and [Segment B]. In order to assist us with our evaluation of how you considered the guidance in FASB ASC 280, please address the following comments:

- Please provide to us the names of your business units and a summary of how these business units are structured. Discuss who manages the business units and describe their role with the company.
- Please describe to us the nature of interactions between the CODM and the business unit managers.
- Clarify for us the role of the segment managers and describe how the segment managers interact with the business unit managers and the CODM.
- Describe to us how the business unit manager's responsibilities differ from the segment manager's responsibilities.
- Clarify the roles and responsibilities of the functional leaders within the company and if they are different from the business unit managers and segment managers.
- Provide to us more information about your budgeting process. Within your discussion, describe who is involved with each level of review and approval during the budgeting process. Also discuss who is responsible for assessing actual performance versus budgeted performance. Clarify who is responsible for discussing any excesses or shortfalls and who is involved in these discussions and to what level of detail.
- Please explain to us if there are situations where the [Segment A] or [Segment B] managers are responsible for any elements of the business units. Within your response discuss if each business unit is aligned solely under one segment manager or if certain business units report to both segment managers.

ASC 280 prescribes the "management approach" for the presentation of segments in a public entity's financial statements. The objective of the management approach is to allow financial statement users to (1) see through the eyes of management the entity's performance, (2) assess the entity's prospects for future cash flows, and (3) make more informed judgments about the entity as a whole. It is presumed that investors would prefer disaggregated information. Consequently, operating segments should not be aggregated unless providing more detailed information would not enhance an investor's understanding of the entity.

Determining an entity's operating segments is the first step in the assessment of what segment information needs to be reported in the entity's financial statements. An operating segment is a component of the business (1) that engages in business activities from which it may earn revenues and incur expenses, (2) whose operating results are regularly reviewed by the public entity's CODM, and (3) that has discrete financial information available. When challenging a registrant's conclusion about its operating segments, the SEC staff has historically placed a great deal of weight on the information regularly provided to, and reviewed by, the CODM (i.e., the CODM package). The SEC staff would frequently request copies of the CODM package to determine whether the information in the CODM package supports how operating segments are identified and aggregated.

However, technology advancements in registrants' financial reporting systems allow the CODM to easily access additional information that may not be reflected in the CODM package. These advancements have led the SEC staff to revisit its views on the relative importance of the CODM package to the segment identification analysis. At the September 2014 AICPA Banking Conference and December 2014 AICPA Conference, the SEC staff noted that while it may have previously emphasized the importance of using the information in a registrant's CODM package to identify operating segments, the staff's views on how it should weight information in a registrant's CODM package have evolved. The staff indicated that instead of viewing the CODM package as the determinative factor in the identification of operating segments, it would now treat the CODM package as only one of many factors to be considered. Similarly, the staff noted that it would not view the CODM package as a safe harbor for registrants. In other words, the staff would not be supportive of an assertion that information in the CODM package automatically nullifies other information (i.e., information that might suggest different operating segments). Other factors that may be considered in the identification of operating segments include (1) a registrant's organizational chart, (2) a registrant's overall management structure, (3) the basis on which budgets and forecasts are prepared, and (4) the basis on which executive compensation is determined. A registrant should expect that the staff will review other publicly available information for consistency with the registrant's segment disclosures; such information may include the forepart of Form 10-K (i.e., the business section and MD&A), the registrant's Web site, analysts' reports, and press releases.

As used in ASC 280, the term "chief operating decision maker" identifies a function, not an individual in the company who has the specific title. The CODM determines the allocation of resources and assesses the performance of the operating segments. While the CODM is usually an individual, sometimes the function is performed by a group.

Accordingly, at the September 2014 AICPA Banking Conference and December 2014 AICPA Conference, the SEC staff further noted that it has placed a renewed emphasis on the determination of a registrant's CODM. The staff remarked that although most registrants identify their CEO as the CODM, questions from the staff sometimes engender a change in the registrant's conclusion about its CODM's identity, which in turn affects the registrant's determination of operating segments. In light of this, the staff encouraged registrants to reassess their determination of the CODM and, when doing so, to focus on understanding management's structure (e.g., through organizational charts or other information).

Under ASC 280-10-50-11, entities may aggregate operating segments into reportable segments if the operating segments exhibit (1) similar economic characteristics (e.g., similar historical and expected future performance, such as through similar long-term average gross margins) and (2) other similar characteristics, including:

a. The nature of the products and services
b. The nature of the production processes
c. The type or class of customer for their products and services

d. The methods used to distribute their products or provide their services

e. If applicable, the nature of the regulatory environment, for example, banking, insurance, or public utilities.

ASC 280-10 does not define the term "similar" or provide much guidance on the aggregation criteria, and the determination of whether two or more operating segments are similar depends on the individual facts and circumstances and is subject to a high degree of judgment. As a result, the SEC staff may ask a registrant to provide an analysis on how it determined that its aggregation of operating segments complies with both the quantitative and qualitative requirements in ASC 280-10. In the assessment of whether operating segments may be aggregated, determining the basis for economic similarity is particularly difficult for registrants that have complex models and organization and reporting structures. Accordingly, the SEC staff may ask registrants that have aggregated segments how they satisfied the quantitative requirements of ASC 280-10 and may further comment when the economic measures of a registrant's aggregated operating segments have not converged over time despite the registrant's previous assertion that it expected such measures to become more similar. In addition, the SEC staff has emphasized that registrants should also focus on the qualitative factors in ASC 280 (e.g., similar products and customers) when assessing whether operating segments are similar for aggregation purposes. Further, at the 2014 AICPA Conference, the SEC staff noted that registrants should consider whether aggregation is consistent with the objective and basic principles of ASC 280.

Changes in Reportable Segments

Example of an SEC Comment

In your Form 8-K filed July 9, 2014, you indicate your board of directors approved your new organizational design at its meeting on June 19, 2014. Please explain why you waited until the first quarter of fiscal 2015 to reevaluate the impact of the Organizational Redesign restructuring program on the determination of your operating segments and reporting units. Please explain why the reclassification of [Brand X] from [Operating Segment A] to [Operating Segment B] was not reflected in your financial statements as of June 30, 2014. Please refer to ASC 280-10-50-34.

Registrants should continually monitor any changes in facts and circumstances that may affect the identification or aggregation of operating segments. Examples of changes that may prompt the SEC staff to seek additional information about registrants' reportable segments include changes in internal reporting after an acquisition and changes in the CODM.

If a registrant changes the structure of its business in a manner that causes the composition of its reportable segments to change, it is required, in accordance with ASC 280-10-50-34 and 50-35, to restate segment information from prior periods for consistency with current reportable segments unless doing so would be impracticable. If a registrant changes the structure of its business after year-end or quarter-end, the new segment structure should not be presented in financial statements until operating results managed on the basis of that structure are reported (typically in a periodic filing such as a Form 10-K or 10-Q). Paragraph 13310.1 of the FRM indicates that "[i]f annual financial statements are required in a registration or proxy statement that includes subsequent periods managed on the basis of the new organization structure, the annual audited financial statements should include a revised segment footnote that reflects the new reportable segments." A registrant can include the revised financial statements (1) in the registration or proxy statement or (2) in a Form 8-K, which can be incorporated by reference. See the SEC Reporting section for more information.

Product and Service Revenue by Segment

Example of an SEC Comment

We note . . . that you offer a number of different products and in your earnings release you also discuss and quantify sales for different products. Please explain to us your consideration of the guidance in FASB ASC 280-10-50-40 with respect to revenues for each product.

Registrants should remember to identify the "[t]ypes of products and services from which each reportable segment derives its revenues" and to report the total "revenues from external customers for each product and service or each group of similar products and services" in accordance with ASC 280-10-50-21 and ASC 280-10-50-40, respectively. The SEC staff has objected to overly broad views of what constitutes "similar" products and services.

Operating Segments and Goodwill Impairment

Registrants should be aware that incorrect identification of operating segments can affect goodwill impairment testing. Goodwill is tested at the reporting-unit level in accordance with ASC 350-20, and reporting units are identified as either operating segments or one level below. If a registrant has not correctly identified its operating segments, it could incorrectly identify its reporting unit and, as a result, improperly test goodwill for impairment. See the Impairments of Goodwill and Other Long-Lived Assets section for additional information.

Information About Geographic Areas

The SEC staff has frequently asked registrants to include disclosures about geographic information in future filings in accordance with ASC 280-10-50-41 unless it is impracticable to do so.

Share-Based Payments

Disclosures

> **Example of an SEC Comment**
>
> Please review the disclosure requirements for stock-based compensation found at ASC 718-10-50 and provide the following disclosures in future annual filings:
>
> - [Please] revise future filings to include the total intrinsic value of options exercised during the year pursuant to ASC 718-10-50-2d2;
> - Please disclose the weighted-average remaining contractual term of options currently exercisable pursuant to ASC 718-10-50-2e; and
> - Please revise future filings to include the method used to estimate the fair value of all of your options, as well as, the significant assumptions used to determine fair value pursuant to ASC 718-10-50-2b & f.

Registrants should ensure that their disclosures address the following objectives outlined in ASC 718-10-50-1:

- The "nature and terms" of share-based payment arrangements.
- The "effect of [the related] compensation cost . . . on the income statement."
- The "method [for determining] the fair value of the equity instruments granted."
- The "cash flow effects [of] share-based payment arrangements."

Accordingly, the SEC staff's comments on share-based payment disclosures have focused on items such as:

- The nature of, and reason for, a modification in the share-based payment award's terms and how the registrant accounted for that modification.
- The terms and conditions of awards, including vesting conditions and whether award holders are entitled to dividends or dividend equivalents.
- The number of awards that are expected to vest, and the assumptions that were used to determine that number.
- The registrant's valuation method, including significant assumptions used (e.g., volatility, expected term, dividend yield).
- The "weighted-average grant-date fair value" of equity instruments granted during the year.
- The "total intrinsic value of options exercised."

In its comments about disclosures, the SEC staff frequently refers to ASC 718-10-50-2, which describes the "minimum information needed to achieve the objectives in [ASC 718-10-50-1]."

In addition, the SEC staff often asks registrants about share-based payment information they are required to include in a proxy statement (e.g., those disclosures required by Regulation S-K, Item 402). See the Executive Compensation and Other Proxy Disclosures section for more information about SEC staff comments on registrants' proxy statements.

Share-Based Payment Awards Issued by Privately Held Companies

> **Example of an SEC Comment**
>
> Please tell us the estimated IPO price range. To the extent there is a significant difference between the estimated grant-date fair value of your common stock during the past twelve months and the estimated IPO price, please discuss for us each significant factor contributing to the difference.

Calculating share-based compensation for privately held companies can be complex and may require registrants to use significant judgment in determining the fair value of the equity instrument because there is typically no active market for the common stock of such companies. The SEC staff continues to comment on registrants' accounting and valuation assumptions for equity securities issued as compensation in periods before an IPO (commonly referred to as "cheap stock" considerations). The AICPA's accounting and valuation guide *Valuation of Privately-Held Company Equity Securities Issued as Compensation* (known as the "Cheap Stock Guide") contains guidance on these accounting considerations.

A registrant preparing for an IPO should also refer to paragraph 7520.1 of the FRM, which outlines considerations for registrants when the "estimated fair value of the stock is substantially below the IPO price." In such situations, registrants should be able to reconcile the change in the estimated fair value of the underlying equity between the award grant date and the IPO by taking into account, among other things, intervening events and changes in assumptions that support the change in fair value.

Whereas the SEC staff had historically asked registrants to expand the disclosures in their critical accounting estimates to provide additional information about the valuation methods and assumptions used for share-based compensation in an IPO, it updated its FRM in 2014 to indicate that registrants should significantly reduce such disclosures. Specifically, Section 9520 of the FRM was revised to clarify what disclosures are expected in an IPO registration statement and thereby encourage registrants to provide less information about cheap stock. However, paragraph 9520.2 of the FRM notes that the staff may continue to "issue comments asking companies to explain the reasons for valuations that appear unusual (e.g., unusually steep increases in the fair value of the underlying shares leading up to the IPO)." Such requests are meant to ensure that a registrant's analysis and assessment support its accounting for share-based compensation and do not necessarily indicate that the registrant's disclosures need to be enhanced.

At the Practising Law Institute's "SEC Speaks in 2014" Conference, the SEC staff provided insights into how registrants would be expected to apply the guidance in paragraph 9520.1 of the FRM (and thereby reduce their share-based compensation disclosures):

- The staff does not expect much detail about the valuation method registrants used to determine the fair value of their pre-IPO shares. A registrant need **only** state that it used the income approach, the market approach, or a combination of both.

  Further, while registrants are expected to discuss the nature of the material assumptions they used, they would **not** be required to quantify such assumptions. For example, if a registrant used an income approach involving a discounted cash flow method, it would only need to provide a **statement** indicating that "a discounted cash flow method is used and [such method] involves cash flow projections that are discounted at an appropriate rate"; no additional details would be needed.

- Registrants would have to include a **statement** indicating that the estimates in their share-based compensation valuations are "highly complex and subjective." They would not need to provide additional details about the estimates.

- Registrants would also need to include a **statement** disclosing that such "valuations and estimates will no longer be necessary once the company goes public [because] once it goes public, it will rely on the market price to determine the market value of [its] common stock."

For a discussion of SEC staff comments related to IPOs, see the Initial Public Offerings section.

Significant Assumptions — The Simplified Method

Examples of SEC Comments

- We . . . note your disclosure does not explain the reasons why you use the simplified method to determine the expected term for your stock options. Please revise your disclosure to include the reasons why the simplified method was used.
- We note your disclosure that you use the simplified method to estimate the expected term of your stock options. Considering the extent of exercise activity since your initial public offering, please explain to us why you continue to believe that it is appropriate to use the simplified method rather than using historical information.

As noted above, the SEC staff's comments have focused on significant assumptions used in a registrant's valuation of share-based payment awards, such as volatility, expected term, and dividend yield. For example, there were a number of comments related to the use of the "simplified method" to calculate the expected term of employee share options. Under ASC 718, the expected term of an option is a key factor for measuring the option's fair-value-based amount and the related compensation cost. In SAB Topic 14, Question 6 of Section D.2 discusses the simplified method[1] of estimating the expected term of "plain-vanilla" share options and permits a registrant to use the simplified method under certain circumstances if the registrant "concludes that its historical share option exercise experience does not provide a reasonable basis upon which to estimate expected term." The SEC staff's comments have focused on a registrant's use of the simplified method, and in certain instances, registrants were asked to explain why they believe that their historical share option experience does not provide a reasonable basis for estimating the expected term.

In accordance with the staff's guidance in Question 6, a registrant that uses the simplified method should disclose in the notes to its financial statements (1) that the simplified method was used, (2) the reason the method was used, (3) the types of share option grants for which the simplified method was used if it was not used for all share option grants, and (4) the period(s) for which the simplified method was used if it was not used in all periods presented.

- April 2015, *A Roadmap to Accounting for Share-Based Payment Awards*.
- April 28, 2014, *Heads Up*, "MD&A Disclosures About 'Cheap Stock' in IPO Transactions."

1 Question 6 states that under the simplified method, the "expected term = ((vesting term + original contractual term) / 2)."

SEC Disclosure Topics

Management's Discussion and Analysis

Regulation S-K, Item 303, provides guidance on the information a registrant should consider providing in its discussion of financial condition and results of operations in MD&A. The SEC staff continues to indicate that MD&A is the leading source of SEC staff comments, many of which are about the results of operations section. While the SEC staff's comments have addressed various topics of MD&A,[1] they have continued to focus on greater transparency in registrants' disclosures about (1) material trends and uncertainties that affect results of operations, (2) liquidity and capital resources, (3) estimates in critical accounting policies, (4) disclosure of contractual obligations, and (5) early-warning disclosures.

The staff continues to stress that registrants should focus on providing disclosures that are material and relevant to their operations. In addition, the SEC staff continues to recommend that registrants consider including an executive overview section in MD&A that contains a balanced discussion of the key drivers, challenges, and risks that affect results of operations and liquidity.[2]

Results of Operations

The SEC staff frequently comments on how a registrant can improve its discussion and analysis of known trends, demands, commitments, events, and uncertainties and their impact on the results of operations. Such discussion and analysis is crucial to a financial statement user's understanding of the quality of, and potential variability in, a company's earnings and cash flows as well as the extent to which reported results indicate future performance. A determination of the appropriate disclosure generally should include (1) consideration of financial, operational, and other information; (2) identification of known trends and uncertainties; and (3) an assessment of whether these trends and uncertainties will have, or are reasonably likely to have, a material impact on the company's financial condition and operating performance.

Example of an SEC Comment

Please revise this section in future filings to include, if material, substantive disclosure on prospective developments and strategies that may affect your company. Your current disclosure . . . contains a list of factors that broadly affect your segments, but there is no disclosure addressing management's views about the trends and uncertainties that you reasonably expect will have a material impact on your operations. We note that . . . management expressed expectations for a number of items including oil prices, global macroeconomic conditions, raw materials, currency fluctuations and end market demand for each of your segments. In the future, to the extent material, please enhance your discussion of any particular trends, events or uncertainties that you expect may have a material impact on your operations. Please see Section III.B.3 of SEC Release 33-8350 and Item 303(a)(3)(ii) of Regulation S-K.

Under Item 303(a)(3), registrants are required to disclose in MD&A material known trends or uncertainties that may affect future performance (whether favorable or unfavorable). Registrants are commonly asked to (1) quantify components of overall changes in financial statement line items and (2) enhance their analysis of the underlying factors that cause such changes or the reasons for the components affecting the overall change — including an analysis of changes at the segment level because such an analysis is often meaningful in MD&A. The SEC staff has suggested that in addition to discussing how volume and product mix affect their results of operations, registrants should consider explaining other potential influences, such as pricing changes, acquisitions, new contracts, inflation, and foreign exchange rates.

For example, at the Practising Law Institute's "SEC Speaks in 2015" Conference, the SEC staff stressed the importance for a registrant to disclose in MD&A the effects of the decline in the price of crude oil, gas, and other commodities (e.g., iron, copper) if the decline materially affects, or is expected to affect, the registrant's operations. In addition, the staff noted that the mining and oil and gas industries may be particularly affected by such a price decline. Further, registrants with foreign operations in regions

1 See paragraphs 9110.1 and 9110.2 of the FRM for the SEC staff's interpretive views about the objectives of a registrant's MD&A.

2 See the SEC's interpretive release for additional information.

experiencing economic struggles (e.g., Greece, Puerto Rico) or that are otherwise exposed to material business or financial risks resulting from recent economic events should discuss in their MD&A any material trends, risks, and uncertainties related to their operations.[3]

The SEC staff has also encouraged registrants to:

- Use appropriate metrics to help them "tell their story" — including those that may be common to their industry (e.g., same-store sales, average subscribers). However, the SEC staff distinguishes such metrics from non-GAAP measures that are adjusted GAAP measures. See the Non-GAAP Financial Measures and Key Metrics section for additional information.

- Present changes in a tabular format (e.g., a table that summarizes disaggregated cost of sales components by reportable segment).

Further, the SEC staff has asked registrants to separately discuss the impact of online sales on their results of operations.

Liquidity and Capital Resources

Example of an SEC Comment

You state that you believe you will have sufficient capital to fund your operations for the next twelve months. Please discuss the company's capital needs over that period, what the capital will be used for, and what sources of capital and liquidity management believes it has access to. Please refer to Item 303(a)(1) of Regulation S-K and Item 303(a)(2)(i) of Regulation S-K.

The SEC staff frequently requests more meaningful analysis in a registrant's MD&A of material cash requirements, historical sources and uses of cash, and material trends and uncertainties so that investors can understand the registrant's ability to generate cash and meet cash requirements. In addition, rather than repeating items that are reported in the statement of cash flows, registrants should (1) concentrate on disclosing the primary drivers of cash flows and the reasons for material changes in specific items underlying the major captions reported in their financial statements and (2) disclose significant developments in liquidity or capital resources that occur after the balance sheet date.

The SEC staff has noted that it is important for registrants to "accurately and comprehensively explain [their] liquidity story" and has advised registrants to consider including discussions of key liquidity indicators, such as leverage ratios and other metrics that management uses to track liquidity.[4] In addition, the SEC staff has indicated that MD&A disclosures should take into account how the following factors, among others, affect a registrant's liquidity:

- Any changes in leverage strategies.
- Any strains on liquidity caused by changes in availability of previously reliable funding.
- Sources and uses of funds.
- Intraperiod debt levels.
- Restrictions on cash flows between the registrant (i.e., the parent) and its subsidiaries.[5]
- The impact of liquidity on debt covenants and ratios.

Registrants should also consider whether they need to provide enhanced disclosures about:

- Significant debt instruments, guarantees, and covenants.[6]
- Effects on liquidity of material cash balances that are held.[7]

[3] For additional information, see Deloitte's Financial Reporting Alert 15-2, "Financial Reporting Implications Related to Regions Experiencing Economic Struggles."

[4] At the 2011 AICPA Conference, the SEC staff highlighted the need for registrants to include appropriate narratives regarding liquidity and capital resources. See Deloitte's December 14, 2011, *Heads Up* for additional information.

[5] See the Debt section for more information.

[6] See footnote 5.

[7] See the Income Taxes section for more information.

Critical Accounting Estimates

> **Example of an SEC Comment**
>
> Please note that the accounting policy notes in the financial statements should generally describe the method you use to apply an accounting principle; whereas the discussion in Management's Discussion and Analysis of Financial Condition and Results of Operations should present your analysis of the uncertainties involved in applying a principle at a given time or the variability that is reasonably likely to result from its application over time. In future filings please include an analysis, to the extent material, of factors such as how you arrived at critical estimates, how accurate the estimate/assumption has been in the past, how much the estimate/assumption has changed in the past, and whether the estimate/assumption is reasonably likely to change in the future. In addition, your disclosure should address sensitivity of the estimate/assumption to change based on other outcomes that are reasonably likely to occur and would have a material effect. Please refer to the Commission Guidance Regarding Management's Discussion and Analysis of Financial Condition and Results of Operations, Release No[.] 34-48960.

The critical accounting policies section of MD&A is intended to highlight only those financial statement items that require significant management estimates and judgment. When reviewing the section, the SEC staff has frequently focused on the estimates that management used in valuations (e.g., estimates used in the valuation of pension assets, impairment of long-lived assets, income taxes including DTAs and uncertain tax positions, and fair value determinations). Registrants should not simply copy their accounting policy disclosures from the footnotes to the financial statements. Instead, the SEC staff expects discussion and analysis of material uncertainties associated with assumptions underlying each critical accounting estimate.

To provide comprehensive and meaningful disclosures, management should consider disclosing the following items in the critical accounting policies section of MD&A:

- The method(s) used to determine critical accounting estimates.
- The accuracy of past estimates or assumptions.
- The extent to which the estimates or assumptions have changed.
- The drivers that affect variability.
- Which estimates or assumptions are reasonably likely to change in the future.

In addition, registrants should include an analysis of the sensitivity of estimates to change on the basis of outcomes that are reasonably likely to occur and that would have a material effect. The sensitivity analysis should be quantitative if it is reasonable for registrants to obtain such information.

For more information, see the Pensions and Other Postretirement Benefits and Impairments of Goodwill and Other Long-Lived Assets sections.

Tabular Disclosure of Contractual Obligations

Examples of SEC Comments

- With respect to your purchase obligations, we note the discussion of the types of purchase obligations [is] not included in the table in the paragraph following the table. Please tell us how you considered the definition of purchase obligations in Item 303(a)(5)(ii)(D) of Regulation S-K.
- We note . . . that you have long-term raw material and power supply contracts. Please tell us why you do not report these long-term contracts in your contractual obligations table under Item 303(a)(5) of Regulations S-K. In addition, tell us why amounts due under your revolving credit agreement are also excluded from the table. Please provide revised tabular disclosure of your contractual obligations to be included in future filings which includes these obligations or tell us how your current presentation complies with Item 303(a)(5) of Regulation S-K.

The SEC staff's comments on the contractual obligations table and the associated footnotes and disclosures continue to focus on a registrant's omission of (1) material obligations, such as interest payments on debt, pension obligations, and uncertain tax position liabilities, and (2) disclosures about the terms of obligations, such as those related to purchase obligations.

Some registrants have questioned how obligations subject to uncertainties about timing or amount should be presented in the table of contractual obligations. The SEC staff has noted that registrants should consider their circumstances and use judgment in determining whether to include such information in the table or the footnotes to the table.[8] The staff has also indicated that the footnotes should be used to clarify amounts in the table and to (1) explain the nature of the obligations, including whether they were included in, or excluded from, the table (and the reasons for inclusion or exclusion); (2) describe whether the obligations are subject to uncertainty; and (3) describe the uncertainty.[9]

Early-Warning Disclosures

Item 303 requires disclosure of "any known trends or uncertainties that . . . the registrant reasonably expects will have a material favorable or unfavorable impact on net sales or revenues or income from continuing operations." Early-warning disclosures may give investors insight into (1) when charges may be incurred in the future; (2) whether a charge is related to contingencies, restructuring activities, impairment of goodwill or other long-lived assets, or the settlement of uncertain tax positions; (3) when revenue growth or profit margins may not be sustainable because of underlying economic conditions; or (4) when the registrant will be unable to comply with debt covenants. Accordingly, such disclosures may alert investors to the underlying conditions and risks that the company faces before a material charge or decline in performance is reported.

8 See the highlights of the September 2012 CAQ SEC Regulation Committee joint meeting with the SEC staff for discussion of a registrant's use of judgment related to disclosures in the table of contractual obligations.

9 To the extent that the obligations cannot be quantified, the SEC staff expects registrants to disclose information that investors and users need to understand the nature and extent of the registrant's obligations. As indicated in paragraph 9240.7 of the FRM, registrants may include footnotes "to describe provisions that create, increase or accelerate obligations, or other pertinent data to the extent necessary for an understanding of the timing and amount of the registrant's specified contractual obligations."

SEC Reporting

SEC authoritative literature includes a number of requirements in Regulation S-X that govern the form and content of a registrant's financial statements and other information that must be included in filings with the SEC. The SEC staff often comments on these requirements, and they have been the subject of discussion at a variety of forums, including the annual AICPA Conference, various industry conferences, and joint meetings of the SEC staff and the CAQ SEC Regulations Committee. However, there may be situations in which registrants seek relief from complying with certain SEC reporting rules and regulations. With this in mind, the SEC staff has acknowledged that relief may be warranted in some cases and that registrants may seek to obtain a waiver from the CF-OCA. The SEC staff has provided best practices for registrants to consider when seeking reporting relief.

Further, on September 25, 2015, the SEC announced that it is seeking public comment on the effectiveness of financial disclosure requirements in Regulation S-X, including those related to the form and content of financial disclosures about (1) acquired businesses and the accompanying pro forma financial information, (2) equity method investees, and (3) guarantors and issuers of guaranteed securities.[1] SEC Chairman Mary Jo White indicated that the request for comment, which is part of the SEC's disclosure effectiveness initiative, "is an important step in [the SEC's] review of the disclosure requirements" and "will help [the SEC] evaluate potential changes to Regulation S-X that would benefit both investors and companies."

Private-Company Accounting Alternatives

As noted above and discussed further below, there are instances in which a registrant must provide the financial statements of other entities in its registration statements or periodic filings. Among the entities that meet the definition of a public business entity (PBE) under ASU 2013-12 are those that are "required by the [SEC] to file or furnish financial statements, or [do] file or furnish financial statements (including voluntary filers), with the SEC (including other entities whose financial statements or financial information are required to be or are included in a filing)." PBEs are not permitted to adopt private-company accounting alternatives. Accordingly, the effects of any previously elected private-company accounting alternatives would have to be eliminated from the historical financial statements of an entity whose financial statements are included in the SEC filing of a registrant.

Significant Business Acquisitions (Rule 3-05)

Examples of SEC Comments

- Please tell us how you determined that it was not necessary to provide audited financial statements of [Company A] in accordance with Rule 3-05 of Regulation S-X. Please provide us with your [significance] calculations pursuant to Rule 3-05(b)(2) and Rule 1-02(w) of Regulation S-X.
- The company filed a Form 8-K . . . indicating that it intends to file by amendment the historical financial statements of [Company A], and pro formas reflecting the acquisition, not later than 71 calendar days after the date the Form 8-K was required to be filed. Your registration statement may not be declared effective before the financial statements meeting the requirements of Rule 3-05 of Regulation S-X are provided, if the transaction exceeds the 50% significance level. Please provide us with a reasonably detailed presentation of your significance level computations.

[1] For more information about the SEC's request for comment, see Deloitte's October 6, 2015, *Heads Up*.

When a registrant consummates, or it is probable that it will consummate, a significant business acquisition, the SEC staff may require the registrant to file certain financial statements for the acquired or to be acquired business (acquiree) in accordance with Regulation S-X, Rule 3-05, in a Form 8-K, registration statement, or proxy statement. The following factors govern whether, and for what period, financial statements for the acquiree are required:

- Whether the acquired or to be acquired assets and liabilities meet the definition of a business for SEC reporting purposes. The definition of a business for SEC reporting purposes under Regulation S-X is not the same as the definition under ASC 805 for U.S. GAAP purposes.
- The significance of the acquired or to be acquired business. The significance is calculated on the basis of three tests: the investment (purchase price) test, the asset test, and the income test.
- Whether consummation of the business acquisition is probable or has occurred.

The SEC staff comments on the application of Rule 3-05 in connection with significant business acquisitions when registrants:

- Incorrectly determine that the acquired or to be acquired assets and liabilities do not meet the definition of a business for SEC reporting purposes.
- Do not perform the significance calculations correctly. Some of the most common mistakes are misapplications of the income test, such as excluding unusual or one-time gains or losses from the test.
- Do not realize that Rule 3-05 also applies, in a registration statement or certain proxy statements, to probable acquisitions whose significance is greater than 50 percent.
- Do not consider, in a registration statement or proxy statement, the cumulative significance of previously consummated individually insignificant acquisitions.

The staff may also question the financial statements provided by a registrant under Rule 3-05 when the registrant has acquired only selected parts of an entity. In such situations, it may be appropriate, on the basis of the facts and circumstances, for the registrant to include (1) full financial statements of the entity, (2) carve-out financial statements of the assets and operations acquired, or (3) abbreviated financial statements (i.e., Statement of Assets Acquired and Liabilities Assumed; Statement of Revenue and Direct Expenses). For additional information about how to determine what financial statements are appropriate when the registrant has acquired selected parts of an entity, see Section 2065 of the FRM.

Investments in Equity Method Investees (Rules 4-08(g) and 3-09)

Example of an SEC Comment

Please tell us why you have not presented the summarized financial data under Rule 4-08(g) of Regulation S-X for your equity method investments for the years presented. Additionally, please provide us with your significance test with respect to income before continuing operations before income taxes to determine whether the financial statements of [Company A] are required under Rule 3-09 of Regulation S-X. Please refer to Rule 1-02(w)(3) of Regulation S-X.

When a registrant has a significant equity method investment, Regulation S-X, Rules 4-08(g) and 3-09, may require the registrant to provide summarized financial information of the investee in the footnotes to the financial statements, separate financial statements of the investee, or both. To determine whether summarized information is required under Rule 4-08(g), a registrant must perform all three significance tests: the investment test, the asset test, and the income test.

Under Rule 3-09, significance is calculated for equity method investees on the basis of only two tests performed annually: the investment test and the income test. If an investee is significant, its separate financial statements must be filed in the registrant's Form 10-K or in a related amendment. Thus, a registrant's compliance with Rule 3-09 is particularly important because its failure to file the financial statements of a significant investee may cause it to become a delinquent filer and lose Form S-3 eligibility.

Common errors that registrants make when performing the significance tests under Rules 4-08(g) and 3-09 include:

- Failure to document the tests each year. This is most common when an equity method investee has been clearly insignificant in the past. In certain situations, such as a near-break-even year for the registrant or a large income or loss at the investee level, the current year's significance may change, making the equity method investee significant for the first time and thus requiring audited financial statements for the current year and unaudited financial statements for prior years.
- Failure to update the tests each year. Registrants should update and reassess the significance tests for all years presented in a Form 10-K after they report a retrospective change, such as a change in accounting principle or classification of a component as a discontinued operation. See paragraph 2410.8 of the FRM.

For additional SEC staff interpretations of Rules 4-08(g) and 3-09, see Section 2400 of the FRM.

Restrictions on Dividends (Rules 4-08(e), 5-04, and 12-04)

Registrants must consider the requirements of Regulation S-X, Rules 4-08(e), 5-04, and 12-04, when the transfer of assets (cash or other funds) to the parent company/registrant from its subsidiary (or subsidiaries) or equity method investee (1) is materially restricted, (2) is limited, or (3) requires a third party's approval.

For additional discussion, see the Debt section.

Guarantors of Registered Securities (Rule 3-10)

Regulation S-X, Rule 3-10, requires a registrant to provide separate financial statements for each subsidiary issuer or guarantor of debt securities registered or being registered unless certain criteria are met. The information required under Rule 3-10 must be presented in registration and proxy statements as well as Forms 10-K and 10-Q. Therefore, a registrant should consider the requirements under Rule 3-10 if (1) the registrant registers debt and the debt is guaranteed by one or more of its subsidiaries or (2) one of the registrant's subsidiaries registers debt and the debt is guaranteed by the parent company or one or more of its other subsidiaries.

Rule 3-10 contains certain exceptions under which a registrant may provide more limited financial information in lieu of full financial statements. If the registrant meets the exception criteria, it may be eligible to provide, in a footnote to the parent company's financial statements, either of the following types of modified financial information in lieu of separate financial statements:

- Condensed consolidating financial information.
- Narrative disclosures about each subsidiary issuer or guarantor.

While each of the exceptions under Rule 3-10 has additional provisions that must be met for a registrant to qualify for the relief, all of them require (1) the subsidiary issuer and guarantors to be "100 percent owned" by the registrant and (2) the guarantee to be "full and unconditional." The SEC staff sometimes comments on whether the registrant specifically meets these and other criteria necessary for the presentation of modified financial information.

For additional SEC staff interpretations of Rule 3-10, see Section 2500 of the FRM.

Definition of 100 Percent Owned

> **Example of an SEC Comment**
>
> It is not clear that you have provided all of the disclosures required by Rule 3-10(i)(8) to (11) of Regulation S-X. For example, pursuant to Rule 1-02(aa) of Regulation S-X, wholly-owned is not equal to 100% owned.

Registrants must disclose that a subsidiary is 100 percent owned to meet one of the conditions for relief under Rule 3-10. The SEC staff has reminded registrants that under Regulation S-X, "100 percent owned" does not mean the same thing as "wholly owned" and that the terms are therefore not interchangeable. The staff has indicated that wholly owned under Regulation S-X, Rule 1-02, means that the parent owns substantially all of the outstanding voting stock of the subsidiary whereas 100 percent owned is defined as ownership of all outstanding shares of the subsidiary. For further clarification of the definition of 100 percent owned, see Rule 3-10(h)(1).[1]

Full and Unconditional Guarantees and Release Provisions

> **Example of an SEC Comment**
>
> Your disclosure indicates that the subsidiary guarantees are full and unconditional. We note that the related indenture agreements contain certain release provisions. For example, . . . there are provisions under which the guarantees shall automatically terminate or the subsidiary guarantor shall be released and discharged from all obligations. Please tell us what consideration you gave to disclosing such release provisions to the full and unconditional guarantees in order to more accurately describe the qualifications to the subsidiary guarantors.

A guarantee must be full and unconditional to allow the registrant to provide limited financial information in lieu of full financial statements under Rule 3-10. Paragraph 2510.4 of the FRM clarifies that an "arrangement that permits a guarantor to opt out of its obligation prior to or during the term of the debt is not a full and unconditional guarantee." However, a subsidiary whose guarantee is released automatically by one of the customary release provisions referred to in paragraph 2510.5 of the FRM may rely on the relief provided by Rule 3-10. Accordingly, registrants should disclose any qualifications of subsidiary guarantees and should not characterize a subsidiary guarantee as full and unconditional without disclosing the circumstances under which it can be released.

The FRM's guidance on customary release provisions applies only to subsidiary guarantees, not to parent guarantees. The SEC staff has clarified that to qualify for Rule 3-10 relief, a registrant must meet certain conditions specified in the rule, one of which is the filing of the parent company's financial statements for the periods indicated. Therefore, if the parent could be released from its guarantee, there would be no basis for relief under Rule 3-10. However, the staff has allowed limited exceptions to parent release provisions, such as situations in which the parent's guarantee is released when the debt is repaid. Registrants are encouraged to contact the staff regarding any parent release provisions in their debt indentures.

[1] Registrants may wish to consult legal counsel when interpreting Rule 3-10(h)(1).

Condensed Consolidating Financial Information

Examples of SEC Comments

- [T]ell us your consideration of the need to include a separate column for the condensed consolidating financial information of the subsidiary issuer(s). Refer to Rule 3-10 (b)–(f) of Regulation S-X.
- Please tell us the consideration you gave to presenting the material components of investing and financing activities in your condensed consolidating statements of cash flows. Refer to Rule 3-10(i)(1) and Rule 10-01(a)(4) of Regulation S-X.

If a registrant presents condensed consolidating financial information, it should use a columnar format and include certain or all of the following as applicable: (1) the parent, (2) subsidiary issuer(s) of the security, (3) subsidiary guarantor(s), (4) nonguarantor subsidiaries, and (5) consolidating adjustments. Registrants should also provide sufficient detail about the assets, liabilities, operations, and cash flows for each of the parent, issuer, subsidiary guarantors, and nonguarantor subsidiaries, as appropriate.

The SEC staff often discusses form and content considerations related to the preparation of condensed consolidating financial information under Rule 3-10 and has highlighted that under this rule:

- The information should be presented at the same level of detail (i.e., the major financial statement captions) as interim financial statements prepared in accordance with Regulation S-X, Article 10.
- The information should be presented in accordance with U.S. GAAP[2] (e.g., intercompany receivables should be shown as an asset and not as a negative liability).
- The classifications in the condensed consolidated statement of cash flows should also comply with U.S. GAAP (i.e., gross versus net reporting, investing versus financing classification).
- A total for comprehensive income should be presented in either a single continuous statement or two separate but consecutive statements.[3]

The SEC staff may also comment when a registrant:

- Incorrectly assumes that certain exceptions in Rule 3-10 are met and therefore concludes that it does not have to provide separate financial statements, condensed consolidating financial information, or narrative disclosures.
- Incorrectly prepares the required condensed consolidating financial information by not presenting subsidiaries under the equity method of accounting, or not presenting information in sufficient detail to allow investors to determine the assets, results of operations, and cash flows of each of the consolidating groups.

The SEC staff has also commented when the parent (or guarantor) has recorded positive operating cash flows in a particular period in the absence of any revenue-generating activities during that time frame. Positive cash flow from operations often results when the parent (or guarantor) classifies dividends received from its subsidiaries as a "return on its investment." In accordance with ASC 230-10-45-16(b) and ASC 230-10-45-12(b), the parent (or guarantor) should consider its particular facts and circumstances when determining whether the cash flows resulting from a dividend distribution represent a "return on" or a "return of" the related investment in the underlying subsidiary. The SEC staff may ask registrants to disclose (1) how they have accounted for such dividends and (2) the amount of dividends received from subsidiaries included in cash flows from operations. For more information about the SEC staff's comments regarding cash flow statement classification, see the Financial Statement Classification, Including Other Comprehensive Income section.

[2] One exception is that investments in subsidiaries should be presented under the equity method of accounting. See Rule 3-10(i)(5).

[3] The SEC staff has clarified that a registrant should present total comprehensive income in a manner consistent with the interim requirements for the registrant's primary financial statements. See paragraphs 2515.2 and 2810.1 of the FRM for additional information.

Recently Acquired Subsidiary Issuers or Subsidiary Guarantors (Rule 3-10(g))

Under Rule 3-10(g), which applies to recently acquired subsidiary issuers or subsidiary guarantors, a registrant must provide separate financial statements of a significant subsidiary issuer or guarantor if the subsidiary's historical results have not been included in the parent's audited financial statements for at least nine months of the most recent fiscal year. The SEC staff has noted that the significance test under Rule 3-10(g) is different from the tests under Rule 3-05 for businesses acquired or to be acquired (see Significant Business Acquisitions (Rule 3-05) above). To determine significance under Rule 3-10(g), a registrant should compare the subsidiary's net book value or purchase price (whichever is greater) with the principal amount of the securities being registered. If the test result equals or exceeds 20 percent, the registrant must file separate financial statements of the acquired subsidiary that are (1) audited in accordance with the standards of the PCAOB for the most recent fiscal year and (2) unaudited for the appropriate interim period preceding the acquisition.

In computing significance under Rule 3-10(g), a registrant must aggregate the acquisitions of a group of related subsidiary issuers or guarantors before their acquisition. A registrant is also required to include financial statements in registration statements but not in periodic reports filed under the Exchange Act (e.g., Forms 10-K and 10-Q).

Pro Forma Financial Information (Article 11)

Examples of SEC Comments

- [P]lease explain the adjustments for the acceleration of certain profits interests awards from [Company A] as a result of the offering. Tell us why these adjustments are considered factually supportable, directly attributable to the transaction, and expected to have a continuing impact on the statement of operations. Refer to Rule 11-02(b)(6) of Regulation S-X.
- We note the terms and form of future earn-out payments . . . have not been finalized. . . . As a range of terms are under consideration, you should provide additional pro forma presentations which give effect to the range of possible results, consistent with the guidance in Rule 11-02(b)(8) of Regulation S-X. This information should fully address the anticipated impact upon future results of operations, earnings per share, and ownership percentages.

Pro forma information is required under Regulation S-X, Article 11, when (1) it is material to an understanding of a significant consummated or probable transaction, such as a business combination; (2) a transaction is subject to a shareholder vote; or (3) other conditions outlined in Article 11 are met. Pro forma financial information under Article 11 may be required in a registration statement, proxy statement, or Form 8-K, but it is not required in a Form 10-K or 10-Q. Although Article 11 pro forma financial statements are not required in a registrant's Form 10-K or 10-Q, a registrant must separately evaluate the need for supplemental pro forma disclosures under ASC 805 (related to business combinations) in its financial statements included in a Form 10-K or 10-Q. See the Business Combinations section for more information about supplemental pro forma disclosures that are required under U.S. GAAP.

Registrants should generally present Article 11 pro forma financial statements in columnar form with separate columns for historical financial information, pro forma adjustments, and pro forma results. In limited circumstances, registrants may present narrative disclosures in lieu of pro forma financial statements. Further, Article 11 requires pro forma balance sheet adjustments to reflect events that are (1) factually supportable and (2) directly attributable to the transaction. In addition, pro forma income statement adjustments must have a "continuing impact" on the registrant's operations (i.e., they are not "one time").[4] The SEC staff continues to comment on certain form and content matters, such as when a registrant fails to clearly explain each financial statement adjustment or does not clearly demonstrate how the above requirements are met.

[4] The SEC staff has expanded on its view of what would constitute continuing impact. See the highlights of the June 2012 and March 2013 CAQ SEC Regulations Committee joint meetings with the SEC staff for additional information.

When calculating pro forma adjustments, registrants should assume that the transaction occurred (1) as of the date of the most recent balance sheet for the pro forma balance sheet and (2) at the beginning of the fiscal year presented for the pro forma income statement. In the past, the SEC staff has clarified that this guidance applies only to calculating the amount of the pro forma adjustment and should not be used to determine whether an adjustment is appropriate. For example, in the preparation of a pro forma income statement, it would be inappropriate for a registrant to make a pro forma adjustment for a charge in the historical financial statements on the basis of an assertion that if the transaction had been consummated at the beginning of the year, the charge would not have been incurred.

For companies doing an IPO, the SEC staff has clarified that it would be rare for costs "that a company expects to incur as a public company" to be pro forma adjustments "since such costs are not directly attributable to the transactions for which pro forma information is presented."[5] However, the staff has noted that depending on the facts and circumstances, a registrant may disclose the types and ranges of such costs in the notes to the pro forma financial information. For additional reporting considerations related to IPOs, see the Initial Public Offerings section.

Further, transactions may be structured in a manner such that significantly different results may occur. In these instances, registrants should comply with the requirement under Regulation S-X, Rule 11-02(b)(8), to disclose additional pro forma information that gives effect to the range of possible outcomes resulting from the transaction.

Section 3300 of the FRM summarizes issues that are often associated with pro forma financial information.

[5] Quoted text is from the highlights of the March 2012 CAQ SEC Regulations Committee joint meeting with the SEC staff.

Disclosures About Risk

The SEC staff continues to expect registrants to provide investors with tailored, comprehensive, and transparent risk disclosures.

Risk Factors

Example of an SEC Comment

Some of your risk factors appear to combine separate risk factors under one heading. Please review each risk factor heading to ensure it clearly conveys a separate, detailed risk to investors regarding your company, industry or security.

In recent years, the SEC staff has emphasized that registrants should present tailored risk factors in their filings and avoid using boilerplate language. In an April 11, 2014, speech[1] highlighting the SEC staff's "disclosure effectiveness" initiative, a staff member indicated that "risk factors could be written better — less generic and more tailored — and they should explain how the risks would affect the company if they came to pass."

Accordingly, the SEC staff routinely asks registrants to replace boilerplate risk disclosures with a discussion of the risks that specifically affect the registrant and their possible impact on the registrant's business. Instead of combining separate risk factors under a single heading and providing a general discussion, registrants are asked to review each risk factor heading to ensure that it clearly conveys and adequately describes a separate, detailed risk to investors. In addition, the SEC staff requests more specific discussion and enhanced explanations of how the risks could materially affect the registrant's business. This discussion may be supplemented with quantitative information to provide additional context about the risks. In addition, the staff often asks registrants whether they have (1) discussed all relevant risk factors and (2) provided sufficient MD&A discussion when a risk constitutes a material trend or uncertainty.

Cybersecurity

Example of an SEC Comment

We note that you may have been subject to [distributed denial of service] attacks in the past. Please clarify whether you have knowledge of the occurrence of any such attacks in the past. If attacks have occurred, and were material either individually or in the aggregate, revise to discuss the related costs and consequences. For additional guidance, consider our CF Disclosure Guidance: Topic No. 2 on Cybersecurity.

The SEC staff has noted the increasingly frequent occurrence of cyberincidents, which may cause registrants to incur significant remediation and other costs for (1) direct damages (both real and reputational), (2) the impact on their customers, and (3) increased protection from future cybersecurity attacks. It is important for registrants to consider the nature of any cyberincidents that occur and to provide the appropriate level of disclosure about such incidents in their filings.

Currently, there are no SEC rules that explicitly require registrants to disclose cybersecurity-related matters in their filings. Therefore, some registrants' cybersecurity disclosures have been viewed as generic and uninformative. However CFDG Topic 2 provides SEC staff views on potential disclosures related to material cybersecurity matters. CFDG Topic 2 indicates that under existing SEC requirements, registrants may need to provide disclosures in various sections of an SEC filing, including risk factors, legal proceedings, MD&A, and the financial statements. For example, cybersecurity risks and cyberincidents may constitute material known trends and uncertainties that registrants should consider disclosing in MD&A in accordance with Regulation S-K, Item 303(a)(3)(ii).

[1] Keith Higgins, director, Division of Corporation Finance, "Disclosure Effectiveness: Remarks Before the American Bar Association Business Law Section Spring Meeting," April 11, 2014.

In cybersecurity disclosures, registrants should avoid using boilerplate language and instead should include information such as (1) the aspects of the business that are subject to cybersecurity risks, (2) updates for new information, and (3) cost estimates, if possible and material. Registrants should not state that there is a risk of a cybersecurity breach after the occurrence of an actual cyberattack; rather, such registrants should disclose that they have experienced security breaches or cyberattacks.

Accordingly, the SEC staff may monitor information outside a registrant's filings and ask why certain cyberincidents are not disclosed. Further, a registrant may be asked to confirm that it has disclosed the occurrence of material cyberincidents in its filings.

Non-GAAP Financial Measures and Key Metrics

Example of an SEC Comment

We note your presentation of the line item "net revenue" here and in the financial statement table within MD&A, which you describe on page 22 of MD&A as revenue minus transportation costs. As you appear to generally be the primary obligor for generally recognizing gross revenues under ASC Topic 605-45-45 and you report gross revenue in your audited financial statements, presenting "net revenue" appears to be a non-GAAP measure under Item 10(e) of Regulation S-K for which a tabular presentation reconciling net revenue to the most directly comparable GAAP measure would be necessary. As such, please revise the tables in Selected Financial Data and MD&A to disclose that the line item net revenue represents a non-GAAP measure. In a footnote to the tables, please describe how this measure is calculated and further, how it is used by management and how it should be used by an investor. Please revise in future filings.

SEC Rule 33-8176 defines a non-GAAP financial measure as a "numerical measure of a registrant's historical or future financial performance, financial position or cash flows" that includes amounts that are not part of the most directly comparable GAAP measure or excludes amounts that are part of the most directly comparable GAAP measure. Common non-GAAP financial measures include EBITDA or adjusted EBITDA, adjusted revenues, free cash flows, core earnings, funds from operations, and measures presented on a constant-currency basis.

Regulation S-K, Item 10(e)(1)(i), states that for financial measures used in documents that are filed with the SEC, the following information should accompany a registrant's disclosure of non-GAAP financial measures:

(A) A presentation, with equal or greater prominence, of the most directly comparable financial measure or measures calculated and presented in accordance with [GAAP];

(B) A reconciliation (by schedule or other clearly understandable method), which shall be quantitative for historical non-GAAP measures presented, and quantitative, to the extent available without unreasonable efforts, for forward-looking information, of the differences between the non-GAAP financial measure disclosed or released with the most directly comparable financial measure or measures calculated and presented in accordance with GAAP . . . ;

(C) A statement disclosing the reasons why the registrant's management believes that presentation of the non-GAAP financial measure provides useful information to investors regarding the registrant's financial condition and results of operations; and

(D) To the extent material, a statement disclosing the additional purposes, if any, for which the registrant's management uses the non-GAAP financial measure that are not disclosed pursuant to [subparagraph (C) above].

At the 2013 AICPA Conference, the SEC staff noted that it continues to focus on disclosures of non-GAAP measures and particularly on whether registrants have (1) clearly labeled and described non-GAAP measures and adjustments (e.g., titles should not be confusingly similar to those of GAAP financial measures), (2) used appropriate conventional accounting terminology, and (3) provided context for their presentation.

Further, the SEC staff has indicated that a registrant should not present non-GAAP measures if they are misleading — regardless of whether the registrant intends to use them in or outside a filing. In addition, the staff has indicated that the following items should not be excluded from non-GAAP financial measures:

- Expenses that are necessary to run the business, such as traditional recurring cash operating expenses.
- The largest expenses that are necessary to generate the registrant's revenues.

The staff has also indicated that registrants should not eliminate recurring cash charges from a profit measure in a misleading way. When the staff believes that a registrant's presentation of a non-GAAP measure is misleading, it may take action in addition to issuing a comment, which could include bringing an enforcement action against the registrant.

In addition, the staff often comments when adjustments to non-GAAP measures are labeled as nonrecurring, infrequent, or unusual. Regulation S-K, Item 10(e), prohibits registrants from adjusting a non-GAAP financial performance measure "to eliminate or smooth items identified as non-recurring, infrequent or unusual, when the nature of the charge or gain is such that it is reasonably likely to recur within two years or there was a similar charge or gain within the prior two years." Question 102.03 of the C&DIs related to non-GAAP financial measures clarifies that guidance by indicating that a charge or gain may be included as an adjustment as long as it is not inappropriately labeled or described as nonrecurring, infrequent, or unusual.

Liquidity Versus Performance Measures

Example of an SEC Comment

We note that you reconcile your non-GAAP measure, Adjusted EBITDA, to net income attributable to [Company A]. Because you adjust this measure for changes in deferred revenue and course expenses, effectively reflecting cash disbursements and receipts as opposed to earned revenues and incurred expenses, it appears to be a measure of liquidity as opposed to performance. Therefore, we believe the most directly comparable GAAP measure is cash provided by operating activities rather than net income. Please advise or revise accordingly.

The SEC staff has continued to comment when a non-GAAP financial measure is not reconciled to the appropriate GAAP measure as determined on the basis of whether the purpose of the non-GAAP measure is to assess the registrant's performance or its liquidity. For example, the staff has indicated that the most directly comparable GAAP measure for reconciling EBITDA and adjusted EBITDA is typically net income (loss) for a performance measure and cash flows from operating activities for a liquidity measure.

Relevance and Consistency of Non-GAAP Measures

Examples of SEC Comments

- We note your disclosure of the non-GAAP measures free cash flow, EBIT, and ongoing EPS. Furthermore, your disclosure states that "the presentation of non-GAAP financial measures is intended to supplement investor's understanding of our operating performance." It appears your disclosures are overly general and therefore, not consistent with the objective of Item 10(e)(1)(i) of Regulation S-K. Please revise to include disclosure concerning the reasons why the management believes that presentation of the non-GAAP financial measure provides useful information to investors in accordance with Instruction 2 to Item 2.02 of Form 8-K and Item 10(e)(1)(i) of Regulation S-K.
- While three of the factors disclosed in the press release and the Form 10-Q are the same, there are two factors disclosed in the press release that were not included in the Form 10-Q and one factor in the Form 10-Q that was not included in the press release. Please help us understand why there appears to be an inconsistency between the press release and the Form 10-Q.

The SEC staff has continued to comment on the extent of a registrant's disclosures and whether the disclosures demonstrate the purpose of the measures (i.e., how management uses them and their usefulness to investors).

Further, the SEC staff focuses on consistency in communications with investors. It may ask a registrant about inconsistencies between (1) the non-GAAP measures identified in information disclosed outside the registrant's SEC filings, such as on its Web site and in its press releases, earnings calls, and analyst presentations, and (2) the non-GAAP measures in the registrant's SEC filings. The SEC staff has noted that it does not require registrants to use non-GAAP measures in their filings. However, the staff may comment if a registrant discusses non-GAAP financial measures in other communications to investors but such discussion is omitted from, or contradicts, the information in the registrant's filings. In addition, if a non-GAAP measure is the focal point in all of a registrant's outside communications but is not included in filed documents, the SEC staff may ask why.[1]

Undue Prominence of a Non-GAAP Financial Measure

Example of an SEC Comment

We note that you present full non-GAAP income statements for the three months ended December 31, 2014 and 2013. We believe that the presentation of a full non-GAAP income statement attaches undue prominence to the non-GAAP information, results in the creation of many additional non-GAAP measures, and may give the impression that the non-GAAP income statement represents a comprehensive basis of accounting. Please confirm to us that you will revise your presentation to provide relevant information to investors without providing full non-GAAP income statements in future filings. For additional guidance, please refer to [Question 102.10 of the C&DIs related to non-GAAP financial measures].

The SEC staff will comment when a registrant presents its non-GAAP financial measures more prominently than its GAAP measures in terms of the order of presentation or the degree of emphasis. A registrant may receive a comment if its discussion of non-GAAP financial measures is significantly longer than its discussion of the corresponding GAAP financial measures, or if it uses a full non-GAAP income statement format that is generally not appropriate under Question 102.10 of the C&DIs related to non-GAAP financial measures. In recent comments, the SEC staff has indicated that as a substitute for presenting a full non-GAAP income statement, registrants may consider presenting only individual non-GAAP measures (e.g., line items) as long as each measure is used in a manner consistent with Regulation S-K, Item 10(e)(1)(i).

Key Metrics

Example of an SEC Comment

We note your discussion . . . of the number of your customers and your annual dollar-based net expansion rate. Please tell us what consideration you have given to discussing these metrics, as well as other measures you use to evaluate your business, in a separately titled section and discussing any trends in such metrics and related material impacts on your business. For example, it appears that the growth rates of property manager customers and law firm customers are slowing. See Item 303(a) of Regulation S-K, and for additional guidance, refer to Section III.B of SEC Release No. 33-8350.

A registrant may include in its SEC filings unique financial or operating metrics (e.g., same-store sales, average rental rates, number of online users, room night stays, catalogs mailed) to illustrate the size and growth of its business. In public remarks, the SEC staff has stated that (1) metrics may differ from non-GAAP measures and (2) it is generally not referring to non-GAAP measures when discussing metrics.

At the "SEC Speaks in 2015" Conference, the SEC staff discussed metrics used in registrants' IPO registration statements and periodic filings. The staff indicated that because not all investors may be familiar with a registrant's metrics, such metrics should be discussed informatively. Accordingly, a registrant should (1) clearly define the metrics used and how they are calculated, (2) describe any important assumptions and limitations of the metrics (e.g., whether the metric is a "hard" amount or

[1] The SEC staff discussed this topic at the 2010 AICPA Conference. See Deloitte's December 16, 2010, *Heads Up* for additional information.

an estimate), (3) present a metric within a balanced discussion, and (4) clearly describe how a metric is related to current or future results of operations. A registrant should also consider disclosing how management uses specific metrics and why they are important to investors. In addition, the staff indicated that because metrics evolve over time, it expects registrants to disclose what the changes are and the reasons for using a new metric.

A registrant must use judgment in determining whether to include metrics in its filings. The staff noted at the "SEC Speaks in 2015" Conference that registrants should ask themselves the following questions in making this determination:

- Is the metric integral to the story?
- Does the metric help investors understand changes quickly and effectively?
- Is the metric discussed outside of periodic filings (e.g., in earnings calls or supplemental packages)?

Disclosure Controls and Procedures

In discussions of disclosure controls and procedures (DC&P)[1] registrants must use language that conforms to the requirements in Rule 13a-15(e) or Rule 15d-15(e) of the Exchange Act.[2] The SEC staff often comments when registrants do not use the proper definition of DC&P or omit certain language in reaching conclusions about the effectiveness of their DC&P. In these situations, the staff frequently requires registrants to confirm that their DC&P are effective in the current year and to revise their disclosures in future filings.

Inappropriate Conclusion About DC&P

Example of an SEC Comment

We note your statement that your disclosure controls and procedures are not effective for a company your size. Please revise to remove the qualifier "for a company our size." Refer to Item 307 of Regulation S-K, which requires a clear and unqualified statement as to whether your disclosure controls and procedures are effective or ineffective.

The SEC staff has noted that management must clearly state, without using any qualifying or alternative language, its conclusion about whether DC&P are "effective" or "ineffective" as of the end of the respective quarter. Examples of unacceptable language include phrases such as "adequate," "effective except for," "effective except as disclosed below," or "reasonably effective."

The SEC staff has also commented when registrants refer to the level of assurance of the design of their DC&P. Although registrants are not required to discuss such assurance, the staff has asked registrants that choose to do so to also state clearly whether the DC&P are, in fact, effective at the "reasonable assurance" level.

In addition, when registrants have concluded that their DC&P are ineffective, the staff has asked them to discuss how they intend to remedy the deficiencies identified.

Incomplete, Inconsistent, or Inaccurate Information in Disclosure About DC&P

Examples of SEC Comments

- We note your Chief Executive Officer and Chief Financial Officer concluded that your disclosure controls and procedures as of June 30, 2014 were effective; however, you did not include the definition of disclosure controls and procedures or refer to such definition as stated in the Exchange Act Rules. Please confirm to us, if true, that your officers concluded your disclosure controls and procedures are effective as of June 30, 2014, to ensure that the information required to be disclosed by the company in reports that it files under the Exchange Act is recorded, processed, summarized and reported within the time periods specified in the Commission´s rules and forms and also to ensure that information required to be disclosed in the reports that you file or submit under the Exchange Act is accumulated and communicated to management, as appropriate, to allow timely decisions regarding required disclosure. Further, in future filings, revise your disclosures to include the full definition of disclosure controls and procedures or clearly indicate that the evaluation was made with respect to disclosure controls and procedures as defined in Rule 13a-15(e) and 15d-15(e) of the Exchange Act. We refer you to Item 307 of Regulation S-K.
- The disclosure . . . that management concluded that your [DC&P] were effective [as of] December 31, 2013 is not consistent with your risk factor [regarding which] you disclose that management concluded that your DC&P were not effective due to the existence of certain material weaknesses.

[1] Under Part I, Item 4, of Form 10-Q and Part II, Item 9A, of Form 10-K.

[2] As required by Regulation S-K, Item 307.

Registrants are not required to define DC&P in their conclusion (they may refer to the definition in the Exchange Act Rules instead). However, if they choose to define the term, they must use the entire definition in Rule 13a-15(e) or Rule 15d-15(e). The SEC staff has commented when registrants (1) define DC&P but do not use the entire definition or (2) neither fully define DC&P nor refer to the definition in the Exchange Act. In addition, the staff has commented when a registrant's DC&P disclosure (1) is inconsistent with other disclosures in the filing or previous filings or (2) does not contain all of the required information.

Conclusion That DC&P Were Effective If a Restatement Is Required, a Material Weakness Exists, or Reports Were Not Filed in a Timely Manner

Examples of SEC Comments

- We note your disclosure of a material weakness related to the failure to maintain qualified accounting personnel. Your disclosure describes certain remediation efforts and states that you expect remediation to continue. Given [that ICFR is] an integral part of [DC&P], please tell us how you came to the conclusion that your material weakness related to ICFR did not impact your conclusion on the effectiveness of your DC&P or amend to revise your conclusion on the effectiveness of your DC&P.
- [P]lease consider whether management's failure to perform or complete its report on internal control over financial reporting impacts its conclusions regarding the effectiveness of your disclosure controls and procedures as of June 30, 2014 and revise your disclosure as appropriate.

Paragraph 4310.9 of the FRM states, "Because of the substantial overlap between ICFR and [DC&P], if management concludes that ICFR is ineffective, it must also consider the impact of the material weakness on its conclusions related to [DC&P]." If a registrant concludes that its DC&P are effective when a material weakness exists, the SEC staff often asks for information on the factors the registrant considered in reaching such a conclusion. In addition, when a registrant is required to file amended periodic reports containing restated financial statements, the SEC staff generally asks the registrant to reconsider its conclusions about the effectiveness of its DC&P.

The SEC staff has also asked about management's conclusion that DC&P were effective when a registrant did not file periodic reports in a timely manner. A registrant should design DC&P to ensure that information disclosed in its reports filed or submitted under the Exchange Act is recorded, processed, summarized, and reported within the periods specified in the SEC's rules. If the registrant does not report such information within these periods, the staff may request the registrant to supply additional information to support management's conclusion.

A Change in the Conclusion That DC&P Were Effective If No Changes to ICFR Were Disclosed

Example of an SEC Comment

You concluded your disclosure controls and procedures were effective as of September 30, 2014. In forming this conclusion, please tell us how you considered the following: (a) the three material weaknesses you had as of December 31, 2013, (b) your internal control over financial reporting was not effective as of December 31, 2013, (c) your disclosure controls and procedures were not effective as of December 31, 2013, March 31, 2014 and June 30, 2014 and (d) you disclosed in each of your Forms 10-Q filed during 2014 that no material changes in your internal control over reporting had occurred. Please also tell us the factors you considered to support management's conclusion that your disclosure controls and procedures were effective as of September 30, 2014. Please revise your disclosures regarding changes in your internal control over financial reporting and corrections of material weaknesses, as appropriate. Otherwise, please amend your Form 10-Q for the period ended September 30, 2014 to disclose, if true, your disclosure controls and procedures were not effective as of September 30, 2014.

If a registrant concludes that its DC&P were effective after a period in which the DC&P had been deemed ineffective, the SEC staff may ask the registrant to explain the basis for its conclusion. The SEC staff is especially likely to do so if the registrant has disclosed in the same period that there have been no changes to its ICFR.

Internal Control Over Financial Reporting

In addition to disclosing material changes in ICFR on a quarterly basis,[1] a registrant must annually provide management's report on ICFR and, if applicable, the attestation report of the registrant's registered public accounting firm.[2] These reports are not required in registration statements or Form 11-K.[3] Further, newly public companies generally do not need to provide management's report on ICFR in the first Form 10-K that they file after their initial public registration statement is declared effective.[4] In addition, the JOBS Act amended Section 404(b) of the Sarbanes-Oxley Act by exempting emerging growth companies (EGCs) from the requirement to obtain an attestation report on ICFR for as long as such entities retain their EGC status. See the Emerging Growth Companies section for considerations related to EGCs.

Entities should be mindful of the SEC's interpretive release regarding management's assessment of ICFR, particularly the guidance on the evaluation of control deficiencies. The OCA has stated that internal control reporting is a focus in its reviews and enforcement actions, and this focus is evidenced by past SEC cases. For example, in one case, the SEC's Division of Enforcement brought an enforcement action against the CEO and former CFO of a computer equipment company alleging internal control violations, including (1) the failure to disclose to their company's auditors significant deficiencies in internal control and (2) falsely representing in their signed certifications under Section 302 of the Sarbanes-Oxley Act that they disclosed all such deficiencies to the auditors. In another case, an enforcement action was brought against a corporation for Foreign Corrupt Practices Act (FCPA) violations, including internal control violations of the Exchange Act, with the chief of the Division of Enforcement's FCPA Unit noting that the FCPA violations were the result of a "lax internal control environment."

Evaluation of Severity of Control Deficiencies

Examples of SEC Comments

- Please describe in detail your evaluation of the severity of the key control deficiency. Refer to the guidance for evaluation of control deficiencies beginning on p. 34 of SEC Release No. 33-8810 "Commission Guidance Regarding Management's Report on Internal Control Over Financial Reporting Under Section 13(a) or 15(d) of the Securities Exchange Act of 1934." Include in your analysis a description of the maximum potential amount or total of transactions exposed to the deficiency and how that determination was made.
- Please address the following in relation to [the error you identified]:
  - Provide further information to help us understand how you considered the identification and correction of the error in your evaluation of [ICFR] as of December 31, 2013 and whether control deficiencies existed due to the error. To the extent that you determined there were control deficiencies due to the error, describe the deficiencies and how you evaluated the severity of each identified.
  - In addition, describe the evaluation performed on whether there was a reasonable possibility that your controls would have failed to prevent or detect a material misstatement associated with other related aspects of the consolidation process.
  - Last, tell us if the identification and correction resulted in changes to your internal controls and if so, describe those changes and the timing.

The SEC staff has continued to issue comments to registrants that have identified numerous control deficiencies without reporting a material weakness to understand how the registrants evaluated the severity of the deficiencies in the aggregate. The SEC staff has reiterated that the existence of a material weakness does not depend on the actual magnitude of an error (or whether an error existed) but instead depends on whether there was a reasonable possibility that a material misstatement could have occurred without being detected or prevented by the registrant's ICFR. In the interpretive release discussed above, the SEC stated that management needs to consider "whether each deficiency, individually or in

[1] Under Part I, Item 4, of Form 10-Q and Part II, Item 9A, of Form 10-K.

[2] The requirement for an attestation report applies only to large accelerated and accelerated filers because nonaccelerated filers are exempt from this requirement under Section 404(b) of the Sarbanes-Oxley Act.

[3] Form 11-K is used to file the annual reports for employee stock purchase, savings, and similar plans.

[4] However, paragraph 4310.6 of the FRM states, "A company that historically reported under the Exchange Act as a voluntary filer or because of registered debt, and therefore filed annual reports up to and through the date of its [equity] IPO, in which it was required to comply with . . . Item 308(a) of Regulation S-K, is therefore required to provide management's report on ICFR in its first annual report following the IPO."

combination, is a material weakness as of the end of the fiscal year . . . even though such deficiencies may be individually less severe than a material weakness"; in addition, the SEC noted an increased likelihood of misstatement when there are "[m]ultiple control deficiencies that affect the same financial statement amount or disclosure." At the 2013 AICPA Conference, Brian Croteau, deputy chief accountant in the OCA, stated that he remains convinced that "at least some of the PCAOB's inspection findings related to the audits of internal control over financial reporting are likely indicators of similar problems with management's evaluations of ICFR, and thus potentially [are] also indicative of risk for unidentified material weaknesses." He also questioned whether all material weaknesses are being properly identified and noted that only in rare instances does management identify a material weakness in the absence of a material misstatement. He attributed this to the following possibilities: (1) "the deficiencies are not being identified in the first instance" or (2) "the severity of deficiencies is not being evaluated appropriately."

Mr. Croteau reiterated these points at the 2014 AICPA Conference, where he stated that he "continue[s] to question whether material weaknesses are being properly identified, evaluated, and disclosed." He also stated that the "efforts throughout the SEC pertaining to the ICFR requirements are ongoing, coordinated, and increasingly integrated into [the SEC's] routine consultation, disclosure review and enforcement efforts," thus indicating that ICFR will remain a focus of the SEC staff.

Evaluation of Control Deficiencies Related to Immaterial Misstatements

Example of an SEC Comment

We note that you concluded that the errors related to deferred tax assets were immaterial to the previously reported amounts contained in your periodic reports. Please tell us the following concerning these errors:

- Explain to us in greater detail the nature of the errors and how they were determined and remediated;
- Tell us if there was any impact on the evaluation of your disclosure controls and procedures and your conclusion on Internal Control over Financial Reporting; and
- Provide us with your SAB 99 materiality analysis beginning with the initial time period in which the errors were detected, addressing how you concluded that these errors were immaterial to the previously reported amounts contained in your periodic reports.

At the September 2014 AICPA Banking Conference, the SEC staff indicated that it will continue to question how registrants have considered and evaluated the severity of deficiencies in ICFR related to immaterial misstatements that were corrected by immaterial restatements.[5] The staff reminded registrants that the severity of a deficiency does not depend on whether a misstatement actually has occurred; rather, it depends on whether there is a reasonable possibility that the deficiency could have resulted in a misstatement. The evaluation of the severity warrants consideration of risk factors including, but not limited to, the potential future consequences of the deficiency.[6] Accordingly, it is possible that an immaterial restatement represents a material weakness in ICFR even though the actual magnitude of an error was not material. The SEC's interpretive release states:

> Management evaluates the severity of a deficiency in ICFR by considering whether there is a reasonable possibility that the company's ICFR will fail to prevent or detect a misstatement of a financial statement amount or disclosure; and the magnitude of the potential misstatement resulting from the deficiency or deficiencies. The severity of a deficiency in ICFR does not depend on whether a misstatement actually has occurred but rather on whether there is a reasonable possibility that the company's ICFR will fail to prevent or detect a misstatement on a timely basis.

[5] An immaterial restatement is a restatement of previously issued financial statements for the correction of a misstatement that is either of the following:

- Not material to the prior period being changed but would be material to the current period if corrected in the current period.
- Not material to any periods being presented.

[6] At the December 2014 AICPA Conference, the SEC staff indicated that "[c]onsidering the nature of the deficiency is an important next step in determining the magnitude of the potential misstatement." This evaluation should include consideration of both the nature and current number of transactions affected by the deficiency and the expected amount or volume of transactions that may be affected in the future.

Evaluation of Deficiencies Identified in the Other COSO Components

Examples of SEC Comments

- Tell us how you considered the various errors identified at your corporate location and across multiple geographic regions, some of which were the result of control deficiencies, including significant deficiencies, in different components of the COSO Framework, in evaluating the effectiveness of the control environment component of COSO, especially as it relates to the factor regarding competence (i.e., knowledge, skills, training, and experience of the relevant employees).
- For the significant deficiencies you identified in the risk assessment, monitoring, and information and communication components, tell us why the severity of each is limited to the specific, individual process-level errors you describe in your response and how you determined that the reasonably possible potential error for each is limited to the various errors identified. For example, how was it determined that the significant deficiency in the risk assessment component related to "not having the appropriate resources" is limited to only being manifested through an immaterial error in a specific type of revenue transaction?
- Tell us how you concluded that the significant deficiency resulting in the embedded derivative error is appropriately classified within the information and communication component, as opposed to the failure to identify the relevant clauses in the contracts resulting from, for example, a lack of appropriate employee technical skill (control environment), an improper risk assessment of the types of activities that could lead to embedded derivatives, or the ineffective monitoring of the regional accounting team by the corporate accounting team.

The SEC staff has questioned whether deficiencies in control activities may be related to deficiencies in one or more of the following components of ICFR:

- Control environment.
- Information and communication.
- Risk assessment.
- Monitoring.

Specifically, the SEC staff may ask a registrant to provide a detailed analysis on how it concluded that the controls related to each of the other four COSO components were effective. This point was illustrated at the 2014 AICPA Conference by Kevin Stout, senior associate chief accountant in the OCA, who cited an example in which a growing company had "not employed sufficient resources in the finance department to keep up." Mr. Stout stated that such a situation "raises questions about what other amounts or disclosures could be impacted by the lack of resources and how the Control Environment and Risk Assessment components of COSO had been evaluated." Mr. Stout explained that if management does not understand the nature of all deficiencies, it "is more likely to overlook the possibility that there is a deficiency in another COSO component that may already represent, or could otherwise be developing into, a material weakness."

Disclosure of Material Changes in ICFR

> **Example of an SEC Comment**
>
> [Y]our disclosure indicates that there were no significant changes in your internal control over financial reporting during the last quarterly period covered by this report. This seems to contradict your statement that the signing of the acquisition agreement with [Company A] and the change in management, both of which occurred in November 2013, represent steps to cure deficiencies in your internal control over financial reporting. Please clarify.

The SEC staff has commented when a registrant has not explicitly and clearly asserted whether there has been a change in ICFR in the last fiscal quarter that had or could have a material effect on its ICFR, as required by Regulation S-K, Item 308(c). Registrants should state clearly whether there were changes in ICFR for the quarter and, if so, should disclose the nature of the changes. The staff has stressed that registrants should avoid "boilerplate" disclosure that there have been no material changes affecting ICFR in a period, particularly when there have been identifiable events such as layoffs, changes in outsourcing arrangements, or changes in accounting policies.

Consequently, the staff expects to see increased disclosures regarding changes in ICFR, specifically those related to remediation of material weaknesses. For example, the SEC staff has reminded registrants that it is important for management to monitor and consider disclosing a change in ICFR in the quarter in which management remediates a material weakness.[7]

In reviewing registrants' filings, the SEC staff looks for indicators of potential ICFR deficiencies. Common indicators include disclosures about changes in ICFR and corrections of errors (discussed below). If indicators are observed, the staff routinely asks registrants about management's consideration of such indicators in relation to its conclusions about the effectiveness of ICFR (i.e., whether a deficiency in internal control represents a material weakness that should have been identified and disclosed). For the quarter in which any material changes in ICFR occur, registrants should provide disclosures about such material changes, including (1) the identification of any material weaknesses and (2) changes made to remediate material weaknesses.

Disclosures About the Impact and Remediation of Material Weaknesses

> **Example of an SEC Comment**
>
> We note your disclosure that your independent registered public accounting firm identified material weaknesses in the internal controls over financial reporting during the 2014 and 2013 audits. Please revise to address the following:
>
> - Please provide information surrounding each of the material weaknesses identified. Quantify the effects of each one on your financial statements.
> - Please provide an expanded discussion of the specific steps you have taken and put into place to resolve each material weakness. Identify which material weaknesses have been resolved and which have not been resolved.
> - Please revise MD&A to provide a discussion of the material weaknesses that includes the information requested in the first two bullets points of this comment and that includes a discussion of how the material weaknesses affected your financial condition, results of operations and cash flows.

[7] The SEC staff discussed remediation of material weaknesses and related disclosure considerations at the 2010 AICPA Conference. For additional information, see Deloitte's December 16, 2010, *Heads Up*.

The SEC staff has indicated that management's disclosures about material weaknesses are expected to go beyond merely identifying the existence of one or more material weaknesses or providing a limited description. Rather, such disclosures should contain enough information to allow investors to understand the cause of a material weakness and determine the pervasiveness of its effect on ICFR.

Similarly, the staff has called for more transparent disclosures about the pervasiveness of a material weakness's impact on the registrant's financial reporting and its ICFR. The staff has stressed that registrants need to avoid narrowly focusing their disclosures on a particular financial statement line item affected by a material weakness and should consider other financial statement line items that may also be affected.[8]

Registrants that have identified a material weakness have been asked to discuss (1) management's plans to remediate the weakness, (2) the estimated timing of management's remediation efforts, and (3) the related material costs.

In addition, in certain instances, the SEC staff has observed that questions about the validity and completeness of management's disclosures regarding material weaknesses have arisen as a result of management's discussion of its remediation plans. Sometimes the remediation plans are broader than the material weakness identified, potentially indicating that the actual material weakness is more pervasive than the material weakness disclosed or that there may be another material weakness that was not identified and disclosed. In providing disclosures about remediation plans, registrants should therefore consider the root cause of a material weakness and whether it highlights a more pervasive material weakness in their ICFR or deficiencies in other controls.

Further, the SEC staff has recently commented when registrants identified one or more material weaknesses in ICFR but either refrained from concluding on the effectiveness of ICFR or concluded that their ICFR is effective. In such instances, the staff has reminded registrants that Regulation S-K, Item 308(a)(3), prohibits a conclusion that ICFR is effective when one or more material weaknesses exist and has asked registrants to amend their filings to state that their ICFR is not effective as a result of the material weaknesses that were identified.

Conclusion That ICFR Remains Effective After a Restatement

Example of an SEC Comment

Please tell us what consideration was given to management's assessment at December 31, 2013 and at dates before then during 2011, 2012 and 2013 of the effectiveness of disclosure controls and procedures and internal control over financial reporting in light of the restatement discussed in [your notes]. Explain why you believe both disclosure controls and procedures and internal controls over financial reporting were effective at those dates in light of the errors and why no modifications to the disclosures contained in management's report, including any material changes made to ICFR, were required.

Because a restatement is typically indicative of a material weakness in ICFR, the SEC staff may challenge registrants when they conclude that their ICFR and DC&P are effective after restating their financial statements. In addition, since most elements of ICFR are subsumed in the definition of DC&P and it is therefore typically difficult for a registrant to conclude that its DC&P are effective when its ICFR is ineffective, the SEC staff may ask registrants after a restatement has occurred to explain why they concluded that their DC&P are effective. At the 2013 AICPA Conference, Mr. Croteau discussed a registrant's responsibility to maintain effective DC&P and directed registrants' management to (1) review an SEC enforcement order that addresses a registrant's failure to maintain effective controls and (2) consider whether its own DC&P and ICFR processes and procedures could be improved in light of the issues raised in that order. He also indicated that the adequacy of such controls and management's evaluations and conclusions about them are likely to be a focus of future Enforcement Division investigations.

8 This issue was discussed at the Forums on Auditing in the Small Business Environment hosted by the PCAOB in December 2012.

Registrants should consider paragraphs 4310.16 and 4310.17 of the FRM regarding the restatement of financial statements:

> There is no requirement for a company to reevaluate the effectiveness of its internal controls and/or reissue a revised management's report on ICFR when a company restates its financial statements to correct errors . . . . However, a company may need to consider whether or not its original disclosures in management's report continue to be appropriate in light of these errors, and should modify or supplement its original disclosure to include any other material information that is necessary for such disclosures not to be misleading in light of the restatement. . . . If a company's management concludes that its original assessment of ICFR was incorrect, it should consider whether or not to revise its original report on ICFR.

Disclosure of the Framework Used to Evaluate ICFR

Example of an SEC Comment

Please revise future filings to clarify which version, 1992 or 2013, of the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in *Internal Control — Integrated Framework* you utilized when performing your assessment of internal control over financial reporting.

The COSO framework is one of the most widely applied frameworks used by registrants in evaluating the effectiveness of their ICFR. On May 14, 2013, COSO released an updated version of its *Internal Control — Integrated Framework* to reflect the significant changes in business and operational environments that have occurred since the original framework was introduced in 1992. Although the components of internal control under the framework remain unchanged, the update introduced 17 new principles that explicitly articulate and describe the components of internal control.[9] At the 2013 AICPA Conference, the SEC staff stated that registrants must disclose the internal control framework they applied in assessing the effectiveness of their ICFR in accordance with paragraph 4310.7 of the FRM. Because the COSO framework was updated in 2013 and provides for a transition period before the original framework is superseded, registrants should disclose whether they applied the 2013 framework or the original framework.

The SEC staff often comments when registrants do not disclose the framework used to evaluate the effectiveness of ICFR. The staff has cited specific examples in which management did not identify the framework used, as well as instances in which management inappropriately referred to SEC guidance or COSO's small-company guidance as the framework used for the evaluation. As a result, when a registrant has not disclosed the framework it used, it may be asked to advise the SEC staff of the framework it used in the current year and to revise its disclosures in current and future filings.

The SEC staff has also noted that "the longer issuers continue to use the 1992 framework, the more likely they are to receive questions from the staff about whether the issuer's use of the 1992 framework satisfies the SEC's requirement to use a suitable, recognized framework."[10]

[9] For additional information, see Deloitte's June 10, 2013, *Heads Up* on the revised COSO framework.

[10] For additional information, see the highlights of the September 2013 CAQ SEC Regulations Committee joint meeting with the SEC staff.

Incomplete or Missing ICFR Evaluation

Examples of SEC Comments

- [Y]ou did not include your conclusion regarding the effectiveness of your internal control over financial reporting. Please confirm to us that you intended to state . . . that your internal control over financial report is not effective, if correct, and confirm that you will include your conclusions for your assessments of the effectiveness of your disclosure controls and procedures and internal control over financial reporting in all future Forms 10-K.
- We note that management's report does not provide all the required information. Specifically, it does not define management's responsibility for establishing and maintaining adequate internal control over financial reporting, nor does it identify the framework used by management to evaluate the effectiveness of internal control over financial reporting at December 31, 2013.

Regulation S-K, Item 308(a)(3), requires registrants to assess and conclude on the effectiveness of their ICFR as of the end of their most recent fiscal year. In several instances, the SEC staff has issued comments to registrants that omitted a conclusion or provided one that did not contain all of the required information. The staff has also issued comments to registrants that failed to indicate a date for their ICFR evaluation or included in their filing a date other than the end of their most recent fiscal year. Registrants should ensure that the appropriate date of their ICFR evaluation is prominently displayed in any filing with the SEC.

- September 5, 2014, *Heads Up*, "Challenges and Leading Practices Related to Implementing COSO's *Internal Control — Integrated Framework*."
- December 16, 2013, *Heads Up*, "Highlights of the 2013 AICPA Conference on Current SEC and PCAOB Developments."

Executive Compensation and Other Proxy Disclosures

Proxy disclosure, particularly executive compensation, remains a topic of focus in SEC staff comments to registrants, including those issued to smaller reporting companies. Many of the staff's comments are related to (1) disclosures about how performance is assessed, including the use of performance targets and benchmarking; (2) disclosures in CD&A, including compensation table disclosures; and (3) disclosures about related-party transactions.

Further, the SEC continues to expand executive compensation and other proxy disclosure requirements through its rulemaking under the Dodd-Frank Act. See Other Deloitte Resources below for additional considerations.

Determining Compensation — Assessment of Performance

Performance Targets

> **Example of an SEC Comment**
>
> We note disclosure that the maximum bonus opportunities were set between [X]% and [Y]% of base salary for each of your named executive officers. In future filings, please clearly disclose the threshold, target and maximum bonus opportunities as a percentage of salary for each of your named executive officers. Please also disclose all previously established performance goals (such as company operating income), the actual level of achievement, and how you calculated the performance based bonus award for each named executive officer. [P]lease provide us supplementally with draft disclosure showing how you will present this information in future filings. Refer to Items 402(b)(1)(v) and (2)(v) of Regulation S-K.

The SEC staff frequently asks registrants that use performance targets to disclose them and provide information about their use.[1] Under Regulation S-K, Item 402(b), a registrant is required to discuss any compensation awarded to named executive officers (NEOs) in its CD&A. The discussion should include (1) the objectives of the compensation program, (2) what the compensation program is designed to reward, (3) the elements of the compensation, (4) the registrant's reasons for paying each element, (5) how each element is calculated (including any formula used), and (6) how the program fits into the registrant's objectives. The SEC staff frequently comments on how certain performance factors affect compensation arrangements for NEOs as well as how nonequity incentive compensation granted to NEOs is calculated. Item 402(b) also requires discussion of whether and, if so, how the results of shareholder advisory votes on executive compensation may affect the registrant's decisions and policies related to executive compensation.

To help financial statement users understand the registrant's compensation policies and decisions, the SEC staff has asked registrants to:

- Quantify and disclose the performance target and explain the purpose of performance factors.
- Disclose actual performance results and detail the specific elements of individual performance and contributions that affected the compensation received.
- Discuss the correlation between achievement of performance targets and the compensation ultimately awarded.
- Indicate whether the compensation committee or others had discretion or additional qualitative input when determining the final amount of compensation awarded, and the factors that affected the determination.

[1] Registrants may exclude performance targets (and other confidential information) if disclosing such material would result in competitive harm. However, registrants must satisfy "confidential-treatment" criteria and demonstrate to the SEC staff, upon request, that they have done so. Even when omission of targets or other factors or criteria is appropriate, a registrant should disclose how difficult it will be for the executive, or how likely it will be for the registrant, to achieve the undisclosed target levels or other criteria.

Benchmarking

> **Example of an SEC Comment**
>
> In future filings, please disclose the component companies used for benchmarking the compensation of your named executive officers. See Item 402(b)(2)(xiv) of Regulation S-K. We also note that target total annual compensation was within the [X] percentile. In future filings, please revise to disclose where actual total annual compensation fell for your named executive officers in relation to the benchmarked parameters.

A registrant may use benchmarks for total compensation or a material element of compensation (e.g., the registrant compares its executive compensation to that of a peer group in the same industry or uses compensation surveys to determine compensation levels). When it does, the registrant must identify (1) the benchmark for each NEO and (2) the components of compensation used and the entities that constitute the benchmark group.[2]

If benchmarks are used, the SEC staff may request that registrants disclose:

- All elements of compensation that are subject to benchmarking.
- The impact of the benchmarking on compensation decisions.
- Additional details about how they used the comparison information, including whether they had discretion regarding when and how to use it as well as the nature and extent of such discretion.
- Where payments fell with respect to the benchmark for each NEO.
- The degree to which their compensation committees consider entities in the benchmark group to be comparable to the registrants themselves.

The staff has also asked for explanations when actual compensation fell outside the targeted range.

Disclosures in CD&A

> **Examples of SEC Comments**
>
> - You disclose that the amounts of the 2014 cash incentives are included in the Bonus column. If the bonus was granted under a plan providing for compensation intended to serve as incentive for performance to occur over a specified period of time, then the bonus should be disclosed under the "Non-Equity Incentive Compensation Plan" column. Amounts earned under the plan as adjusted for the exercise of negative discretion would still be reportable in the Non-Equity Incentive Plan Compensation column. Please explain to us why the payments under the 2014 Annual Incentive Plan awards are being disclosed in the "Bonus" column, and to the extent necessary revise your future filing accordingly. For guidance, please refer to Question 119.02 of Regulation S-K Compliance and Disclosure Interpretations.
> - We note disclosure that Mr. [A] has received fees related to his services on the company's board . . . for a total aggregate of $[X]. Please tell us where these fees have been disclosed in the summary compensation table, and in future filing, identify them through the use of footnote disclosure to the extent applicable. Please see instruction 3 to Item 402(c) of Regulation S-K.

The SEC staff continues to focus on CD&A disclosures, particularly those in the summary compensation table, because they give investors important information about a registrant's compensation policies and decisions. Frequently, the staff asks about inconsistencies between the amounts disclosed in the financial statements and the amounts disclosed in the summary compensation table.

[2] See Regulation S-K, Item 402(b)(2)(xiv), for additional information.

Regulation S-K, Item 402(c), requires that for each NEO, registrants include tabular disclosures specifying (1) the NEO's name and principal position, (2) the fiscal year covered, (3) the base salary earned, (4) the bonus earned, (5) the stock/option awards, (6) nonequity incentive plan compensation, (7) the change in pension value and nonqualified deferred compensation earnings, (8) all other compensation, and (9) the total amount of compensation. Both the cash portion and the noncash portion of salary and bonus must be disclosed.

Accordingly, the SEC staff often comments when registrants disclose amounts in incorrect columns of, or exclude types of compensation from, the table. For example, the staff often asks why bonuses paid to NEOs (on the basis of achieved performance targets) are disclosed in the bonus column instead of in the nonequity incentive plan compensation column.

In addition, for stock awards included in CD&A, the SEC staff often asks for the aggregate grant-date fair value of the awards as computed in accordance with ASC 718 and for disclosure of all assumptions used in the valuation of share-based compensation, which the registrant can provide by including a reference to its footnotes to the financial statements or to the critical accounting policies section of its MD&A. Regulation S-K, Item 402(k)(2)(iii), also requires disclosure of the aggregate grant-date fair value and aggregate number of stock awards as of the fiscal year-end for each director.

Related-Party Transactions

Regulation S-K, Item 404(a), requires disclosure of transactions that the registrant participated in, or will participate in, with related parties in which the "amount involved exceeds $120,000, and [the related party] had or will have a direct or indirect material interest." ASC 850 does not establish a quantitative threshold but requires disclosure in the financial statements when the information "would make a difference in decision making." In addition, Regulation S-X, Rule 4-08(k), requires registrants to (1) disclose related-party transactions that affect the financial statements and (2) separately present the amounts of such related-party transactions on the face of the balance sheet, income statement, or statement of cash flows when those amounts are material. Types of related-party transactions that the SEC staff often comments about include sales and loans involving related parties.

As part of identifying related-party transactions, registrants should consider consulting with legal counsel and reviewing the instructions to Item 404(a) to better understand the definition of a "related person" and the types of transactions they need to disclose.

Policies and Procedures

> **Example of an SEC Comment**
>
> Please tell us your Committees' policies and procedures for the review, approval, or ratification of covered transactions. Please see Item 404(b) of Regulation S-K.

The SEC staff may request that the registrant provide a complete discussion of the policies and procedures related to the review, approval, or ratification of transactions with related persons, as required by Regulation S-K, Item 404(b). Registrants often disclose the existence, or a general summary, of such policies and procedures but exclude material features such as the types of transactions covered by the policies and procedures, the standards to be applied to the transactions, and the persons or group of persons responsible for applying the policies and procedures.

Transactions Involving Indebtedness

Example of an SEC Comment

Please provide the disclosure required by Item 404(a)(5) of Regulation S-K. In addition, please update the balance of the related party debt as of the most recent financial statements.

The SEC staff also often asks registrants to improve their disclosures about related-party transactions involving indebtedness. Item 404(a) indicates that registrants should disclose the major terms of related-party indebtedness (e.g., the amounts involved, the largest principal amount outstanding during the period and as of the latest practicable date, the principal and interest payments during the period, the interest rate, and the interest-payable amount).

Emerging Growth Companies

An emerging growth company (EGC) is a new type of issuer created by the JOBS Act to encourage public offerings by small and developing companies. The regulatory and reporting requirements for EGCs are less stringent than they are for other types of issuers and include the following:

- Only two years of audited financial statements are required in an IPO for common equity.
- The periods required for selected financial data in both registration statements and periodic filings do not extend to periods before the first year presented in the EGC's equity IPO registration statement.
- EGCs may elect to defer the adoption of new accounting standards until they become effective for private companies (i.e., nonissuers).
- EGCs are exempt from the requirement to obtain an attestation report on ICFR from their auditor.

In addition, an EGC may submit registration statements to the SEC for confidential reviews. Under the JOBS Act, an EGC would be required to make publicly available (at least 21 days before its "road show") any documents that were submitted to the SEC staff for confidential review. Accordingly, the SEC staff's comment letters to the EGC (and the EGC's responses) must be filed on EDGAR.

The staff in the SEC's Division of Corporation Finance has issued FAQs on numerous aspects of the JOBS Act, many of which are related to qualifying for EGC status and the filing requirements for EGCs. In addition, the SEC staff has incorporated EGC-related guidance in section 10000 of the FRM.

In its comment letters to EGCs, the SEC staff primarily has asked companies to disclose (1) that they qualify for EGC status, (2) how and when they may lose their EGC status, (3) the elections they made under Title I of the JOBS Act, and (4) their qualification for an exemption from Section 404(b) of the Sarbanes-Oxley Act.

EGC Status and Elections

Example of an SEC Comment

It appears that you qualify as an "emerging growth company," as defined in the Jumpstart Our Business Startups Act. If true, in an appropriate section of the filing please disclose that you are an emerging growth company and revise your registration statement to:

- Describe how and when a company may lose emerging growth company status;
- Briefly describe the various exemptions that are available to you, such as [an exemption] from Section 404(b) of the Sarbanes-Oxley Act of 2002 . . . ; and
- State your election under Section 107(b) of the JOBS Act:
    - If you have elected to opt out of the extended transition period for complying with new or revised accounting standards pursuant to Section 107(b), include a statement that the election is irrevocable; or
    - If you have elected to use the extended transition period for complying with new or revised accounting standards under Section 102(b)(2), provide a risk factor explaining that this election allows you to delay the adoption of new or revised accounting standards that have different effective dates for public and private companies until those standards apply to private companies. Please state in your risk factor that, as a result of this election, your financial statements may not be comparable to companies that comply with public company effective dates. Include a similar statement in your critical accounting policy disclosures.

Filing Status

Because a key objective of the JOBS Act is to promote smaller companies' access to capital markets, some of the JOBS Act's accommodations for EGCs resemble reporting requirements for smaller reporting companies (e.g., annual financial statement requirements in an IPO registration statement under Regulation S-X, Article 8). However, the rules are not the same, and the SEC staff has asked EGC filers to clarify descriptions of their filing status. Further, a company can maintain EGC status for up to a maximum of five years after an equity IPO as long as certain conditions apply;[1] and the SEC staff has asked EGC filers to disclose information about their filing status, including how and when the company may lose EGC status.

Extended Transition Period to Adopt New or Revised Accounting Standards

EGCs are allowed to adopt new or revised accounting standards on the basis of effective dates applicable to private companies (i.e., nonissuers) for ASUs issued after April 5, 2012 (i.e., the date of the enactment of the JOBS Act). Consequently, the SEC staff has asked EGC filers to indicate the basis on which they are adopting accounting standards. Further, the SEC staff has asked EGCs that elect to adopt accounting standards on the basis of adoption and transition dates that apply to private companies to disclose as a risk factor that their financial statements may not be comparable with those of registrants that elect (or are required) to adopt accounting standards on the basis of adoption and transition dates that apply to public companies. The SEC staff has also asked registrants to include similar disclosures in their critical accounting policy section of MD&A.

Section 404(b) Exemption

The JOBS Act amends Section 404(b) of the Sarbanes-Oxley Act by exempting EGCs from the requirement to obtain an attestation report on the company's ICFR from its registered public accounting firm. The staff has required registrants to disclose that they are exempt from obtaining an audit of their ICFR (for as long as they maintain EGC status).[2]

Other Considerations

Reduced Financial Reporting Requirements

Examples of SEC Comments

- You state here that you have not made a final decision to take advantage of certain of the exemptions available to you as an emerging growth company. Please tell us when you intend [to] make that decision and whether your current executive compensation disclosures reflect the reduced disclosure obligations applicable to a smaller reporting company.
- Briefly describe . . . exemptions [from the requirements related to obtaining shareholder approval of executive compensation under] Section 14A(a) and (b) of the Securities Exchange Act of 1934.

An EGC is required to present only two years of audited financial statements in its equity IPO registration statement. In addition, the periods for which an EGC presents select financial data in its registration statements and periodic filings may be limited to the earliest year presented in its equity IPO registration statement. Further, certain JOBS Act provisions related to scaled disclosures may interact with certain SEC rules (e.g., other entities' financial statements may be required under Regulation S-X, Rules 3-05 and 3-09); accordingly, the SEC staff has issued comments on reduced disclosure requirements. For example, under the JOBS Act, EGCs can comply with the SEC's proxy requirements regarding executive compensation by providing the same reduced disclosures that are required of smaller reporting companies.[3] Consequently, the staff has asked whether EGCs' executive compensation disclosures reflect reduced disclosure requirements. EGCs should therefore consider the SEC staff's FAQs on the JOBS Act to assess whether reduced reporting requirements apply in these situations. For additional information on Rules 3-05 and 3-09, see the SEC Reporting section.

1 For example, the EGC's total gross revenues do not exceed $1 billion during the five-year period; the EGC's market capitalization does not exceed $700 million (i.e., the EGC does not meet the definition of a large accelerated filer); and the EGC does not issue more than $1 billion in nonconvertible debt in a three-year period (which is not limited to calendar or fiscal years and is a rolling three-year period from the date of the EGC's last debt issuance).

2 EGCs are also exempt from any future PCAOB rules that may require (1) auditor rotation or (2) expansion of the auditor's report to include an auditor's discussion and analysis of the company under audit.

3 EGCs are also exempt from certain proxy provisions of the Dodd-Frank Act.

Requests for Written Communications

Example of an SEC Comment

We note that you are an "emerging growth company," as defined in the Jumpstart Our Business Startups Act. Please supplementally provide us with the following:

- [C]opies of all written communications, as defined in Rule 405 under the Securities Act, that you, or anyone authorized to do so on your behalf, present to potential investors in reliance on Section 5(d) of the Securities Act, whether or not they retain copies of the communications; and
- [A]ny research reports about you that are published or distributed in reliance upon Section 2(a)(3) of the Securities Act of 1933 added by Section 105(a) of the Jumpstart Our Business Startups Act by any broker or dealer that is participating or will participate in your offering.

The JOBS Act significantly changed the rules governing communication between EGCs and certain potential investors. Under the JOBS Act, an EGC, or any person authorized to act on behalf of an EGC, may engage in oral or written communications with potential investors that are qualified institutional buyers or institutional accredited investors to "test the waters" before the EGC files its registration statement. Consequently, the SEC staff has requested copies of such communications.

April 15, 2014, *Heads Up*, "Two Years After the JOBS Act."

Other SEC Reporting Matters

Certifications

Example of an SEC Comment

We note that the beginning of the certifications filed . . . are missing the first line of text relating to the individual certifying the filing as required by Item 601(b)(31) of Regulation S-K (i.e., the declaration that the party is certifying). We also note that you have omitted the introductory language in paragraph 4 referring to internal control over financial reporting. Accordingly, please file an amendment to your Form 10-K that includes the entire filing together with the certifications of each of your current CEO and CFO in the form currently set forth in Item 601(b)(31) of Regulation S- K.

Registrants must provide quarterly and annual certifications in the form specified by Regulation S-K, Item 601(b)(31). When these certifications contain errors, registrants are often asked to file an amendment to an entire periodic filing in addition to submitting a corrected certification. Interpretation 246.14 of the C&DIs of Regulation S-K states:

> The following errors in a certification required by Item 601(b)(31) are examples of errors that will require the company to file a corrected certification that is accompanied by the entire periodic report: (1) the company identifies the wrong periodic report in paragraph 1 of the certification; (2) the certification omits a conformed signature above the signature line at the end of the certification; (3) the certification fails to include a date; and (4) the individuals who sign the certification are neither the company's principal executive officer nor the principal financial officer, or persons performing equivalent functions.

The SEC staff often comments when registrants' certifications, including punctuation marks and parenthetical phrases, do not appear exactly as specified in Item 601(b)(31). The staff routinely notes that including the title, rather than the name, of the certifying officer in the first sentence of the certification constitutes an inappropriate modification. In addition, the staff regularly comments on certifications that are dated incorrectly.

Registrants must include certifications when they are filing amendments to periodic reports. See Question 161.01 of the C&DIs of Exchange Act Rules for guidance on what paragraphs can be excluded from certifications filed with amendments to periodic reports.

Use of Experts and Consents

> **Example of an SEC Comment**
>
> We note that the prospectus includes market and industry data derived from publications, surveys, and reports, including from [Entities A, B, C, D, E, F, and G]. If any of these publications, surveys, or reports were commissioned by you for use in connection with the registration statement, please file consents of such third parties pursuant to Rule 436 of the Securities Act as exhibits to your registration statement or tell us why you believe you are not required to do so.

In their registration statements under the Securities Act and periodic reports under the Exchange Act (e.g., Forms 10-K and 10-Q), registrants sometimes refer to an "independent valuation firm" or other third party. The SEC staff has asked such registrants whether management or the board relied on a third-party expert and will sometimes infer reliance on a third-party expert even when the registrants do not refer to one. Examples of third-party experts that registrants commonly consider or rely on include the following:

- Valuation firms, about:
  - The valuation of a registrant's common and preferred stock in an IPO.
  - The fair value determination of goodwill and assets acquired and liabilities assumed in a business combination.
  - The determination of goodwill impairment.
  - The determination of an environmental liability.
- An independent actuary, about the estimation of workers' compensation liability.
- Petroleum engineers, about the evaluation of oil and gas reserves.
- Pricing services or brokers that provide information used to determine the fair values of financial assets or liabilities. See the Fair Value section for additional considerations.
- Counsel providing legal opinions.
- Tax specialists providing tax opinions.

The SEC staff has stated that in registration statements or periodic reports, registrants generally are not required to refer to an independent valuation firm or other expert. If a registrant does not refer to the expert in its filing, the registrant is not required to name the expert or obtain the expert's consent; however, certain SEC requirements may compel the registrant to include or summarize an expert's report or opinion in its filing and could trigger a consent requirement. Registrants that refer to experts in their filings should consider the implications related to periodic reports and registration statements.

Periodic Reports (Exchange Act)

Consents are not required for Form 10-K or 10-Q. However, the guidance below on registration statements should be applied if the registrant (1) refers to an independent valuation firm or other expert in a periodic report and attributes statements in the report to the expert and (2) incorporates that periodic report by reference into a registration statement.

Registration Statements (Securities Act)

Historically, if a registrant has referred to third-party experts in a registration statement, the SEC staff has asked the registrant to provide the experts' consents, including those from the registrant's independent registered public accounting firm. However, C&DIs issued by the staff appear to indicate that the key to assessing whether a consent will be required is determining the degree to which management takes responsibility for statements related to work performed by a third-party expert that are included in or incorporated into the registration statement. The SEC staff typically evaluates the totality of the disclosure provided when determining whether management is taking responsibility for the conclusion.[1]

Scope

The SEC staff has also commented on the use of "limiting" language in consents provided by third-party experts. The staff has emphasized that an expert's consent should not contain any language that limits the use of the consent to the registrant or suggests that there is a limit on potential investor reliance.

Material Contracts

Example of an SEC Comment

You state that you rely on the uninterrupted operation of your data centers. Yet it appears that you do not plan to file as exhibits any agreements with the third parties that host your network operating centers. To the extent you have entered into agreements with respect to your network operating centers, please revise the Business section to discuss the material terms of your material agreements. In addition, explain to us how you determined that the agreements need not be filed as exhibits pursuant to Item 601(b)(10) of Regulation S-K. Alternatively, file the agreements as exhibits to the registration statement.

Regulation S-K, Item 601, requires registrants to file certain material contracts as exhibits if, during the reporting period, such contracts (1) become effective or (2) are executed, amended, or modified. For example, Item 601(b)(10) requires a registrant to file:

- Every material contract that is "not made in the ordinary course of business."
- Any material contract "made in the ordinary course of business":
  - With certain parties, such as directors, officers, promoters, voting trustees, certain security holders, or underwriters, other than contracts involving only the purchase or sale of current assets at a price that equals a determinable market price.
  - On which the registrant's business substantially depends.
  - For the acquisition or disposition of any property, plant, or equipment for consideration exceeding 15 percent of the registrant's total consolidated fixed assets.
  - For a lease under which part of the property is held by the registrant.
- Generally, any management contract or compensatory plan, contract, or arrangement in which a director or NEO of the registrant participates (such contracts are considered material) and any other material management contract or any other compensatory plan, contract, or arrangement in which any other executive officer of the registrant participates.[2]
- Any other material compensatory plan, contract, or arrangement "adopted without the approval of security holders pursuant to which equity may be awarded" in which any employee of the registrant (i.e., regardless of whether the employee is an executive officer) participates.

1 Registrants may look to Question 233.02 of the C&DIs of the Securities Act Rules that were issued by the SEC staff in November 2008 but should be aware that other consent-related C&DIs of the Securities Act Rules may apply to their specific circumstances and that they should therefore review such C&DIs periodically.

2 For examples of management contracts or compensatory plans, contracts, or arrangements that are exempt from this filing requirement, see Item 601(b)(10)(iii)(C).

Accordingly, the SEC staff issues comments when registrants omit certain material agreements. Recent comment letters have instructed registrants to do either of the following:

- File the material agreements in their entirety, including schedules and related exhibits, as exhibits to Form 10-K or 10-Q or separately on Form 8-K in accordance with Item 601.
- Explain why they have not filed the agreements.

For SEC staff views on when registrants may be required to file agreements as exhibits under Item 601, see Sections 146, 206, and 246 of the C&DIs of Regulation S-K.

Backlog Disclosures

Examples of SEC Comments

- Please tell us how and when the "order process" that you mention was changed and how that will affect age outs. Also, please (1) clarify this issue in future filings where you mention the order process change, [and] (2) tell us about any other changes to the method that you used to determine the dollar amount of reported backlog during the last three fiscal years, the extent to which the change affected backlog, and where you describe those changes in your filings.
- To the extent material, please disclose the amount of backlog related to uncompleted contracts for which you have recorded a provision for estimated losses. Please also disclose the amount of backlog not reasonably expected to be filled within the current fiscal year, and seasonal or other material aspects of backlog. Refer to Item 101(c)(1)(viii) of Regulation S-K.

Regulation S-K, Item 101(c)(1)(viii), requires disclosure of the "dollar amount of backlog orders believed to be firm, as of a recent date and as of a comparable date in the preceding fiscal year, together with an indication of the portion thereof not reasonably expected to be filled within the current fiscal year, and seasonal or other material aspects of the backlog." Because companies may compute backlog information differently, the SEC staff has requested expanded disclosures about it, including (1) the methods used (or changes in methods used) to determine backlog and (2) changes in backlog resulting from new contracts, canceled contracts, and contracts recognized in revenue. In addition, the SEC staff has reminded registrants to disclose in accordance with Item 101(c)(1)(viii) the backlog not reasonably expected to be filled within the current fiscal year.

Disclosures Regarding State Sponsors of Terrorism

Examples of SEC Comments

- You state . . . that [Company X] accounted for 10% of your sales in 2014. [Company X's] wholly-owned subsidiaries . . . both provide contact information on their respective websites for their respective [businesses] in each of [Sudan and] Syria. [Sudan and] Syria are designated by the Department of State as state sponsors of terrorism, and are subject to U.S. economic sanctions and export controls. Please describe to us the nature and extent of your past, current, and anticipated contacts with . . . Sudan and Syria, if any, whether through subsidiaries, affiliates, distributors, partners, customers, joint ventures or other direct or indirect arrangements. You should describe any services, products, information, or technology you have provided to [Sudan or] Syria, directly or indirectly, and any agreements, commercial arrangements, or other contacts you have had with the governments of those countries or entities they control.
- Please discuss the materiality of any contacts with . . . Sudan and Syria you describe in response to the comment above, and whether those contacts constitute a material investment risk for your security holders. You should address materiality in quantitative terms, including the approximate dollar amounts of any associated revenues, assets, and liabilities for the last three fiscal years and the subsequent interim period. Also, address materiality in terms of qualitative factors that a reasonable investor would deem important in making an investment decision, including the potential impact of corporate activities upon a company's reputation and share value. Various state and municipal governments, universities, and other investors have proposed or adopted divestment or similar initiatives regarding investment in companies that do business with U.S.-designated state sponsors of terrorism. You should address the potential impact of the investor sentiment evidenced by such actions directed toward companies that have operations associated with [Sudan and] Syria.

The U.S. Department of State has designated three countries as state sponsors of terrorism — Iran, Sudan, and Syria. These countries are subject to U.S. economic sanctions and export controls. Generally, registrants that do business in these countries are required to disclose material operations conducted in them (whether through subsidiaries, affiliates, distributors, partners, customers, joint ventures, or other direct or indirect arrangements) and any agreements, commercial arrangements, or other contacts with the countries' respective governments or with entities controlled by such governments.[3] The SEC staff regularly comments on this subject and believes that such disclosures are important to investors in making investment decisions. The staff has asked registrants to disclose the nature and extent of these contacts (past, present, and probable) — as well as to provide a detailed analysis of the materiality of contacts with these countries — on the basis of both quantitative and qualitative factors. In addition to providing quantitative disclosures of revenues, assets, and liabilities associated with these countries, registrants are encouraged to disclose any related qualitative factors that may have a significant impact on their activities.[4]

[3] In 2007, the SEC issued a concept release that requested input on certain matters related to sponsors of state terrorism. The concept release indicates that the "federal securities laws do not impose a specific disclosure requirement that addresses business activities in or with a country based upon its designation as a State Sponsor of Terrorism." However, as with other requirements to disclose material information, the "federal securities laws do require disclosure of business activities in or with a State Sponsor of Terrorism if this constitutes material information that is necessary to make a company's statements, in the light of the circumstances under which they are made, not misleading." [Footnote omitted]

[4] Further, the Iran Threat Reduction and Syria Human Rights Act of 2012 requires registrants to include certain disclosures about sanctionable activities with those countries in all quarterly and annual reports. There is no materiality threshold for such reporting; therefore, a registrant may be required to disclose immaterial transactions meeting the criteria specified in the Act. For implementation guidance, see Questions 147.01 through 147.07 of the C&DIs of Exchange Act Sections.

Interactive Data — eXtensible Business Reporting Language (XBRL)

SEC Staff's Review and Observations

Examples of SEC Comments

- The staff notes that you have not submitted electronically and posted on your corporate Web site every Interactive Data File required to be submitted and posted during the preceding 12 months. Please file this information pursuant to Rule 405 of Regulation S-T.
- The XBRL Document and Entity Identification Information rendered as part of your filing appears to contain a number of data element errors, including but not limited to, your classification as a non-accelerated filer. Please revise to comply with the requirements of Section 405 of Regulation S-T and the EDGAR Filer Manual.

The SEC staff continues to monitor registrants' interactive data file (i.e., XBRL) submissions for completeness and compliance with the provisions of Regulation S-T, Rule 405. The staff often asks whether the registrant has (1) submitted its interactive data files as an exhibit to Form 10-K and Form 10-Q in accordance with Regulation S-K, Item 601(b)(101); (2) checked the appropriate box on the cover page of its Form 10-K or 10-Q to indicate that all required interactive data files have been submitted; and (3) posted its interactive data files on its Web site. When a registrant has omitted a required interactive data file exhibit, the staff may ask why and request an amended filing that includes the missing information.

The SEC staff also considers the quality of interactive data filings and has commented broadly on the problems encountered in that regard. For example, the staff has indicated that it continues to see basic errors in interactive data submissions and has directed registrants to its observations on the SEC's Web site for additional details. Specifically, the staff has reminded registrants to (1) use negative values properly, (2) ensure the completeness of tagging, and (3) use custom tags only when appropriate.

In its July 2014 report *Staff Observations of Custom Tag Rates*, the SEC staff noted that although it has seen a steady decline in custom tag use by larger filers, it has not observed a similar decline in usage by smaller filers.[5] Further analysis revealed that this trend may be partially attributable to smaller filers' use of certain third-party providers. The staff expressed its intention to continue monitoring registrants' use of custom tags and indicated that it may issue further guidance or take additional action in the future.

Requirement to Include Calculation Relationships

Sections 6.14 and 6.15 of the EDGAR Filer Manual provide guidance on complying with the requirement to include calculation relationships in an interactive data file. In addition, the SEC staff's "Dear CFO" letter,[6] which was posted to the SEC's Web site in July 2014 and has been sent to a number of public companies, reminds registrants that the XBRL rules require them to "include calculation relationships for certain contributing line item elements for [the] financial statements and related footnotes." The letter advises registrants to "take the necessary steps to ensure that [they] are including all required calculation relationships" in their XBRL files.

Interactive Data Requirements in Other Filings

Example of an SEC Comment

Please provide the XBRL interactive data file that is required to be submitted pursuant to Item 601(b)(101)(i) of Regulation S-K. For guidance, please refer to Regulation S-K Compliance and Disclosure Interpretations Question 146.17, available at: http://www.sec.gov/divisions/corpfin/guidance/regs-kinterp.htm.

[5] The staff used the term "smaller filers" to refer to U.S. GAAP filers that are not large accelerated filers.

[6] *Sample Letter Sent to Public Companies Regarding XBRL Requirement to Include Calculation Relationships.*

Under Regulation S-T and Regulation S-K, Item 601(b)(101)(i), registrants must submit an interactive data file as an exhibit to a registration statement if the statement contains (1) financial statements and (2) a price or price range. For purposes of Item 601(b)(101)(i), the disclosure of the "offering price" of a shelf offering, an at-the-market offering, an exchange offer, or a secondary offering in a filed registration statement is construed as a price or price range.

In addition, Item 601(b)(101)(i) highlights that an interactive data file would be required for a Form 8-K filing "when the Form 8-K contains audited annual financial statements that are a revised version of financial statements that previously were filed with the [SEC] that have been revised pursuant to applicable accounting standards to reflect the effects of certain subsequent events, including a discontinued operation, a change in reportable segments or a change in accounting principle."

Further, registrants should monitor new rules issued by the SEC as a result of the Dodd-Frank Act or other legislation to see whether they require XBRL tagging of specified information that otherwise would be outside the scope of the SEC's interactive data requirements. For example, under the SEC's recently proposed rule on pay-versus-performance disclosures, which would implement Section 953(a) of the Dodd-Frank Act, registrants would be required to provide such disclosures "in tagged data format using [XBRL]."[7]

Audit Report Requirements

Example of an SEC Comment

Please amend your filing to include an audit opinion which encompasses all of the financial statements included in your filing. In this regard, we note that your audit opinion refers to " . . . the related consolidated statements of operations, comprehensive loss, changes in stockholders' equity and cash flows for the year then ended." However, you have included more than one year of financial statements. We note the same terminology was used in the concluding paragraph of the audit opinion. Additionally, please ensure that your independent auditor properly references the city and state where the audit report was issued. Please refer to Rule 2-02 (a) of Regulation S-X. We remind you to also include currently dated certifications that refer to the amended form.

The SEC staff continues to comment when a registrant does not comply with Regulation S-X, Rule 2-02(a), and Regulation S-T, Rule 302. For example, the staff has commented when:

- A signature did not conform to Regulation S-X and S-T requirements.
- A public accounting firm's city and state were omitted from the audit report.
- A registrant included a report from its auditor that does not appropriately identify all financial statements covered by the audit report.

[7] For additional information about the SEC's proposed rule, see Deloitte's May 29, 2015, *Heads Up*.

The SEC staff will generally ask the registrant to amend its filing or provide a revised audit report if the report is not in compliance with the technical requirements of Regulation S-X, Rule 2-02(a), or Regulation S-T, Rule 302, including the requirements related to typed "signatures" in electronic submissions.

In addition, the CAQ issued Alert 2012-16 to remind auditors that "it **would not** be appropriate for the auditor's report for issuers or other entities that require compliance with PCAOB requirements to reference only the ***auditing*** **standards** of the PCAOB" since this qualifying language may imply that the auditor did not adhere to other standards of the PCAOB (e.g., its independence standards). The alert also encouraged registrants and auditors to review paragraph 4110.5 of the FRM for additional information regarding certain PCAOB requirements in various SEC filings.

Selected Quarterly Financial Data

Example of an SEC Comment

We note in your disclosure that you describe the effects of certain significant items on an aggregate basis for each respective year. Please revise to clearly disclose how such unusual or infrequently occurring items are material to the results of each quarter. Please refer to Item 302 (a)(3) of Regulation S-K.

The SEC staff has issued comments on the sufficiency of disclosures about selected quarterly financial information under Regulation S-K, Item 302(a). For example, the staff has asked registrants to revise such disclosures when the disclosures fail to mention the effects of items recognized during quarters within the two most recent fiscal years, such as (1) the disposal of a segment of a business or (2) extraordinary, unusual, or infrequently occurring items.

A registrant is generally not required to provide selected quarterly financial data in its initial registration statement on Form S-1 because the requirement does not apply until a company has registered securities in accordance with Section 12(b) or Section 12(g) of the Exchange Act. However, at the March 2015 CAQ SEC Regulations Committee joint meeting with the SEC staff, the staff clarified that registrants that file a follow-on registration statement[8] before filing their first Form 10-K would generally be required to provide selected quarterly financial data because their securities are typically registered under Section 12(b) or Section 12(g) at the time the follow-on registration statement is filed.

[8] That is, a registration statement filed after the IPO.

Disclosure Topics in Initial Public Offerings

Initial Public Offerings

An IPO is most commonly thought of as the initial sale of equity or debt securities to the public by a private company that registers its securities on Form S-1. However, there are other situations in which a company can register debt or equity securities with the SEC for the first time, such as by exchanging debt securities previously issued in a private transaction for registered debt securities (typically on a Form S-4), registering currently outstanding equity securities, or distributing shares in a spin-off transaction by a public company (typically on a Form 10). All such transactions are referred to as IPOs in this discussion. However, as a result of the JOBS Act, which was signed into law on April 5, 2012, certain companies that meet the requirements for emerging growth company (EGC) status are eligible to raise capital and register as new issuers by complying with less stringent regulatory and reporting requirements than those required for a typical IPO. See the Emerging Growth Companies section for additional information on such requirements.

Because an IPO typically represents a company's first filing with the SEC, the SEC staff almost always reviews the related registration statement. The staff's review is typically comprehensive, covering reporting, accounting, and legal issues. In addition, the SEC staff's comments often focus on the following reporting topics (most of which are further discussed in the SEC Reporting section):

- Significant business acquisitions (Regulation S-X, Rule 3-05).
- Investments in equity method investees (Regulation S-X, Rule 3-09).
- Guarantors of registered securities (Regulation S-X, Rule 3-10).
- Issuers of securities that collateralize registered securities (Regulation S-X, Rule 3-16).
- Pro forma financial statements (Regulation S-X, Article 11).

It is also common for SEC staff comments on IPO registration statements to address accounting and disclosure topics such as (1) complex equity instruments; (2) share-based compensation, including equity securities issued as compensation in periods before an IPO (commonly referred to as "cheap stock" considerations); and (3) revenue recognition. For more information, see the Debt, Financial Instruments, Share-Based Payments, and Revenue Recognition sections. The SEC staff also comments on certain issues that are more specific to IPO registration statements. Such issues are discussed in this section.

Registrant Financial Statements

A company undergoing an IPO is required to present its financial statements, footnotes, and schedules for certain annual and interim periods in its registration statement. Regulation S-X, Rules 3-01 through 3-04, describe the general financial statement requirements for the registrant and its predecessors. Registrants must determine which financial statements to include in their initial registration statement on the basis of their individual facts and circumstances and must continue to update the financial statements throughout the registration process to provide current financial information. The SEC staff often comments when registrants do not include the required financial statements in the registration statement.

Age of Financial Statements

Example of an SEC Comment

Please amend your filing to provide financial statements for [Company A] and its predecessor that comply with Rule 3-12 of Regulation S-X at the date the registration statement becomes effective.

A registrant's financial statements must meet the "age of financial statements" requirements as of every filing date as well as when the registration statement is declared effective. The age of financial statements generally refers to the specific annual and interim periods for which financial statements are required in a filing. Regulation S-X, Rule 3-12, provides guidance on such periods and on when the financial statements become stale (i.e., should be updated).

Recently Organized Registrant

> **Example of an SEC Comment**
>
> Please provide audited financial statements of the registrant (i.e. the current subsidiary that will become [Company X]) and [the existing entity] as required by Rule 3-01(a) of Regulation S-X, or tell us why you believe such financial statements are not required.

Sometimes the legal entity registering securities in an IPO is a newly formed company that will succeed to the operations of an existing business before the effective date of the initial registration statement. In such cases, the entity may need to include the balance sheet of the recently organized registrant in addition to the financial statements of the existing business. See Section 1160 of the FRM for additional guidance on newly formed entities. In addition, Regulation S-X, Rule 3-01, provides guidance on a registrant's balance sheet requirements.

Predecessor Financial Statements

> **Example of an SEC Comment**
>
> Please tell us what factors you considered, and why you concluded, [Company A] represents your predecessor. In your response, please tell us how you are actually succeeding to substantially all of the business of [Company A], and what impact control of [Company A] has upon your ability to succeed to the business. We may have further comment.

Section 1170 of the FRM addresses the requirements for predecessor financial information. It states that the designation "predecessor" is required when "a registrant succeeds to substantially all of the business (or a separately identifiable line of business) of another entity (or group of entities) and the registrant's own operations before the succession appear insignificant relative to the operations assumed or acquired." Because a predecessor's historical financial information is considered important to an investing decision, when a predecessor is identified, the registration statement must also present the predecessor's financial information and reflect such information as if it were the registrant's. That is, financial statements for both the registrant and its predecessor should be presented as of and for all periods required by Regulation S-X.

Trends related to predecessor financial statements in put-together transactions were considered at the March 2015 CAQ SEC Regulations Committee joint meeting with the SEC staff. The meeting highlights published by the CAQ state:

> The Committee and staff also discussed how registrants should evaluate who the predecessor is in put-together transactions where multiple entities that are roughly the same size are acquired by a [new entity ("Newco")] in a business combination in which Newco is the accounting acquirer. In this situation, the staff noted that it may not be readily apparent which entity or entities should be treated as the predecessor. The [s]taff also noted that the fact patterns it has seen have been unique, and in certain circumstances registrants have concluded that there is more than one predecessor.

In summary, the reasoning behind an entity's conclusion on what should be included in its predecessor financial statements — and on whether the entity has a single predecessor or multiple predecessors — remains a focus of the SEC staff.

Carve-Out Financial Statements

Example of an SEC Comment

You disclose that the combined financial statements may not include all of the actual expenses that would have been incurred had [the new entity] been a [stand-alone] company during the periods presented and that actual costs would have been different. Please disclose your estimate as to what the expenses would have been on a stand-alone basis for [the new entity], that is, the cost that would have been incurred if [the new entity] had operated as an unaffiliated entity for all years reported when such basis produces materially different results. Please refer to Question 2 of SAB Topic 1.B.1.

"Carve-out financial statements" is a generic term used to describe separate financial statements that are derived from the financial statements of a larger parent company. A carve-out occurs when a parent company segregates a portion of its operations and prepares a distinct set of financial statements for the segregated portion in preparation for a sale, spin-off,[1] or IPO of the "carve-out entity." Examples of a carve-out entity may include (1) all or part of a subsidiary of a parent company or (2) a line of business that was previously part of a larger parent company.

Often, the parent may not have historically accounted for the carve-out entity separately, and the registrant (i.e., the carve-out entity) may have relied on the parent for certain functions. SAB Topic 1.B indicates that the registrant's historical income statements should present all of the costs of doing business, including expenses incurred by the parent on behalf of the registrant. Examples of such costs include salary, rent, depreciation, advertising, accounting and legal services, and other SG&A. Registrants must use a reasonable method to allocate the common expenses from the parent to the registrant if specific identification is not practicable. The method for such allocation must also be disclosed in the notes to the financial statements, with an explanation of why management believes such method is reasonable. To the extent that the registrant and the parent have shared functions (e.g., treasury or cash management), these shared functions need to be evaluated so that the appropriate amount of expense to be allocated to the carve-out entity can be determined.

When financial statements of a carve-out entity are used in an IPO, it is critical that the carve-out financial statements identify the appropriate assets and operations of the registrant. A registrant's determination of the composition of the carve-out financial statements depends on its specific facts and circumstances and may require significant judgment because the process of identifying appropriate assets and operations of the registrant in an IPO transaction is complicated. At the 2014 AICPA Conference, the SEC staff acknowledged that determining what financial statements to include in a registration statement can be complex and that registrants need to use judgment when doing so, particularly because (1) there may not be SEC guidance directly on point and (2) accounting guidance (e.g., the guidance in ASC 505-60 on determining the accounting spinnor and spinnee) may not be wholly determinative of the SEC's reporting requirements. Further, at the March 2015 CAQ SEC Regulations Committee joint meeting with the SEC staff, the staff discussed financial reporting differences that can arise depending on the legal form of the transaction.

Accordingly, registrants should consider the context of their Description of Business section and MD&A and whether that information, along with the financial statements, provides a full picture for investors. At the 2014 AICPA Conference, the SEC staff encouraged registrants to submit a prefiling letter to resolve any complex issues ahead of time and thereby potentially avoid having to address them during the staff's review of their IPO filing.

In addition, the SEC staff discussed at the 2014 AICPA Conference the recent prevalence of IPO transactions that contemplate the formation of a master limited partnership. Examples include situations in which assets that function as internal services have been contributed by the sponsor but operations

[1] ASC 505-60-20 defines a spin-off as the "transfer of assets that constitute a business by an entity (the spinnor) into a new legal spun-off entity (the spinnee), followed by a distribution of the shares of the spinnee to its shareholders, without the surrender by the shareholders of any stock of the spinnor."

have not had historical revenue streams. Registrants need to carefully analyze the facts and circumstances to determine what historical financial statements to include. Again, the staff encouraged registrants to submit a prefiling letter to help resolve these unique and complex issues.

Spin-off transactions can be highly complex and involve numerous legal and accounting decisions that registrants must consider, including the accounting for the transaction (i.e., spin-off or reverse spin-off) in accordance with ASC 505-60. Registrants should also consider other aspects of carve-out financial statement reporting, including (1) the allocation of items such as pension and postretirement benefit plans, income taxes, impairment of goodwill and other intangible assets, and debt and contingencies and (2) treatment of intercompany transactions. In addition, carve-out entities in an IPO will need to consider their ongoing compliance with Rules 3-05 and 3-09 for acquisitions and equity method investments, respectively, whose level of significance may differ from that of the parent's acquisitions and equity method investments. Further, the SEC staff may ask about segment reporting and EPS in these complex transactions.

For additional considerations related to carve-out transactions, see Deloitte's publication *A Roadmap to Accounting and Financial Reporting for Carve-Out Transactions*.

Public-Entity Disclosures and Transition Provisions

A nonpublic entity's previously issued financial statements may not be sufficient for an IPO. Nonpublic entities may need to revise their financial statements to include the public entity disclosures required under U.S. GAAP and Regulation S-X.[2] In addition, such entities will need to obtain an auditor's report on their financial statements that (1) is issued by a PCAOB-registered accounting firm and (2) refers to the PCAOB's standards.[3]

U.S. GAAP

Certain provisions of U.S. GAAP differ for public and nonpublic entities. A registrant's financial statements in an IPO must adhere to accounting principles and disclosures required for public entities for all periods presented.[4] The term "public entity" generally refers to an entity that files its financial statements with the SEC. However, there are different definitions of public entity under U.S. GAAP. Examples of accounting principles and disclosures that apply to public entities but not nonpublic entities include EPS (under ASC 260-10-15-2 and 15-3); segment reporting (under ASC 280-10-15-3 and ASC 280-10-20); temporary equity classification of redeemable securities (under ASC 480-10-S99-3A); and pensions and other postretirement benefits, such as defined benefit plans (under ASC 715-20-20).

In addition, the effective date of a new accounting pronouncement may be sooner for public entities than for nonpublic entities. Since registrants must apply public-entity guidance for all periods presented in the IPO financial statements, a nonpublic entity may be required to retrospectively change its date of adoption of a new standard to that required for a public entity.[5]

Further, a company that is preparing to go public — or that may consider going public in the future — should be cautious about electing the alternatives developed by the PCC. Once a company is considered a PBE, it would no longer be permitted to apply PCC accounting alternatives. Consequently, any previously elected PCC alternatives would need to be eliminated from the company's historical financial statements before such statements can be included in its IPO registration statement. See the SEC Reporting section for additional information about PBEs.

[2] EGCs are allowed to adopt new or revised financial accounting standards on the basis of effective dates applicable to private companies (i.e., nonissuers) "if such standards apply to companies that are not issuers." See the Emerging Growth Companies section for additional information.

[3] See paragraph 4110.5 of the FRM for additional information.

[4] See footnote 2.

[5] See footnote 2.

SEC Rules and Regulations

Examples of SEC Comments

- Please revise future filings to disclose the amount of income (loss) before income tax expense attributable to domestic or foreign operations. Refer to Rule 4-08(h) of Regulation S-X.
- Please revise to provide separate disclosure in your consolidated statements of operations of the license fee expense paid to [Company A], a company affiliated with one of your principal shareholders, during all periods presented. Refer to the guidance outlined in Rule 4-08(k) of Regulation S-X.

In an IPO, the registrant's financial statements should comply with the applicable requirements of Regulation S-X, and SEC staff views in SABs, for each period presented in the financial statements. Because such requirements and views are new to the registrant, its disclosures may not be fully compliant; as a result, the SEC staff frequently requests additional disclosures. Regulation S-X prescribes the types, form, and content of the financial information that registrants must file. Many of these requirements expand on the disclosures directly required by U.S. GAAP. SABs provide staff views on 14 broad topics, including business combinations, revenue recognition, and share-based payment arrangements. Requirements addressed by Regulation S-X and SABs that often affect nonpublic-entity financial statements during the IPO process include:

- Balance sheet and income statement presentation requirements (Regulation S-X, Rules 5-02 and 5-03) and age of financial statement requirements (Regulation S-X, Rule 3-12).
- Summarized financial information of subsidiaries not consolidated and 50 percent or less owned persons (Regulation S-X, Rule 4-08(g)).
- Income tax expense (Regulation S-X, Rule 4-08(h)).
- Related-party disclosures (Regulation S-X, Rule 4-08(k)).
- Audited financial statement schedules (Regulation S-X, Articles 5 and 12).
- Preferred stock and other securities (e.g., common stock) subject to mandatory redemption requirements or whose redemption is outside the issuer's control (Regulation S-X, Rule 5-02.27; ASR 268; ASC 480-10-S99-3A).

For additional reporting considerations related to these topics, see the Financial Statement Classification, Including Other Comprehensive Income; Income Taxes; and SEC Reporting sections.

Distributions to Owners

Example of an SEC Comment

We note that you plan to distribute all of the proceeds from the offering of common units and a portion of the proceeds from your new credit facility to [Entity A] upon closing of the offering. Please explain to us what consideration you gave to providing a pro forma balance sheet alongside your latest historical balance sheet reflecting the distribution. Additionally, please tell us what consideration you gave to providing pro forma per unit data for the latest year and interim period within your historical financial statements to the extent that the distribution exceeds the current year's earnings. . . . We refer you to SAB Topic [1.B.3].

It is common for registrants to plan dividends or distributions to owners as of, or immediately before, the closing of an IPO. The SEC staff often comments on the need for pro forma information related to such distributions.

SAB Topic 1.B.3 and paragraph 3420.1 of the FRM express the SEC staff's view that a significant planned distribution that is not reflected in the latest historical balance sheet should be presented in a pro forma balance sheet regardless of whether it has been declared or will be paid from the proceeds of the offering. The pro forma balance sheet should be presented alongside the most recent historical balance sheet in the filing and should reflect the distribution (but not give effect to the offering proceeds).

In addition, SAB Topic 1.B.3 indicates that if a distribution will be paid to owners from the proceeds of the offering rather than from the earnings in the current year, the registrant should present pro forma EPS data for the latest year and interim period in addition to historical EPS. Paragraph 3420.2 of the FRM provides additional interpretive guidance on the calculation of such pro forma per share data.

Changes in Capitalization

Entities often have other capitalization changes that occur before, or concurrently with, the effective date or closing of an IPO. Some changes, such as a stock split, are reflected retrospectively in all periods presented in the financial statements. Other changes, which may include (but are not limited to) the redemption or automatic conversion of preferred stock into common stock or the conversion of debt to equity, are only recorded prospectively and may not be reflected in the financial statements presented in an IPO filing. Registrants should present such changes in capitalization as part of the pro forma information. The SEC staff often focuses on the presentation of such pro forma information.

Pro Forma Information

Examples of SEC Comments

- Please revise to include a pro forma balance sheet presented alongside the historical balance sheet giving effect to the conversion of your A, B and C preferred shares. Also if the conversion will result in a material reduction of earnings per share, please include pro forma EPS for the latest year and interim period giving effect to the conversion.
- We note your use of net proceeds from this offering includes the repayment of outstanding balances under your credit facility. Please revise your pro forma net loss per share information to address the effect of the proceeds intended to be used for debt repayment. In this regard, you should disclose the effects of the interest expense adjustment and the number of shares issued in this offering whose proceeds will be used to repay the credit facility. Please ensure that the footnotes to your pro forma disclosures clearly support the calculations of both the numerator and denominator used in computing pro forma net loss per share. We refer you to SAB Topic 3.A by analogy and Rule 11-01(a)(8) and Rule 11-02(b)(7) of Regulation S-X.

The SEC staff asks registrants to present pro forma information when changes in capitalization will occur after the date of the latest balance sheet. Paragraph 3430.2 of the FRM indicates that when such changes will result in a material reduction in permanent equity or are the result of a redemption of a material amount of securities in conjunction with the offering, a filing should include a pro forma balance sheet (presented alongside the historical balance sheet) that takes into account the change in capitalization but not the effects of the offering proceeds.

In addition, paragraph 3430.3 of the FRM indicates that when a conversion of outstanding securities occurs after the latest balance sheet date and will result in a material reduction in EPS exclusive of the effects of the offering, registrants should present pro forma EPS (but should exclude the effects of the offering). Such pro forma EPS should be presented for the latest fiscal year and interim period.

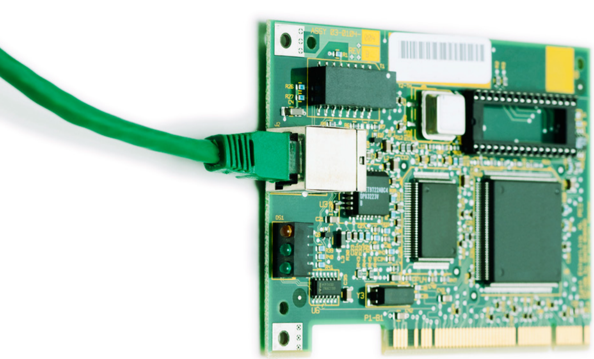
Further, SEC staff comments have noted that to the extent that proceeds of an offering are used for the repayment of outstanding borrowings, registrants should include the impact of such repayments in their pro forma EPS amounts by (1) increasing the denominator by the number of shares necessary to repay the outstanding borrowings and (2) adjusting interest expense in the numerator.

Draft Audit Reports

Example of an SEC Comment

We note that your reverse stock split will be effective immediately prior to completion of the offering. This reverse split should be retrospectively reflected in the financial statements, selected financial data and elsewhere throughout the filing. If the transaction prevents the auditor from expressing an opinion on the financial statements at the time of filing, we will not object to the filing of a "draft report" in the form that it will be expressed at effectiveness. In this case, the draft report should be accompanied by a signed preface of the auditor stating that it expects to be in a position to issue the report in the form presented at effectiveness. No registration statement can be declared effective until the preface is removed and the accountant's report [is] finalized.

In accordance with Regulation S-X, Rule 2-02, and interpretive guidance (e.g., Section 4710 of the FRM), the auditor's report should be dated and signed by the auditor and should not contain restrictive language (e.g., "draft"). The SEC staff will generally not commence its review of a registrant's filing if the registrant has filed a registration statement that does not meet these requirements. However, if a transaction (e.g., a stock split) is expected to occur immediately before the registration statement is declared effective, the registrant may wish to give effect to the transaction before it occurs. When such an anticipated transaction has been included in the historical financial statements, the SEC staff has accepted the filing of a "draft report" in the form in which the report will be expressed at the time the registration statement becomes effective to prevent the auditor from expressing an opinion regarding the financial statements at the time of filing (because the filing took place before the transaction occurred and before the registration statement was declared effective). Such a report would include a preface indicating that the report will not be final until the transaction is completed. The SEC staff will remind registrants to remove the preface from a registration statement that was filed before being declared effective because no registration statement can be declared effective until the preface is removed and the accountant's report is finalized.



Dilution Disclosure

Examples of SEC Comments

- Please tell us why you are including noncontrolling interest in your calculation of historical net tangible book value for purposes of assessing dilution to shareholders that invest at the time of your IPO.
- We note that you removed the measure of net tangible book value from your disclosure in addition to removing your measure of net tangible liabilities. Please revise your disclosures to present the net tangible book value measures required by Item 506 of Regulation S-K, or tell us why you believe these disclosures are no longer applicable.

Under Regulation S-K, Item 506, certain disclosures (including net tangible book value per share before and after a distribution) are required when "common equity securities are being registered and there is substantial disparity between the public offering price and the effective cash cost to officers, directors, promoters and affiliated persons of common equity acquired by them."

Section 8300 of the FRM acknowledges that there is no authoritative definition of "tangible book value" but notes that the metric "is used generally as a conservative measure of net worth, approximating liquidation value." The interpretive guidance (1) indicates what tangible assets should exclude and (2) cites examples of when the SEC staff has allowed dual calculation of tangible book value. Accordingly, the staff may question a registrant's calculation of dilution and its related disclosures, particularly if net tangible book value reported in the dilution section of the registration statement appears to be inconsistent with the historical financial statements.

Foreign Private Issuers

Foreign Private Issuers Using IFRSs

The SEC staff's comments to FPIs have addressed a number of financial accounting and disclosure topics. Many of the comments are generally consistent with those issued to domestic filers and raise topics that are discussed in other sections of this publication (albeit staff comments to FPIs on financial statement topics refer to IFRSs). In addition, FPIs have received staff comments about (1) the presentation of financial statements (i.e., under IAS 1); (2) accounting for expenditures related to the exploration for, and evaluation of, mineral resources (i.e., under IFRS 6); (3) their consolidation analysis and disclosures (e.g., under IFRS 10); and (4) references to the use of IFRSs as issued by the IASB.

Presentation of Financial Statements

Examples of SEC Comments

- Please confirm that you have disclosed all material expenditures by nature as required under paragraph 104 of IAS 1 or revise your disclosure to quantify these expenditures.
- We note . . . that you view the loss of settlement as [being] unrelated to your operations because the settlement was based on an allegation of infringement and no finding of infringement was ever made by a court of proper jurisdiction. We would expect that it is normal operational activity for companies to defend their patents used in operations against claims of infringement, whether litigated or settled. Since the patents involved are used by your operations, we continue to believe that the associated settlement costs are representative of activities that would normally be regarded as operating. Refer to BC 56 of IAS 1.

The SEC staff's comments have often focused on missing disclosures about the nature of expenses when FPIs used a functional presentation of expenses in the statement of profit or loss and OCI. The staff has also commented on the exclusion of certain expenses from amounts presented as results of operating activities (i.e., operating income). In addition, the staff has asked FPIs to present additional line items in the statement of profit or loss and OCI when such presentation is relevant to an understanding of the issuer's financial performance.

Under IAS 1, an entity can present expenses either by nature or by function. According to paragraph 104 of IAS 1, an entity that presents expenses by function must provide additional disclosures about the "nature of expenses, including depreciation and amortisation expense and employee benefits expense." As explained in paragraph 105 of IAS 1, this is "because information on the nature of expenses is useful in predicting future cash flows." The use of the term "including" in IAS 1 implies that additional disclosures about the nature of expenses may not be limited to depreciation, amortization, and employee benefit expenses. Rather entities should disclose other expenses by nature if such information may be useful in predicting future cash flows. An entity that uses a functional format should ensure that all additional disclosures are included in the footnotes and should consider including them in a single footnote for greater transparency. Paragraph IG6 of IAS 1 illustrates income statements that are presented by nature and by function.

Paragraphs 82 and 82A of IAS 1 each list line items that an entity should include, at a minimum, in its statement of profit or loss and OCI. Disclosure of the results of operating activities as a separate line item in the statement of profit or loss and OCI is not required; however, an entity that decides to present the results of operating activities or a similar line item should refer to paragraph BC56 of IAS 1, which notes, in part, that "it would be misleading and would impair the comparability of financial statements if items of an operating nature were excluded from the results of operating activities, even if that had been industry practice."

Further, paragraph 85 of IAS 1 requires an entity to present additional line items, headings, and subtotals on the face of the statement of comprehensive income "when such presentation is relevant to an understanding of the entity's financial performance." When including such line items and subtotals, an entity should consider providing transparent disclosures that clearly convey the relevance of the items to financial statement users. In such cases, an entity may amend the description of the line items and reorder them to explain the particular element of financial performance.

Exploration for, and Evaluation of, Mineral Resources

Examples of SEC Comments

- We note . . . that you rely on IFRS 6 guidance in capitalizing exploration expenditures. We also note . . . that capitalized exploration costs are classified as mine development assets and you are relying on the guidance in IAS 16. To help us better understand your accounting policy for capitalizing exploration expenditures, please address the following items:
  - Tell us why you consider it appropriate to classify the capitalized exploration costs as mine development assets under IFRS 6 paragraphs 10 and 25.
  - Tell us how you reclassify the capitalized exploration costs when the technical feasibility and commercial viability of extracting a mineral resource are demonstrable under the guidance in IFRS 6 paragraph 17 if the related capitalized exploration costs have been recorded as mine development assets.
  - Tell us the amount of exploration costs capitalized by mine at [Mine A and Mine B].
- We note your disclosure that you capitalize exploration and evaluation costs as intangible assets and reclassify these costs to mining properties when intended production levels are achieved. Please provide us a detailed discussion of how your accounting policy complies with IFRS 6, particularly paragraph 17. Additionally, please tell us how you define intended production levels being achieved.

The SEC staff has often requested more information about an FPI's accounting policy related to the types of expenditures that the issuer recognizes as exploration and evaluation assets, including whether such policy complies with IFRS 6.

IFRS 6 requires an entity to develop an accounting policy that specifies the types of expenditures it recognizes as exploration and evaluation assets and to apply that policy consistently — particularly because IFRS 6 does not require entities to capitalize exploration and evaluation expenditures. In addition, when specified conditions are met, IFRS 6 permits entities to continue applying the accounting policies they used to account for exploration and evaluation expenditures before adopting IFRS 6.

Under IFRS 6, an entity's assessment of which expenditures would qualify as exploration and evaluation assets is determined on the basis of how closely the expenditures are associated with finding specific mineral resources. IFRS 6 provides a nonexhaustive list of expenditures that an entity might consider including in the initial measurement of its exploration and evaluation assets. Such expenditures include those related to:

- Acquisition of rights to explore minerals.
- Topographical, geological, geochemical, and geophysical studies.
- Exploratory drilling.
- Trenching.
- Sampling.
- Activities related to evaluating the technical feasibility and commercial viability of extracting a mineral resource.

However, in accordance with IFRS 6, entities should not recognize expenditures related to the development of mineral resources as exploration and evaluation assets; instead, entities are required to apply the *Conceptual Framework for Financial Reporting* and IAS 38 to determine an appropriate accounting policy for such amounts. Further, although the term "development" is not defined, paragraph 5(b) of IFRS 6 indicates that the development phase begins "after the technical feasibility and commercial viability of extracting a mineral resource are demonstrable."

References to the Use of IFRSs as Issued by the IASB

Example of an SEC Comment

Please amend your filing to include an audit opinion that refers to and opines on International Financial Reporting Standards as issued by the International Accounting Standards Board or include a reconciliation to US GAAP. Refer to Item 17(c) of Form 20-F.

The SEC staff has requested that FPIs amend their Form 20-F when they have not asserted, and the audit report has not stated, that the financial statements were prepared in accordance with "IFRSs as issued by the IASB."

As stated in paragraph 6310.2 of the FRM and similarly indicated in Item 17 of Form 20-F, the issuer's "accounting policy footnote must state compliance with [IFRSs] as issued by the IASB and the auditor's report must opine on compliance with [IFRSs] as issued by the IASB." An issuer that does not prepare its financial statements in accordance with IFRSs as issued by the IASB is required to reconcile its financial statements to U.S. GAAP. The SEC staff has reiterated that FPIs need to provide a statement of compliance with "IFRSs as issued by the IASB" to be eligible to omit the U.S. GAAP reconciliation.

Consolidations

Examples of SEC Comments

- We note that upon adoption of IFRS 10, you deconsolidated five companies because you determined you are not exposed to variable returns although you have power over the relevant activities. [F]or [Entity A] and [Entity B], your ownership percentage is 100.00% and 92.64%, respectively. Tell us and revise your future filings to disclose the significant judgments and assumptions made in your determination that you are not exposed to variable returns for these entities even though you have substantially all voting rights.
- We note that your adoption of IFRS 11 resulted in accounting for several entities under the equity method instead of the proportional consolidation method you used prior to the adoption of IFRS 11. Please tell us in sufficient detail how you determined these joint arrangements qualified as joint ventures as opposed to joint operations. Ensure your analysis discusses the structure and form of the arrangements and the involved parties' rights and obligations arising from the arrangements.

FPIs have received SEC staff comments about their IFRS 10 conclusions, including whether they have (1) power over the relevant activities of an investee, (2) exposure or rights to the variable returns of an investee, and (3) the ability to affect an investee's variable returns through their power over the investee.

In addition, FPIs have been asked to provide disclosures required by IFRS 12 related to (1) their interests in other entities and (2) the significant judgments and assumptions they made in determining that they have control, joint control, or significant influence over another entity.

Further, the SEC staff has inquired about how a registrant determined whether joint arrangements qualified as joint ventures rather than joint operations.

Industry-Specific Topics

Consumer and Industrial Products

Retail and Distribution

The SEC staff's comments to registrants in the retail and distribution industry have focused on the convergence of digital technology with the traditional "brick-and-mortar" and direct channels. Retailers citing an omnichannel customer experience have received comments on MD&A related to the impact of multiple distribution channels on trends in results of operations and in liquidity and capital resources. Other frequent comments include (1) questions about the accounting for and disclosure of certain revenue recognition items and (2) requests for additional disclosures related to sales returns and allowances.

In addition, given that registrants in the industry typically have multiple distribution channels (e.g., stores, catalogs, the Internet), geographic locations, and store concepts and brands, the SEC staff frequently asks such registrants about the identification and aggregation of their operating segments, particularly when they disclose only one reportable segment. Further, many retailers have received comments related to the disclosure of revenue by products and services in accordance with ASC 280-10-50-40. See the Segment Reporting section for additional information.

MD&A

Examples of SEC Comments

- [P]lease expand your discussion of how the trend towards mobile and multi-channel shopping will affect both your liquidity and capital resources expenditures moving forward.
- Since it appears that your online business has a significant impact on your results, please provide a quantified discussion of your online business as part of providing investors with a view of the company through the eyes of management. . . . In making this disclosure, please disclose the revenues and profitability of your online channel for each period presented and provide a comprehensive discussion and analysis of the performance and known trends related to your online operations.
- While we recognize that situations such as placing an online order while standing in a store make it difficult to present pure store and online sales amounts, we assume that if management separately tracks the sales from stores and online you are using a reasonable allocation methodology to make those figures meaningful to you, and we believe that your investors would benefit from you sharing this information along with your allocation methodology.
- We note your eCommerce sales are included within your same store sales calculation. Tell us your basis for inclusion of online sales in your same store sales calculation and explain to us what consideration you gave to also disclosing same store sales excluding eCommerce sales. In explaining your basis, please tell us and disclose whether the prices, margins or types of products ordered online differ materially from products available at your brick and mortar stores.

The SEC staff frequently asks registrants to improve their MD&A (e.g., by including operational and statistical measures) to help investors see registrants' performance through the eyes of management. Many retailers consider same-store sales a key operating metric; accordingly, same-store sales are often discussed in MD&A to help explain fluctuations in results of operations. Because there can be variability in the way same-store sales are calculated, the SEC staff often asks registrants to enhance their disclosures about such metrics and elaborate on any factors that could affect year-to-year comparability.

Further, in a manner consistent with SEC staff remarks at the 2013 AICPA Conference, the SEC staff continues to ask registrants with significant online sales to separately discuss (1) the impact of such sales on the results of operations, including changes in overall gross margin, and (2) any trends affecting online sales. Incrementally, retailers have received comments requesting expanded disclosure of the impact that online sales have on year-to-year sales metrics, such as same-store sales. See the Management's Discussion and Analysis and Non-GAAP Financial Measures and Key Metrics sections for additional information.

Revenue Recognition — Accounting and Disclosure

Examples of SEC Comments

- We note that delivery sales are recognized at the time of shipment rather than upon delivery to and acceptance by the customer. Please explain why this policy is appropriate referencing authoritative literature.
- Please tell us how you account for your customer loyalty program and your consideration of disclosing your accounting policy specifically as it relates to the program.
- Please tell us how you determined that it was appropriate to classify income from unredeemed gift cards as a reduction of selling, general and administrative expenses as opposed to within net sales or other operating income. Further, tell us and, if material, disclose the amount of breakage income recognized during the periods presented.

The SEC staff may ask registrants to clarify the key terms and related accounting and disclosure for certain revenue recognition items common among retailers, including matters related to direct sales, customer loyalty programs, and gift card breakage. For example, since there is diversity in practice regarding the classification of gift card breakage (i.e., classification as a reduction of SG&A versus within net sales or other operating income), the SEC staff frequently asks registrants to explain the rationale for their classification.

Sales Returns and Allowances

Example of an SEC Comment

Please tell us your consideration of disclosing your accounting policy for sales returns and allowances and your consideration of including the activity in Schedule II as prescribed by Rule 12-09 of Regulation S-X in accordance with Rule 5-04 of Regulation S-X.

The SEC staff has focused on sales returns and allowances for retailers. Given that retailers' online sales are increasing significantly, trends in sales returns may become more important since the rate of sales returns is frequently greater in retailers' direct channels (e.g., online sales) than in their brick-and-mortar channels. Accordingly, registrants whose sales returns have a material impact on their financial statements should consider providing expanded disclosures about their accounting policy in the notes to the financial statements as well as additional quantitative and qualitative information about sales returns in MD&A. Further, some registrants may provide a rollforward of sales returns and allowances in Schedule II under Regulation S-X, Rule 12-09, or similar disclosure in the notes to the financial statements.

Travel, Hospitality, and Leisure

The SEC staff's comments to registrants in the THL industry have focused on (1) revenue recognition accounting and disclosures, (2) impairment of long-lived assets, and (3) VIEs.

Revenue Recognition

Examples of SEC Comments

- We note from your revenue recognition critical accounting policy that at the majority of your private clubs, members are expected to pay an initiation fee or deposit upon acceptance as a member to the club for which revenue related to the initiation fee is recognized over the expected life of an active membership. . . . In this regard, please tell us and revise your critical accounting policies to disclose the expected lives or range of expected lives of active memberships for purposes of recognizing revenue associated with initiation fees and deposits for each of the periods presented in your financial statements. Your revised discussion should address attrition rates and how they are used in determining the expected lives of active memberships.
- We refer to the September 2013 modifications to your [Entity A] agreement that have changed the way you record [travel program miles] sold. We note your disclosure that you allocate the consideration received from selling miles to all deliverables based on their relative standalone sales price and you disclose your method for determining your best estimate of selling prices. Please clarify for us, and revise to disclose the timing when revenue is recognized for each deliverable and the classification of the revenue in the statements of operations.
- Given your acquisition of [Entity A] during 2013 and a portion of [A's] revenues being derived from membership fees, please revise your revenue recognition policy to disclose how you recognize membership fees, the period over which such revenue is recognized and how you account for any deferred revenue and the classification of such on your balance sheet.

The SEC staff often asks THL registrants to clarify and support their revenue recognition policies by disclosing in MD&A or footnotes information such as:

- Any estimates used in the determination of deferred or recognized revenue. For example, the SEC staff may ask for additional disclosure about (1) estimation processes used to determine timing of recognition (e.g., how breakage estimates for loyalty programs were determined) or (2) estimates associated with determining selling prices for contracts with multiple-elements. The SEC staff may also ask THL registrants to disclose amounts recorded in revenue that are based on such estimates.
- The specific inputs and assumptions used to calculate estimates for revenues recognized over time. The SEC staff may ask THL registrants to clarify in their critical accounting policies (1) the significant inputs and assumptions used to determine estimates and (2) the values of the inputs and assumptions used to determine the estimates for the periods reported (e.g., customer attrition rates used to determine average membership life).

In addition, THL registrants have received SEC staff comments asking them to (1) disclose the percentage of revenue derived from key customers mentioned in the registrants' respective SEC filings and (2) provide the staff with quantitative and qualitative information related to any contracts or agreements with countries designated by the U.S. government as state sponsors of terrorism (see the Disclosures Regarding State Sponsors of Terrorism section for more information).

Long-Lived Assets

> **Example of an SEC Comment**
>
> Please consider expanding the Critical Accounting Policies section of MD&A to include a table summarizing your owned vessels that details by vessel, the date of acquisition, purchase price and carrying value at the balance sheet date. Also, please identify within this table any vessels whose estimated market values are less than their carrying values. In this regard, for those vessels whose estimated market value is below their carrying value, please add disclosure below the table of the aggregate market value and aggregate book value of such vessels. This additional disclosure will provide investors with an indication of the estimated magnitude of the potential aggregate impairment charge related to these vessels, if you decided to sell all of such vessels. Also, the disclosure accompanying the table should discuss the related accounting treatment of your vessels, and describe the circumstances under which you would be required to record an impairment loss for those vessels with a carrying value in excess of their estimated fair market values.

The SEC staff has encouraged shipping company registrants to provide tabular disclosures in the critical accounting policies section of MD&A that include information about assets at the individual-vessel level, especially if asset values are depressed. Further, the SEC staff has asked such registrants to disclose, on a comparative basis, the aggregate amount by which their vessels' carrying value exceeds the vessels' aggregate basic charter-free market value (or valuation for covenant compliance purposes). This disclosure is intended to highlight the potential for impairment, the trend in vessel values, and how that trend could affect future results of operations.

In addition, the SEC staff may ask shipping company registrants to discuss more thoroughly (1) the factors and conditions that would lead them to recognize an impairment loss and (2) the sources or events that are driving the change in fair value for recorded impairment charges at the individual-vessel level.

The SEC staff may also ask for more robust disclosures about the sensitivity of assumptions used in the impairment test, particularly those used in the selection of historical average charter rates. Accordingly, registrants are encouraged to consider disclosing the margins by which estimated future undiscounted cash flows would exceed each vessel's carrying value if management were to use various historical trailing averages (e.g., those based on one-year, three-year, and five-year periods).

VIEs

> **Example of an SEC Comment**
>
> Please tell us more specifically how you determined that it was appropriate to not consolidate the variable interest [entity] which you manage, but do not consolidate. Please refer to the specific guidance starting at ASC 810-10-25-20 and compare and contrast to your [c]onsolidated VIEs.

THL registrants may enter into arrangements that result in their holding variable interests (e.g., interests related to real estate investments, property management ventures, or investments in utilities that supply energy to property developments). Since holders of variable interests are required to perform a consolidation analysis, the SEC staff often inquires, or requests additional disclosures, about (1) the specific terms of such arrangements, (2) the initial determination and evaluation of the primary beneficiary under ASC 810-10, and (3) changes in circumstances (e.g., development plans) that could affect the primary beneficiary analysis. In addition, the SEC staff has asked THL registrants to clarify why a consolidated VIE's assets (or liabilities) are not separately presented on the face of the primary beneficiary's statement of financial position if the consolidated VIE's assets can only be used to settle obligations of the consolidated VIE (or the consolidated VIE's liabilities do not provide creditors with recourse to the general credit of its primary beneficiary).

For more information, see the Consolidation section.

Energy and Resources

Oil and Gas

The SEC staff's comments to registrants in the oil and gas industry continue to focus on (1) distributable cash flow and maintenance capital expenditures for master limited partnerships (MLPs); (2) oil and gas reserves; (3) disclosures about drilling activities, wells and acreage data, and delivery commitments; (4) income statement classification; and (5) declines in oil and gas prices.

Distributable Cash Flow and Maintenance Capital Expenditures for MLPs

Example of an SEC Comment

Please tell us and disclose whether you incurred any capital expenditures that had an element of both maintenance capital expenditures and expansion capital expenditures. If so, please revise your disclosure to quantify the portion allocated to expansion capital expenditures for each of the periods presented. In your response, please show us what your disclosure would have looked like had such disclosures been provided in your current Form 10-K.

The partnership agreements of MLPs typically define distributable cash flow and often call for a distinction between capital expenditures related to maintenance and those related to growth. In turn, MLPs frequently disclose distributable cash flow and capital expenditure amounts. Consequently, because distributable cash flow is not determined on the basis of SEC rules or U.S. GAAP, SEC staff comments to registrants in the oil and gas industry may focus on:

- Providing (1) greater clarity about how distributable cash flow is calculated and (2) disclosure of any changes in the calculation of distributable cash flows from prior periods.
- How maintenance capital expenditures are defined, and how they affect distributable cash flow.
- Describing the relationship between the calculated amount of distributable cash flow and actual distributions.
- Understanding the liquidity ramifications of cash distribution requirements, including the risk that the registrant will be unable to maintain the same level of distributions in the future.
- Compliance with the requirements of Regulation S-K, Item 10(e), related to non-GAAP financial measures.

Oil and Gas Reserves

PUD Reserves

Examples of SEC Comments

- You state that "at June 30, 2014, none of our proved undeveloped reserves, which are all at [Location A], have remained undeveloped for five years from the date of initial recognition and disclosure as proved undeveloped reserves." Please disclose the extent to which these proved undeveloped reserves are not expected to be converted from undeveloped to developed status within five years since your initial disclosure of these reserves. If any of your proved undeveloped reserves will take more than five years to develop since initial disclosure, you should disclose the specific circumstances to comply with Item 1203(d) of Regulation S-K.
- We note that your inventory of proved undeveloped drilling locations included four wells that had been recognized as proved reserves for five years or longer. Please quantify the reserves related to these wells, describe the specific circumstances that justified the continued recordation of these reserves, and outline your progress in drilling these four wells. Refer to Rule 4-10(a)(31) of Regulation S-X.

Under Regulation S-X, Rule 4-10(a)(22), a registrant should be reasonably certain when estimating proved reserves that the reserves can be recovered in future years under existing economic conditions. In accordance with Rule 4-10(a)(31)(ii), "[u]ndrilled locations can be classified as having undeveloped reserves only if a development plan has been adopted indicating that they are scheduled to be drilled within five years, unless the specific circumstances, justify a longer time."

At the 2014 AICPA Conference, the SEC staff referred registrants to Rule 4-10(a) and Question131.04 of the C&DIs of the oil and gas rules for the definition of proved undeveloped (PUD) oil and gas reserves and staff views on the interaction of that definition with a registrant's development plan. The staff noted that a mere intent to develop reserves does not constitute adoption of a development plan, which would require a final investment decision. Further, a registrant's scheduled drilling activity should reconcile to its investment plans that have been approved by management.

The SEC staff may ask registrants to justify recorded PUD reserves that will remain undeveloped for more than five years because a registrant's decision not to develop PUD reserves for such a long period may indicate uncertainty regarding development and ultimate recoverability. In accordance with Regulation S-K, Item 1203(d), a registrant may be asked to explain why the reserves have not been or will not be developed, why it believes that the reserves are still appropriate, and how it plans to develop the reserves within five years given the registrant's historical conversion rate. The SEC staff may also ask registrants to support engineering assumptions, such as terminal decline rates, used in proved reserve estimates, as well as assumptions used in future cash flow analyses (e.g., estimated future well costs).

In addition, at the 2014 AICPA Conference, the SEC staff reminded registrants in the oil and gas industry to consider the recent declines in oil and gas prices and the related potential impact on exploration, development, and production levels. See Declines in Oil and Gas Prices below for more information.

Separate Disclosure of NGL Reserves

Example of an SEC Comment

We note your disclosure of "wet" natural gas reserves including NGLs in the presentation of your proved and probable reserves as of June 30, 2013. If your reserves as of June 30, 2013 represent a combination of two separate sales products, please revise your disclosure to provide separate disclosure by product type. In this regard, the staff considers natural gas liquids to be a separate product type under Item 1202(a)(4) of Regulation S-K. Therefore, NGL reserves, if material, should be presented as separate quantities for disclosure under Item 1202(a)(2) of Regulation S-K. Please revise your disclosure or tell us why a revision is not necessary.

Although NGLs are not separately identified as a product type in Regulation S-K, Item 1202(a), they are discussed in ASC 932-235-50-4. Accordingly, the SEC staff may ask registrants to disclose NGLs separately if they aggregate significant NGLs with other product types in their disclosures of proved reserves.

Significant Changes in Reserves and Standardized Measures

Examples of SEC Comments

- Please revise your disclosure to include an explanation of significant changes in reserve quantities as discussed in FASB ASC 932-235-50-10.
- Despite the decrease in [PUDs] from [X thousand barrels of oil equivalent (MBoe)] at December 31, 2013 to [X] MBoe at December 31, 2014, we note that future development costs used to calculate the standardized measure of discounted future net cash flows increased from approximately $[X] to approximately $[X]. Please tell us whether you expect the PUDs recorded as of December 31, 2014 to require greater expenditure for development to proved developed status than PUDs converted in prior periods.

The SEC staff has commented on registrants' disclosures about (1) changes in proved reserves and standardized measures and (2) their compliance with ASC 932-235-50. Accordingly, the SEC staff may ask registrants to:

- Describe the technical factors (e.g., the activities, findings, and circumstances) that led to significant changes in proved reserves.
- Address negatively revised estimates attributable to performance separately from negatively revised estimates attributable to price reductions.
- Explain significant changes in extensions and discoveries.
- Disclose prices used in the calculation of standardized measures.
- Discuss how certain tax attributes were used to determine the future income tax expenses.

Further, the SEC staff may (1) ask registrants whether abandoned assets have been included in the standardized measure and, if so, to provide information about them and (2) refer registrants to a sample letter expressing views of the SEC's Division of Corporation Finance on the required disclosures.

Reserve Reports

Example of an SEC Comment

The discussion of methods employed in the estimation of reserves provided in the Appendix to the reserves report lists four methods customarily employed in the estimation of reserves. While this appears to be a comprehensive list of the methods available to the evaluator, Item 1202(a)(8)(iv) of Regulation S-K requires that the disclosure should address the methods and procedures used in connection with the preparation of the estimates specific to the report. Please obtain and file an amended report to revise the discussion, if necessary, to list only those methods and/or combinations of methods actually used to estimate the reserves contained in the report.

Under Regulation S-K, Item 1202(a)(8), a registrant must file a third-party report as an exhibit to its periodic report or registration statement when it "represents that a third party prepared, or conducted a reserves audit of, the registrant's reserves estimates, or any estimated valuation thereof, or conducted a process review." Accordingly, certain disclosures are required under Item 1202(a)(8). The SEC staff issues comments when these required disclosures are omitted. Often, the staff's comments are related to the requirement in Item 1202(a)(8)(iv) to disclose the "assumptions, data, methods, and procedures used, including the percentage of the registrant's total reserves reviewed in connection with the preparation of the report, and a statement that such assumptions, data, methods, and procedures are appropriate for the purpose served by the report."

Drilling Activities, Wells, Acreage, and Delivery Commitments

Examples of SEC Comments

- [P]lease revise your disclosure to provide additional information regarding the minimum remaining terms of leases and concessions. As currently presented, your disclosure only provides information on acreage expirations for the three fiscal years following the periods covered by your Form 10-K. Refer to Item 1208(b) of Regulation S-K.
- Please expand the disclosure of your production to present the total annual quantities, by final product sold, for each of the periods presented to comply with the requirements in Item 1204(a) of Regulation S-K.

The SEC staff has continued to focus on registrants' disclosures about production information, drilling activities, wells and acreage data, and delivery commitments under Regulation S-K, Items 1204 through 1208. Additional disclosures that may be requested include (but are not limited to) the following:

- Production by geographic area and for each country and field that contains 15 percent or more of the registrant's total proved reserves.
- Drilling activities for each of the last three years by geographic area.
- Steps to be taken to meet significant delivery commitments.
- The number of wells that the registrant operates, including the total gross and net productive wells, expressed separately for oil and gas by geographic area.
- Information related to undeveloped acreage regarding minimum remaining terms of leases and concessions for material acreage concentrations, including significant undeveloped acreage that will be expiring over the next three years.

Income Statement Classification

Example of an SEC Comment

We note your disclosure . . . indicating that in certain instances you take title to the natural gas, NGLs or crude oil that you gather, store, or transport for your customers. We further note the disclosure in your revenue recognition footnote . . . that you recognize revenues for services and products. Please tell us how much revenue you have recognized, for each financial period presented, related to the sales of tangible product for which you have taken title and the amount of revenue related to services. Also tell us how you determined you were not required to separately disclose net sales of tangible products and revenues from services to comply with Rule 5-03(b)(1) of Regulation S-X and to separately disclose the related costs and expenses to comply with Rule 5-03(b)(2).

Under Regulation S-X, Rule 5-03, if product or service revenue is greater than 10 percent of total revenue, disclosure of such component is required as a separate line item on the face of the income statement, and costs and expenses related to the product or service revenue should be presented in the same manner. Revenue streams vary by sector within the oil and gas industry. For example, in the midstream sector, revenue streams could include transportation and storage of crude or refined petroleum products, processing of natural gas, and marketing fees generated from the sale of such products. In connection with these services, midstream companies may purchase, take title to, or otherwise have risk of ownership for the related products they are transporting, storing, or processing. If revenues from these product sales exceed 10 percent of total revenues, registrants are required to disclose such revenues and costs and expenses separately in the income statement. For more information, see the Financial Statement Classification, Including Other Comprehensive Income section.

Declines in Oil and Gas Prices

Example of an SEC Comment

You indicate that a continued low price environment could cause a "significant revision" in the carrying value of oil and gas properties in future periods. Section III.B.3. of SEC Release No. 33-8350 provides guidance regarding quantitative disclosure of reasonably likely effects of material trends and uncertainties. Please revise to provide more extensive discussion, including, where reasonably practicable, quantification of the impact of current commodity prices on the carrying value of your oil and gas properties. Your revised disclosure should also quantify the impact of potential scenarios deemed reasonably likely to occur on your estimated reserve volumes.

At the 2014 AICPA Conference, the SEC staff reminded registrants in the oil and gas industry to consider the recent declines in oil and gas prices and that such changes may:

- Represent a known trend or uncertainty that should be discussed in MD&A.
- Represent a risk that should be discussed in risk factor disclosures.
- Affect the determination of estimated proved reserves.

The SEC staff has noted that one of the most important elements necessary to gaining an understanding of a company's performance, and the extent to which reported financial information is indicative of future results, is the discussion and analysis of known trends and uncertainties. Section III.B.3 of SEC Release No. 33-8350 calls for the quantification of material effects of known material trends and uncertainties and states that "material forward-looking information regarding known material trends and uncertainties is required to be disclosed as part of the required discussion of those matters and the analysis of their effects." Given the nature of the oil and gas industry, significant changes to commodity prices could affect the overall operations of the company. In particular, a significant decline in commodity prices could have a material impact on the carrying value of an exploration and production company's oil and gas properties and may be an early-warning sign of impairment. Accordingly, registrants in the oil and gas industry should quantify, to the extent possible, the impact of commodity prices on their (1) future development and capital programs and (2) oil and gas properties, including reserves. For more information, see Deloitte's January 2015 *Oil & Gas Spotlight*. Registrants should also consider their risk factor disclosures, including quantitative disclosures about the potential impact of the recent changes in commodity prices on their reserves, and whether those disclosures adequately address the risks arising from the uncertainty associated with the price changes. See PUD Reserves above.

Other Deloitte Resources

December 15, 2014, *Heads Up*, "Highlights of the 2014 AICPA Conference on Current SEC and PCAOB Developments."

Power and Utilities

The focus of recent SEC staff comments to registrants in the P&U industry is largely consistent with that of staff comments issued in past years. Specifically, the staff has concentrated on (1) dividend restrictions; (2) accounting for the impact of rate making; (3) regulatory disallowance of property, plant, and equipment; and (4) identification of possible phase-in plans.

The SEC staff has also issued comments related to whether registrants in the P&U industry have complied with requirements under ASC 450 to disclose their range of loss in connection with litigation and other contingencies. Further, the staff has asked such registrants to explain the considerations they gave to separately disclosing the revenues and costs of revenues related to nonregulated businesses in light of Regulation S-X, Rule 5-03(b)(1) and (2). For additional considerations related to these topics, refer to the Contingencies and Financial Statement Classification, Including Other Comprehensive Income sections.

Dividend Restrictions

Example of an SEC Comment

Reference is made to your disclosure . . . of [Company A's] maximum ratio of consolidated financial indebtedness to consolidated total capitalization imposed by a credit agreement. Please tell us whether this covenant, other financial covenants and/or restrictions imposed by regulatory commissions restrict the ability of your subsidiaries or investments accounted for by the equity method to transfer funds to you in the form of loans, advances or cash dividends. If so, please tell us: (i) the amount of restricted net assets of consolidated subsidiaries and your equity in the undistributed earnings of investments accounted for by the equity method as of September 30, 2014 and how you computed the amount; (ii) your consideration of providing the disclosures required by Rule 4-08(e)(3)(i) and (ii) of Regulation S-X; and (iii) your consideration of providing the condensed financial information prescribed by Rule 12-04 of Regulation S-X in accordance with Rule 5-04 of Regulation S-X.

Given the nature of regulation in the P&U industry, there may be constraints on a P&U registrant's financial flexibility and its relationships with affiliated parties, including the parent company. For example, a utility subsidiary may be subject to requirements imposed by federal and state regulators that establish a minimum equity capitalization ratio or set limits on the payment of dividends. In addition, the capital-intensive demands of the P&U industry require significant financing agreements at the subsidiary level that may restrict (1) a subsidiary's transfer of assets in the form of advances, loans, or dividends to the parent company or another affiliated party or (2) other types of transactions between a subsidiary and its affiliates. The inability of a subsidiary to transfer assets to the parent company could, in turn, restrict the parent company's ability to pay dividends to its own shareholders.

Consequently, several P&U registrants have received comments from the SEC staff about their compliance with Regulation S-X, Rules 4-08(e) and 5-04. Those comments have included inquiries about whether consideration was given to regulatory or other limitations (e.g., debt agreements) that could restrict the transfer of assets from a subsidiary to the parent company through dividends, loans, advances, or returns of capital. As a result of the staff's comments, several P&U registrants have been required, or have agreed, to prospectively (1) expand their notes to the financial statements about potential dividend restrictions in accordance with Rule 4-08(e) and (2) include a Schedule I in their annual Form 10-K filing in accordance with Rule 5-04. Registrants should be aware that the calculations for determining the note disclosures required under Rule 4-08(e) should be performed independently of the calculations for determining the required Schedule I disclosures, and that compliance with one set of disclosure requirements does not satisfy the requirements of the other.

For additional considerations about dividend restrictions, see the Debt section.

Accounting for the Impact of Rate Making

Example of an SEC Comment

We noted a significant increase in your regulatory asset related to [Matter X] during the fiscal year ended December 31, 2014 . . . . We also note your disclosure . . . that the [state legislation] leaves the decision on cost recovery determinations related to [Matter Y] to the normal ratemaking processes before utility regulatory commissions and your disclosure . . . that you believe recovery is probable. We further note your disclosure in multiple instances . . . that an order from the regulatory authorities disallowing recovery of costs related to [Matter Z] could have an adverse impact on your financial statements. As it appears you do not have a regulatory order supporting the deferral of these costs, please tell us why you believe the amounts you have deferred as regulatory assets are probable of recovery under U.S. GAAP and provide us with your detailed analysis supporting this conclusion including both positive and negative evidence you considered. Refer to ASC 980-340-25-1.

The SEC staff's comments have focused on (1) ensuring that P&U registrants are thoughtful in determining the initial and continuing probability of cost recovery inclusive of the expected recovery period, (2) providing supplemental explanations or separate detailed analysis and evidence that support the P&U registrant's recognition of regulatory assets, and (3) whether a particular regulatory asset of the P&U registrant is earning a rate of return. Further, the SEC staff continues to issue comments on (1) how the P&U registrant's current regulated rates are designed to recover its specific costs of providing service, (2) the nature of the P&U registrant's material regulatory assets and liabilities, and (3) the P&U registrant's accounting policies for revenues subject to refund.

Regulatory Disallowance of Property, Plant, and Equipment

Example of an SEC Comment

We note from your Form 8-K filed on March 9, 2015 that [Utility Commission A] voted to disallow recovery of costs related to [Capital Project A] and that you expect to record a charge of approximately $[X] during the first quarter of 2015. Considering the recovery disallowance recommendations of [Intervenor A] and [Intervenor B] during 2014 along with the February 2015 [administrative law judge] recovery disallowance proposal, please tell us in more detail why no charges were recorded during fiscal 2014 related to the [Capital Project A] prudence investigation.

SEC staff comments to public utility registrants continue to focus on the guidance in ASC 980-360-35 on subsequent measurement and recognition of property, plant, and equipment related to regulated operations. Under that guidance, an entity should record a disallowance related to a recently completed plant if it determines that a disallowed amount is probable and reasonably estimable; the entity must use judgment to make that determination. In light of recent regulatory orders by state public utility commissions that limit a public utility entity's cost recovery, registrants have been asked to explain their considerations related to the timing of recording a disallowance, particularly when a disallowance was not recorded until a rate order was received.

Identification of Possible Phase-In Plans

> **Example of an SEC Comment**
>
> Please explain to us in detail why the method of recognition of allowable costs in rates associated with bare steel and cast iron replacement activities of [Subsidiary A] and [Subsidiary B], the capital infrastructure program of [Subsidiary A,] and [the replacement of] bare steel and cast iron pipelines and other infrastructure by [Subsidiary C] are not considered phase-in plans as defined in ASC 980-340-20.

To lessen the impact of a rate increase as part of a current rate proceeding, a regulator may decide to defer costs associated with a major new plant addition. A deferral of any costs associated with a major, newly completed plant could be a phase-in plan. In accordance with ASC 980-340-25-2, cost deferrals are not permitted for phase-in plans. To qualify as a phase-in plan, a method for recognizing allowable costs must meet the three criteria outlined in ASC 980-340-20.

If a major, newly completed plant is being included in rates for the first time and the regulator provides for a deferral of any costs associated with the new plant for inclusion in future rates rather than as part of the cost of service in the current proceeding, those costs may not qualify as regulatory assets under U.S. GAAP regardless of whether the incurred costs are probable of recovery in future rates unless an exception applies.

Mining

Examples of SEC Comments

- We note you have combined your proven and probable reserve categories which is contrary to the explicit guidance of Industry Guide 7, which provides that reserves may be combined as "proven and probable" only if proven and probable reserves cannot be readily segregated. Your filing does not state that your proven and probable reserves cannot be differentiated or segregated with an explanation. Please modify your filing and segregate your proven reserves from your probable reserves in the appropriate reserve tables or provide a statement that this is not possible with the appropriate explanation.
- We note you refer to [Properties A and B] as development stage properties . . . . The terms development and production have very specific meanings within Industry Guide 7 (see www.sec.gov/about/forms/industryguides.pdf). These words/terms reference the development stage when preparing reserves for production, and the production stage when companies are engaged in commercial-scale, profit-oriented extraction of minerals. Since you do not disclose any reserves for these properties, as defined by Guide 7, please remove the terms develop, development or production throughout your document, and replace this terminology, as needed, with the terms such as explore or exploration.
- We note your disclosure of proven and probable reserves for [Mine A]. Please forward to our engineer, as supplemental information and not as part of your filing, your technical report or the information that establishes the legal, technical and economic feasibility of the materials designated as reserves, as required by paragraph (c) of Industry Guide 7. This information should include:
    - Acreage breakdown by owned, leased or other.
    - Maps showing property, mine permit and reserve boundaries; including recent and historic production areas.
    - Drill-hole maps showing drill intercepts.
    - Justifications for the drill hole spacing used at various classification levels.
    - General cross-sections that indicate the relationship between seams, geology, and topography.
    - A detailed description of your procedures for estimating reserves.
    - The specific criteria used to estimate reserves.
    - An indication of how many years are left in your longest-term mining plan for each reserve area.
    - Site specific economic justification for the criteria you used to estimate reserves.
    - Mining plans or feasibility studies, including production schedules, cost estimates and cash flow projections.
    - Third party reviews of your reserves that were developed within the last three years.
    - Any other information needed to establish legal, technical and economic feasibility.

The SEC staff often comments when a registrant has not separately disclosed proven and probable reserves in accordance with paragraph (a) of SEC Industry Guide 7. Under paragraph (b) of Guide 7, such reserves may be combined if "the difference in degree of assurance between the two classes of reserves cannot be readily defined."

Registrants should also ensure that they are appropriately using the terms "exploration stage," "development stage," and "production stage." These terms are explicitly defined in Section (a) of Guide 7.

Further, paragraph (c) of Guide 7 outlines the supplemental information that registrants should disclose "[i]f an estimate of proven (measured) or probable (indicated) reserves is set forth in the [technical] report." Such information includes (1) "maps drawn to scale showing any mine workings and the outlines of the reserve blocks involved together with the pertinent sample-assay thereon," (2) "all pertinent drill data and related maps," and (3) "the calculations whereby the basic sample-assay or drill data were translated into the estimates made [of] the grade and tonnage of reserves in each block and in the complete reserve estimate." Accordingly, the SEC staff may ask for supplemental information for proven and probable reserves. For example, the staff may ask registrants to furnish the technical report or the information that establishes the legal, technical, and economic feasibility of the materials designated as reserves.

Financial Services

Banking and Securities

The SEC staff's comments to registrants in the banking industry have moderated over the past couple of years; however, they continue to focus on (1) the estimation of allowances for loan losses, (2) disclosures about credit quality, (3) acquired loans, and (4) loan modifications and TDRs.

Further, registrants in the securities industry have received SEC staff comments requesting enhanced disclosures about (1) market risk and VaR, (2) asset management and administration fees, (3) order flow revenues and disclosures about license agreements, and (4) the impact of regulatory reporting errors on ICFR.

Allowance for Loan Losses — Collateral Appraisals

Example of an SEC Comment

Please revise your future filings to disclose whether your policy for obtaining appraisals for properties outside of [Country A] is consistent with your policies disclosed here for properties inside [Country A]. If not, disclose the similar policies for obtaining appraisals for properties outside of [Country A]. Additionally, please revise future filings to disclose whether your collateral valuations for construction or development projects that are in process contemplate collateral values "as is" or "as complete/developed."

To understand how registrants determine their allowance for loan losses, the SEC staff often requests disclosures about (1) their appraisal policies, including differences in those policies for various jurisdictions; (2) how frequently they obtain updated appraisals for impaired collateral-dependent loans; and (3) the types of adjustments made to appraised values, if any.

Disclosures About Credit Quality Under ASC 310-10

Example of an SEC Comment

[Please revise future filings to:]

1. [D]isclose the allowance for loan losses rollforward by portfolio segment. Refer to ASC 310-10-50-11B.c for guidance and provide us your planned disclosure in your response.
2. [D]isclose both the balance of your allowance for loan losses and your recorded investment in financing receivables by impairment method (e.g. collectively evaluated, individually evaluated) for each loan portfolio segment. Refer to ASC 310-10-50-11B(g) and (h), ASC 310-10-50-11C, and the example disclosure in ASC 310-10-55-7 for guidance and provide us your planned disclosure in your response.
3. [I]nclude all of the disclosure requirements of ASC 310-10-50-14A through [50-20] related to impaired loans and provide us your planned disclosure in your response.
4. [I]nclude all of the disclosure requirements of ASC 310-10-50-28 through [50-30] related to credit quality information and provide us your planned disclosure in your response.
5. [I]nclude the disclosure requirements of ASC 310-10-50-7(b) and [ASC] 310-10-50-7A regarding past due loans. Refer to ASC 310-10-55-9 for guidance and provide us your planned disclosure in your response.

The SEC staff continues to focus on the disclosures prescribed by ASC 310-10, particularly the granularity of those disclosures. ASC 310-10 requires entities to enhance and disaggregate their disclosures about the credit quality of their financing receivables and their allowance for credit losses.

Specifically, as indicated in ASU 2010-20, ASC 310-10 requires disclosure of the following information about credit exposure and reserving methodology on the basis of disaggregated portfolio segments and classes of financing receivables:

1. Credit quality indicators of financing receivables at the end of the reporting period by class of financing receivables
2. The aging of past due financing receivables at the end of the reporting period by class of financing receivables
3. The nature and extent of troubled debt restructurings that occurred during the period by class of financing receivables and their effect on the allowance for credit losses
4. The nature and extent of financing receivables modified as troubled debt restructurings within the previous 12 months that defaulted during the reporting period by class of financing receivables and their effect on the allowance for credit losses
5. Significant purchases and sales of financing receivables during the reporting period disaggregated by portfolio segment.

Acquired Loans

Example of an SEC Comment

[R]evise your future filings [as follows]:

- [P]lease enhance the relevant sections of your MD&A disclosures to disaggregate your allowance for credit losses and related asset quality disclosures[,] differentiating between your acquired loan portfolio for all periods presented and your originated loan portfolio. . . .
- [D]isclose how changes in the credit quality of your originated loan portfolio are reflected in the amount of your provision for loan loss[es] recorded during the period and the amount of the allowance for loan losses at period end . . . . Your analysis should quantify each loan portfolio component of your allowance for loan losses (ASC 310-10, ASC 450-20) and explain how incremental credit quality changes are reflected.

The SEC staff has requested disclosures that clearly distinguish between the registrant's originated loans and its acquired loans (both PCI and non-PCI) to enable financial statement users to understand the key characteristics of each portfolio and the related impact on the determination of the allowance for credit losses.

Loan Modifications and TDRs

Example of an SEC Comment

Please revise your disclosure in future filings to provide [information about your forbearance program as follows]:

- Clarify whether you have any limits on the number of times a borrower may request a modification of the terms of [its] loan. If not, please discuss how you consider multiple modifications in determining whether a loan has been renegotiated or refinanced.
- [S]eparately disclose the balance of loans that have received multiple modifications [and the balance of loans] that have received only one modification.
- [R]evise future filings to discuss how you consider the level of loans needing more than one modification as well as the level of re-defaults of refinanced or renegotiated loans when determining the appropriate level of allowance for loan losses. If you believe this disclosure is no longer meaningful, please tell us why.

The SEC staff continues to request enhanced disclosures about loan restructurings. The staff has also inquired about whether such restructurings should be accounted for as TDRs and therefore should be included in the registrant's risk element disclosures required by SEC Industry Guide 3.

The SEC staff has suggested that registrants consider disclosing:

- How modifications affect the timing of the recording of the allowance for loan losses.
- A description of the key features of the registrant's loan modification programs, including whether the programs are government- or company-sponsored and whether they are short- or long-term.
- How frequently loans are modified and remodified.
- More granular and quantitative information about the levels of loan modifications and remodifications.
- Quantification of the types of concessions made (e.g., rate reductions, payment extensions, forgiveness of principal, forbearance) and discussion of success with the different types of concessions.
- The accounting policy for restructured loans, including how and when a restructured loan is determined to be nonaccrual or accrual (i.e., noninterest accruing or interest accruing); the factors the registrant considered in determining whether the loan should accrue interest; the anticipated period and number of borrower payments for a restructured loan to return to accrual status; and whether any loan loss allowance has been recorded or any portion of the loan has been charged off.
- Confirmation of whether loan restructurings should be classified as TDRs under ASC 310-40 and, if so, separate disclosure of the loans in the nonperforming assets table under SEC Industry Guide 3, Item III(C)(1).
- TDRs by loan type, classified separately as accrual or nonaccrual.

In addition, if there are material changes in TDRs, the SEC staff may ask about such changes and request additional disclosures, including a rollforward detailing loan sales, payments, charge-offs, and loans that have been removed from TDR status.

Further, when a material amount of a registrant's loan modifications is not accounted for as TDRs, the SEC staff often requests disclosures that explain:

- Triggers and factors the registrant considered to identify loans to modify and to support its conclusion that modifications are not TDRs.
- Key features of the modification programs, including a description of the significant terms modified and the typical length of each modified term.
- Success rates of the modification programs.
- The amount of the loans modified in each period presented.
- Whether the modified loans are included in the registrant's impairment analysis of the general reserve (ASC 450-20) or individual reserve (ASC 310-10) and, if included in the general reserve analysis, whether a materially different amount would have resulted if the loans had been included in the individual reserve analysis.

In evaluating whether a loan modification represents a TDR, a registrant must use judgment to determine whether (1) the debtor (i.e., the borrower) is experiencing financial difficulty and (2) the lender has granted a concession to the borrower.

ASC 310-40 outlines considerations for determining whether a borrower is experiencing financial difficulties (e.g., debtor default, debtor bankruptcy, and concerns about the borrower's ability to continue as a going concern). Further, it clarifies that a borrower not currently in default could be experiencing financial difficulties if default is probable in the foreseeable future.

Disclosures About Market Risk and VaR

Example of an SEC Comment

We note that you made significant changes to your regulatory VaR and stressed-VaR models in 2013. We also observe . . . that certain significant variances in VaR measures from June 30, 2013 to September 30, 2013 were the result of changes made to your VaR models (i.e. you replaced relative or percentage changes in interest rate risk factors with absolute changes). Finally, we note that you have omitted comparative information for 2012 because of the changes made to your VaR models. Please explain to us and revise your future filings to address the following:

- Disclose comparative information for prior periods under the current model or additionally provide current and comparative information under the previous model until all reported periods are presented under the current model. Refer to Item 305(a)(1)(iii)(4)(ii) of Regulation S-K which requires the disclosure of both the old and new methods for the purposes of comparability.
- Explain to us your basis for making the changes to your VaR models (i.e. explain how this change has made your model more precise). Include in your explanation a description of any other changes made to your model and indicate which changes were the result of regulatory guidance.

The SEC continues to ask registrants in the banking and securities industries to provide enhanced quantitative and qualitative disclosures about market risk and VaR. In addition, the SEC staff may ask registrants to:

- Quantify the amount of the investment positions excluded from the VaR measure.
- Explain whether the VaR measure includes the market risk associated with securities sold but not yet purchased.
- Include comparative disclosures for the prior year, along with a discussion describing the reasons for material quantitative changes in market risk.
- Explain the reason for the length of the historical observation period used to calculate VaR-based measures.
- Identify whether VaR-based measures are based on regulatory or internal risk management parameters and include a description of the parameters used.
- Revise future filings to present information under a stressed-VaR scenario or to explain why this information would not be meaningful.

Asset Management and Administration Fees

Example of an SEC Comment

We note that a significant amount of your asset management and administration fees are generated from [your] money market funds, equity and bond funds, and [Mutual Fund A] (i.e. mutual fund service fees). In an effort to enhance your disclosure and provide greater transparency to investors, please revise your future filings to address the following:

- Provide a separate roll-forward of your assets under management and administration (AUM&A) for each asset class (as noted above). Your roll-forward should include, but not be limited to, gross in-flows and gross out-flows, market appreciation (depreciation), and the effects of foreign currency translations for each period provided.
- Disclose the average AUM&A for each asset class for each period provided. In addition, consider expanding your client metrics . . . to provide your average client assets.
- Provide an analysis (preferably in tabular format) comparing your weighted average fee rate charged (e.g. by basis points) for the aforementioned asset classes.
- Provide a discussion here, and elsewhere within your MD&A as necessary, of any significant trends experienced in AUM&A (e.g. new client assets or redemptions, significant changes between asset classes attributable to specific or general economic factors, etc.).

The SEC staff has asked registrants in the banking and securities industries to enhance their disclosure about asset management and administration fees to provide greater transparency to investors. Specifically, the staff has asked registrants to include (1) a separate rollforward of AUM for each asset class, and (2) the rollforwards that reflect gross inflows, gross outflows, and market appreciation (depreciation) separately from effects of foreign currency translations for each period. In addition, the SEC staff may ask registrants to present the net return on AUM for each period presented to give investors a better understanding of AUM performance.

Order Flow Revenues and Disclosures About License Agreements

Examples of SEC Comments

- It appears that order flow revenues have been a significant component of your "Other Revenue" line item in each of last three fiscal years. However, your disclosure does not indicate the amount of order flow payments or the amount of the change, year over year. We note that payments made to brokers by market venues were subject to a significant amount of public, press, regulatory and congressional scrutiny. Also, we note that on your website you provide customers with disclosure about the revenue per share you receive from various market venues. In order for investors to better understand the impact of order flow payments and any changes to the arrangements, please revise your disclosure in future filings to disclose the amounts of revenue generated from order flow in each period. Please discuss the major components of order flow revenues. Please also discuss the reasons for any material changes in order flow revenues, such as whether an increase was a result of a higher trade volume or a change in the fee structure paid by the market venues.
- We note from your disclosure . . . that licensing agreements in place with [Entities A, B, and C] expire in 2017, 2015 and 2015, respectively. Please tell us and, in future filings, consider discussing the impact that the expiration of these licenses could have on your business, to the extent that they are material individually or in the aggregate. In addition, in future filings, consider disclosing the expiration date of your license agreement with [Entity D] and include it in the discussion suggested above to the extent that [the license agreement] will expire in the near term.

Although other revenues and expenses may not typically be thought of as items that require additional disclosure, the SEC staff has asked registrants in the securities industry to identify significant components of other revenue and expense items that may be of interest, or may be material, to users.

Impact of Regulatory Reporting Errors on ICFR

Example of an SEC Comment

We note your disclosure that you applied an incorrect adjustment . . . , resulting in an overstatement of your historical regulatory capital ratios included in prior SEC filings and other regulatory reports. Additionally, . . . you filed an 8-K disclosing that a third party was engaged to perform certain procedures . . . , and that this review resulted in adjustments to your regulatory capital ratios . . . . Lastly, . . . a spokesperson for the company noted that you made an error in calculating the volume data you sent to FINRA regarding the equity volume transacted on your alternative trading system. In light of these errors noted in your SEC and other regulatory reporting, please provide us with the following additional information:

- Tell us whether the identification of the regulatory capital ratio error and subsequent adjustments are indicative of the existence of one or more material weaknesses in [ICFR], and, if so, whether any such material weaknesses also would have existed as of December 31, 2013;
- To the extent you identified significant deficiencies in your original assessment of ICFR as of December 31, 2013, tell us the nature of each, including the impacted component(s) of the [COSO] Internal Control Integrated Framework, and how you evaluated their severity individually and in the aggregate, including in aggregation with any deficiencies identified upon discovery of the above regulatory capital ratio errors, if applicable; and
- Upon discovery of the error related to alternative trading system volume in your regulatory reporting to FINRA, tell us the extent to which there may be common root causes to the errors in your regulatory capital ratio reporting that are relevant to the evaluation of the nature and severity of any deficiencies in ICFR (especially the control environment, risk assessment, or monitoring components of COSO).

Registrants should be aware that regulatory disclosures are a critical part of the financial statements and that the SEC staff asks issuers to determine how deficiencies in regulatory reporting affect ICFR.

Other Considerations

The SEC staff has asked registrants to explain, and disclose in future filings, (1) whether they have evaluated the impact of a decline in the market and (2) how their brokerage revenues and investment holdings would be affected.

For more information, see the Management’s Discussion and Analysis section.

Insurance

In many of its comments to registrants in the insurance industry, the SEC staff has continued to focus on (1) reserves and loss adjustment expense; (2) disclosures related to the current interest rate environment; and (3) various other considerations, including those related to statutory disclosures, disclosures about dividend restrictions, captive subsidiaries, and investments and financial instruments.

In addition to the insurance-related matters (discussed below), the SEC staff's comments to registrants in the insurance industry have focused on goodwill and income taxes. See the Impairments of Goodwill and Other Long-Lived Assets and Income Taxes sections for more information.

Reserves and Loss Adjustment Expense

Example of an SEC Comment

Please tell us the variations in loss and loss adjustment expenses for the appropriate periods that relate to prior year loss reserve development and provide proposed revised disclosure to be included in future periodic reports that discusses the amount and underlying causes of prior year loss development.

The SEC staff has asked registrants to discuss in the critical accounting policy section of their MD&A the drivers of change to their loss reserve, including assumptions that have changed and assumptions that are reasonably likely to change. In addition, the SEC staff continues to ask registrants to (1) explain the key methods and assumptions they used in deriving their loss adjustment expense and related reserves and (2) provide current disclosures that comply with the requirements of SEC Industry Guide 6.

Interest Rate Environment

Example of an SEC Comment

You state that the current low interest rate environment has meant that you have invested or reinvested cash flows at substantially lower yields than your existing portfolio yield, while your ability to reduce credited rates has been limited by contractual minimums. Please provide us proposed disclosure to be included, in MD&A, in future periodic reports that discloses the expected effects of this known trend or uncertainty on your future financial position, results of operations and cash flows. To the extent that information about cash flows you expect to have to reinvest at lower rates due to potential maturities or calls of your investments, or [information about] cash flows that you are committed to pay due to products with guaranteed features[,] is necessary to understand these effects, please include information such as the amount of maturing or callable investments and their weighted average yields and the amount of products with guaranteed features and their rates in your proposed disclosure.

Depending on the interest rate environment, the SEC staff may comment on effective interest rates and ask registrants to expand their disclosures about the expected effects of the interest rate environment and the impact of those effects on future financial information (e.g., financial position, results of operations, and cash flows).

Other Considerations

Statutory Disclosures and Disclosures About Dividend Restrictions

SEC staff comments to registrants in the insurance industry continue to focus on compliance with existing disclosure requirements about statutory capital, surplus, and dividend restrictions under ASC 944-505-50 and Regulation S-X, Rule 4-08(e). When registrants have used in their annual audited financial statements labels such as "Unaudited," "Approximate," or "Preliminary" to describe their statutory capital and surplus, the staff will remind them that these disclosures are required to be audited. Further, the staff has asked registrants to enhance disclosures on minimum capital and surplus requirements for both domestic and foreign subsidiaries.

The SEC staff has also asked registrants in the insurance industry about their compliance with Regulation S-X, Rules 4-08(e) and 7-05(c),[1] when there appear to be restrictions on the payment of dividends. In addition, registrants in the industry have been asked to provide additional information about the considerations underlying their determination of why they did not need to disclose information required under Rules 4-08(e) and 7-05(c). Further, the staff has reminded registrants that in applying Rule 4-08(e), they must consider foreign insurance operations and nonregulated subsidiaries in addition to U.S. domestic subsidiaries. See the Debt section for additional information.

Captive Subsidiaries

Many insurance entities have captive subsidiaries, which insure specific risks for the parent entity and its affiliates. These captive subsidiaries allow entities to manage their own risks and provide many advantages, including capital management benefits. The SEC staff has continued to request expanded disclosures about transactions between registrants in the insurance industry and their captive subsidiaries, such as the nature, purpose, and number of those transactions. Further, it has requested enhanced disclosures about the impact of captive subsidiaries on registrants' financial statements and about the risks and uncertainties associated with those subsidiaries.

Investments and Financial Instruments

Given the significance of investment portfolios to most registrants in the insurance industry, the SEC staff may ask such registrants about their investments and financial instruments and whether related disclosures portray their financial position accurately. Accordingly, the staff may concentrate on conclusions reached by management about the credit quality of investments and may ask registrants to summarize the procedures they performed (and other support they obtained) to make such determinations.

The SEC staff may also question registrants' disclosures about key drivers that affected their net derivative results. When there has been significant volatility in results for multiple periods, registrants may be asked to enhance their disclosures about the drivers of net derivative gains and losses.

[1] Rule 7-05(c) requires registrants in the insurance industry to file Schedule II if the rule's conditions are met. These conditions are identical to those under Regulation S-X, Rule 5-04, that govern whether a commercial company must file Schedule I. See the Debt section for information about Rule 5-04.

Investment Management

The SEC staff's recent comments to investment advisers and business development companies in the investment management industry have continued to focus on topics such as (1) fair value measurement, (2) risk oversight, (3) consolidation, and (4) commitments and contingencies. The staff has also commented on quantitative and qualitative disclosures about market risk. For more information about risk factors, see the Disclosures About Risk section.

In addition, the SEC's Office of Compliance Inspections and Examinations (OCIE) highlighted the examination priorities of the SEC's 2015 National Exam Program for investment advisers and investment companies, which include issues such as conflicts of interest and fund marketing and performance. This year, the OCIE's examination priorities are organized into three themes: (1) protecting retail investors and investors saving for retirement, (2) assessing market-wide risks, and (3) using data analytics to identify signals of potential illegal activity. For more information about these priorities, see the OCIE's 2015 National Exam Program.

Fair Value Measurement

Example of an SEC Comment

We note that you use valuations provided by third party pricing services as the basis for your fair value measurements for several different types of financial instruments. Please revise your future filings to disclose the procedures you perform to validate the valuations received from such third party pricing services.

The SEC staff continues to focus on fair value measurement and related disclosures in comments to investment advisers in the investment management industry. In particular, the SEC staff will frequently ask investment advisers to disclose additional qualitative information about their processes for determining fair value. Specifically, it will ask a registrant for additional information about (and, potentially, additional disclosures related to) Level 3 inputs, adjustments to quoted market prices, and investments for which the investment adviser's net asset value per share does not represent fair value. Further, the SEC staff has asked investment advisers to disclose additional information about the procedures they use to validate values obtained from external sources (e.g., broker quotes[2]). In addition, the SEC staff has often asked investment advisers to expand quantitative disclosures, such as a weighted average or range of inputs in the tabular disclosure of Level 3 unobservable inputs. For more information, see the Fair Value section.

Risk Oversight

Example of an SEC Comment

Please expand your risk management discussion to describe in more detail the various tools you use to monitor risk. You should address:

- Whether you have identified triggering events that require reports/communications to the committee;
- Whether you have a Chief Risk Officer and this person's role in the risk management process; and
- Potential challenges your organization faces in managing risk.

An Exchange Act registrant is required to disclose its board's risk management policies and procedures under Regulation S-K, Item 407(h). The SEC staff may ask an investment adviser in the investment management industry to elaborate on its board's risk management oversight of investment vehicles and to disclose additional information about the risk management responsibilities of board committees (e.g., the audit and compliance committees).

[2] For SEC staff remarks about the use of third-party pricing services to measure fair value, see Deloitte's December 14, 2011, *Heads Up*.

Consolidation

Example of an SEC Comment

We note your consolidation policy related to variable interest entities ("VIEs"). Please revise your future filings to address the following:

- Expand your disclosure to discuss how you assess your rights in determining if you have the power to direct the activities of the VIE that most significantly impact the [VIE's] economic performance.
- In your discussion of VIEs evaluated for consolidation that are not money market funds or investment companies you state that "when determining whether the Company stands to absorb the majority of a VIE's expected losses or receive a majority of [the] VIE's expected returns, if the Company determines it has control over the activities that most significantly impact the economic performance of the VIE and it will absorb a majority of the VIE's expected variability, [the Company] will consolidate the [VIE."] Explain how your disclosure here is consistent with the guidance in ASC 810-10-25-38.
- In your discussion of [VIEs] that will be consolidated when you have both the power to direct the activities of the VIE that most significantly impact the VIE's economic performance and the obligation to absorb losses or right to receive benefits that could potentially be significant to the VIE, clarify how the calculation of variability, based on an analysis of projected probability-weighted cash flows based on the design of a particular VIE, complies with the guidance in ASC 810-10-25-38A(b) in determining whether losses and benefits could potentially be significant to the VIE.
- Expand the examples of entities assessed for consolidation under the different frameworks described in your policy discussion . . . to increase transparency as to the basis for entities consolidated (e.g. [collateralized debt obligations], pooled investment vehicles, etc.).

Because VIEs are common in the investment management industry, the SEC staff continues to comment on management's conclusions regarding the consolidation or deconsolidation of VIEs and asks investment advisers to clarify why certain vehicles have been consolidated and others have not. The SEC staff frequently questions (1) the consolidation model applied to specific investments, (2) the qualitative and quantitative assessments used to determine the primary beneficiary, and (3) the related disclosures. For more information, see the Consolidation section.

Commitments and Contingencies

Example of an SEC Comment

In future financial statements, please include a line item for "Commitments and Contingencies," along with a reference directing the reader to the related footnote in the Company's Notes to Financial Statements . . . . See Regulation S-X Rule 6-04.15.

Business development companies have received SEC staff comments related to their financial statements. Recently, the SEC staff has focused on the requirements of Regulation S-X, Rule 6-04.15, and has asked business development companies to include a line item on the balance sheet for commitments and contingencies along with a reference to the related footnote.

Real Estate

The SEC staff's comments to registrants in the real estate industry have focused on topics such as (1) whether, for U.S. GAAP purposes, real estate acquisitions represent business combinations or asset acquisitions and whether, for SEC reporting purposes, a registrant has acquired a business or real estate operations; (2) leasing activities; (3) capitalization of real estate development, construction, and leasing costs; (4) non-GAAP financial measures; (5) liquidity considerations associated with distributions; and (6) consolidation.

In addition, in industries other than real estate, the SEC staff has observed a higher frequency of REIT transactions (e.g., conversions, spin-offs, and carve-outs) involving nontraditional real estate assets such as cell towers, data centers, and billboards. REITs holding nontraditional real estate assets have received staff comments suggesting that they should strive to comply with the spirit of the disclosure requirements prescribed for REITs that hold traditional real estate assets (e.g., requirements related to Schedule III,[3] portfolio occupancy, effective rents, material tenant concentrations, category and physical location of the assets, significant lease types, and lease expiration dates). REITs holding traditional real estate assets that provided insufficient disclosures have also received comments from the staff.

Real Estate Acquisitions

Examples of SEC Comments

- Please provide us with the results of the significance tests for your 2013 and 2014 acquisitions in accordance with Rule 3-14 of Regulation S-X. For each property acquisition where Rule 3-14 financial statements are required, please tell us where you have filed these financial statements.
- Please tell us and disclose your policy for determining whether the acquisition of real estate is a business or asset purchase and the result of that determination on how [you] record the cost of the transaction.

Regulation S-X, Rule 3-05, requires a registrant to provide full financial statements (and pro forma financial information) for significant acquired or to be acquired businesses. However, Regulation S-X, Rule 3-14, permits a registrant to file only abbreviated income statements (and pro forma financial information) for significant acquired or to be acquired real estate operations that meet certain requirements. Because the requirements of Rules 3-05 and 3-14 are different, it is important for a registrant to determine whether it acquired a real estate operation (see the SEC Reporting section for additional information about Rule 3-05). As a result, from an SEC reporting standpoint, the SEC staff may ask a registrant to provide an analysis supporting its conclusion that its acquisitions are real estate operations under Rule 3-14.

In addition, from an accounting standpoint, the SEC staff has asked registrants with material acquisitions to elaborate on their process and policies for determining whether the acquired assets, including acquired real estate that is subject to a lease, qualify as a business or an asset acquisition under U.S. GAAP. This determination is important because the accounting for an asset acquisition differs from the accounting for a business combination. In acquisitions accounted for as business combinations, all transaction costs must be expensed as incurred. In asset acquisitions, however, transaction costs are capitalized as part of the purchase price. The SEC staff has asked registrants to enhance their disclosures to discuss the accounting policies they apply to property acquisitions, including policies for allocating value to identified intangible assets and for recognizing acquisition-related costs.

[3] Under Regulation S-X, Rule 5-04, certain real estate companies are required to file a Schedule III that presents supplemental information about real estate investments and accumulated depreciation on a property-by-property basis in the manner prescribed by Regulation S-X, Rule 12-28.

Leasing Activities

Triple Net Leases

Examples of SEC Comments

- It appears that [Entity X] is a significant lessee of properties under a long-term triple-net lease. Please tell us how you determined it was not necessary to provide audited financial statements of [Entity X].
- We note that you have presented within . . . [Forms 8-K] summary financial information for [Entity X], [Entity Y] and [Entity Z], along with disclosure as to where audited financial statements could be located on the internet for these companies. Please tell us how you have complied with the applicable rules to provide financial statements of significant asset concentrations as these financial statements have not been filed pursuant to the Exchange Act.

In a triple net lease, a lessee is typically required to pay costs that are normally associated with ownership, such as property taxes, insurance, utilities, and maintenance costs. In accordance with Section 2340 of the FRM, a registrant that leases, under triple net leases, one or more properties to a single lessee may need to provide full audited financial statements of the lessee (or guarantor) for the periods required by Regulation S-X, Rules 3-01 and 3-02, if a determination was made that the properties represent a "significant" portion of the registrant's assets (i.e., more than 20 percent of the registrant's assets as of its most recent balance sheet date). Section 2340 further states that if the lessee is a public company subject to the periodic reporting obligations of the Exchange Act, a registrant that would otherwise be required to provide such full audited financial statements may instead include in its filing a statement that refers investors to a publicly available Web site containing financial statements the lessee filed with the SEC. Accordingly, when a registrant enters into a triple net lease and its filing does not include or refer to a lessee's financial statements, the SEC staff may request information related to the significance test performed to determine whether there is significant asset concentration. Similarly, the SEC staff will inquire about significant asset concentration when a registrant acquires a property that is subject to a triple net lease.

Disclosures About Rental Performance

Examples of SEC Comments

- In future Exchange Act periodic reports, please provide more detailed leasing statistics, including the amount of space available at the start of the period, the amount of lease expirations, the amount of new leases, the amount of renewals and the amount of vacant space at the end of the period. Additionally, please provide more detailed disclosure regarding tenant improvement costs and leasing commission costs for new leases.
- In future Exchange Act periodic reports, please include a discussion that compares new leases and renewed leases on previously leased properties to prior rents received. Such amounts should be adjusted for any tenant concessions provided, such as free rent.

Over the past few years, as rental rates in many markets have fluctuated, the SEC staff has commented about registrants' disclosures in MD&A of lease rollover trends, including changes in rental rates on lease renewals and new leases in the reporting period. For space expected to be re-leased over the next 12 months, the staff has commented on the difference between existing rents and current market rents to better understand registrants' current and future performance trends.

The SEC staff has also requested information about activity related to new and expiring leases and lease renewals during the reporting period, including:

- Square feet leased.
- Average rents.
- Per-square-foot costs associated with leasing (e.g., leasing commissions, tenant allowances, and tenant improvements).

See the Leases section for additional staff comments on leasing transactions.

Capitalization of Real Estate Development, Construction, and Leasing Costs

Examples of SEC Comments

- [C]onsider including in future filings a breakdown of your capital expenditures by type (new development, redevelopment/renovation, tenant improvements/allowances, CAM, etc.) and by period presented.
- In future filings, please expand your disclosure to clearly describe your capitalization policy as it relates to construction/development costs including interest, salaries and G&A, real estate taxes and any other significant amounts that are capitalized during the pre-acquisition phase and the construction phase including a discussion of when the capitalization period ends.

The SEC staff frequently asks registrants to enhance their disclosures about the capitalization of real estate development, construction, and leasing costs (including their accounting for these costs). For example, the SEC staff has asked registrants to clarify their accounting policy for capitalizing or deferring costs in accordance with ASC 835-20, ASC 840-20-25-16, and ASC 970-10. It has also requested quantitative disclosures of certain expenses that are being capitalized, such as soft costs (e.g., interest and payroll).

In addition, the SEC staff has asked registrants to expand their disclosures about capital expenditures (either on the face of the statement of cash flows or in MD&A) to separately disclose expenditures related to acquisitions, new development, redevelopment, and improvements to existing properties.

Non-GAAP Financial Measures

Examples of SEC Comments

- In future Exchange Act periodic reports, in order to illustrate for investors your internal earnings growth, please disclose period to period same store net operating income. Additionally, please disclose how you determine the properties that fall within the “same store” pool, including also a discussion of any properties that were excluded from the pool that were owned in all periods compared, and how you determined which revenues and expenses to include in determining NOI. For example, please explain if you include items such as tenant improvement and leasing commissions, ground rent, lease termination fees and marketing costs.
- In arriving at Funds from operations, you start with Net income available to common stockholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common stockholders instead of all equity stockholders. In future periodic filings please re-title “Funds from operations” to the more appropriate “Funds from operations attributable to common stockholders.”

The SEC staff has continued to comment on inconsistencies between (1) the key performance measures identified in press releases, earnings calls, and analyst presentations and (2) the non-GAAP financial measures disclosed in registrants’ SEC filings. Although the SEC filings of most REITs include FFO as defined by the National Association of Real Estate Investment Trusts (NAREIT), REIT communications to shareholders and analysts may use other performance measures, such as modified FFO, adjusted FFO, core FFO, EBITDA, NOI, or core earnings.[4] When these key performance measures are provided in other communications to investors, the SEC staff may ask registrants why such non-GAAP financial measures were not disclosed in their periodic reports (e.g., Forms 10-K and 10-Q).

In addition, the staff has recently issued comments on FFO disclosures that are inconsistent with NAREIT's definition of FFO. Many of these comments have specifically asked the registrant to confirm whether its FFO calculation is in accordance with NAREIT's definition of FFO and have focused on whether FFO is reported gross or net of noncontrolling interest adjustments. In situations in which the FFO calculation appears to consider noncontrolling interest adjustments and is simply labeled "FFO," the staff has asked registrants to update the labeling of the total to reflect "FFO attributable to common stockholders" or "FFO attributable to the company."

The SEC staff has also focused on non-GAAP performance metrics used in MD&A. The staff has requested clarification of how registrants define NOI to determine whether any additional property operating costs should be included. The SEC staff will often question whether the MD&A disclosure of period-to-period changes clarifies the impacts of same-property and non-same-property results, particularly when the discussion does not address the drivers of changes in the operating results (e.g., occupancy, rental rates) besides changes in the number of properties. To improve transparency, disclosures of "same-property NOI" should (1) be accompanied by a clear explanation of how the same-property pool is defined and determined and (2) highlight any changes in the pool from the prior reporting period, including the number of properties that were added to and removed from such metrics in any given year.

Over the past couple of years, the SEC staff has also requested additional information and disclosure about backlog from (1) real estate companies involved in engineering and construction and (2) home builders.

See the Backlog Disclosures, Management's Discussion and Analysis, and Non-GAAP Financial Measures and Key Metrics sections for additional information.

Liquidity and Capital Resources — Distributions

Example of an SEC Comment

In future Exchange Act periodic reports, please provide separate disclosure showing cash coverage and earnings coverage of distributions for the last fiscal year . . . . Highlight the relationship between total distributions paid, and cash flow from operations showing the source of any shortfall. In addition, show the relationship of the total distributions paid and earnings, net income or FFO. To the extent there is a shortfall in either cash flow from operations coverage or FFO . . . coverage, please specify the percentage coverage in a risk factor related to dividend coverage.

The SEC staff frequently requests disclosures that investors can use to evaluate the registrant's ability to maintain or increase its historical distribution yield. When GAAP cash flow from operations is insufficient to cover the total distributions paid during a particular period, the SEC staff may inquire about the cash resources used to cover the shortfall, such as borrowings or offering proceeds. Registrants should adequately disclose the risks associated with paying distributions in excess of GAAP cash flow from operations. In addition, the SEC staff may request disclosures that compare earnings (or FFO) with paid distributions, including amounts reinvested through a distribution reinvestment plan. The staff sometimes asks registrants to disclose these items on a cumulative basis so that financial statement users can better understand the relationship between earnings (or FFO) and distributions.

See the Management's Discussion and Analysis section for further discussion about liquidity and capital resources.

[4] See Questions 102.01 through 102.03 of the C&DIs on non-GAAP financial measures for additional information about FFO and NAREIT.

Consolidation

Example of an SEC Comment

Please clarify how you determined that you do not have a controlling interest in either of [your] joint ventures. Your disclosure . . . suggests that you are the managing member in each of the joint ventures and as such there would be a presumption of control by analogy to ASC 970-810-25-3.

The SEC staff continues to focus on registrants' involvements with VIEs and joint ventures and has inquired about consolidation assessments.

The SEC staff also routinely asks for additional information and disclosures about non-VIE joint ventures, particularly when (1) a registrant uses the equity method of accounting and either has a majority ownership interest or is the general partner or managing member or (2) the qualitative disclosures about such arrangements are not robust. Disclosures about these arrangements should include a discussion of the ownership structure as well as the governance provisions that led the registrant to conclude that it does not have a controlling financial interest in the joint venture. In addition, the SEC staff routinely asks for clearer qualitative disclosures when there are amendments to management agreements or changes in ownership structure or percentages that do not result in a change to a registrant's consolidation conclusion.

See the Consolidation section for further discussion about VIEs.

Health Sciences

Life Sciences

The SEC staff's comments to registrants in the life sciences industry have focused on topics such as (1) revenue recognition, (2) disclosures related to risk factors, (3) MD&A disclosures, (4) business combinations, and (5) commitments and contingencies.

Revenue Recognition

Collaborative Arrangements

Examples of SEC Comments

- In order to help us understand more fully how your collaborative arrangements impact your financial statements for each period presented, please provide us, in table format, the amounts . . . by year and by line item included in your statements of operations attributable to transactions arising from collaborative arrangements between you and the other participants and third-parties. Please provide separate tables for each of your "significant" collaborative arrangements and for all of your collaborative arrangements in the aggregate (i.e. the "significant" arrangements and all other arrangements). Present separately amounts with other participants and third-parties that are netted in a financial statement line item.
- You indicate that collaborative activities may include research and development, marketing and selling (including promotional activities and physician detailing), manufacturing, and distribution. Tell us your accounting policies regarding separation and allocation for your collaborative arrangements.
- Although you disclose your accounting policies for income you generate as a result of collaboration agreements under "revenue recognition" . . . , tell us your accounting recognition for other aspects of these arrangements and where these policies are disclosed.

Collaborative arrangements are common among biotech and pharmaceutical companies. ASC 808-10 provides guidance on the income statement presentation, classification, and disclosures related to collaborative arrangements but "does not address recognition or measurement matters related to collaborative arrangements, for example, determining the appropriate units of accounting, the appropriate recognition requirements for a given unit of accounting, or when the recognition criteria are met." As a result, the SEC staff often asks registrants in the industry about the nature of, and accounting for, their collaborative arrangements and has continued to probe them to better understand the basis for such accounting under U.S. GAAP.

Inquiries to registrants have focused on the registrant's conclusion about whether certain transactions with the collaboration partner represent true vendor-customer activities. Collaborative arrangements within the scope of ASC 808 are based on the premise that each party to the agreement assumes a proportionate share of risks and, therefore, a vendor-customer relationship does not exist. Even if the registrant concludes that it is a party to a collaborative agreement, however, there may be circumstances in which certain elements of the agreement represent activities that are similar to those in a vendor-customer relationship. Accordingly, the SEC staff seeks to understand the registrant's accounting policies regarding separation (i.e., unit of accounting) and allocation (i.e., when multiple units exist) for collaborative arrangements.

In addition, since collaborative arrangements often include up-front payments, royalty or profit-share payments, and expense reimbursements, the SEC staff has requested supplemental explanation of the registrant's determination and disclosure of (1) the separation, allocation, recognition, and classification principles that were used to account for payments between collaboration partners and (2) the factors that led the registrant to conclude that it is the principal (or agent) in transactions with third parties.

The SEC staff also has requested enhanced disclosures about registrants' collaborative agreements, including the overall effect of collaborative arrangements on the financial statements. Staff requests for such disclosures have focused on clearly describing the material terms of a collaborative arrangement, such as (1) each party's rights and obligations under the arrangement, (2) potential payments, (3) the existence of royalty provisions, and (4) duration and termination provisions. Further, the SEC staff has asked that registrants prepare a tabular summary to provide the staff with a composite disclosure of the financial statement impact of all collaborative arrangements. For all periods presented, the staff may request a separate table for each significant collaborative arrangement and a table for all collaborative arrangements in the aggregate; in addition, the staff may request separate presentation in such tables of amounts attributable to transactions with other participants and third parties that are presented net in a financial statement line item.

Further, the staff may ask registrants to file a material collaborative arrangement as an exhibit to their filing in accordance with Regulation S-K, Item 601(b)(10). For more discussion, see the Material Contracts section.

Milestones

Example of an SEC Comment

Your disclosure . . . lists the awarding of a license as an example of an appropriate milestone for revenue recognition. Please provide us with a detailed explanation of your basis for previously recognizing this revenue, including the specific milestones previously reached that made recognition of the revenue on the affected contracts appropriate. Also, please clarify your ongoing revenue recognition policy in terms of when it is appropriate to recognize revenue prior to obtain[ing] a license.

The SEC staff has continued to comment on disclosures related to the milestone method of revenue recognition under ASC 605-28. When such disclosures apply, the staff will review the registrant's filings to determine whether they contain the following disclosures outlined in ASC 605-28-50-2:

a. A description of the overall arrangement

b. A description of each milestone and related contingent consideration

c. A determination of whether each milestone is considered substantive

d. The factors that the entity considered in determining whether the milestone or milestones are substantive

e. The amount of consideration recognized during the period for the milestone or milestones.

Registrants in the industry will often make adjustments for milestones when determining non-GAAP income. For a discussion of adjustments made by registrants when determining their non-GAAP measures, see the Non-GAAP Financial Measures and Key Metrics section.

Multiple-Element Arrangements

Example of an SEC Comment

You disclose that you recognize revenue from the licensing of product rights and the performance of research or selling activities over the periods earned. Please tell us the amounts of each of these streams of [revenue] you recognized in each of the last three years and address the following:

- Tell us your consideration for disclosing each revenue stream separately under Item 5-03.1 of Regulation S-X;
- Tell us your consideration for disclosing the terms of any material arrangements under which these revenues are earned; and
- To the extent these streams are material, provide us proposed revised policy disclosure to be provided in future periodic reports that clarifies how you recognize these revenues "over the periods earned."

The SEC staff often asks registrants in the life sciences industry to expand or clarify their disclosures about multiple-element arrangements, particularly those involving licenses of product rights and other deliverables. Registrants could improve their required disclosures about the nature and terms of such arrangements by (1) separating the description of the obligations and rights from the discussion of how they were accounted for, (2) ensuring that the description is complete (i.e., that all material terms are disclosed for each revenue stream), and (3) precisely describing the rights conveyed by the license.

In addition, the staff has reminded registrants that they should explicitly identify each deliverable in the arrangement and explain why it represents (or does not represent) a separate unit of accounting. The staff has also suggested that registrants could improve their disclosures about the relative selling price method of allocating arrangement consideration by (1) quantifying the total arrangement consideration to be allocated, (2) identifying the amount of consideration allocated to each unit of accounting, and (3) explaining how the estimated selling price for each unit was determined (including the significant assumptions used). For more information about multiple-element arrangements and other revenue-related considerations, see the Revenue Recognition section.

Risk Factors

Example of an SEC Comment

You disclose your plan to initially conduct further clinical trials in Europe and that you intend to put off any clinical trials in the United State until 2015. Accordingly, please also discuss here any risks to your product development and domestic commercialization strategy from conducting trials outside of the United States. For example, you should address the possibility that the FDA may not accept the results of such trials and how such lack of acceptance could impact the regulatory approval process.

The SEC staff recently issued several comments on risk factors related to product development. More specifically, when registrants have used boilerplate language for risk factor disclosures, the staff has commented that risk factor disclosures should focus on providing additional detail specifically related to the registrant and the risks associated with the registrant's product development. In addition, the staff has asked registrants to explain how they would be affected by such risks if those risks came to pass.

MD&A Disclosures

R&D Expenses

> **Example of an SEC Comment**
>
> Please revise your disclosure to disclose the costs incurred during each period presented and to date for each of your research and development projects. If you do not maintain any research and development costs by project, disclose that fact and explain why you do not maintain and evaluate research and development costs by project and provide other quantitative or qualitative disclosure that indicates the amount of your resources being used on each of your projects.

The SEC staff has asked registrants in the life sciences industry to expand their disclosures about internal R&D expenses and estimated future expenses beyond those required under ASC 730-10. In addition to disclosing the types of activities and elements included in R&D expenses and the amount of R&D expenses incurred during each reporting period, registrants may be asked to revise their MD&A (and Business section) to include information about each major R&D project. If registrants do not maintain information about R&D costs by project or program, they may be asked to explain why.

Registrants must carefully consider whether their R&D projects are significant enough to warrant disclosure and whether the timing of the costs associated with the projects can be reasonably estimated. Registrants involved in late-stage clinical trials should consider expanding their disclosures about such projects to reflect the uncertainty of ultimate regulatory approval and commercial success.

The SEC staff may also ask a registrant to include, in its contractual obligations table in MD&A, commitments to make payments for R&D contractual relationships. See the Management's Discussion and Analysis section for more information about the contractual obligations table.

Revenue Adjustments

> **Examples of SEC Comments**
>
> - We believe that your disclosure related to estimates of items that reduce revenues such as product returns, chargebacks, rebates and other sales deductions could be improved. . . . [P]lease provide us a revised table to be included in future periodic reports that presents the following:
>   - Current provision related to sales made in current period,
>   - Current provision related to sales made in prior periods,
>   - Actual returns or credits in current period related to sales made in current period, and
>   - Actual returns or credits in current period related to sales made in prior periods[.]
> - [P]lease provide us disclosure to be provided in future periodic reports that discusses the amount of and reason for fluctuations for each type of reduction of revenue (i.e. product returns, chargebacks, rebates and other sales deductions) including the effect that changes in your estimates of these items had on your sales and operations.

The SEC staff has asked registrants to expand their MD&A disclosure related to the reductions in revenue incurred as a result of product returns, chargebacks, rebates, and other revenue adjustments. Enhancement requests have focused on (1) describing in tabular format the period-over-period fluctuations that occurred and (2) disclosures describing the reasons for changes, such as changes in pricing strategies or changes in contracts. Further, the SEC staff has asked registrants to clarify the period to which their recorded provisions or processed credits apply.

Patents

Examples of SEC Comments

- We note your disclosure regarding your patent portfolio which you have provided in bullet point format . . . . Please revise your disclosure regarding your patents and patent applications to provide the following information:
    - Please specify which of your patents and [patent] applications are owned and which are licensed. For the patents and patent applications which are licensed, please specify from whom they are licensed;
    - Please disclose in which jurisdictions your patents have been granted and which jurisdictions your patent applications are currently pending. In this regard we note that you provide this information in some of your bullet points but not in others; and
    - Please provide the expected expiration dates if your pending patent applications are approved. Please provide this information separately from the expiration dates of your approved patents where applicable.
- Please tell us, and disclose in future filings, when the patents . . . expire. In this regard, please tell us which patents, if any, expired and will expire in the near future that are resulting in or are likely to result in material competition from generic products; include in your response the portion of your revenue and income derived from those patents.

The SEC staff has regularly commented on life sciences registrants' disclosure of patents, particularly on patent exclusivity of their products in U.S. and foreign jurisdictions and the impact of such exclusivity on revenues and overall operations. Patent expiration and challenges can affect not only a registrant's current-period earnings but also its future operations and liquidity, particularly if the patents are for core products. Registrants should consider Regulation S-K, Items 101 and 503(c), respectively, for guidance on (1) disclosing patent information in the Business section of their periodic filings and (2) discussing patent expiration and challenges as possible risk factors in their annual reports. In addition, the SEC staff has requested information on the subject matter, type of patent coverage (e.g., method of use, composition of matter), and jurisdiction of a registrant's patents.

Liquidity

Examples of SEC Comments

- We note your disclosure that a significant amount of your earnings occur outside the U.S., and that non-U.S. subsidiaries hold funds that are indefinitely reinvested there and that are available for use by your non-U.S. operations. However, it appears from your disclosure . . . that you intend to borrow these funds from your non-U.S. subsidiaries.
- You disclose that during fiscal 2014, 2013 and 2012, you provided for U.S. and non-U.S. income and withholding taxes in the amount of $[X], $[X] and $[X], respectively, on earnings that were or are intended to be repatriated. You further indicate that, in general, the remaining earnings of your subsidiaries are considered to be permanently reinvested and that you have approximately $[X] of undistributed earnings that are considered to be permanently reinvested. Please quantify the amounts repatriated for each period presented and tell us the facts and circumstances for repatriating your subsidiaries earnings.

Life sciences companies typically have manufacturing and distribution sites, as well as holding company subsidiaries, domiciled in countries with favorable tax rates. If a life sciences registrant discloses that it will reinvest undistributed earnings of its foreign subsidiaries indefinitely, the SEC staff is likely to examine the registrant's liquidity disclosure to determine whether its cash holdings are sufficient to meet its long- and short-term liquidity needs. Therefore, the disclosures in the liquidity section of MD&A about how the registrant plans to meet its funding obligations should be clear and robust. See the Income Taxes section for additional information.

Business Combinations

> **Example of an SEC Comment**
>
> You state that you acquired no significant processes in your . . . acquisition of all of the outstanding shares of [Company A]. Please provide your analysis supporting this conclusion and that this was not an acquisition of a business. Refer to ASC 805-10-55-4 through [55-9].

In recent years, the life sciences industry has seen an increase in M&A activity. While many entities in the industry have sought ways to expand their pipeline of products in development or acquire additional commercial products, others have explored how to generate additional returns on assets that are no longer a strategic focus.

Accounting for a transaction as a business combination differs significantly from accounting for a transaction as an asset acquisition. For example, whereas an entity would capitalize acquired IPR&D and recognize the fair value of contingent consideration and goodwill in a business combination, it would expense acquired IPR&D and not recognize contingent consideration and goodwill in an asset acquisition. Consequently, when acquisitions occur, it is important to determine whether what is being acquired meets the definition of a business under ASC 805. Accordingly, the SEC staff often issues comments related to whether the acquired set meets the definition of a business and further inquires about the basis for the registrant's conclusion.

In addition, in business combinations involving the acquisition of intangible assets, acquirers must determine the useful life of each intangible asset acquired. Because the intangible assets acquired are typically the patent rights to a product or potential product, most life sciences companies begin their analysis by considering the patent life of the underlying product. However, useful life could be affected by other factors, such as the risk of competition from branded or generic products before the company's patent expires or a high barrier to market entry even after the company's patent expires. Therefore, the SEC staff has asked registrants to provide additional analysis that explains the basis for their conclusions about the useful lives of acquired intangible assets.

For additional accounting and reporting considerations related to acquisitions, see the Business Combinations section.

Commitments and Contingencies

Example of an SEC Comment

Please summarize for us your potential milestone and royalty payments related to your collaborations and explain why these potential payments are excluded from the Contractual Obligations and Commitments table. Refer to Item 303(a)(5) of Regulation S-X.

Pharmaceutical and medical device companies often enter into licensing arrangements that include up-front payments and royalty or profit-share payments contingent on the occurrence of certain future events linked to the success of the asset in development. The SEC staff often comments on life sciences registrants' disclosures about these commitments and contingencies associated with payments due to licensors of intellectual property. Registrants can improve such disclosures by disclosing the nature, timing, and amount of contingent milestone and royalty payments, including the factors that trigger payment. For additional accounting and disclosure considerations related to contingencies, see the Contingencies section.

Other Deloitte Resources

March 2015, *Life Sciences: Accounting and Financial Reporting Update — Including Interpretive Guidance*.

Health Plans

The SEC staff's recent comments to health plan registrants have focused mainly on (1) accounting for risk adjustment, reinsurance, and risk corridor programs (the "three Rs") and (2) statutory disclosures. Like other registrants, health plan registrants have also continued to receive comments related to MD&A, contingencies, goodwill impairment, and revenue recognition. For more information on these topics, see the Management's Discussion and Analysis, Contingencies, Impairments of Goodwill and Other Long-Lived Assets, and Revenue Recognition sections.

In addition, because health plan registrants are primarily engaged in offering health care insurance products, SEC staff comments to registrants in the insurance industry may also apply to health plans. For more information, see the Insurance section.

Accounting for the Three Rs

Example of an SEC Comment

Please provide us with your accounting policy for the risk corridor, reinsurance and risk adjustment ("three Rs") that you reference . . . . Please also tell us the amounts you have recorded for each item as well as for the reinsurance fee assessment.

The Patient Protection and Affordable Care Act (PPACA) provided for the establishment of three premium stabilization programs. Commonly referred to as the three Rs, these programs became effective on January 1, 2014, and consist of the following:

- *Risk adjustment program* — This program is designed to enable health insurers to price and offer policies to individuals and small groups without regard to the health status of individual policyholders or group members. It is the only permanent program among the three Rs.
- *Reinsurance program* — Designed as a temporary measure for the 2014–2016 calendar years, the reinsurance program aims to mitigate the effects of a potential increase in the number of large claims filed by policyholders in the individual health care insurance market.

- *Risk corridor program* — Like the reinsurance program, the risk corridor program was designed to be a temporary measure for the 2014–2016 calendar years. Its purpose is to help protect health care insurers from variability in the individual and small group markets by limiting gains and losses. The program applies only to qualified health plans established under the PPACA in the individual and small-group markets.

Similar risk adjustment provisions may also exist in registrants' insurance plan contracts that are not subject to the PPACA.

The SEC staff has asked health plan registrants about their accounting policies and recorded amounts related to the three Rs as well as the method they used to determine such amounts.

Statutory Disclosures

Example of an SEC Comment

Please provide us disclosure to be included in future periodic reports of the restricted net assets for your subsidiaries as of the balance sheet date or otherwise provide disclosure that complies with the objective in Rule 4-08(e)(3)(ii) of Regulation S-X such as disclosing the amount available from these subsidiaries. In this regard, you indicate that dividends received from your regulated subsidiaries are a source of liquidity.

Regulation S-X, Rule 4-08(e)(3), requires footnote disclosure in the consolidated financial statements about the nature and amount of significant third-party restrictions on the ability of subsidiaries to transfer funds to the registrant if restricted net assets of consolidated subsidiaries and equity method investees exceed 25 percent of consolidated net assets. The SEC staff has commented when disclosures required under ASC 944-505 (e.g., disclosures about statutory requirements related to minimum capital standards and certain restricted accounts or assets that may limit payment of dividends) and Rule 4-08(e) are incomplete or missing. In addition, the SEC staff has reminded health plan registrants that disclosures under ASC 944-505 should not be labeled as unaudited. For more information, see the Debt and Insurance sections.

Technology and Telecommunications

Technology

Over the past year, the technology industry has seen a continued high volume of initial public offering (IPO) filings in both domestic and foreign markets. As the amount of capital available to the technology industry rises, business models in various sectors of the industry keep evolving, leading to a need for more robust and transparent disclosures about (1) how companies in those sectors earn revenue and (2) the related critical accounting policies and estimates. Accordingly, when the SEC staff reviews IPO and annual financial report filings, it continues to focus largely on matters related to revenue recognition, including (1) accounting policies and disclosures regarding multiple-element arrangements, (2) gross versus net reporting, and (3) accounting for nonrefundable up-front fees. In addition, the staff has focused on registrants' use of key metrics in MD&A. See the Revenue Recognition section for more information about SEC staff comments on revenue-related topics.

In addition, SEC staff comments to registrants in the technology industry, like those received by registrants in other industries, have concentrated on disclosures about contingencies, income taxes, segment determination, and share-based compensation. See the Contingencies, Income Taxes, Segment Reporting, and Share-Based Payments sections for additional information about such comments.

Revenue Recognition — Multiple-Element Arrangements

Accounting Policies and Disclosures Regarding Multiple-Element Arrangements

Examples of SEC Comments

- Please explain to us how you apply FASB ASC 605-25-30, which requires arrangement consideration to be allocated based on the relative selling price to all deliverables in your multiple element arrangements. Please identify each unit of accounting and discuss how you determine the selling price for each deliverable under FASB ASC 605-25-30-2. Please also include clarifying disclosure in future filings.
- We note your disclosure that implementation services that are delivered prior to the customer being able to use the platform do not have stand-alone value and are recognized over the longer of the life of the subscription or the expected life of the customer relationship. Please explain your basis for concluding that these services do not have [stand-alone] value and tell us how you considered ASC 605-25-25-5(a). In this regard, we note that you disclose that these services can be provided by the Company, third-party service providers or distributors.
- Disclose how you are allocating the arrangement fee to each element or deliverable identified in an arrangement. Further, describe how you account for [one or more arrangements] with a customer that [contain] software-related and non-software related elements, if any. We refer you to ASC 985-605-15-4A.

Under ASC 605-25, consideration in multiple-element arrangements must be allocated to the deliverables on the basis of their relative selling price. To determine the selling price of each deliverable, entities apply a hierarchy that requires them to use vendor-specific objective evidence (VSOE) if available, third-party evidence (TPE) if VSOE is not available, or their best estimate of the selling price if neither VSOE nor TPE is available. The SEC staff focuses on how technology registrants allocate consideration to elements in such arrangements and may request additional information about the factors, inputs, and assumptions used to determine the selling price of each element.

Given the prevalence of multiple-element arrangements in the industry, when the SEC staff reviews the filings of technology registrants, it may comment on the manner in which revenue is measured and recognized in such arrangements as well as on the related disclosures. Historically, registrants have been asked to clarify the descriptions of the elements or deliverables in an arrangement, how they determined that deliverables have stand-alone value, and the timing of each element's delivery or performance.

For multiple-element arrangements that include tangible products containing software, the staff may ask registrants to clarify the accounting guidance they applied and how they determined whether a tangible product's software components and nonsoftware components function together to deliver its essential functionality (and are therefore outside the scope of the guidance in ASC 985-605). Accordingly, registrants should (1) carefully consider all facts when determining the appropriate accounting guidance to apply to arrangements that involve tangible products containing software and (2) clearly and adequately disclose the guidance they applied to such arrangements.

Disclosures About VSOE

> **Example of an SEC Comment**
>
> You indicate that you have established VSOE for consulting days, training and software support, except for software support bundled with time-based licenses, based on separate stand-alone sales of these elements. Please describe in greater detail the methodology for establishing VSOE for these arrangements, including the volume and range of [stand-alone] sales used to establish VSOE. We refer you to ASC 985-605-25.

Establishing VSOE of fair value can significantly affect how revenue is recognized under ASC 985-605. To recognize revenue for a delivered element (e.g., a software license) in a software arrangement, a vendor must first establish VSOE for any undelivered elements (e.g., postcontract customer support (PCS) or professional services). If the vendor cannot establish VSOE of fair value for undelivered elements, it generally must defer all revenue in the arrangement until VSOE is established, the undelivered elements are delivered, or the last remaining deliverable is PCS.

The SEC staff periodically asks registrants that have multiple-element arrangements within the scope of ASC 985-605 — many of which are undergoing IPOs — to expand their disclosures about how they determined VSOE. The additional information may include:

- The percentage of customers that renew at contractually stated rates for PCS and how the rates are substantive when contractually stated renewal rates are used to establish VSOE.
- An explanation of how the registrant determined VSOE if it does not use stated renewal rates or a bell-curve analysis of stand-alone sales to establish VSOE.
- A description of the process used to evaluate the various factors that affect VSOE.
- A quantitative description of the volume and range of stand-alone sales used to establish VSOE and how the registrant accounts for contracts whose sales volume falls outside that range.
- A description of how VSOE is determined when different levels of renewable rates exist.
- An explanation of why the registrant believes that it cannot determine VSOE for its undelivered elements if it accounts for software arrangement elements ratably because they are not separated.
- An explanation of why the registrant could not determine VSOE in prior years and, in cases in which VSOE is first established or is reestablished, what changes arose in the current year.

Revenue Recognition — Gross Versus Net Reporting

Under ASC 605-45, an entity should report revenue on a gross basis when it is acting as the principal of the transaction and on a net basis when acting as an agent to the transaction; applying this guidance often requires careful consideration and judgment. Although ASC 605-45 refers to eight indicators of gross reporting, the SEC staff has placed a higher emphasis on (1) which party is the primary obligor to the transaction and (2) which party has general inventory risk.

Determining the principal in an online transaction is challenging for technology companies, particularly those engaging in transactions related to software as a service (SaaS), online gaming, or online advertising, since there is no tangible product (and, in some instances, transactions are executed almost instantaneously). Because these types of arrangements have become more prevalent, they are topics of increased SEC staff focus.

At the 2014 AICPA Conference, the SEC staff discussed challenges related to determining whether an entity is a principal or an agent under ASC 605-45 when the guidance is applied to emerging business models, such as digital advertising. The staff observed that this analysis should generally begin with the identification of a "deliverable" in the transaction and the party ultimately responsible for its fulfillment. In this regard, the staff may scrutinize the deliverable identified by a registrant and consider all available information (e.g., MD&A, Web sites, marketing materials, contractual arrangements) in evaluating the reasonableness of this determination. Further, the staff noted that the deliverable that is ultimately identified for ASC 605-45 application purposes should be consistent with the deliverable that is subsequently evaluated for revenue recognition purposes.

In its discussion of principal-versus-agent considerations at the 2014 AICPA Conference, the SEC staff also indicated that it is likely to focus on a registrant's assessment of the primary obligor and general inventory risk indicators under ASC 605-45. If the identity of the primary obligor is unclear, the staff may focus its analysis on other factors, such as general inventory risk and latitude in establishing pricing. The staff also noted that latitude in establishing pricing should be evaluated in the context of any "economic constraints" in accordance with ASC 605-45.

SaaS and Online Gaming

Example of an SEC Comment

We note . . . that you believe the second type of arrangement is not within the scope of ASC 605-45. Please clarify whether the partner's customer will enter into any agreement or licensing rights with you to have the right to access your software. Indicate whether the partner's customer will seek remedy from your partner or you. That is, tell us whom the partner's customer will consider responsible for the acceptability and fulfillment of the services. Describe how any marketing materials or other representations made in executing these arrangements describe your role. Your response should address how you considered that you are hosting and providing the services that the customers want.

SaaS and online gaming companies often use operator or reseller partners to target new markets. Questions arise about which party is the primary obligor (i.e., the party responsible for providing the product or service desired by the customer). The SEC staff has challenged the conclusions of various SaaS and online gaming companies (and their resellers) about the appropriateness of gross or net reporting for their transactions and has asked such registrants to provide additional analysis with an emphasis on the factors outlined in ASC 605-45-45. The staff may also request additional disclosures about the nature of these transactions and the role of each of the parties.

Online Advertising

> **Example of an SEC Comment**
>
> We note that you recognize advertising revenue from customers that are advertising networks on a net basis, while advertising revenues earned directly from advertisers are recognized on a gross basis. Also we note your agreements with [Company X] and [Company Y] executed in September and October 2013, respectively. With the agreements you have apparently transferred the primary responsibility to fill substantially all website advertising inventory to [X] and mobile advertising inventory to [Y]. Further both [X] and [Y] will pay for all advertising requests regardless of their ability to fill the inventory. In light of the arrangements, please explain how you have considered whether your website and mobile advertising revenue should be recognized on a gross or net basis under ASC 605-45-45.

Like other forms of advertising, online advertising often involves at least three parties:

- An owner/operator of the online content (a "publisher") that provides the online space or search engine results in which advertising content may be placed.
- A party (an "advertiser") that desires to place the advertising content.
- A third-party service provider (e.g., an "advertising agency").

In addition, there are many companies that offer various technologies and solutions to help advertisers and publishers in what is commonly referred to as the "ad tech" industry. These include "ad networks" or "demand-side platforms," "ad exchanges," and "supply-side platforms."

A registrant that has entered into an online advertising arrangement needs to evaluate the terms of the arrangement and the responsibilities of each of the parties to the agreement to determine whether it should report revenues on a gross or net basis. As a result, the SEC staff may review the contractual terms and marketing materials related to the transaction to determine the nature of the deliverable and the party ultimately responsible for fulfillment. For example, it may be challenging for an advertising agency to conclude that it is the primary obligor (and therefore the principal) if it cannot demonstrate that it is responsible for displaying the advertising content but instead appears to be acting as an agent by matching advertisers with publishers. On the other hand — to understand whether, for example, a demand-side platform is the principal — the SEC staff often seeks to understand contractual terms (among other factors) to determine whether there are sufficient economic and fulfillment risks analogous to inventory risk. Accordingly, the SEC staff may review the contractual agreements with advertisers to understand whether the demand-side platform provided a firm commitment to deliver a certain amount of advertising space at fixed pricing by means of contractual insertion orders (a common contractual form used in the online advertising industry).

Because of the complexity and judgments associated with determining whether to record revenues on a gross or net basis, technology registrants should (1) thoroughly document the basis for their conclusions and (2) consider whether additional disclosures would be appropriate for investors.

Revenue Recognition — Accounting for Nonrefundable Up-Front Fees

Example of an SEC Comment

We note that your [Segment X] business recognizes nonrefundable setup fees as services are performed. Please tell us whether the setup fees have standalone value. Refer to ASC 605-25-25-5(a). If they do not have standalone value, please tell us how you determined that recognition of revenue as services are performed is appropriate. Refer to footnote 39 of SAB Topic [13.A.3(f)].

SAB Topic 13.A.3(f) provides guidance on the accounting for nonrefundable up-front fees. In the technology industry, up-front fees often exist in hosting or SaaS arrangements. These fees, which are typically charged together with a subscription fee for the hosting or SaaS services, cover items such as training, connection services, data migration, and other implementation services. Entities entering into such arrangements are generally required to determine whether the activities associated with the up-front fees and those related to the ongoing hosting or SaaS services are separate units of accounting in a multiple-element arrangement under ASC 605-25. To make this determination, entities must assess whether the activities associated with the up-front fees have stand-alone value and can therefore be regarded as a separate unit of accounting. In assessing stand-alone value, entities need to consider whether such activities are sold separately by any vendor or whether the customer can resell any products or services received.

When the activities associated with an up-front fee and the hosting or SaaS services are treated as a single unit of accounting under ASC 605-25, registrants apply the guidance in SAB Topic 13.A.3(f) to determine an appropriate accounting policy for recognizing revenue related to the up-front fee. Under that guidance, "[u]nless the up-front fee is in exchange for products delivered or services performed that represent the culmination of a separate earnings process," revenue is typically deferred and recognized over the period in which the up-front fee is earned, which may extend beyond the initial contract term.

Footnote 39 of SAB Topic 13.A.3(f) states that the "revenue recognition period should extend beyond the initial contractual period if the relationship with the customer is expected to extend beyond the initial term and the customer continues to benefit from the payment of the up-front fee." The SEC staff has asked registrants about their accounting policies for recognizing revenue in these circumstances. Specifically, it has focused on the period during which registrants recognize revenue for up-front fees, particularly when revenue is recognized either immediately or over the initial contract period despite indications that the relationship with the customer may extend beyond that period.

Disclosures About Key Metrics in MD&A

Examples of SEC Comments

- We note . . . that you expect to significantly increase your subscription base and the annual value per subscription, which you state will ultimately drive billings growth. Considering your transition to cloud based and flexible licenses in fiscal 2014, tell us how you considered providing quantification of your subscription base and annual value per subscription as key metrics in analyzing revenues. We refer you to . . . Section III.B.1 of SEC Release 33-8350.
- We note you provide information regarding the cumulative number of customers that have made at least one purchase since inception of your business and that you believe this metric helps you understand the activity rate of your subscribers. Please explain further why you believe this information is meaningful to your investors and how this metric relates to your results of operations. For example, based on your description, it appears the cumulative number of customers is a metric that is always going to increase and does not factor in currently active or inactive customers. Similar concerns apply to your metric regarding the cumulative number of repeat customers. Please advise.

Technology registrants often use metrics to convey information to their investors. Because there are various types of registrants in the industry (i.e., offering a broad range of products and services), there is diversity in metrics discussed in registrants' earnings calls, registration statements, and periodic filings. Examples of metrics common to registrants in the technology industry include (1) number of "likes," (2) revenue per user, (3) daily or monthly active users, and (4) weighted average duration of contracts. The SEC staff has questioned registrants when certain metrics are not explained in MD&A, changes are not appropriately quantified, and it is unclear whether metrics represent key performance indicators. Accordingly, the staff may ask registrants to provide a detailed quantitative and qualitative discussion and analysis of the impact of changes in their key metrics disclosed in MD&A, in a manner consistent with Sections III.B.1 and III.B.2 in SEC Release No. 33-8350 and Regulation S-K, Item 303(a)(3)(iii). In addition, registrants that have not already done so are asked to provide disclosures in MD&A to discuss why the metrics were chosen, how they are used, and any inherent limitations in the metrics selected.

Because of the vast volume of the metrics used, the SEC staff has been concerned that (1) metrics may not be presented with appropriate context and (2) the link between registrants' key metrics and their income and future profitably may not be clear. Registrants should review their metrics to ensure that the metrics portray a balanced discussion and remain relevant. If that is not the case, registrants should consider removing metrics (or replacing them with new ones).

Other Deloitte Resources

December 15, 2014, *Heads Up*, "Highlights of the 2014 AICPA Conference on Current SEC and PCAOB Developments."

Telecommunications

The SEC staff's comments to registrants in the telecommunications industry have focused on topics such as revenue recognition and long-lived asset impairment.

Revenue Recognition

Examples of SEC Comments

- While your disclosure addresses the basic revenue recognition criteria related to product sales, it is not clear when delivery typically occurs and when the related revenues are typically recognized. . . . Please tell us what consideration was given to disclosing the general timing of delivery or performance of service and the general timing of revenue recognition for product sales. Please refer to ASC 605-25-50-2.
- Tell us and explain why [Product A shipments] were not recognized as revenues. It is unclear from the Critical Accounting and Estimates section of the MD&A what revenue recognition criteria were not met. In addition, tell us in detail the nature of your sell-through to end users and how you are accounting for such sales.

The SEC staff often asks registrants in the telecommunications industry to expand or clarify their disclosures about revenue recognition. For example, the SEC staff may ask registrants for details about their compliance with the four criteria for revenue recognition contained in SAB Topic 13. The staff has indicated that registrants must carefully monitor these criteria when selling products to resellers and distributors and, in particular, should evaluate whether the substance of an arrangement is such that the price is not fixed or determinable until the product is sold to the end customer. When revenue is deferred because a criterion was not satisfied, registrants should specify which criterion was not met and disclose how and when the transaction will be recognized.

As the telecommunications industry continues to evolve, registrants in the industry must consider the revenue recognition implications of new business practices and ensure transparent disclosure. Wireless operators, for example, are increasingly offering subscribers more flexible handset-purchase options, such as installment plans and exchange rights. Such offerings can have significant revenue recognition implications. New offerings also may trigger a requirement for registrants in the industry to provide financial statement disclosures not previously considered significant. These could include disclosures about financing receivables for which registrants may not have historical information to appropriately predict an allowance for credit losses, credit quality indicators, and potential guarantee liabilities that arise from the various handset-purchase options. New business practices are likely to draw SEC staff scrutiny if the registrants' relevant revenue recognition policies and considerations are not clearly disclosed.

In addition, in light of the prevalence of multiple-element arrangements in the telecommunications industry and the complexities associated with accounting for them, the SEC staff frequently issues comments related to such arrangements. Further, registrants in the industry have received staff comments requesting an analysis that supports the registrant's conclusion about whether it is a principal or an agent in certain transactions.

For information on multiple-element arrangements and other revenue-related considerations, see the Revenue Recognition section.

Long-Lived Asset Impairment

Example of an SEC Comment

We note that you conducted a long-lived asset impairment analysis in the fourth quarter of [201X] and [201Y] and in each case concluded that your long-lived assets were not impaired. In this regard, please disclose events or changes in circumstances that occurred during those periods that indicated that the carrying value of your assets or assets groupings may not be recoverable. Disclose the extent to which the fair value of your assets or asset groups exceeded their carrying value. Disclose if any of your assets are at risk of impairment.

The SEC staff continues to question registrants in the telecommunications industry about the recoverability of their long-lived assets, including physical network assets and spectrum licenses. For example, the staff inquires about the reasonableness of the useful-life estimates used by registrants to determine whether their long-lived assets are potentially impaired. Such assets may be subject to a greater risk of impairment as a result of the rapid rate of technological innovation. In addition, the staff has asked registrants to disclose the carrying value of significant types of assets and the methods used to estimate the assets' useful lives.

For additional information, see the Impairments of Goodwill and Other Long-Lived Assets section.

Appendixes

Appendix A: Topic "Graveyard"

This appendix is a "graveyard" of comment letter topics discussed in our publication's eighth edition that no longer represent recent trends. Although such topics are not discussed in the current edition, we realize that they remain relevant to a registrant that may receive SEC staff comments regarding them and to any preparer who is interested in understanding topics on which the SEC staff has historically focused. Accordingly, this appendix links topic headings from last year's SEC comment letter book that do not appear elsewhere in the current edition. For information about a previously discussed topic, click one of the topic heading links below (also available on our US GAAP Plus Web site at http://www.iasplus.com/en-us/tag-types/united-states) and you will be directed to the corresponding section or subsection of the eighth edition. Linked titles of past comment letter book editions are also provided below.

Appendix B: SEC Staff Review Process

The SEC's Division of Corporation Finance (the "Division") selectively reviews filings made under the Securities Act and the Exchange Act. In January 2009, the SEC staff issued an overview that explains its filing review and comment letter process.[1] The overview aims to increase transparency in the review process and expresses the staff's willingness to discuss issues with registrants. For example, the overview indicates that the "[staff] views the comment process as a dialogue with a company about its disclosure" and that a "company should not hesitate to request that the staff reconsider a comment it has issued or reconsider a staff member's view of the company's response to a comment at any point in the filing review process."

The overview is divided into two main sections:

- *The filing review process* — This section explains that the Division comprises 11 offices staffed by experts in specialized industries, accounting, and disclosures. The section includes background on the different types of review (required and selective) and covers the comment process, indicating that "[m]uch of the [staff's] review [process] involves evaluating the disclosure from a potential investor's perspective and asking questions that an investor might ask when reading the document." The section also addresses how to respond to staff comments and close a filing review.
- *The reconsideration process* — This section emphasizes that "staff members, at all levels, are available to discuss disclosure and financial statement presentation matters with a company and its legal, accounting, and other advisors." In addressing a registrant's potential request for the SEC staff to reconsider a staff member's comment or view on a registrant's response, the staff emphasizes that registrants do not have to "follow a formal protocol." However, the staff explains where registrants should start and the steps involved in the normal course of the reconsideration process. The staff also specifies contact information for each office for both accounting and financial disclosure matters and legal and textual disclosure matters.

Registrants may involve the SEC's Office of the Chief Accountant (OCA) during any stage of the review process. Unlike the Division's role, which is to address matters related to the age, form, and content of registrants' financial statements that are required to be filed, the OCA's role is to address questions concerning a registrant's application of GAAP. Guidance on consulting with the OCA is available on the SEC's Web site.

A registrant that receives an SEC comment letter should generally respond within the time frame indicated in the letter. See Appendix C for more information about responding to SEC comment letters. The registrant should continue to respond to any requests for more information until it receives a letter from the Division stating that the Division has no further comments. A registrant that does not receive a completion letter within a reasonable amount of time after submitting a response letter should call its SEC staff reviewer (named in the letter) to ask about the status of the review. If the review is complete, the registrant should request a completion letter.

To increase the transparency of the Division's review process, comment letters and company responses to those letters are made public, via the SEC's Web site, at least 20 business days after the Division has completed its review of a periodic or current report or declared a registration statement effective. See Appendix D for tips on searching the SEC's comment letter database.

[1] An overview of the legal, regulatory, and capital markets offices is also available on the SEC's Web site.

Appendix C: Best Practices for Managing Unresolved SEC Comment Letters

The best practices below are intended to help registrants resolve any staff comment letters in a timely manner. Unresolved comments may affect a registrant's ability to issue financial statements and an auditor's ability to issue the current-year audit report. In addition, when responding to staff comment letters, registrants should be mindful of their responses because all responses to staff comment letters are made publicly available and become part of a registrant's "total mix of information" and disclosure records (i.e., investors may read such responses similarly to how they interpret a registrant's other filings and publicly available information).[1] A registrant should therefore do the following:

- Review the comment letter immediately and respond to the SEC staff reviewer (named in the letter) within the time indicated in the comment letter (usually 10 business days). If possible, the registrant should not request an extension, since this may delay resolution of the comment letter. However, in certain circumstances, the registrant should consider requesting an extension to provide a more thorough and complete response that addresses all of the staff's comments.
- If the registrant does not fully understand any specific comment, it should contact its SEC staff reviewer quickly for clarification so that it can provide an appropriate response.
- Consider the impact the comment letter may have on its ability to issue the financial statements.
- Consult with its SEC legal counsel about the impact the comment letter may have on the certifications contained in its Form 10-K.
- Consult with its auditors to discuss the impact the comment letter may have on their ability to issue the current-year audit report.
- Include in the response a discussion of supporting authoritative accounting literature and references to the specific paragraph(s) from the standard(s).
- Because some comments may request disclosure in future filings, the registrant should consider including such disclosure in the response letter to potentially eliminate additional requests from its SEC staff reviewer.
- If an immaterial disclosure is requested, the registrant should consider explaining why the disclosure is immaterial instead of including the immaterial disclosure in future filings.
- Maintain contact with its SEC staff reviewer and make the reviewer aware of the registrant's required timing (on the basis of its current-year filing deadlines).
- If the registrant has not received a follow-up letter or been contacted within two weeks of filing the initial response letter, the registrant should contact its SEC staff reviewer to determine the status of the comments. The registrant should promptly address any follow-up questions.
- If the registrant is uncertain about whether its review has been completed without further comments, it should ask the SEC staff reviewer about the status of the review. If the review is complete, the registrant should ask the reviewer for a completion letter.

Oral Comments

In certain circumstances, the SEC staff may provide oral comments to a registrant instead of a written comment letter. The registrant should ask the SEC staff reviewer how he or she would like to receive the registrant's response to the oral comments. If the reviewer requests a response via EDGAR, a registrant should respond with a written letter. If the reviewer requests an oral response or identifies no preference, a registrant should still, although it is not required to do so, consider responding to the staff's comments with a letter to formally document the registrant's understanding of the staff's comments and the discussions held as well as the registrant's response.

[1] The SEC staff discussed this topic at the 2012 AICPA Conference. Refer to Deloitte's December 11, 2012, *Heads Up* for more information.

Disclosure Requirements

Under the Securities Offering Reform, large accelerated filers, accelerated filers, and well-known seasoned issuers must disclose in their Forms 10-K the substance of any material unresolved SEC staff comments that were issued 180 or more days before the end of the current fiscal year.

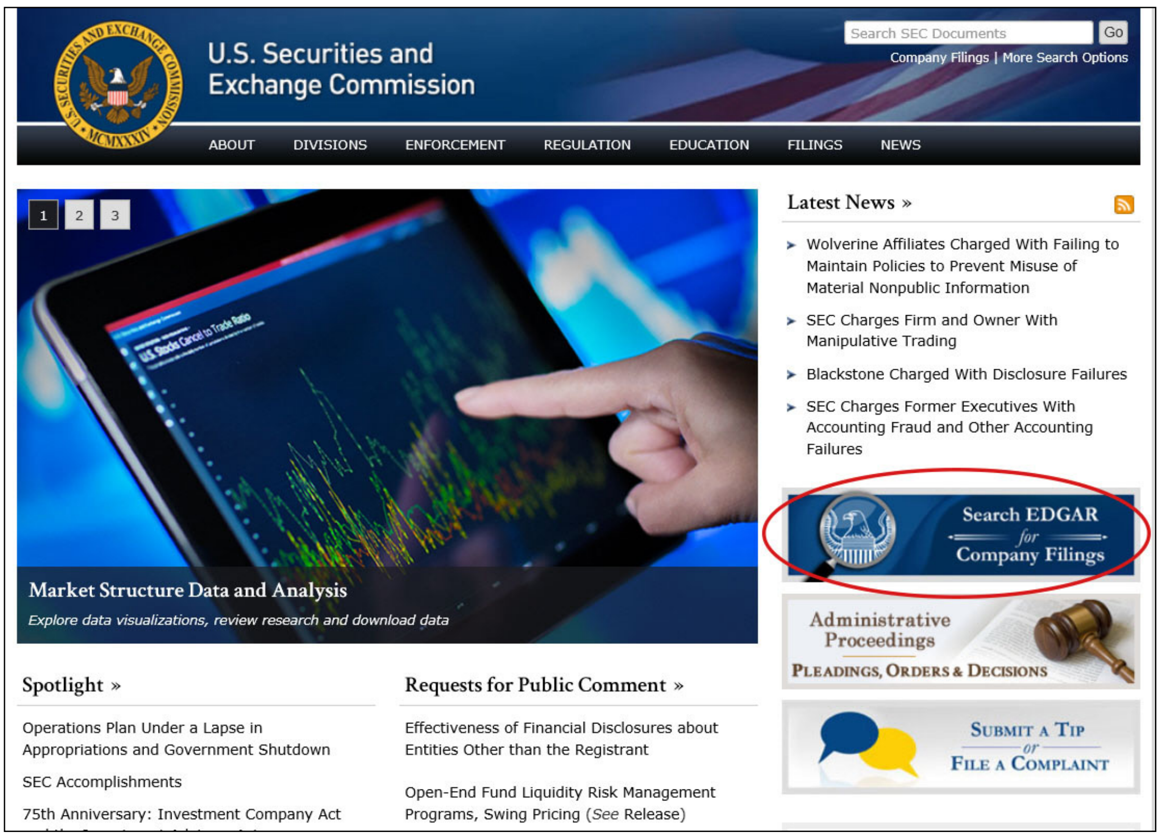
Appendix D: Tips for Searching the SEC's Database for Comment Letters

The SEC adds comment letters (and responses from registrants) to its EDGAR database no earlier than 20 days after its review of a filing is complete. Registrants can refer to such comments as part of their financial statement review process and to improve their own accounting and overall disclosure.

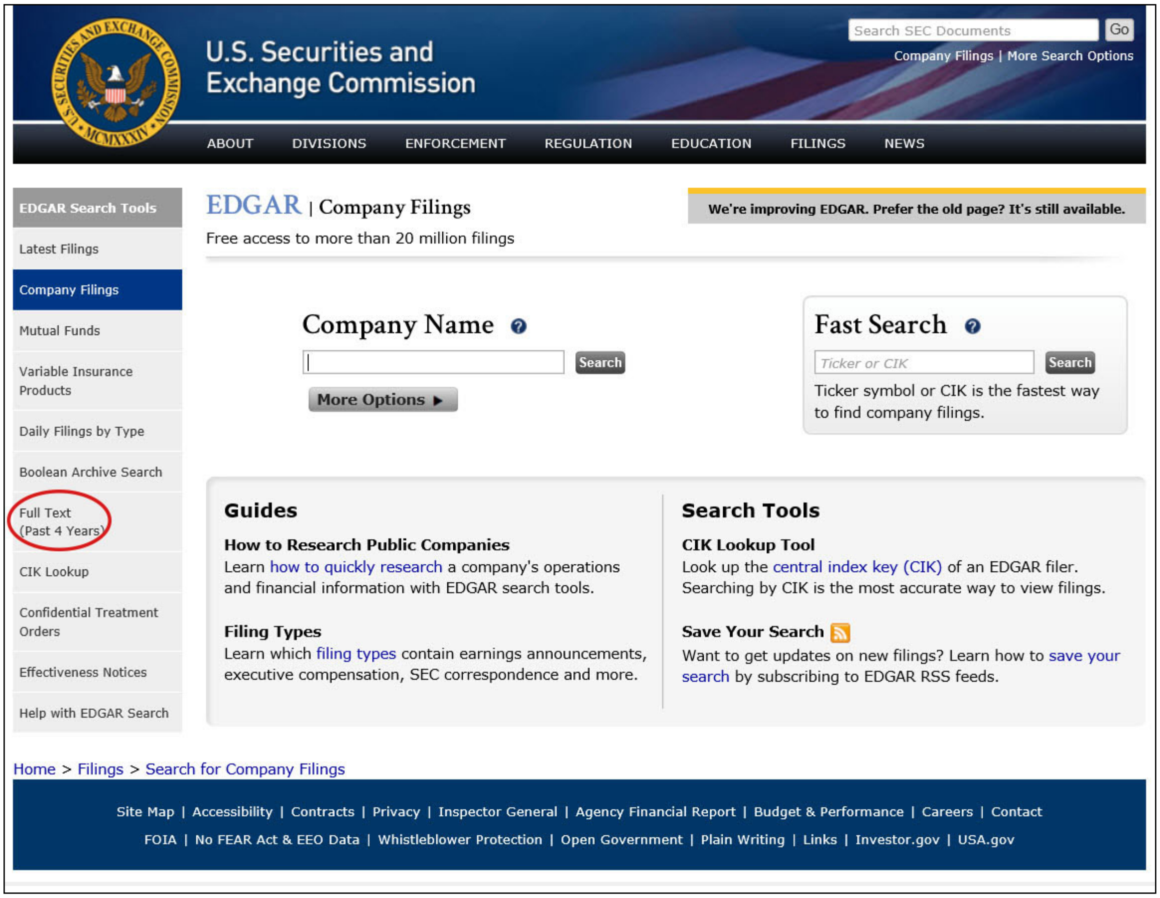
Although the SEC has updated the EDGAR search engine to simplify searches of corporate filings, users may still wish to use the "full-text" search feature to find the text of specific comment letters posted within the last four years and to generally narrow their search results. The process of performing a full-text search is discussed below.

Full-Text Searching

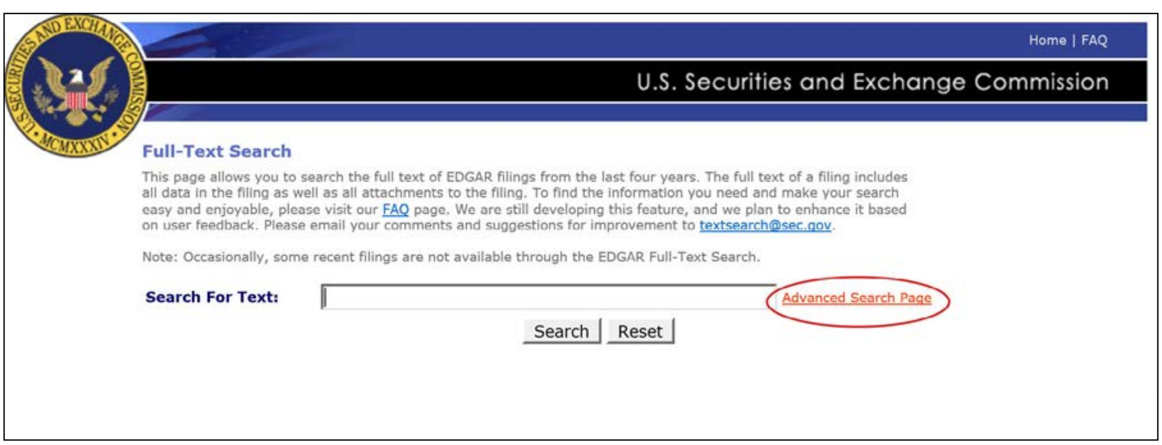
To perform a full-text search, first go to the SEC's home page (www.sec.gov) and click the "Search EDGAR for Company Filings" image:



Then, click the “Full Text” link in the left sidebar on the “EDGAR | Company Filings” page:



On the “Full-Text Search” page, select “Advanced Search Page”:



This brings up the following form:

In the form, limit the search results to SEC comment letters by using the drop-down menu next to **"In Form Type"** and choosing "UPLOAD" (or select "CORRESP" to include registrant responses as well).

Then, enter search terms in the **"Search for Text"** field. The documents found will contain at least one of the words entered as well as variations of the key word(s). To search for specific phrases, enclose the phrase in quotation marks (e.g., "management's discussion and analysis"). Results will include documents that contain the quoted phrase as well as conceptually related phrases, such as "managerial discussion & analysis."

Enhancing Search Results

Searches can be further refined by using Boolean operators such as AND, OR, and NOT (capitalization of these terms is required). For an operator to work effectively, a key word or phrase generally must be included before and after it (e.g., goodwill AND impairment). Searches in which operators are used will produce results as follows:

- *AND* — Documents will contain **all** terms connected (but not necessarily in the same sentence or paragraph) by the AND operator. The terms can appear in any order in the document.
- *OR* — Documents will contain **any** terms connected by the OR operator.
- *NOT* — Documents will contain one term but **not** another term.

Using wildcards or the "nearness" feature can also enhance search results:

- *Wildcards* — While certain variations of key words are automatically included in search results, using an asterisk (*) can ensure that all variations are included. For example, the wildcard "impair*" can be used to find documents that contain the words impair, impaired, impairing, impairment, or impairs.

- *Nearness* — Key words or phrases within a certain distance of each other can be searched by stipulating a range. The range is determined by using the term "NEARn," with "n" representing the maximum number of words in the range (e.g., "impairment NEAR5 test" would find documents with impairment and test within five words of each other).

Advanced search features can frequently be combined. For example, quotations used to find a specified phrase can be combined with Boolean operators (e.g., goodwill AND "impairment test").

Note that numbers are ignored in searches. Thus, a search for "Final Rule 108" will only locate documents that contain the terms "Final" and "Rule." Searches can, however, be sorted by other criteria, such as dates, as discussed below.

Sorting by Dates and Other Specific Criteria

On the full-text search form, selections can also be made to limit results to a specified:

- Company name.
- Central index key (CIK).[1]
- Standard industrial classification (SIC) code.[2]
- Date range.

Note that clicking the SIC code in the list of search results will display a list of additional companies that have the same SIC code:

Example

10/09/2015 S-3 for PACIFIC MERCANTILE BANCORP
COMPANY NAME(s) - [PACIFIC MERCANTILE BANCORP (CIK - 1109546 /SIC - 6021)]
As filed with the Securities and Exchange Commission on October 9, 2015 Registration No. 333- UNITED STATES SECURITIES AND EXCHANGE COMMISSION Washington, D.C. 20549 FORM S-3 REGISTRATION

Controlling and Displaying Search Results

The **Results Per Page** drop-down list can be used to limit the number of search results that display. To open a comment letter, click on the underlined title of the form to the right of the date. The comment letters will include any attachments or exhibits.

Example of the Benefits of Using Full-Text Search Features

Assume that a user is interested in SEC comments issued over the past two years that are related to results of operations in the hotel industry. By searching for the words "results" and "operations" with "All Forms" selected and no dates specified, the user would obtain over 8,000 results, many of which are not relevant.

However, if the user narrowed his or her search by (1) selecting the form type UPLOAD, (2) entering the search term "results of operations" in quotation marks, (3) entering the industry code for the hotel/motel industry (SIC 7011), and (4) providing a date range spanning the last two years, the number of results will be more relevant and manageable.

[1] According to the SEC's Web site, a "CIK is the unique number that the SEC's computer system assigns to individuals and corporations [that] file disclosure documents with the SEC. All new electronic and paper filers, foreign and domestic, receive a CIK number."

[2] A SIC code is an industry designation. Note that some of the SIC code descriptions are similar, so narrowing results by SIC code may not include certain issuers that are in a similar industry yet have a different assigned SIC code.

GOODWIN PROCTER ALERT

AUGUST 19, 2015

SEC Adopts Final CEO Pay Ratio Disclosure Rule

by Daniel P. Adams, John O. Newell, Ettore A. Santucci, Marian A. Tse

Speed Read

The SEC has adopted a final rule requiring public companies to disclose the ratio of its CEO compensation to the median compensation of its employees, as mandated by the Dodd-Frank Act. Disclosure of the pay ratio will be required in registration statements, proxy and information statements, and annual reports that require executive compensation disclosure. Subject to certain transition provisions, the final rule will first apply to compensation paid for a company's first full fiscal year that begins on or after January 1, 2017 and, therefore, will not require new disclosure in SEC filings by calendar year-end companies until 2018.

On August 5, 2015, the Securities and Exchange Commission adopted the final CEO pay ratio disclosure rule by a 3-2 vote. The final rule amends Item 402 of Regulation S-K, as required by Section 953(b) of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010. The rules require public companies to disclose:

- the median annual total compensation for all employees of the company other than the CEO (subject to limited exceptions for foreign employees) for the last completed fiscal year;
- the annual total compensation of the CEO (or equivalent position) for the last completed fiscal year; and
- the ratio of the two amounts.

The pay ratio disclosure may be expressed as a ratio with the median employee compensation equal to one (for example, "x to 1" or "x:1"), or may be expressed narratively (for example, "The CEO's annual total compensation is x times that of the median total annual compensation of employees").

As discussed in greater detail in a separate section below, the CEO pay ratio disclosure rule will first apply to compensation paid for a company's first full fiscal year that begins on or after January 1, 2017 and will therefore not require new disclosure in a company's SEC filings until 2018. Although the final rule is likely to face legal challenges in court and there are already bills in both the House of Representatives and the Senate that would repeal the section of the Dodd-Frank Act under which the SEC adopted the final rule, companies should begin to evaluate whether they have information and reporting systems that would produce the required data and how compliance would impact internal and external reporting and disclosure.

Companies Covered by the Final Rule

The CEO pay ratio disclosure rule applies to all companies that are required to provide Summary Compensation Table disclosure under Item 402(c) of Regulation S-K. The final rule therefore does not apply to smaller reporting companies, emerging growth companies, U.S.-Canadian multijurisdictional disclosure system filers, foreign private issuers or registered investment companies.

Identifying the Median Employee

Employee Population. In determining the employees from which the median employee is identified, a company may use its full employee population or a statistical sampling and/or other reasonable methods. A company's full employee population for purposes of identifying the median employee for a particular year includes all individuals other than the CEO who were employed by the company or any of its consolidated subsidiaries as of a date selected by the company that is within the last three months of its fiscal year. All full-time, part-time, seasonal and temporary workers who were employed on the date selected are included. Workers who provide services to the company as independent contractors or "leased" workers are excluded if they were employed by and their compensation was determined by an unaffiliated third party. In addition, companies may exclude persons who became employees as the result of a business combination or acquisition occurring during the year and, under limited exemptions described below, non-U.S. employees.

Employee Compensation. The final rule provides companies with significant flexibility in determining the compensation measure to be used to identify the median employee. Companies may use annual total compensation, calculated in the same way as total compensation is for the named executive officers in the Summary Compensation Table, or any other compensation measure that is consistently applied to all employees included in the calculation. For example, a company may use information from its tax or payroll records to identify the median employee. Companies also may use a measure that is defined differently across jurisdictions, such as "taxable wages," and may include different annual periods as long as the company applies the measure consistently within each jurisdiction. As described in more detail below, companies may also make cost-of-living adjustments to the compensation of employees in jurisdictions other than the jurisdiction in which the CEO resides.

Frequency of Determination. Companies must identify the median employee at least once every three years; provided that if there has been a change in employee population or compensation arrangements during a company's prior fiscal year that the company reasonably believes would result in a significant change to its pay ratio disclosure, the company must re-identify the median employee for that fiscal year.

Substitution of Median Employee. In cases where a company would otherwise not be required to re-identify the median employee for a particular year but it is no longer appropriate to use the median employee for the prior year because of a change in the employee's circumstances that the company reasonably believes would result in a significant change in its pay ratio disclosure, the final rule permits a company to use another employee whose compensation was substantially similar to the original median employee based on the compensation measure that the company used to select the original median employee. This could become necessary if the original median employee is no longer employed by the company in year two or year three, or if the employee's compensation significantly changes in year two or year three (for example, as a result of a promotion that significantly increases his or her compensation).

Disclosure Requirements. The final rule includes a number of disclosure requirements relating to the identification of the median employee. In particular, a company must disclose:

- the date selected by the company to determine the full employee population, and if such date was changed from the prior year, disclosure of the change and a brief explanation of the reason for the change;
- the compensation measure used to identify the median employee if the company uses a compensation measure other than annual total compensation;
- if true, that the company is using the same median employee as it did in the prior year and a brief description of the basis for its reasonable belief that there have been no changes in employee population or compensation arrangements during its prior fiscal year that it reasonably believes would significantly affect its pay ratio disclosure;
- the approximate number of employees that have been omitted because they became employees as the result of a business combination or acquisition during the year, if any, and the identity of the acquired business that is excluded; and
- if cost-of-living adjustments are made, the additional disclosures described in that section.

Companies also must briefly describe the methodology and any material assumptions, adjustments or estimates they use to identify the median employee. In addition, if a company changes its methodology or its material assumptions, adjustments or estimates from those used in its pay ratio disclosure for the prior fiscal year, and the effects of any such change are significant, the company must briefly describe the change and the reason for the change. The final rule also separately requires companies to clearly identify any estimates used. As an example, the adopting release stated that when a company uses statistical sampling, it must describe the size of both the sample and the estimated full employee population, any material assumptions used in determining the sample size and the sampling methods used.

Determination of Annual Total Compensation

Median Employee. The annual total compensation of the median employee that is required to be disclosed and used to determine the CEO pay ratio is to be calculated in the same way total compensation is calculated for the named executive officers in the Summary Compensation Table pursuant to Item 402(c)(2)(x) of Regulation S-K, except as noted below. Companies are required to recalculate the annual total compensation of the median employee each year, even in situations where they were not required to re-identify the median employee for the particular year.

Salary. For non-salaried employees, references to "salary" refer instead to "wages plus overtime."

Annualizing Adjustments. Companies may annualize total compensation for all permanent employees that were employed for less than the full year, such as newly hired employees or those on unpaid leave. Companies may not annualize total compensation for temporary or seasonal positions, and may not make a full-time equivalent adjustment for any employee.

Personal Benefits. Companies may include (1) personal benefits that are less than $10,000 in the aggregate and (2) non-discriminatory benefit plan compensation in calculating annual total compensation of their median employee if they include the same items in the annual total compensation of their CEOs used for purposes of calculating the CEO pay ratio. If a company does so, it must explain the difference between the CEO's annual total compensation used for the pay ratio disclosure and the total compensation shown in the Summary Compensation Table if the difference is material.

Reasonable Estimates. Companies are permitted to use reasonable estimates to calculate annual total compensation or any element of annual total compensation for the median employee. As interpreted by the SEC in the adopting release, this means that companies must have a reasonable basis to conclude that their estimates approximate the actual amounts of compensation, or a particular element of compensation, calculated in accordance with Item 402(c)(2)(x) of Regulation S-K. The SEC did state that companies may use reasonable estimates in determining an amount that reasonably approximates the aggregate change in the actuarial present value of the median employee's defined pension benefit. In this situation, the SEC recognized that companies may not have access to the information needed to calculate the precise amount.

Companies must clearly identify any estimates they use in calculating the annual total compensation or any element of annual total compensation for the median employee. Companies must also briefly describe any material assumptions, adjustments, or estimates they use to determine total compensation. If a company changes its assumptions, adjustments or estimates from the prior fiscal year and the effects of the change are significant, the company must describe the change and the reason for the change. These disclosure requirements are the same as the disclosure requirements relating to assumptions, adjustments and estimates used to identify the median employee.

Cost-of-Living Adjustments. As described in more detail below, the final rule permits companies to make cost-of-living adjustments to the compensation of employees in jurisdictions other than the jurisdiction where the CEO resides if they use such an adjustment to identify the median employee.

Multiple CEOs During a Single Year. The final rule permits a company that has more than one non-concurrent CEO serving during a single fiscal year to calculate the annual total compensation for its CEO in either of two manners:

- the company may calculate and combine the compensation provided to each person who served as CEO during the year for the period during which he or she served as CEO; or
- the company may calculate and annualize compensation for the individual who was serving as CEO on the date the company selected for identification of the median employee.

The final rule requires the company disclose which option it chose and how it calculated the CEO's annual total compensation.

Cost-of-Living Adjustments

The final rule permits companies to make cost-of-living adjustments to the compensation of employees in jurisdictions other than the jurisdiction where the CEO resides. From the discussion in the adopting release, these references to "jurisdiction" appear to be limited to different countries rather than different U.S. states or local jurisdictions. If a company uses such an adjustment to identify the median employee, and the median employee is in a jurisdiction other than the jurisdiction where the CEO resides, the company must use the same adjustment to calculate the median employee's annual total compensation and disclose the median employee's jurisdiction. The company must also briefly describe the cost-of-living adjustment it used (1) to identify the median employee and (2) to calculate the median employee's annual total compensation, including the measure used as the basis for the cost-of-living adjustment. If the company makes a cost-of-living adjustment, it must also present the median employee annual total compensation and pay ratio determined *without* the cost-of-living adjustment. To calculate these amounts, the company will need to identify the median employee without using any cost-of-living adjustment. Companies must disclose if they change from using a cost-of-living adjustment to not using that adjustment (or vice versa).

Non-U.S. Employees

The CEO pay ratio rule provides two exemptions for employees located outside the United States.

Data Privacy Exemption. The final rule allows companies to exclude non-U.S. employees from the company's employee population if they are employed in a foreign jurisdiction in which the laws or regulations governing data privacy are such that, despite reasonable efforts to obtain or process the necessary information, the company is unable to do so without violating those laws or regulations. If a company excludes any non-U.S. employees under this exemption in a particular jurisdiction, it must exclude all non-U.S. employees in that jurisdiction. The data privacy exclusion is subject to the following additional requirements:

- A company's "reasonable efforts" to obtain the necessary information must include, at a minimum, using or seeking an exemption or other relief under the applicable data privacy laws or regulations.
- If a company excludes any employees under this exemption, it must identify the excluded jurisdiction(s) and identify the specific data privacy laws or regulations that prohibit the collection of information and explain how complying with the CEO pay ratio disclosure rule would violate those laws or regulations (including the efforts the company made to seek an exemption from the laws or regulations). Companies must also indicate the approximate number of employees excluded from each jurisdiction based on this exemption.
- A company that relies on this exemption must obtain a legal opinion from counsel that opines on the company's inability to obtain or process the required information without violating the jurisdiction's data privacy laws or regulations, including the company's inability to obtain an exemption or other relief. Companies must file this legal opinion as an exhibit to the filing that includes CEO pay ratio disclosure.

The data privacy exclusion is not subject to the 5% limitation of the *de minimis* exemption described below, but employees excluded under the data privacy exemption count against the 5% limitation of the *de minimis* exemption.

De Minimis Exemption. The adopted rule also provides a "*de minimis*" exemption for non-U.S. employees. To the extent available, this exemption permits companies to exclude up to 5% of their total employees. If a company's non-U.S. employees account for 5% or less of its total employees, the company may choose to exclude all (but not less than all) of its non-U.S. employees under this exemption. If a company's non-U.S. employees exceed 5% of its total employees, a company may exclude up to 5% of its total employees who are non-U.S. employees, subject to the following restrictions:

- If a company excludes any non-U.S. employees in a jurisdiction, it must exclude all employees in that jurisdiction. If more than 5% of the company's employees are in a single non-U.S. jurisdiction, companies may not exclude any employees in that jurisdiction under the *de minimis* exemption.
- Companies may not use the *de minimis* exemption if the number of employees excluded under the data privacy exemption equals or exceeds 5% of the company's total employees. Non-U.S. employees excluded under the data privacy law exemption count against the 5% total that may be excluded under the *de minimis* exemption.
- If employees excluded under the data privacy exemption are less than 5% of the company's total employees, the company may use the *de minimis* exemption to exclude up to the number of non-U.S. employees that would, combined with employees excluded under the data privacy exemption, not exceed 5% of the company's total employees.

If a company uses the *de minimis* exemption, it must disclose the jurisdiction or jurisdictions from which it is excluding employees, the approximate number of employees excluded from each jurisdiction under the *de minimis* exemption, the total number of its U.S. and non-U.S. employees calculated without regard to the data privacy and/or *de minimis* exemptions, and the total number of its U.S. and non-U.S. employees used for its *de minimis* calculation.

Additional Disclosure Permitted

The final rule permits (but does not require) companies to present additional information, including additional ratios, such as additional pay ratios for U.S. employees or non-U.S. employees. Additional information and ratios must be clearly identified and must not be misleading or presented with greater prominence than the required ratio.

Personally Identifiable Employee Information

The final rule provides that companies are not required to, and should not, disclose any personally identifiable information about the median employee other than his or her compensation. The final rule permits companies to generally identify an employee's position to put the employee's compensation in context, but does not require companies to provide this information and provides that companies should not do so if providing that information could identify any specific individual.

CEO Compensation Not Available and New Form 8-K Disclosure

If a company's CEO's salary or bonus is not calculable through the latest practicable date for a filing that otherwise would require disclosure of the CEO pay ratio, the company must disclose that the pay ratio cannot be calculated until the CEO salary or bonus, as applicable, has been determined and the date on which it expects to determine the CEO's actual total compensation. The company must then include the CEO pay ratio disclosure required by the final rule in the current report under Item 5.02(f) of Form 8-K that discloses the CEO's salary or bonus.

Compliance Date, Affected Filings and Transition Periods

For companies that are subject to the CEO pay ratio disclosure rule, the final rule will first apply to compensation paid for their first fiscal year beginning on or after January 1, 2017. As a result, the final rule will not require CEO pay ratio disclosure until 2018 for calendar year-end companies.

Filings Affected. Companies are required to include CEO pay ratio disclosures in any registration statement, proxy or information statement and annual report that requires executive compensation disclosure pursuant to Item 402 of Regulation S-K.

Disclosure Timing. Generally, CEO pay ratio disclosure is subject to the same filing timetable as other compensation disclosure required by Item 402. This means that the final rule does not require a company to file CEO pay ratio disclosure for the last completed fiscal year until it files its annual report on Form 10-K or, if later, when the company files its definitive proxy or information statement relating to its next annual meeting of shareholders or written consent in lieu of such a meeting. As is the case with other Item 402 compensation disclosure, a company may incorporate the CEO pay ratio disclosure into its annual report on Form 10-K from its definitive proxy statement. If the company does not file its definitive proxy statement within 120 days after the end of its prior fiscal year, the company must file the CEO pay ratio disclosure and other disclosure that would have been incorporated by reference from its definitive proxy statement in an amendment to its annual report on Form 10-K. Unlike other disclosures required by Item 402, if the CEO pay ratio disclosure for the mostly recently completed fiscal year would be required in a registration statement or a proxy or information statement that is filed before such disclosure is included, or required to be included, in a company's Form 10-K, the company would not be required to include the updated CEO pay ratio disclosure in that filing. The adopting release suggests that, in that instance, the most recent CEO pay ratio disclosure that previously had been included in a Form 10-K (i.e., the prior year's CEO pay ratio disclosure) would be required to be included in the filing.

Filed, not Furnished. CEO pay ratio disclosure will be treated as "filed" rather than "furnished" for purposes of the federal securities laws, and will be subject to the CEO/CFO certifications required by Rule 13a-14 under the Securities Exchange Act of 1934 and Section 906 of the Sarbanes-Oxley Act.

Transitional Relief for New Reporting Companies. For a new reporting company that is not an emerging growth company or a smaller reporting company, the final rule will first apply to compensation paid for the first fiscal year following the year on which it first becomes subject to reporting requirements under Section 13(a) or Section 15(d) of the Securities Exchange Act, but not for any fiscal year that begins before January 1, 2017. For example, a company that completes its initial public offering in 2016 would first be required to provide CEO pay ratio disclosure with respect to 2017 compensation in its Form 10-K or definitive proxy statement filed in 2018. Similarly a company that completes its initial public offering in 2018 would first be required to provide CEO pay ratio disclosure with respect to 2019 compensation in its Form 10-K or definitive proxy statement filed in 2020.

Transitional Relief for Emerging Growth and Smaller Reporting Companies. For a company that qualifies as an emerging growth company or smaller reporting company, the final rule will first apply to compensation paid for the first fiscal year commencing on or after the date on which the company ceases to be an emerging growth company or smaller reporting company, as applicable, but not for any fiscal year that begins before January 1, 2017. For example, a company that ceases to be an emerging growth company during 2017 would first be required to provide CEO pay ratio disclosure with respect to 2018 compensation in its Form 10-K or definitive proxy statement filed in 2019.

GOODWIN PROCTER ALERT

FEBRUARY 26, 2015

SEC Proposes Hedging Policy Disclosure Rule

by Daniel P. Adams, John O. Newell, Marian A. Tse

Speed Read

The SEC has proposed a rule that would require new hedging policy disclosure by companies that are subject to SEC proxy rules. The proposed rule would in most cases expand the hedging policy disclosure currently provided by companies. The proposed rule would also extend this requirement to companies that are not currently required to provide hedging disclosure, such as smaller reporting companies and emerging growth companies. The proposed rule is subject to public comment through April 20, 2015 and therefore is very unlikely to affect disclosure in proxy statements for 2015 annual meetings by companies with calendar year-end fiscal years.

On February 9, 2015, the Securities and Exchange Commission proposed a rule that would require companies to disclose their policies with respect to hedging of equity securities of the company, as well as its parent and subsidiaries of the company or its parent, by the company's employees, officers and directors. The proposed rule, which expands current SEC disclosure requirements for hedging policies, is one of four compensation-related disclosure mandates under the Dodd-Frank Wall Street Reform and Consumer Protection Act.

To date, the SEC has proposed rules covering CEO pay ratio disclosure and hedging policy disclosure. The SEC has not yet proposed rules covering clawbacks of incentive compensation under stock exchange rules or pay for performance disclosure. The goal of the proposed rule is to provide investors with additional information about the governance practices of companies in which they invest.

The proposed rule is subject to public comment through April 20, 2015. Even if the SEC were to adopt a final rule promptly after the comment period closes, the final rule is therefore very unlikely to affect disclosure by companies with calendar year-end fiscal years in proxy statements for 2015 annual meetings. The full text of the proposed rule is available on the SEC web site.

In the proposing release, the SEC solicits public comment on a significant number of questions, so it is possible that the final rule may be somewhat different from the proposed rule. A joint statement released on February 9 by Commissioners Gallagher and Piwowar, who voted for the proposed rule, identified five areas about which they "remain quite concerned" and for which they "hope to receive robust public comment." These include:

- lack of an exemption for emerging growth companies and/or smaller reporting companies;
- lack of an exemption for certain investment companies (specifically, listed, closed-end funds);
- lack of an exemption for hedging by employees that cannot affect a company's share price;
- application of the proposed rule to the equity securities of a company's subsidiaries, parents, and brother-sister companies; and
- whether the proposed rule reflects the best prioritization of SEC staff and resources.

Proposed Hedging Disclosure

Companies and SEC Filings Covered. The proposed rule would require hedging policy disclosure in proxy and information statements for the election of directors by companies subject to the federal proxy rules, including smaller reporting companies, emerging growth companies, and registered closed-end investment companies with shares listed and registered on a national securities exchange. The proposed rule would not require companies to adopt anti-hedging policies. However, as discussed below, many companies have already done so, and, depending on the scope of the final rule, other companies may choose to do so.

Persons Covered. The proposed disclosure of hedging policies would apply to hedging activities by any employees (including officers) and directors of the company and any of their designees. A company that permits hedging transactions by some, but not all, of the categories of persons covered by the proposed rule would be required to disclose the categories of persons who are permitted to engage in hedging transactions and those who are not.

Hedging Activities Covered. The proposed rule would require a company to disclose whether it permits its employees, officers or directors (1) to purchase financial instruments (including prepaid variable forward contracts, equity swaps, collars, and exchange funds) or (2) otherwise to engage in transactions that are designed to or have the effect of hedging or offsetting any decrease in the market value of equity securities that (A) have been granted to the employee, officer or director by the company as part of the compensation of the employee, officer or director or (B) are held, directly or indirectly, by the employee, officer or director.

The proposed rule would require a company to disclose the categories of hedging transactions that it permits and those that it prohibits. The proposed rule would permit a company to disclose that it prohibits or permits particular categories and permits or prohibits, respectively, all other hedging transactions, if true. If a company does not permit any hedging transactions, or permits all hedging transactions, it would be required to disclose that fact and would not be required to describe specific categories of hedging transactions. A company that permits hedging transactions would be required to disclose sufficient detail to explain the scope of the permitted hedging transactions.

The proposed rule would apply to hedging policies with respect to equity securities that are registered under Section 12 of the Securities Exchange Act of 1934 and that have been issued by the company, any parent of the company, any subsidiary of the company, or any subsidiary of any parent of the company.

The disclosure required by the proposed rule would not be deemed to be incorporated by reference into any filing under the Securities Act of 1933, the Securities Exchange Act of 1934 or the Investment Company Act of 1940 except to the extent that the company specifically incorporates the disclosure by reference.

Current Hedging Disclosure Requirements and Practice

There are current disclosure requirements relating to hedging policies, and many companies have adopted hedging policies, often in response to the policies of proxy advisory firms. However, the new rule as currently proposed would extend disclosure of hedging policies to companies that are not currently subject to these disclosure requirements, and would expand disclosure requirements significantly beyond the disclosure that most companies currently provide.

Under current SEC rules, the principal disclosure requirement relating to hedging policies in proxy statements is the requirement to disclose in Compensation Discussion and Analysis the material information necessary to understand a company’s compensation policies and decisions regarding its named executive officers. In addition, in recent years, proxy advisory firms have implemented policies that encourage companies to adopt and disclose anti-hedging policies. As a result, many companies have already adopted and disclose the existence of anti-hedging policies. A study published in September 2014 by Meridian Compensation Partners LLC indicated that 91% of the 250 large publicly traded companies that comprise the Meridian 250 disclosed the existence of an anti-hedging policy, up from 82% in 2013.

Because the principal current disclosure requirement is part of CD&A, it does not apply to smaller reporting companies, emerging growth companies, registered investment companies or foreign private issuers. In addition, the current CD&A disclosure requirement does not cover hedging policies that apply to directors, executive officers who are not named executive officers, or other employees. Although anti-hedging policies adopted by companies often apply to a broader group of people than the company’s named executive officers, they generally do not apply to all employees. Additionally, these policies may not cover registered securities, if any, issued by a subsidiary or the company’s parent or another subsidiary of the parent, and may not apply to as broad a range of hedging transactions as those covered by the proposed rule.

As a result, when the final rule is adopted, most companies with existing anti-hedging policies will need to review their policies and disclosure in light of the new rule. In addition, many companies that have not adopted anti-hedging policies may need to consider doing so.

Actions to Take

The SEC has solicited public comment on a large number of questions that could affect which employees and securities are subject to disclosure under the new rule. The SEC has also solicited comment on whether the final rule should apply to classes of companies such as emerging growth companies and smaller reporting companies. As a result, we expect that many companies will wait for the SEC to adopt the final rule before amending existing anti-hedging policies or considering whether to adopt anti-hedging policies in response to these new disclosure requirements.

Ultimately, when the SEC adopts the final rule, we expect that companies may have additional policy decisions to consider. For example, if the proposed rule is adopted in its current form, companies would need to consider whether anti-hedging policies should apply to all employees. Companies would also need to consider the types of hedging transactions that will be subject to a company policy. Companies that wish to comment on the proposed rule should consider submitting comments on the proposed rule to the SEC on or before April 20, 2015.

GOODWIN PROCTER ALERT

JULY 16, 2015

SEC Proposes Mandatory Incentive Compensation Clawback Rules

by Daniel P. Adams, John O. Newell, Ettore A. Santucci, Marian A. Tse

Speed Read

The SEC has proposed long-awaited rules on incentive compensation clawbacks under the Dodd-Frank Act. The proposed rules would require national securities exchanges to adopt new listing standards requiring listed companies to adopt and enforce clawback policies. The proposed rules would also require listed companies to make a variety of disclosures concerning their clawback policies and any clawbacks required by these policies. The proposed rules are sweeping in their scope, in terms of the number of listed companies covered, the number of executives covered, the types of incentive compensation covered and the number of fiscal years covered. If the SEC adopts these rules as proposed, the potential impact on executive compensation could be significant.

On July 1, 2015, the Securities and Exchange Commission proposed rules, consisting of new Rule 10D-1 and related rule and form amendments, that would require clawbacks of incentive compensation received by executive officers of listed companies in the event of subsequent accounting restatements. The SEC proposed these rules to implement Section 10D of the Securities Exchange Act of 1934, which was added by Section 954 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010.

The proposed rules would require national securities exchanges, including the NYSE and Nasdaq, to adopt rules that would prohibit the initial or continued listing of any security of a company that does not adopt and comply with a written policy providing that, in the event the company is required to prepare an accounting restatement as a result of material non-compliance with any financial reporting requirement under the securities laws, the company will recover (*i.e.,* “claw back”) the amount of excess incentive-based compensation received by the company’s executive officers during the three fiscal years preceding the date on which the company is required to prepare the restatement. The proposed rules would also require each listed company to publicly file its written clawback policy and, if there is a restatement that is subject to the policy, to disclose specified information regarding the restatement and the company’s application of its policy in connection with the restatement.

As described in more detail below, the new clawback policies that would be required could raise several difficult issues if the SEC adopts the proposed rules in their current form. For example:

- *Stock Price and TSR-Based Incentive Compensation*. The proposed rules would require listed company clawback policies mandated by the proposed rules to apply to compensation that had been earned based on the company’s stock price or total shareholder return (TSR). In this situation, the listing standards required by the proposed rules would require that the amount of compensation to be clawed back be based on “a reasonable estimate of the effect of the accounting restatement on the stock price or total shareholder return upon which the incentive-based compensation was received.” Companies would likely encounter significant difficulties and uncertainties when they attempt to determine the precise impact of the misstated financial information on the company’s stock price, and would likely need to hire a third party to assist with this determination. Requiring a company to make and publicly disclose these estimates could also harm the company’s ability to defend potential litigation relating to a restatement.
- *No Tax Offset*. The new clawback policies would require companies to compute clawback amounts without regard to any taxes paid. As a result, if an executive ultimately is not able to obtain a full refund or credit for the taxes paid on compensation that is clawed back, the proposed rules would not provide for a reduction in the amount required to recovered from the executive and the executive could potentially be worse off than if the executive had never received the compensation in the first place.

- *Determination of When Restatement is Required*. The proposed rules would require companies to claw back excess incentive-based compensation received by the company's executive officers during the three fiscal years preceding the date on which the company is required to prepare the restatement. The definition of the date on which the company is required to prepare the restatement includes the date on which the relevant decision maker at the company "concludes, *or reasonably should have concluded*, that the company's previously issued financial statements contain a material error" (emphasis added). As a result, in order for a company to comply with its clawback policy, it would need to determine whether it reasonably should have reached this conclusion earlier than it actually did. Because the date of this conclusion determines the fiscal years that are subject to the company's clawback policy, this would introduce uncertainty into the determination of which compensation needed to be clawed back and potentially expose companies to delisting in the event they are second-guessed as to when they reasonably should have determined that a material error existed in prior financial statements. In addition, because the proposed rules would require companies to disclose the date on which the company was required to prepare the restatement and Form 8-K already requires companies to disclose the date on which they actually reach the conclusion that prior financial statements contain a material error, a company's determination that it reasonably should have concluded that a material error existed earlier than it actually did would be completely transparent to the public. Public disclosure of the difference between these dates could further compound the potential adverse consequences of a restatement to a company.

Which Companies Would be Affected?

The clawback policies that would be required by the listing standards under the proposed rules would apply to all companies with a class of listed securities, subject to very limited exceptions. The proposed rules would not permit exceptions for smaller reporting companies, emerging growth companies or foreign private issuers, among others.

Which Executives Would be Covered?

The new clawback policies would be required to apply to any individual who served as an "executive officer" of the company at any time during the performance period for incentive-based compensation that is subject to the clawback policy. The proposed rules define "executive officer" in the same manner that the rules under Section 16 of the Securities Exchange Act define "officer."

What Compensation Would be Subject to Mandatory Clawback?

Clawback policies under the proposed rules would require companies to claw back "incentive-based compensation," as defined by the proposed rules, that was received:

- during the three completed fiscal years immediately preceding the date that the company is required to prepare a restatement of its previously issued financial statements to correct a material error;
- while the company had a class of securities listed on a securities exchange; and
- by an individual who served as an executive officer at any time during the performance period for such incentive-based compensation.

The amount of incentive-based compensation that companies would be required to claw back would be the amount that exceeds the amount that otherwise would have been received if the incentive-based compensation had been determined based on the accounting restatement, computed without regard to any taxes paid.

"Incentive-Based Compensation." The proposed rules define "incentive-based compensation" as any compensation that is granted, earned or vested based wholly or in part upon the attainment of a financial reporting measure. Financial reporting measures would be defined as:

- measures that are determined and presented in accordance with the accounting principles used in preparing the company's financial statements;
- any measures that are derived wholly or in part from those measures (*e.g.*, EBITDA, FFO, return on assets or invested capital, financial ratios, liquidity, return and earnings measures, and sales per square foot or same store sales, among others); and
- stock price and TSR.

Financial reporting measures would not be limited to measures presented within the company's financial statements or SEC filings.

Because the definition of incentive-based compensation includes compensation earned "in part" upon achieving a financial reporting measure, these clawback policies would also apply to compensation that is not tied to these measures in a strictly formulaic manner. This would include discretionary bonuses paid from a bonus pool, where the size of the pool is determined based wholly or in part on the attainment of a financial reporting measure, or awards based on the attainment of a financial reporting measure that are subject to discretionary increase or decrease. Incentive-based compensation would also include compensation that was earned based on the company's performance with respect to a financial reporting measure (for example, stock price and TSR) relative to a peer group.

The proposed rules would not apply to the following types of compensation:

- salary;
- bonuses or equity awards paid solely on a discretionary basis, other than those paid from a bonus pool the size of which was determined wholly or in part by satisfying a financial reporting measure;
- bonuses or equity awards paid solely on satisfaction of subjective standards, completion of a specified employment period or the achievement of goals that do not constitute financial reporting measures, such as opening a specified number of stores, obtaining regulatory approvals of a product, consummating a merger or divestiture or completing a restructuring plan or financing transaction.

When Compensation is "Received." Pursuant to the proposed rules, incentive-based compensation would be deemed received in the company's fiscal period during which the financial reporting measure specified in the incentive-based compensation award is attained, even if the payment or grant of the incentive-based compensation occurs after the end of that period. For instance, an equity award that is earned based on the company's TSR for the three-year period ending December 31, 2018 would be deemed received in 2018 even though the shares are not issued until early 2019, and even if the shares are subject to additional time-based vesting. As a result, the shares would be subject to these clawback provisions if the company was required to prepare a restatement in 2019, 2020 or 2021.

When a Company is "Required to Prepare a Restatement." Under the proposed rules, the date on which a company is required to prepare an accounting restatement would be the earlier of:

- the date the company's board of directors, a committee of the board of directors, or officer(s) of the company authorized to take that action if board action is not required, concludes, or reasonably should have concluded, that the company's previously issued financial statements contain a material error; or
- the date a court, regulator or other legally authorized body directs the company to restate previously issued financial statements to correct a material error.

The proposed rules include a note that the first date above is generally expected to coincide with the date of the triggering event under Item 4.02(a) of Form 8-K, which requires the company to file a Form 8-K if relevant company decision makers conclude that previously issued financial statements should no longer be relied upon because of an error. However, the Form 8-K triggering event and the proposed rule's definition of the date on which a company would be required to prepare an accounting restatement differ in one potentially significant way. The Form 8-K reporting requirement is only triggered when the relevant decision makers actually reach the required conclusion. In contrast, the clawback requirement would be triggered when the relevant decision makers *reasonably should have* reached the required conclusion.

This subjective standard would introduce an element of potential uncertainty into the determination of the compensation that is required to be clawed back, and potentially require companies to disclose in their SEC filings that they reasonably should have concluded that a material error existed in their financial statements earlier than they actually reached this conclusion. Accounting standards can be very complex and/or may rely upon inherently subjective judgments. In situations where accounting standards are subsequently determined to have been misapplied, it may be difficult to determine exactly when the relevant decision maker reasonably should have concluded that a material error existed in previously issued financial statements. Uncertainty or potential second-guessing of when this conclusion reasonably should have been made could expose a company to significant risks because the consequences of failing to implement the clawback policy and make the required disclosures at the required date include delisting of the company's securities. Further, publicly disclosing that the company should have reasonably concluded that a material error existed earlier than it actually reached this conclusion could further compound the potential adverse consequences of a restatement to a company.

Excess Incentive-Based Compensation. The listing standards would require companies to claw back excess incentive-based compensation. The amount of the excess incentive-based compensation is the amount of the applicable incentive-based compensation that exceeds the amount that otherwise would have been received had it been determined based on the accounting restatement (*i.e.*, using the restated results). As noted above, companies must determine and recover the amount of excess incentive-based compensation without regard to any taxes paid.

For incentive-based compensation based on a company's stock price or TSR, where the amount of excess incentive-based compensation is not subject to mathematical recalculation directly from the information in an accounting restatement, the proposed rules would require that:

- the amount be based on a reasonable estimate of the effect of the accounting restatement on the stock price or TSR upon which the incentive-based compensation was received; and
- the company maintain documentation of the determination of that reasonable estimate and provide that documentation to the securities exchange on which it is listed.

The SEC also provided additional guidance in the proposing release describing how it intended the proposed rules to operate with respect to the determination of the amount of excess incentive-based compensation. In particular, the SEC noted the following:

- if a company originally used negative discretion to reduce formulaic incentive-based compensation, the excess incentive-based compensation would equal the formulaic amount determined using the restated results less the amount originally received (*i.e.*, recovery would be deemed to have already been received to the extent of any prior exercise of negative discretion);
- if a company originally used positive discretion to increase formulaic incentive-based compensation, the excess incentive-based compensation would equal the formulaic amount determined using the restated results less the formulaic amount originally determined (*i.e.*, the executive would be permitted to retain the full amount of the discretionary increase in compensation) provided that the company would have been permitted to make such a discretionary increase based on the restated results;
- for awards received from bonus pools, where the size of the pool is determined based wholly or in part on the attainment of a financial reporting measure, no recovery is required unless the aggregate amount of awards received exceeds the size of the pool based on the restated results and the excess amount of any executive's award will be a pro rata portion of the aggregate deficiency (*i.e.*, no discretion to pursue differential recovery among executives is permitted); and
- for exercised options or SARs where the underlying shares have been sold, the recoverable amount would be the sale proceeds received with respect to the excess number of shares reduced to reflect the applicable exercise price paid.

Neither the proposed rules nor the proposing release address the potential for offsetting increases where restated results would have decreased the amount of incentive-based compensation received in one year, but increased the amount received in another year (for example, in a situation where the aggregate amount of revenues or expenses recognized over a multi-year period does not change, but the specific periods in which the revenues or expenses are recognized does change).

Indemnification Prohibited. The proposed rules would prohibit companies from indemnifying executive officers against the loss of any excess incentive-based compensation.

Are Companies Required to Recover Excess Incentive-Based Compensation Under All Circumstances?

The stock exchange listing standards mandated by the proposed rules would require a company to recover excess incentive-based compensation in accordance with its clawback policy unless the company's compensation committee determines recovery is impractical because either (i) the direct expense paid to a third party to assist in enforcing the policy would exceed the amount to be recovered or (ii) the recovery would violate home country law adopted prior to July 14, 2015.

Before concluding that recovery is impracticable based on the expense of enforcement, a company must first make a reasonable attempt to recover the excess incentive-based compensation, document that attempt and provide that documentation to the securities exchange on which the company's securities are listed. Before concluding that recovery is impracticable based on home country law, a company must first obtain an opinion of home country counsel, not unacceptable to the securities exchange on which the company's securities are listed, that recovery would result in a violation of applicable home country law and provide that opinion to the securities exchange. Neither the proposed rules nor the proposing release specify whether "home country law" is intended to refer to the laws of the country in which the company is domiciled or has its headquarters or whether it refers to the laws of any foreign jurisdiction that applied to an executive officer (for example, an executive officer located in a foreign office of a domestic company).

A company that does not comply with its clawback policy will be subject to delisting by the securities exchange on which it is listed. The proposing release suggested that the securities exchanges would have some discretion when determining whether and when to commence delisting proceedings. Because the proposed rules would not require that the clawback be completed within a specific period of time, the securities exchange would be required to determine whether the steps a company was taking constituted compliance by the company with its clawback policy. In the proposing release, the SEC indicated that a securities exchange, in making this assessment, would need to determine, among other things, whether the company was making a good faith effort to pursue recovery promptly. Because a company's failure to comply with its own policy could result in delisting, companies should be careful to craft their clawback policies in a manner that will minimize the potential for delisting due to noncompliance with requirements that are not strictly mandated by applicable SEC rules or securities exchange listing standards.

If a securities exchange delists a company for failing to comply with the clawback policy required by the securities exchange, the company will not be permitted to list its securities on any securities exchange thereafter until it has complied with its clawback policy.

How Quickly Must Companies Recover Excess Incentive-Based Compensation?

Although the proposed rules do not specify a minimum period of time within which clawback policies must require a company to recover excess incentive-based compensation, the SEC stated in the proposing release that a company should recover excess incentive-based compensation reasonably promptly, since undue delay would constitute non-compliance with its clawback policy. However, as noted below, the proposed rules would generally require a company to disclose any shortfalls in recovery that existed as of the end of the prior fiscal year in the company's proxy statement.

What New Disclosures Would be Required by the Proposed Rules?

Filing of Clawback Policy. The proposed rules would require each company that had a class of securities listed on a securities exchange at any time during its last completed fiscal year to file its required clawback policy as an exhibit to its annual report on Form 10-K.

Proxy Statement Clawback Disclosure After a Restatement. The proposed rules would require each company that had a class of securities listed on a securities exchange at any time during its last completed fiscal year to provide additional disclosure if at any time during the last completed fiscal year either (1) the company completed a restatement that required recovery of excess incentive-based compensation pursuant to the company's clawback policy or (2) there was an outstanding balance of excess incentive-based compensation from a prior restatement. In these cases, the company would be required to disclose the following information in its proxy or information statement that included executive compensation disclosure under Item 402 of Regulation S-K and in its annual report on Form 10-K, either directly or through incorporation by reference to its proxy statement:

- *Clawback Amounts.* For each restatement, the company would be required to disclose:
  - the date on which the company was required to prepare an accounting restatement;
  - the aggregate dollar amount of excess incentive-based compensation attributable to the accounting restatement;
  - the estimates that were used in determining the excess incentive-based compensation attributable to the accounting restatement if the financial reporting measure related to a stock price or TSR metric; and

- the aggregate dollar amount of excess incentive-based compensation that the company had not recovered at the end of the last completed fiscal year.

If the company has not yet determined the amount of excess incentive-based compensation, the company must disclose that fact and explain the reasons.

- *Recoveries Not Pursued.* If during the last completed fiscal year the company decided not to pursue recovery of excess incentive-based compensation from any individual subject to its clawback policy, the company would be required to disclose, for each individual, the name and amount forgone and a brief description of the reason the company decided not to pursue recovery.
- *Unpaid Recoveries.* If, as of the end of the last completed fiscal year, any excess incentive-based compensation owed by an individual had been outstanding for 180 days or longer since the date on which the company determined the amount owed, the company would be required to disclose name of the individual and the outstanding dollar amount of excess incentive-based compensation due.

The proposed rules also provide that any amounts recovered from an executive pursuant to a company's required clawback policy would reduce the executive's compensation reported in the Summary Compensation Table for the fiscal year in which the recovered amount was initially reported as compensation, and would be identified by a footnote.

Under the proposed rules, the securities exchange listing standards would require each listed company to file all disclosures with respect to its clawback policy "in accordance with the requirements of the federal securities laws." A company that failed to comply with SEC disclosure requirements about its clawback policy would therefore be subject to delisting.

This new disclosure would not be incorporated by reference into registration statements except to the extent that the company specifically does so. Companies would also be required to file this new disclosure in XBRL format, block-text tagged, as an exhibit to each filing containing this new disclosure.

Other Proposed Amendments. The proposed rules would also amend Schedule 14A, Form N-CSR, Form 20-F and Form 40-F to include corresponding changes to the disclosure requirements in these forms for registered investment companies, registered management investment companies, foreign private issuers and filers under the multijurisdictional disclosure system.

When Will Companies be Required to Comply with the New Rules?

The proposed rules, other than those related to the new disclosure requirements, would not apply directly to companies, but would require national securities exchanges to adopt rules prohibiting the initial or continued listing of any security of a company that does not comply with the requirements of the listing standards required by the proposed rules. The proposed rules containing new SEC disclosure requirements would not become effective until the securities exchange listing standards requiring companies to adopt clawback policies become effective. As a result, a company will not be required to take any action until the SEC has adopted final rules and the securities exchange on which the company's securities are listed has adopted new listing standards and those listing standards have become effective. The proposed rules provide a detailed schedule for implementation of the new listing standards and disclosure requirements. The key dates are shown in the table below.

Event	Date
National securities exchanges must file proposed rules/amendments	Not more than 90 days after publication of final SEC rules
National securities exchanges rules/amendments must be effective	Not more than one year after publication of final SEC rules
Listed companies must adopt a clawback policy	Not more than 60 days after the effective date of the securities exchange rules/amendments
Incentive-based compensation subject to clawback policy	Compensation "received" on or after the effective date of the final rules adopted by the SEC
Companies must comply with new disclosure requirements	SEC filings required on or after the effective date of the securities exchange rules/amendments

Practical Considerations

In recent years, companies have increasingly redesigned their incentive compensation programs to pay compensation based on performance metrics that would be subject to the clawback policies mandated by the proposed rules. In particular, performance-based awards that use TSR, on a relative and/or absolute basis, have become commonplace. The final requirements and effective date of the proposed rules remain uncertain, but if the SEC adopts final rules that are consistent with the proposed rules, the impact of these rules on executive compensation policies could be wide-ranging and long-lasting. For example, these rules could create real tension between what many companies have seen as proper alignment/good governance policies, on the one hand, and effective incentives and fairness to executives on the other hand, as they relate to the risk/reward balances reflected in compensation policies and programs.

Companies may choose to defer any action until the mandated new securities exchange listing standards are finalized. However, companies – particularly those that rely on multi-year incentive programs that may pay compensation in future years after the SEC final rules and securities exchange listing standards become effective – may wish to begin considering how the stock exchange listing standards mandated by the proposed rules could affect their existing compensation structures and how they would comply with these listing standards and rules if the SEC adopts the proposed rules in their current form.

Attn: Secretary

Re: Effectiveness of Financial Disclosures About Entities Other Than the Registrant – File No. S7-20-15

Dear Ladies and Gentlemen:

We appreciate the opportunity to submit this letter in response to the request by the Securities and Exchange Commission (the "Commission") for comment on the effectiveness of financial disclosure requirements in Regulation S-X for certain entities other than the registrant. In particular, we are writing to suggest certain amendments to Rule 3-14 of Regulation S-X ("Rule 3-14").

While we believe that Rule 3-14 serves an important purpose and supports the Commission's goal of ensuring that investors have the information needed to make informed decisions, unnecessary inconsistencies between Rule 3-05 of Regulation S-X ("Rule 3-05") and Rule 3-14 can result in inefficiencies and uncertainties and place undue burdens on registrants, without providing investors with meaningful information. We respectfully request the Commission consider the following suggestions to harmonize certain requirements of Rule 3-14 with those of Rule 3-05.

1. **Rule 3-14 should be amended to align it with Rule 3-05(b)(4)(i), so that Rule 3-14 contains an exception for acquisitions that are less than or equal to 50% significant.**

Rule 3-05(b)(4)(i) provides that if an acquisition or probable acquisition of a business is less than or equal to 50% significant, financial statements of such business need not be included in the acquiror's registration statement or proxy statement unless the registration statement is declared effective, or the proxy statement is mailed, 75 days or more after the acquisition is consummated, and the financial statements have not previously been filed by the acquiror.[1] Rule 3-14 does not provide a similar exception, and Section 2310.2 of the Division of Corporation Finance's *Financial Reporting Manual* specifically states that the exception in 3-05(b)(4)(i) does not apply to Rule 3-14 financial statements.

[1] See also Section 2040.1 of the Division of Corporation Finance's *Financial Reporting Manual*.

The inconsistency between Rule 3-14 and 3-05(b)(4)(i) does not have a compelling rationale. In *Streamlining Disclosure Requirements Relating to Significant Business Acquisitions*, Release No. 33-7355 (Oct. 10, 1996), the Commission amended Rule 3-05 to add Rule 3-05(b)(4)(i). In adopting such amendment, the Commission noted that appropriate policy strives “to remove obstacles to proceeding with registered offerings despite pending or recent acquisitions, but recognizes that an acquisition could be so large relative to an issuer that investors would need financial statements of the acquired business for a reasoned evaluation of any primary capital raising transaction by the issuer.”[2] It appears that the same reasoning for adding Rule 3-05(b)(4)(i) is also applicable to Rule 3-14. In Release No. 33-7355, the Commission specifically decided against applying the amendment to add Rule 3-05(b)(4)(i) to Rule 3-14, noting that “[b]ecause Rule 3-14 is intended to address unique features of [the real estate] industry, such as the ‘‘blind pool’’ type of offering frequently used in the industry, the Commission has decided to consider revision of Rule 3-14 in the context of its evaluation of a more comprehensive disclosure scheme.”[3] As noted in Release No. 33-7355, such an amendment would “provide issuers greater flexibility and efficiency in accessing the public securities markets.”[4]

Whether it is part of a more comprehensive disclosure scheme or a more focused amendment, we respectfully ask that the Commission amend Rule 3-14 to align it with Rule 3-05(b)(4)(i), so that financial statements for property acquisitions that are less than or equal to 50% significant are not required to be included in the acquiror’s registration statement or proxy statement unless such registration statement is declared effective, or a proxy statement is mailed, 75 days or more after the acquisition is consummated.

2. **Rule 3-14 should be amended to align it with Rule 3-05(b)(4)(iii), so that it is clear that financial statements of an acquired property are not required to be separately presented once the financial results of such property are reflected in the audited consolidated financial statements of the acquiror for a full fiscal year.**

Rule 3-05(b)(4)(iii) provides that separate financial statements of an acquired business are not required to be separately presented once the operating results of the acquired business have been reflected in the audited consolidated financial statements of the acquiror for a complete fiscal year unless such financial statements have not been previously filed or unless the acquired business is of major significance. Rule 3-14 is silent on this point and there is a divergence in practice in connection with how long acquirors continue to separately present Rule 3-14 financial statements. Consistent with Rule 3-05, some acquirors stop separately presenting Rule 3-14 financial statements after such financial statements have been reflected in the audited consolidated financial statements of the acquiror for a full fiscal year. Other acquirors continue

[2] *Streamlining Disclosure Requirements Relating to Significant Business Acquisitions*, Release No. 33-7355 (Oct. 10, 1996) [61 Fed. Reg. 54509, 54510].
[3] *Id* at 54512.
[4] *Id* at 54513.

to separately present Rule 3-14 financial statements for all significant property acquisitions made during the period covered by the acquiror's financial statements.

Similar to the inconsistency with Rule 3-05(b)(4)(i), the inconsistency between Rule 3-14 and 3-05(b)(4)(iii) does not have a compelling rationale. Once the financial results of an acquisition, whether of a business or property, that have previously been presented on a standalone basis are reflected in an acquiror's financial statements, there is no reason that the financial statements of the acquisition should also be presented separately. When amending Regulation S-X to establish uniform instructions governing the periods to be covered by financial statements, the Commission noted that the instructions had been designed by the Commission with "the intention of providing users with easy access to sufficient data for an informed decision while refraining from requiring data in excess of the amount necessary to satisfy most users or data for which the costs of preparation cannot be justified by the benefits."[5] The Commission's concern of providing users with sufficient information for an informed decision without requiring information in excess of the amount necessary is reflected in Rule 3-05(b)(4)(i) but not in Rule 3-14.

We respectfully ask that the Commission amend Rule 3-14 to align it with Rule 3-05(b)(4)(iii), so that it is clear that separate financial statements of acquired property need not be separately presented once the financial results of such property have been reflected in the audited consolidated financial statements of the acquiror for a complete fiscal year.

***

We would be happy to discuss any questions with respect to this letter, and any such questions may be directed to David H. Roberts at (617) 570-1039.

Sincerely,

Goodwin Procter LLP

Corporate & Securities/Capital Markets | GT Alert

November 2015

SEC Adopts Regulation Crowdfunding to Facilitate Early Capital Raises

On Oct. 30, 2015, the Securities and Exchange Commission (SEC) adopted Regulation Crowdfunding by a 3-1 vote. The rules were adopted despite concerns expressed in comment letters to the SEC that capital raising through crowdfunding could lead to fraudulent activities, and thereby place unsophisticated investors at risk. Regulation Crowdfunding governs offers and sales of securities under Section 4(a)(6) of the Securities Act of 1933, as amended (Securities Act), which came into effect as part of the JOBS Act in 2012. Securities sold under the new rules are exempt from the registration requirements of Section 12(g) of the Securities Exchange Act of 1934, as amended (Exchange Act). Regulation Crowdfunding will become effective May 16, 2016, except for certain provisions relating to funding portals, as discussed below. Under the new rules, an issuer may raise up to a maximum of $1 million in any rolling 12-month period from investors, including non-accredited investors. All offerings relying on Regulation Crowdfunding must utilize a SEC-registered broker-dealer or funding portal.

“Crowdfunding” has evolved in recent years as a method of raising capital through general solicitation, typically over the internet, for a variety of projects. The JOBS Act created an exemption under the U.S. federal securities laws to enable this funding alternative to be utilized for the offer and sale of securities, subject to certain investment size, and manner of offering limits. The provisions in the JOBS Act were designed to provide startup companies and small businesses with access to capital through relatively low dollar offerings of securities, featuring a less costly means of capital raising by relying on the “crowd.” In recent years, the concept has been confused with capital raises under Rule 506(c) under the Securities Act of 1933, as amended (Securities Act), and Regulation A+, adopted by the SEC last summer. However, as discussed below, crowdfunding under the newly-adopted rules draws important distinctions from other available exemptions. Offerings made in reliance on Section 4(a)(6) will not be integrated with other exempt offerings that occur prior to, concurrently with, or subsequent to the offering, provided that all conditions for each exemption relied upon are satisfied.

Issuer Eligibility: For purposes of determining aggregate amounts offered and sold, including under prior offerings, the term "issuer" is defined broadly to include "all entities controlled by or under common control with the issuer and any predecessors of the issuer. Among other issuer requirements, in order to rely upon Regulation Crowdfunding, the issuer must not be:

- a non-U.S. company;
- an existing SEC reporting company under the Exchange Act;
- a company (or affiliates) that is disqualified as a "bad actor" under Rule 503 under Regulation Crowdfunding;
- an investment company (subject to certain limitations);
- a development stage company with no specific business plan or that has indicated its business plan is to engage in a merger or acquisition with an unidentified company; or
- a company that has sold securities in reliance on Regulation Crowdfunding and has not filed the requisite reports with the SEC and provided the required annual reports to investors during the two years immediately preceding the filing of the required offering statement.

Disclosure Requirements. In conducting an equity crowdfunding offering, companies must file certain information with the SEC and make certain disclosures available to investors and the broker-dealer, or to the funding portal facilitating the offering, in the interest of providing transparency. Initial disclosure about the offering must be filed with the SEC on new Form C, which the intermediary (i.e., the broker-dealer or funding portal through which the offering is being conducted) would then post on its website or provide a link for potential investors. The required disclosures are akin to those included in a Form 1-A qualification statement under Regulation A+. Issuers can opt to include a Q&A-style format to provide certain disclosures. Amendments to the Form C must be filed for any updates to the information, or for material changes that would affect an investment decision. Progress reports on Form C-U are required to be filed with the SEC within five days after completion of certain milestones, such as: investor commitments for at least 50% of the offering; commitments for 100% of the offering; acceptance of oversubscriptions; and closing of the offering.

Form C disclosures are not insubstantial and include information about officers, directors, and owners of 20% or more of the company, certain related party transactions, the price to the public of the securities being offered or the method for determining the price, the target offering amount, offer mechanics, whether the company will accept investments greater than the target amount, any deadline by which the company must reach the target amount, a description of the company's business, the intended use of proceeds from the offering, indebtedness, a description of other exempt offerings over the past three years, risk factors, transfer restrictions, a discussion of the financial condition of the company, and financial statements of the company. Information must also be provided about the intermediary, including compensation arrangements, and any other financial interests the intermediary may have in the offering or in the issuer. The discussion of offering mechanics must include a statement that the investor can cancel a subscription up to 48 hours prior to the identified deadline and that, if not cancelled, the investor's funds will be released to the issuer at closing.

The scope of the financial information that must be provided depends upon the amount of securities being offered and sold during a 12-month period, as set out below:

- <u>for offerings up to $100,000</u>: total income, taxable income, and total tax, or equivalent line items, as reported on the issuer's federal tax return for the most recently completed year, and certified by the principal executive officer. The issuer's financial statements must also be provided and certified by the same officer. Alternatively, if financial statements have either been reviewed or audited by an independent public accountant, this information must be provided instead;
- <u>for offerings over $100,000 and up to $500,000</u>: financial statements reviewed by an independent public accountant, unless audited financial statements are available;
- <u>for offerings over $500,000 and up to $1 million</u>: financial statements audited by an independent public accountant; however, first-time issuers may provide financial statements that have been reviewed by an independent public accountant if audited statements are not available.

Financial statements must be prepared in accordance with U.S. GAAP and, where required, audited in accordance with AICPA or PCAOB standard. Audited financial statements must include a signed audit report from the independent public accountant.

Ongoing Reporting. Companies that conduct an offering under the new rules are required to file an annual report with the SEC on Form C-AR within 120 days after the issuer's fiscal year-end. The report must include the information required in the Form C, as well as financial statements certified by the principal executive officer.

The ongoing reporting requirements can be terminated upon the first to occur of:

> the issuer becoming subject to the reporting requirements of the Exchange Act;
> after filing at least one annual report, the issuer has fewer than 300 record holders;
> after filing at least three annual reports, the issuer's assets do not exceed $10 million;
> all of the issuer's securities issued under Section 4(a)(6) have been repurchased or redeemed; or
> the issuer dissolves or is liquidated under state law.

Holders of securities sold in reliance on Section 4(a)(6) are excluded from the determination of the number of the issuer's "holders of record," for purposes of determining whether the issuer is required to register the class of securities under Section 12(g) of the Exchange Act. However, the issuer is required to maintain a method for tracking its shareholders, which may require engaging a transfer agent or similar third-party service provider.

Offering Communications: Rule 204 under Regulation Crowdfunding permits issuers to release a notice to the public similar to the tombstone-type information allowed for conventional public offerings under Securities Act Rule 134. The information is limited to: the name, address, phone number and website of the issuer, together with an email address for the issuer's representative; the name of the related intermediary for the offering, including a link to the intermediary's offering page; the amount, nature and price of offered securities; the closing date; and a brief description of the issuer's business. All other communications with investors must occur through the intermediary's platform. The issuer may, however, continue to release information about its business in the ordinary course, without mentioning the offering; such releases will not have the benefit of an express safe harbor.

Investor Requirements: Investors themselves are subject to significant limitations on the amount they may invest in crowdfunding offerings over a rolling 12-month period. For investors with annual income or net worth less than $100,000, the maximum investment in all offerings relying upon Regulation Crowdfunding is the greater of (x) $2,000, or (y) 5% of the lesser of the investor's annual income or net worth. If annual income and net worth each equal or exceed $100,000, then the investment limit is 10% of such annual income or net worth, whichever is less.

Unlike securities acquired in a Regulation A+ offering, securities purchased through crowdfunding are subject to a one-year restriction on resale or transfer, except to the issuer, an accredited investor, a family member, or in connection with estate transfers, or in connection with an offering registered under the Securities Act.

Platform Requirements: Section 4A under the Securities Act was adopted as part of the JOBS Act and sets out the statutory requirements for intermediaries participating in a crowdfunding offering under Section 4(a)(6). All issuers conducting offerings under Section 4(a)(6) and Regulation Crowdfunding are required to use a SEC-registered intermediary, either a broker-dealer or funding portal. The intermediary essentially functions as a gatekeeper to protect investors from fraudulent transactions. Only one such intermediary may be used for a particular offering. The offering must be conducted on and through the intermediary's platform. A "platform" is "a program or application accessible via the Internet or other similar electronic communication medium through which a registered broker or a registered funding portal acts as an intermediary in a transaction involving the offer or sale of securities in reliance on Section 4(a)(6) of the Securities Act." Funding portals must register with the SEC on new Form Funding Portal and must also become a member of FINRA. The proposed FINRA framework is not covered in this Alert. The new Form will become effective Jan. 29, 2016. Registration will become effective on the later of 30 days after the filing of Form Funding Portal with the SEC, or the date upon which the portal is approved for membership in FINRA.

Under the new rules, intermediaries must, among other things:

- provide investors that open accounts with educational materials in plain English by electronic link that explain the process for investing on the platform, the types of securities offered, investment limits, company information, resale/transfer restrictions, right to cancel a commitment, and post-transaction relationships with the issuer and the intermediary;
- adopt measures to reduce the risk of fraud, including having a reasonable basis for believing the company complies with the new rules and has established means to keep accurate records of securities holders. The intermediary must conduct background and securities regulatory enforcement checks on each issuer, as well as the issuer's officers, directors, and beneficial owners of at least 20% of the issuer's securities;
- make the company disclosure available on the platform throughout the offering period, and for at least 21 days prior to the sale of any security in the offering;
- provide communication channels on the platform to facilitate discussions among investors and issuers about offerings made available on the intermediary's site, without participation by the intermediary itself; and
- disclose to investors the intermediary's compensation relating to the offering, as well as that of any promoter.

Intermediaries must require investors to open an account on the platform before accepting any investment; however, the intermediary cannot require a potential investor to open an account in order to receive information about the offering or an issuer. The intermediary must have a reasonable belief that the investor meets and complies with the investment limitations under the rules. The issuer may rely upon the intermediary's calculation of the investment limits relative to an investor, provided that the issuer does not otherwise have knowledge that the limits would be exceeded as a result of participating in the offering. Upon receipt of a commitment from an investor, the intermediary must provide an electronic notice to the investor confirming the dollar amount of the commitment, price of the securities, name of the issuer, and deadline for cancellation of the commitment. Prior to acceptance of the investor's commitment, the intermediary must obtain confirmation from the investor that the investor understands the restrictions on cancellation of a commitment and the ability to secure a return of the investment, the restrictions on resale and transfer of the securities, and the potential for complete loss of the investment and the ability to withstand such loss. Once the investment has been accepted, the intermediary must provide electronic confirmations to each of the investors at or before completing the sale.

Intermediaries are prohibited under the rules from engaging in certain activities. Companies may not be permitted access to the platform if the intermediary has a reasonable belief that there is a potential for fraud, among other concerns. Intermediaries are prohibited from having a financial interest in a company offering on its platform, unless that interest was received as compensation for its services, subject to certain limitations. In addition, no person may be compensated by the intermediary for providing personally identifiable information of any investor or potential investor.

Crowdfunding portals are subject to additional restrictions on their activities, as distinguished from broker-dealers. Funding portals cannot offer investment advice, make investment recommendations, solicit purchases, sales, or offers to buy securities, compensate promoters or other persons for soliciting investors or based upon the sale of securities, or hold, possess or handle investor funds or securities.

State Securities Law Preemption: Section 305 of the JOBS Act amended Securities Act Section 18(b)(4) to preempt the ability of state securities commissions to regulate certain aspects of crowdfunding conducted in reliance upon Section 4(a)(6). Although preemption of state registration requirements will reduce the costs of these offerings for issuers, certain states and commentators have expressed concern that such preemption will remove a layer of protection for investors in preventing fraud. In the adopting release, the SEC noted that certain restrictions included in the statute and the final rules are intended to offset this concern, such as through public disclosure requirements, investment limits, the use of an intermediary, and the disqualification provisions. In addition, the antifraud provisions of the federal and state securities laws will apply to these offerings.

* * * * * * * * * *

Regulation Crowdfunding will not become effective until May 16, 2016. This time lag will enable funding portals to begin the registration process with the SEC, once the applicable forms become available at the end of January 2016. It will also allow funding portals the necessary time to apply for FINRA membership. Early stage companies will now be able to consider the viability of raising capital through the "crowd," as compared to Regulation A+, or more traditional forms of private placements, such as Regulation D. However, given all the "chatter" that has surrounded crowdfunding since the enactment of the JOBS Act, we anticipate that early stage companies will welcome these new rules and seek to be part of the expanding crowd. Notwithstanding this enthusiasm, participants in crowdfunding must carefully prepare to meet the extensive requirements and safeguards imposed under the JOBS Act and Regulation Crowdfunding, as well as the associated costs.

See note below about Hogan Lovells

SEC staff issues no-action letter facilitating Rule 144 sales of REIT shares received in exchange for operating partnership units

On March 14, the staff of the SEC's Division of Corporation Finance issued a no-action letter that will enable holders of shares of a publicly traded real estate investment trust (REIT) received in exchange for privately placed units of the REIT's operating partnership to sell the shares under Rule 144 without having to start a new holding period for them. The staff issued the letter in response to a no-action request jointly submitted by Bank of America, N.A. and Merrill Lynch, Pierce, Fenner & Smith Incorporated and three law firms, including Hogan Lovells. The letter is captioned *Bank of America, N.A., Merrill Lynch, Pierce, Fenner & Smith Incorporated* and is available **here**.

The parties submitting the no-action request did not identify specific parties or specific transactions to which the SEC staff directed its no-action relief. The staff's no-action letter accordingly represents an interpretive position on which any holder of REIT shares received in a covered exchange transaction should be able to rely. By facilitating Rule 144 resales, the no-action relief could reduce the number of registration statements REITs have to file related to these exchange transactions, alleviate the hardships that would be encountered by unit holders in the event a registration statement is not available, and provide lenders greater comfort in accepting units as collateral for loans.

Background

Entity and transaction structure. The staff's no-action relief encompasses exchange transactions involving securities of entities in an umbrella partnership real estate investment trust (UPREIT) structure as summarized in the no-action request.

REIT and operating partnership. In an UPREIT structure, all of the REIT's real estate assets are acquired and owned directly or indirectly by its umbrella partnership, which is organized as a limited partnership or limited liability company and is typically referred to as an "operating partnership." The REIT's only material assets are its holdings of interests (units) in the operating partnership, through which the REIT operates its business. The REIT either serves as the general partner of the operating partnership or controls the general partner.

Operating partnership units. Units also are held by other investors that

acquire the securities in non-public offerings, typically in exchange for real estate assets they contributed to the operating partnership, either at the time of the REIT's initial public offering or in subsequent transactions. These investors pay the full purchase price for their units when they acquire them. There is no public market for the units, which are subject to significant transfer restrictions under the agreement governing the formation of the operating partnership.

Washington, D.C.
michael.mctiernan@hoganlovells.com

www.hoganlovells.com

One unit is the economic equivalent of one share of common stock of the REIT, or of another specified number of shares of REIT common stock fixed to ensure economic parity between the REIT shares and the units. The units are substantially identical economically to the REIT shares, in that they represent the same right to the same proportionate interest in the same underlying pool of assets.

Exchange transaction. The REIT shares are registered under Section 12 of the Exchange Act and are publicly traded on a national securities exchange. After an initial one-year holding period, unit holders may request that the operating partnership redeem their units for cash. The REIT, at its option, may assume the operating partnership's redemption obligation and acquire the units for REIT shares based on the fixed ratio. Unit holders are not required to pay any additional consideration for the REIT shares at redemption, and the cash value of each unit at redemption directly corresponds to the REIT common stock's market value at that time.

Rule 144. Rule 144 provides a "safe harbor" from registration under the Securities Act for sales by holders of "restricted securities," which are securities acquired from the issuer or an affiliate of the issuer in a transaction not involving a public offering. Under Rule 144(d)'s "holding period" requirement, the securities must be held for at least six months after they have been fully paid for (or for at least one year if the securities are issued by a company that has been public for fewer than 90 days). In some situations, a holder of restricted securities may "tack" (or add on) the holding period of other parties or related securities to the holding period of newly acquired securities.

Before it issued the no-action letter, the SEC staff had not formally addressed the application of the holding period requirement to REIT shares received in exchange for operating partnership units, although it informally had indicated that a new holding period was required for the shares. Under this position, a unit holder's Rule 144(d) holding period for the REIT shares began upon its acquisition of the shares rather than upon its acquisition of the units it exchanged for the shares.

The staff's informal view had the unfortunate effect of subjecting holders of units who privately exchanged their units for REIT shares to a waiting period under Rule 144 of at least six months after receipt of the shares before they could sell the shares publicly. This would be a hardship for the holders, because, although taxes on the exchange would be triggered when the exchange occurred, the holders could not sell their shares under Rule 144 to help pay for the taxes until at least six months had elapsed. Many REITs have addressed the hardship by filing a registration statement under the Securities Act covering either the exchange of the units for REIT shares or the resale of the REIT shares received upon exchange. These filings require considerable time and expense to complete.

No-action request

The parties requesting no-action relief asked the SEC staff to concur with their view that a seller of REIT shares received upon an exchange of operating partnership units should be allowed under Rule 144 to tack the holding period of the units to the holding period of the REIT shares and therefore be able to sell the REIT shares immediately upon receipt if the units had been held for the requisite period. The staff traditionally has taken the position that the holding period requirement is satisfied only if the seller has been at full economic risk with respect to the securities for the entire period required by Rule 144. Where an exchange of securities occurs, the economic risk of the new securities typically is different from that of the exchanged securities, thereby requiring the start of a new holding period.

The requestors argued in their submission that in the case of a REIT structured as an UPREIT, the economic risk of the operating partnership units is identical to that of the REIT shares (apart from tax considerations). Under the UPREIT structure, the operating partnership units and the REIT common stock acquired upon redemption represent the same proportionate right to the assets of the operating partnership, so that the exchange does not result in any change to the economic risk of the investment in the underlying assets. The unit holder has the same economic risk as a holder of REIT common stock during the entire period it holds the units and the unit holder retains the same economic risk and the same proportionate share of the underlying real estate assets after the exchange. Accordingly, from the date the unit holder pays the full purchase price for the units to the date it exchanges the units for REIT common stock, the economic value of a unit is the same as the market price of, and therefore the economic value of, a corresponding share of REIT common stock. Because the economic risk is the same after the exchange, the requestors said the holding periods of the two securities should be combined under the rule.

The staff agreed with the requestors that the holding periods of operating partnership units and REIT shares could be tacked under Rule 144. Because most UPREITs are structured to require holders of units to hold their units for at least one year, the staff's position will permit most unit holders to sell immediately under Rule 144 any REIT shares they receive in exchange for the units. Sales by affiliates of the REIT will be subject to the volume limitation and other requirements of Rule 144. For tax purposes, a new holding period will commence upon that exchange, so a sale within one year after the exchange would result in short-term capital gain to the extent the shares have appreciated in value since the exchange.

The staff's position is consistent with two orders the SEC issued in 1995 and 1998 under Section 12(h) of the Exchange Act that exempted two REITs having an UPREIT structure from the application of Section 16 of that Act to their ownership of, and transactions in, units of their operating partnerships. The orders, the first of which was obtained upon a request prepared by our firm, were based on the same principle on which the request for the new no-action letter was based, which is that the economic risk is the same (apart from taxes) for both the operating partnership units and the REIT shares received in exchange for them, so that no purchase or sale effectively occurs under Section 16 upon the exchange.

TABLE OF CONTENTS

UNITED STATES

BOARD OF DIRECTORS- VOTING ON DIRECTOR NOMINEES IN UNCONTESTED ELECTIONS

Unilateral Bylaw/Charter Amendments

Current General Recommendation: Generally vote against or withhold from directors individually, committee members, or the entire board (except new nominees, who should be considered case-by-case) if the board amends the company's bylaws or charter without shareholder approval in a manner that materially diminishes shareholders' rights or that could adversely impact shareholders, considering the following factors, as applicable:

- The board's rationale for adopting the bylaw/charter amendment without shareholder ratification;
- Disclosure by the company of any significant engagement with shareholders regarding the amendment;
- The level of impairment of shareholders' rights caused by the board's unilateral amendment to the bylaws/charter;
- The board's track record with regard to unilateral board action on bylaw/charter amendments or other entrenchment provisions;
- The company's ownership structure;
- The company's existing governance provisions;
- Whether the amendment was made prior to or in connection with the company's initial public offering;
- The timing of the board's amendment to the bylaws/charter in connection with a significant business development;
- Other factors, as deemed appropriate, that may be relevant to determine the impact of the amendment on shareholders.

Key Changes:

- Separate the methodology for evaluating adoptions of bylaw or charter provisions made prior to or in connection with a company's initial public offering from the methodology for evaluating unilateral board amendments to the bylaws or charter made following completion of a company's initial public offering, and
- Explicitly state that ISS will consider both such actions in determining vote recommendations for director nominees until such time as the actions are reversed or submitted to a binding vote of public shareholders.

New General Recommendation:

1.17. Generally vote against or withhold from directors individually, committee members, or the entire board (except new nominees, who should be considered case-by-case) if the board amends the company's bylaws or charter without shareholder approval in a manner that materially diminishes shareholders' rights or that could adversely impact shareholders, considering the following factors:

- The board's rationale for adopting the bylaw/charter amendment without shareholder ratification;
- Disclosure by the company of any significant engagement with shareholders regarding the amendment;
- The level of impairment of shareholders' rights caused by the board's unilateral amendment to the bylaws/charter;
- The board's track record with regard to unilateral board action on bylaw/charter amendments or other entrenchment provisions;
- The company's ownership structure;
- The company's existing governance provisions;
- The timing of the board's amendment to the bylaws/charter in connection with a significant business development; and,
- Other factors, as deemed appropriate, that may be relevant to determine the impact of the amendment on shareholders.

Unless the adverse amendment is reversed or submitted to a binding shareholder vote, in subsequent years vote case-by-case on director nominees. Generally vote against (except new nominees, who should be considered case-by-case) if the directors:

- Classified the board;
- Adopted supermajority vote requirements to amend the bylaws or charter; or
- Eliminated shareholders' ability to amend bylaws.

1.18. For newly public companies, generally vote against or withhold from directors individually, committee members, or the entire board (except new nominees, who should be considered case-by-case) if, prior to or in connection with the company's public offering, the company or its board adopts bylaw or charter provisions adverse to shareholders' rights, considering the following factors:

- The level of impairment of shareholders' rights caused by the provision;
- The company's or the board's rationale for adopting the provision;
- The provision's impact on the ability to change the governance structure in the future (e.g., limitations on shareholder right to amend the bylaws or charter, or supermajority vote requirements to amend the bylaws or charter);
- The ability of shareholders to hold directors accountable through annual director elections, or whether the company has a classified board structure; and,
- A public commitment to put the provision to a shareholder vote within three years of the date of the initial public offering.

Unless the adverse provision is reversed or submitted to a vote of public shareholders, vote case-by-case on director nominees in subsequent years.

Rationale for Update:

This update clarifies ISS policy and aligns ISS' approach to evaluating unilateral bylaw and charter amendments by pre-IPO companies and post-IPO company board members with feedback received from institutional investors. This update also establishes separate methodologies to evaluate adoptions of bylaw or charter provisions made prior to or in connection with a company's initial public offering and unilateral board amendments made to the bylaws or charter following completion of a company's initial public offering. This bifurcation reflects the differing expectations that investors may have for the governance structures of a newly-public company versus a company that has been public for some period of time.

At companies that are already public, investors have seen a marked increase in moves by boards to circumvent votes by unilaterally amending their companies' governing documents—usually the bylaws—to reduce shareholders' rights. While ISS tracked 10 such cases in 2013 (the historic norm in terms of volume), unilateral adoptions jumped to 64 in 2014, and there have been 62 thus far in 2015.

A majority of investor respondents to the ISS 2015–2016 policy survey favor adverse vote recommendations for director nominees when a board unilaterally adopts bylaw or charter amendments that "materially diminish" shareholders' rights until such time as the rights are restored. Both investor and non-investor respondents identify "classifying the board" and "establishing supermajority vote requirements for bylaw/charter amendments" as the unilateral actions for which continuing adverse vote recommendations would be most appropriate.

A significant percentage of recent IPOs have included provisions that limit board accountability to post-IPO investors and make it difficult for shareholders to amend the company's governing documents or take other corporate actions. While some pre-IPO boards argue that these governance structures will benefit investors over the long run, few of them provide opportunities for post-IPO shareholders to ratify these provisions. Notably, the lion's share of recent IPO firms have limited directors' accountability to shareholders by staggering board terms (via classified boards) and adopting supermajority vote provisions to amend the firms' governing documents. A law firm analysis of governance practices at more than 400 “emerging growth companies” that completed their IPOs in the period from Jan. 1, 2013, through Dec. 31, 2014, for example, found that 69 percent of these firms went public with classified boards and nearly three-quarters had supermajority vote requirements in place.[1] A separate law firm analysis of large IPOs at 46 non-controlled companies for the Sept. 1, 2001, to Oct. 31, 2013, period, found that 70 percent of the boards had staggered terms and 70 percent of the firms required supermajority votes to amend their bylaws.[2]

Overboarded Directors

Current General Recommendation: Vote against or withhold from individual directors who:

- Sit on more than six public company boards; or
- Are CEOs of public companies who sit on the boards of more than two public companies besides their own—withhold only at their outside boards[3].

Key Changes:

- In 2016, ISS will note in its analysis if a director is serving on more than five (5) public company boards.
- Starting in February of 2017, ISS will recommend against directors who sit on more than five (5) public company boards.

New General Recommendation: Vote against or withhold from individual directors who:

- Sit on more than six public company boards; for meetings on or after Feb. 1, 2017[4], sit on more than five public company boards; or
- Are CEOs of public companies who sit on the boards of more than two public companies besides their own—withhold only at their outside boards[3].

Rationale for Update:

More than a decade ago, in response to rising investor concerns about over-boarding and academic research questioning the performance of “busy” directors, ISS set limits of six directorships for most board members and three total board memberships (service on the home company board and two outside directorships) for sitting CEOs.

Since these limits were adopted, the average time commitment for board service has exploded. According to the National Association of Corporate Directors’ (NACD) 2014-2015 Public Company Governance Survey, respondent directors of public companies now spend an average of 242 hours a year (or more than 30 eight-hour work days annually) on board service. This typical time commitment jumps up to 278 hours (or nearly five more eight-hour work days) when you add in the survey respondents’ estimates of additional time spent in informal meetings/conversations with management. In contrast, the average annual director time commitment reported by NACD’s survey respondents in 2005 was 190 hours (or fewer than 24 eight-hour work days).

[2] Davis Polk &Wardwell, Corporate Governance Practices in U.S. Initial Public Offerings (Excluding Controlled Companies, Jan, 2014.
[3] Although all of a CEO’s subsidiary boards will be counted as separate boards, ISS will not recommend a withhold vote from the CEO of a parent company board or any of the controlled (>50 percent ownership) subsidiaries of that parent, but may do so at subsidiaries that are less than 50 percent controlled and boards outside the parent/subsidiary relationships.
[4] This policy change includes a 1-year transition period to allow time for affected directors to address necessary changes if they wish.

Recent academic research generally shows a negative association between board "busyness" and firm performance and director attendance at board meetings[5]. Notably, the authors of most of these studies define a "busy" director's workload as three or more boards.

Many boards have responded to concerns about overboarding by placing limits on the number of public company directorships that that their members may hold. Some boards appear to address time commitment concerns via their nominating panels. Spurred by these policies and common sense, most board members limit their board seats to four or fewer directorships.

ISS has periodically updated its overboarding policy since it was implemented in 2004, to incorporate the evolving market realities. The new policy aligns with feedback and research received from institutional investors as well as the issuer community (via our 2015-2016 policy survey and roundtable discussions) regarding the ability of a director to devote sufficient time to each board commitment. Based on that feedback as well as draft policy comments, ISS will continue evaluating the optimal level of directorships for individuals who are CEOs of public companies.

Proxy Contests/Proxy Access — Voting for Director Nominees in Contested Elections

Current General Recommendation: Vote case-by-case on the election of directors in contested elections, considering the following factors:

- Long-term financial performance of the target company relative to its industry;
- Management's track record;
- Background to the proxy contest;
- Nominee qualifications and any compensatory arrangements;
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates);
- Stock ownership positions.

When the addition of shareholder nominees to the management card ("proxy access nominees") results in a number of nominees on the management card which exceeds the number of seats available for election, vote case-by-case considering the same factors listed above.

Key Changes:

- Clarifying a policy analysis framework to evaluate candidates nominated pursuant to proxy access as well as nominees in a proxy contest.
- While several factors may be similar in each evaluation, there may be factors that are unique to analyzing proxy access nominations.

New General Recommendation: Vote case-by-case on the election of directors in contested elections, considering the following factors:

[5] Cashman, George D. and Gillan, Stuart and Jun, Chulhee, Going Overboard? On Busy Directors and Firm Value (March 1, 2012). Available at SSRN: http://ssrn.com/abstract=2044798 or http://dx.doi.org/10.2139/ssrn.2044798; Falato, Antonio and Kadyrzhanova, Dalida and Lel, Ugur, Distracted Directors: Does Board Busyness Hurt Shareholder Value? (December 10, 2013). Available at SSRN: http://ssrn.com/abstract=2272478 or http://dx.doi.org/10.2139/ssrn.2272478; Jiraporn, Pornsit and Davidson, Wallace N. and Ning, Yixi and DaDalt, Peter J., Too Busy to Show Up? An Analysis of Directors' Absences (January 21, 2008). Available at SSRN: http://ssrn.com/abstract=1254642 or http://dx.doi.org/10.2139/ssrn.1254642

- Long-term financial performance of the target company relative to its industry;
- Management's track record;
- Background to the contested election;
- Nominee qualifications and any compensatory arrangements;
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates); and
- Stock ownership positions.

In the case of candidates nominated pursuant to proxy access, vote case-by-case considering any applicable factors listed above or additional factors which may be relevant, including those that are specific to the company, to the nominee(s) and/or to the nature of the election (such as whether or not there are more candidates than board seats).

Rationale for Update:

This policy revision provides an analytical framework for evaluating candidates nominated pursuant to proxy access. ISS has a policy for evaluating director nominees in contested elections, which currently applies to proxy contests as well as proxy access nominations. However, the circumstances and motivations of a proxy contest and a proxy access nomination may differ significantly. Therefore, it is necessary to create adequate analytical latitude for evaluating candidates nominated through proxy access.

Proxy access rights have grown into a high-visibility corporate governance issue for US-listed companies. In 2014, ISS evaluated 18 shareholder proposals seeking proxy access rights. That number rose to more than 90 in 2015. Further, while five of the proposals received majority support in 2014, 52 have received majority support so far in 2015. Moreover, following the 2015 US proxy season, numerous companies have unilaterally adopted proxy access rights, even in the absence of majority-supported shareholder proposals.

While it is unlikely that many (or perhaps any) proxy access nominees will materialize in 2016, ISS believes it is prudent to update its framework for evaluating candidates nominated via proxy access right. In some cases, the nominating shareholder's views on the current leadership or company strategy may be opposed to the existing board's views. Alternatively, a shareholder nominator may generally agree with the company's strategy or have no specific critiques of incumbent directors, but may propose an alternative candidate to address a specific concern, such as board diversity or boardroom skills gaps.

COMPENSATION

Advisory Votes on Executive Compensation— Problematic Pay Practices

Insufficient Executive Compensation Disclosure by Externally Managed Issuers

Current General Recommendation: None.

Currently, insufficient disclosure regarding compensation arrangements for executives at an externally-managed issuer (EMI) is not considered a problematic pay practice under ISS policy. Absent any other significant concerns identified, ISS has generally not issued adverse say-on-pay recommendations on this basis. ISS does raise concerns, however, regarding the lack of transparency resulting when an EMI provides a say-on-pay proposal without information that enables investors to make an informed voting decision on the proposal.

Key Changes: Update the Problematic Pay Practice policy, add "Insufficient Executive Compensation Disclosure by Externally Managed Issuers (EMIs)" to the list of practices that may result in an adverse recommendation on the advisory vote on executive compensation. This refers to an EMI's failure to provide sufficient disclosure to enable shareholders to make a reasonable assessment of compensation arrangements for the EMI's named executive officers.

New General Recommendation: For externally-managed issuers (EMIs), generally vote against the say-on-pay proposal when insufficient compensation disclosure precludes a reasonable assessment of pay programs and practices applicable to the EMI's executives.

Rationale for Update:

Lack of Disclosure Precludes a Reasonable Assessment of Executive Compensation Arrangements

Like most U.S. public companies, EMIs are subject to periodic, advisory say-on-pay vote requirements. However, an EMI typically does not directly compensate its executives. Instead, executives are compensated by the external manager, which is reimbursed by the EMI through a management fee.

EMIs typically do not disclose any details about their compensation arrangements or payments made to executives by external managers. Many EMIs do not provide even basic disclosure regarding executive compensation arrangements and payments between the external manager and the EMI's executives. When “executive compensation information” is disclosed, it is usually limited to the aggregate management fee paid by the EMI to its manager. Without adequate information, shareholders are unable to conduct a reasonable assessment of executive compensation arrangements in order to identify potentially problematic aspects of those arrangements and to make an informed decision when voting on the EMI's say-on-pay proposal.

Some EMIs provide disclosure about the value and nature of NEOs' compensation arrangements in sufficient detail to enable shareholders to reasonably assess the arrangements and cast an informed vote on the EMI's say-on-pay proposal. Some EMIs, for example, disclose the aggregate portion of such fees that is allocable to executive compensation expenses. A small number of EMIs disclose detailed information on behalf of their external managers. This enhanced transparency demonstrates that such information can be made available within the constraints of company agreements with external managers.

As such, ISS will consider insufficient disclosure regarding compensation arrangements between executives and the external manager to be a problematic practice that warrants an AGAINST recommendation on the say-on-pay proposal.

2015-2016 Policy Survey

Based on 2015-2016 ISS Policy Survey results, 71% of investor respondents indicated that, in the event an EMI does not provide disclosure on the compensation paid to management by the eternal manager, ISS should recommend an AGAINST vote on the say-on-pay proposal, given that the level of disclosure does not meet shareholders' informational needs. Even a sizable minority (24%) of non-investor respondents (companies and advisors) responded that an AGAINST recommendation would be warranted.

U.S. Compensation Roundtables

At the 2015 ISS U.S. Compensation Roundtable held on Sept. 22, 2015, nearly all participants expressed their support for a policy update in which ISS would recommend AGAINST the say-on-pay proposals for EMIs that do not provide sufficient executive compensation disclosure. No participant expressed a preference for continuation of ISS' current approach of supporting the say-on-pay proposals in such cases. At the 2014 ISS U.S. Compensation Roundtable held on Sept. 16, 2014, participants similarly indicated that they considered an EMI's lack of compensation disclosure to inhibit shareholders' ability to fully assess the merits of the company's pay program and practices.

Hold Equity Past Retirement or for a Significant Period of Time

Current General Recommendation: Vote case-by-case on shareholder proposals asking companies to adopt policies requiring senior executive officers to retain all or a significant portion of the shares acquired through compensation plans, either:

- while employed and/or for two years following the termination of their employment ; or
- for a substantial period following the lapse of all other vesting requirements for the award ("lock-up period"), with ratable release of a portion of the shares annually during the lock-up period.

The following factors will be taken into account:

- Whether the company has any holding period, retention ratio, or officer ownership requirements in place. These should consist of:
  - Rigorous stock ownership guidelines;
  - A holding period requirement coupled with a significant long-term ownership requirement; or
  - A meaningful retention ratio;
- Actual officer stock ownership and the degree to which it meets or exceeds the proponent's suggested holding period/retention ratio or the company's own stock ownership or retention requirements;
- Post-termination holding requirement policies or any policies aimed at mitigating risk taking by senior executives;
- Problematic pay practices, current and past, which may promote a short-term versus a long-term focus.

A rigorous stock ownership guideline should be at least 10x base salary for the CEO, with the multiple declining for other executives. A meaningful retention ratio should constitute at least 50 percent of the stock received from equity awards (on a net proceeds basis) held on a long-term basis, such as the executive's tenure with the company or even a few years past the executive's termination with the company.

Vote case-by-case on shareholder proposals asking companies to adopt policies requiring Named Executive Officers to retain 75% of the shares acquired through compensation plans while employed and/or for two years following the termination of their employment, and to report to shareholders regarding this policy. The following factors will be taken into account:

- Whether the company has any holding period, retention ratio, or officer ownership requirements in place. These should consist of:
  - Rigorous stock ownership guidelines, or
  - A holding period requirement coupled with a significant long-term ownership requirement, or
  - A meaningful retention ratio,
- Actual officer stock ownership and the degree to which it meets or exceeds the proponent's suggested holding period/retention ratio or the company's own stock ownership or retention requirements.
- Problematic pay practices, current and past, which may promote a short-term versus a long-term focus.

A rigorous stock ownership guideline should be at least 10x base salary for the CEO, with the multiple declining for other executives. A meaningful retention ratio should constitute at least 50 percent of the stock received from equity awards (on a net proceeds basis) held on a long-term basis, such as the executive's tenure with the company or even a few years past the executive's termination with the company.

Generally vote against shareholder proposals that mandate a minimum amount of stock that directors must own in order to qualify as a director or to remain on the board. While ISS favors stock ownership on the part of directors, the company should determine the appropriate ownership requirement.

Key Changes:

- Broaden policy to encompass executive equity retention proposals more generally, eliminating the need for a separate policy covering proposals seeking retention of 75% of net shares.
- Clarify that the proposed retention ratio and the required duration of retention are some of the several factors that will be considered in ISS' case-by-case analysis.

New General Recommendation: Vote case-by-case on shareholder proposals asking companies to adopt policies requiring senior executive officers to retain a portion of net shares acquired through compensation plans. The following factors will be taken into account:

- The percentage/ratio of net shares required to be retained;
- The time period required to retain the shares;
- Whether the company has equity retention, holding period, and/or stock ownership requirements in place and the robustness of such requirements;
- Whether the company has any other policies aimed at mitigating risk taking by executives;
- Executives' actual stock ownership and the degree to which it meets or exceeds the proponent's suggested holding period/retention ratio or the company's existing requirements; and
- Problematic pay practices, current and past, which may demonstrate a short-term versus long-term focus.

Rationale for Update:

This policy update clarifies the factors considered in ISS' case-by-case analysis. It also broadens the policy to encompass equity retention proposals more generally, thereby eliminating the need for a separate policy tied to a specified retention ratio.

Specifically, the revised policy clarifies that the proponent's suggested retention percentage/ratio and the required retention duration are two of the several factors to be assessed under ISS' case-by-case approach. This change eliminates the need for separate policies tied to specified retention ratios (i.e. a separate policy for proposals requesting 75% net share retention), since the retention ratio is a factor to be considered for every proposal. In more clearly identifying the factors and eliminating repetitive language, the new policy is more streamlined and easier to understand.

ENVIRONMENTAL AND SOCIAL ISSUES

Animal Welfare

Current General Recommendation: Generally vote for proposals seeking a report on a company's animal welfare standards, unless:

- The company has already published a set of animal welfare standards and monitors compliance;
- The company's standards are comparable to industry peers; and
- There are no recent, significant fines or litigation related to the company's treatment of animals.

Key Changes:

- Add "or animal welfare-related risks" to introductory sentence;
- Add "controversies" to last bullet point; and
- Add "and/or its suppliers'" to the last bullet point.

New General Recommendation: Generally vote for proposals seeking a report on a company's animal welfare standards, or animal welfare-related risks, unless:

- The company has already published a set of animal welfare standards and monitors compliance;
- The company's standards are comparable to industry peers; and
- There are no recent significant fines, litigation, or controversies related to the company's and/or its suppliers' treatment of animals.

Rationale for Update:

In 2014, some proponents began submitting shareholder proposals requesting reports on the risks associated with the use of certain methods of animal housing (e.g. gestation crates and battery cages) and other animal welfare practices deemed inhumane in a company's supply chain. The updated policy clarifies that proposals requesting a report on animal welfare-related risks, including the aforementioned resolutions on supply chain risks, are analyzed under this policy. The inclusion of controversies, along with fines and litigation, provides for consistent language across the Environmental and Social Issues policies, and ensures consistent evaluation and incorporation of relevant information.

Pharmaceutical Pricing, Access to Medicines, and Prescription Drug Reimportation

Current General Recommendation: Vote case-by-case on proposals requesting that a company report on its product pricing or access to medicine policies, considering:

- The nature of the company's business and the potential for reputational and market risk exposure;
- Existing disclosure of relevant policies;
- Deviation from established industry norms;
- Relevant company initiatives to provide research and/or products to disadvantaged consumers;
- Whether the proposal focuses on specific products or geographic regions; and
- The potential burden and scope of the requested report.

Key Changes:

- Add "regulatory" to the risk exposure bullet point; and
  Add a bullet point for "recent signficiant controveries, litigation, or fines at the company."

New General Recommendation: Vote case-by-case on proposals requesting that a company report on its product pricing or access to medicine policies, considering:

- The potential for reputational, market, and regulatory risk exposure;
- Existing disclosure of relevant policies;
- Deviation from established industry norms;
- Relevant company initiatives to provide research and/or products to disadvantaged consumers;
- Whether the proposal focuses on specific products or geographic regions;
- The potential burden and scope of the requested report;
- Recent significant controversies, litigation, or fines at the company.

Rationale for Update:

This update codifies ISS' current practice. When evaluating resolutions that request a report on a company's policies related to product pricing and access to medicine, ISS considers the potential for regulatory risks and the company's exposure to controversies, litigation, or fines.

The addition of the controversies bullet point reflects the increased criticism regarding the pricing of pharmaceutical products, in particular specialty drugs. This criticism has not only resulted in media coverage, but also Senate and U.S. Department of Justice investigations at some companies. Additionally, a growing number of states have either passed or have presented legislation aiming to cap pricing for certain products or to require drug manufacturers to provide increased disclosure on the cost of drug research and production, resulting in additional regulatory risks for the pharmaceutical industry.

Climate Change/Greenhouse Gas (GHG) Emissions

Current General Recommendation: Generally vote for resolutions requesting that a company disclose information on the impact of climate change on its operations and investments, considering:

- Whether the company already provides current, publicly-available information on the impacts that climate change may have on the company as well as associated company policies and procedures to address related risks and/or opportunities;
- The company's level of disclosure is at least comparable to that of industry peers; and
- There are no significant controversies, fines, penalties, or litigation associated with the company's environmental performance.

Key Changes:

Add "such as financial, physical, or regulatory risks" to the introductory sentence.

New General Recommendation: Generally vote for resolutions requesting that a company disclose information on the risks related to climate change on its operations and investments, such as financial, physical, or regulatory risks, considering:

- Whether the company already provides current, publicly-available information on the impact that climate change may have on the company as well as associated company policies and procedures to address related risks and/or opportunities;
- The company's level of disclosure is at least comparable to that of industry peers; and
- There are no significant controversies, fines, penalties, or litigation associated with the company's environmental performance.

Rationale for Update:

During the 2015 proxy season, proponents filed new shareholder proposals addressing companies' capital expenditure strategies as they relate to investments in fossil fuel and stranded carbon asset risk (investment in high-cost, high-carbon assets could be stranded, as global demand for fossil fuels slows in the coming years and/or potential climate change regulations make them unburnable). These resolutions asked companies to either report on the consistency of their capital expenditure strategies with policymakers' goals to limit greenhouse gas emissions, or a company's strategy to address the risk of stranded assets presented by global climate change and associated demand reductions for oil and gas.

The revisions to the current policy clarify the types of risks related to climate change that can impact a company's operations and investments. It also clarifies that the capital expenditure strategy and stranded carbon asset resolutions are evaluated pursuant to this policy.

CANADA

BOARD OF DIRECTORS- VOTING ON DIRECTOR NOMINEES IN UNCONTESTED ELECTIONS

Overboarded Directors –TSX

Current General Recommendation: Generally vote withhold for individual director nominees if:

- Irrespective of whether the company has adopted a majority voting policy, the director is overboarded[6] AND the individual director has attended less than 75 percent of his/her respective board and committee meetings held within the past year without a valid reason for these absences.

Cautionary language will be included in ISS reports where directors are overboarded regardless of attendance.

Key Changes:
- Change the definition of "overboarded" from more than 2 outside public company boards to more than 1 in the case of CEOs, and from more than 6 total public company boards to more than 4 in the case of non-CEOs.
- Commencing as of February 2017 meeting dates, the new policy definition will be implemented under the ISS Canada TSX Overboarded Directors policy.

New General Recommendation: Generally vote withhold for individual director nominees if:
- Irrespective of whether the company has adopted a majority voting policy, the director is overboarded[6,7] AND the individual director has attended less than 75 percent of his/her respective board and committee meetings held within the past year without a valid reason for these absences.

Cautionary language will be included in ISS reports where directors are overboarded regardless of attendance.

Rationale for Update:

Directors need sufficient time and energy in order to be effective representatives of shareholders' interests. Directors' responsibilities are increasingly complex as board and key committee memberships demand greater time commitments.

In a 2014 study, 120 board chairs, directors and CEOs across Canada were surveyed regarding their annual time commitment per board on which they served. The survey found that the average annual time commitment per board for a Canadian director was 304 hours. This number was higher for directors of companies with assets of more than CA$5 billion (388 hours) and also higher for those with assets between CA$1 billion and CA$5 billion (335 hours). There

[6] "Overboarded" is defined as: a CEO of a public company who sits on more than 2 outside public company boards in addition to the company of which he/she is CEO (withholds would only apply on outside boards these directors sit on), OR the director is not a CEO of a public company and sits on more than 6 public company boards in total.

[7] Starting February 1, 2017, "overboarded" will be defined as: a CEO of a public company who sits on more than 1 outside public company board in addition to the company of which he/she is CEO (withholds would only apply on outside boards these directors sit on), OR the director is not a CEO of a public company and sits on more than 4 public company boards in total.

was also a correlation between the role of a director and average annual time commitment. As expected, being a board chair is the most time consuming role; however, being a committee chair can be almost as time consuming.

While it appears that no comparable studies were conducted for previous years in Canada, according to a 2014-2015 US survey conducted by the National Association of Corporate Directors (NACD), directors of US public companies spent an annual average of 278 hours on board-related matters.

Based on the results of the 2015-16 ISS Global Policy Survey, a plurality of investor responses indicated that four total board seats is an appropriate limit for directors who are not active CEOs, and that a total of two board seats (a CEO's "home board" plus one outside board) is an appropriate limit for directors who are active CEOs.

ISS also obtained feedback in one-on-one discussions with institutional investors, the results of which indicate that a majority of those canvassed support maximum limits of four and two total board seats for non-CEO directors and CEO directors, respectively. These limits are reasonable in light of the "double-trigger" approach of jointly evaluating both number of board seats and attendance under Canadian policy.

Externally-Managed Issuers (EMIs) –TSX and TSXV

Current General Recommendation: None.

Key Changes:

Provide a framework for reviewing board accountability at EMIs, in cases where disclosure is limited or insufficient with respect to the management services agreement and how senior management is compensated.

New General Recommendation: Vote case-by-case on say-on-pay resolutions where provided, or on individual directors, committee members, or the entire board as appropriate, when an issuer is externally-managed and has provided minimal or no disclosure about their management services agreements and how senior management is compensated. Factors taken into consideration may include but are not limited to:

- The size and scope of the management services agreement;
- Executive compensation in comparison to issuer peers and/or similarly structured issuers;
- Overall performance;
- Related party transactions;
- Board and committee independence;
- Conflicts of interest and process for managing conflicts effectively;
- Disclosure and independence of the decision-making process involved in the selection of the management services provider;
- Risk mitigating factors included within the management services agreement such as fee recoupment mechanisms;
- Historical compensation concerns;
- Executives' responsibilities; and
- Other factors that may reasonably be deemed appropriate to assess an externally-managed issuer's governance framework.

Rationale for Update:

Externally-managed issuers (EMIs) typically pay fees to outside firms in exchange for management services. In most cases, some or all of the EMI's executives are directly employed and compensated by the external management firm.

EMIs typically do not disclose details of the management agreement in their proxy statements and only provide disclosure on the aggregate amount of fees paid to the manager, with minimal or incomplete compensation information.

Say-on-pay resolutions are voluntarily adopted in Canada, and none of the currently identified Canadian EMIs had a say-on-pay resolution on ballot this past year. Additionally, all non-controlled TSX-listed issuers are required to adopt majority voting director resignation policies which could result in a director being required to resign from a board if he or she receives more 'withhold' than 'for' votes at the shareholders' meeting. Some investor respondents to ISS' 2015-16 ISS Global Policy Survey indicated that in cases where an externally managed company does not have a say-on-pay proposal (i.e., 'withhold' votes may be recommended for individual directors), factors other than disclosure should be considered, such as performance, compensation and expenses paid in relation to peers, board and committee independence, conflicts of interest, and pay-related issues. Policy outreach sessions conducted with Canadian institutional investors resulted in identical feedback.

COMPENSATION

Equity Compensation Plans–TSX

Current General Recommendation: Vote case-by-case on equity-based compensation plans. Vote against the plan if any of the following factors applies:

- **Cost of Equity Plans:** The total cost of the company's equity plans is unreasonable;
- **Dilution and Burn Rate:** Dilution and burn rate are unreasonable, where the cost of the plan cannot be calculated due to lack of relevant historical data.
- **Plan Amendment Provisions:** The provisions do not meet ISS guidelines regarding those amendments that should require shareholder approval..
- **Non-Employee Director Participation:** Participation of directors is discretionary or unreasonable.
- **Pay for performance:** There is a disconnect between CEO pay and the company's performance.
- **Repricing Stock Options:** The plan expressly permits the repricing of stock options without shareholder approval and the company has repriced options within the past three years.
- **Problematic Pay Practices:** The plan is a vehicle for problematic pay practices.

Key Changes:

Similar to the model introduced in the United States for the 2015 proxy season, ISS is adopting a "scorecard" model (Equity Plan Scorecard – "EPSC") for Canadian TSX equity plans that considers a range of positive and negative factors to evaluate equity incentive plan proposals. In concert with ISS' longstanding Canadian policies for TSX equity plans (relating to non-employee director participation, amendment provisions, and repricing without shareholder approval), the total EPSC score will determine whether ISS recommends for or against the proposal.

EPSC factors will fall under three categories ("EPSC pillars"): Plan Cost, Plan Features, and Grant Practices.

As part of the new approach, the updated policy will:

- Utilize two index groups to determine certain thresholds and factor weightings: [8]
    - S&P/TSX Composite Index; and
    - Non-Composite TSX-listed Issuers.
- Utilize individual scorecards for both index groups, as well as Special Cases versions of these scorecards where certain historic data are unavailable;
- Measure plan cost (Shareholder Value Transfer or SVT) through both of the following:
    - The company's total new and previously reserved equity plan shares plus outstanding grants and awards ("A+B+C shares"); and
    - Only the new request plus previously reserved but ungranted shares ("A+B shares");
- Incorporate a wide range of new factors for consideration, both positive and negative, in determining how to recommend for a given equity plan.

New General Recommendation: Vote case-by-case on equity-based compensation plans using an "equity plan scorecard" (EPSC) approach. Under this approach, certain features and practices related to the plan[9] are assessed in combination, with positively-assessed factors potentially counterbalancing negatively-assessed factors and vice-versa. Factors are grouped into three pillars:

- **Plan Cost**: The total estimated cost of the company’s equity plans relative to industry/market cap peers, measured by the company's estimated Shareholder Value Transfer (SVT) in relation to peers and considering both:
    - SVT based on new shares requested plus shares remaining for future grants, plus outstanding unvested/unexercised grants; and
    - SVT based only on new shares requested plus shares remaining for future grants.

- **Plan Features:**
    - Absence of problematic change-in-control (CIC) provisions, including:
        - Single-trigger acceleration of award vesting in connection with a CIC; and
        - Settlement of performance-based equity at target or above in the event of a CIC-related acceleration of vesting regardless of performance.
    - No financial assistance to plan participants for the exercise or settlement of awards;
    - Public disclosure of the full text of the plan document; and
    - Reasonable share dilution from equity plans relative to market best practices.

- **Grant Practices:**
    - Reasonable three-year average burn rate relative to market best practices;
    - Meaningful time vesting requirements for the CEO's most recent equity grants (three-year lookback);
    - The issuance of performance-based equity to the CEO;
    - A clawback provision applicable to equity awards; and
    - Post-exercise or post-settlement share-holding requirements (S&P/TSX Composite Index only).

Generally vote against the plan proposal if the combination of above factors, as determined by an overall score, indicates that the plan is not in shareholders' interests. In addition, vote against the plan if any of the following unacceptable factors have been identified:

- Discretionary or insufficiently limited non-employee director participation;

---

[8] Additional Special Cases versions of both models will also be developed for companies that have recently IPO'd or emerged from bankruptcy and where the burn-rate factor would therefore not apply.
[9] In cases where certain historic grant data are unavailable (e.g. following an IPO or emergence from bankruptcy), Special Cases models will be applied which omit factors requiring these data.

- An amendment provision which fails to adequately restrict the company's ability to amend the plan without shareholder approval;
- A history of repricing stock options without shareholder approval (three-year look-back);
- The plan is a vehicle for problematic pay practices or a significant pay-for-performance disconnect under certain circumstances; or
- Any other plan features that are determined to have a significant negative impact on shareholder interests.

Rationale for Update:

As issues around cost transparency and best practices in equity-based compensation have evolved in recent years, ISS has determined to update its Canadian Equity Plans policy in order to provide for a more nuanced consideration of equity plan proposals.

Currently, the Canadian policy for equity plans comprises a series of pass/fail tests relating to plan cost and to three key concerns of Canadian investors:

- Non-employee director participation;
- Plan amendment provisions; and
- Repricing without shareholder approval.

While the three policy cornerstones above will continue to be overriding negative factors under the new policy, the pass/fail test for plan cost will be replaced with a scorecard approach designed to provide a robust overview of an equity plan's strengths and weaknesses.

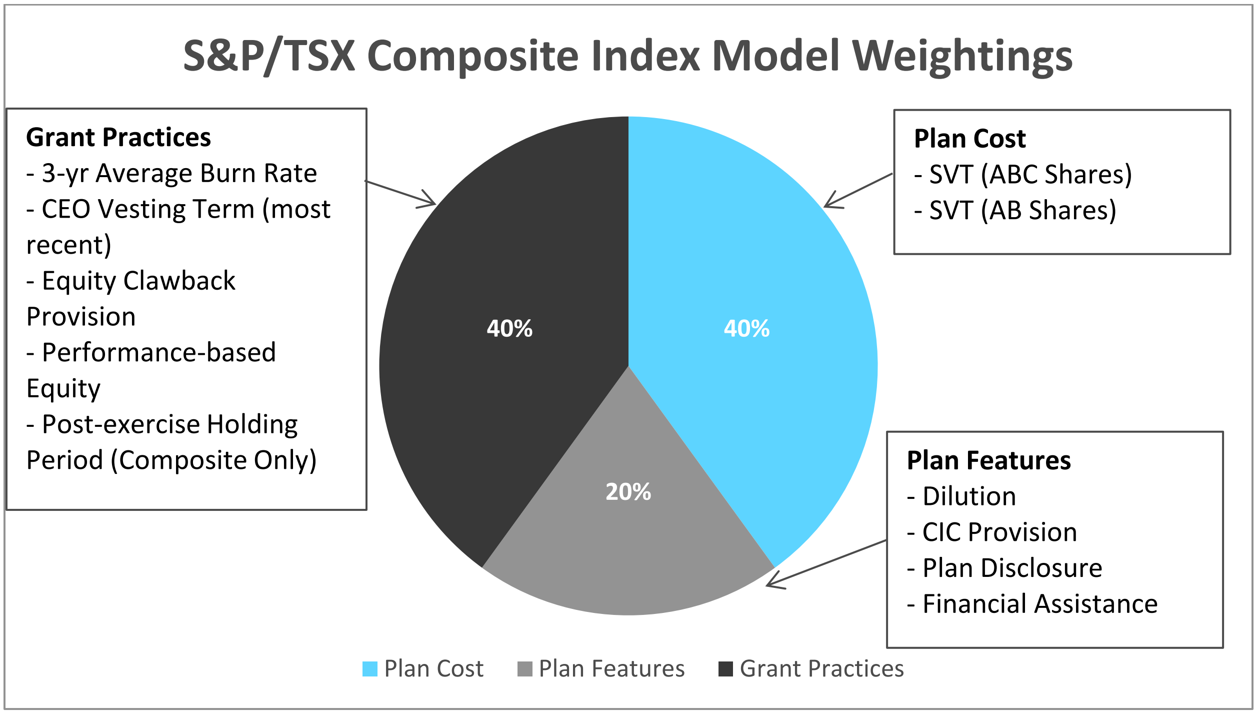
Feedback obtained through ongoing consultation with institutional investors since the 2013-2014 ISS policy cycle indicates strong support for the new approach, which incorporates the following key goals:

1. Consider a range of factors, both positive and negative, in determining vote recommendations;
2. Select factors based on institutional investors' concerns and preferences and on best practices within the Canadian market established through regulation, disclosure requirements, and best practice principles;
3. Establish factor thresholds and weightings which are cognizant of the Canadian governance landscape (separate scorecards for the S&P/TSX Composite Index and the broader TSX);
4. Ensure that key concerns addressed by policy continue to hold paramount importance (institution of overriding negative factors).

The EPSC policy for equity plan proposals significantly iterates ISS' current Canadian policy by providing a full-spectrum overview of plan cost, plan features, and historic grant practices. This allows shareholders greater insight into rising governance concerns, such as the implementation of risk-mitigating mechanisms, the strength of vesting provisions, and the use of performance-based equity, while also providing added assessments of longstanding concerns relating to equity plans such as burn rate and dilution.

By assessing these factors in combination, the EPSC is designed to facilitate a more holistic approach to vote recommendations. For example, a plan where cost is nominally higher than a company's allowable cap may receive a favourable recommendation if sufficient positive factors are present. Conversely, a plan where cost is nominally lower than the allowable cap may ultimately receive a negative recommendation if a preponderance of scorecard factors demonstrates adverse qualities. Plans will, however, continue to be subject to the scrutiny of overriding negative factors reflecting ISS' current policies regarding problematic non-employee director participation, insufficient plan amendment provisions, repricing without shareholder approval, and other egregious practices. Plans permitting these unacceptable practices will continue to receive an "against" recommendation.

A scorecard approach will enable the evaluation of equity plan proposals in consideration of a range of best practices. Weightings for the three scorecard pillars applicable to S&P/TSX Composite Index constituents and non-Composite TSX-listed issuers are shown below, along with the factors within each pillar. More information about the policy and weightings will be included in ISS' EPSC FAQ to be published in December.



BRAZIL

BOARD OF DIRECTORS - DIRECTOR ELECTIONS

Election of board and fiscal council nominees presented by minority ordinary and preferred holders under separate election items

Current General Recommendation: Vote against the election of directors nominated by non-controlling shareholders presented as a separate voting item if the nominee names are not disclosed in a timely manner prior to the meeting.

The policy is silent regarding the election of fiscal council members (statutory auditors) nominated by non-controlling shareholders, presented as separate voting items, as allowed by the Brazilian Corporate Law.

Key Changes:

› Recommend an abstain vote in the absence of timely disclosure regarding the names of the minority shareholders' director nominees (both ordinary minority nominee and/or preferred minority nominee, as applicable), when presented under a separate election; and

› Add the provision of an abstain vote recommendation in the absence of timely disclosure regarding the names of minority shareholders' fiscal council nominees and alternates (both ordinary and preferred minority nominees, as applicable), when presented under a separate election.

New General Recommendation: Vote abstain on the election of directors and fiscal council members nominated by non-controlling shareholders presented as a separate voting item if the nominee names are not disclosed in a timely manner prior to the meeting.

Rationale for Update:

The current recommendation to vote against the election of directors nominated by non-controlling shareholders presented as a separate voting item if the nominee names are not disclosed in a timely manner prior to the meeting is part of the Brazilian policy carved out from the Americas Regional policy mid-2013, effective as of Feb. 1, 2014, but was not fully implemented by the Latin America Research team due to the evolving processes in the voting operations chain regarding minority elections presented under separate items in the Brazilian market.

Minority nominees are generally considered independent and, as they can legally be presented up to the time of the meeting, a vote against would disenfranchise minority shareholders who could benefit from greater independent representation. Nonetheless, a vote for minority nominees in the absence of the disclosure of such names is inconsistent with ISS transparency principles and the overall policy framework for the Latin America region.

As such, an abstain vote is the most effective (and neutral) way to address minority shareholder election items when adequate disclosure is not provided in a timely manner. The policy update maintains the current practice of recommending a for vote if the names of the minority nominees are disclosed, and, in the absence of timely disclosure, to recommend an abstain vote for all minority election items, including directors and fiscal council nominees (ordinary and preferred shareholder meeting).

Combined Chairman/CEO

Current General Recommendation: None specific to the combination of Chair/CEO.

Key Changes:
Introduce policies for voting on directors at companies listed under the differentiated corporate governance segments in Brazil that maintain a combined Chair/CEO structure

New General Recommendation: Vote against the bundled election of directors of companies listed under the differentiated corporate governance segments of the Sao Paulo Stock Exchange (BM&FBovespa)--Novo Mercado, Nivel 2, and Nivel 1-- if the company maintains or proposes a combined chairman/CEO structure, after three (3) years from the date the company's shares began trading on the respective differentiated corporate governance segment.

Vote against the election of the company's chairman, if the nominee is also the company's CEO, when it is presented as a separate election at companies listed under the differentiated corporate governance segments of the Sao Paulo Stock Exchange (BM&FBovespa)–Novo Mercado, Nivel 2, and Nivel 1-- after three (3) years from the date the company's shares began trading on the respective differentiated corporate governance segment.

Rationale for Update:

The policy update is consistent with the current regulatory requirements of the Brazilian differentiated corporate governance listing segments (Novo Mercado, Nivel 2, and Nivel 1) adopted by the BM&FBovespa in 2010, which established the following:

No Accumulation of Positions. The offices of chairman of the board of directors and the chief executive officer or major executive officer of the Company shall not be accumulated in a single person, except in case of vacancy, in which event the circumstance will be disclosed to the market and action will be taken within the subsequent one hundred and eighty (180) days to fill in the positions.

However, accumulation of positions of chairman of the board of director and chief executive officer or major executive officer of the Company will be permitted on an exceptional and transitional basis for a maximum period of three (3) years starting from the date the Company shares begin to trade on the Novo Mercado, the Nivel 2 and Nivel 1.

Conflicts of Interest (Policy change applies to Americas Regional policy as well)

Current General Recommendation: Under extraordinary circumstances, vote against individual directors, members of a committee, or the entire board, due to:

- Material failures of governance, stewardship, risk oversight, or fiduciary responsibilities at the company;
- Failure to replace management as appropriate; or
- Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

Key Changes:
Include the provision to recommend against an individual nominee, committee members, or the entire board in light of a conflict of interest that raises significant risk, which has not yet materialized (forward looking), in the absence of mitigating measures.

New General Recommendation: Under extraordinary circumstances, vote against individual directors, member(s) of a committee, or the entire board, due to:

- Material failures of governance, stewardship, risk oversight, or fiduciary responsibilities at the company;
- Failure to replace management as appropriate; or
- Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

Vote against individual directors, members of a committee, or the entire board due to a conflict of interest that raises significant potential risk, in the absence of mitigating measures and/or procedures.

Rationale for Update:

The current policy framework refers to conflicts of interest that raise concern in specific transactions. The update addresses a conflict of interest that raises potential significant risk in terms of future possible actions or transactions that could be adverse to shareholders' interests, when the company does not disclose policies and procedures that would mitigate such risk.

COMPENSATION

Management Compensation

Current General Recommendation: Generally vote for management compensation proposals that are presented in a timely manner and include all disclosure elements required by the Brazilian Securities Regulator (CVM).

Vote against management compensation proposals when:

- The company fails to present a detailed remuneration proposal or the proposal lacks clarity; or
- The company does not disclose the total remuneration of its highest-paid executive; or
- The figure provided by the company for the total compensation of its highest-paid administrator is not inclusive of all elements of the executive's pay.

Key Changes:
Include a provision that a significant increase in the proposed remuneration cap on a year-over-year basis will trigger further scrutiny of the company's remuneration proposal, providing a framework for a more qualitative remuneration analysis.

New General Recommendation: Generally vote for management compensation proposals that are presented in a timely manner and include all disclosure elements required by the Brazilian Securities Regulator (CVM).

Vote against management compensation proposals when:

- The company fails to present a detailed remuneration proposal or the proposal lacks clarity; or
- The company does not disclose the total remuneration of its highest-paid executive; or
- The figure provided by the company for the total compensation of its highest-paid administrator is not inclusive of all elements of the executive's pay.

Vote case-by-case on global remuneration cap (or company's total remuneration estimate, as applicable) proposals that represent a significant increase of the amount approved at the previous AGM (year-over-year increase). When further scrutinizing year-over-year significant remuneration increases, jointly consider some or all of the following factors, as relevant:

- Whether there is a clearly stated and compelling rationale for the proposed increase;
- Whether the remuneration increase is aligned with the company's long-term performance and/or operational performance targets disclosed by the company;
- Whether the company has had positive TSR for the most recent one- and/or three-year periods;
- Whether the relation between fixed and variable executive pay adequately aligns compensation with the company's future performance.

Rationale for Update:

In Brazil, shareholders are asked to approve the aggregate remuneration of directors and executive officers annually through a binding resolution presented at a shareholder meeting. Regulatory changes implemented late 2009, effective as of January 2010 (Instructions 480 and 481), provided the framework of full disclosure of the proposed remuneration, including detailed information of executive remuneration (not individualized), which has now been in place for several years. While current policy has based recommendations solely on companies' compliance with the disclosure requirements, this update provides for a more qualitative analysis when a significant year-over-year increase signals that further scrutiny of remuneration practices is warranted.

Compensation Plans

Current General Recommendation: ISS will generally support reasonable equity pay plans that encourage long-term commitment and ownership by its recipients without posing significant risks to shareholder value.

Practically all of the plans presented since the implementation of the 2009 CVM guidelines have included reasonable dilution limits and adequate vesting conditions. Performance criteria, meanwhile, are rarely disclosed. ISS' assessments of these plans have generally hinged on the presence of discounted exercise prices (which are common in Brazil), particularly in the absence of specific performance criteria.

Vote against a stock option plan, or an amendment to the plan, if:

- The plan lacks a minimum vesting cycle of three years; and/or
- The plan permits options to be issued with an exercise price at a discount to the current market price, in the absence of explicitly stated, challenging performance hurdles related to the company's historical financial performance or the industry benchmarks; and/or
- The maximum dilution exceeds ISS guidelines of 5 percent of issued capital for a mature company and 10 percent for a growth company. However, ISS will support plans at mature companies with dilution levels up to 10 percent if the plan includes other positive features such as challenging performance criteria and meaningful vesting periods, as these features partially offset dilution concerns by reducing the likelihood that options will become exercisable unless there is a clear improvement in shareholder value; and/or
- Directors eligible to receive options under the scheme are involved in the administration of the plan.

Key Changes:
Reference restricted share plans to clarify that ISS will recommend against such plans based on the proposal of full-value shares (which essentially represent a 100-percent discount to market price) in the absence of publicly disclosed performance targets and hurdles.

New General Recommendation: ISS will generally support reasonable equity pay plans that encourage long-term commitment and ownership by its recipients without posing significant risks to shareholder value.

Practically all of the plans presented since the implementation of the 2009 CVM guidelines have included reasonable dilution limits and adequate vesting conditions. Performance criteria, meanwhile, are rarely disclosed. ISS' assessments of these plans have generally hinged on the presence of discounted exercise prices (which are common in Brazil), particularly in the absence of specific performance criteria.

Vote against a stock option plan and/or restricted share plan, or an amendment to the plan, if:

- The plan lacks a minimum vesting cycle of three years; and/or
- The plan permits options to be issued with an exercise price at a discount to the current market price, or permits restricted shares to be awarded (essentially shares with a 100 percent discount to market price), in the absence of explicitly stated, challenging performance hurdles related to the company's historical financial performance or the industry benchmarks; and/or
- The maximum dilution exceeds ISS guidelines of 5 percent of issued capital for a mature company and 10 percent for a growth company. However, ISS will support plans at mature companies with dilution levels up to 10 percent if the plan includes other positive features such as challenging performance criteria and meaningful vesting periods, as these features partially offset dilution concerns by reducing the likelihood that options will become exercisable unless there is a clear improvement in shareholder value; and/or
- Directors eligible to receive options under the scheme are involved in the administration of the plan.

Rationale for Update:

Currently, ISS Brazil policy does not address restricted share plans, only stock option plans, although the latter have been seen more frequently in the last couple of years. As such, this policy update includes specific reference to restricted share plans under the current policy framework already adopted for stock options plans.

U.S. Executive Compensation Policies

Frequently Asked Questions

Published December 18, 2015
Updated January 21, 2016

New/updated questions highlighted in yellow

Table of Contents

U.S. EXECUTIVE PAY OVERVIEW

1. Which named executive officers' total compensation data are shown in the Executive Pay Overview section?

The executive compensation section will generally reflect the same number of named executive officer's total compensation as disclosed in a company's proxy statement. However, if more than five named executive officers' total compensation has been disclosed, only five will be represented in the section: the CEO and the four highest paid executives. Current executives will take precedence over terminated executives (except that a terminated CEO whose total pay is within the top five will be included, since s/he was an executive officer within the past fiscal year).

2. There was a CEO transition in the last fiscal year. Which CEO's pay is shown in the report and used for the quantitative screen?

The quantitative pay-for-performance screen will generally use the CEO in office on the last day of the fiscal year; however, the longer tenured CEO may be displayed in some cases where the transition occurs very late in the year. Both CEOs' compensation may be evaluated in the qualitative review.

3. How is Total Compensation calculated?

Total Compensation = Base Salary + Bonus + Non-equity Incentive Plan Compensation + Stock Awards*+ Option Awards** (based on full grant date values, as calculated by ISS) + Change in Pension Value and Nonqualified Deferred Compensation Earnings + All Other Compensation. The calculation will generally match the Summary Compensation Table with the exception of the stock option value and/or stock awards, described further below.

*Stock Awards - Grant date value, generally as reported in the Grants of Plan-Based Awards Table for stock awards, but ISS may calculate values as deemed appropriate based on assessment of the grant. Note that performance shares (equity incentive plan awards) are generally calculated at target value (target # of shares X stock price on grant date).

**Option Awards - Grant date value of options using ISS' Black-Scholes option pricing model.

4. What inputs are used in ISS' Black-Scholes methodology?

Variable	Item	Source	Comments
C	Option Value	Calculated	
S	Stock Price	Proxy	
E	Exercise Price	Proxy	
σ	Volatility	XpressFeed	Historical three-year stock price volatility measured on a daily basis from the date of grant. If a company has not been publicly traded for at least three years, ISS measures volatility from the IPO date through grant date.

Q	Dividend Yield	XpressFeed	Average dividend yield over five years. If a company has not been publicly traded for at least five years, ISS averages dividend yield from the IPO date and the grant date of option. Dividend yield is based on each dividend divided by the closing stock price on the last business day before the dividend date. The calculation excludes the payouts of special dividends.
R	Risk Free Rate	Dept of Treasury website	U.S. Government Bond Yield on the date of grant corresponding to the term of the option. For example, if the option has a 10-year term, the risk free rate is the 10-year U.S. Government Bond Yield on the date of grant.
T	Term/Expected Life	Proxy	Full term of the option.
E	Base of Natural Logarithm	N/A	N/A
Ln	Natural Logarithm	N/A	N/A
N(x)	Cumulative Normal Distribution Function	N/A	N/A

5. How is the present value of all accumulated pensions calculated in the CEO Tally Sheet table?

This figure represents the aggregate amounts disclosed as the present value of the benefits for all pension plans (including qualified and non-qualified), as disclosed in the Pension Benefits table of the proxy statement.

6. How is the value of Non-Qualified Deferred Compensation calculated in the CEO Tally Sheet table?

This figure represents the sum of all deferred compensation values, as disclosed in the Non-Qualified Deferred Compensation table.

7. How are Potential Termination Payments calculated in the CEO Tally Sheet table?

The values for an involuntary termination without cause and a change in control related termination are provided as disclosed under the relevant termination scenario in the Change in Control Table and/or narrative of the proxy statement.

Financial Data: Total Shareholder Return and Revenue

8. Where does ISS obtain a company's 1-year fiscal total shareholder return, 3-year fiscal total shareholder return, and revenue?

ISS obtains all financial data in the Compensation Profile from Standard & Poor's Compustat and Research Insight. Here is a link to their data dictionary.

9. How does Compustat calculate a company's TSRs and financial/operational measures?

For information on how Compustat calculates TSR and financial/operational measures, such as revenue and net income, see the data dictionary.

10. Why does CEO pay as percent of revenue or net income show as "N/A"?

This will show as "N/A" when the company's revenue or net income is not greater than zero.

MANAGEMENT SAY ON PAY (MSOP) AND ISS' EXECUTIVE PAY EVALUATION

11. What is ISS' Executive Pay Evaluation policy?

The Executive Pay Evaluation policy consists of three primary areas: Pay for Performance, Problematic Pay Practices, and Compensation Committee Communication and Responsiveness. Recommendations issued under the Executive Pay Evaluation policy may apply to any or all of the following ballot items, depending on the pay issue (as detailed in the policy): Election of Directors (primarily compensation committee members), Advisory Votes on Compensation (management say on pay -- MSOP), and/or Equity Plan proposals in certain circumstances.

12. When may ISS' compensation-related recommendations affect director election vote recommendations?

In general, if a company has an MSOP resolution on the ballot, the compensation-related recommendations will be applied to that proposal; however, if egregious practices are identified, or if there are recurring problematic issues or responisveness concerns, ISS may also recommend withhold/against votes with respect to compensation committee members or, if appropriate, the full board. In addition, if there is no advisory pay vote on the ballot, any adverse recommendations related to executive compensation may apply to compensation committee members.

13. A company has not included a say on pay proposal on ballot without a valid exemption or has not presented the proposal in adherence with the company's previously adopted frequency. What action is warranted under ISS policy?

In the absence of clearly disclosed and compelling rationale, failure to adhere to the adopted say on pay frequency or failure to include the say on pay proposal on the ballot without a valid exemption may result in against or withhold recommendations against incumbent Compensation Committee members/chair or, in exceptional circumstances, the full board. While the SEC rule requires inclusion of say on pay proposals at least once every three calendar years, if the company's annual meeting date changes due to, for example, a change in fiscal year, or if the proposal is not presented at a meeting where shareholders may reasonably expect to see it for any other reason, companies should provide an explanation about the timing of the next say on pay resolution.

14. If one or more directors received a negative recommendation in the prior year due to ISS' concerns over compensation practices, will it have a bearing on the following year's recommendation?

The prior year recommendation is not a specific consideration in the following year's analysis, although the underlying concern may be. If one or more directors received less than 50 percent of shareholders' support (regardless whether it is a compensation issue), ISS may recommend that shareholders withhold from the entire board with the exception of new nominees if the company fails to take adequate action to respond to or remediate the issues raised in the previous report. If one or more directors received a high level of dissent (30 percent to 49.5 percent), the company should discuss any action or consideration taken to address the concern. A high level of dissent indicates an overall dissatisfaction and the board/committee should be responsive to shareholders' concerns. A lack of discussion or consideration, coupled with existing concerns may have a bearing on the following year's recommendation.

15. What impact might an identified pay for performance misalignment have on equity plan proposals?

If ISS identifies a significant pay-for-performance misalignment that results in an adverse recommendation on the say-on-pay proposal or compensation committee members, ISS may also recommend a vote against an equity plan proposal on the same ballot. Considerations in recommending against the equity plan include, but are not limited to:

- Severity of pay for performance misalignment;
- Whether problematic equity grant practices are driving the misalignment; and
- Whether equity plan awards have been heavily concentrated to the CEO and/or the other NEOs (as opposed to the plan being considered broad-based).

In determining whether the equity plan is broad-based, ISS examines the three-year average concentration ratio for equity awards made to the CEO and other NEOs. If the average concentration ratio exceeds 30% for the CEO (or 60% for all NEOs, including the CEO), this would indicate that the plan is not broad-based. Also see ISS' Equity Plan Scorecard FAQ.

Pay for Performance Evaluation

Please also see ISS' "Evaluating Pay for Performance Alignment" white paper for a detailed explanation of the quantitative methodology used in the first phase of this analysis, and a discussion of the qualitative factors considered.

16. How does ISS' quantitative pay for performance screen work?

The first step in ISS' evaluation of pay for performance has historically been a quantitative assessment of how well a company's CEO pay has been aligned with its shareholder returns. The current screen (which, as of 2015, applies to all S&P 500 and Russell 3000E Index companies, as well as selected additional companies that are widely held) identifies companies that demonstrate a significant level of misalignment between the CEO's pay and company TSR, either on an absolute basis or relative to a group of peers similar in size and industry (see below for more information about ISS peer groups). Three independent measures assess alignment over multiple time horizons. If any or a combination of these measures indicates a pay for performance misalignment, ISS performs an in-depth qualitative review of the company's pay programs and practices to ascertain likely causal factors, or mitigating factors, and a relevant vote recommendation. Note that all companies' pay programs and practices are evaluated.

17. What are the three quantitative screens?

The quantitative screens work as follows:

- Relative Degree of Alignment. This relative measure compares the percentile ranks of a company's CEO pay and TSR performance, relative to an industry-and-size derived comparison group, annualized for the prior three fiscal year periods. Specifically, CEO pay is averaged for the three-year period; annualized TSR is the geometric mean of the three fiscal year TSRs in the period.
- Multiple of Median. This relative measure expresses the prior year's CEO pay as a multiple of the median pay of its comparison group for the same period.
- Pay-TSR Alignment. This absolute measure compares the trends of the CEO's annual pay and the value of an investment in the company over the prior five-year period.

18. How does the initial quantitative pay for performance analysis affect the ultimate compensation-related vote recommendation?

The quantitative pay for performance analysis serves as an initial screen to identify cases that suggest there has been a significant misalignment of CEO pay and performance. An elevated concern from the quantitative screen results in a more in-depth initial qualitative review of the company's pay programs and practices to identify the probable causes of the misalignment and/or mitigating factors. We note that any company can receive an in-depth qualitative review, and all companies' pay programs and practices are evaluated.

However, a company with a Low quantitative concern level may still receive an in-depth qualitative review if deemed appropriate (for example, if the prior say-on-pay proposal received substantial shareholder opposition). While the quantitative screen indicates potential pay for performance outliers, the result of ISS' in-depth qualitative review is what ultimately determines the vote recommendation.

19. What are the factors that ISS considers in conducting the qualitative review of the pay for performance analysis?

Here are some of the key factors that ISS generally considers in conducting the qualitative review of the pay for performance analysis:

- The ratio of performance- to time-based equity awards;
- The overall ratio of performance-based compensation;

- The completeness of disclosure and rigor of performance goals;
- The company's peer group benchmarking practices;
- Actual results of financial/operational metrics, such as growth in revenue, profit, cash flow, etc., both absolute and relative to peers;
- Special circumstances related to, for example, a new CEO in the prior FY or anomalous equity grant practices (e.g., bi-annual awards);
- Realizable pay compared to granted pay; and
- Any other factors deemed relevant.

20. If a company received a "low" concern in the quantitative pay for performance model, will ISS still evaluate the company's incentive programs?

Yes, ISS reviews all companies' Compensation Discussion and Analysis and highlights noteworthy issues to investors regardless of the quantitative concern level. This qualitative evaluation, as well as any in-depth qualitative evaluation subsequent to the quantitative screens, is the most important part of the analysis. Problematic incentive designs such as multi-year guaranteed payments, discretionary pay components, inappropriate perquisites (including tax gross-ups) or lack of rigorous goals are generally addressed in the qualitative analysis and may result in a negative recommendation despite a "low" quantitative concern.

21. How does ISS use realizable pay in its analysis?

ISS' standard research report will generally show three-year realizable pay compared to the three-year granted pay for S&P 1500 companies. See the next question for ISS' definition of realizable pay and how it will be calculated.

Realizable pay may be discussed in the qualitative review. For S&P 1500 companies, we may utilize the realizable pay chart to see if realizable pay is higher or lower than granted pay (see related questions below) and further explore the underlying reasons. For example, is realizable pay lower than granted pay due to the lack of goal achievement in performance based awards, or simply due to a decline in stock price? Is realizable pay higher than granted pay due to above target payouts in performance based equity awards (and, if so, are the underlying goals sufficiently rigorous), or is the difference due to increasing stock price?

For all companies, ISS' consideration of realized and/or realizable pay is to assist in determining whether the company demonstrates a strong commitment to a pay for performance philosophy. The fact that realizable pay is lower, or higher, than granted pay will not necessarily obviate other strong indications that a company's compensation programs are not sufficiently tied to performance goals designed to enhance shareholder value over time. However, in the absence of such indications, realizable pay that demonstrates a pay for performance commitment will be a positive consideration.

22. How is Realizable Pay computed?

ISS' goal is to calculate an estimated amount of "realizable pay" for the CEOs of S&P 1500 companies. It includes the cash and benefit values actually paid, and the value of any amounts "realized" (i.e., exercised or earned due to satisfaction of performance goals) from incentive grants made during a specified measurement period*, based on their value as of the end of the measurement period. Equity grants made during the measurement period that remain on-going as of the end of the period (i.e., not yet earned or forfeited) will be revalued using the company's stock price at the end of the period. For periods that include multiple CEOs, the departed CEO's pay (excluding any grants forfeited) will be valued as of his/her termination date.

In short, realizable pay includes all non-incentive compensation amounts delivered during the measurement period, plus the value of equity or long-term cash incentive awards made during the period and either earned or, if the award remains on-going, revalued at target level as of the end of the measurement period. The total realizable value for these grants and payments will thus be the sum of the following:

- Base salary reported for all years in the measurement period;
- Bonus reported for all years;
- Short-term (typically annual) awards reported as Non-equity Incentive Plan Compensation for all years;
- For all prospective long-term cash awards made during the measurement period, the earned value of the award (if earned during the same measurement period) or its target value in the case of on-going award cycles;
- For all share-based awards made during the measurement period, the value (based on stock price as of the end of the measurement period) of awards made during the period (less any shares/units forfeited due to failure to meet performance criteria); or, if awards remain on-going, the target level of such awards;
- For stock options granted during the measurement period, the net value realized with respect to such granted options which were also exercised during the period; for options granted but not exercised during the measurement period, ISS will re-calculate the option value, using the Black-Scholes option pricing model, as of the end of the measurement period;
- Change in Pension Value and Nonqualified Deferred Compensation Earnings reported for all years; and
- All Other Compensation reported for all years.

*Generally three fiscal years, based on the company's fiscal year. For realizable pay calculated as part of ISS' 2016 analyses, this will generally consist of fiscal years 2013 through 2015.

Note that ISS' realizable pay amount will be based on a consistent approach, using information from company proxy disclosures. Since current SEC disclosure rules are designed to enumerate "grant-date" pay rather than realizable pay, these estimates will be based on ISS' best efforts to determine necessary inputs to the calculation. In cases where, for example, it is not sufficiently clear whether an applicable award has been earned or forfeited during a measurement period, ISS will use the target award level granted.

23. How does ISS calculate the "Granted Pay" that is compared to a CEO's "Realizable Pay"?

The CEO's "Granted Pay" presented in the "3-Year Granted vs. Realizable CEO pay" chart in ISS' reports is calculated as the sum of the following for the 3-year measurement period:

- Base salary reported for all years in the measurement period;
- Bonus reported for all years;

- Target short-term (typically annual) awards reported as Non-equity Incentive Plan Awards in the Grants of Plan-Based Awards table, for all years; if a target award is not determinable, none will be included;
- Target long-term cash awards made during the measurement period (as reported in the Grants of Plan-Based Awards table, or elsewhere in the CD&A);
- The grant-date value of all share-based awards made during the measurement period;
- For stock options granted during the measurement period, grant-date value is calculated by ISS using the Black-Scholes option pricing model, per ISS' standard stock option valuation methodology.
- Change in Pension Value and Nonqualified Deferred Compensation Earnings reported for all years; and
- All Other Compensation reported for all years.

24. Why doesn't ISS use the intrinsic value (exercise price minus current market price) of stock options when calculating realizable pay?

Top executives' stock options typically expire after seven to 10 years, meaning that even if an option is underwater in the first few years after its grant, there is a substantial likelihood it will ultimately deliver some value to the holder prior to expiration. Shareholders recognize that, in considering "realizable" pay as a pay for performance factor, it is important to include the economic value of underwater options (which will also reflect the impact of a lower stock price, if applicable).

25. A company would like to disclose ongoing and/or completed performance-based equity awards for awards made in the past three years. What type of disclosure format would ISS suggest?

Disclosure of ongoing or completed performance-based equity awards in a consistent manner would facilitate ISS' calculation of realizable pay (which is based on a best efforts extraction of necessary information from proxy statements). If a company has awarded performance-based equity awards in the past three years, disclosure of the awards in the following table would be helpful:

Grant Date	Threshold Payout (#)	Target Payout	Maximum Payout	Performance Period*	Target/Actual Earned Date	Actual Payout
3/1/2009	100,000	150,000	200,000	1 year	6/1/2010	180,000
3/1/2010	150,000	200,000	250,000	3 years	6/1/2012	Not determined yet

*Performance period does not include time-vesting requirement.

26. With respect to pay for performance alignment and realizable pay calculations, how will ISS treat CEOs who have not been in the position for three years?

The quantitative methodology will analyze total CEO pay for each year in the analysis without regard to whether all years are the same or different CEOs. If that analysis indicates significant pay for performance misalignment, the ensuing qualitative analysis may take into account any relevant factors related to a change in CEO during the period. However, given an apparent disconnect between performance and CEO pay, shareholders would expect the new CEO's pay package to be substantially performance-based.

For years when a company has more than one CEO, only one CEO's pay will be included to calculate granted pay (generally the CEO who was in the position at or near the end of the fiscal year) for purposes of the pay-for-performance quantitative screen. CEO base salary will be annualized.

With respect to realizable pay, ISS will include both pay packages and calculate the realizable amount, as of the end of the measurement period, of the Summary Compensation Table pay reported for the CEO in office on the last day of each fiscal year in the measurement period. Pay for a terminated CEO (including the value of unforfeited awards as if they were paid out on the last day of service or the end of the fiscal year, based on information in disclosures) will also be included in realizable pay.

27. How is three-year total shareholder return (TSR) calculated? How are "peaks and valleys" accounted for in the five-year analysis?

The Relative Degree of Alignment (RDA) measure uses annualized three-year TSR – i.e., the annualized rate of the three 12-month periods in the three-year measurement period (calculated as the geometric mean of the three TSRs). TSR reflects stock price appreciation plus the impact of reinvestment of dividends (and the compounding effect of dividends paid on reinvested dividends) for the period.

Under the absolute assessment, indexed TSR represents the value of a hypothetical $100 investment in the company, assuming reinvestment of dividends. The investment starts on the day five years prior to the month-end closest to the company's most recent fiscal year end, and is measured on the subsequent five anniversaries of that date. The Pay-TSR Alignment (PTA) measure (as outlined in the ISS "Evaluating Pay for Performance Alignment" white paper) is designed to account for the possibility of "bumps" in the overall trend.

28. What TSR time period will ISS use for the subject company and the peers in the Pay for Performance analysis? What about the compensation period?

TSRs for the subject company and all its peers are measured from the last day of the month closest to the subject company's fiscal year end. For example, if the subject company's fiscal year end is September 30, then the one-year and three-year TSRs for the subject company and its peers will be based on September 30. Compensation figures for all companies are as of the most recent available date.

29. For companies with meetings early in the year, whose latest year peer CEO pay has not yet been released, what pay data does ISS use?

ISS uses the latest compensation data available for the peer companies, some of which may be from the previous year. This circumstance is considered in any related qualitative review, as deemed relevant.

30. Do you include the subject company in the derivation of the peer group median? When you say 14 companies minimum for peers, does the 14 include the subject company?

No, neither the CEO pay nor the TSR of the subject company is included in the median calculation. The subject company is also not included in the minimum number of peer companies, which will generally be 14 (also see **Determining Peer Companies**, below).

31. If a company has not been publicly traded for at least three or five years, does the relevant quantitative pay for performance evaluation still apply? Does this affect whether a company would be used as a peer?

If the company has not been publicly traded for five fiscal years, the relative assessments, specifically the relative annualized three-year TSR pay and performance rank and the multiple of pay against the peer median, will still apply. If the company has been publicly traded for less than three years, the relative assessment will be based on as many complete years of annualized TSR and CEO pay data as is available. The company's limited life as a publicly traded company will also be considered as part of any qualitative evaluation.

Generally, only companies with three full years of data will be peer companies. In limited circumstances, a company with less than three years of data may be used when the quantitative evaluation focuses on only one year.

32. How does ISS take the year-over-year change in pension benefits value into account in assessing CEO pay?

ISS includes changes in pension value in our pay assessments because companies that do not offer supplemental defined benefit pensions (SERPs) to their top executives often provide for post-retirement compensation through larger grants of equity-based awards and thus could be disadvantaged in company-to-company pay comparisons if SERP-related compensation is omitted from the annual figures. Because ISS' quantitative analysis has a long-term orientation, pay anomalies caused by issues such as a single large increase in year-over-year pension accumulations (e.g., due to interest rate changes) should not have a significant impact on the results. However, such anomalies are considered in the qualitative evaluation.

33. What actions can the company take to address concerns when ISS has issued an adverse recommendation on the basis of a pay for performance disconnect?

The pay for performance evaluation is a case-by-case analysis, and actions intended to address concerns should be tailored according to the underlying issues identified in the pay for performance disconnect. Prospective commitments to increase the proportion of performance-based pay in the future will not adequately address concerns; adjustment to recent awards to strengthen their performance linkage may be considered, however. As an example, if the primary source of a pay increase is due to time-vested equity awards, a remedy could be for the company to make a substantial portion (i.e. at least 50 percent) of such equity awards to named executive officers performance-based.

Any pay for performance action(s) should be disclosed in a public filing, such as a Form 8-K or DEFA 14A. Based on the additional disclosure, ISS may change its vote recommendation if the company's actions sufficiently remedy the pay for performance disconnect. However, ISS' recommendation will depend on the company providing compelling and sufficient evidence of action to strengthen the performance-linkage to its executives' compensation and comprehensive additional disclosure.

34. When will ISS consider equity awards to be performance-based?

The company should disclose the details of the performance metric(s) (e.g., return on equity) and the associated goals (e.g., 15 percent) associated with the performance awards at the time they are made. From this disclosure, shareholders will know the minimum level of performance required for any equity grants to be earned. In this context, strongly performance-based equity awards do not include standard time-based stock options or performance-accelerated grants. Instead, performance-based equity awards are performance-contingent grants, where the individual will not receive the equity grant if the performance goal is unmet. Premium-priced options must have a meaningful premium in order to be considered strongly performance-based. If option vesting is contingent on the stock reaching a specified price, the price condition should be maintained for at least 30 consecutive trading days before vesting in order for the grant to be considered strongly performance-based.

In order for shareholders to assess the rigor of performance-based bonus and equity programs, the company needs to disclose the performance measures and goals. To ensure complete and transparent disclosure, the company should disclose the following:

1. the measures(s) used (and rationale for the selections);
2. the goal(s) that were set for each metric and the target (and, if relevant, threshold and maximum) payout level(s) set for each NEO;
3. the reason that each goal was determined to be appropriate for incentive pay purposes (including the expected difficulty of attaining each goal);
4. the actual results achieved with respect to each goal; and
5. the resulting award (or award portion) paid (or payable) to the NEO with respect to each goal.

35. Will ISS take into account the timing of equity grants (such as for grants made subsequent to the applicable performance year) when conducting its pay for performance evaluation?

Grant timing issue can be problematic for investors evaluating the relationship between performance and pay. The value of equity grants generally represents a significant proportion of top executives' pay; if the grants are made subsequent to the "performance year," disclosures in the Grants of Plan-Based Awards Table may distort the pay for performance link.

Some investors believe that equity awards can incentivize and retain executives for past and future performance; therefore, adjustments for such timing issues may not be relevant. In addition, ISS' pay for performance analysis has a long-term orientation, where these types of timing issues are less relevant than in an evaluation of one year's pay. Nevertheless, ISS may consider the timing of equity awards made early in a fiscal year in its qualitative assessment if complete disclosure and discussion is made in the proxy statement.

In order to ensure that pay for performance alignment is perceived, the company should discuss the specific pre-established performance measures and goals that resulted in equity awards made early in the next fiscal year. A general reference to last year's performance is not considered sufficient and meaningful to shareholders. If the company makes equity grants early in each year, based on the prior year's specific performance achievement, shareholders should not be required to search for the information in Form 4s and compute the adjusted total compensation for the top executives in order to make a year-over-year comparison. Instead, companies should provide information about grants made in relation to the most recently completed fiscal year in the proxy statement for the shareholder meeting that follows that fiscal year (aligned with other compensation reported for that year). Many companies provide an alternate summary compensation table that takes into account the recent equity awards made in the current fiscal year. The number of options or stock awards with the relevant exercise price or grant price should be disclosed in the proxy statement. The term of the options should be provided as well. In order for ISS to compute the adjusted total compensation and include it for purposes of our narrative discussion and analysis, companies need to make transparent and complete disclosure in the proxy statement; ISS will not search for the companies' Form 4 filings to make such adjustments but will rely on the specific grant disclosures found in the proxy statement.

36. A company grants time-vesting equity awards that were contingent on meeting specific performance criteria. Does ISS consider such awards to be performance-conditioned?

ISS will generally consider such awards to be performance-conditioned if the performance measures and goals were pre-established and are disclosed in the proxy statement.

37. How does ISS capture transition period compensation?

Disclosure of transition period compensation varies across companies; therefore, ISS does not apply a standardized methodology in all cases. When transition periods represent an extension of a recently completed fiscal year (until the start of a new fiscal year period), ISS will generally include transition period pay as part of the most recently completed fiscal year pay. Cash pay components such as base salary and bonus will be annualized and equity pay components will be added, subject to a company-specific case by case review.

38. Which companies are subject to ISS quantitative pay-for-performance screens?

At a minimum, all companies in the S&P500 and Russell 3000E indexes.

39. How does ISS evaluate pay-for-performance alignment at companies for which pay data is not analyzed in the quantitative screens?

For companies outside the Russell 3000E Index (which includes all companies in the Russell 3000 and Russell Microcap indexes), ISS reviews the CD&A, including the Summary Compensation Table and other compensation tables, to assess the level of NEOs' pay relative to internal standards developed to identify potential egregious pay levels and problematic compensation practices (similar to the Problematic Pay Practices component of the Executive Pay Evaluation Policy). If that evaluation does not identify any significant concerns, the ISS research report indicates that (and notes any items that shareholders may nevertheless wish to consider). If significant concerns are identified, the ISS analysis addresses them to determine whether or not the situation warrants an adverse recommendation.

Determining Peer Companies

40. How does ISS select constituents for the peer groups used in its pay for performance analysis?

ISS' methodology for selecting peers maintains a focus on identifying companies that are reasonably similar to the subject company in terms of industry profile, size, and market capitalization, taking into account a company's self-selected peers to guide industry selections. This peer group is used with respect to two of the three quantitative pay-for-performance screens that may trigger and in-depth review and analysis of a company's pay program in connection with say on pay evaluations.

ISS' selected peer group generally contains a minimum of 14 (and always at least 12) and maximum of 24 companies, based on the following factors:

1) The GICS industry classification of the target company
2) The GICS industry classifications of the company's disclosed CEO pay benchmarking peers
3) Size constraints for both revenue (or assets for certain financial companies) and market value.

Subject to the size constraints, and while choosing companies that push the subject company's size closer to the median of the peer group, peers are selected from a potential peer universe in the following order:

1. from the subject's own 8-digit GICS group
2. from the subject's peers' 8-digit GICS groups
3. from the subject's 6-digit GICS group
4. from the subject's peers' 6-digit GICS groups
5. from the subject's 4-digit GICS group

When choosing peers, priority is given to potential peers within the subject's "first-degree" peer group (the companies that are either in the subject's own peer group, or that have chosen the subject as a peer), and companies with numerous connections (by choosing as peer or being chosen as a peer) to these first-degree peers. All other considerations being equal, peers closer in size are preferred.

41. Will a company's self-selected peers always appear in the ISS peer group, if they meet ISS' size constraints?

Not necessarily. While the methodology does place a priority on the company's own peer selections, there are a number of reasons why a company selected peer may not appear in the final ISS list, even if it meets the relevant size (revenue or assets and market capitalization) parameters. As noted above, the methodology also places priority on other factors as it builds the peer group:

- The company's own 8-digit GICS category
- Maintaining the subject company size at or near the median of its peer group
- Maintaining the approximate distribution of GICS industry codes as reflected in the company's self-selected peer group

At times, including a company's self-selected peer may push the subject company away from the median, or lead to an overrepresentation of that industry within the final peer group. In these cases the company's self-selected peer may not be included. In addition, if a company's self-selected peer is the only peer company in its 6- and 8-digit GICS category, that industry grouping will not be utilized in the peer selection process (since the company may have selected that peer solely due to geographic proximity, for example).

42. What are ISS' size parameters for qualifying a potential peer?

ISS applies two size constraints to qualify potential peers:

1. Revenue (or assets for certain financial companies or market capitalization for certain oil & gas companies, as described in the following question below)
   In general, peers should fall in the range of 0.4 to 2.5 times the company's revenue (or assets). These ranges are expanded when the subject company's revenue is larger than $5 billion or smaller than $200 million in revenue (assets). Companies smaller than $100 million in revenue (assets) are treated as if they have $100 million in revenue (assets).

2. Market capitalization (in millions)

   Companies are classified into market capitalization buckets as follows:

Bucket	Low end	High end
Micro	0	200
Small	200	1,000
Mid	1,000	10,000
Large	10,000	No cap

   While ISS may choose peers that fall outside a subject company's market cap bucket if necessary to reach a minimum peer group size, none may have a market cap of less than 0.25 times the low end or more than 4 times the high end of the subject's market capitalization bucket.

43. Which industry groups will not use revenue for size comparisons? What happens when a company has potential peers in industry groups measured by different size metrics?

ISS will use balance sheet assets (rather than revenue) to measure the size of companies in the following 8-digit GICS groups:

- 40101010 Commercial Banks
- 40101015 Regional Banks
- 40102010 Thrifts + mortgage
- 40202010 Consumer Finance
- 40201020 Other diversified

Additionally, ISS will use market cap rather than revenue to qualify peers for companies within these GICS groups:

- 10102010 Integrated Oil & Gas

- 10102020 Oil & Gas Exploration & Production
- 10102030 Oil & Gas Refining & Marketing
- 10102040 Oil & Gas Storage & Transportation
- 10102050 Coal & Consumable Fuels

Both subject and potential peer must be in the asset- or market cap-based GICS groups listed above in order to be compared on the basis of assets or market cap, as applicable. In cases where a subject company is in one of the asset- or market cap-based GICS groups and a potential peer is not, revenues will be used for size comparisons. This principle applies to the size comparisons made to qualify a peer for potential inclusion as a peer, to the size rankings made to maintain the subject company near the median size of the peer group, and to the size prioritization of peers.

In addition, as deemed appropriate by ISS, additional 8-digit GICS categories may be determined to utilize assets and/or market cap to identify peers.

44. When will a company's peer group have more than 14 members?

In general, the closer the industry match, the larger the subject size of the peer group: for direct matches to the company's own 8-digit GICS with respect to all potential peers, as many as 24 peers may be chosen. For matches that include the company's peers' 8-digit GICS, as many as 18 peers may be chosen, falling to a maximum of 14 peers when peers are selected solely from the company's 4-digit GICS. In all cases, however, additional peers may be selected in order to bring the target company's size closer to the median of the peers or to enhance the consistency of the pay-for-performance screens using these peer groups.

45. If the standard methodology fails to yield the minimum number of acceptable peers, what peer group will be used?

In cases where the standard methodology does not provide a sufficient number of peers, ISS will supplement those peer groups according to the principles above, generally by relaxing size parameters while maintaining the subject company at or near the median size. In selected cases, ISS may also relax industry group constraints.

In exceptional cases, the ISS peer group may contain a minimum of 12 constituents.

46. How does ISS treat foreign-domiciled or privately-held company peers?

ISS uses all company peers to identify relevant GICS industry groups, if industry data is readily available. Foreign-domiciled companies that file Def14A, 10-Qs, and 10-Ks may be included as ISS selected peers. Privately-held or other foreign-domiciled companies that do not make such filings are not included as ISS selected peers, although their GICS classifications may be utilized to select alternative peers whose data is publicly available.

47. If a company used multiple peer benchmarking groups, which group will ISS use as an input to the process? What does ISS do if a company does not employ a peer group for benchmarking?

ISS uses the company peer group that is used for CEO pay benchmarking purposes. If there is no peer group employed, the peer methodology will draw peers from the company's own 8-, 6- and 4-digit GICS groups, subject to ISS' size constraints.

48. Does ISS apply additional judgment in the process of building peer groups?

ISS generally does not adjust peer groups that are generated from the standard methodology and have the requisite minimum number of constituents. In exceptional circumstances, where a peer group appears to have inappropriate constituents at the time of our analysis, limited adjustments may be made, following the basic principles of the methodology: peers should come from similar industries and be of similar size, and company peers will be prioritized where possible.

49. When will ISS reconstruct peer groups?

Company peer groups are reconstructed during December and early January, effective for meetings as of the following February 1. A subsequent peer group construction will occur in July and August, after the Russell 3000 index is updated in July, to be in place for research in process as of September 15 (generally affecting companies that have filed DEF14As after mid-August).

50. What opportunities will companies have to communicate changes made to their benchmarking peer groups following their more recent proxy disclosures?

In December, ISS provides companies a "peer update" opportunity to communicate changes made to their benchmarking peer groups following their most recent proxy diclosures. For companies with later fiscal year-end dates (approximately September 15 through the following January), ISS provides a similar peer update opportunity after proxy season, prior to reconstruction of its peer groups per above. During the update process, companies should inform ISS of updates to the peer groups they used to benchmark executive compensation that will be reported in their upcoming proxy statements (not to benchmark the upcoming year's pay).

Companies that do not participate in the ISS peer update process will continue to have their most recently disclosed compensation peers used in the ISS peer group construction process.

51. What companies can be used as peer companies? Will ISS use companies that an issuer considers as peers (specified in the proxy) to develop the ISS comparator group?

If a company discloses the names of public companies that it uses as its peers, ISS will collect the data on them even if they are not in the index of companies that are screened through ISS' quantitative pay-for-performance model (the Russell 3000E index). If these companies fit ISS' criteria for peers, then they may be used as ISS peers as of the next update of ISS peer groups.

52. What are GICS codes? Who can I contact if I disagree with the GICS classification?

The Global Industry Classification Standard (GICS) was developed by Standard & Poor's and MSCI in response to the financial community's need for a reliable, complete (global) standard industry classification system. GICS codes correspond to various business or industrial activities, such as Oil & Gas Drilling or Wireless Telecommunication Services. GICS is based upon a classification of economic sectors, which is further subdivided into a hierarchy of industry groups, industries and sub-industries. The GICS methodology is widely accepted as the industry analysis framework for investment research, portfolio management, and asset allocation.

ISS does not classify companies into the GICS codes. Please contact Standard & Poor's at 1-800-523-4534 if you believe that a company has been misclassified.

53. Are the same peer companies that are used for the pay-for-performance analysis also used to calculate a company's Shareholder Value Transfer Benchmark related to an equity plan proposal?

No, the list of companies shown in the executive compensation section is not the same peer group used in calculating a company's SVT Benchmark. The peer group used for benchmarking executive pay is based on a combination of industry and size (revenue/assets and market cap); the peer group used for creating the SVT Benchmark for stock compensation plan proposals is based on 4-digit GICS industry groups, with adjustments for market cap size.

54. How are peer medians calculated for the Components of Pay table?

The median is separately calculated for each component of pay and for the total annual compensation. For this reason, the median *total compensation* (TC) of the peer CEOs will not equal the sum of all the peer median pay components, because the values are calculated separately for each pay component; the median TC reflects the median of TC of the peer group constituents.

Problematic Pay Practices/Commitments on Problematic Pay Practices

55. What is ISS' Problematic Pay Practices evaluation?

Pay elements that are not directly based on performance are generally evaluated on a CASE-BY-CASE basis considering the context of a company's overall pay program and demonstrated pay for performance philosophy. Based on input from client surveys and roundtables, ISS has identified certain practices that are contrary to a performance-based pay philosophy, which are highlighted in the list below. ISS evaluates these practices on a case-by-case basis, considering the facts and circumstances disclosed, in determining whether any extraordinary perks or benefits are a poor use of company assets which could also have other detrimental effects (e.g., creating or contributing to an “imperial CEO” culture).

- Egregious employment contracts:
  - Contracts containing multi-year guarantees for salary increases, non-performance based bonuses, or equity compensation.
- New CEO with overly generous new-hire package:

  - Excessive "make whole" provisions without sufficient rationale;
  - Problematic termination-related equity vesting provisions;
  - Any of the problematic pay practices listed in this policy.
- Abnormally large bonus payouts without justifiable performance linkage or proper disclosure:
  - Includes performance metrics that are changed, canceled, or replaced during the performance period without adequate explanation of the action and the link to performance
- Egregious pension/SERP (supplemental executive retirement plan) payouts:
  - Inclusion of additional years of service not worked that result in significant benefits provided in new arrangements
  - Inclusion of performance-based equity or other long-term awards in the pension calculation
- Excessive Perquisites:
  - Perquisites for former and/or retired executives, such as lifetime benefits, car allowances, personal use of corporate aircraft, or other inappropriate arrangements
  - Extraordinary relocation benefits (including any home loss buyouts)
  - Excessive amounts of perquisites compensation
- Excessive severance and/or change in control provisions:
  - Change in control cash payments exceeding 3 times base salary plus target/average/most recent bonus;
  - New or materially amended arrangements that provide for change-in-control payments without loss of job or substantial diminution of job duties (single-triggered or modified single-triggered, where an executive may voluntarily leave for any reason and still receive the change-in-control severance package);
  - New or materially amended employment or severance agreements that provide for an excise tax gross-up. Modified gross-ups would be treated in the same manner as full gross-ups;
  - Excessive payments upon an executive's termination in connection with performance failure;
  - Liberal change in control definition in individual contracts or equity plans which could result in payments to executives without an actual change in control occurring
- Tax Reimbursements: Excessive reimbursement of income taxes on executive perquisites or other payments (e.g., related to personal use of corporate aircraft, executive life insurance, bonus, restricted stock vesting, secular trusts, etc; see also excise tax gross-ups above)
- Dividends or dividend equivalents paid on unvested performance shares or units.
- Internal pay disparity: Excessive differential between CEO total pay and that of next highest-paid named executive officer (NEO)
- Repricing or replacing of underwater stock options/stock appreciation rights without prior shareholder approval (including cash buyouts, option exchanges, and certain voluntary surrender of underwater options where shares surrendered may subsequently be re-granted).
- Other pay practices that may be deemed problematic in a given circumstance but are not covered in the above categories.

56. Which problematic practices are most likely to result in an adverse recommendation?

The list below highlights the problematic practices that carry significant weight and will likely result in adverse vote recommendations:

- Repricing or replacing of underwater stock options/SARs without prior shareholder approval (including cash buyouts and voluntary surrender of underwater options);
- Excessive perquisites or tax gross-ups, potentially including any gross-up related to a secular trust or restricted stock vesting, and home loss buyouts;
- New or extended executive agreements that provide for:
  - CIC payments exceeding 3 times base salary and average/target/most recent bonus;
  - CIC severance payments without involuntary job loss or substantial diminution of duties ("single" or "modified single" triggers);
  - CIC payments with excise tax gross-ups (including "modified" gross-ups).

57. How does ISS view hedging or significant pledging of company stock by an executive or director?

Hedging is a strategy to offset or reduce the risk of price fluctuations for an asset or equity. Stock-based compensation or open market purchases of company stock should serve to align executives' or directors' interests with shareholders. Therefore, hedging of company stock through covered call, collar or other derivative transactions sever the ultimate alignment with shareholders' interests. Any amount of hedging by a company insider will be considered a problematic practice warranting a negative vote recommendation against appropriate board members.

Significant levels of pledging of company stock – regardless of whether the shares were obtained through compensation programs or whether the pledged shares exclude the number of shares required to be held under a company's stock ownership guidelines – also may raise risks for the company's stock price or for violation of insider trading restrictions. Please see the FAQ on Policies & Procedures – Board Accountability for more insight on ISS policy in this regard.

58. Does the presence of single trigger vesting acceleration in an equity plan result in an automatic against recommendation for the plan, the say on pay vote, the entire compensation committee, or the full board?

With regard to equity-based compensation, ISS policy encourages “double trigger” vesting of awards after a CIC (considered best practice), although recommendations are determined case-by-case, considering all aspects of company programs.

In the absence of double-triggered vesting, the current preferred practice is for the board to have flexibility to determine the best outcome for shareholders (e.g., to arrange for outstanding grants to be assumed, converted, or substituted), rather than the plan providing for *automatic* accelerated vesting upon a CIC.

Equity plans or arrangements that include a liberal CIC definition (such as a very low buyout threshold or a CIC occurring upon shareholder approval of a transaction, rather than its consummation), coupled with a provision for automatic full vesting upon a CIC, are likely to receive a negative recommendation. Also see the Equity Compensation Plans FAQ.

59. What level of compensation disclosure by externally-managed issuers (EMIs) would be sufficient to enable a reasonable assessment of pay programs to

make an informed say-on-pay vote and avoid an adverse say-on-pay recommendation?

Although EMIs are required to present a say-on-pay vote, most EMIs provide little, if any, disclosure regarding the compensation arrangements between their executive officers and the external manager. Based on ISS' review of EMI compensation disclosure, most EMIs provide only the aggregate management and incentive fees paid to the manager. Without more information, shareholders are unable to make a reasonable assessment of pay programs and practices applicable to the EMI's executives, and therefore are unable to cast an informed say-on-pay vote. In assessing whether an EMI has provided sufficient compensation disclosure to allow for an informed say-on-pay vote, ISS will look for all of the following disclosures:

- The portion of the EMI's management fee that is allocated to NEO compensation paid by the external manager (aggregated values for all NEOs is acceptable);
- Of this compensation, the breakdown of fixed vs. variable/incentive pay; and
- The metrics utilized to measure performance to determine NEOs' variable/incentive pay.

While the above does not represent a complete picture of executive compensation, it represents the minimum disclosure necessary to enable shareholders to reasonably evaluate pay arrangements between the EMI's executives and the external manager. Absent this disclosure, ISS will generally recommend against the EMI's say-on-pay proposal.

60. After incentive awards were earned below target, a company granted special retention awards to executives. How would ISS view such awards?

Investors do not expect boards to reward executives when performance goals are not achieved, whether by "moving the goalposts" (i.e., lowering goals) or granting other awards to compensate for the absent incentive payouts. They recognize, however, that retention of key talent may be critical to performance improvements and future shareholder value. Companies that grant special retention awards of cash or equity to executives when regular incentive plan goals are not met should provide clear and compelling rationale in their proxy disclosure. Awards should be conservative and reflect the fact that performance is lagging (i.e., should generally be significantly less than unearned target award levels). Optimally, "extra" awards designed to encourage retention should not be a regular occurrence and should also include performance conditions that will ensure strong alignment of pay and performance going forward and avoid "pay for failure" scenarios if the executive is not retained.

61. How will ISS evaluate problematic pay practices relating to agreements or decisions in the current fiscal year as opposed to those from the most recently completed fiscal year?

For problematic provisions (excise tax gross-ups, single-trigger severance, etc.) contained in a new/materially amended executive agreement, ISS will generally issue an adverse recommendation when such provisions are disclosed by the company, even if the problematic agreement was entered into or amended after the most recent fiscal year end. For example, if a company with a calendar fiscal year discloses a new problematic agreement entered into in February following the FYend, ISS will generally recommend against the current say-on-pay proposal.

However, in certain cases ISS may wait to further evaluate the problematic issue in the following year, when our analysis could be informed by additional information that would be disclosed in the following year's proxy statement. For example, ISS may wait until the following year in the case of a potentially problematic equity grant to a new CEO hired in February after the FYend, in order to evaluate the grant in the context of the new CEO's total pay as disclosed in the following year's proxy statement.

62. While guaranteed multi-year awards are problematic, is providing a guaranteed target pay opportunity for what ISS considers a performance-based vehicle acceptable?

While guaranteeing any executive pay elements (outside of salary and standard benefits) is not considered best practice, if the payout of such an award ultimately depends on the attainment of rigorous performance goals (i.e., no payout would occur if performance is below a specified standard), this would generally mitigate concerns about the guaranteed award opportunity.

63. How will ISS view existing/legacy problematic provisions in executive agreements?

While maintaining problematic provisions in legacy arrangements (i.e. agreements not entered into or amended in the most recently completed fiscal year) is not considered a best practice, such legacy arrangements generally will not on their own result in an adverse vote recommendation. However, legacy problematic provisions will be considered as part of the holistic analysis, and they should be removed whenever the agreement is amended or extended (see related questions below).

64. Are material amendments other than extensions of existing contracts a trigger for analysis with respect to problematic existing contract provisions?

Shareholders are concerned with the perpetuation of problematic practices; thus, new or recently amended agreements will face the highest scrutiny and weight in ISS' analysis. Any material amendments to such agreements will be considered an opportunity for the board to fix problematic issues.

65. Would a legacy employment agreement that is automatically extended (e.g., has an evergreen feature) but is not otherwise amended warrant an adverse vote recommendation if it contains a problematic pay practice?

Automatically renewing/extending agreements (including agreements that do not specify any term) are not considered a best practice, and existence of a problematic practice in such a contract is a concern. However, if an "evergreen" employment agreement is not materially amended in manner contrary to shareholder interests, it will be evaluated on a holistic basis, considering a company’s other compensation practices along with features in the existing agreement.

66. What if a problematic pay practice is contained under a separate plan or agreement that runs indefinitely, but an executive has a separate employment agreement that is extended or modified?

The policy relevant for "new or extended executive agreements" applies to any and all agreements or plans under which the executive whose contract is being modified is covered. In other words, ISS may view the modification to an employment agreement as also being a modification or extension of the executive's separate severance and/or CIC arrangement. Alternatively, the modification to the employment agreement should include a removal of the executive's entitlement to the problematic pay practice under the separate agreement.

67. If a company put a problematic pay practice provision in new or modified agreements in the last fiscal year, what action can they take to prevent an adverse recommendation from ISS?

The company can remove that provision from the new agreements and disclose this action in the proxy statement.

Frequency of Advisory Vote on Executive Compensation

68. In the event that a company's board decides not to adopt the say on pay vote frequency supported by a plurality of the votes cast, what are the implications in terms of ISS' voting recommendations at subsequent meetings?

If the board adopts a longer frequency for say-on-pay votes than approved by a plurality of shareholder votes, ISS will make a case-by-case recommendation, considering the following:

› The board's rationale for choosing a frequency that is different from the frequency which received a plurality;
› The company's ownership structure;
› ISS' analysis of the company's executive compensation and whether there are compensation concerns or a history of problematic compensation practices; and
› The previous year's support level on the company's say-on-pay proposal.

Advisory Vote on Golden Parachutes (SOGP)

69. If a truncated performance period is used when accelerating awards in a CIC, how would ISS determine whether the performance goals would not have been achieved had no CIC transaction occurred?

Best practice is pro rata vesting for actual achievement levels during a partial performance period. If it is impossible to measure performance under pre-determined performance criteria the board should justify paying an award as if target or highest performance goals were met.

70. How does ISS determine whether specified golden parachute payouts are "excessive"?

In evaluating disclosed payouts related to a change in control with respect to the SOGP proposal, ISS may consider a variety of factors, including the value of the payout on an absolute basis (e.g., relative to an executive's annual compensation) or one or total payouts relative to the transaction's equity value. There are no bright line thresholds for these considerations, since they are made in conjunction with other factors in ISS' review.

71. How will ISS consider existing problematic change-in-control severance features in its SOGP evaluation?

ISS considers both new and existing problematic features and practices. Recent amendments that incorporate problematic features will tend to carry more weight on the overall analysis. However, the presence of multiple legacy problematic features will also be closely scrutinized.

The questions and answers in this FAQ are intended to provide general guidance regarding the way in which ISS' Global Research Department will analyze certain issues in the context of preparing proxy analyses and determining vote recommendations for U.S. companies. However, these responses should not be construed as a guarantee as to how ISS' Global Research Department will apply its benchmark policy in any particular situation.

Re: American Assets Trust, Inc.
Form 10-K
Filed February 20, 2015
File No 1-35030

Dear Ms. Monick and Mr. Rakip:

The purpose of this letter is to respond to the comments of the Division of Corporation Finance of the Securities and Exchange Commission (the "Commission"), received by email on July 6, 2015 (the "Comment Letter"), with respect to the American Assets Trust, Inc. (the "Company") Form 10-K filed February 20, 2015 (the "2014 Form 10-K"). For ease of review, we have set forth below each of the numbered comments of the Comment Letter and the Company's responses thereto. All page numbers and captions in the responses below refer to the 2014 Form 10-K, except as otherwise noted below.

General

1. **Please tell us how you determined it is appropriate to provide combined periodic reports for parent and subsidiary registrants given that you owned approximately 70.9% of your operating partnership at March 31, 2015.**

   Response: The Company advises the Staff that it has assessed the appropriateness of combining periodic reports for parent (American Assets Trust, Inc. ("REIT")) and subsidiary (American Assets Trust, L.P. ("OP")) registrants for purposes of reporting under the Securities Exchange Act of 1934. We have concluded that the REIT owns substantially all of the OP, there are nominal differences between the financial statements of the REIT and OP and the non-financial disclosures of the REIT and the OP are substantially similar as described below and in our Explanatory Notes in our 2014 Form 10-K and March 31, 2015 Form 10-Q.

Furthermore, the REIT is the sole general partner of the OP and, in addition to owning the general partner interest, owned an approximate 70.9% limited partner interest in the OP at March 31, 2015. The REIT and the OP are structured to achieve economic parity between a common share of beneficial interest of the REIT and a common unit of limited partnership interest of the OP. Whenever the REIT issues common shares, the OP issues an equal number of common units to the REIT at the same price for which the common shares were sold. All of the REIT's operating activities are conducted through the OP and the OP's subsidiaries and the OP reimburses the REIT for any operating expenses (e.g., taxes and any expenses associated with the REIT's equity capital raising activities). As such, the REIT is in effect a holding company; the only assets of which are its equity interests in the OP. As the sole general partner of the OP, the REIT is exclusively vested with managerial control and authority over the business and affairs of the OP. Accordingly, the REIT's financial statements include the OP and the OP's subsidiaries. Because the REIT conducts no business operations other than through the OP and the OP's subsidiaries, the REIT's financial statements are substantially the same as the financial statements of the OP (with the most notable difference being the fact that the OP also has outside minority unitholders).

Since the overwhelming majority of the information included in the REIT's and OP's periodic reports is the same due to the organizational structure described above, we concluded that filing combined periodic reports, where possible, would significantly reduce internal costs and expenses associated with the preparation of largely duplicative reports and eliminate the risk of inadvertent or unintentional errors that could result from the process of generating two reports. Given that the users of the OP financial statements need both entities' financial statements to understand the performance of their investment given its convertible nature, we also believe the use of one report minimizes redundancy and disclosure overload. Moreover, we believe that combining the disclosure - where appropriate - helps convey the manner in which the operations and activities of the REIT and the OP are interrelated for the purposes of the REIT shareholders and OP unit holders. For this reason, we believe that a combined presentation is beneficial to an investors' understanding of the business and financial condition of and relationship between the two entities.

Additionally, the 2014 Form 10-K filing was the first presentation of combined periodic reports of the REIT and OP. The Company voluntarily began filing combined periodic reports effective as of December 31, 2014, and for all years presented, in anticipation of the OP potentially becoming a required filer. As of the date of our response, the OP is not a required filer and it does not appear probable that it will be a required filer in 2015.

American Assets Trust, L.P.

Consolidated Statements of Comprehensive Income, page F-10

2. **Please tell us why your operating partnership has adjusted for net income attributable to unitholders in the Operating Partnership in amounts equal to those applicable to American Assets Trust, Inc. In your response, please also address why you have not included the adjustment for net income attributable to unitholders in the Operating Partnership in your operating partnership’s consolidated statements of comprehensive income for the interim period ended March 31, 2015.**

Response: In preparing the American Assets Trust, L.P. financial statements for the first time, we started with the American Assets Trust, Inc. financial statements because as noted above the assets, liabilities, revenues and expenses are identical and the earnings per share/units of the REIT and the OP are designed to have parity on a per share/unit basis. Due to the fact that the financial statement accounts and numbers are identical, the REIT financial statements only required changes in titles, labels and minor reformatting. During the activity of changing titles, labels and reformatting, we inadvertently did not delete the row titled "Net income attributable to unitholders in the Operating Partnership" and also neglected to update the weighted average shares of common stock outstanding - basic. This was a clerical oversight. Following the receipt of the Staff's comment, we have determined that none of the other financial information within the Form 10-K and specifically the American Assets Trust, L.P. financial statements are impacted by the clerical error. As you noted in your comment**,** this ministerial error was not repeated in the Company's Form 10-Q for the three months ending March 31, 2015 and 2014, respectively.

In order to correct this ministerial error, we intend to file an Amendment No. 1 to our Form 10-K/A on or about the date that we file our Form 10-Q for the period ended June 30, 2015. As American Assets Trust, L.P. is currently a voluntary filer. We believe the numbers as shown in the line item "incorrectly titled" Net Income Attributable to American Assets Trust, L.P. (as these amounts are actually the Net Income Attributable to American Assets Trust, Inc.) are not meaningful to the users of the Form10-K as the users of these financial statements are the owners of the REIT common stock and Operating Partnership units. Currently there are no direct users of the Operating Partnership's financial statements. However, the potential users of the Operating Partnership financial statements are the holders of the operating partnership units. As the operating partnership units have the exact same economics as the REIT common stock holders, all key financial information that is needed by the unit holders is accurately reported in both the REIT and Operating Partnership financial statements, including net income and net income attributable to each class of ownership as depicted on the statement of equity, and earnings per share/unit. However we believe an Amendment to the Form 10-K should be filed so that the presentation is comparable to what is in the quarterly reports and to have the corrected information on file prior to American Assets Trust, L.P. becoming a required registrant, which may or may not happen in future periods.

In our Amended Form 10-K, we intend to present an Explanatory Paragraph as follows:

> This Amendment No.1 to Form 10-K is being filed for the purpose of correcting a ministerial error in the American Assets Trust, L.P. Consolidated Statements of Comprehensive Income on page F-10 of the annual report on Form 10-K for the year ending December 31, 2014 filed on February 20, 2015 (the "Original Report"). Specifically, this Amendment removes the line item "Net Income attributable to unitholders in the Operating Partnership" from the American Assets Trust, L.P. Statement of Comprehensive Income and updates the weighted average units outstanding, basic. These amounts were inadvertently copied from the American Assets Trust, Inc. statement of comprehensive income without appropriate modification in formatting and labeling. As a result of these changes, the calculation of earnings per unit - basic - from continuing operations is updated.

For ease of reference, this Amendment sets forth the entire Original Report as previously filed, amended only to give effect to the correction discussed above. In addition, pursuant to Rule 12b-15 under the Securities Exchange Act of 1934, as amended, this Amendment includes new certifications of our principal executive officer and principal financial officer on Exhibits 31 and 32, each as of the date of filing this Amendment.

This Amendment does not affect any other section of the Original Report and continues to speak as of the date of the Original Report.

A summary of the corrections are as follows (which will also be included in the filing of the Amendment):

American Assets Trust, L.P.
Consolidated Statements of Comprehensive Income

Form 10-K
Filed February 20, 2015
File No 1-35030

Dear Ms. Monick and Mr. Rakip:

The purpose of this letter is to respond to the comments of the Division of Corporation Finance of the Securities and Exchange Commission (the "Commission"), received by email on July 23, 2015, with respect to the American Assets Trust, Inc. (the "Company") Form 10-K filed February 20, 2015 (the "2014 Form 10-K"). For ease of review, we have set forth below each of the numbered comments of the Comment Letter and the Company's responses thereto. All page numbers and captions in the responses below refer to the 2014 Form 10-K, except as otherwise noted below.

General

1. We note your response to prior comment one. It does not appear that you qualify for combined periodic reporting given you do not appear to own substantially all of the ownership of the American Assets Trust, L.P. Please separately file the required periodic reports for the REIT and OP or advise.

Response: The Company respectfully advises the Staff that it will formally be requesting a waiver from the Staff of the Office of Chief Accountant of the Division of Corporation Finance to permit American Assets Trust, Inc. (the "REIT") and American Assets Trust, L.P. (the "OP") to be able to make combined filings of periodic reports beginning with the 2014 Form 10-K for the REIT's and the OP's fiscal year ended December 31, 2014 and for all subsequent periods.

RE: American Capital Agency Corp. Form 10-K for the year ended December 31, 2014 (File. No. 001-34057)

Dear Mses. John and Marrone:

American Capital Agency Corp. (the "Company") is in receipt of your comment letter dated March 17, 2015 (the "Comment Letter"), which sets forth the comments of the staff (the "Staff") of the Division of Corporate Finance (the "Division") of the Securities and Exchange Commission (the "Commission") regarding the above-mentioned filing. The numbered paragraphs below respond to each of the Staff's comments in the Comment Letter, by setting forth the Staff's comment followed by the Company's response thereto.

Note 7. Fair Value Measurements, page 99

1. We note your disclosure on page 84 that you estimate the fair value of your "non-centrally cleared" interest rate swaps using inputs from counterparty and third-party pricing models to estimate the net present value of the future cash flows. We further note that these assets and liabilities are classified within Level 2 of the fair value hierarchy. Please provide us with additional details to support your Level 2 classification.

As noted in Note 7 (page 99) of the filing, we classify assets and liabilities within Level 2 of the fair value hierarchy when the fair value of such instruments is derived from inputs based on quoted prices for similar assets and liabilities in active markets; quoted prices for identical or similar instruments in markets that are not active; and model-derived valuations whose inputs are observable or whose significant value drivers are observable.

We determine the fair value of our non-centrally cleared interest rate swaps based on valuations obtained from third-party pricing services and the swap counterparty (collectively "third-party valuations"). The third-party valuations are model-driven using observable inputs consisting of LIBOR and the forward yield curve. We also consider the creditworthiness of both us and our counterparties and the impact of netting and credit enhancement provisions contained in each derivative agreement, such as collateral postings. All of our non-centrally cleared interest rate swaps are subject to bilateral collateral arrangements. Consequently, no credit valuation adjustment was made in determining the fair value of such instruments.

In response to the Staff's comment, in future filings we will clarify our disclosure pertaining to the classification of non-centrally cleared interest rate swaps within Level 2 of the fair value hierarchy as described above.

In submitting this letter, the Company acknowledges:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;

- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and

- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

We hope that this letter addresses the Staff's questions and comments. If we can be of assistance in facilitating the Staff's review of our responses to the Comment Letter, please contact Cydonii Fairfax at (301) 841-1384 or me at (301) 841-1405. Thank you in advance for your prompt attention to this matter.

Sincerely,

/s/ Samuel A. Flax

Re: American Homes 4 Rent
Form 10-K for the fiscal year ended December 31, 2014
Filed March 2, 2015
File No. 1-36013

Dear Ms. John:

American Homes 4 Rent (the "Company") submits this letter to respond to the comments of the staff (the "Staff") of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (the "Commission") contained in your letter dated May 6, 2015, regarding the Company's Form 10-K for the year ended December 31, 2014. The Staff's comments are repeated below in bold italics preceding each response.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Non-GAAP Measures, page 67

1. We note that NOI presented on page 68 excludes operating expenses for vacant single-family properties and therefore appears to be NOI for your leased properties only. Please advise and revise the label in future filings to clearly indicate that this measure relates to NOI for leased properties.

The Company advises the Staff that NOI excludes "vacant property operating expenses," which consists of operating expenses associated with properties that have been renovated, but not initially leased, and includes "leased property operating expenses," which consists of operating expenses associated with properties that have been initially leased, whether or not they are currently leased. Therefore, the Company's measure of NOI represents NOI from properties that have been initially leased, whether or not they are currently leased. Descriptions of "leased property operating expenses" and "vacant property operating expenses" have previously been disclosed on pages 54 and 55 of the Company's Form 10-K for the year ended December 31, 2014. In response to the Staff's comment, the Company has revised the description and label of this measure to read "Initially Leased Property Core NOI" in the Company's Form 10-Q for the quarter ended March 31, 2015, to indicate that NOI is from initially leased properties only. The Company will include the revised label in its future Exchange Act periodic reports.

2. We note that your reconciliation of FFO and Core FFO begins with Net loss attributable to common shareholders and includes an adjustment to include non-controlling interest in the Operating Partnership. It appears that your FFO and Core FFO measures represent FFO and Core FFO attributable to common shareholders and operating partnership unitholders. Please advise and revise your presentation in future filing to clearly label each measure.

The Company advises the Staff that FFO and Core FFO represent FFO and Core FFO attributable to common shareholders and operating partnership unitholders, which has been described in footnote (1) to the table appearing on page 69 of the Company's Form 10-K for the year ended December 31, 2014. In response to the Staff's comment, the Company has revised the label of each measure in the Company's Form 10-Q for the quarter ended March 31, 2015, to add "and units" after FFO and Core FFO to indicate that each is attributable to common shareholders and operating partnership unitholders. The Company will include the revised labels in its future Exchange Act periodic reports.

In connection with our responses to the Staff's comments, we hereby acknowledge that:

File No. 001-13232

AIMCO Properties, L.P.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed April 24, 2015
File No. 0-24497

Ladies & Gentlemen:

This letter responds to the comments of the staff of the Securities and Exchange Commission (the "Staff") addressed to Ernest M. Freedman on behalf of Apartment Investment and Management Company ("Aimco") and AIMCO Properties, L.P., a Delaware limited partnership (collectively, the "Companies"), in a letter dated April 27, 2015. The Companies' response to the Staff's comment is set forth below.

* * * * *

Form 10-K

Balance Sheet and Liquidity, page 22

Comment: We note your use of pro forma and actual leverage ratios. It does not appear your presentation of these leverage ratios complies with Item 10(e) of Regulation S-K. Please revise future periodic filings to disclose that these leverage ratios are non-GAAP, disclose how management deems the measures useful, and provide a reconciliation of any non-GAAP measures used in these leverage ratios. Your reconciliation should reconcile any non-GAAP measures to the most directly comparable financial measure or measures calculated and presented in accordance with GAAP. Further, your reconciliation of your pro forma measures should include an explanation of any assumptions made. Please provide us with an example of your proposed disclosure.

Response: In response to the Staff's comment, the Companies will revise future periodic filings to disclose that their leverage ratios are non-GAAP, to explain how management deems these measures useful, and will provide a reconciliation of the non-GAAP measures used in these ratios to the most directly comparable financial measure or measures calculated and presented in accordance with GAAP. To the extent the Companies present any pro forma leverage ratios, the accompanying disclosures will include an explanation of any assumptions made in the pro forma calculation. As requested by the Staff, an example of the Companies' proposed disclosure is provided below.

Balance Sheet and Liquidity

Our leverage strategy seeks to increase financial returns while using leverage with appropriate caution. We target the ratio of Adjusted Debt plus Preferred Equity to Adjusted EBITDA to be below 7.0x and we target the ratio of Adjusted EBITDA Coverage of Adjusted Interest and Preferred Dividends to be greater than 2.5x. We also focus on the ratios of Adjusted Debt to Adjusted EBITDA and Adjusted EBITDA Coverage of Adjusted Interest.

We believe the ratios of ratios of Adjusted Debt to Adjusted EBITDA and Adjusted Debt plus Preferred Equity to Adjusted EBITDA are important measures as they are commonly used by investors and analysts to assess the relative financial risk associated with balance sheets of companies within the same industry, and they are additionally used by rating agencies to assess the potential for companies defaulting on their debt obligations.

The ratios of Adjusted EBITDA Coverage of Adjusted Interest and Adjusted EBITDA Coverage of Adjusted Interest and Preferred Dividends provide a measure of a company's ability to pay its current interest and preferred dividend requirements. We believe these are meaningful to investors, analysts and rating agencies in assessing financial risk associated with a company's debt levels and provide an indication of the health of the company's earnings in relation to interest and preferred dividend requirements. Additionally, these measures allow for comparison of our debt and earnings levels to those of other companies within our industry.

Adjusted Debt, Adjusted EBITDA and Adjusted Interest, as used in these ratios, are non-GAAP financial measures, which are further discussed and reconciled under the Non-GAAP Leverage Measures heading. Preferred Equity represents Aimco's preferred stock and the Aimco Operating Partnership's preferred OP Units.

Our leverage ratios for the trailing twelve month and annualized three month periods ended December 31, 2014 and 2013, are presented below:

	Pro-forma Trailing Twelve Months Ended December 31,	Actual Trailing Twelve Months Ended December 31,	
	2014 (1)	2014	2013
Adjusted Debt to Adjusted EBITDA	6.5x	7.1x	7.1x
Adjusted Debt plus Preferred Equity to Adjusted EBITDA	7.0x	7.6x	7.3x
Adjusted EBITDA Coverage of Adjusted Interest	2.9x	2.7x	2.6x
Adjusted EBITDA Coverage of Adjusted Interest and Preferred Dividends	2.7x	2.5x	2.5x

(1) During January 2015, Aimco completed a common stock offering resulting in net proceeds of approximately $367 million. The pro-forma ratios presented for the trailing twelve months ended December 31, 2014, have been adjusted to reflect the following: a) Repayment of $112.3 million of outstanding borrowings under our Credit Agreement at December 31, 2014; b) Repayment of $102.2 million of property debt that will be repaid in 2015 to further supplement Aimco's unencumbered pool; c) Repayment of $27.0 million of Aimco's CRA Preferred Stock; and d) Investment of the remaining proceeds from the common offering. The effect of the repayment of debt, redemption of preferred stock and investment of the remaining proceeds from the common offering resulted in a pro forma reduction of Interest and Preferred Dividends of $11.2 million and $0.4 million for the trailing twelve months ended December 31, 2014. The pro forma interest and preferred dividend adjustments are based on the contractual amounts for the debt repaid or preferred securities redeemed, and investment of the remaining proceeds assumed an annual return of one percent. Refer to Note 16 to the consolidated financial statements in Item 8 for additional information regarding this stock offering.

We expect future leverage reduction from both earnings growth, the lease up of redevelopment communities and from regularly scheduled property debt amortization repaid from retained earnings. We also expect to increase our financial flexibility by expanding our pool of unencumbered apartment communities. As of December 31, 2014, this pool included 15 consolidated apartment communities, which we expect to hold beyond 2015, with an estimated fair value of more than $1 billion.

Non-GAAP Financial Measures

Note: Our 10-K, as filed, includes our Funds From Operations ("FFO") and Adjusted Funds From Operations ("AFFO") discussion, along with the related non-GAAP disclosures and reconciliations, within Management's Discussion and Analysis ("MD&A"). Based on the expanded non-GAAP disclosure in response to the Staff's comment, we plan to add a Non-GAAP Financial Measures section within the MD&A in future filings, which would include our existing FFO and AFFO disclosures, along with the proposed expanded non-GAAP disclosures below. For the purpose of this Comment Letter response, we have not repeated the FFO and AFFO disclosure.

Non-GAAP Leverage Measures

Adjusted Debt represents our share of the debt obligations recognized in our consolidated financial statements, as well as our share of the debt obligations of our unconsolidated partnerships, reduced by our share of the cash and restricted cash of our consolidated and unconsolidated partnerships, and our investment in the subordinate tranches of a securitization that holds certain of our property debt (essentially, our investment in our own non-recourse property loans). We believe Adjusted Debt is useful to investors as it is a measure of our net exposure to debt obligations, assuming the application of cash and restricted cash balances as well as reducing our leverage by our investment in our own property debt. Adjusted Debt, as used in our leverage ratios discussed under the Balance Sheet and Liquidity heading, is calculated as set forth in the table below.

Preferred Equity, as used in our leverage ratios, represents the redemption amounts for Aimco's preferred stock and the Aimco Operating Partnership's preferred OP Units. Preferred Equity, although perpetual in nature, is another component of our overall leverage.

Adjusted EBITDA is a non-GAAP performance measure. We believe Adjusted EBITDA provides investors relevant and useful information because it allows investors to view income from our operations on an unleveraged basis, before the effects of taxes, depreciation and amortization, gains or losses on sales of and impairment losses related to real estate, and various other items described below that are not necessarily representative of our ability to service our debt obligations or preferred equity requirements.

Adjusted EBITDA represents Aimco's share of the consolidated amount of our net income adjusted to exclude the effect of the following items for the reasons set forth below:

- interest, to allow investors to compare a measure of our earnings before the effects of our capital structure and indebtedness with that of other companies in the real estate industry;
- income taxes, to allow investors to measure our performance independent of income taxes, which may vary significantly from other companies within our industry due to leverage and tax planning strategies, among other drivers;
- depreciation and amortization, gains or losses on dispositions and impairment losses related to real estate, for similar reasons to those set forth in our discussion of FFO and AFFO in the preceding section;
- provisions for (or recoveries of) losses on notes receivable, gains on dispositions of non-depreciable assets and non-cash stock-based compensation, as these are items that periodically affect our operations but that are not necessarily representative of our ability to service our debt obligations;
- the interest income earned on our investment in the subordinate tranches of a securitization that holds certain of our property debt, as we subtract this income from our interest expense in our calculation of Adjusted EBITDA coverage of Adjusted Interest; and
- EBITDA amounts related to our legacy asset management business, as the debt obligations and associated interest expense for the legacy asset management business are excluded from our leverage ratios and the associated interest payments are not funded from our operations.

While Adjusted EBITDA is a relevant measure of performance, it does not represent net income as defined by GAAP, and should not be considered as an alternative to net income in evaluating our performance. Further, our computation of Adjusted EBITDA may not be comparable to similar measures reported by other companies.

Adjusted Interest, as calculated in our leverage ratios, is a non-GAAP measure that we believe is meaningful for investors and analysts as it presents our current recurring interest requirements associated with leverage. Our calculation of Adjusted Interest is set forth in the table below. We exclude from our calculation of Adjusted Interest

- the amortization of deferred financing costs, as these amounts have already been expended in previous periods and are not representative of our current or prospective debt service requirements; and
- debt prepayment penalties and other items that from time to time, affect our operating results, but are not representative of our scheduled interest obligations.

Our calculation of Adjusted Interest is also reduced by income we receive on our investment in the subordinate tranches of a securitization that holds certain of our property debt, as this income is being generated indirectly from our payments of principal and interest associated with the property debt held by the trust and such amounts will ultimately repay our investment in the trust.

Preferred Dividends represents the preferred dividends paid on Aimco's preferred stock and the preferred distributions paid on the Aimco Operating Partnership's preferred OP Units. We add Preferred Dividends to Adjusted Interest for a more complete picture of the interest and dividend requirements of our leverage, inclusive of perpetual preferred equity.

For the years ended December 31, 2014 and 2013, reconciliations of the most closely related GAAP measures to our calculations of Adjusted Debt, Preferred Equity, Adjusted EBITDA, Adjusted Interest and Preferred Dividends, as used in our leverage ratios, are as follows (in thousands):

	Year Ended December 31,	
	2014	**2013**
Total indebtedness	$ 4,135,139	$ 4,388,185
Adjustments:		
Debt related to assets classified as held for sale	27,296	—
Proportionate share adjustments related to debt obligations of consolidated and unconsolidated partnerships	(117,827)	(142,136)
Cash and restricted cash	(120,416)	(182,788)
Proportionate share adjustments related to cash and restricted cash held by consolidated and unconsolidated partnerships	2,103	15,317
Securitization trust assets	(61,043)	(58,408)
Bond repayment on December 31, 2014, effective on January 1, 2015	(34,000)	—
Adjusted Debt, as used in leverage calculations	$ 3,831,252	$ 4,020,170
Preferred stock	186,126	68,114
Preferred OP Units	87,937	79,953
Preferred Equity	274,063	148,067
Adjusted Debt plus Preferred Equity	$ 4,105,315	$ 4,168,237

	Year Ended December 31, 2014	Year Ended December 31, 2013
Net income attributable to Aimco Common Stockholders	$ 300,220	$ 203,673
Adjustments:		
Noncontrolling interests in Aimco Operating Partnership's share of net income	23,349	18,876
Preferred Dividends	7,947	2,804
Interest expense, net of noncontrolling interest	216,880	241,025
Depreciation and amortization, net of noncontrolling interest	275,175	295,584
Income tax benefit	(20,026)	(3,101)
Gains on disposition and other, net of income taxes and noncontrolling partners' interests	(265,358)	(184,382)
Provision for (recovery of) impairment losses related to depreciable assets, net of noncontrolling partners' interests	2,197	(855)
Recovery of (provision for) losses on notes receivable	(237)	(1,827)
Gains on disposition of other	(501)	(11)
Non-cash stock-based compensation	5,781	5,645
Interest income received on securitization investment	(5,697)	(5,322)
Net income of legacy asset management business, excluding interest expense	(2,556)	(3,977)
Adjusted EBITDA, as calculated in leverage ratios	$ 537,174	$ 568,132

	Year Ended December 31, 2014	Year Ended December 31, 2013
Interest expense, continuing operations	$ 220,971	$ 237,048
Interest expense, discontinued operations	—	13,346
Adjustments:		
Proportionate share adjustments related to interest of consolidated and unconsolidated partnerships	(6,064)	(10,189)
Amortization of deferred loan costs, debt prepayment penalties and other	(12,905)	(13,706)
Interest income received on securitization investment	(5,697)	(5,322)
Adjusted Interest, as calculated in leverage ratios	$ 196,305	$ 221,177
Preferred stock dividends	7,947	2,804
Preferred OP Unit distributions	6,497	6,423
Preferred dividends and distributions	14,444	9,227
Adjusted Interest and Preferred Dividends, as calculated in leverage ratios	$ 210,749	$ 230,404

Re: Apollo Commercial Real Estate Finance, Inc.
Form 10-K for the Year-Ended December 31, 2014
Filed February 26, 2015
File No. 1-34452

Dear Ms. John:

On behalf of Apollo Commercial Real Estate Finance, Inc., a Maryland corporation (the "**Company**"), set forth below are the responses of the Company to the comments of the staff of the Division of Corporation Finance (the "**Staff**") of the Securities and Exchange Commission (the "**Commission**") by letter dated August 12, 2015 (the "**Comment Letter**") with respect to the Company's Form 10-K for the year ended December 31, 2014 (the "**Form 10-K**").

The Company's responses to the comments of the Staff contained in the Comment Letter are set out below in the order in which the comments were set out in the Comment Letter and are numbered accordingly. Defined terms used herein but not otherwise defined have the meanings given to them in the Form 10-K.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Investments, page 34

1. **We note your weighted average underwritten IRR for first mortgages and CMBS significantly exceeds your weighted average yield. Please tell us why these amounts differ.**

Company Response:

In response to the Staff's comment, the Company advises the Staff that the weighted average underwritten IRR for first mortgages and CMBS differs from the weighted average yield because the weighted average underwritten IRR takes into account borrowings assumed by the Company to finance its investments and, as is set out in footnote 3 to the table referenced in this comment, assumes that the cost of borrowings remains constant over the remaining term. The Company intends to modify the disclosure in future filings to also note that the weighted average underwritten IRR takes leverage into account.

Notes to Consolidated Financial Statements

Note 3 – Fair Value Disclosure, page 69

2. **Regarding your estimated fair value of the CMBS portfolio and your disclosure that adjustments to broker quotes are made as deemed necessary by management. Please tell us the nature of any adjustments made to broker quotes. Further, please tell us what consideration you gave to disclosing the nature of material adjustments made to broker quotes.**

Company Response:

In response to the Staff's comment, the Company advises the Staff that there were no events or instances that resulted in the Company making material adjustments to the broker quotes to value CMBS in its consolidated financial statements for the periods presented. The estimated fair value of the Company's CMBS portfolio is determined by reference to market prices provided by certain dealers who make a market in these financial instruments. However, broker quotes are only indicative of fair value and may not necessarily represent what the Company would receive in an actual trade for the applicable instrument. The Company generally seeks multiple broker quotes for a CMBS and uses the average value of the prices received to determine fair value. The Company then evaluates such pricing information taking into account factors such as recent trades, weighted average life, duration, coupon, prepayment experience, fixed/adjustable rate, coupon index and similar credits, among other factors. If the Company determines (based on such a comparison and management's market knowledge and expertise) that a security is priced significantly differently than similar securities, it may contact brokers for additional information regarding such brokers' valuation of the security. The Company may further adjust the value from the broker quotes based on its analysis of the above market-based factors.

Re: Ares Commercial Real Estate Corporation
Form 10-K for the Fiscal Year Ended December 31, 2013
Filed March 17, 2014
File No. 1-35517

Dear Ms. John:

This letter sets forth the responses to the comment of the Staff of the Division of Corporation Finance (the "Staff") contained in your letter dated February 18, 2015 relating to the above-referenced filing (the "10-K").

Set forth below is the comment of the Staff contained in the Staff's letter and immediately below the comment is the response with respect thereto and the location in the relevant filing of the requested disclosure.

Item 8. Financial Statements and Supplementary Data

Consolidated Statements of Operations, page F-4

1. *We note in your response to prior comment 1 of our letter dated January 27, 2015 that you elected to use the proceeds from the convertible notes to repay outstanding amounts under your secured funding agreements. Therefore, please revise your presentation of net interest margin in future filings to reflect the interest associated with this convertible debt.*

   Response: In response to the Staff's comment, the Company will revise its presentation of net interest margin in future filings to include the interest expense associated with the convertible notes in "Interest Expense" within the consolidated statements of operations.

The Company understands that:

(a) the Company is responsible for the adequacy and accuracy of the disclosure in the filings;

(b) Staff comments or changes to disclosure in response to Staff comments in the filings reviewed by the Staff do not foreclose the SEC from taking any action with respect to the filings; and

(c) the Company may not assert Staff comments as a defense in any proceeding initiated by the SEC or any person under the federal securities laws of the United States.

Please do not hesitate to call me at (202) 721-6111 if you have any additional questions or require any additional information.

Very truly yours,

/s/Tae-Sik Yoon

File No. 001-13087

Boston Properties Limited Partnership
Form 10-K for the fiscal year ended December 31, 2014
Filed March 2, 2015
File No. 000-50209

Dear Ms. John:

This letter is submitted in response to the comments of the staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission") with respect to the Forms 10-K for the year ended December 31, 2014 of Boston Properties, Inc. (the "Company") and Boston Properties Limited Partnership (the "Operating Partnership"), as set forth in your letter (the "Comment Letter") dated May 1, 2015 to Michael E. LaBelle, Chief Financial Officer of the Company.

For reference purposes, the text of the Comment Letter has been reproduced herein with responses below each numbered comment.

General

Comment No. 1

1. *Please revise all future filing of Boston Properties, Inc. as well as Boston Properties Limited Partnership in response to these comments, as applicable.*

Response to Comment No. 1

The Company will revise all of its future filings and those of the Operating Partnership in response to the Staff's comments in the Comment Letter.

Item 7 – Management's Discussion and Analysis of Financial Condition and Results of Operations

Capitalization, page 99

Comment No. 2

2. *We note your disclosure of total adjusted debt on Page 100. Please provide a tabular reconciliation to your total consolidated debt recognized in accordance with GAAP in future filings.*

Response to Comment No. 2

In future periodic filings, including the Forms 10-Q for the quarterly period ended March 31, 2015, each of the Company and the Operating Partnership will provide a tabular reconciliation of total consolidated debt in accordance with GAAP to total adjusted debt in the relevant portion of the section entitled "Debt Summary." An example of the disclosure as it would have appeared on page 101 of the Company's Form 10-K and page 98 of the Operating Partnership's Form 10-K is set forth below:

	December 31,	
	2014	2013
	(dollars in thousands)	
Debt Summary:		
Balance		
Fixed rate mortgage notes payable	$ 4,309,484	$ 4,449,734
Variable rate mortgage notes payable	—	—
Unsecured senior notes, net of discount	5,287,704	5,835,854
Unsecured exchangeable senior notes, net of discount and adjustment for the equity component allocation	—	744,880
Unsecured Line of Credit	—	—
Mezzanine notes payable	309,796	311,040
Total consolidated debt	9,906,984	11,341,508
Add:		
Our share of unconsolidated joint venture debt	351,500	329,188
Deduct:		
Partners' share of consolidated mortgage notes payable	(1,057,879)	(759,239)
Partners' share of consolidated mezzanine notes payable	(123,918)	(124,416)
Total adjusted debt	$ 9,076,687	$10,787,041

Funds from Operations, page 105

Comment No. 3

3. *Please revise the labels on your reconciliation in future filings to clarify that you are presenting $899 million of "Funds from Operations (FFO) attributable to common shareholders and Operating Partnership unitholders" and $808 million of "FFO attributable to Boston Properties, Inc. common shareholders", reconciled from $433 million of "Net income attributable to Boston Properties, Inc. common shareholders."*

Response to Comment No. 3

In future periodic filings, the Company will revise the labels on its Funds from Operations (FFO) reconciliation in the form requested by the Staff. However, as discussed with the Staff on May 5, 2015, the Company intends to clarify that it is presenting $899 million of "Funds from Operations (FFO) attributable to Operating Partnership common unitholders (including Boston Properties, Inc.)." Because the number of outstanding shares of common stock of the Company at all times equals the number of common units of the Operating Partnership that are owned by the Company, we believe this language (which is slightly different from that proposed by the Staff) is more accurate and will lessen the chance that a reader will believe that "double-counting" has occurred.

As requested in the Comment Letter, the Company hereby acknowledges the following:

(1) the Company is responsible for the adequacy and accuracy of the disclosure in the filing;

(2) Staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and

(3) the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions concerning these responses, please contact me at (617) 236-3352.

Sincerely,

/s/ Michael E. LaBelle

Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 19, 2015
File No. 333-201464-01

Dear Ms. Monick:

This letter sets forth the response of Brixmor Property Group Inc. and Brixmor Operating Partnership LP (collectively, the "Company") to the comment letter from the Staff of the Division of Corporation Finance of the Securities and Exchange Commission (the "Commission"), received by email on April 13, 2015, relating to the Company's Form 10-K for the year ended December 31, 2014, filed with the Commission on February 19, 2015. For your convenience, we have set forth each of the Staff's original comments immediately preceding our response.

<u>Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, Page 35</u>

1. On pages F-19 and F-20, you disclose that you capitalize personnel costs to real estate under redevelopment and deferred leasing costs. Please tell us the amount of personnel costs you have capitalized. To the extent material, in future periodic filings, please separately quantify and disclose personnel costs capitalized to real estate under redevelopment and deferred leasing costs for all periods presented and discuss fluctuations in capitalized personnel costs for all periods presented within your MD&A. To the extent you do not believe these amounts are material, please tell us how you made that determination.

Response

In response to the Staff's comment, in our future periodic filings we will, to the extent material, separately quantify and disclose personnel costs capitalized to real estate under redevelopment and deferred leasing costs for all periods presented and discuss significant fluctuations in capitalized personnel costs for all periods presented within our MD&A. For the years ended December 31, 2014 and 2013, the Company capitalized personnel costs of $5.8 million and $5.2 million, respectively, to real estate under redevelopment and $15.1 million and $13.3 million, respectively, to deferred leasing costs.

Notes to Consolidated Financial Statements, page F-16
16. Commitments and Contingencies, page F-34
Insurance captive, page F-34

2. In future periodic filings, please disclose a roll forward of your insurance reserves for each year presented. The roll forward should include the amount of incurred claims, any changes in the provision for prior year events, and the amount of payments made. Please provide an example of your proposed disclosure. To the extent you do not believe this disclosure is material, please tell us how you made that determination.

Response

In response to the Staff's comment, in our future annual reports we will disclose a roll forward of the Company's insurance reserves for each year presented as follows:

	201X	201X
Balance at the Beginning of the year	$ XXX	$ XXX
Incurred related to:		
Current year	X	X
Prior years	X	X
Total incurred	X	X
Paid related to:		
Current year	X	X
Prior years	X	X
Total paid	X	X
Changes in the provision for prior year events	X	X
Balance at the end of the year	$ XXX	$ XXX

RE: Camden Property Trust
Form 10-K
Filed February 20, 2015
File No. 001-12110

Dear Mr. Kluck:

The following is the response of Camden Property Trust to the comments contained in the Staff's comment letter dated May 26, 2015 concerning the above-referenced report.

FORM 10-K

General

1. Please advise us whether you consider net operating income and same property net operating income to be key performance indicators. We may have further comment.

We do not consider net operating income and same property net operating income to be key performance indicators. They are two of many individual operating metrics used by the real estate industry to assess company performance. Accordingly, Camden provides these measurements to securities analysts and investors.

Unlike Funds From Operations as defined by the National Association of Real Estate Investment Trusts ("NAREIT"), there is no standard industry definition regarding the method of calculation of either net operating income or same property net operating income. As a result, neither net operating income nor same property net operating income is consistently defined or calculated by peer companies or investors. Net operating income, for example, does not take into account all aspects of the Company's performance as net operating income does not include the impact of certain revenues and expenses such as equity in income of joint ventures, interest expense, income taxes, and general and administrative expenses.

Risk Factors, page 3

2. We note that your Geographic Diversification table on page 26 indicates that 18.4% of your real estate assets were concentrated in Washington, D.C. Metro and 9.5% of your real estate assets were concentrated in Houston, Texas. To the extent that you consider this geographic concentration to represent a material risk, please include a risk factor specifically addressing this risk in future Exchange Act periodic reports.

We refer you to the first risk factor on page 3 of our Form 10-K under the heading **"Risks Associated with Capital Markets, Credit Markets, and Real Estate -** ***Volatility in capital and credit markets, or other unfavorable changes in economic conditions, either nationally or regionally in one or more of the markets in which we operate, could adversely impact us."***

In this risk factor, we discuss key economic risks for (a) local conditions in the first bullet point, (b) declines in market rental rates in the third bullet point, and, (c) regional economic downturns affecting geographic markets in the sixth bullet point.

Item 2. Properties, page 8

3. We note your disclosure to the effect that your operating properties have an average age of 12 years, "calculated on the basis of investment dollars." In future Exchange Act periodic reports, please clarify how this number is calculated.

The average age of our operating properties is based upon the average of the product of the gross capitalized cost of each property multiplied by the property's physical age divided by gross capitalized costs. We will clarify this calculation in future Exchange Act periodic reports.

Management's Discussion and Analysis of Financial Condition and Results of Operations

Completed Construction in Lease-Up, page 24

4. In future Exchange Act periodic reports, with respect to any disclosure on costs incurred with respect to completed construction in lease-up, please clarify whether costs incurred include leasing costs.

With respect to our disclosure on costs incurred for completed construction in lease-up, we do not include leasing costs. Leasing costs are expensed as incurred. We will clarify leasing costs are expensed as incurred in future Exchange Act periodic reports.

Proxy Statement

General

5. We were unable to locate the disclosures required by Item 407(d)(4) of Regulation S-K. Please revise your future Exchange Act periodic reports or proxy statements, as applicable, to include such disclosures or advise.

The establishment of a separately-designated audit committee, comprised solely of independent trust managers, is disclosed on page 4 of our recently-filed proxy statement and a further description of the Company’s Audit Committee, including the identity of each committee member, is disclosed on page 7 of our proxy. In future filings, we will clarify the Audit Committee has been established in accordance with Section 3(a)(58)(A) of the Exchange Act.

We acknowledge:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and,
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions, please do not hesitate to contact the undersigned at (713) 354-2500.

Very truly yours,

/s/ Michael P. Gallagher

Filed March 2, 2015
SEC File No. 001-12494

CBL & Associates Limited Partnership (herein the "Operating Partnership")
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed March 2, 2015
SEC File No. 333-182515-01

Dear Mr. Gordon:

In reference to your comment letter of May 15, 2015 and with respect to your review of our Form 10-K for the fiscal year ended December 31, 2014, filed March 2, 2015, this letter sets forth CBL's and the Operating Partnership's (collectively, the "Company") responses to each comment, numbered to correspond to the Staff's letter.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Same-center Net Operating Income, page 55

1. **It appears that the NOI measures on page 56 are inclusive of NOI attributable to non-controlling interests in the OP. Please revise labels of these non-GAAP measures in future filings to indicate that they include both the company's share and the non-controlling interests' share of property NOI and same-center NOI.**

We acknowledge the Staff's comment. The following is an example of the revised disclosure we intend to include in future filings related to same-center net operating income to clarify our presentation, using the disclosure from our Form 10-K for the Fiscal Year Ended December 31, 2014 as an example, with the revisions highlighted in red below:

Same-center Net Operating Income

NOI is a supplemental measure of the operating performance of our shopping centers and other Properties. We define NOI as property operating revenues (rental revenues, tenant reimbursements and other income) less property operating expenses (property operating, real estate taxes and maintenance and repairs).

~~Similar to FFO,~~ W~~w~~e compute NOI based on our Operating Partnership's pro rata share of both consolidated and unconsolidated Properties. We believe that presenting NOI and same-center NOI (described below) based on our Operating Partnership's pro rata share of both consolidated and unconsolidated Properties is useful since we conduct substantially all of our business through our Operating Partnership and, therefore, it reflects the performance of the Properties in absolute terms regardless of the ratio of ownership interests of our common shareholders and the noncontrolling interest in the Operating Partnership. Our definition of NOI may be different than that used by other companies and, accordingly, our calculation of NOI may not be comparable to that of other companies.

Since NOI includes only those revenues and expenses related to the operations of our shopping center Properties, we believe that same-center NOI provides a measure that reflects trends in occupancy rates, rental rates and operating costs and the impact of those trends on our results of operations. Our calculation of same-center NOI excludes lease termination income, straight-line rent adjustments, and amortization of above and below market lease intangibles in order to enhance the comparability of results from one period to another, as these items can be impacted by one-time events that may distort same-center NOI trends and may result in same-center NOI that is not indicative of the ongoing operations of our shopping center and other Properties. Same-center NOI is for real estate properties and does not include the results of operations of our subsidiary that provides janitorial, security and maintenance services.

We include a Property in our same-center pool when we have owned all or a portion of the Property since January 1 of the preceding calendar year and it has been in operation for both the entire preceding calendar year ended December 31, 2013 and the current year ended December 31, 2014. New Properties are excluded from same-center NOI, until they meet this criteria. The only Properties excluded from the same-center pool that would otherwise meet this criteria are Non-core Properties, Properties under major redevelopment, Properties being considered for repositioning, Properties where we intend to renegotiate the terms of the debt secured by the related Property and Properties included in discontinued operations. Madison Square and Madison Plaza were classified as Non-core Properties as of December 31, 2014. Lender Properties consisted of Gulf Coast Town Center, Triangle Town Center and Triangle Town Place as of December 31, 2014. Properties under major redevelopment as of December 31, 2014 included the Annex at Monroeville, CoolSprings Galleria and Northgate Mall. Properties where we are considering alternatives to reposition the Property included Chesterfield Mall and Wausau Center at December 31, 2014.

Due to the exclusions noted above, same-center NOI should only be used as a supplemental measure of our performance and not as an alternative to GAAP operating income (loss) or net income (loss). A reconciliation of our same-center NOI to net income attributable to the Company for the years ended December 31, 2014 and 2013 is as follows (in thousands):

	Year Ended December 31,	
	2014	**2013**
Net income ~~attributable to the Company~~	$ **253,033**	$ 110,370
Adjustments: [(1)]		
Depreciation and amortization	**326,237**	319,260
Interest expense	**272,669**	266,843
Abandoned projects expense	**136**	334
Gain on sales of real estate assets	**(6,329)**	(2,002)
(Gain) loss on extinguishment of debt	**(87,893)**	9,108
Gain on investment	**—**	(2,400)
Loss on impairment	**18,539**	75,283
Income tax provision	**4,499**	1,305
Lease termination fees	**(3,808)**	(4,217)
Straight-line rent and above and below market rent	**(3,359)**	(1,502)
Net income attributable to noncontrolling interests in ~~earnings of Operating Partnership~~ other consolidated subsidiaries	**(3,777)**	(18,041)
Gain on discontinued operations	**(276)**	(1,144)
General and administrative expenses	**50,271**	48,867
Management fees and non-property level revenues	**(36,386)**	(23,552)
~~Company's~~ Operating Partnership's share of property NOI	**783,556**	778,512
Non-comparable NOI	**(63,968)**	(75,492)
Total same-center NOI	$ **719,588**	$ 703,020

(1) Adjustments are based on our Operating Partnership's pro rata ownership share, including our share of unconsolidated affiliates and excluding noncontrolling interests' share of consolidated Properties.

Same-center NOI increased $16.6 million for the year ended December 31, 2014 compared to 2013. Our NOI growth of 2.4% for 2014 was driven primarily by increases of $13.4 million in minimum rent and $4.1 million in tenant reimbursements. The increases in rental rates were a result of our positive leasing spreads of 12.6% for our Stabilized Mall portfolio as we continued to upgrade our tenant mix. Additionally, maintenance and repair expenses, as compared to the prior-year period, were relatively flat for 2014 as a $1.0 million increase in snow removal expenditures was offset by a similar decline in maintenance and supplies expense due to operating efficiencies.

Funds from Operations, page 81

2. **We note your reconciliation of FFO and FFO, as adjusted on page 82. In future filings, please revise the labels of these non-GAAP measures to indicate that the measure represents Funds from operations of the Operating Partnership common unitholders and Funds from operations of the Operating Partnership common unitholders, as adjusted.**

We will modify our presentation of our FFO reconciliations in future filings as follows, using the disclosure from our Form 10-K for the Fiscal Year Ended December 31, 2014 as an example, with the changes shown in red below:

Funds From Operations

FFO is a widely used measure of the operating performance of real estate companies that supplements net income (loss) determined in accordance with GAAP. The National Association of Real Estate Investment Trusts ("NAREIT") defines FFO as net income (loss) (computed in accordance with GAAP) excluding gains or losses on sales of depreciable operating properties and impairment losses of depreciable properties, plus depreciation and amortization, and after adjustments for unconsolidated partnerships and joint ventures and noncontrolling interests. Adjustments for unconsolidated partnerships and joint ventures and noncontrolling interests are calculated on the same basis. We define FFO ~~allocable to common shareholders~~ as defined above by NAREIT less dividends on preferred stock of the Company or distributions on preferred units of the Operating Partnership, as applicable. Our method of calculating FFO ~~allocable to common shareholders~~ may be different from methods used by other REITs and, accordingly, may not be comparable to such other REITs.

We believe that FFO provides an additional indicator of the operating performance of our Properties without giving effect to real estate depreciation and amortization, which assumes the value of real estate assets declines predictably over time. Since values of well-maintained real estate assets have historically risen with market conditions, we believe that FFO enhances investors' understanding of our operating performance. The use of FFO as an indicator of financial performance is influenced not only by the operations of our Properties and interest rates, but also by our capital structure.

We present both FFO allocable to ~~of our~~ Operating Partnership common unitholders and FFO allocable to common shareholders, as we believe that both are useful performance measures. We believe FFO allocable to ~~of our~~ Operating Partnership common unitholders is a useful performance measure since we conduct substantially all of our business through our Operating Partnership and, therefore, it reflects the performance of the Properties in absolute terms regardless of the ratio of ownership interests of our common shareholders and the noncontrolling interest in our Operating Partnership. We believe FFO allocable to common shareholders is a useful performance measure because it is the performance measure that is most directly comparable to net income (loss) attributable to common shareholders.

In our reconciliation of net income (loss) attributable to common shareholders to FFO allocable to Operating Partnership common unitholders ~~shareholders~~ that is presented below, we make an adjustment to add back noncontrolling interest in income (loss) of our Operating Partnership in order to arrive at FFO of the ~~our~~ Operating Partnership common unitholders. We then apply a percentage to FFO of the ~~our~~ Operating Partnership common unitholders to arrive at FFO allocable to common shareholders. The percentage is computed by taking the weighted-average number of common shares outstanding for the period and dividing it by the sum of the weighted-average number of common shares and the weighted-average number of Operating Partnership units held by noncontrolling interests during the period.

FFO does not represent cash flows from operations as defined by GAAP, is not necessarily indicative of cash available to fund all cash flow needs and should not be considered as an alternative to net income (loss) for purposes of evaluating our operating performance or to cash flow as a measure of liquidity.

FFO, as adjusted, for the year ended December 31, 2014 excludes an $83.2 million gain on extinguishment of debt, net of non-cash default interest expense, primarily related to the conveyance of Chapel Hill Mall and Columbia Place and the foreclosure of Citadel Mall. It also excludes a partial litigation settlement of $7.8 million, net of related expenses. FFO, as adjusted, for the year ended December 31, 2013, excludes a $9.1 million loss on extinguishment of debt, a $2.4 million gain on investment and an $8.2 million partial litigation settlement. In 2012, we recorded a gain on investment of $45.1 million related to the acquisition of the remaining 40% noncontrolling interest in Imperial Valley Mall in December 2012. Considering the significance and nature of these items, we believe that it is important to identify the impact of these changes on our FFO measures for a reader to have a complete understanding of our results of operations. Therefore, we have also presented FFO excluding these items.

FFO of the Operating Partnership increased 24.7% to $545.5 million for the year ended December 31, 2014 compared to $437.5 million for the prior year. Excluding the litigation settlements, the gain on investments, non cash default interest expense and gain (loss) on extinguishment of debt, FFO of the Operating Partnership increased 4.3% for the year ending December 31, 2014 to $454.6 million compared to $435.9 million in 2013.

The reconciliation of ~~FFO to~~ net income attributable to common shareholders to FFO allocable to Operating Partnership common unitholders is as follows (in thousands):

	Year Ended December 31,		
	2014	**2013**	**2012**
Net income attributable to common shareholders	**$ 174,258**	$ 40,312	$ 84,089
Noncontrolling interest in income of Operating Partnership	**30,106**	7,125	19,267
Depreciation and amortization expense of:			
Consolidated properties	**291,273**	278,911	255,460
Unconsolidated affiliates	**41,806**	39,592	43,956
Discontinued operations	**—**	6,638	13,174
Non-real estate assets	**(2,311)**	(2,077)	(1,841)
Noncontrolling interests' share of depreciation and amortization	**(6,842)**	(5,881)	(5,071)
Loss on impairment, net of tax benefit	**18,434**	73,485	50,343
Gain on depreciable property	**(937)**	(7)	(652)
Gain on discontinued operations, net of taxes	**(273)**	(647)	(566)
FFO~~unds from operations of the~~ allocable to Operating Partnership common unitholders	**545,514**	437,451	458,159
Litigation settlement, net of related expenses	**(7,763)**	(8,240)	—
Gain on investments	**—**	(2,400)	(45,072)
Non cash default interest expense	**4,695**	—	—
(Gain) loss on extinguishment of debt	**(87,893)**	9,108	(265)
FFO~~unds from operations of the~~ allocable to Operating Partnership common unitholders, as adjusted	**$ 454,553**	$ 435,919	$ 412,822

The reconciliations of FFO allocable to ~~of the~~ Operating Partnership common unitholders to FFO allocable to common shareholders, including and excluding the litigation settlements, gain on investments, non cash default interest and the gain (loss) on extinguishment of debt are as follows (in thousands):

	Year Ended December 31,		
	2014	**2013**	**2012**
FFO~~unds from operations of the~~ allocable to Operating Partnership common unitholders	**$ 545,514**	$ 437,451	$ 458,159
Percentage allocable to common shareholders (1)	**85.27%**	84.97%	81.36%
FFO~~unds from operations~~ allocable to common shareholders	**$ 465,160**	$ 371,702	$ 372,758
FFO~~unds from operations of the~~ allocable to Operating Partnership common unitholders, as adjusted	**$ 454,553**	$ 435,919	412,822
Percentage allocable to common shareholders (1)	**85.27%**	84.97%	81.36%
FFO~~unds from operations~~ allocable to common shareholders, as adjusted	**$ 387,597**	$ 370,400	$ 335,872

(1) Represents the weighted-average number of common shares outstanding for the period divided by the sum of the weighted-average number of common shares and the weighted-average number of Operating Partnership units held by noncontrolling interests during the period.

[LETTERHEAD OF CHESAPEAKE LODGING TRUST]

July 7, 2015

Re: Chesapeake Lodging Trust
Form 10-K for the fiscal year ended December 31, 2014
Filed on February 19, 2015
File No. 001-34572

Ladies and Gentlemen:

This letter is submitted in response to the comments of the staff of the Division of Corporation Finance (the "*Staff*") of the Securities and Exchange Commission (the "*Commission*") contained in the Commission's letter dated May 26, 2015 (the "*Letter*") with respect to the Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "*Form 10-K*") of Chesapeake Lodging Trust (the "*Trust*"), which was filed with the Commission on February 19, 2015.

For convenience of reference, each Staff comment is reprinted below in italics, numbered as it was in the Letter, and is followed by the Trust's corresponding response.

<u>Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations</u>

<u>Results of Operations, page 28</u>

1. *In future filings, please include a discussion of the significant individual components of revenue and hotel operating expenses. For example, we note that almost half of hotel operating expenses consist of "indirect" expense. Please clarify the types of indirect expenses included and provide an analysis of significant changes from the prior year, as well as any known trends.*

   RESPONSE: The Trust acknowledges the comment and will provide additional responsive disclosure in future filings.

Hotel Operating Results, page 30

2. *Please remove the term "pro forma" from your narrative disclosure of hotel operating metrics since their presentation is not in accordance with Article 11.*

RESPONSE: As discussed with the Staff, the Trust uses the term "pro forma" to describe its comparisons of the Trust's key metrics of hotel operating performance (occupancy, ADR, RevPAR, Adjusted Hotel EBITDA and Adjusted Hotel EBITDA Margin) as if the Trust had owned each of its hotels owned at the end of the applicable reporting period for the entirety of each comparative period. The Trust's disclosures clearly indicate the meaning of the term as used in this context and do not create any implication that the term is intended to connote Article 11 compliance. Please see the Trust's response to comment 3, below, for further information as to why the Trust believes presentation of these "pro forma" operating metrics is valuable for its investors.

Non-GAAP Financial Measures, page 31

3. *We note that you present Hotel EBITDA and Adjusted Hotel EBITDA including results of operations for certain hotels prior to acquisition and that the measure is reconciled to revenues. To the extent that you present these measures in future filings, please exclude hotel operations prior to acquisition. Item 10(e) of Regulation S-K requires reconciliation of all non-GAAP measures to the most comparable measure calculated in accordance with GAAP. The inclusion of pre-acquisition operating data makes it impossible to reconcile these non-GAAP measures to your historical financial statements and is therefore impermissible. Also see Question 103.02 of the Compliance and Disclosure Interpretations that states that these types of measures should be reconciled to net income.*

RESPONSE: Based on feedback it has received, the Trust continues to believe that presenting Hotel EBITDA and Adjusted Hotel EBITDA on a "pro forma" basis, in a manner that includes the operating results of hotels prior to their acquisition by the Trust, and therefore permits easy comparison of these operating metrics irrespective of the owner of the hotels across comparative periods, provides useful information for its investors and securities analysts. The Trust notes, however, that its acquired hotels generally have a different cost basis (i.e., depreciation expense) and capital structure (i.e., interest expense) under prior ownership for the periods prior to the Trust's acquisitions of the hotels, and as a result does not believe that it would be informative to investors and securities analysts to provide a reconciliation of Hotel EBITDA of the acquired hotels to the prior owners' net income. Accordingly, the Trust proposes to provide a reconciliation of pro forma Hotel EBITDA and Adjusted Hotel EBITDA, including the impact of pre-acquisition operating results from its acquired hotels, to the Trust's reported net income as shown on Exhibit A.

Notes to Consolidated Financial Statements

Note 2. Summary of Significant Accounting Policies, page F-9

4. *Please include a description of your capitalization policy as it relates to renovation and repositioning costs, clearly describing your treatment of interest, salaries, real estate taxes, general and administrative and any other significant amounts that are capitalized during the construction phase. Your disclosure should include a discussion of the periods of capitalization, including when the capitalization period ends.*

RESPONSE: The Trust acknowledges the comment but notes that its past practice generally has been to conduct renovation and repositioning efforts by taking only a portion of the affected hotel out of service at any point in time (i.e., the hotel continues to operate and generate cash flow). In addition, much of the renovation and repositioning activity in which the Trust has been engaged at its hotels has focused on replacement of soft and hard goods and has occurred over short periods of time. As a result, the Trust has not capitalized interest, salaries, real estate taxes or other general and administrative costs related to these efforts.

* * *

EXHIBIT A

CURRENT PRESENTATION:

	Three Months Ended March 31, 2015 Pro Forma
Total revenue	$ 119,870
Less: Total hotel operating expenses	90,145
Hotel EBITDA	29,725
Add: Non-cash amortization	(81)
Adjusted Hotel EBITDA	$ 29,644
Adjusted Hotel EBITDA Margin	24.7%

PROPOSED PRESENTATION:

		Three Months Ended March 31, 2015
Net income		$ 1,552
Add:	Interest expense	7,179
	Depreciation and amortization	14,927
	Air rights contract amortization	130
	Hotel acquisition costs	369
	Corporate general and administrative	4,577
Less:	Income tax benefit	(3,348)
	Interest income	—
Hotel EBITDA		25,386
Less:	Non-cash amortization(1)	(81)
Adjusted Hotel EBITDA		25,305
Add:	Prior owner Hotel EBITDA(2)	4,339
Pro forma Adjusted Hotel EBITDA(2)		$ 29,644
Total revenue		$ 109,290
Add:	Prior owner total revenue(2)	10,580
Pro forma total revenue(2)		$ 119,870
Pro forma Adjusted Hotel EBITDA Margin(2)		24.7%

(1) Includes non-cash amortization of ground lease asset, deferred franchise costs, deferred key money, and unfavorable contract liability.
(2) Includes results of operations for certain hotels prior to our acquisition.

Chimera Investment Corporation
1211 Avenue of the Americas
New York, NY 10036

April 27, 2015

Ms. Jaime G. John
Division of Corporation Finance
Securities and Exchange Commission
100 F Street, N.E.
Washington, D.C. 20549

Re: Chimera Investment Corporation
Form 10-K
Filed March 2, 2015
File No. 00133796

Dear Ms. John:

On behalf of Chimera Investment Corporation ("we", "our" or the "Company"), set forth below is our response to the comments of the staff of the Division of Corporation Finance of the Securities and Exchange Commission, received by letter dated April 13, 2015 in which you provided comments to the reports referenced above.

For your convenience, we have reproduced your comment followed by our corresponding response.

<u>Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 51</u>

<u>Liquidity and Capital Resources, page 74</u>

1. *We note that your disclosure on page 76 provides the weighted average haircut on your repurchase agreements collateralized by your Agency RMBS separately from your non-Agency RMBS. Please disclose the weighted average haircut on your repurchase agreements collateralized by both your Agency and non-Agency RMBS as of the end of each period presented and discuss any known trends or material changes from the prior year.*

Response:

We will disclose the weighted average haircut on our repurchase agreements collateralized by both our Agency and Non-Agency RMBS as of the end of each period presented and discuss any known trends or material changes from the prior year in our subsequent filings with the SEC.

The combined weighted average haircut on our repurchase agreements collateralized by both Agency and Non-Agency RMBS was 4.8% and 8.0% as of December 31, 2013 and December 31, 2014, respectively. The increase was due to the addition of Non-Agency repurchase agreements during the period ending December 31, 2014 which generally required higher collateral requirements. The combined weighted average haircut remained unchanged from the period ending September 30, 2014.

SEC Comment:

Note 3. Residential Mortgage-Backed Securities, page F-17

2. *We note that you define Alt-A mortgage securities on page F-23 as non-Agency RMBS where (i) the underlying collateral has weighted average FICO scores between 680 and 720 or (ii) for instances where FICO scores are greater than 720, RMBS have 30% or less of the underlying collateral composed of full documentation loans. This appears to be a more narrow definition than the one used prior to September 30, 2014. Please explain to us the reasons why management changed the internal definition used to classify Alt-A loans, and disclose in future filings.*

Response:

As part of our financial statement review, we evaluate ways to improve our disclosures, including making our disclosures more comparable with others in the industry. As part of this effort, we reviewed public information of our peers and, as a result of this review, we updated our definition of Alt-A residential mortgage loans. We believe the updated definition is consistent with others in the financial industry. We will disclose this in our first quarter filing with the SEC.

****

In connection with responding to your comments, we acknowledge that:

- the Company is responsible for the adequacy and accuracy of the disclosures in its filing
- SEC Staff comments or changes to disclosures in response to SEC Staff comments do not foreclose the Commission from taking action with respect to such filings; and
- the Company may not assert SEC Staff comments as a defense in any proceeding initiated by the commission or any person under the federal securities laws of the United States.

Please feel free to contact me at 212-696-0100 with any comments or questions you may have with respect to our responses.

Very truly yours,

/s/ Rob Colligan

Washington, D.C. 20549

Dear Ms. Monick and Mr. Esquivel:

This letter is submitted in response to comments from the staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission") in a letter dated May 5, 2015 (the "Comment Letter") with respect to Colony Capital, Inc.'s (the "Company") Form 10-K for the fiscal year ended December 31, 2014, which was filed with the Commission on February 27, 2015 (the "Form 10-K"), as amended on March 31, 2015, and Form 8-K filed on February 20, 2015 (the "Form 8-K").

For your convenience, the Staff's numbered comments set forth in the Comment Letter have been reproduced in bold herein with responses immediately following each comment. Unless otherwise indicated, page references in the reproductions of the Staff's comments refer to the Form 10-K or the Form 8-K, as applicable.

Form 10-K for the year ended December 31, 2014
Notes to Consolidated Financial Statements
6. Investments in Unconsolidated Joint Ventures, page F-22

1. We note you have a 75% ownership interest in Portfolio 8 Investors, LLC and we further note your disclosure that the minority member has control over the day-to-day operations. Given the ownership interest in the entity, please elaborate and explain to us in detail the facts and circumstances specific about this entity that would cause you to conclude that equity method treatment is more appropriate than consolidation. Please cite applicable guidance in your response.

Portfolio 8 Investors, LLC ("Portfolio 8") is a joint venture established to invest in a portfolio of multifamily properties. The Company owns an 83% interest in a separate consolidated entity ("Preferred Member"), which holds a preferred equity interest in Portfolio 8, representing 75% of the total equity of Portfolio 8. The remaining 25% of equity in Portfolio 8 is held by a third party sponsor ("Common Member"). In addition to a 12% preferred return, the Company's preferred equity is entitled to a 30% profit participation after each member has attained a 12% internal rate of return. Although the Company's preferred equity interest represents more than 50% of the total equity of Portfolio 8, the Company determined that the Common Member controls the venture and that the Company does not currently have the ability to exercise substantive participating or liquidation rights that would overcome the presumption of control by the Common Member. Accordingly, the Company accounts for its investment using the equity method under ASC 323.

Variable Interest Assessment

To evaluate Portfolio 8 for consolidation, the Company first considered the applicability of the variable interest model. While the Company has a variable interest in Portfolio 8 through its preferred equity investment, the Company determined that Portfolio 8 did not meet any of the following characteristics of a variable interest entity under ASC 810-10-15-14:

- *Insufficient equity investment at risk* — At inception, Portfolio 8 was capitalized with $55 million of equity and $171 million of third party non-recourse debt financing, with equity investment at risk representing approximately 24% of the venture's total assets. The Company's preferred equity in Portfolio 8 was deemed to be "at risk" because it participates significantly in both profits and losses, albeit not on a pari passu basis with the Common Member. The Preferred Member participates significantly in profits of Portfolio 8 through its 12% preferred return and 30% of residual return. Based upon these equity-like returns, we determined that the Preferred Member participates significantly in profits of Portfolio 8. The Preferred Member also participates significantly in losses as there is no recourse to the Common

Member, thus the preferred equity investment is subject to total loss. The third party debt obtained by Portfolio 8 was based on customary market terms and without significant guaranties from its equity owners or any of their related parties. In light of the venture's ability to obtain customary third-party debt and its debt-to-total capital ratio, which is consistent with other entities that hold similar assets, the Company concluded that Portfolio 8 has sufficient equity at risk to finance its activities without additional subordinated financial support.

- *Holders of equity investment at risk lack the characteristics of a controlling financial interest* — Portfolio 8 is controlled by a Board of Directors (the "Board") which has delegated day-to-day management of the venture to the Administering Member, which is initially the Common Member. The Common Member cannot be removed as Administering Member without unanimous consent of the Board (composed of two members appointed by the Company and a single member appointed by the Common Member). As the Administering Member, the Common Member is responsible for all aspects of the day-to-day operations, leasing and management of the underlying investment properties, and identifying future investment opportunities, which are deemed to be the activities that most significantly impact the economic performance of the venture. While the members' participation in profits and losses are not on a pari passu basis (due to the preferred return and sharing of residual returns that are not proportionate to the members' economic interests), there are no contractual or other arrangements which protect the members, as a group, from absorbing losses or cap their returns. Since the equity holders, as a group, have the ability to elect the Board, thereby appoint the Administering Member, and have the obligation to absorb expected losses and the right to receive expected residual returns, the equity holders, as a group, have the characteristics of a controlling financial interest.

- *Entity is established with non-substantive voting interests* — The manner in which profits and losses are shared between the members (as noted above) are not proportionate to the members' voting rights (which are split 66.7%/33.3% between the Company and the Common Member, respectively, based upon the members' Board representation and 50%/50% where unanimous consent is required). However, the Company concluded that Portfolio 8 is not established with non-substantive voting interests as substantially all of the activities of Portfolio 8 are not conducted on behalf of, or involve, a member with disproportionately few voting rights relative to its economic interest. In making this qualitative assessment, the Company considered the following:
    - Both the Company and the Common Member invest in real estate; accordingly, the operations of Portfolio 8 are substantially similar in nature to the activities of both members.
    - While the members have rights to buy or sell their equity interest under certain circumstances, these rights are not equivalent to an option with a fixed price or "in the money" put or call feature.
    - While there are transfer restrictions on each member's equity interest, de facto agents identified by ASC 810-10-25-43(d) are not considered in applying the anti-abuse clause, and there are no other arrangements which would create a de facto agency relationship between the members.

Since none of the characteristics of ASC 810-10-15-14 were present, Portfolio 8 was evaluated for consolidation under the voting model.

Voting Interest Assessment
After considering the voting interest model, the Company concluded that Portfolio 8 is a limited liability company which has governing provisions that are the functional equivalent of a limited partnership. Although Portfolio 8 is governed by a Board, the Board has effectively delegated its powers and ceded control over day-to-day operation and management of the investment properties, which represent the core activities of Portfolio 8, to the Common Member as the Administering Member. The role of the Administering Member is akin to that of a general partner in a limited partnership or a managing member in a limited liability company, which is typical in real estate joint ventures. In this regard, the Preferred Member is analogous to a limited partner.

Under the voting interest model for limited partnerships, ASC 810-20-25-3 provides a presumption that the general partner controls the limited partnership, regardless of the extent of its ownership interest. This presumption of control by the general partner can be overcome if the limited partners have either substantive liquidation rights, or substantive kick-out rights without cause, or substantive participating rights that could be exercised by a simple majority vote of limited partners (or by a single limited partner).

The Company does not currently have substantive kick-out or liquidation rights since removal of the Common Member as the Administering Member without cause and liquidation of the venture require unanimous consent of the Board (including the Common Member). Although the Company has the rights to control certain decisions made by the Board, such decisions, which include liquidation of the entity, protection against dilution in economic rights and ownership interests, and new asset acquisition, are protective in nature. Similarly, while the Board is required to approve the venture's annual business plan, the plan is subject to automatic approval as long as it provides for sufficient cash flow to pay debt service and fund the preferred return. Accordingly, the budget approval right does not allow the Company to participate in decision-making in the ordinary course of business. As the rights retained by the Board are non-substantive, the presumption of control by the Administering Member is not overcome.

Based upon the foregoing analysis, the Company concluded that controlling financial interest over Portfolio 8 resides with the Common Member. The Company's preferred equity investment allows it to exert significant influence but not control over Portfolio 8. Accordingly, the Company accounts for its investment in Portfolio 8 under the equity method.

There have been no reconsideration events or changes in the contractual rights of the members since the inception of the investment that affected the assessment described above. We will continue to evaluate any changes in the rights or duties of the members which are conditioned upon future contingent events (including the Common Member's fulfillment of its obligations as Administering Member) to assess if there may be a change to the presumption of control by the Common Member at that time.

Schedule IV, page F-54

2. We note your footnote (3) to your table. Please tell us if you have aggregated loans whose carrying values are individually greater than 3% of the total carrying value. Specifically, address the line item Hotel -various, USA with two loans that have a combined carrying value of $328 million. Please refer to Rule 12-29 of Regulation S-X.

At December 31, 2014, the Company had four loans whose carrying values individually exceeded 3% (or approximately $63.9 million) of total carrying value of loans, all of which are listed individually in Schedule IV.

The two mezzanine loans included in Schedule IV on an aggregate basis were originated as part of a single refinancing of a portfolio of 152 hotels located throughout the United States and represent two subordinate tranches of the debt stack comprising a first mortgage loan owned by third parties with a principal balance of $775 million and two partial mezzanine positions owned by the Company with a combined carrying value of $328 million. The mezzanine loans include a first mezzanine loan with a carrying value of $25 million and a second mezzanine loan with a carrying value of $303 million. Since the carrying value of the first mezzanine loan is less than the 3% threshold, it would have been aggregated with other unrelated loans. However, since the loans share the same collateral pool that is cross-collateralized for the entire debt stack and management views and manages the loans as a single investment, the Company determined that it was more appropriate to combine the two related mezzanine positions for presentation in Schedule IV.

3. Please tell us how you complied with Rule 12-29 of Regulation S-X, or tell us how you determined it was not necessary to disclose the aggregate cost for Federal income tax purposes.

The Company acknowledges the Staff's comment and notes that the aggregate cost basis for Federal income tax purposes as of December 31, 2014 for the mortgage, subordinated and mezzanine loans included in Schedule IV was approximately $2.12 billion, which is not materially different from the GAAP carrying value of $2.13 billion. In future filings, the Company will include this additional information.

Form 8-K Filed on February 20, 2015
Exhibit 99.1 Press Release dated February 19, 2015

4. We note that you present fair value as a non-GAAP financial measure in your press release. Please explain to us how this presentation complies with Regulation G; specifically, please tell us how you determined it was not necessary to provide a reconciliation of this measure to your net book value. If after further consideration you determine to revise your disclosure of the non-GAAP presentation, please provide us with your revised presentation to be included in future filings.

Until recently, the majority of the Company's investment portfolio had been composed of financial instruments (including loans receivable and equity investments in unconsolidated entities) for which we disclose fair value on a quarterly basis in accordance with ASC 825. Certain mortgage REITs that we once viewed as our peers had elected the fair value option for similar financial instruments, and the fair value metrics in our press release were furnished to provide our investors a basis for comparison, as if we had made a similar election.

However, given our increased focus on equity investments and recent combination with Colony Capital, LLC, we view fair value to no longer be relevant to our investors since equity REITs and asset managers that we now view as our peers do not report this metric. Accordingly, beginning in the first quarter of 2015, we have eliminated our disclosure of fair value in our press release. Nonetheless, we acknowledge the Staff's comment and have provided below a reconciliation of the fair value metrics disclosed in our press release, which are primarily derived from our GAAP financial statements.

(In thousands)	Book Value		Fair Value		Excess of Fair Value Over Book Value
Loans receivable, net	$ 2,131,134	(1)	$ 2,163,500	(2)	$ 32,366
Real estate assets, net	1,643,997	(1)	1,650,276	(3)	6,279
Investments in unconsolidated joint ventures	1,646,977	(1)	1,963,965	(2)	316,988
CMBS debt	537,268	(1)	536,927	(2)	341
Convertible senior notes	604,498	(1)	617,763	(2)	(13,265)
Noncontrolling interests	518,313	(1)	527,158	(4)	(8,845)
Total excess of fair value over book value attributable to stockholders					$ 333,864

(In thousands, except per share data)	December 31, 2014	
Total stockholders' equity	$ 2,417,480	(1)
Excess of fair value over book value attributable to stockholders as calculated above	333,864	
Less: Preferred stock liquidation preference	(338,250)	(1)
Fair value of common equity	2,413,094	
Shares of common stock outstanding	109,634	(1)
Fair value per common share	$ 22.01	

____

(1) Derived from the Company's audited consolidated balance sheet as of December 31, 2014

(2) Derived from Note 11 of the Company's audited consolidated financial statements for the year ended December 31, 2014

(3) Estimated based upon discounted cash flows and/or recent transaction prices

(4) Calculated based upon noncontrolling interests' share of each investment entity's estimated fair value of equity under hypothetical liquidation at fair value.

Given that we no longer provide fair value metrics other than as required by GAAP, we do not expect to include such reconciliation in our future filings.

* * * * *

The Company acknowledges that:

- The Company is responsible for the adequacy and accuracy of the disclosure in the filings;
- Staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filings; and
- The Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions concerning this letter or if you would like any additional information, please do not hesitate to call me at (310) 552-7230.

Sincerely,

/s/ Darren J. Tangen

Re: Columbia Property Trust, Inc.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 12, 2015
File No. 1-36113

Form 10-Q for the quarterly period ended March 31, 2015
Filed April 30, 2015
File No. 1-36113

Dear Ms. Monick:

On behalf of Columbia Property Trust, Inc. (the "Company"), we are responding to the comments from the Securities and Exchange Commission Staff (the "Staff") contained in its letter dated June 23, 2015 regarding our Annual Report filed on Form 10-K for the fiscal year ended December 31, 2014 and our Quarterly Report filed on Form 10-Q for the quarterly period ended March 31, 2015 (together, the "Filings"). For your convenience, this letter sets forth in italics each of the Staff's comments before each response.

Form 10-K for the fiscal year ended December 31, 2014

General

1. *We note you jointly filed a Form S-3ASR with Columbia Property Trust Operating Partnership, L.P. ("Columbia LP") on September 15, 2014, and, on March 10, 2015, you jointly filed a 424B with Columbia LP relating to senior notes. We further note the disclosure in Note 15 of your financial statements. Please tell us how you considered (i) whether Columbia LP is an Exchange Act reporting company, (ii) whether it was required to be an Exchange Act reporting company at the time the Form S-3ASR was filed and (iii) whether it has satisfied its reporting obligations.*

Response: In accordance with Rule 3-10(c) of Regulation S-X, the Company is permitted to include, and does include, in its periodic reports condensed consolidating financial information in

One Glenlake Parkway
Suite 1200
Atlanta, GA 30328
columbiapropertytrust.com

T 800 899 8411
T 404 465 2200
F 404 465 2201

lieu of separate financial statements of Columbia LP (the subsidiary issuer) because all of the following criteria are met:

(1) Columbia LP (the subsidiary issuer) is 100% owned by the Company (the parent guarantor);

(2) the guarantee is full and unconditional; and

(3) no other subsidiary of the Company (the parent guarantor) guarantees the senior notes.

In addition, in accordance with Rule 12h-5(a) of the Exchange Act, Columbia LP, as the issuer of a guaranteed security that is permitted to omit financial statements by Rule 3-10(c) of Regulation S-X, is exempt from the requirements of Section 13(a) or 15(d) of the Exchange Act.

Therefore, we respectfully advise the Staff that:

(I) Columbia LP is exempt from the reporting requirements of Sections 13(a) and 15(d) of the Exchange Act;

(II) Columbia LP was exempt from the reporting requirements of Sections 13(a) and 15(d) of the Exchange Act at the time of the filing of the Form S-3ASR because (i) all of the conditions described above were met for the Company to include condensed consolidating financial information in lieu of separate financial statements of Columbia LP, and (ii) such information was included in the Company's periodic reports at such time, thereby exempting Columbia LP under Rule 12h-5(a) of the Exchange Act; and

(III) based on (i) and (ii) above, we believe Columbia LP has satisfied any reporting obligations.

Item 2. Properties

Property Statistics, page 14

2. *In future Exchange Act periodic reports, please revise to provide disclosure, here or in MD&A, regarding the relationship of rental rates on leases that expired in the reporting period and the rental rates on renewals or new leases on the same space. In addition, please disclose the relationship between rents on leases scheduled to expire in the current period and current market rents for the expiring space.*

   Response: In future periodic Exchange Act reports, beginning with our Form 10-Q for the period ended June 30, 2015, the Company will provide disclosure within the MD&A Overview to discuss the relationship between the rental rates on leases that expired in the reporting period and the rental rates on renewals or new leases on the same space. Further, to the extent material, the Company will also provide commentary regarding the relationship between rental rates on leases scheduled to expire over the near term and the Company's view on current market rents for those spaces within the MD&A Overview.

3. *Please also supplement your disclosure in future Exchange Act periodic reports to discuss leasing costs, including tenant improvement costs and leasing commissions, for both renewals and new leases*

on a per square foot basis.

Response: In future periodic Exchange Act reports beginning with our Form 10-Q for the period ended June 30, 2015, the Company will provide disclosure within the MD&A Overview of the Company’s tenant improvement costs and leasing commissions for both renewals and new leases on a per square foot basis.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations, page 22

4. *Please tell us the amount, if any, of internal costs you capitalize to deferred leasing costs and real estate assets for all periods presented. If material, please confirm for us that you will disclose this information within future periodic filings and discuss any significant fluctuations in such capitalized internal costs within your MD&A.*

Response: We have capitalized the following internal costs to deferred leasing costs and real estate assets for the periods presented in the Filings (in thousands):

	For the Years Ended December 31,			For the Three Months Ended March 31,	
	2014	**2013**	**2012**	**2015**	**2014**
Deferred leasing costs	$ 47	$ —	$ —	$ 18	$ 6
Real estate assets	$ 271	$ 187	$ —	$ 81	$ 68

We do not believe these amounts are material, and therefore, do not intend to disclose them. However, in the event these items become material in future periods, the Company confirms that it will disclose the amount of internal costs capitalized to deferred leasing costs and real estate assets and discuss any significant fluctuations in such amounts within MD&A.

Overview, page 22

5. *In future Exchange Act periodic reports, please revise to provide net operating income as well as same store net operating income or advise.*

Response: In future periodic Exchange Act reports beginning with our Form 10-Q for the period ended June 30, 2015, the Company will disclose net operating income and same store net operating income within MD&A. The Company monitors performance metrics that are considered most useful to investors, analysts and other financial statement users. In the future, to the extent the Company deems it appropriate to use different performance metrics or to revise the manner in which such metrics, including net operating income and same store net operating income, are calculated to improve their utility, such revisions will be made consistently in the Company’s Exchange Act periodic reports and in its supplemental financial reports.

Results of Operations

Comparison of the Year Ended December 31, 2014 to 2013

Continuing Operations, page 25

6. *In future Exchange Act periodic reports, please revise here or elsewhere in MD&A to address period to period changes in net income for the comparable pool and also include disclosure addressing the relative impact of same store occupancy changes and average rent changes on the results.*

   Response: In future periodic Exchange Act reports beginning with our Form 10-Q for the period ended June 30, 2015, the Company will discuss within MD&A the period to period changes impacting net income for the comparable pool of properties, including addressing the relative impact of same store occupancy and average rental rate changes on the Company's operating results.

Notes to Consolidated Financial Statements

2. Summary of Significant Accounting Policies

Intangible Assets and Liabilities Arising from In-Place Leases Where Columbia Property Trust is the Lessor

7. *With respect to your below-market lease intangibles, please tell us how you considered any fixed rate renewal options in your estimate of the remaining term of the underlying leases and your basis for your determination. Your response should address, but not necessarily be limited to, whether or not you use a threshold in your evaluation. To the extent you use thresholds, please tell us how you concluded that these thresholds are appropriate and tell us the potential impact to your financial statements if you were to conclude that all below market fixed rate renewal options would be exercised.*

   Response: We amortize below-market in-place lease intangibles over the remaining non-cancelable term of the respective lease, including fixed rate below-market renewal options for which exercise of the renewal option appears to be reasonably assured.

   In estimating the fair value of below-market lease intangibles, we assume that tenants with a fixed rate renewal option would be reasonably assured to exercise the option if the present value of the option rent is at least 10% less than the present value of the corresponding market rent. We utilize a third-party expert to assist us in this determination. For example, if the present value of the market rent over the option term is $100 per square foot and the present value of the contractual option rent over the option term is $90 per square foot, we assume the renewal will be exercised. We have utilized this assumption, which we believe to be reasonable, because we believe that such a discount would be compelling and that tenants would elect to renew their leases under such favorable terms relative to market.

   At a discount of less than 10%, we believe the tenant's consideration of qualitative factors may outweigh the discount in deciding whether to renew a below-market lease. Such qualitative factors may include the tenant's long-term projected space needs, employee and customer preference related to location, image and functionality of the building and office space, and convenience and proximity to transportation, amenities and housing.

As of March 31, 2015, less than $3.0 million of our net intangible below-market lease liability balance of $78.1 million relates to fixed-rate renewal options at our in-place leases. If we had determined that all fixed rate below-market renewal options at our in-place leases would be exercised, there would not have been a material change to the intangible below-market lease liability balance or to the related amortization for any of the periods presented in the Filings.

In future Exchange Act periodic reports, the Company will include the following additional disclosure related to the accounting policies used to measure and amortize below market tenant lease intangibles, including the effect of below market renewal options:

Identifiable intangible assets and liabilities are calculated for above-market and below-market tenant and ground leases where we are either the lessor or the lessee. The difference between the contractual rental rates and our estimate of market rental rates is measured over a period equal to the remaining non-cancelable term of the leases, including significantly below market renewal options for which exercise of the renewal option appears to be reasonably assured.

The remaining term of leases with renewal options at terms significantly below market reflect the assumed exercise of such below market renewal options and assume the amortization period would coincide with the extended lease term.

Schedule III, page S-1

8. *Please tell us how you complied with Rule 12-28 of Regulation S-X, or tell us how you determined it was not necessary to disclose the aggregate cost for Federal income tax purposes of your real estate assets.*

   Response: The Company acknowledges that disclosure of the aggregate cost of its real estate assets for Federal income tax purposes is required by Rule 12-28 of Regulation S-X. The Company will include such disclosure in a footnote to Schedule III beginning in our Form 10-K for the year ended December 31, 2015. As of December 31, 2014, the aggregate gross cost of the Company’s real estate assets for Federal income tax purposes is $5.807 billion.

Form 10-Q for the quarterly period ended March 31, 2015

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Results of Operations, page 30

9. *We note you have multiple factors that impact your results of operations for several line items. In future periodic filings, please confirm that you will separately quantify the impact from each factor.*

Response: In future periodic Exchange Act reports beginning with our Form 10-Q for the period ended June 30, 2015, the Company will quantify the impact of the individual factors impacting the line items discussed in Results of Operations when multiple factors are present.

The Company acknowledges that it is responsible for the adequacy and accuracy of the disclosure in the Filings, and that Staff comments or changes to disclosure in response to Staff comments do not foreclose the Securities and Exchange Commission from taking any action with respect to the Filings. The Company further acknowledges that it may not assert Staff comments as a defense in any proceeding initiated by the Securities and Exchange Commission or by any person under the federal securities laws of the United States.

If we can be of any assistance in explaining these responses, please let us know. Please contact me with any questions or comments at (404) 465-2200.

Very truly yours,

Corporate Office Properties, L.P.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 18, 2015
File No. 333-189188

Dear Ms. John:

Corporate Office Properties Trust ("COPT") and Corporate Office Properties, L.P. ("COPLP") are writing in response to the letter dated July 21, 2015 received from the Staff of the Securities and Exchange Commission (the "Commission") regarding COPT's and COPLP's Annual Reports on Form 10-K for the year ended December 31, 2014 (the "2014 Form 10-K" or the "filing"). Our responses to the Staff's comments appearing in the letter are set forth below. For reference, the Staff's comments, set forth in bold font, precede the Company's responses.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds from Operations, page 50

1. **Given that you indicate that Basic FFO represents FFO available to common share and common unit holders, in future periodic filings revise Basic and Diluted FFO in your reconciliation on page 52 to clearly label this measure.**

Response: We will clearly label those measures in future filings.

Item 8. Financial Statements and Supplementary Data

Note 17 — Operating Leases, page F-47

2. **We note your disclosure on page 34 that the majority of your leases with the United States Government consist of a series of one-year renewal options or provide for early termination rights. Please tell us how these leases are reflected in your table on page F-47 of gross minimum future rentals on noncancelable leases and tell us the percentage of each amount in the table that includes such leases.**

Response: Our disclosure of gross minimum future rentals in the table on page F-47 includes rents from our leases with the United States Government when we conclude that the exercise of these renewal options is reasonably assured. Rents from these leases comprise the following percentages of each amount in the table:

2015	18%
2016	19%
2017	20%
2018	18%
2019	19%
Thereafter	27%

In connection with our response to the Staff's comments, COPT and COPLP acknowledge that:

- COPT and COPLP are responsible for the adequacy and accuracy of the disclosure in the filing;

Dear Mr. John:

This letter is in response to your comment letter dated July 6, 2015, with respect to the documents referenced above filed by Corrections Corporation of America (the "Company").

Given the Staff's comments and the Company's proposed responses, we respectfully request that the Company be permitted to make any necessary changes in future filings beginning with the Company's Form 10-K for the fiscal year ended December 31, 2015, as indicated in your comment letter. In any event, we would appreciate the opportunity to discuss our proposed responses with you to determine if they appropriately address the Staff's concerns. We have prepared these responses with the assistance of our counsel and the proposed responses have been read by our independent registered public accounting firm. In accordance with your instructions, we have keyed our responses to the specific numbered comments contained in your letter dated July 6, 2015.

In accordance with your letter dated July 6, 2015, the Company acknowledges that the Company is responsible for the adequacy and accuracy of the disclosure in any Company filing and that Staff comments or changes to disclosures in response to Staff comments do not foreclose the Securities and Exchange Commission (the "Commission") from taking any action with respect to the filing. The Company also acknowledges that it may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Form 10-K for the Fiscal Year Ended December 31, 2014

General

1. In future Exchange Act reports, please include a schedule of facility contract expirations for each of the next ten years, stating the number of facility contracts expiring, the total number of beds covered by such contracts, the annual revenue represented by such contracts, and the percentage of total annual revenue represented by such contracts. Refer to Item 15(f) of Form S-11 as a guide.

Response to Question 1:

We typically enter into facility contracts with governmental entities for terms of up to five years, with additional renewal periods at the option of the contracting governmental agency. Most of our facility contracts also contain clauses that allow the government agency to terminate the contract at any time without cause and our contracts are generally subject to annual or bi-annual legislative appropriations of funds. As a result, there is not significant incremental risk to our contracts which have expired or are scheduled to expire within twelve months from the reporting date to those contracts that have remaining renewal options.

We have exchanged correspondence with the Commission on matters similar to the question raised herein on a letter dated March 25, 2010 from us with follow up correspondence submitted on April 9, 2010 regarding disclosures made in our Form 10-K for the year ended December 31, 2009. In that correspondence we agreed to include a statement in future periodic filings that we believe we will renew all contracts that have expired or are scheduled to expire within the next twelve months that would have a material effect on our financial statements if not renewed, other than those contracts with customers that are specifically disclosed to be terminated or for which management believes that it is reasonably likely that a renewal will not be obtained and for which the non-renewal would have a material effect on our financial statements.

For each reporting period we assess the facts and circumstances related to our contracts to determine which contracts, if any, we believe are reasonably likely to expire upon termination or which contracts the customer is reasonably likely to elect to terminate prior to expiration and would have a material impact to revenue or income from continuing operations. We also determine which contracts are necessary to disclose as a risk of termination and make such disclosure in our Management’s Discussion and Analysis of Financial Condition and Results of Operations in our quarterly periodic filings along with the statement that we believe we will renew all other contracts. We have included such disclosure for each quarterly period since our correspondence with the Commission on April 9, 2010.

We have reviewed the information in Item 15(f) of Form S-11 as well as examples of similar tabular disclosures from other public REITs. Given that many of our contracts are short-duration, three to five years in most cases, and, unlike other REITs, are subject to fluctuations in revenue based on fluctuations in inmate populations, we believe that such a disclosure may misleadingly suggest that a larger portion of our contracts are likely to terminate in the near term than has historically been the case. We believe our renewal rate on existing contracts remains high as a result of a variety of reasons including, but not limited to, the constrained supply of available beds within the U.S. correctional system, our ownership of the majority of the beds we operate, and the quality of our operations. Similarly, a table of contract expirations may mistakenly suggest that revenue from a contract is secure through contract expiration when, in fact, the government customer has the right to terminate prior to its expiration. Based on the foregoing, we respectfully request that the Commission reconsider the need for a tabular schedule presenting the revenues of all contracts scheduled to expire over the next ten years.

Item 1A. Risk Factors

We are subject to terminations, non-renewals, or competitive re-bids of our government contracts, page 27

2. We note your disclosure on page 27 that twenty-three of your facility contracts are scheduled to expire by December 31, 2015. In future Exchange Act reports please revise your risk factor disclosure regarding such expiring contracts to quantify the revenue and the percentage of total revenues represented by the facility contracts as of the most recent fiscal year.

Response to Question 2:

We advise the Staff that in future Annual Reports on Form 10-K we will disclose in the risk factor the revenue and the percentage of total revenues represented by the facility contracts that are scheduled to expire within the next twelve months. The aggregate revenue earned during the year ended December 31, 2014 for the twenty-three contracts with scheduled maturity dates, notwithstanding contractual renewal options, on or before December 31, 2015 was $526.1 million, or 32% of total revenue.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Critical Accounting Policies

Self-Funded Insurance Reserves, page 53

3. Please provide to us a roll forward of your insurance reserves. The roll forward should include the amount of incurred claims, any changes in the provision for prior year events, and the amount of payments made.

Response to Question 3:

Self-funded insurance reserves include accrued liabilities for employee health, workers' compensation, and automobile insurance claims. We have consistently accrued the estimated liability for employee health insurance claims based on our history of claims experience and the estimated time lag between the incident date and the date we pay the claims. We have accrued the estimated liability for workers' compensation claims based on a third-party actuarial valuation of the outstanding liabilities, discounted to the net present value of the outstanding liabilities, using a combination of actuarial methods to project ultimate losses, and our automobile insurance claims based on estimated development factors on claims incurred. Please see the roll forward of our self-funded insurance reserves. *(in millions):*

Balance as of December 31, 2013	$ 33.8
Claims provision	81.2
Payments	(83.0)
Balance as of December 31, 2014	$ 32.0

Investing activities, page 76

4. We note from your disclosure on page F-10 that you capitalize construction costs directly associated with the development of a correctional facility. In future filings please disclose the total amount of soft costs capitalized, such as payroll and other G&A costs, for the respective years. Also provide a narrative discussion for fluctuations from year to year, if material.

Response to Question 4:

The only soft cost that has historically been capitalized by us during the development of a correctional facility is capitalized interest which we disclose in both the statement of cash flows and the Management's Discussion and Analysis of Financial Condition and Results of Operations in our periodic filings. In the future, if we undertake the development of real estate and capitalize internal soft costs in accordance with Accounting Standards Codification ("ASC") 970-10-15, "Real Estate – General" we will disclose the material components of the amounts capitalized.

Item 8. Financial Statements and Supplementary Data

Notes to Consolidated Financial Statements

Note 18. Condensed Consolidating Financial Statements of CCA and Subsidiaries, page F-40

5. Please tell us the consideration you gave to presenting the material components of investing and financing activities in your condensed consolidating statements of cash flows. Refer to Rule 3-10(i)(1) and Rule 10-01(a)(4) of Regulation S-X.

Response to Question 5:

According to Rule 3-10 of Regulation S-X, we are required to provide condensed consolidating financial information with a separate column for the parent company, subsidiary issuer(s), combined subsidiary guarantor(s), combined subsidiary non-guarantors (if not minor) and each subsidiary issuer or subsidiary guarantor that is not 100% owned, whose guarantee is not full and unconditional, or whose guarantee is not joint and several with the guarantees of other subsidiaries. Further, Rule 10-01(a)(4) of Regulation S-X provides guidance specific to the cash flow presentation. It states that that the statement of cash flows may be abbreviated starting with a single figure of net cash flows from operating activities and showing cash changes from investing and financing activities individually only when they exceed 10% of the average of net cash flows from operating activities for the most recent three years. Notwithstanding this test, §210.4-02 applies and de minimis amounts therefore need not be shown separately.

Our basis for the abbreviated disclosure in the condensed consolidating statement of cash flows was primarily that substantially all cash flow activity occurs within either the parent or the guarantor subsidiaries. In our view, the primary benefit of this statement to the users of the financial statements would be the disclosure of any material cash flows occurring within non-guarantor subsidiaries. Given that the activity reported in the Consolidating Adjustments and Other column reflect only intercompany eliminations and thus there is no cash flow activity occurring in non-guarantor subsidiaries, we did not feel that an expanded disclosure would add meaningful value to the overall disclosure since the expanded data is already provided in the consolidated statements of cash flows.

Schedule III – Real Estate Assets and Accumulated Depreciation, page F-48

6. Please tell us the consideration you gave to instruction 6 to Rule 12-28 of Regulation S-X which requires disclosure of the aggregate cost for Federal income tax purposes of your real estate assets.

Response to Question 6:

The Company has omitted the disclosure in prior filings because the aggregate cost of real estate assets for federal income tax purposes has not differed materially from the gross value reported in schedule III. Given the Staff's comment, however, we confirm that we will include the disclosure in future filings. The aggregate cost of real estate assets for federal income tax proposes was approximately $3.1 billion at December 31, 2014, the same as the gross cost of the real estate.

Form 8-K filed on May 7, 2015

Exhibit 99.1 Press Release dated May 6, 2015

7. We note that you present net operating income in your earnings releases as a non-GAAP measure. Please revise future earnings releases to include all of the disclosures required by Item 10(e)(1)(i) of Regulation S-K for this measure. In your response, provide an example of your proposed disclosure.

Response to Question 7:

Net operating income is a measure that we believe supplements our discussion and analysis of our results of operations and is a measure that is used by management to assess operating performance. We confirm that to the extent we continue to use net operating income in future press releases we will include all of the disclosures required by Item 10(e)(1)(i) of Regulation S-K for this measure. An example of our disclosure and the related reconciliation to the most comparable GAAP measure is included as requested.

Adjusted Net Income, net operating income (NOI), EBITDA, Funds From Operations (FFO), Normalized FFO and Adjusted Funds From Operations (AFFO), and their corresponding per share metrics are non-GAAP financial measures. CCA believes that these measures are important operating measures that supplement discussion and analysis of the Company's *results of operations and are used to review and assess operating performance of the Company and its correctional facilities and their management teams. CCA believes that it is useful to provide investors, lenders and security analysts' disclosures of its results of operations on the same basis that is used by management. FFO and AFFO, in particular, are widely accepted non-GAAP supplemental measures of REIT performance, each grounded in the standards for FFO established by the National Association of Real Estate Investment Trusts (NAREIT).*

NAREIT defines FFO as net income computed in accordance with generally accepted accounting principles, excluding gains (or losses) from sales of property and extraordinary items, plus depreciation and amortization of real estate and impairment if depreciable real estate. EBITDA, NOI, FFO, and AFFO are useful as supplemental measures of performance of the Company's correctional facilities because they add back non-cash expenses such as depreciation and amortization, or with respect to EBITDA, the impact of the Company's tax provisions and financing strategies.

(Amounts in thousands)	For the Three Months Ended March 31,	
	2015	2014
Net income	$ 57,277	$ 51,738
Income tax expense	1,385	1,367
Other income	(26)	(387)
Interest expense, net	10,190	10,348
General and administrative	26,872	25,392
Depreciation and amortization	28,685	28,384
Asset impairments	955	—
Net operating income	$ 125,338	$ 116,842

If you have any questions concerning our responses to your questions and comments, please do not hesitate to contact me at (615) 263-3008, or by facsimile at (615) 263-3010 or our outside counsel, William J. Cernius of Latham & Watkins at (714) 755-8172 or by facsimile at (714) 755-8290.

Sincerely,

David M. Garfinkle

Re: Corrections Corporation of America
Form 10-K for Fiscal Year Ended December 31, 2014
Filed February 25, 2015
Form 8-K filed on May 7, 2015
File No. 1-16109

Dear Mr. John:

On Wednesday, July 22, 2015, the SEC provided comments with respect to Corrections Corporation of America's (the "Company") response dated July 10, 2015 to the comments issued by the Staff in its letter dated July 6, 2015 in relation to the Company's Form 10-K for the year ended December 31, 2014. For your ease of reference, we have included your original comments in italics below and have provided a response after the comment.

We have prepared this response with the assistance of our counsel and the proposed response has been read by our independent registered public accounting firm. The Company acknowledges that the Company is responsible for the adequacy and accuracy of the disclosure in any Company filing and that Staff comments or changes to disclosures in response to Staff comments do not foreclose the Securities and Exchange Commission (the "Commission") from taking any action with respect to the filing. The Company also acknowledges that it may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Critical Accounting Policies

Self-Funded Insurance Reserves, page 53

We note your response to prior comment 1. Please tell us the consideration you gave to disclosing the amount of claims provisions and payments. Additionally, confirm to us that you did not adjust your claims provision for re-estimates due to prior year loss development.

Response:

As we noted in our response dated July 10, 2015, our self-funded insurance reserves include accrued liabilities for employee health, workers’ compensation, and automobile insurance claims. We have consistently accrued the estimated liability for employee health insurance claims based on our history of claims experience and the estimated time lag between the incident date and the date we pay the claims. We review the time lag related to our employee health claims on a monthly basis and have found it to be consistent and short-term in nature, with a range between 45 and 50 days. Due to the short-term nature of the time lag, we do not believe re-estimates due to prior year loss development, if any, would have a material impact on our reserve for employee health claims. Further, as of December 31, 2014, our employee health claims reserve accrual was $8.6 million, which represented approximately 3% of total current liabilities and less than 1% of total liabilities.

Additionally, as noted in our response on July 10, 2015, we have accrued the estimated liability for workers’ compensation claims based on a third-party actuarial valuation of the outstanding liabilities, discounted to the net present value of the outstanding liabilities, using a combination of actuarial methods to project ultimate losses, and our automobile insurance claims based on estimated development factors on claims incurred. Generally, our payments and incurred expense under our workers’ compensation and automobile insurance claim provisions are consistent from period to period. For the years ended 2014 and 2013, management reviewed the impact of the prior year loss development re-estimates on projected workers’ compensation ultimate losses as provided by our third-party actuary. We noted a change of approximately $34,000 in the workers’ compensation liability from 2013 to 2014 related to these re-estimates. Given the immaterial amounts of re-estimates for prior year loss development, we presented the amounts in the claims provision in our roll forward provided in our July 10, 2015 response. Further, as of December 31, 2014, our workers’ compensation reserve accrual was $22.5 million, which represented approximately 7% of total current liabilities and 1% of total liabilities. As of December 31, 2014, our automobile insurance claim accrual was $0.9 million, which represented less than 1% of total current liabilities and less than 1% of total liabilities.

In response to the Staff’s comment and based on the information provided, we believe our current disclosure of our accounting policies related to our self-insurance reserves provides a balanced presentation of such estimates. Further, based on our analyses, we do not believe re-estimates due to prior year loss development, if any, were material to our self-insurance reserves and, thus, would not necessitate separate disclosure. Further, when we have experienced material fluctuations in the total provision for self-insured insurance reserves we have disclosed the impact in our Results of Operations section of Management's Discussion and Analysis. In future filings, if we identify material changes in the re-estimates of prior year loss development or material changes in the development of self-insured losses we will consider the need to emphasize the factors that led to such a change within the Critical Accounting Policy as well as our Results of Operations.

If you have any questions concerning our responses to your questions and comments, please do not hesitate to contact me at (615) 263-3008, or by facsimile at (615) 263-3010 or our outside counsel, William J. Cernius of Latham & Watkins at (714) 755-8172 or by facsimile at (714) 755-8290.

Sincerely,

David M. Garfinkle
Executive Vice President and
Chief Financial Officer

File No. 001-32324

CubeSmart, L.P.
Form 10-K for the Year Ended December 31, 2014
Filed February 27, 2015
File No. 000-54462

Dear Mr. John:

This letter is submitted on behalf of CubeSmart and CubeSmart, L.P. (collectively, the "***Company***") in response to the comments regarding the above-referenced filings (the "***Filings***") that you provided on behalf of the staff of the Division of Corporate Finance (the "***Staff***") of the Securities and Exchange Commission (the "***Commission***") to Timothy M. Martin, the Company's Chief Financial Officer, in your letter dated June 23, 2015 (the "***Comment Letter***"). The responses are set out in the order in which the comments were set out in the Comment Letter and are numbered accordingly. For reference purposes, the text of the comments contained in the Comment Letter have been reproduced herein (in italics), with the Company's response below such comment.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Revenues, page 50

1. *We note your disclosure that your same-store portfolio provided an $18.7 million increase in rental income during 2014 as compared to 2013, due to increases in net rental rates and average occupancy. In future Exchange Act reports, please expand upon your narrative description of same-store performance to explain whether the increases in*

net rental rates were a result of increased rates on new tenants or existing tenants, reduced promotional discounts, or otherwise.

Response: In response to the Staff's comment, in future reports filed by us pursuant to the Securities Exchange Act of 1934, as amended, ("***Exchange Act reports***") in which we discuss same-store performance, we will include an explanation of whether changes in net rental rates are the result of changes in rates on new tenants or existing tenants, changes to promotional discounts, or otherwise.

Non-GAAP Financial Measures

FFO, as adjusted, page 55

2. *We note that your presentation of FFO appears to represent "FFO attributable to common shareholders and Operating Partnership unitholders". Please advise and revise your label accordingly in future filings.*

Response: We confirm that the presentation of funds from operations ("***FFO***") in the Filings does represent FFO attributable to common shareholders and Operating Partnership unitholders. In our future Exchange Act reports where FFO is presented, we will label the presentation of FFO accordingly.

Item 11. Executive Compensation

Definitive Proxy Statement filed on April 17, 2015

Compensation Discussion and Analysis, page 23

3. *We note your disclosure on pages 23 through 24 regarding the 2014 peer group your Compensation Committee used "for benchmarking purposes." In future Exchange Act reports, please provide more detail about how you benchmark compensation against the compensation of your peer group. Please refer to Item 402(b)(2)(xiv) of Regulation S-K.*

Response: In response to the Staff's comment, in future Exchange Act reports where we disclose information regarding the peer group our Compensation Committee uses for benchmarking purposes, we will provide additional detail regarding how our Compensation Committee benchmarks the compensation of our management against the compensation of similarly situated management in the peer group.

Annual Incentive Compensation, page 26

4. *We note your disclosure on page 26 that the Annual Incentive Compensation is measured in part by your funds from operations growth, same-store net operating income growth, and the achievement of "strategic goals consisting of external growth." In future Exchange Act reports, please identify the strategic goals for external growth. Please also*

disclose your target levels with respect to these metrics, or provide us with your analysis for concluding that the disclosure of such targets is not required because it would result in competitive harm and that such disclosure may be omitted pursuant to Instruction 4 to Item 402(b) of Regulation S-K. To the extent you omit disclosure of targets because it will result in competitive harm, please include a discussion in future Exchange Act reports of how difficult it will be for the executive or how likely it will be for the company to achieve the undisclosed target level or other factor or criteria. Please see Instruction 4 to Item 402(b) and Regulation S-K Compliance & Disclosure Interpretation 118.04..

Response: In response to the Staff's comment, in future Exchange Act reports where we include a discussion of annual incentive compensation (or other, similar compensation based upon the achievement of specific performance metrics), we will identify the goals or performance metrics and disclose target levels with respect to such metrics. However, to the extent we believe that the disclosure of the target levels of such goals or performance metrics will cause us competitive harm, we will not disclose such target levels, but rather will provide an analysis of why we concluded that disclosure of such target levels will cause us competitive harm, allowing us to forgo such disclosure of the target levels. Further, to the extent we do not disclose the target levels of relevant goals and performance metrics, we will include a discussion of how difficult it will be for the executive, or how likely it will be for the Company, to achieve the undisclosed target levels of such goals and performance metrics.

In responding to the Staff's comments, the Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the Filings;
- the Staff's comments or changes to disclosure in response to the Staff's comments do not foreclose the Commission from taking any action with respect to the Filings; and
- the Company may not assert the Staff's comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Sincerely,

/s/ Timothy M. Martin

RE: CYS Investments, Inc.
Form 10-K for fiscal year ended December 31, 2014
Filed on February 17, 2015
File No. 1-33740

Dear Mr. John:

This letter is submitted in response to the comment of the Staff of the Division of Corporation Finance (the "**Staff**") of the Securities and Exchange Commission (the "**Commission**") contained in your letter dated July 6, 2015 with respect to the Form 10-K for the fiscal year ended December 31, 2014 of CYS Investments, Inc. (the "**Company**"), which was filed with the Commission on February 14, 2015 (the "**Form 10-K**").

For convenience of reference, the Staff comment contained in your July 6, 2015 comment letter is reprinted below in italics, and followed by the corresponding response of the Company.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Quantitative and Qualitative Disclosures about Short-Term Borrowings, page 46

In future annual filings, please quantify the average quarterly balance for all periods presented, the period end balance for each of those quarters and the maximum balance at any month-end. Additionally, explain significant variances among these amounts. Provide an example of your proposed revisions within your response.

RESPONSE: In the Company's future annual filings with the Commission, it will include the average quarterly balance for all periods presented, the period end balance for each of those quarters and the maximum balance at any month-end. Additionally, the Company will endeavor to explain significant variances among these amounts. An example of such disclosure that the Company anticipates in its future Exchange Act annual reports is as follows:

"The following table discloses quantitative data about our short-term repo borrowings during the years ended December 31, 2014 and 2013:

(Dollars in millions)

Quarter ended	December 31, 2014	September 30, 2014	June 30, 2014	March 31, 2014

From quarter to quarter, fluctuations occur in our short-term repo borrowings that are fairly tightly correlated with the expansion and contraction of our investment portfolio. Though it varies by quarter, we currently require repo borrowing funding for approximately 85-90 percent of our investment portfolio."

Filed March 2, 2015
File No. 1-32336

Digital Realty Trust, L.P.
Form 10-K for the fiscal year ended December 31, 2014
Filed March 2, 2015
File No. 0-54023

Dear Mr. Gordon:

This letter sets forth the response of Digital Realty Trust, Inc. and Digital Realty Trust, L.P. (collectively, the "***Subject Companies***") to the comments received on May 19, 2015 from the staff (the "***Staff***") of the Division of Corporation Finance of the United States Securities and Exchange Commission (the "***Commission***") regarding the Form 10-K (the "***2014 Form 10-K***") filed by the Subject Companies on March 2, 2015.

For ease of review, we have set forth below the numbered comment of the Staff in its letter dated May 19, 2015 and the Subject Companies' response thereto.

4. Investments in Unconsolidated Joint Ventures

Griffin Capital Essential Asset REIT, Inc. Joint Venture, page 127

1. We note you contributed a property valued at $185.5 million in September 2014 to a joint venture with Griffin Capital Essential Asset REIT, Inc., and net of proceeds received, recognized a gain of $93.5 million. Please provide to us the basis of your conclusion to deconsolidate the property and record a gain on the sale of the 80% interest in the joint venture, and cite the appropriate accounting literature in your response. Also in your response, outline all decisions determined by the company to be major that require approval of the GCEAR member as well as those decisions that do not require such approval.

Response: Pursuant to our agreement with Griffin Capital Essential Asset REIT, Inc. ("***GCEAR***"), the Subject Companies contributed a wholly owned property to the joint venture in exchange for cash and a retained 20% interest in the joint venture (the "***Venture***"). We considered the consolidation guidance in ASC 810 to determine our subsequent accounting for our interest in the Venture. We note that the Venture did not meet the criteria to be considered a variable interest entity as the entity has sufficient equity to finance its activities, the equity interest holders are the only parties with the ability to direct the activities of the entity, and there are no non-substantive voting rights. Thus we concluded that our accounting for our interest in the Venture should follow the voting interest model. We note that the unanimous member consent requirements of the Venture agreement give GCEAR the right and ability to approve all significant decisions related to the Venture. As a result, we concluded that even though we are the managing member of the Venture, GCEAR had substantial participating rights that precluded our ability to control the Venture, and thus we concluded that the equity method of accounting for our retained interest in the Venture was appropriate.

A summary of the decisions that require approval of GCEAR are noted below:

1. Adopt or amend any Annual Plan or cause the joint venture to materially deviate from the Annual Plan.
2. Acquire any real property, or interest therein, either directly or indirectly.
3. Acquire any other material asset for the use, operation, maintenance, repair, construction, financing, refinancing, pledge, encumbrance, ownership, leasing, redevelopment, renovation, improvement, or disposition of the property.
4. Cause the property or any portion thereof to be sold.
5. Market the property or any portion thereof.
6. Obtain, prepay or amend any financing other than the incurrence of trade payables.
7. Issue a joint venture interest.
8. Issue or sell any debt securities of the joint venture.
9. Make any distribution other than amounts authorized by the agreement.
10. File or initiate the filing of a bankruptcy, reorganization or insolvency petition.
11. Enter into, modify or terminate any Lease in excess of 8,000 square feet.
12. Initiate, negotiate, or settle any litigation in excess of $100,000.
13. Enter into, amend, modify, or terminate any agreement with a member notwithstanding GCEAR's rights enumerated elsewhere in the agreement.
14. Make any decision regarding tax matters.
15. Change or replace KPMG as accountant.
16. Make or settle any claims or make any adjustments under the contribution agreement.
17. Approve, determine or take any other action expressly reserved to the Subject Companies and GCEAR under the agreement.

In determining whether a gain should be recognized in connection with the contribution of the property and the amount of such gain, the Subject Companies considered the guidance in ASC 970-323-30-3 which indicates that in situations where an investor receives a cash distribution upon the contribution of properties to a venture and is not otherwise committed to reinvest that cash in the venture, the substance of the transaction is a partial sale of an interest in the properties contributed. As the Subject Companies are not required to make further capital contributions to the Venture, the Subject Companies concluded that this transaction met the requirements for partial sale accounting and looked to the guidance in ASC 360-20-40-46 through 360-20-40-49 to determine the amount of any gain to recognize. Further, the Subject Companies are not obligated to support the operations of the Venture to an extent greater than its proportional interest, and the agreement governing the Venture provides GCEAR with a priority on cash distributions. Thus, the Subject Companies concluded that the amount of gain to be recognized would be limited to the amount by which the net proceeds the Subject Companies received were in excess of the costs of the contributed property, in accordance with ASC 360-20-46-49. The gain of $93.5 million recorded by the Subject Companies was calculated as the difference between the net proceeds received of $167.5 million less the carrying value of the property sold to the Venture of $74.0 million, including deferred rent receivables and other required costs related to the property.

Re: Duke Realty Corporation
Duke Realty Limited Partnership (collectively referred to as the "Company")
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 20, 2015
File Numbers 1-9044 and 0-20625

Dear Ms. Monick:

The Company is providing this letter to you in response to the comments of the staff of the Division of Corporate Finance (the "Staff") of the Securities and Exchange Commission (the "Commission"), as set forth in your letter, dated May 27, 2015 (the "Comment Letter") related to the Company's 2014 Annual Report on Form 10-K (the "2014 Form 10-K"). The numbered paragraph below corresponds to the numbered paragraph in the Comment Letter. To facilitate your review, the Company has reproduced below the original text of the Staff's comment, and has included its response immediately following such comment.

Please note that the Company is filing this response letter via EDGAR submission.

FORM 10-K FOR THE YEAR ENDED DECEMBER 31, 2014

General

1. Please provide us with your Rule 3-09 significance test calculations for 2014. Additionally, please tell us how you determined the unconsolidated joint venture that sold an office tower in Atlanta, Georgia during 2014 was not significant under Rule 3-09.

Response:

We have included our Rule 3-09 significance test calculations as requested. As shown in these calculations, none of our individual unconsolidated joint ventures, including the unconsolidated joint venture that sold an office tower in Atlanta, Georgia during 2014 (3630 Peachtree Road Holdings Limited Partnership or "3630 Peachtree"), were determined to be significant under Rule 3-09.

The 2014 Rule 3-09 significance tests were computed as follows (in thousands):

Investment Test	**Texas Dugan LLC**	**Duke/Hulfish LLC**	**Duke HHC Realty Development LLC**	**Linden Development LLC**	**All Other - Investments Individually Less than $20 million**	**Total as Presented in 2014 Form 10-K**
Investment in Unconsolidated Entity (Numerator for Investment Test)	$ 102,869	$ 45,894	$ 40,040	$ 32,104	$ 72,743	$ 293,650
Total Assets per 2014 Form 10-K - Duke Realty Corporation ("DRE") and Duke Realty Limited Partnership ("DRLP") - (Denominator for Investment Test)	$7,754,839	$ 7,754,839	$ 7,754,839	$ 7,754,839		
Significant Subsidiary Calculation	**1.3%**	**0.6%**	**0.5%**	**0.4%**		
Significant Pursuant to S-X 3-09 for Investment Test?	**No**	**No**	**No**	**No**		

Income Test

	3630 Peachtree		Dugan Millennia LLC		Duke/Hulfish LLC		Texas Dugan LLC		All Other - Registrant Share of Equity in Earnings Individually Less than $5 million	Total as Presented in 2014 Form 10-K
Equity in Earnings - 2014	$ 58,612		$ 15,656		$ 6,759		$ 6,475		$ 6,815	$ 94,317
Less Basis Differences and Registrant Share of Investee -Level Earnings from Discontinued Operations	(58,458)	**(1)**	(15,462)	**(1)**	(19)		—		(500)	
Numerator for Significance Test	**$ 154**	**A**	**$ 194**	**A**	**$ 6,740**	**A**	**$ 6,475**	**A**	**$ 6,315**	
Income from Continuing Operations Before Taxes per 2014 Form 10-K (DRE and DRLP)	$ 225,125		$ 225,125		$ 225,125		$225,125			
Less Equity in Earnings Amounts Excluded from Numerator of Test	(58,458)		(15,462)		(19)		—			
Less DRE Noncontrolling Interest Attributable to Continuing Operations	(2,607)		(2,607)		(2,607)		(2,607)			
DRE Income from Continuing Operations Attributable to Common Shareholders (Denominator for Income Test)	**$ 164,060**	**B**	**$ 207,056**	**B**	**$ 222,499**	**B**	**$222,518**	**B**		
Add Back DRE Noncontrolling Interest Attributable to Continuing Operations	2,607		2,607		2,607		2,607			
Less DRLP Noncontrolling Interest Attributable to Continuing Operations	(240)		(240)		(240)		(240)			
DRLP Income from Continuing Operations Attributable to Common Shareholders (Denominator for Income Test)	**$ 166,427**	**C**	**$ 209,423**	**C**	**$ 224,866**	**C**	**$224,885**	**C**		
DRE - Significant Subsidiary Calculation (A/B)	**0.1%**		**0.1%**		**3.0%**		**2.9%**			
DRLP - Significant Subsidiary Calculation (A/C)	**0.1%**		**0.1%**		**3.0%**		**2.9%**			
Significant Pursuant to S-X 3-09 for Income Test?	**No**		**No**		**No**		**No**			

(1) The sole purpose of these joint ventures was to own and operate real estate assets. During 2014, both of these joint ventures sold all of their real estate assets, repaid their third party debt and distributed the resultant cash proceeds to us and their other owners. The gain on sale of those real estate assets, and all of the pre-sale operations from those real estate assets, met the criteria to be classified within discontinued operations at the investee level. Such items meeting the criteria to be classified as discontinued operations at the investee level were excluded from the income significance test based on the guidance in Section 2410.3 of the Commission's Financial Reporting Manual, which indicates that the numerator in the income test is calculated based on the registrant's share of pre-tax income from continuing operations reflected in the separate financial statements of the investee prepared in accordance with U.S. GAAP for the period in which the registrant recognizes income or loss from the investee under the equity method, adjusted for any basis differences.

Equity in earnings related to basis differences excluded from both the numerator and denominator of the income significance tests pertain primarily to impairment charges on the investment in the 3630 Peachtree joint venture recognized at the registrant level (and not in the investee's separate financial statements) during 2009, which caused a basis difference. Additionally, the equity in earnings impact at the registrant level of any other basis differences written off as a direct result of the sale of the underlying joint venture assets, which were not reflected in the separate financial statements of the investee, are excluded from both the numerator and the denominator of the income significance test.

Because the sales of the assets underlying these joint ventures represented the effective liquidation of our ownership interests in these joint ventures, we believe the results of these sales would also be appropriately excluded from the numerator of the income test, pursuant to the guidance in section 2410.8 of the Commission's Financial Reporting manual, had the sales been included in income from continuing operations at the investee level.

DuPont Fabros Technology, L.P.
Form 10-K for the Year Ended December 31, 2014
Filed February 25, 2015
File No. 333-165465-17

Dear Ms. Monick:

Reference is made to your letter, dated July 29, 2015, regarding comments made by the Staff (the "Staff") of the U.S. Securities and Exchange Commission (the "Commission") with respect to the above referenced Annual Report on Form 10-K for the year ended December 31, 2014. This letter repeats the comment in the Staff's letter in bolded typeface followed by a response prepared by management of DuPont Fabros Technology, Inc. and DuPont Fabros Technology, L.P. together with our legal representatives. We have also sent to your attention courtesy copies of this letter.

General

1. **Please tell us how you determined it is appropriate to provide combined periodic reports for parent and subsidiary registrants given that you owned approximately 81.1% of your operating partnership at December 31, 2014.**

COMPANY RESPONSE: Management has determined it is appropriate to provide combined periodic reports for DuPont Fabros Technology, Inc. (the "Company") and DuPont Fabros Technology, L.P. (the "Operating Partnership"). The Company began presenting combined periodic reports in 2010. In evaluating that presentation, management believed (and continues to believe) combining the periodic reports of the Company and the Operating Partnership into a single report provides several benefits, including:

- enhancing investors' understanding of the Company and the Operating Partnership by enabling investors to view the business as a whole in the same manner as management views and operates the business (discussions with investors support that this benefit has resulted from the combined presentation);

- eliminating duplicative disclosure and provides a more streamlined and readable presentation since a substantial portion of the disclosure in the periodic reports applies to both the Company and the Operating Partnership; and

- creating time and cost efficiencies through the preparation of one combined report instead of two separate reports.

We have considered the SEC staff guidance in Section 1370 of the Division of Corporate Finance Financial Reporting Manual ("FRM"). Although "substantially all" is not defined, we believe there is not a material difference in the financial statement presentation between 81.1% ownership and a higher percentage, particularly in this case where the Company is the sole general partner of the Operating Partnership and, as such, has exclusive control of the day-to-day management of the Operating Partnership. Since the Company owned approximately 81.1% of the Operating Partnership as of December 31, 2014, we considered the nature of 18.9% of the Operating Partnership not owned by the Company. The units of limited partnership interest ("OP units") in the Operating Partnership held by limited partners have the economic equivalent of, and are convertible on a one for one basis for, shares of common stock of the Company. Therefore, we believe the overall substance of the relationship between the entities and their owners is economically equivalent to the Company owning 100% of the equity interests in the Operating Partnership. We believe the holders of OP units have equal or greater interest in the performance of the Company as they do in the Operating Partnerships and it would be less effective and potentially confusing to investors to present the information in two separate filings.

Management believes it is important for investors to understand that there are no differences between the Company and the Operating Partnership in the context of how the Company and the Operating Partnership operate as a consolidated company and believes the preparation of combined periodic reports best enhances this understanding. The only difference between the assets of the Company and those of the Operating Partnership is a cash balance of about $4 million. There is no difference from a financial, business or operational perspective between ownership levels of 81.1% and 99% in the Company's UPREIT structure.

In preparing combined periodic reports for the Company and the Operating Partnership, management complies with the staff position set forth in Section 1370 of the FRM. The combined periodic reports of the Company and the Operating Partnership include separate audit reports, separate reviewed interim financial statements (where applicable), separate reports on disclosure controls and procedures and internal controls over financial reporting, separate complete financial statements, separate footnotes for areas that differ and separate CEO/CFO certifications. Given the Company's compliance with these requirements and the other considerations cited above, management believes it is appropriate to provide combined periodic reports for the Company and the Operating Partnership

2. **We note your triple-net lease with Microsoft represents 20.5% of your annualized base rent and 21.6% of your consolidated revenues for the year ended December 31, 2014. Please tell us if Microsoft leases in excess of 20% of your assets as of December 31, 2014. To the extent that Microsoft leases in excess of 20% of your assets, please tell us how you determined it was unnecessary to include a statement referring investors to a publicly-available website with the lessee's SEC filed financial statements.**

COMPANY RESPONSE: As of December 31, 2014, Microsoft leased less than 20% of our total assets. Therefore, we were not required to include a statement referring investors to a publicly-available website with the lessee’s SEC filed financial statements. Management will continue to monitor the percentage of our total assets leased by our most significant customers.

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Reconciliation of Same Store Operating Income to Same Store Net Operating Income and Cash Net Operating Income, page 41

3. **It appears from your disclosure in footnote (1) on page 41 that you have reconciled NOI and Cash NOI to the operating income attributable only to the properties included in the analysis. In future filings, please include a reconciliation of these non-GAAP measures to operating income as a whole as presented in your consolidated statements of operations. Refer to Item 10(e)(1)(i)(B) of Regulation S-K.**

COMPANY RESPONSE: Beginning with the 10-Q for the quarter ending September 30, 2015 we will include a reconciliation of same store NOI and same store Cash NOI to operating income as a whole as presented on our consolidated statements of operations.

The Company acknowledges that:

- the company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact me at (202) 478-2333 in connection with questions or comments concerning the above response. Thank you for your attention to this matter.

Very truly yours,

/s/ Jeffrey H. Foster

Re: EastGroup Properties, Inc.

Form 10-K for the year ended December 31, 2014

Filed February 17, 2015

File No. 001-07094

Dear Mr. Kluck:

In connection with your review of the EastGroup Properties, Inc. (the "Company") Form 10-K for the year ended December 31, 2014 (the "2014 Form 10-K"), we respectfully submit the following responses to the comments included in your letter dated July 1, 2015. Each of the Staff's comments are restated in bold with our responses to the comments following immediately thereafter.

Properties, page 10

1. **Please tell us what consideration you have given to disclosing in greater detail your tenant-type concentration.**

Response: We consider tenant-type concentration when preparing our disclosures. We disclose the fact that we are geographically concentrated in the Sunbelt region of the United States and we discuss the risks associated with our geographic concentration in "Item 1A. Risk Factors-Risks Associated with Our Properties-We face risks due to lack of geographic and real estate sector diversity" on page 7 of the 2014 Form 10-K. We also disclose in that risk factor that as of December 31, 2014, we owned operating properties totaling 6.2 million square feet in Houston, which represents 18.6% of the Company's total Real estate properties on a square foot basis. We supplementally note that as of December 31, 2014 no single tenant in Houston accounted for more than 5% of that market on a square foot basis and that the Company estimates that tenants that are directly involved in the oil and gas industry represent approximately 24% of the Houston market on a square foot basis and approximately 5% of the Company’s aggregate annualized base rent. Accordingly, we have not historically included any information regarding tenant-type concentration under Item 2-Properties. In preparing disclosure in our future Exchange Act periodic reports we will continue to evaluate our portfolio with respect to tenant-type concentration and will include appropriate disclosure, if a material concentration is identified.

Management's Discussion and Analysis of Financial Condition and Results of Operations, page 15

2. **We note your disclosure on page 17 comparing the same property average rental rates in 2013 to 2014. In future Exchange Act periodic reports, please disclose whether average rental rate is based on effective rent that includes free rent periods.**

Response: We calculate average rental rates in accordance with GAAP. In light of the Staff's comment we will disclose in future Exchange Act periodic reports that our average rental rates are calculated in accordance with GAAP and are based on effective rent that includes free rent periods.

Exhibits

3. **We note that you incorporate by reference your Articles of Incorporation from your proxy statement for your annual meeting held on June 5, 1997. It appears that the document has been on file with the Commission for more than five years. See Item 10(d) or Regulation S-K. In future Exchange Act filings, please file the Articles of Incorporation as an exhibit or advise.**

Response: We note that Item 10(d)(2) provides an exception to the five-year rule for "[d]ocuments that the registrant specifically identifies by physical location by SEC file number reference, provided such materials have not been disposed of by the Commission pursuant to its Records Control Schedule." We further note that the 1997 proxy statement was filed by the Company via EDGAR on April 24, 1997 under file number 1-07094 and that the retention period under the Records Control Schedule for proxy materials is 30 years. Accordingly in future Exchange Act filings we will specifically reference the SEC file number when incorporating by reference any document on file with the Commission for more than five years.

***

In connection with our responses, the Company acknowledges the following:

- The Company is responsible for the adequacy and accuracy of the disclosure in its filings;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filings; and
- The Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you need additional information, please contact me at (601) 354-3555.

Sincerely,

/s/ N. Keith McKey

Dear Mr. Woody:

The following sets forth the responses of Education Realty Trust, Inc. (the "***Company***") to the comments issued by the staff (the "***Staff***") of the Securities and Exchange Commission (the "***Commission***") with respect to the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "***2014 Form 10-K***") in the Staff's letter (the "***Comment Letter***") dated July 21, 2015. For your convenience, we have restated the Staff's comment in italics with the Company's response immediately following the comment.

Form 10-K for the fiscal year ended December 31, 2014

Item 7. Management's discussion and analysis of financial condition and results of operations, page 34

Non-GAAP measures, page 56

Funds from operations (FFO), page 56

Comment: *We note that your calculation of FFO includes an adjustment for gain on insurance settlement. Please tell us whether management determined that this adjustment is in compliance with NAREIT's definition of FFO. Please tell us management's consideration for presenting an FFO, as an adjusted amount.*

Response: Management of the Company determined that the calculation of FFO disclosed in the 2014 Form 10-K has been prepared in compliance with the NAREIT definition of FFO and is consistent with the standards established by the Board of Governors of NAREIT in its March 1995 White Paper (as amended). As disclosed on page 56 of the 2014 Form 10-K, the Company makes certain adjustments in its calculation of FFO, including a deduction for "gain on insurance settlement." The Company believes this gain on insurance settlement is synonymous with a gain on sale of a depreciable real estate asset, and therefore, has determined that the inclusion of such adjustment is consistent with the NAREIT definition of FFO.

One of the Company's income-producing communities was partially destroyed by a fire and sustained significant property damage. Costs to rebuild the community were covered under an existing insurance policy, and during the fiscal year ended December 31, 2014, the insurance claim related to the rebuild was settled with the insurance carrier. The insurance settlement exceeded the net book value of this asset, resulting in a gain on insurance proceeds of $8.1 million. Management of the Company believes that this gain is similar in nature and has the same characteristics as an adjustment for gains/losses from the sale of depreciable property, which are required to be excluded from FFO under NAREIT's definition.

For the reasons discussed above, management of the Company believes that the presentation of FFO and its reconciliation to net income is both consistent with NAREIT's definition of FFO and provides users of the Company's financial statements the ability to assess the Company's operating performance relative to its performance in prior reporting periods and relative to the operating performance of other REITs.

****

In responding to the Staff's comments, the Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- the Staff's comments or changes to disclosure in response to the Staff's comments do not foreclose the Commission from taking any action with respect to the filing; and
- The Company may not assert the Staff's comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions concerning our responses to your questions and comments, please do not hesitate to contact the undersigned at (901) 259-2507.

Sincerely,

/s/Edwin B. Brewer, Jr.

RE: Empire State Realty Trust, Inc.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 27, 2015
File No. 1-36105

Empire State Realty OP, L.P.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 27, 2015
File No. 1-36106

Dear Ms. John:

We are writing in response to your letter dated July 31, 2015, setting forth the comments of the Staff of the Division of Corporation Finance (the "Staff") on the above mentioned filings for Empire State Realty Trust, Inc. and Empire State Realty OP, L.P. (together, the "Company"). We have considered the Staff's comments and our responses are set forth below. To facilitate the Staff's review, we have keyed our responses to the headings and numbered comments used in the Staff's comment letter, which we have reproduced in bold print.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Results of Operations, page 53

1. **We note that you have provided a discussion of "combined" financial data for the predecessor period ended October 6, 2013 and the successor period ended December 31, 2013. Please note that your primary discussion should be of the actual results for each period (i.e. predecessor and successor separately). It is inappropriate to merely combine information for predecessor and successor periods. You can supplement your**

discussion of the actual historical results of operations with a discussion of pro forma financial information (e.g. predecessor period plus successor period plus pro forma adjustments).

The pro forma financial information should be presented in a format consistent with Article 11 of Regulation S-X and any discussion of such pro forma information should supplement and not be given greater prominence than actual results. Please tell us how you to intend to revise the disclosure in future filings.

Response: In response to the Staff's comment, the Company respectfully notes that in preparing the presentation of operating results in its Form 10-K, the Company considered that presenting historical 2013 results on a combined basis would facilitate the most comprehensive and meaningful discussion of results of operations and that, conversely, the presentation of pro forma financial information, as required by Article 11 of Regulation S-X, would not provide meaningful information or be useful to investors, and would potentially be confusing.

Per the Staff's comment, however, the Company respectfully advises the Staff that in future filings that require disclosure of our results for periods that include both the predecessor and successor periods, we will not base our results of operations discussion for such periods on combined financial information, but rather, we will present separate results for each of the respective predecessor and successor periods. Any pro forma financial information that we may include in future filings will comply with Article 11 of Regulation S-X.

Funds from Operations ("FFO"), page 66

2. We note that your FFO calculation includes an adjustment for preferred unit distributions. Based upon your reconciliation, it appears that the $214.8 million FFO for the year ended December 31, 2014 represents FFO attributable to common shareowners and non-controlling interests. Please revise your presentation in future filings to clearly label the FFO measure. Also make adjustments to earnings releases filed on Form 8-K, as appropriate.

Response: The Company hereby confirms that, in future filings after the date of this response letter, including future earnings releases filed on Form 8-K, Empire State Realty Trust, Inc. will use the label "Funds from Operations attributable to common stockholders and non-controlling interests" and Empire State Realty OP, L.P. will use the label "Funds from Operations attributable to common unitholders."

Item 8. Financial Statements and Supplementary Data

Note 10 – Commitments and Contingencies

Litigation, page F-28

3. We note your disclosure on F-31 regarding the risk of a material adverse effect related to the "Second Class Actions" and the defense and indemnity rights held by certain other defendants. Please expand your disclosure to comply with the requirements of ASC 450-20-50 including disclosure of an estimate of the reasonably possible range of loss or a statement that such an estimate cannot be made.

Response: In response to the Staff's comment, the Company respectfully notes that members of our internal legal and financial teams quarterly evaluate the status of legal matters in determining the probability of the incurrence of a loss and whether a loss is reasonably possible and estimable, along with evaluating the quarterly disclosures regarding such matters for compliance with ASC 450-20-50. We consider the facts and the applicable laws, and obtain the opinion of counsel, if applicable, in order to make this determination on a case by case basis.

With respect to the "Second Class Actions" and the defense and indemnity rights held by certain other defendants with respect thereto, a loss accrual has not been provided for in the historical financial statements because we believe we cannot reasonably estimate a possible range of potential loss at this time due to the excessive nature of the claims and damages sought by plaintiffs, the spectrum of remedies which may be available to the court in the event of an adverse ruling, and the difficulties at the current stage of the litigation of determining potential exposure related to each of the defendants in the matter. In future filings beginning with the Company's Quarterly Report on Form 10-Q for the fiscal quarter ended September 30, 2015, to the extent still applicable, we will expand the disclosure to state that an estimate of the additional loss or range of loss cannot be made with respect to the "Second Class Actions," which such disclosure may be similar to the following:

> *At this time, due to the spectrum of remedies which may result from the outcome of the matter and the difficulty in calculating and allocating damages (if any) among the defendants, we cannot reasonably assess the timing or outcome of this litigation and any related indemnification obligations, estimate the amount of loss, or assess their effect, if any, on our financial statements.*

Exhibits 31.1 and 31.2

4. The certifications do not conform exactly to the certification in Item 601(b)(31)(i) of Regulation S-K. Specifically, you have omitted the reference to internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d- 15(f)) in the introduction to paragraph 4 and omitted paragraph 4(b). Please amend your filings to include the introductory language required by paragraph 4 and to include paragraph 4(b) of Item 601(b)(31)(i) of Regulation S-K. Please note that this comment also applies to the Form 10-Q filed May 6, 2015.

Response: The Company respectfully advises the Staff that following resolution of the Staff's comments, each of Empire State Realty Trust, Inc. and Empire State Realty OP, L.P. will file amendments to their Annual Reports on Form 10-K for the fiscal year ended December 31, 2014, their Quarterly Reports on Form 10-Q for the fiscal quarter ended March 31, 2015 and their subsequently filed Quarterly Reports on Form 10-Q for the fiscal quarter ended June 30, 2015 to include revised officer certifications in the exact form as set forth in Item 601(b)(31)(i) of Regulation S-K. As discussed telephonically with the Staff, the amended filings will contain the cover page, explanatory note, signature page and certifications.

Re: Equity Commonwealth (the "Company")
Form 10-K for the fiscal year ended December 31, 2014
Filed February 19, 2015 (the "Filing")
File No. 1-9317

Dear Ms. Gowetski:

The Company is writing in response to your letter dated June 22, 2015. For your convenience, each of your original comments appears below in italicized text and is followed by the Company's response.

Form 10-K for fiscal year ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 51

Overview, Page 51

1. *We note your disclosure on page 52 that, effective October 1, 2014, you engaged CBRE to conduct your day-to-day property management services for your U.S. properties. We further note you pay CBRE a property-by-property management services fee and will reimburse CBRE for certain expenses incurred in the performance of its duties. In future Exchange Act periodic reports, please more specifically describe how such fees are determined and quantify the aggregate fees and reimbursements that you have paid or are payable to CBRE or advise.*

   Company Response: The Company respectfully requests the amounts and methodology for determining the fees and reimbursements that it pays to CBRE for property management services (the "Confidential Material") be afforded confidential treatment under the Freedom of Information Act ("FOIA") pursuant to 17 C.F.R. Section 200.83. Pursuant to Rule 12b-4 promulgated under the Securities Exchange Act of 1934, as

---

amended, the Confidential Material is being provided to the Staff on a confidential, supplemental basis only and is not to be filed with or deemed part of the Company's SEC filings. Pursuant to Rule 12b-4, the Company hereby requests that the Confidential Material be returned using the self-addressed envelope included with this submission to the undersigned promptly following completion of the Staff's review of the Confidential Material.

   The amount of the fees payable were determined and negotiated with CBRE across the Company's portfolio. The specific amounts are commercially sensitive information for both the Company and CBRE and are the subject of confidentiality agreements. It would be detrimental to both the Company and CBRE for this information to be publicly disclosed. Furthermore, the Company believes that although this information is very commercially sensitive, the specific amount of fees payable on a property by property basis is not material to an investor's understanding of the Company's business or results of operations. As a result, the Company is seeking confidential treatment of the methodology and amount of the property management fees it pays to CBRE.

2. *We note your disclosure on page 51 that leases entered into during the year ended December 31, 2014, including both lease renewals and new leases, had weighted average cash rental rates that were approximately 1.7% lower than prior rental rates for the same space and weighted average GAAP rental rates that were approximately 3.4% higher than prior rental rates for the same space. In future Exchange Act periodic reports, please revise to separately compare rental rates for lease renewals and new leases as well as briefly explain the reasons for the difference between weighted average cash rental rates and weighted average GAAP rental rates.*

Company Response: The Company acknowledges this comment, understands the usefulness of these additional disclosures and intends to comply with the request.

3. *We note that leases representing approximately 11% of your annualized rental revenue and square footage will expire by the end of the current fiscal year. In future Exchange Act periodic reports, please discuss the relationship of market rents and expiring rents.*

Company Response: The Company acknowledges this comment, understands the usefulness of these additional disclosures and intends to comply with the request.

<u>*Funds From Operations (FFO) and Normalized FFO, page 69*</u>

4. *Please tell us why management did not exclude the excess redemption price over carrying value of preferred shares in calculating FFO attributable to Equity Commonwealth common shareowners.*

Company Response: It is our intent to calculate FFO in a manner consistent with National Association of Real Estate Investment Trusts' ("NAREIT"'s) *White Paper on Funds from Operations*, which provides the real estate industry standard for calculating FFO. This

publication does not contemplate an adjustment to FFO for the item mentioned in your letter. Thus, we use our judgment to adjust FFO for items we consider relevant to a common shareholder to arrive at FFO attributable to Equity Commonwealth common shareholders.

For the information of the staff of the Securities and Exchange Commission (the "Staff"), page F-27 of our 2014 Annual Report on Form 10-K describes the excess redemption price paid over carrying value of preferred shares. As described therein, a Fundamental Change Conversion Right (commonly referred to as a "change-in-control") event was triggered when the Company's Prior Trustees were removed on March 25, 2014. This event allowed our series D preferred shareholders to exchange their shares for Equity Commonwealth common shares between April 9, 2014 and May 14, 2014. As a result, holders of the series D preferred shares converted 10,263,003 series D preferred shares for 10,411,779 of the Company's commons shares. The *excess redemption price paid over carrying value of preferred shares* was the one-time, non-cash excess of the current market value of the Company's common shares issued above the carrying value of the series D preferred shares redeemed.

For the information of the Staff, page 68 of our Annual Report on Form 10-K describes the usefulness of FFO. As noted therein, we recommend FFO be considered in conjunction with GAAP measures such as net income attributable to Equity Commonwealth common shareholders. Such GAAP measures include excess redemption price paid over carrying value of preferred shares.

Given the nonrecurring and non-cash nature of the excess redemption price paid over carrying value of preferred shares, as well as the uses for FFO discussed above, the Company feels that the disclosure as presented is appropriate.

The Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the Filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the Filing; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

The Company appreciates your comments and welcomes the opportunity to discuss with you the responses provided above. Please call me at 312-646-2839 if you have any questions or require additional information.

Sincerely,

Equity Commonwealth

Re: Essex Property Trust, Inc. and Essex Portfolio, L.P. (the "Companies")
Form 10-K for Fiscal Year Ended December 31, 2014 for each of the Companies
Filed March 2, 2015 for each of the Companies
File Nos. 1-13106 and 333-44467-01, respectively

Dear Mr. Lee:

Essex Property Trust, Inc. (the "Company" or "Essex") submits this letter in response to comments from the staff (the "Staff') of the Securities and Exchange Commission (the "SEC") received by a letter, dated April 28, 2015, related to the above filing. On May 8, 2015, we submitted a response to the Staff's April 28th comment letter. As a result of subsequent discussions with the Staff, we are hereby modifying our response to the Staff's comment. The response set forth below supersedes the response set forth in our May 8, 2015 letter.

In this letter, we have recited the comment from the Staff in italicized, bold type, and have followed the comment with the Company's response in regular type.

Form 10-K for the year ended December 31, 2014 for each of the Companies

Item 6. Selected Financial Data, pages 32-36

1. ***In arriving at Funds from operations, you start with Net income available to common stockholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common stockholders instead of all equity stockholders. In future periodic filings please re-title "Funds from operations" to the more appropriate "Funds from operations attributable to common stockholders".***

Response:

Funds from Operations ("FFO") includes net income attributable to the noncontrolling interest of limited partner unit holders of the Company's operating partnership, Essex Portfolio, L.P. ("EPLP"), and excludes net income attributable to other noncontrolling interests and dividends relating to preferred stockholders. Accordingly, we will re-title "Funds from operations" as "Funds from operations attributable to common stockholders and unitholders" in future periodic filings.

We acknowledge that the adjustment for noncontrolling interest attributable to the limited partner unitholders of EPLP was included, without specificity, as an "other" adjustment in the line item "Depreciation add back from unconsolidated co-investments, and other, net" on page 34 of the Form 10-K for the year ended December 31, 2014 and that our FFO table does not clearly set forth that the FFO amount also includes that noncontrolling interest adjustment. Accordingly, in future periodic filings, we will set forth in a separate line item, the add back of net income allocated to such noncontrolling interest.

* * *

Form 10-K for Fiscal Year Ended December 31, 2014 for each of the Companies
Filed March 2, 2015 for each of the Companies
File Nos. 1-13106 and 333-44467-01, respectively

Dear Mr. Lee:

Essex Property Trust, Inc. (the "Company" or "Essex") submits this letter in response to comments from the staff (the "Staff') of the Securities and Exchange Commission (the "SEC") received by a letter, dated April 28, 2015, related to the above filing.

In this letter, we have recited the comment from the Staff in italicized, bold type, and have followed the comment with the Company's response in regular type.

<u>Form 10-K for the year ended December 31, 2014 for each of the Companies</u>

<u>Item 6. Selected Financial Data, pages 32-36</u>

1. In arriving at Funds from operations, you start with Net income available to common stockholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common stockholders instead of all equity stockholders. In future periodic filings please re-title "Funds from operations" to the more appropriate "Funds from operations attributable to common stockholders".

<u>Response:</u>

In calculating Funds from operations, or "FFO", we add back the net income attributable to the noncontrolling interest of the limited partner unit holders of the Company's operating partnership, Essex Portfolio, L.P. (the "Operating Partnership"). This noncontrolling interest add back is included within the line item "Depreciation add back from unconsolidated co-investments and other, net" in the "Other Data" table on page 34 of the Form 10-K for the year ended December 31, 2014. By adding this amount back, it converts the "net income available to common stockholders" to an amount attributable to both the common stockholders and the Operating Partnership limited partners. Accordingly, the weighted average numbers of shares outstanding, diluted, used to calculate FFO and Core FFO per diluted share includes both common shares and Operating Partnership units outstanding for the year.

As the FFO amount also includes net income attributable to the noncontrolling interest of limited partner unit holders, we respectfully submit that it would not be appropriate to re-title "Funds from operations" as "Funds from operations attributable to common stockholders."

We acknowledge that the adjustment for non-controlling interest was included, without specificity, as an "other" adjustment in the line item "Depreciation add back from unconsolidated co-investments, and other, net" and that our FFO table does not clearly set forth that the FFO amount also includes that noncontrolling interest adjustment. Accordingly, in future periodic filings, we will set forth in a separate line item the add back of net income allocated to such noncontrolling interest.

Form 10-K for the year ended December 31, 2014
File No. 333-39595-01

Ladies and Gentlemen:

On behalf of FelCor Lodging Trust Incorporated and FelCor Lodging Limited Partnership (together "FelCor"), we hereby file FelCor's response to comments contained in the letter from the U.S. Securities and Exchange Commission, Division of Corporation Finance (the "Commission"), dated July 21, 2015. For your convenience, we have repeated the comment prior to our response.

Form 10-K for the year ended December 31, 2014

Note 8 – Joint Venture Transaction, pages 78 – 79

1. **Given the significance of your gain on sale of investment in unconsolidated entities, please clarify how you determined the related unconsolidated entities were not significant to require separate financial statements pursuant to Rule 3-09 of Regulation S-X.**

In connection with preparing our Annual Report on Form 10-K for the year ended December 31, 2014 (our "2014 Form 10-K"), we evaluated the significance of our equity method investees to determine if separate financial statements pursuant to Rule 3-09 of Regulation S-X were required. We determined that each investee failed both the first and third significant subsidiary tests described in Rule 1-02(w) of Regulation S-X for all financial statement periods presented in our 2014 Form 10-K (substituting 20% for 10%). As provided for in the Division of Corporation Finance's Financial Reporting Manual Topic 2 - Sections 2020.4 and 2410.3, we excluded both our 2014 gain on the disposition of investment in unconsolidated entities and our 2014 gain from remeasurement to fair value of previously unconsolidated entities from the numerator when calculating each investee's share of our 2014 income from continuing operations.

On behalf of FelCor Lodging Trust Incorporated and FelCor Lodging Limited Partnership (together "FelCor"), we hereby file FelCor's response to comments contained in the letter from the U.S. Securities and Exchange Commission, Division of Corporation Finance (the "Commission"), dated July 21, 2015. For your convenience, we have repeated the comment prior to our response.

Form 10-K for the year ended December 31, 2014

Note 8 – Joint Venture Transaction, pages 78 – 79

1. **Given the significance of your gain on sale of investment in unconsolidated entities, please clarify how you determined the related unconsolidated entities were not significant to require separate financial statements pursuant to Rule 3-09 of Regulation S-X.**

In connection with preparing our Annual Report on Form 10-K for the year ended December 31, 2014 (our "2014 Form 10-K"), we evaluated the significance of our equity method investees to determine if separate financial statements pursuant to Rule 3-09 of Regulation S-X were required. We determined that each investee failed both the first and third significant subsidiary tests described in Rule 1-02(w) of Regulation S-X for all financial statement periods presented in our 2014 Form 10-K (substituting 20% for 10%). As provided for in the Division of Corporation Finance's Financial Reporting Manual Topic 2 - Sections 2020.4 and 2410.3, we excluded both our 2014 gain on the disposition of investment in unconsolidated entities and our 2014 gain from remeasurement to fair value of previously unconsolidated entities from the numerator when calculating each investee's share of our 2014 income from continuing operations.

Re: First Potomac Realty Trust
Form 10-K for the fiscal year ended December 31, 2014
Filed February 20, 2015
File No. 001-31824

Dear Mr. Lee:

This letter is in response to the comments of the Staff of the Division of Corporation Finance (the "**Staff**") of the United States Securities and Exchange Commission (the "**Commission**"), received by e-mail on September 17, 2015, with respect to the Annual Report on Form 10-K for the fiscal year ended December 31, 2014 of First Potomac Realty Trust, a Maryland real estate investment trust (the "**Company**"), which was filed with the Commission on February 20, 2015.

For ease of review, the Staff comment contained in your September 17, 2015 letter is reprinted below in bold and is followed by the Company's corresponding response thereto.

Form 10-K for the year ended December 31, 2014

Form 10-Q for the three months ended March 31, 2015 and the three and six months ended June 30, 2015

Exhibit 31.2

1. **We note that paragraph 2 of the Executive Vice President and Chief Financial Officer certifications filed in Exhibit 31.2 duplicates paragraph 4 and excludes the language for paragraph 2 outlined within Item 601(b)(31) of Regulation S-K. Please amend your filings to include corrected certifications that contain the required statement.**

   RESPONSE: As discussed telephonically with the Staff, the Company will file abbreviated amendments to the above-referenced quarterly reports on Form 10-Q, which will include corrected certifications.

Filed February 17, 2015
File No. 001-32470

Dear Mr. Kluck:

Franklin Street Properties Corp. (the "Company") has set forth below a response to the comment to the Company's Annual Report on Form 10-K for the year ended December 31, 2014 provided by you to Mr. John G. Demeritt in a letter dated September 15, 2015 (the "Letter"). The response is keyed to the numbering of the comment in the Letter and to the headings used in the Letter.

<u>Item 2. Properties</u>

1. In future Exchange Act periodic reports, please provide a lease expiration table for ten years, starting with the year in which the report is filed, stating (i) the number of tenants whose leases will expire, (ii) the total area in square feet covered by such leases, (iii) the annual rental represented by such leases, and (iv) the percentage of gross annual rental represented by such leases.

<u>Response</u>

In future Annual Reports on Form 10-K, the Company undertakes to include a lease expiration table for ten years, starting with the year in which the report is filed, stating (i) the number of tenants whose leases will expire, (ii) the total area in square feet covered by such leases, (iii) the annual rental represented by such leases, and (iv) the percentage of gross annual rental represented by such leases.

Re: ***General Growth Properties, Inc.***
Form 10-K for the year ended December 31, 2014 (the "Form 10-K")
Filed March 2, 2015
File No. 001-34948

Dear Mr. Woody:

I am writing on behalf of General Growth Properties, Inc. (the "Company", "we", "GGP" or "our") in response to comments of the staff (the "Staff") of the Securities and Exchange Commission ("the Commission") contained in your correspondence dated March 17, 2015. The heading and page number below from the Company's Annual Report on Form 10-K ("Annual Report") corresponds to the heading and page number referenced in your letter. In addition, for your convenience, I have reproduced your comments in this letter and included our responses directly below each comment. Capitalized terms not defined herein shall have the meanings given to them in the Company's periodic reports.

Note 2 – Summary of Significant Accounting Policies, page F-13

1. *In future filings, please disclose your accounting policy for dispositions of assets, and in particular, contributions of assets to joint ventures.*

Response: We acknowledge the Staff's comment and note that in future Exchange Act periodic reports, we will disclose our accounting policy for dispositions of assets, and in particular, contributions of assets to joint ventures. As an illustration of the disclosure approach we expect to take with respect to the December 31, 2015 10-K, below is a markup of our proposed changes to the disclosure on pages F-15 and F-16 of our Form 10-K for Year Ended December 31, 2014 (with the proposed addition in bold and brackets):

Revenue Recognition and Related Matters (F-16)

Tenant recoveries are established in the leases or computed based upon a formula related to real estate taxes, insurance and other property operating expenses and are generally recognized as revenues in the period the related costs are incurred.

[Real estate sales are recognized whenever (1) a sale is consummated, (2) the buyer has demonstrated an adequate commitment to pay for the property, (3) the Company's receivable is not subject to future subordination, and (4) the Company has transferred to the buyer the

risks and rewards of ownership and does not have continuing involvement. Unless all conditions are met, recognition of all or a portion of the profit shall be postponed.]

We provide an allowance for doubtful accounts against the portion of accounts receivable, including straight-line rents, which is estimated to be uncollectible. Such allowances are reviewed periodically based upon our recovery experience. The following table summarizes the changes in allowance for doubtful accounts:

Investment in Unconsolidated Real Estate Affiliates (F-15)

Partially owned, non-variable interest joint ventures over which we have controlling financial interest are consolidated in our consolidated financial statements. In determining if we have a controlling financial interest, we consider factors such as ownership interest, authority to make decisions, kick-out rights and substantive participating rights. Partially owned joint ventures where we do not have a controlling financial interest, but have the ability to exercise significant influence, are accounted for using the equity method.

[To the extent that the Company contributes assets to a joint venture accounted for using the equity method, the Company's investment in the joint venture is recorded at the Company's cost basis in the assets that were contributed to the joint venture. The Company will recognize gains and losses on the contribution of its real estate to joint ventures, relating solely to the outside partner's interest, to the extent the buyer is independent of the Company, the collection of the sales price is reasonably assured, and the Company will not be required to support the operations of the property or its related obligations to an extent greater than its proportionate interest.]

[The combined summarized financial information of unconsolidated joint ventures is disclosed in Note 6 to the Consolidated Financial Statements.]

We continually analyze and assess reconsideration events, including changes in the factors mentioned above, to determine if the consolidation treatment remains appropriate. Decisions regarding consolidation of partially owned entities frequently require significant judgment by our management.

The Company hereby acknowledges that the Company is responsible for the adequacy and accuracy of the disclosure in the filing; Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact me at 312-960-5044 if you have any questions about the foregoing, or if you would like to further discuss any of the matters raised in this response letter.

Sincerely,

/s/ Michael Berman

Eric McPhee
Securities and Exchange Commission
100 F Street, N.E.
Washington, D.C. 20549

RE: Gramercy Property Trust Inc. (the "Company")
Form 10-K for the year ended December 31, 2014
Filed on March 9, 2015
File No. 001-32248

Dear Mr. McPhee:

We are transmitting for filing the Company's response to the comments of the Staff of the Securities and Exchange Commission (the "Commission") contained in your letter to Jon W. Clark of the Company, dated August 21, 2015 (the "August 21st Letter"). For convenience of reference, the Staff comments contained in the August 21st Letter are reprinted below in italics and are followed by the corresponding response of the Company.

Item 5. Market For Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities - Dividends

1. In future periodic filings, please disclose the tax status of distributions per unit pursuant to Rule 3-15(c) of Regulation S-X.

Response: In response to the Staff's comment, the Company undertakes to include this disclosure in future annual filings.

Funds from Operations, pages 72 – 73

2. We note that in your earnings release and supplemental information you discuss other Non-GAAP Financial Measures such as Core FFO, Adjusted FFO, and Net Operating Income. Please clarify whether you utilize these measures as key performance indicators. To the extent you do, in future periodic filing, please include such Non-GAAP financial measures, discussion of any related and relevant fluctuations, and the required Non-GAAP disclosures outlined within Item 10(e) of Regulation S-K for each respective measure.

Response: In response to the Staff's comment, the Company advises the Staff that for future filings, it will include Core FFO and Adjusted FFO in its periodic filings and provide related detailed reconciliations to GAAP net income (loss) as well as any relevant fluctuations, as the Company intends to utilize Core FFO and Adjusted FFO as key performance measures in addition to Funds from operations which has already been included in the Company's periodic filings. Net operating income is not utilized as a key performance indictor to evaluate the Company's performance as a whole. Net operating income is used only to provide additional information for specific property acquisitions and for individual properties owned in the Company's investment portfolio.

3. In arriving at Funds from operations, you start with Net income available to common stockholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common stockholders instead of all equity stockholders. In future periodic filings please re-title "Funds from operations" to the more appropriate "Funds from operations attributable to common stockholders".

Response: In response to the Staff's comment, the Company advises the Staff that for future periodic filings, it will retitle "Funds from operations" to "Funds from operations attributable to common stockholders and unitholders". Using the title "Funds from operations" and starting the table with net income available to common stockholders was only intended to present a performance indicator that excludes dividends that are attributable solely to preferred stockholders. The denominator for Funds from operations per share represents both common stockholders and operating partnership unit holders but excludes preferred stockholders.

Consolidated Statements of Operations, page 80

4. Please revise future periodic filings to clarify the types of expenses that are included in operating expenses and general and administrative expenses. Within your response, please provide an example of your proposed disclosure.

Response: In response to the Staff's comment, the Company advises the Staff that, for future periodic filings, the Company will revise footnote 2 of its financial statements, which describes the Company's significant accounting policies, to include additional detail regarding the types of costs included in property operating expenses and those included in general and administrative expenses. The following is an example of our proposed disclosure:

> "Property operating expenses include insurance, property management, repairs and maintenance, security, janitorial, landscaping and other administrative expenses incurred to operate the Company's properties as well as costs directly related to its asset management business on properties owned by third parties in both the United States and Europe.
>
> General and administrative expenses represent costs unrelated to property operations or acquisition related costs. These expenses primarily include corporate office expenses, employee compensation and benefits as well as costs related to being a listed public company including certain audit fees, directors and officer's insurance, legal costs and other professional fees."

In connection with the Company's response to the August 21st Letter, the Company acknowledges that:

- It is responsible for the adequacy and the accuracy of the disclosures in the filing;

Annex A

Item 8. Financial Statements and Supplementary Data

Consolidated Balance Sheets, page F-2

1. **We note that cash and cash equivalents include pledged cash of $323.8 million and $225.4 million as of December 31, 2014 and 2013, respectively. Please explain to us why pledged cash is not considered restricted and presented as such in the consolidated financial statements.**

   Response: Our cash and cash equivalents include cash pledged to derivative counterparties, which is held in margin accounts as collateral related to interest rate swap agreements, futures contracts and forward commitments to purchase to-be-announced mortgage-backed securities. Pursuant to the terms of the related ISDA, futures trading and MSFTA agreements, we are allowed to pledge cash or securities as collateral, and can actively manage the nature and amount of collateral pledged as margin requirements fluctuate. The pledged cash is held in demand deposit bank accounts to which we have direct access without restriction. We view the fact pattern as similar to "arrangements (that) exist but are not agreements which legally restrict the user of cash amounts shown on the balance sheet" (excerpted from Regulation S-X Rule 5.02). Accordingly, we disclose the nature of these arrangements and the amounts involved in the footnotes to our consolidated financial statements and include a parenthetical disclosure on the face of the balance sheet to further highlight the existence of these contractual arrangements.

Consolidated Statements of Comprehensive Income, page F-4

2. **Please tell us your basis for presenting comprehensive income (loss) per share on the face of this statement.**

   Response: Because fair value adjustments on our mortgage-backed securities portfolio flow through other comprehensive income while fair value adjustments on our derivatives flow through earnings, management considers comprehensive income to be a meaningful measure of our operating results, in addition to net income. As such, beginning with our Quarterly Report on Form 10-Q for the period ended September 30, 2014, we have included a discussion of comprehensive income in our results of operations. While we are not aware of any GAAP or SEC guidance validating comprehensive income per share as a formal GAAP measure, neither are we aware of any guidance precluding it. In addition, our calculation of comprehensive income per share directly mirrors the Financial Accounting Standards Board guidance for earnings per share calculations, in accordance with ASC 260-10-45-5. While ASC 260-10-45-5 states that per share amounts that are not required to be presented should not be shown on the face of the income statement, we did not interpret that provision as preventing comprehensive income per share from being shown on the face of the statement of comprehensive income. Further, we believe that the presentation of comprehensive income per share has practical benefits for users of our financial statements.

Re: Hatteras Financial Corp.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 24, 2015
File No. 1-34030

Dear Jaime G. John:

This correspondence is our response to your comment letter dated June 4, 2015, regarding our Form 10-K for the fiscal year ended December 31, 2014, which references our May 21, 2015 response to your comment letter dated May 13, 2015. For convenience, we reproduced your comment before our response thereto below.

We acknowledge the following:

- we are responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- we may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

<u>Consolidated Statements of Comprehensive Income, page F-4</u>

1. We note your response to prior comment 2. As discussed in ASC 260-10-45-2, per-share information relating to income from continuing operations and net income is required on the face of the income statement. Further, ASC 260-10-45-5 states that per-share amounts not required to be presented by this Subtopic shall be disclosed only in the notes to the financial statements. Therefore, please revise future filings to remove this measure from the face of your consolidated statements of comprehensive income.

   Response: In response to your comment, in future filings we will not present comprehensive income per share on the face of our statement of comprehensive income.

Re: HCP, Inc.
Form 10-K for the fiscal year ended December 31, 2014
Filed on February 10, 2015
File Number: 1-08895

Dear Mr. Efron:

HCP, Inc. hereby submits this letter in response to the comment letter from the Staff of the Securities and Exchange Commission (the "Staff") dated March 19, 2015. For your convenience, the Staff's comment has been reprinted in italics below and our responses are in bold print. References to "we", "our" or the "Company" in this response are to HCP, Inc.

Form 10-K for the fiscal year ended December 31, 2014
Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations
Non-GAAP Financial Measures
Funds Available for Distribution, page 38

1. *We note your disclosure appears to indicate that FAD is a liquidity measure as management views it as a supplemental measure which meaningfully measures the ability to fund ongoing dividend payments. Please tell us how you have met the reconciliation requirement under Item 10(e) of Regulation S-K as you have reconciled the amount to net income applicable to common shares through FFO as adjusted applicable to common shareholders. Additionally, please tell us how you determined it was appropriate to provide FAD per share within your filing in light of Question 102.5 of Compliance and Disclosure Interpretations on Non-GAAP financial measures.*

Response: We respectfully advise the Staff that we view FAD primarily as a performance measure and not a liquidity measure. This is consistent with how real estate equity analysts and investors evaluate our performance as FAD represents one of the key supplemental benchmarks to measure our operating performance and profitability (along with NAREIT FFO). Further, FAD, as a performance measure, is: 1) included as part of our Annual Operating Plan presented to and approved by our Board of Directors; 2) reported in our quarterly earnings releases; 3) discussed on earnings calls and with investors as a performance benchmark; and 4) one of the performance criteria in determining a portion of our named executive officers' compensation, as described in our 2014 and 2015 Proxy Statements. Therefore, since the Company views FAD as a performance measure, we believe net income applicable to common shares is the most directly comparable GAAP measure.

While dividends can be analyzed in comparison to FAD, as much as they are analyzed in comparison to FFO or net income, it is not our intent to imply that this is the primary purpose of this measure.

For the avoidance of doubt, we respectfully advise the Staff that we will revise our disclosure in future periodic filings to state:

Other REITs or real estate companies may use different methodologies for calculating FAD, and accordingly, our FAD may not be comparable to those reported by other REITs. Although our FAD computation may not be comparable to that of other REITs, management believes FAD provides a meaningful supplemental measure of our performance and is frequently used by analysts, investors, and other interested parties in the evaluation of our performance as a REIT. FAD does not represent cash generated from operating activities determined in accordance with GAAP, is not necessarily indicative of cash available to fund cash needs, and should not be considered as an alternative to net income (determined in accordance with GAAP).

For the Staff's benefit, we have included an Appendix to this letter which outlines our revised disclosure, which is marked for changes from the disclosure included in our Form 10-K for the fiscal year ended December 31, 2014.

Response: We respectfully advise the Staff, because FAD is considered a performance measure (as clarified above), we believe it is appropriate to present FAD per share in our filings in accordance with Item 10(e) of Regulation S-K and Question 102.5 of Compliance and Disclosure Interpretations of Non-GAAP financial measures.

In connection with responding to your comment, we acknowledge that:

- we are responsible for the adequacy and accuracy of the disclosure in the filings;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filings; and
- we may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Thank you for your consideration of our responses. Should you have any questions, please call the undersigned at (949) 407-0707.

Very truly yours,

/s/ TIMOTHY M. SCHOEN

Timothy M. Schoen
Executive Vice President and
Chief Financial Officer

File No. 001-35568

Healthcare Trust of America Holdings, LP
Form 10-K for the year ended December 31, 2014
Filed February 23, 2015
File No. 333-190916

Dear Mr. Gordon:

On behalf of Healthcare Trust of America, Inc., a Maryland corporation ("**HTA**"), and Healthcare Trust of America Holdings, LP, a Delaware limited partnership (together with HTA, the "**Company**"), we hereby respond to the letter dated May 22, 2015 (the "**Letter**") setting forth comments of the staff (the "**Staff**") of the Securities and Exchange Commission (the "**Commission**") on the Company's above-referenced Form 10-K.

On behalf of the Company, we are responding below to the Staff's Letter. For the convenience of the Staff, the comment from the Letter is restated in **bold** prior to our response on behalf of the Company.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 37

1. On page 71, you disclose that you capitalized internal leasing related costs. Please tell us the amount of internal costs you capitalize to deferred leasing costs and real estate investments for all periods presented. If material, please confirm for us that you will disclose this information within future periodic filings and discuss any significant fluctuations in such capitalized internal costs within your MD&A.

In response to the Staff's comment, during the years ended December 31, 2014, 2013 and 2012, the Company capitalized $2.1 million, $1.6 million and $0.7 million, respectively, of internal costs to deferred leasing costs. In addition, during the years ended December 31, 2014, 2013 and 2012, the Company capitalized $0.7 million, $0.5 million and $0.4 million, respectively, of internal costs to real estate investments. The Company confirms that, to the extent material, it will disclose amounts capitalized in future periodic filings with the Commission, starting with our Form 10-Q for the six months ending June 30, 2015, and discuss in the Company's MD&A any significant fluctuations in the amount of internal costs capitalized to deferred leasing costs and real estate investments.

FFO and Normalized FFO, page 44

2. We note that your calculation of FFO starts with Net income attributable to common stockholders and as such, it appears that the resulting amount of FFO represents FFO attributable to common stockholders rather than FFO for the entire company. In future filings please re-label "Funds from operations" to "Funds from operations attributable to common stockholders".

In response to the Staff's comment, the Company confirms that it will add the above referenced "Funds from operations attributable to common stockholders" language in future filings with the Commission.

We are in receipt of your letter dated May 14, 2015, regarding the above referenced Filing. For your convenience, each of your original comments appears in bold text and is followed by our response.

Form 10-K for the fiscal year ended December 31, 2014

Non-GAAP Measures, page 87

1. **In arriving at Funds from operations, you start with Net income available for common shareholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common shareholders instead of all equity shareholders. In future periodic filings please designate that FFO is attributable to common shareholders. Additionally, apply this comment to Normalized FFO as well.**

   Company Response:

   In future periodic filings, we will designate that FFO and Normalized FFO are attributable to common shareholders.

Financial Statements

6. Management Agreements and Leases, F-15

2. **We note the Morgan agreement expires in 2103 and that you recognize rents on a cash basis due to uncertainty with future rent collection. Please describe if there have been any significant changes or updates related to the future collection of rent under the Morgan lease. Additionally, tell us how your testing of impairment related to**

the Clift Hotel was adjusted related to rent collectability issues with the lessee.

Company Response:

In 2004, a subsidiary of Morgans Hotel Group, or the Morgans Subsidiary, entered into a 99 year lease for the Clift Hotel located in San Francisco, CA. We acquired the Clift Hotel in December 2012. As of the acquisition date, the lease provided for annual base rent to us of $6.0 million. The annual base rent due to us was scheduled to increase in October 2014 based on changes in the CPI, as defined, with a minimum increase of 20% of the current rent amount and a maximum increase of 40%. On each fifth anniversary thereafter during the lease term, the base rent due to us will increase further based on changes in the CPI, as defined, with minimum increases of 10% and maximum increases of 20%.

When performing our analysis to determine the appropriate accounting treatment of this acquired lease, we determined that the lease did not meet the collectability criteria under ASC 840-10-25-42(a) and classified it as an operating lease. When we acquired the hotel in 2012, the operations of the hotel were not generating sufficient cash flow to cover the rent payments required under the lease and the Morgans Subsidiary had no assets or other resources available to fund its cash flow deficit. Although Morgans Hotel Group had on occasion funded cash shortfalls sustained by the Morgans Subsidiary in order to enable it to make lease payments, it had no legal obligation under the terms of the lease to do so in the future. We also considered the impact that the scheduled 20% to 40% rent increase in 2014 would have on the Morgans Subsidiary's ability to meet its future payment obligations under the lease. For the above reasons, we concluded that the collectability of future rent payment under the lease was not reasonably assured.

Although operating results of the Clift Hotel have improved since we acquired the hotel, historical cash flows before capital expenditures and management fees have not been sufficient to cover the current annual base rent amount. In addition, we believe that the hotel will require a major renovation in the next few years (last renovated in 2001) at an estimated cost of $30 million to $35 million. If these renovations occur, the cost of this renovation is an obligation of the Morgans Subsidiary under the terms of the lease agreement. For the above reasons, we believe that the collectability of future rent payments under the lease continue to not be reasonably assured.

We regularly evaluate whether events or changes in circumstances have occurred that could indicate impairment in the value of our real estate properties. If there is an indication that the carrying value of a property is not recoverable, we estimate the future undiscounted cash flows of the property to determine if we should recognize an impairment loss. In performing our analysis for the Clift Hotel, we have not based our estimate of the future undiscounted cash flows of the hotel on the contractual rent payments required under our lease with the Morgans Subsidiary. Instead, we have estimated the future undiscounted cash flows of the hotel using a rent amount we believe a market participant would pay to lease the hotel. We considered the historical and projected operating performance of the hotel and the return expectations of market participants in developing our estimate of a market rent. Based on our analysis, we determined no impairment loss should be recognized for this property.

In connection with our responses above, we acknowledge that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the Filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the Filing; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

We appreciate your comments and welcome the opportunity to discuss with you our responses provided above. If you have any

RE: Iron Mountain Incorporated (the "Company")
Form 10-K for the fiscal year ended December 31, 2014
Filed February 27, 2015
File No. 1-13045 (the "Form 10-K")

Form 10-Q for the quarterly period ended June 30, 2015
Filed July 30, 2015
File No. 1-13045 (the "Form 10-Q")

Dear Mr. Telewicz:

The purpose of this letter is to respond to your letter of September 21, 2015. For your convenience, the original staff comments have been repeated in bold typeface, followed by our responses.

Form 10-K for the fiscal year ended December 31, 2014
Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations
Non-GAAP Measures, page 39

1. **We note the use of Funds from Operations Applicable to Iron Mountain, or FFO (NAREIT) in your earnings commentary and supplemental information. Please tell us whether you consider this measure to be a key performance indicator. To the extent this measure is considered a key performance indicator, in future periodic filings please include the measure as well as the required disclosures in accordance with Item 10(e) of Regulation S-K within your Management's Discussion and Analysis.**

RESPONSE:

1. In response to the staff's comment, we consider FFO (NAREIT) and FFO Applicable to Iron Mountain (Normalized) ("FFO (Normalized)"), to be key performance indicators of our business since our Board of Directors, in the second quarter of 2014, approved our conversion to a real estate investment trust for federal

---

income tax purposes ("REIT") for the taxable year beginning January 1, 2014. Accordingly, commencing with our Form 10-Q for the quarterly period ending September 30, 2015, we will include FFO (NAREIT) and FFO (Normalized) within the Non-GAAP Measures section of Management's Discussion and Analysis of Financial Condition and Results of Operations for each of the current and prior periods presented therein. As required by Item 10(e) of Regulation S-K, our disclosure will include a reconciliation of FFO (NAREIT) and FFO (Normalized) to the most comparable generally accepted accounting principles measure, as well as disclosure regarding why we believe that FFO (NAREIT) and FFO (Normalized) provide useful information to investors regarding our financial condition and results of operations.

Financial Statements
Notes to Consolidated Financial Statements
Note 2. Summary of Significant Accounting Policies
g. Goodwill and Other Intangible Assets, page 86

2. **Please explain to us in greater detail the reason for the $32,265 fair value and other adjustment made to goodwill and deferred income taxes. Cite any relevant accounting literature in your response.**

RESPONSE:

2. In October 2013, we acquired Cornerstone Records Management, LLC and its affiliates ("Cornerstone"), a national, full solution records and information- management company with operations in the United States, in a cash transaction for approximately $191.0 million. At December 31, 2013, our purchase accounting for the Cornerstone acquisition was incomplete, as noted in Note 6. *Acquisitions* to our

Form 10-K for the fiscal year ended December 31, 2013 in which we state "The purchase price allocations of the 2013 acquisitions are subject to finalization of the assessment of the fair value of…income taxes (primarily deferred income taxes)." As of and for the year ended December 31, 2013, provisional purchase accounting amounts in accordance with Accounting Standards Codification ("ASC") No. 805, *Business Combinations* ("ASC 805") related to the Cornerstone acquisition were recorded.

Throughout the first half of fiscal year 2014 and within the applicable measurement period (as described in ASC 805), we were reconciling historical Cornerstone acquisition-date tax records and positions with Cornerstone's predecessor tax advisor associated with the 2013 Cornerstone tax return. In conjunction with that analysis, we obtained new additional detailed information and historical data regarding certain acquisition-date deferred income tax attributes. We determined that this information represented, in accordance with ASC 805-25-13, "*new information about facts that existed as of the acquisition date that, if known, would have affected the measurement of the amounts recognized as of that date.*" Accordingly, we

adjusted the provisional purchase accounting amounts related to the acquisition-date deferred income tax attributes for the Cornerstone acquisition by $33.3 million during the first and second quarters of fiscal year 2014, resulting in an increase in deferred tax assets (primarily associated with the valuation of net operating loss carryforwards) of $9.7 million and a net decrease in deferred tax liabilities (primarily associated with the identification of additional tax basis in certain assets) of $23.6 million. The effect of these adjustments to the deferred income tax attributes was a net decrease in goodwill associated with the Cornerstone acquisition of $33.3 million. This decrease in goodwill associated with the Cornerstone acquisition, which was partially offset by approximately $1.0 million of other deferred income tax fair value adjustments associated with other 2013 acquisitions, accounts for the $32,265 of fair value adjustments to deferred income taxes disclosed on page 89 of our Form 10-K.

Additionally, we assessed with contemporaneous documentation, both from a quantitative and qualitative perspective, whether the impact of the Cornerstone deferred income tax adjustments was material to our previously issued consolidated balance sheets as of December 31, 2013 or March 31, 2014, as well as our consolidated statements of operations for the year ended December 31, 2013 and the three months ended March 31, 2014 (collectively, the "Prior Period Financial Statements"). Based on this analysis, we concluded that the impact of the Cornerstone deferred income tax adjustments was not material to the Prior Period Financial Statements and, accordingly, we did not restate in accordance with ASC 805 any of the Prior Period Financial Statements as a result of the Cornerstone deferred income tax adjustments.

Financial Statements
Notes to Consolidated Financial Statements
Note 2. Summary of Significant Accounting Policies
q. Allowance for Doubtful Accounts and Credit Memo Reserves, page 100

3. Please tell us the reasons for your credit memo reserve. Your response should include a discussion of the types and frequency of disputes that arise that create the need for the reserve. Cite any relevant accounting literature in your response.

RESPONSE:

3. We maintain a credit memo reserve associated with disputes from our customers related to billing and service issues. Billings to our customers are based upon contractually agreed upon prices and represent a homogenous pool of a large volume of generally small billings associated with storage and service delivery (which includes pick-up, retrieval, refile, indexing, permanent removal, destruction and transportation of customer materials, among other services). Billing and service delivery issues include unit price, quantity, type of service (regular or expedited) and

quality of service (on-time or accuracy), among others. No one customer represents greater than 2% of our consolidated revenues and our customer billings are spread over more than 155,000 customer accounts on a global basis.

We issued customer credits totaling approximately $47.1 million, or approximately 1.5% of consolidated revenues, in the year ended December 31, 2014. Our credit memo reserve as of December 31, 2014 was approximately $18.1 million, or approximately 2.8% of gross accounts receivable and approximately 0.6% of consolidated revenues for the year ended December 31, 2014.

With respect to our accounting for the credit memo reserve, we analogize to the provisions of ASC 605-15-25, *Revenue Recognition — Products — Sales of Product when Right of Return Exists* ("ASC 605-15-25"), which states, in part:

> "*If an entity sells its product but gives the buyer the right to return the product, revenue from the sales transaction shall be recognized at time of sale only if all of the following conditions are met:*

a. *The seller's price to the buyer is substantially fixed or determinable at the date of sale.*

b. *The buyer has paid the seller, or the buyer is obligated to pay the seller and the obligation is not contingent on resale of the product…*

c. *The buyer's obligation to the seller would not be changed in the event of theft or physical destruction or damage of the product.*

d. *The buyer acquiring the product for resale has economic substance apart from that provided by the seller…*

e. *The seller does not have significant obligations for future performance to directly bring about resale of the product by the buyer.*

f. *The amount of future returns can be reasonably estimated."*

We assessed our credit memo reserve accounting based on the literature above and determined that revenue recognition is appropriate as we meet each of the necessary conditions. Specifically, we note that (a) our prices are fixed or determinable as our prices are based upon the terms of our contracts with our customers and (b) the customer is obligated to pay us for services rendered. Items "c" through "e" in ASC 605-15-25 above are not applicable to us, as our storage rental and related services are not subject to theft or destruction, nor are they subject to resale by our customers.

With respect to item "f" in ASC 605-15-25 above, our credit memo reserve represents a reasonable estimate of amounts recognized as revenue and billed to our customers as of the applicable reporting period which may subsequently be disputed by our customers for the issues noted above. The credit memo reserve is determined by calculating (a) the period for which credit memos are unissued, or the lag, multiplied by (b) the average amount of credit memos issued over the period of the lag (which is based upon a review of the type, volume and trending of historical

credit memo activity). With respect to our ability to reasonably estimate the amount of credit memos that will be issued in order to calculate our credit memo reserve, we believe that we have significant historical experience with respect to our credit memo activity as the volume of credit memos has historically not been subject to any significant volatility. Credit memos charged against consolidated revenue represented 1.3%, 1.6% and 1.5% of consolidated revenues for the fiscal years ended December 31, 2012, 2013 and 2014, respectively, and total credit memos have ranged from 1.3% to 1.6% of consolidated revenues over the past five fiscal years.

Form 10-Q for the quarterly period ended June 30, 2015
Notes to Consolidated Financial Statements
Note 5. Debt, page 30

4. We note that you entered into an accounts receivable securitization program in March 2015. In future filings, please revise your summary of significant accounting policies to include the accounting policy that you apply for the accounts receivable securitization program.

RESPONSE:

4. As disclosed in the Form 10-Q, in March 2015 we entered into an accounts receivable securitization program (the "AR Securitization Program") involving several of our wholly owned subsidiaries and certain financial institutions. Under the AR Securitization Program, certain of our subsidiaries sell substantially all of their United States accounts receivable balances to certain special purposes subsidiaries (the "Special Purposes Subsidiaries") which are also wholly owned by us. The Special Purpose Subsidiaries use these accounts receivable balances to collateralize loans obtained from financial institutions.

In response to the staff's comment and in order to provide users of our financial statements greater clarity with respect to our accounting for the AR Securitization Program, we will provide incremental disclosure in future filings regarding our accounting for the AR Securitization Program. However, we believe that providing such disclosure in the context of the description of the transaction itself within our Debt footnote, rather than within the significant accounting policies section of our filings, is more appropriate. We intend to revise the disclosure in our Debt footnote as it will appear in our Form 10-Q for the quarterly period ending September 30, 2015 to include the following incremental language:

"The Special Purpose Subsidiaries are consolidated subsidiaries of IMI. The Accounts Receivable Securitization Program is accounted for as a collateralized financing activity, rather than a sale of assets and, therefore: (a) accounts receivable balances pledged as collateral are presented as assets and borrowings are presented as liabilities on our consolidated balance sheet, (b) our consolidated statement of operations reflects the associated charges for bad debt expense related to pledged accounts receivable (a component of selling, general and administrative expenses) and reductions to revenue due to billing and service related credit memos issued to customers and related reserves, as well as, interest expense associated with the collateralized borrowings and (c) receipts from customers related to the underlying accounts receivable are reflected as operating cash flows and borrowings and repayments under the collateralized debt are reflected as financing cash flows within our consolidated statement of cash flows."

****

As requested, the Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions concerning the content of this letter, please do not hesitate to contact me.

Sincerely,
IRON MOUNTAIN INCORPORATED

Re: iStar Inc.
Form 10-K
Filed March 2, 2015
File No. 0001-15371

Dear Mr. Telewicz:

On behalf of iStar Inc. (the “Company” or “we”), set forth below are the responses of the Company to the comments of the staff of the Division of Corporation Finance (the “Staff”) of the Securities and Exchange Commission (the “Commission”), received by letter dated September 11, 2015 (the “September 11 Letter”), with respect to the Company's Form 10-K for the year ended December 31, 2014 (the “Form 10-K”). The responses to the Staff's comments are set out in the order in which the comments were set out in the September 11 Letter and are numbered accordingly.

Form 10-K for the fiscal year ended December 31, 2014

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Liquidity and Capital Resources, page 37

1. *We note your disclosure that you generated approximately $1.1 billion of proceeds from loan repayments and asset sales within your portfolio during the year ended December 31, 2014. We further note that this amount is inclusive of amounts generated from consolidated and equity method investments. Please clarify for us whether this amount includes the total cash proceeds generated by equity method investments or your pro rata share.*

1114 Avenue of the Americas
New York, NY 10036

T 212 930 9400
www.istar.com

<u>Response</u>:

The $1.1 billion of proceeds from loan repayments and asset sales, which is inclusive of amounts generated from consolidated and equity method investments, includes only the Company's pro rata share of cash proceeds generated from equity method investments.

In future filings the Company will disclose that cash proceeds from equity method investments represent only the Company's pro rata share.

<u>Item 8. Financial Statements and Supplemental Data Note 6 - Other investments</u>

<u>Real Estate Equity Investments, page 69</u>

1. *Please tell us the following with respect to the unconsolidated entity you formed with a sovereign wealth fund during the year ended December 31, 2014*

1) *Explain to us how you determined the entity did not meet the definition of a VIE in accordance with ASC Topic 810-10-15-14. Your response should include, but not be limited to, an explanation of how you considered your promote and management fee when evaluating the criteria under ASC Topic 810-10-15-14c.*
2) *Please provide us a summary of the substantive participating rights of your partner. Your response should include a description of how any disputes that arise between you and your partner are resolved.*

<u>Response</u>:

1) The Company partnered with a sovereign wealth fund in 2014 to form a new entity to acquire and develop net lease assets. The Company determined that the entity did not meet the definition of a variable interest entity ("VIE") in accordance with ASC 810-10-15-14.

   The Company determined, in accordance with ASC 810-10-15-14(a), that the initial equity investment at risk for this entity, which was $34 million or 36% of the initial asset acquisition price, was sufficient to permit the legal entity to finance its activities without additional subordinated financial support provided by any parties, including equity holders. In addition, the governing documents of the venture preclude the entity leverage from exceeding 65% on a portfolio basis or 70% on an individual asset basis.

   The Company also determined in accordance with ASC 810-10-15-14(b), that the equity holders as a group do not lack the power, through voting rights or similar rights, to direct the activities of the entity that most significantly impact the entity's performance, and neither party can exercise kick out rights unilaterally. Additionally, the equity holders have the right to participate in earnings or obligation to absorb the expected losses of the entity and the right to receive residual returns.

In accordance with ASC Topic 810-10-15-14(c)(1), the Company determined that it does have disproportionate voting rights (50.0%) relative to its participation rights in earnings or losses (52.5% inclusive of related party interests). In addition, the Company is responsible for sourcing new opportunities and managing the venture and its assets in exchange for a management fee and potential promote payment. The management fee and promote structure for the services provided is commensurate with the level of effort required to provide those services and is consistent with market rates for similar services. The Company analyzed from a quantitative perspective, in accordance with ASC 810-10-15-14(c)(2), if the economics of the venture (e.g. capital at risk, participation in profits, etc.) would be heavily skewed towards the Company. The Company concluded that because our partner receives a 47.5% pari passu economic interest in the entity, after payment of management fees and promote the economics of the venture are not expected to be heavily skewed towards the Company. The Company then analyzed from a qualitative perspective, in accordance with ASC Topic 810-10-15-14(c)(2), whether substantially all of the activities of the venture are conducted on behalf of the member who has the disproportionately fewer voting rights. The Company did not identify any strong indicators that would indicate that substantially all of the activities of the venture were conducted on the Company's behalf. For example, the Company is not obligated to fund substantially all additional capital contributions to the venture, the principal purpose of this entity is to conduct business that is complementary to the business activities of all members and the Company did not sell non-performing assets to the venture.

Therefore, the Company concluded the venture is not a VIE.

1) The Company's partner has substantive participating rights over all major decisions of the venture. The venture cannot enter into a major decision without the consent of both the Company and its partner. Major decisions include, but are not limited to, approval of the business plan, acquiring any asset or making any investment, approval of operating plans and budgets, lease arrangements, the incurrence of indebtedness, transferring of membership interests, sales of a project, selection of contractors, bankruptcy matters and dissolution of the venture. Further, the members effectively participate in all significant decisions related to the venture through their approval of the initial business plan and the requirement that they vote on any major change to the business plan.

   If the Company and its partner do not agree on a major decision, the major decision is not consummated. However, both the Company and its partner are obligated to act in good faith and in the best interests of the venture, with each member reserving the right to elect to arbitrate and compel arbitration of any dispute through final and binding arbitration.

* * * * *

In connection with responding to the Staff's comments, we acknowledge the following:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;

Re: Kimco Realty Corporation
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 27, 2015
File No. 001-10899

Dear Mr. McPhee:

This letter sets forth the response of Kimco Realty Corporation (the "Company") to the comment letter from the Staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission"), received by email on March 30, 2015, relating to the Company's Form 10-K for the year ended December 31, 2014, filed with the Commission on February 27, 2015 (the "2014 Form 10-K"). For your convenience, we have set forth each of the Staff's original comments immediately preceding our response.

Form 10-K for the year ended December 31, 2014

Combined Same Property net Operating Income, page 32

1. Please provide the disclosures required by Item 10(e) related to the non-GAAP measures Combined Same Property NOI, before foreign currency impact, and U.S. Same Property NOI, in future filings, including the reasons why you believe presentation of these measures provides useful information to investors and any additional purposes for which you use the measures.

Response

In response to the Staff's comment, in our future filings we will include additional disclosure related to the non-GAAP measures Combined Same Property NOI, before foreign currency impact, and U.S. Same Property NOI, including the reasons why the Company believes presentation of these measures provides useful information to the Company's analysis and investors. As an example of our expected future disclosure, the below excerpt from the 2014 Form 10-K has been revised to include the requested additional disclosure (for your convenience additions to our existing disclosure are shown in bold):

Combined Same Property Net Operating Income

Combined Same Property Net Operating Income ("Combined Same Property NOI") is a supplemental non-GAAP financial measure of real estate companies' operating performance and should not be considered an alternative to net income in accordance with GAAP or as a measure of liquidity. Combined Same Property NOI is considered by management to be an important performance measure of the Company's operations and management believes that it is helpful to investors as a measure of the Company's operating performance because it includes only the net operating income of properties that have been owned for the entire current and prior year reporting periods including those properties under redevelopment and excludes properties under development and pending stabilization. Properties are deemed stabilized at the earlier of (i) reaching 90% leased or (ii) one year following a projects inclusion in operating real estate. As such, Combined Same Property NOI assists in eliminating disparities in net income due to the development, acquisition or disposition of properties during the particular period presented, and thus provides a more consistent performance measure for the comparison of the Company's properties.

Combined Same Property NOI is calculated using revenues from rental properties (excluding straight-line rents, lease termination fees, above/below market rents and includes charges for bad debt) less operating and maintenance expense, real estate taxes and rent expense, plus the Company’s proportionate share of Combined Same Property NOI from unconsolidated real estate joint ventures, calculated on the same basis.

The Company also presents Combined Same Property NOI, before foreign currency impact, as it considers it an important supplemental non-GAAP financial measure of the Company's operations and believes it is frequently used by securities analysts and investors. Combined Same Property NOI, before foreign currency impact, derives an appropriate measure of period-to-period operating performance by removing the effect of foreign currency exchange rate movements from Combined Same Property NOI. The effect of foreign currency exchange rate movements is determined by using the current period exchange rate to translate from local currency into U.S. dollars for both periods.

Additionally, the Company presents U.S. Same Property Net Operating Income ("U.S. Same Property NOI"), which excludes the impact of foreign currency exchange rates and the Company's Canadian operations from Combined Same Property NOI. The Company provides U.S. Same Property NOI because it believes such measure is frequently used by securities analysts and investors as a valuable measure of period-to-period U.S. operating performance.

The Company's method of calculating Combined Same Property NOI, Combined Same Property NOI, before foreign currency impact and U.S. Same Property NOI may differ from methods used by other REITs and, accordingly, may not be comparable to such other REITs.

<u>Notes to Consolidated Financial Statements</u>

<u>Business, page 48</u>

2. We note your disclosure on page 48 that you believe you have a single reportable segment in part because you do not group your operations on a geographical basis for purposes of measuring performance. Please tell us how you considered your presentation of the non-GAAP measure U.S. Same Property NOI in coming to this determination.

<u>Response</u>

The Company currently evaluates performance on a property specific or transactional basis and does not distinguish its principal business or group its operations on a geographical basis for purposes of measuring performance. The Company's business activities, regardless of geographical location, involve owning and operating real estate. The Company provides U.S. Same Property NOI in its non-GAAP measures because this item has been requested by securities analysts to allow them to compare the Company's operating performance to other REITs that solely operate in the U.S.. Although the Company believes that the disclosure of U.S. Same Property NOI is an important measurement that allows for such a comparison the Company does not use these comparisons to make decisions about resources or to assess performance on a geographical basis.

* * *

The Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

* * *

Should you have any questions or require further clarification with regard to our responses, please feel free to contact me directly at (516) 869-7290.

Re: Kite Realty Group Trust
Form 10-K for the fiscal year ended December 31, 2014
Filed February 27, 2015
File No. 1-32268

Dear Mr. Gordon:

This letter sets forth the responses of Kite Realty Group Trust (the "Company") to the comments contained in the letter from the Staff of the Division of Corporation Finance of the Securities and Exchange Commission, dated June 24, 2015, to the Company's Form 10-K for the fiscal year ended December 31, 2014. For your reference, we have set forth each of the Staff's original comments in italics immediately preceding our response.

General

1. *We note that you jointly filed with Kite Realty Group, L.P. ("Kite LP") a Form S-3 on March 11, 2015, and you jointly filed with Kite LP a Form 8-K on March 18, 2015. Please ensure that your Exchange Act periodic filings as well as those of Kite LP are filed under each respective CIK number or advise.*

In response to the Staff's comment, in future periodic filings, we will ensure our filings are filed under each respective CIK number.

Item 2. Properties
Lease Activity - New and Renewal, page 42

2. In future Exchange Act periodic reports, in this section or elsewhere as appropriate, please revise to discuss the relationship of market rents and expiring rents as well as leasing costs on a per square foot basis, for both renewals and new leases, to the extent material.

In response to the Staff's comment, in future filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, we will expand the disclosures of new and renewal leasing activity to include material amounts of leasing-related costs per square foot. In addition, we will expand our disclosure of the rent spreads achieved in the current period to discuss any material changes in the market rents and the expiring rents.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Same Property Net Operating Income, page 54

3. In future Exchange Act periodic reports, please revise your narrative disclosure in this section to more specifically describe how you determine the properties that fall within the "same property" pool, including a discussion of any properties that were excluded from the pool that were owned in all periods compared and a description of how you classify properties within, and transfer properties from, operating portfolio to redevelopment status.

In response to the Staff's comment, in future filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, we will expand our disclosure to explain how we determine the properties to include within the "same property" pool including a discussion of properties that were excluded from the pool that were owned in all periods and the reason for the exclusion. This disclosure will include more information to enable the reader to understand the factors we consider in deciding whether to classify a property in redevelopment status and transfers to/from such classification.

Funds From Operations, page 55

4. We note that your FFO reconciliation starts with consolidated net loss, but adjusts to exclude the impact of dividends on preferred shares; therefore your FFO allocable to the Company would appear to represent FFO attributable to common shareholders. Please revise future filings to clearly label your non-GAAP measure or tell us why that is not necessary.

In response to the Staff's comment, in future filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, the Company will clearly label our non-GAAP measure as Funds From Operations attributable to common shareholders.

Results Of Operations

Comparison of Operating Results for the Years Ended December 31, 2014 and 2013, page 56

5. Given the significant increase in your portfolio from the acquisition of properties from Inland Diversified in July 2014, in future periodic filings please consider revising your disclosures to provide a discussion reflecting property operating expenses as a percentage of revenue for all periods presented. In addition, please also provide more robust disclosure regarding the changes in your specific expenses included within the property expense line items (e.g., maintenance, insurance, etc.).

In response to the Staff's comment, in future filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, we will expand our disclosure to present operating expenses as a percentage of revenues and we will include a discussion of the causes of any material changes in these percentages. In addition, we will expand our discussion of property operating expenses to include material changes in property expense line items such as repairs and maintenance, landscaping, insurance, etc.

6. We note your reference in the Business section to period to period increase in same property net operating income and your disclosure on page 58 describing the increase in rental income. In future Exchange Act periodic reports, please revise your disclosure in this section to specifically discuss the relative contribution of same store occupancy changes and average base rent changes on the results.

In response to the Staff's comment, in future filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, we will expand our disclosure to discuss the relative contribution of same property occupancy changes and average base rent changes on our results of operations.

Form 10-Q for the interim period ended March 31, 2015

7. In future periodic filings, please ensure that your officer certifications are in the exact format as prescribed by Item 601(b)(31) of Regulation S-K.

In response to the Staff's comment, in future periodic filings beginning with the Company's Form 10-Q for the quarter ended June 30, 2015, we will ensure our officer certifications are in the exact format as prescribed by Item 601(b)(31) of Regulation S-K.

The Company acknowledges that:

- It is responsible for the adequacy and accuracy of the disclosure in the filing.
- Staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- It may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: Lexington Realty Trust
Lepercq Corporate Income Fund L.P.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 26, 2015
File Nos. 001-12386 and 033-04215

Dear Mr. McPhee:

This letter sets forth the response of Lexington Realty Trust ("Lexington" or "we") to the Staff's comment letter, dated July 2, 2015, in connection with the Staff's review of the Form 10-Ks for the fiscal year ended December 31, 2014 of Lexington and Lepercq Corporate Income Fund L.P. ("Lepercq") (as applicable, the "Form 10-K"). Capitalized terms used herein and not otherwise defined herein have the meanings specified in the Form 10-K, as applicable. For your convenience, we have repeated the Staff's comment prior to our response below.

Form 10-K for the year ended December 31, 2014

Consolidated Balance Sheets, page 61

1. **Please tell us what gave rise to the significant increase in Rent receivable – deferred during 2014, and clarify how these amounts are accounted for.**

   Lexington and Lepercq invest in single-tenant net-leased assets many of which have annual fixed-rate escalation clauses. Due to these annual fixed-rate escalations, rent is not paid on a straight-line basis. Per Financial Accounting Standards Board ASC 840-20-25-1, lessors should account for leases with fixed-rate escalations on a straight-line basis, see footnote 2 in the respective Form 10-K for the revenue recognition policy. The difference between the rental revenue recognized on a straight-line basis and the current contractual rent due is accounted for on the balance sheet as Rent receivable – deferred.

The significant increase in Rent receivable – deferred at December 31, 2014 as compared to December 31, 2013 relates primarily to the impact of the acquisition of single-tenant net-leased assets subject to long-term leases (greater than 10 years) with fixed-rate escalation clauses in 2014 and the fourth quarter of 2013. See footnote 4 in Lexington's Form 10-K and footnote 3 in Lepercq's Form 10-K for the year ended December 31, 2014 for the disclosure of the acquisitions in 2014 and 2013.

* * *

At the request of the Staff, each of Lexington and Lepercq acknowledges that:

- it is responsible for the adequacy and accuracy of the disclosure in its filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to its filings; and
- it may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

We would greatly appreciate your prompt attention in resolving any remaining open issues. If you have any questions regarding the responses to the Staff's comments, please call the undersigned at (212) 692-7215.

Sincerely,

/s/ Patrick Carroll

Re: Mack-Cali Realty Corporation
Form 10-K for the year ended December 31, 2014
Filed on February 19, 2015
File No. 001-13274

Dear Mr. Kluck:

On behalf of Mack-Cali Realty Corporation (the "Registrant"), and in connection with the Annual Report on Form 10-K for the year ended December 31, 2014 of the Registrant (the "Report"), I respectfully submit this letter in response to the comments by the staff (the "Staff") of the Securities and Exchange Commission (the "Commission") contained in your letter dated July 16, 2015 (the "Comment Letter"). For convenience of reference, each comment is recited in bold face type and is followed by the Registrant's response thereto. Capitalized terms used herein and not defined shall have the meaning ascribed to such terms in the Report.

<u>Results from Operations, page 51</u>

1. **In future Exchange Act periodic reports, please discuss in greater detail how the company defines same-store properties. In this regard, please disclose whether the "in-service" properties exclude redeveloped or repositioned properties and, if so, how many have been removed for these reasons in the last year.**

Response: In future filings, the Registrant will disclose that its in-service same-store properties exclude redeveloped and repositioned properties. An example of which follows:

"…"Same-Store Properties" represent all in-service properties owned by the Company at December 31, 2012 (for the 2014 versus 2013 comparisons), and represent all in-service properties owned by the Company at December 31, 2011 (for the 2013 versus 2012 comparisons), excluding properties that were sold, disposed of, removed from service ***<u>or being redeveloped or repositioned,</u>*** *through December 31, 2014."*

Also in future filings, the Registrant will disclose the number of properties being redeveloped or repositioned that have been removed from in-service properties in the last year.

2. **In future Exchange Act periodic reports, please discuss in greater detail the relative impact of occupancy and rental rate changes in your period to period changes for your same-store properties.**

Response: In future filings, the Registrant will discuss in greater detail the relative impact of occupancy and rental rate changes for period to period changes of same-store properties in its MD&A discussion.

On behalf of the Registrant, I hereby confirm that the Registrant acknowledges that:

- It is responsible for the adequacy and accuracy of the disclosure in its filings;
- Staff comments or changes to disclosure in response to comments do not foreclose the Commission from taking any action with respect to the filing; and
- It may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Should you have any questions or wish to discuss this matter further, please do not hesitate to contact me at 732-590-1000.

Very truly yours,

/s/ Anthony Krug

File No. 001-32559

Dear Mr. Lee:

The purpose of this letter is to respond to your letter dated April 9, 2015. To assist you in reviewing our responses, we will precede each response with a copy (in bold type) of the comment as stated in your letter.

Form 10-K for the fiscal year ended December 31, 2014

Financial Statements

3. Real Estate and Loans Receivable

Median Transaction, page 82

1. **It appears that you expect the second step of the Median Transaction to close in early 2015 and that this transaction is a sale/leaseback transaction where you will be acquiring the property subject to the transaction and then leasing it back to the seller. Please clarify whether you plan to account for the Median Transaction as a business combination or asset purchase. Your response should address the basis for your conclusion and cite the relevant facts, circumstances, and accounting literature relied upon. In addition, your response should outline all assets acquired and explain whether your acquisition will include any assets in addition to real estate property such as medical records, medical equipment, licenses, intangibles, and other components of the healthcare operations.**

All of the real estate assets expected to be acquired as part of Step 2 of the Median transaction will be simultaneously leased back to the seller (as required per the purchase/sale agreements) and will be accounted for as an acquisition of a business. As part of this transaction, we expect to acquire land (unless subject to ground lease), land improvements, buildings (including fixed furniture/fixtures) and related lease intangibles, if any. We will not acquire medical records, medical equipment, intangibles, or other components of the healthcare operations – those assets will stay with the operator of the properties.

In determining whether our real estate property acquisitions are acquisitions of a business or an asset purchase, we use the guidance provided in Topic 805, Business Combinations. A business is defined as "[a]n integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing a return in the form of dividends, lower costs, or other economic benefits directly to investors or other owners, members, or participants." In the case of the Median transaction, the real estate being acquired is the "Input" of the business, the lease which is effective at the acquisition date (and a requirement to close on the real estate as stated above) is the "Process", and the rent paid to us pursuant to the lease is the "Output". As such, we have determined that the real estate assets to be acquired as part of the Median Transaction and leased back to the seller meet the definition of a business and will be accounted for as acquisitions of a business.

Concentration of Credit Risks, page 90

2. **You have disclosed that Prime represented or exceeded 20% of your total assets as of December 31, 2014 and 2013. These assets are leased to Prime under master lease agreements on a long-term, triple net-lease basis. As a result, it appears that financial information related to Prime would be relevant to investors given Prime's concentration to your business. It appears such information was provided in previous years. Please clarify your basis for no longer providing such information and/or amend your 10-K to include such financial information.**

Our concentration disclosure about Prime on page 90 includes both our investment in properties leased backed to Prime on a triple net-lease basis and our investment in properties for which we hold a mortgage loan. In total, these investments made up 20.0% and 24.5% of our total assets at December 31, 2014 and 2013, respectively; however, our investment in properties leased to Prime on a triple net-lease basis represents, in the aggregate, significantly less than 20% of our total assets as follows:

	Concentration %	
Investment Type	***December 31, 2014***	***December 31, 2013***
Triple-net leases	*12.6 %*	*15.3 %*
Mortgage loans	*7.4 %*	*9.2 %*
Total	*20.0 %*	*24.5 %*

Pursuant to SEC Staff Training Manual, Topic II.B – Properties Subject to Net Lease, "the disclosure pertaining to a material lessee, including its audited financial statements if the investment exceeds 20% of total assets, should be provided in filings made under both the Securities Act and the Exchange Act." Since our investments under a triple-net lease basis to Prime are below 20% of our total assets at December 31, 2014 or 2013, we do not believe Prime's financial statements are required to be filed with our 2014 Form 10-K.

RE: National Health Investors, Inc.
Form 10-K
Filed February 17, 2015
File No. 1-10822

Dear Mr. Woody:

On behalf of National Health Investors, Inc. (the "Company"), this letter is written in response to your letter dated July 15, 2015 regarding the Company's filing referenced above. Our responses are keyed to the comments in your letter.

Form 10-K for the fiscal year ended December 31, 2014

SEC Comment

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

FFO, AFFO & FAD, page 47

1. It appears that your presentation of funds from operations is actually funds from operations attributable to common stockholders. Please revise your characterization of the non-GAAP measure in future filings.

Company Response

In our reconciliation of funds from operations, we begin with net income attributable to common stockholders. In future filings, we will revise our presentation of funds from operations to clearly characterize such measure as being attributable to common shareholders.

SEC Comment

Notes to consolidated financial statements, page 59

Note 2. Real Estate, page 63

Prestige, page 64

1. Please explain to us why you accounted for the acquisition of Prestige Senior Living's four facilities as an asset acquisition in light of the guidance contained in ASC 805-10-55-4.

Company Response

In the context of our practice of acquiring properties for our real estate portfolio, we follow Section 805, *Business Combinations* of the FASB Accounting Standards Codification in evaluating each purchase transaction to determine whether the acquired property meets the definition of a business as described in ASC 805-10-20 or is an asset purchase.

Applying the guidance in ASC 805-10-55-4 through 55-9, in an acquisition in which the selling party, who is not the operator or an affiliate of the operator, previously leased the property, we have determined that the essential elements of a business are present. We identify the real estate asset involved as inputs, the lease billing and collection cycle as processes, and the receipt and distribution of cash payments as outputs of the leasing business. As a result, we account for these transactions as business combinations. With the four facilities owned and operated by Prestige Senior Living, we have determined that the inputs, processes and outputs essential to the definition of a business are not present, and therefore, we consider the acquisition to be of assets alone.

Our approach to accounting for acquisitions is consistent with definitions contained in the SEC's *Financial Reporting Manual*, at ¶2330.10, where it is noted that property previously owner-occupied does not constitute real estate operations. We believe analogy to this guidance is relevant as, similar to what is described in 2330.10, "no prior rental history exists" with an owner/operator, and thus the "processes" - the second essential element of what constitutes a business - do not exist, and the conditions of §805 are not met.

The Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filings;

Re: Newcastle Investment Corp.
Form 10-K for the Fiscal Year ended December 31, 2014
Filed March 2, 2015
File No. 001-31458

Dear Ms. Monick,

On behalf of Newcastle Investment Corp. (the "Company"), the undersigned submits this letter in response to comments from the staff (the "Staff") of the U.S. Securities and Exchange Commission (the "Commission") received by letter, dated July 28, 2015 (the "Comment Letter"), relating to the Company's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (File No. 001-31458) filed on March 2, 2015 (the "2014 10-K"). To facilitate your review, the undersigned has reproduced the text of the Staff's comments in italics below, and the headings and comment numbers in this letter correspond to the headings and comment numbers in the Comment Letter. In addition, capitalized terms used but not defined herein shall have the meanings assigned to such terms in the 2014 10-K.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Other Income, Net, page 58

1. *Please provide to us additional details of the nature of the restructuring of certain properties related to the Golf business that resulted in a $7.2 million gain, and tell us the accounting guidance upon you which you relied.*

Response

We respectfully advise the Staff that the $7.2 million gain is primarily related to the write-off of unfavorable leasehold interest intangible liabilities as a result of restructuring lease agreements for two properties in the Golf business which we acquired in 2013. We also terminated lease agreements of five properties in the Golf business in 2014, which contributed a net gain of less than $0.1 million.

In connection with the accounting for our acquisition of the Golf business, we recognized unfavorable leasehold interest intangibles on the consolidated balance sheet as of the date the Golf business was acquired in accordance with ASC 805-20-25-4 and ASC 805-20-25-12. This was appropriate as we assumed certain lease agreements with unfavorable leasehold interests, in which contracted rent payments were unfavorable relative to market rents at the date of the acquisition.

Subsequent to the acquisition, we initiated negotiations with course owners to restructure or terminate certain lease agreements with unfavorable terms. In the third and fourth quarters of 2014, we negotiated and amended two assumed lease agreements with net unfavorable leasehold interest intangible liabilities of $2.0 million and $5.2 million, respectively, to current market rates with substantially different terms and payment requirements. As a result of these amendments and the substantially different terms that the Company was able to secure, including pricing more representative of prevailing market rates, we concluded that the unfavorable terms under the previous lease agreements relative to market rates no longer existed, and that the write-off of the unfavorable leasehold interest intangible liabilities was appropriate in accordance with ASC 350-30-35-14. Consequently, we reported $5.2 million under "Other income, net" in the consolidated statement of income in the 2014 Form 10-K.

<u>Liquidity and Capital Resources, page 61</u>

2. *We note that you paid dividends of $145.3 million and had net cash provided by operating activities of $40.4 million during the year ended December 31, 2014. In future periodic filings, please discuss the source(s) of these distributions within your Management´s Discussion and Analysis of Financial Condition and Results of Operations, as this disparity raises concerns about the sustainability of distributions into the future. Please provide an example of your proposed disclosure.*

<u>Response</u>

We respectfully advise the Staff that the Company's dividend distributions are not exclusively impacted by net cash provided by operating activities. As a Real Estate Investment Trust ("REIT"), we are required, among other things, to distribute at least 90% of our annual taxable income to our shareholders. We have disclosed in the past and will continue to disclose differences between GAAP and taxable calculations, and the impact of timing differences between the receipt of cash and the recognition of taxable income, including in Risk Factors in the 2014 Form 10-K.

The Company's business model focuses on opportunistic investments in a wide range of real estate related debt and golf related real estate and operations, and, as a result, the sources of our dividends are, taken together, all cash inflows that represent our return on our portfolio of investments in real estate debt and golf related real estate and operations, which are reflected in our net cash provided by operating activities, net cash provided by investing activities and available cash equivalents. Our Board does not specifically match each use of funds with a particular source, but rather assesses all known or anticipated sources as a group when considering a dividend distribution.

In fiscal year 2014, the Company paid dividends of $145.3 million and had net cash provided by operating activities of $40.4 million, net cash provided by investing activities of $319.9 million and cash and cash equivalents of continuing operations of $42.1 million as of January 1, 2014. Thus far in fiscal year 2015, we have paid dividends of $15.9 million. For the six months ended June 30, 2015, the Company had net cash used in operating activities of $14.6 million and net cash provided by investing activities of $157.3 million, and cash and cash equivalents of $73.7 million as of December 31, 2014.

We respectfully acknowledge the Staff's comment and have revised our disclosures to include the following language in our Form 10-Q for the quarter ended June 30, 2015, and will include similar disclosures in future periodic filings:

> The sources of our distributions are net cash provided by operating activities, net cash provided by investing activities and cash equivalents as they represent the return on our portfolio of investments in real estate debt and golf related real estate and operations. The Company has paid dividends of $15.9 million thus far in fiscal year 2015. For the six months ended June 30, 2015, the Company reported net cash used in operating activities of $14.6 million and net cash provided by investing activities of $157.3 million, and cash and cash equivalents of $73.7 million as of December 31, 2014. The timing and amount of distributions are in the sole discretion of our board of directors, which considers our earnings, financial performance and condition, liquidity, debt service obligations and applicable debt covenants, contractual restrictions, REIT qualification requirements and other tax considerations, as well as capital expenditure requirements, business prospects and other factors that our board of directors may deem relevant from time to time. See "Risk Factors—Risks Related to Our REIT Status and the 1940 Act" for more information.

Repurchase Agreements, page 63

3. *With respect to your repurchase agreements, we note your presentation of the balance at end of period, the average daily amount outstanding and the maximum amount outstanding during the three months and year ended December 31, 2014. In future annual filings, please expand your disclosure to present this information for any quarterly periods within the most recent three years for which you have any repurchase agreement activity. In addition, your revised disclosure should also provide explanations for the significant variances among these amounts.*

Response

We respectfully acknowledge the Staff's comment and will expand our repurchase agreement disclosures in future annual filings to include the quarterly average daily amount outstanding and the maximum amount outstanding of repurchase agreements comparatively over each of the most recent three fiscal years. In addition, we will provide explanations for any significant variances among these amounts. Set forth below is an example of our proposed expanded disclosure, for 2014:

The following table summarizes the quarterly average daily amount outstanding and the maximum amount outstanding of repurchase agreements comparatively over each of the most recent three years as of December 31, 2014:

	Avg Daily Amount Outstanding	Maximum Amount Outstanding	Avg Daily Amount Outstanding	Maximum Amount Outstanding	Avg Daily Amount Outstanding	Maximum Amount Outstanding	Avg Daily Amount Outstanding	Maximum Amount Outstanding
	For the Three Months Ended							
	March 31, 2012		June 30, 2012		September 30, 2012		December 31, 2012	
FNMA/FHLMC	$ 228,708	$ 231,345	$ 259,472	$ 319,431	$ 459,495	$ 541,996	$ 637,434	$ 778,914
CDO Securities	$ 8,374	$ 8,728	$ 7,493	$ 7,525	$ 7,283	$ 7,384	$ 6,569	$ 7,118
Non-Agency RMBS	—	—	—	—	$ 52,058	$ 60,575	$ 71,866	$ 150,922

	For the Three Months Ended							
	March 31, 2013		June 30, 2013		September 30, 2013		December 31, 2013	
FNMA/FHLMC	$ 896,063	$ 1,330,432	$ 801,520	$ 1,351,728	$ 350,792	$ 378,624	$ 489,862	$ 547,366
CDO Securities	—	—	—	—	$ 3,272	$ 15,050	$ 15,054	$ 15,094
Non-Agency RMBS	$ 154,549	$ 158,029	$ 133,178	$ 302,033	—	—	—	—
Linked transaction	—	—	$ 3,954	$ 59,968	$ 59,968	$ 59,968	$ 60,064	$ 60,646
Residential Mortgage Loans	—	—	—	—	—	—	$ 13,359	$ 25,119

	For the Three Months Ended							
	March 31, 2014		June 30, 2014		September 30, 2014		December 31, 2014	
FNMA/FHLMC	$ 129,137	$ 516,134	—	—	—	—	$ 204,340	$ 385,282
CDO Securities	$ 44,325	$ 49,500	$ 52,380	$ 79,712	$ 71,701	$ 91,752	$ 63,265	$ 63,804
Linked transaction	$ 58,385	$ 60,646	$ 36,046	$ 58,563	—	—	—	—
Residential Mortgage Loans	$ 25,154	$ 25,363	$ 23,613	$ 25,363	$ 250	$ 22,965	—	—

During 2012, we purchased $626.3 million face amount of FNMA/FHLMC securities for approximately $663.3 million, which were financed with $628.9 million of repurchase agreements. We also purchased $456.0 million face amount of non-Agency RMBS for approximately $288.4 million, which were financed with $149.4 million of repurchase agreements.

In connection with the spin-off of New Residential in May 2013, $1.0 billion of repurchase agreements financing FNMA/FHLMC securities and $301.4 million of repurchase agreements financing non-Agency RMBS were transferred to New Residential. In June 2013, we purchased $116.8 million face amount of securities which were collateralized by certain repackaged Newcastle CDO VIII notes, and financed with $60.0 million of repurchase agreements. We accounted for this transaction as a linked transaction as we purchased and financed this transaction with the same counterparty contemporaneously. In November 2013, we financed a portfolio of residential mortgage loans with $25.1 million of repurchase agreements, which were previously unencumbered on Newcastle's balance sheet. In September 2013, we financed previously repurchased CDO debt with $15.1 million of repurchase agreements.

In January 2014, we sold $503.0 million face amount of the FNMA/FHLMC securities for total proceeds of $532.2 million and repaid $516.1 million of repurchase agreements. We also financed additional repurchased CDO debt with $30.8 million of repurchase agreements. In June 2014, we repaid $60.0 million of repurchase agreements associated with our linked transaction as the underlying assets were paid off. Additionally, in June 2014 we financed previously repurchased CDO debt with $26.3 million of repurchase agreements. In July 2014, we sold $37.4 million face amount of residential mortgage loans for total proceeds of $34.7 million and repaid $23.0 million of repurchase agreements associated with these loans.

Core Earnings, page 76

4. *Please tell us and revise future periodic filings to clarify how the components of "Impairment (reversal), other (income) loss and other adjustments from discontinued operations" presented on page 77 are reflected in your disclosure of discontinued operations on page 107.*

Response

We respectfully advise the Staff that the components of Impairment (reversal), other (income) loss and other adjustments from discontinued operations are detailed in the table below:

	Year Ended December 31,		
	2014	**2013**	**2012**
Depreciation and Amortization	$ 90,627	$ 30,969	$ 6,975
Depreciation and amortization non-controlling interest	(708)	2,121	0
Other income (loss)	(1,444)	(6,464)	(17,339)
Acquisition and spin-off related expenses	15,751	13,348	4,625
Impairment (reversal), other (income) loss and other adjustments from discontinued operations	$ 104,226	$ 39,974	$ (5,739)

Ms. Jennifer Monick
U.S. Securities and Exchange Commission
August 13, 2015
Page 5

We respectfully acknowledge the Staff's comment, and have revised our disclosures in our Form 10-Q for the quarter ended June 30, 2015 to add a footnote to the Core Earnings table detailing the components of this line item, and will include similar disclosures in future periodic filings (see underlined text for revisions to page 77):

Set forth below is a reconciliation of core earnings to the most directly comparable GAAP financial measure (in thousands).

	Three Months Ended June 30,		Six Months Ended June 30,	
	2015	**2014**	**2015**	**2014**
Income available for common stockholders	$ 17,019	$ 30,532	$ 14,927	$ 34,055
Add (Deduct):				
Impairment (reversal)	13,679	1,526	14,084	2,772
Other (income) loss(A)	(29,044)	(39,510)	(29,231)	(55,357)
Impairment (reversal), other (income) loss and other adjustments from discontinued operations(B)	(317)	26,634	(306)	60,758
Depreciation and amortization(C)	9,837	8,952	19,309	17,757
Acquisition, restructuring and spin-off related expenses	333	1,115	371	2,277
Core earnings	$ 11,507	$ 29,249	$ 19,154	$ 62,262

(A) Net of $1.9 million of deal expenses relating to the sale of the manufactured housing portfolio which were recorded to general and administrative expense under GAAP during 2014.

(B) Includes gain on settlement of investments of $0.3 million and $0.3 million and depreciation and amortization of $0 and less than $0.1 million for the three and six months ended June 30, 2015, respectively. Includes depreciation and amortization of $23.2 million and $50.7 million (gross of $0 and $0.7 million related to non-controlling interests), acquisition and spin-off related expenses of $3.4 million and $10.7 million, and other loss of less than $0.1 million and less than $0.1 million for the three and six months ended June 30, 2014, respectively.

(C) Including accretion of membership deposit liability of $1.5 million and $2.9 million and amortization of favorable and unfavorable leasehold intangibles of $1.2 million and $2.5 million in the three and six months ended June 30, 2015, respectively. Including accretion of membership deposit liability of $1.4 million and $3.1 million and amortization of favorable and unfavorable leasehold intangibles of $1.2 million and $2.5 million in the three and six months ended June 30, 2014, respectively. The accretion of membership deposit liability was recorded to interest expense and the amortization of favorable and unfavorable leasehold intangibles was recorded to operating expenses - golf.

We have also revised our disclosures in our Form 10-Q for the quarter ended June 30, 2015 to add a footnote to the discontinued operations disclosure detailing the portion of general and administrative expense that is related to acquisition and spin-off related expenses, and will include similar disclosures in future periodic filings (see underlined text for revisions to page 107):

Results from discontinued operations were as follows:

	Three Months Ended June 30,		Six Months Ended June 30,	
	2015	2014	2015	2014
Interest income	$ —	$ —	$ —	$ —
Interest expense	—	13,592	—	29,389
Net interest income (loss)	—	(13,592)	—	(29,389)
Media income	—	—	—	68,213
Rental income	50	54,595	549	107,485
Care and ancillary income	—	5,666	—	11,127
Gain on settlement of investments	318	—	318	—
Other income (loss)	—	(22)	—	(22)
Total media, rental and other income	368	60,239	867	186,803
Media operating expenses	—	—	—	65,826
Property operating expenses	(157)	26,459	187	52,419
General and administrative expenses (A)	1	4,911	30	12,463
Depreciation and amortization	—	23,245	11	50,733
Income tax (benefit) expense	—	536	—	(224)
Total expenses	(156)	55,151	228	181,217
Income (loss) from discontinued operations	$ 524	$ (8,504)	$ 639	$ (23,803)
Net income attributable to noncontrolling interests	$ —	$ —	$ —	$ 522

(A) Includes acquisition and spin-off related expenses of $3.4 million and $10.7 million for the three and six months ended June 30, 2014.

Depreciation and amortization and other (income) loss are reflected in the disclosure for discontinued operations. The acquisition and spin-off related expenses are included as a portion of general and administrative expense in the disclosure of discontinued operations.

Note 2 Summary of Significant Accounting Policies

Golf Revenues, page 94

5. *Please refer also to your disclosure on page 103 relating to Membership Deposit Liabilities and Deferred Revenue. Please tell us the guidance upon which you relied for your accounting treatment of refundable initiation fees including your consideration of SAB Topic 13. Tell us the amount of revenues recognized under this accounting policy.*

Response

We respectfully advise the Staff that private country club members generally pay an initiation fee upon their acceptance as a member to one of our country clubs. A member is contractually entitled to an unconditional refund of such initial member's non-interest bearing initiation fee deposit (the refund obligation) 30 years from the effective date of the membership, and at no point before 30 years.

The refund obligation component (the "Membership Deposit Liability") of the refundable initiation fee deposit from our private country club members is determined at the date of a member's payment of initiation fee deposits and is calculated as the present value of the refund obligation contractually due in 30 years, utilizing a market discount rate in accordance with ASC 835. It is important to note that the initiation fee deposits bear no interest, therefore requiring that the discount rate be applied over the 30 year contractual period as the terms of the refundable fees are not at market. No revenue is ever recognized on the Membership Deposit Liability. The initiation fee deposits received less the present value of the Membership Deposit Liability are recorded as deferred revenue. We believe that this amount represents the consideration paid by our members at contract inception for the right to access ongoing benefits during the membership, as long as each member continues to pay annual dues. As such, deferred revenue is recognized on a straight-line basis over the expected life of an active membership.

In recognizing deferred revenue, we considered SAB Topic 13.A.4.a, which provides for the recognition of refundable initiation fee deposits, net of estimated refunds (equal to the Membership Deposit Liability in this case), as unearned revenue to be recognized over the expected life of an active membership. SAB Topic 13.A.4.a further indicates that refunds need to be reliable estimates, made on a timely basis. At the inception of a member's initial membership and throughout the contract period, the amount of the refund at the end of the 30 year period is (i) fixed and determinable, (ii) only paid at its original amount and bears no interest and (iii) is only refundable upon the 30th anniversary of the membership effective date.

Pursuant to our Significant Accounting Policies disclosed on page 94 in the 2014 10-K, we recognized approximately $502,000 of revenue during fiscal year 2014, or approximately 0.2% of total revenues.

6. Please tell us how you estimate the present value of the refund obligation and the expected life of the active membership. Also, explain to us your basis for using a different amortization period for the refund obligation and the deferred revenue.

Response

As indicated in our response to the Staff's comment number 5, the present value of the refund obligation of the initiation fee deposit is recorded as a Membership Deposit Liability in the consolidated balance sheet. This liability is calculated as the present value of the refund obligation contractually due in 30 years utilizing a market discount rate in accordance with ASC 835. The initiation fee deposits bear no interest, therefore requiring that the discount rate be applied over the 30 year contractual period. As such, this liability accretes over 30 years when the refund obligation is contractually due using the effective interest method, and the accretion is recorded as interest expense in the consolidated statements of income.

As stated in our response to comment number 5, the initiation fee deposits received less the Membership Deposit Liability represent the consideration paid by members at contract inception for the right to access ongoing benefits during the membership, for as long as members continue to pay annual dues. Such difference is recorded as deferred revenue and is recognized as revenue over the expected life of an active membership. As there is no contractual membership period stipulated in the private club membership arrangement, revenue related to the initiation fee deposits is recognized over the expected term of active membership pursuant to SAB Topic 13.A.3.f.

Accordingly, deferred revenue related to the initiation fee deposits is recognized on a straight-line basis over the expected life of an active membership, which is calculated annually, using historical enrollment and attrition data. During fiscal year 2014, we performed our annual assessment of the estimated expected life of each of our private club memberships, and determined that our estimated expected life of a private club membership is approximately seven years.

We determined the expected life of an active membership by calculating a historical average of enrollment and attrition rates. Based on our history of operating country clubs, we believe that considering membership types is an important factor in estimating the expected life of a member, as attrition rates vary depending on the type of membership. Therefore, we analyze attrition rates on a disaggregated basis to consider various types of membership (e.g., social membership with no golf privileges as compared to full golf memberships). Depending on membership type, our historical experience is that the expected lives of various private club memberships ranged from six to seven years for 2012, 2013 and 2014. Based on our historical and periodic analysis, the Company has observed that average expected lives of private club memberships have been consistent over the years presented in the 2014 10-K.

Further, we have performed various sensitivity analyses and believe it is unlikely that changes in our expected life of an active membership would have a material impact on our financial statements. We have calculated the impact of the change in our estimated average membership lives and determined that the impact to revenue for a one year increase or decrease would be approximately $0.1 million, or less than 0.1% of total revenues for fiscal year 2014.

Because the accretion of the Membership Deposit Liability follows the specific terms of the membership agreement pursuant to ASC 835, which contractually sets the right to refund 30 years after inception, while deferred revenue related to initiation fee deposits are recognized over the expected term of active memberships pursuant to SAB Topic 13, the Company has concluded that the accretion period for Membership Deposit Liability and the amortization period for deferred revenue related to initiation fee deposits are appropriately distinct in nature and different in length, and applies a different basis for interest and revenue recognition.

We have revised our disclosures in our Form 10-Q for the quarter ended June 30, 2015, and will include similar disclosures in future periodic filings (see underlined text for revisions to page 55):

> Private country club members generally pay an advance initiation fee deposit upon their acceptance as a member to the country club. Initiation fee deposits are generally refundable, without interest, 30 years after the date of acceptance as a member. The difference between the initiation fee deposit paid by the member and the present value of the refund obligation is deferred and recognized into revenue in the consolidated statements of operations on a straight-line basis over the expected life of an active membership, which is estimated to be seven years.
>
> The present value of the refund obligation is recorded as a membership deposit liability in the consolidated balance sheet and accretes over a 30-year nonrefundable term using the effective interest method. This accretion is recorded as interest expense in the consolidated statements of operations.

Repurchase Agreements, page 103

7. *We note that you disclose that securities sold under repurchase agreements will be treated as collateralized financing transactions, unless they meet sale treatment. Please tell us whether any of those agreements were accounted for as sales for accounting purposes in your financial statements. If so, please:*

   a. *Quantify the amount of repurchase agreements qualifying for sales accounting at each quarterly balance sheet date for each of the past three years.*

   b. *Quantify the average quarterly balance of repurchase agreements qualifying for sales accounting for each of the past three years.*

   c. *Describe all the differences in transaction terms that result in certain of your repurchase agreements qualifying as sales versus collateralized financings.*

d. Provide a detailed analysis supporting your use of sales accounting for your repurchase agreements.

e. Describe the business reasons for structuring the repurchase agreements as sales transactions versus collateralized financings. To the extent the amounts accounted for as sales transactions have varied over the past three years, discuss the reasons for quarterly changes in the amounts qualifying for sales accounting.

f. Describe how your use of sales accounting for certain of your repurchase agreements impacts any ratios or metrics you use publicly, provide to analysts and credit rating agencies, disclose in your filings with the SEC, or provide to other regulatory agencies.

g. Tell us whether the repurchase agreements qualifying for sales accounting are concentrated with certain counterparties and/or concentrated within certain countries. If you have any such concentrations, please discuss the reasons for them.

h. Tell us whether you have changed your original accounting on any repurchase agreements during the last three years. If you have, explain specifically how you determined the original accounting as either a sales transaction or as a collateralized financing transaction noting the specific facts and circumstances leading to this determination. Describe the factors, events or changes which resulted in your changing your accounting and describe how the change impacted your financial statements.

Response

We respectfully advise the Staff that no securities sold under repurchase agreements have been accounted for as sales for accounting purposes in our consolidated financial statements.

As indicated under ASC 860-10-40-5(c)(1), the transferor is presumed to maintain effective control over the transferred financial asset if there is an agreement that both entitles and obligates the transferor to repurchase it before its maturity. Repurchase agreements are examples of typical arrangements containing such provisions. Therefore, we maintain effective control over the transferred securities in the transaction which results in a collateralized financing accounting treatment.

We have revised our disclosures to include the following language in our Form 10-Q for the quarter ended June 30, 2015, and will include similar disclosures in future periodic filings:

Securities sold under repurchase agreements are treated as collateralized financing transactions.

Note 6. Real Estate Related and Other Loans, Residential Mortgage Loans and Subprime Mortgage Loans, page 116

8. We note your disclosure on page 117 that the sale of your manufactured housing portfolio through a securitization was treated as a sale for accounting purposes. Please tell us how this transaction met all of the criteria of ASC 860-10-40-5 to be accounted for as sale.

Response

In connection with the securitization transaction of our manufactured housing portfolio, we performed an accounting analysis to determine whether the transfer of loans to trust would meet the conditions for sale accounting pursuant to ASC 860.

Pursuant to ASC 860-10-40-5, a transfer of an entire group of financial assets in which the transferor surrenders control over those financial assets shall be accounted for as a sale if all of the following conditions are met: (i) legal isolation of the transferred financial assets; (ii) transferee has the right to pledge or exchange the transferred financial assets; and (iii) the transferor does not maintain effective control over the transferred financial assets.

In our manufactured housing portfolio transaction, through a two-step securitization, we sold, transferred, assigned, and conveyed all of our rights, titles and interests in and to the loans to the trusts without recourse and with only standard representations and warranties as a seller of loans. As a result, we concluded that we achieved the conditions for sale accounting and derecognition of the transferred financial assets for this securitization.

The determination of whether the transferred financial assets have been isolated from the transferor is a legal determination rather than an accounting determination. We obtained and relied on true sale and non-consolidation legal opinions from nationally recognized external legal counsel to provide reasonable assurance that the transfer of financial assets is a true sale at law to a bankruptcy remote entity that would not be consolidated.

The transferee must have the right to pledge or exchange the transferred financial assets in order to obtain the benefits of ownership (i.e., the cash inflows) of the asset, and having the right to the economic benefits of such financial assets is considered to be indicative of control over the financial asset. We confirmed that as transferees, the securitization note-holders are not restricted or constrained from pledging or exchanging the transferred financial assets, with the only exception being Rule 144A of the Securities Act of 1933, which does not preclude sale accounting per ASC 860-10-40-18.

Determining whether the transferor maintains effective control over the transferred financial assets depends on if there is any continuing involvement by the transferor and whether the transferor has the ability to reclaim such transferred financial assets. We did not hold any direct or indirect legal beneficial ownership interest in the loans. In addition, the agreements governing the sale of financial assets did not contain terms with respect to transferor repurchase obligations, transferee put options or any other conditions whereby we could reclaim the transferred financial assets.

Based on the above analysis, we determined that we surrendered control over the transferred financial assets, and met all the conditions in ASC 860-10-40-5 to be accounted for as a sale.

Note 10. Fair Value of Financial Instruments

Recurring Fair Value Measurements – Real Estate Securities and Derivatives, page 130

9. *We note that you use the label “Market Quotations” for both Level 2 and Level 3 hierarchy. Please tell us, and disclosed in future filings, the difference between these inputs as used in each hierarchy, and reconcile with your disclosure on page 51-52 that broker and pricing service quotations that you receive are generally classified as Level 3 inputs.*

Response

We respectfully inform the Staff that we categorize broker and pricing service quotations received for real estate securities issued by government agencies, including the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC) and plain vanilla derivative instruments, including interest rate swaps based on LIBOR swap rate and to-be-announced securities (TBA) as level 2 inputs. Quotations received for all other real estate securities and derivative instruments are level 3 inputs.

Pursuant to ASC 820, the fair value hierarchy establishes three levels to classify inputs to the valuation techniques used to measure fair value. Level 1 inputs are quoted market prices (unadjusted) in active markets for identical assets or liabilities. Level 2 inputs are inputs other than quoted market prices included in Level 1 that are observable for the asset or liability, either directly (such as prices of similar asset or liability), or indirectly. Level 3 inputs are unobservable (supported by little or no market activity), such as non-corroborative indicative prices for a particular instrument provided by a third party.

Government agency securities as well as plain vanilla derivative instruments transact in active and liquid market which provides broker and pricing service with large volumes of pricing data (i.e., market observable inputs) on similar securities. Therefore, we categorized such market quotations as level 2 inputs. Conversely, the market quotations of all other real estate securities are quoted prices in generally inactive and illiquid markets for identical or similar securities. These quotations are generally based on models prepared by the brokers, and are indicative of market transactions. Therefore, we categorized such market quotations as level 3 inputs.

In response to the Staff's comment, in our Form 10-Q for the quarter ended June 30, 2015, we have added "Observable" and "Unobservable" to the "Market Quotations" columns for Levels 2 and 3, respectively, in the fair value table under Footnote 13 – Fair Value as of June 30, 2015, and will include similar disclosures in future filings. The table below illustrates the modifications to our tabular disclosure on fair value inputs.

	Fair Value		
Carrying Value	Level 2	Level 3	Total
	Market Quotations (Observable)	Market Quotations (Unobservable)	Internal Pricing Models

In addition, we have included in our Form 10-Q for the quarter ended June 30, 2015 the disclosure below, which refines our existing Level 2 and Level 3 disclosure (see underlined text for revisions to page 129):

Level 1 - Quoted prices in active markets for identical instruments.

Level 2 - Valuations based principally on observable market parameters, including

- quoted prices for similar assets or liabilities in active markets,

- inputs other than quoted prices that are observable for the asset or liability (such as interest rates and yield curves observable at commonly quoted intervals, implied volatilities and credit spreads), and

- market corroborated inputs (derived principally from or corroborated by observable market data).

Level 3 - Valuations determined using unobservable inputs that are supported by little or no market activity, and that are significant to the overall fair value measurement. Level 3 assets and liabilities include financial instruments whose value is determined using non-binding market quotations, pricing models, discounted cash flow methodologies, or similar techniques where significant inputs are unobservable, as well as instruments for which the determination of fair value requires significant management judgment or estimation.

We also included the revised disclosure below in our Form 10-Q for the quarter ended June 30, 2015 (see underlined text for revisions to pages 51-52):

> We generally classify non-binding broker and pricing service quotations we receive as level 3 inputs~~, except for certain liquid securities~~. Such quotations are quoted prices in generally inactive and illiquid markets for identical or similar securities. These quotations are generally received via email and contain disclaimers which state that they are "indicative" and "not actionable" - meaning that the party giving the quotation is not bound to actually purchase the security at the quoted price. These quotations are generally based on models prepared by brokers, and we have little visibility into the inputs they use. Based on quarterly procedures we have performed with respect to quotations received from such brokers, including comparison to the outputs generated from our internal pricing models and transactions we have completed with respect to these securities, as well as on our knowledge and experience of these markets, we have generally determined that these quotes represent a reasonable estimate of fair value. For the $631.5 million carrying value of securities valued using quotations as of December 31, 2014, a 100 basis point change in credit spreads would impact estimated fair value by approximately $24.0 million.

Pursuant to the Comment Letter, we acknowledge that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: Omega Healthcare Investors, Inc.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 27, 2015
File No. 001-11316

Ladies and Gentlemen:

On behalf of Omega Healthcare Investors, Inc. ("Omega"), I am responding to the comment received from your office by letter dated May 12, 2015 (the "May Letter") with respect to the above-referenced Form 10-K (the "Form 10-K").

I have restated and responded to your comments in the May Letter below. Capitalized terms used in this letter have the meanings ascribed to them in the Form 10-K. All page references (excluding those in the headings and the staff's comment) refer to the pages of the Form 10-K.

Form 10-K for the fiscal year ended December 31, 2014

Item 2. Properties, page 33

1. *We note your disclosure on page 36 that your investments with New Ark Investments, Inc. represent 13% of your total investments. We also note your disclosure that the Ark leases are 50 year leases that expire in 2063. Please clarify and tell us whether all of your leases with New Ark are 50 year leases. In future Exchange Act periodic reports, please disclose the material terms of your agreements with new Ark or advise.*

Response: The New Ark investment is comprised of (i) four fifty-year direct financing leases that expire in 2063 and (ii) one twelve-year operating lease that expires in 2026. We note that Item 2 – Properties includes the total investment value of (i) $539,232 for our investment in the four New Ark direct financing leases under the section titled "Investment in Direct Financing Leases" and (ii) $34,600 for our investment in one New Ark operating lease under the section "Leased Facilities". The combined investment of $573,832 represents approximately 13% of our total investments.

In addition to our disclosure in Item 2 – Properties, we refer to our disclosure of our investments in direct financing leases in our consolidated financial statements. Note 5 Direct Financing Leases states the following:

> On November 27, 2013, we closed on an aggregate $529 million purchase/leaseback transaction in connection with the acquisition of Ark Holding Company, Inc. ("Ark Holding") by 4 West Holdings Inc. At closing, we acquired 55 SNFs and 1 ALF operated by Ark Holding and leased the facilities back to Ark Holding, now known as New Ark Investment Inc. ("New Ark"), pursuant to four 50-year master leases, with rental payments yielding 10.6% per annum over the term of the leases. The purchase/leaseback transaction is being accounted for as a direct financing lease.
>
> The lease agreements allow the tenant the right to purchase the facilities for a bargain purchase price plus closing costs at the end of term. In addition, commencing in the 41st year of each lease, the tenant will have the right to prepay the remainder of its obligations thereunder for an amount equal to the sum of the unamortized portion of the original aggregate $529 million investment plus the net present value of the remaining payments under the lease, and closing costs. In the event the tenant exercises either of these options, we have the right to purchase the properties for fair market value at the time.

In addition to the disclosure of our investment in direct financing leases, we disclosed the acquisition of the three facilities subject to the operating lease in Note 3 – Properties. The following is an excerpt from Note 3 – Properties:

> *Acquisition of Three SNFs in South Carolina and Georgia*
>
> On June 27, 2014, we purchased two SNFs from an unrelated third party for approximately $17.3 million and leased them to an existing operator of Omega. The SNFs, located in Georgia and South Carolina with a total of 213 beds, were combined into a new 12 year master lease with an initial annual cash yield of 9.5%.
>
> In the third quarter of 2014, we purchased a third SNF in South Carolina with 132 beds that was added to the master lease. The combined purchase price, including the third SNF was $34.6 million.

In our future periodic Exchange Act reports, we will disclose the material terms of all material leases with New Ark and will clarify that only the four direct financing leases with New Ark have 50 year terms.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 40

2. *In future Exchange Act periodic reports, for material properties or operators, please discuss occupancy for those facilities that are not materially occupied.*

Response: As of December 31, 2014 and 2013, the Company does not have any material properties or operators with facilities that are not materially occupied. In future periods if a material property or operator is not materially occupied, we will make appropriate disclosures regarding the occupancy of those facilities that are not materially occupied.

Notes to Consolidated Financial Statements

Note 2 – Summary of Significant Accounting Policies, page F-8

In-Place Leases, page F-10

3. *With respect to your below-market lease intangibles, please tell us how you considered any fixed rate renewal options in your estimate of the remaining term of the underlying leases and your basis for your determination.*

Response: For assumed leases with below market rents, the Company evaluates whether the term of the renewal option should be included or excluded in our estimate of the remaining term of the underlying lease by considering several factors, including (i) the comparison of the contractual rent renewal rate versus our estimate of projected future market rental rates coupled with the length of the renewal term, (ii) the length of time between the acquisition date and the renewal date(s) as well as (iii) the current and expected operating performance of the facility and/or lessee. If we determine that it is reasonably assured the renewal option will be exercised, we include the renewal period in our estimate of the remaining term of the underlying lease.

Note 6 – Mortgage Notes Receivable, page F-21

4. *Please tell us how you complied with paragraph 29 of ASC 310-10-50, or tell us how you determined it was not necessary to provide applicable disclosures regarding credit quality information for your mortgage notes receivables.*

Response: The objective of ASC 310-10-50 paragraph 29 is to provide information that enables the financial statement users to (i) understand how and to what extent management monitors the credit quality of its financing receivables in an ongoing manner and (ii) assess the quantitative and qualitative risks arising from the credit quality of its financing receivables.

We have one class of financing receivables.

We note the December 31, 2014 mortgage balance is approximately 17% of our total assets with the majority (92%) of the balance comprised of three mortgage notes.

We address the qualitative and quantitative provisions of paragraph 29 in different areas of our disclosures. Our evaluation process is largely focused on the qualitative risk factors. We refer to our disclosure in Note 2 to our consolidated financial statements "Loan and Direct Financing Lease Impairments" for our discussion regarding the credit quality of our mortgage notes and receivables in general. Within our Loan and Direct Financing Lease Impairments disclosure, we specifically discuss credit quality indicators similar to those set forth in ASC 310-10-55-19. Specifically, we evaluate the following when determining the collectability of our mortgage notes receivable such as (i) non-payment under the loan documents, (ii) impairment of the underlying collateral, (iii) financial difficulty of the operator or other circumstances that may impair full execution of the loan documents. The following is an excerpt from our Note 2 disclosure:

> Management evaluates our outstanding mortgage notes, direct financing leases and other notes receivable. When management identifies potential loan or direct financing lease impairment indicators, such as non-payment under the loan documents, impairment of the underlying collateral, financial difficulty of the operator or other circumstances that may impair full execution of the loan documents or direct financing leases, and management believes it is probable that all amounts will not be collected under the contractual terms of the loan or direct financing lease, the loan or direct financing lease is written down to the present value of the expected future cash flows. In cases where expected future cash flows are not readily determinable, the loan or direct financing lease is written down to the fair value of the collateral. The fair value of the loan or direct financing lease is determined by market research, which includes valuing the property as a nursing home as well as other alternative uses.

We also refer to our disclosure in Note 5 to our consolidated financial statements "Mortgage Notes Receivable" sub note (1) which states:

> As of December 31, 2013 and 2014, we have no allowance for loan loss for any of our mortgages.

We believe we have met the objectives of this disclosure requirement.

Note 20 – Consolidating Financial Statements, page F-40

5. *Please tell us how you determined it was not necessary to provide a consolidating statement of cash flows. Please refer to Rule 3-10 of Regulation S-X.*

Response: For the periods ending December 31, 2014 and 2013, 2012 we did not include the consolidating statement of cash flows in Note 20 - Consolidating Financial Statements because we determined the disclosure was immaterial given the limited nature of the non-guarantor subsidiaries activities. We note that the non-guarantor subsidiaries relate to the subsidiaries that have secured HUD debt associated with them. Due to the regulations regarding HUD debt, we have not historically engaged in investing activities with the subsidiaries. Accordingly, the cash flow activity of the non-guarantor subsidiaries has historically been limited primarily to operating activity or operating cash flows and financing activity primarily related to scheduled principal payments on the HUD debt, both of which we believe we have adequately disclosed. We note the following disclosure regarding our operating cash flow within Note 20:

> For the years ended December 31, 2014 and 2013, the operating cash flow of the non-guarantor subsidiaries approximated net income of the non-guarantor subsidiaries, adjusted for depreciation and amortization expense and rent recorded on a straight-line basis.

In addition, we note the following disclosure regarding the investing and financing activity within Note 20:

> For the years ended December 31, 2014, 2013 and 2012, the non-guarantor subsidiaries did not engage in investing or financing activities other than the principal payment of $4.4 million, $4.0 million and $3.1 million, respectively for the HUD mortgages on the facilities owned by the non-guarantor subsidiaries. All of the Subsidiary Guarantors of our outstanding Senior Notes and 2014 Credit Facilities, and all of our non-guarantor subsidiaries, are 100% owned by Omega.

We believe the above noted disclosures adequately reflect the cash flow activities of the non-guarantor subsidiaries for the periods presented. We also note that a significant portion of the HUD debt outstanding as of December 31, 2014 was retired in early 2015. As a result, in 2015, we will remove the unrestricted status of these subsidiaries resulting in us retroactively eliminating all assets, liabilities and operating activities associated with these non-guarantor subsidiaries from the non-guarantor subsidiaries column in our consolidating financial statements. In doing so, we will further reduce the materiality of the cash flow activities of the non-guarantor subsidiaries.

Effective April 1, 2015 we closed on the acquisition of Aviv REIT, Inc. (Aviv) via merger. The acquisition of Aviv creates increased complexities regarding our non-guarantor subsidiary activity, including the potential for investing activity. Accordingly, beginning with the second quarter of 2015, we will provide a consolidating statement of cash flows within our disclosures in future Exchange Act filings.

RE: Omega Healthcare Investors, Inc.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 27, 2015
File No. 001-11316

Ladies and Gentlemen:

On behalf of Omega Healthcare Investors, Inc. ("Omega" or the "Company"), I am responding to the comment received from your office by letter dated June 2, 2015 (the "June Letter") with respect to the above-referenced Form 10-K (the "Form 10-K") and in response to our response letter dated May 21, 2015.

I have restated and responded to your comments in the June Letter below. Capitalized terms used in this letter have the meanings ascribed to them in the Form 10-K. All page references (excluding those in the headings and the staff's comment) refer to the pages of the Form 10-K.

Form 10-K for the fiscal year ended December 31, 2014

Notes to Consolidated Financial Statements

Note 2 – Summary of Significant Accounting Policies, page F-8

In-Place Leases, page F-10

1. *We note your response to our prior comment three. Please address the following:*
   a. *Please provide more information regarding how you evaluate items (i) and (ii) noted in your response. Your response should address, but not necessarily be limited to, whether or not you use a threshold in your evaluation. To the extent you use thresholds, please tell us how you concluded that these thresholds are appropriate.*
   b. *Please tell us how you consider multiple factors in your evaluation. Your response should address, but not be limited to, if you consider all three factors noted in your response for each lease with a below market fixed rate renewal option, or if you only consider one or two of these items in certain circumstances.*

c. *Please tell us the potential impact to your financial statements, including the impact from the acquisition of Aviv, if you were to conclude that all below market fixed rate renewal options would be exercised.*

Response:

a. For each lease we assume through an acquisition of a property, we apply ASC 805-20-25-12 to determine whether the terms of the lease are favorable or unfavorable compared with the market terms of a lease for a similar property at the acquisition date. If the terms are favorable, an above-market lease intangible asset is recorded, and if the terms are unfavorable, a below-market lease liability is recorded. ASC 805-20-25-12 does not provide us with further guidance on how to arrive at the fair value of the above- or below-market lease intangible asset or liability, so we refer to ASC 820 and ASC 840 for the appropriate valuation guidance. We have historically used a discounted cash flow model to estimate the value of all assumed above and below market lease assets or liabilities based on the estimated difference between the projected future market rent and the contractual rent.

   ASC 820 provides detailed guidance for using management's judgment and other market participant considerations in assessing fair value when quoted prices are not available. We have extensive experience in underwriting and negotiating lease terms in the long-term healthcare and senior healthcare markets. Prior to the acquisition of Aviv on April 1, 2015, we had more than 500 facilities under lease, a significant portion of which were acquired from third parties and simultaneously leased to a new lessee, accordingly, no above or below market evaluation was required because no lease was assumed. We leverage our knowledge of acquiring these properties together with the knowledge gained through the countless lease transactions throughout our entire portfolio over the years as well as our understanding of market activities regarding the terms of other transactions that have recently closed in the long-term healthcare and senior housing industry to estimate the projected future market rent.

   Primarily all of our existing above and below market leases (with one exception of one below market lease assumed in 2013 which is not material) resulted from our 2009 and 2010 acquisition of a 143 facility portfolio that was comprised of 58 leases, including several master lease agreements that covered multiple facilities. We evaluated each assumed lease individually to determine if it was above or below market. Based on our evaluation, we determined that twenty-four of the assumed leases were below market.

For all leases determined to be below market, we do not use a “bright line” threshold in our evaluation of whether we should include any or all lease extension options in our in-place lease evaluation. We considered each lease individually based on a collective evaluation of the following factors: (i) the significance of the estimated rent differential between projected future market rent and contractual rent, in conjunction with (ii) the time between the acquisition closing date(s) and (iii) lease extension date(s). We also consider the length of the period covered by the lease renewal option as well as the current and expected operating performance of the facility and/or lessee to evaluate the likelihood of their ability to comply with the terms of the lease agreement, including any renewal periods that we may include in our below market lease analysis. We do not believe it is appropriate to limit our analysis to any one factor or using a “bright line” in applying our judgment to evaluate how a market participant would value the in place lease. Accordingly, we believe that a renewal option must be “reasonably assured” of being exercised under ASC 840-10-20 (which defines bargain renewal options).

In every lease we have assumed, the lease agreement requires the lessee to be in compliance with the terms of the lease agreement at the time of the renewal notification in order to extend the lease the additional term; accordingly, evaluating the current and expected operating performance is an important part of the evaluations process we use to determine whether or not to included renewal options in our below market lease evaluation. If we determine the lessee is experiencing or may experience operational issues that could cause them to fail to comply with the lease terms, we would likely excluded any renewal periods. We also consider our history with the operator. We have not typically excluded renewal terms due to operator performance issues in the past, but may do so in the future if we determine it appropriate to do so.

We use this approach because we believe it reflects quantitative and qualitative factors that our tenants typically reference in making renewal decisions.

Example 1:
For example, for a lease assumed with a modest projected below market rent, but a relatively close extension date (i.e., a renewal notification period with in a few years of the acquisition date), we would likely include the first lease extension in our evaluation because it is unlikely that the market conditions between the acquisition date and the renewal notification date would change dramatically enough to change our assumption of projected market rent at the time of the lease renewal notification, however, depending on the renewal terms (including the length of the additional lease term) we may or may not include additional renewals.

Example 2:
Assume the same facts in the previous example. Also assume that the lease includes two 10 year renewal options. As noted above, we may include the first renewal option that was due to be exercised in a few years of the date of acquisition because we would have a higher degree of confidence that the projected future market rent will not change significantly and therefore, believe it is reasonable assured that the renewal option will be exercised. However, it is less likely that we would include the second renewal option in our below market in-place lease evaluation because of the uncertainty regarding market rent more than a decade away.

Example 3:
Assume the same modest projected below market rent, but with a single lease renewal extension notification date that is 10 years from the date of acquisition, we would not include the extension in our evaluation for the same reason noted in example 2 (i.e., the uncertainty regarding market rent a decade away) unless there were other significant indicators present that led us to believe that renewal was reasonably assured.

In summary, to determine whether to include the lease renewal term(s) in our in-place lease evaluations we use all three of the factors collectively as noted above in our evaluation. Depending on the individual facts and circumstances of each lease, we assess whether to include any or all lease renewal periods.

b. As noted in our response to (a) above, we consider all three factors in our evaluation of each assumed leases.

c. We closed the Aviv acquisition on April 1, 2015. Due to the timing of the Aviv acquisition, we have not completed our evaluation of our preliminary purchase price accounting, including the determination of assumed below market leases. Accordingly, we are not in a position to estimate the impact of including all of the renewal options for below market leases of Aviv. However, as noted above, we will review each lease individually and include any renewal options that we believe are reasonably assured to be exercised in the lease term.

In response to your request, we quantified the incremental impact to our financial statements if we assumed all below market renewal options for in-place leases assumed in connection with all acquisitions through December 31, 2014. The following table summarizes the incremental impact of including all of the renewal options for below market leases ($ in millions):

Impact on financial statements	Projected incremental below market lease
Increase in acquired lease intangible liabilities	$ 22.3
Total assets as of December 31, 2014	$ 4,598.0
% of total assets as of December 31, 2014	0.48%

In addition to the above, we estimate the additional rental income related to amortizing the acquired lease intangible liabilities would have resulted in less than $0.1 million in additional rental income in 2014. The additional rental income if recorded would have been less than 0.01% of our consolidated total operating revenue and net income for the year ended December 31, 2014.

Based on the foregoing, we respectfully represent to the Staff that the projected impact from including all below market renewal options, as opposed to the below market renewal options that we have included in our below market in-place lease analysis, would not have a material impact on our consolidated 2014 financial statements.

* * * * *

We would respectfully request your prompt consideration of our responses to your comments. We sincerely hope that the staff views our responses as complete and would very much appreciate the staff contacting us as soon as possible by telephone if there are any remaining issues. Please note that because Omega's Form S-4 (SEC File No. 333-203447) was not declared effective on or before June 8, 2015, Omega is obligated to pay liquidated damages accruing at an annual rate of 0.25% on $250,000,000 of outstanding senior notes until such Form S-4 is declared effective. Accordingly, Omega is committed to promptly addressing any remaining questions you may have so that Omega may promptly request that the Form S-4 be declared effective.

If you have any questions or if we can be of further assistance to you in the review process, please contact me at 410/427-1728 (fax: 410/427-8828), or Eliot W. Robinson of our counsel Bryan Cave LLP at 404/572-6785.

Re: Parkway Properties, Inc.
Form 10-K for the year ended December 31, 2014
Filed February 25, 2015
File No. 001-11533

Dear Ms. John:

This letter is submitted by Parkway Properties, Inc. (the "***Compan***y") in response to comments from the staff of the Division of Corporation Finance (the "***Staff***") of the Securities and Exchange Commission (the "***Commission***") in a letter dated August 25, 2015 (the "***Comment Letter***") with respect to the Company's Annual Report on Form 10-K for year ended December 31, 2014 (File No. 001-11533) filed with the Commission on February 25, 2015 (the "***Form 10-K***").

For your convenience, the Staff's numbered comments set forth in the Comment Letter have been reproduced in italics herein with responses immediately following each comment. Unless otherwise indicated, page references in the reproductions of the Staff's comments refer to the Form 10-K. Defined terms used herein but not otherwise defined herein have the respective meanings given to them in the Form 10-K.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 38

1. We note that you disclose NOI and same store NOI in your earnings releases and supplemental materials. Please tell us if you consider these measures to be key performance indicators. To the extent these measures are considered to be key performance indicators, in future filings please include the measures as well as the required disclosure in accordance with Item 10(e) of Regulation S-K within your Management's Discussion and Analysis. Include an example of any future disclosure in your response.

Response to Comment No. 1

In future filings under the Securities Exchange Act of 1934, as amended ("***Exchange Act periodic reports***"), the Company will disclose NOI and same-store NOI because it does consider these measures to be key performance indicators. Future Exchange Act periodic reports will include disclosure substantially along the lines of the following (except to the extent permitted to be excluded by Item 10(e)(iii) of Regulation S-K):

NOI and Same-Store NOI

We define net operating income ("NOI") as income from real estate operations less property operating expenses (before interest expense, impairment charges and depreciation and amortization). NOI excludes interest expense, depreciation and amortization, management company income and expenses, general and administrative expenses, acquisition costs, gain/loss on sale of real estate, impairments and other non-operating items. NOI measures 100% of the operating performance of Parkway Properties LP's real estate properties in which Parkway Properties, Inc. owns an interest. We consider NOI to be a useful performance measure to investors and management because it reflects the revenues and expenses directly associated with owning and operating our properties and the impact to operations from trends in occupancy rates, rental rates and operating costs not otherwise reflected in net income.

We also evaluate performance based upon same-store NOI ("SSNOI"). SSNOI reflects the NOI from properties that were owned for the entire current and prior reporting periods presented and excludes properties acquired or sold during those periods, which eliminates disparities in net operating income due to acquisitions and dispositions of properties during such period. We believe that this measure provides a more consistent metric for the comparison of our properties from period to period.

NOI and SSNOI as reported by us may not be comparable to similar measures reported by other REITs that do not define the measures as we do. NOI and SSNOI are not measures of operating results as measured by GAAP and should not be considered alternatives to net income.

The following table presents a reconciliation of our net income (loss) to NOI and SSNOI for [the periods to be provided in the filing] (in thousands):

Net income (loss) for Parkway Properties, Inc.
Add (deduct):
Interest expense
Loss on extinguishment of debt
Depreciation and amortization
Management company expenses
Income tax expense
General and administrative
Acquisition costs
Equity in (earnings) loss of unconsolidated joint ventures
Sale of condominium units
Cost of sales - condominium units
Net income (loss) attributable to noncontrolling interests
Loss from discontinued operations
Gains on sale of real estate
Impairment loss on real estate
Management company income
Interest and other income
Net operating income from consolidated office and parking properties
Less: Net operating income from non same-store properties
Same-store net operating income

Funds from Operations ("FFO"), page 62

2. *Please expand your disclosure to include a statement disclosing the reasons why you believe the presentation of "recurring funds from operations" provides useful information to investors in accordance with Item 10(e)(1)(i)(C) of Regulation S-K.*

Response to Comment No. 2

In future Exchange Act periodic reports, to the extent the Company uses recurring funds from operations ("***recurring FFO***") as a key performance indicator, it will include a statement substantially along the lines of the following (except to the extent permitted to be excluded by Item 10(e)(iii) of Regulation S-K) to disclose why it believes recurring FFO provides useful information to investors in accordance with Item 10(e)(1)(i)(C) of Regulation S-K:

> In addition to FFO, we also disclose recurring FFO, which excludes our share of non-cash adjustments for interest rate swaps, realignment expenses, adjustments for non-recurring lease termination fees, gains and losses on extinguishment of debt and acquisition costs. Although this is a non-GAAP measure that differs from NAREIT's definition of FFO, we believe it provides a meaningful presentation of operating performance because it allows investors to compare our operating performance to our performance in prior reporting periods without the effect of items that by their nature are not comparable from period to period and tend to obscure our actual operating results. Recurring FFO measures 100% of the operating performance of Parkway Properties LP's real estate properties in which Parkway Properties, Inc. owns an interest.

EBITDA, page 63

3. *We note your presentation of EBITDA and the definition in footnote 1 to the reconciliation on page 65, which differs from EBITDA as defined by Exchange Act Release No. 47226. To the extent that this non-GAAP measure is presented in future filings, please revise the label to distinguish this measure from EBITDA (e.g., "Adjusted EBITDA"). Refer to Question 103.01 of the C&DIs on Non-GAAP Financial Measures.*

Response to Comment No. 3

In future Exchange Act periodic reports, the Company will include a reconciliation of EBITDA as defined by Exchange Act Release No 47226, and show further adjustments to EBITDA as "Adjusted EBITDA." Future Exchange Act periodic reports will include disclosure substantially along the lines of the following (except to the extent permitted to be excluded by Item 10(e)(iii) of Regulation S-K):

EBITDA and Adjusted EBITDA

We believe that using EBITDA as a non-GAAP financial measure helps investors and our management analyze our ability to service debt and pay cash distributions. We define EBITDA as net income before interest expense, income taxes and depreciation and amortization. We further adjust EBITDA to exclude acquisition costs, gains and losses on early extinguishment of debt, impairment of real estate, share-based compensation expense and gains and losses on sales of real estate (“Adjusted EBITDA”).

Adjustments for Parkway’s share of partnerships and joint ventures are included in the computation of Adjusted EBITDA on the same basis.

However, the material limitations associated with using EBITDA and Adjusted EBITDA as non-GAAP financial measures compared to cash flows provided by operating, investing and financing activities are that EBITDA and Adjusted EBITDA do not reflect our historical cash expenditures or future cash requirements for working capital, capital expenditures or the cash required to make interest and principal payments on our outstanding debt. Although EBITDA and Adjusted EBITDA have limitations as an analytical tool, we compensate for the limitations by only using EBITDA and Adjusted EBITDA to supplement GAAP financial measures. Additionally, we believe that investors should consider EBITDA and Adjusted EBITDA in conjunction with net income and the other required GAAP measures of our performance and liquidity to improve their understanding of our operating results and liquidity. EBITDA and Adjusted EBITDA measure 100% of the operating performance of Parkway Properties LP’s real estate properties in which Parkway Properties, Inc. owns an interest.

We view EBITDA and Adjusted EBITDA primarily as a liquidity measure and, as such, the GAAP financial measure most directly comparable to them is cash flows provided by operating activities. Because EBITDA and Adjusted EBITDA are not measures of financial performance calculated in accordance with GAAP, they should not be considered in isolation or as a substitute for operating income, net income, or cash flows provided by operating, investing and financing activities prepared in accordance with GAAP. The following table reconciles cash flows provided by operating activities to EBITDA and Adjusted EBITDA for [the periods to be provided in the filing] (in thousands):

Cash flows provided by operating activities
Interest expense, net
Tax expense - current
EBITDA
Amortization of below market leases, net
Acquisition costs
Loss on extinguishment of debt
Change in deferred leasing costs
Change in condominium units
Change in receivables and other assets
Change in accounts payable and other liabilities
Adjustments for noncontrolling interests and unconsolidated joint ventures
Adjusted EBITDA

The following table reconciles net income (loss) for Parkway Properties, Inc. to EBITDA and Adjusted EBITDA for [the periods to be provided in the filing] (in thousands):

Net income (loss) for Parkway Properties, Inc.
Adjustments to net income (loss) for Parkway Properties, Inc.:
Interest expense, net
Income tax expense
Depreciation and amortization
EBITDA
EBITDA adjustments - noncontrolling interest in real estate partnerships and unconsolidated joint ventures
Impairment loss on real estate
Gains on sale of real estate (Parkway's share)
Loss on extinguishment of debt
Noncontrolling interest - unit holders
Acquisition costs
Amortization of share-based compensation
Adjusted EBITDA

Item 8. Financial Statements and Supplementary Data.

Note 13 - Noncontrolling Interests, page 101

4. *We note your disclosure on page 74 that you consolidate joint ventures where you are the sole general partner and the limited partners do not possess kick-out rights or other substantive participating rights. Please provide us with a detailed analysis to support your conclusion to consolidate Fund II and address any substantive participating rights held by TRST.*

Response to Comment No. 4

The Company respectfully submits that it has analyzed its interest in Fund II and determined that the Company controls Fund II and it is proper to consolidate this interest in its financial statements.

On May 14, 2008, the Company, through affiliated entities, entered into a limited partnership agreement forming a $750 million discretionary fund ("***Fund II***") with the Teacher Retirement System of Texas ("***TRST***") for the purpose of acquiring multi-tenant office properties. TRST is a 70% limited partner investor and the Company, through affiliated entities, is a 30% investor and serves as the general partner.

The Company first considered whether the entity was a variable interest entity under ASC 810. The Company's management concluded that the entity does not meet the definition of a variable interest entity under ASC 810-10 because it does not have any of the following characteristics:

a. the entity does not have enough equity to finance its activities without additional subordinated financial support;

b. the equity holders, as a group, lack the characteristics of a controlling financial interest; and

c. the legal entity is structured with non-substantive voting rights (i.e., an anti-abuse clause).

Pursuant to ASC 810-20-25-3, the general partner in a limited partnership is presumed to control that limited partnership regardless of the extent of the general partner's ownership interest in the limited partnership.

Furthermore, pursuant to ASC 810-20-25-5, the assessment of whether the rights of the limited partners overcome the presumption of control by the general partner is a matter of judgment that depends on facts and circumstances. The general partner does not control the limited partnership if the limited partners have either of the following:

a. the substantive ability to dissolve (liquidate) the limited partnership or otherwise remove the general partner without cause (as distinguished from with cause); or

b. substantive participating rights.

The Company's management evaluated these criteria and concluded neither criteria was met.

Criteria (a) was not met because the limited partner only has the ability to remove the general partner for cause or under a change in control. Section 13.1 of the limited partnership agreement of Fund II (the "***Fund II LPA***") states, in relevant part:

> "TRST shall have the right to remove the General Partner at any time for Cause upon thirty (30) days' prior written notice, except that in the event of potential material harm to the business or value of the Partnership, the General Partner shall be removed immediately upon written notice. In addition, TRST may remove the General Partner upon thirty (30) days' prior written notice in the event there is a Change of Control."

Criteria (b) was not met because the limited partner does not have substantive participating rights. ASC 810-20-20 defines participating rights as rights that allow the limited partners to participate in certain financial and operating decisions of the limited partnership that are made in the ordinary course of business.

Section 7.1 of the Fund II LPA, states, in relevant part:

"The management, operation, and control of the Partnership and its business and the formulation of its investment policy, including, by means of example and not limitation, the day-to-day responsibility for acquiring, operating, financing and managing the Investments, shall be vested exclusively in the General Partner…."

Section 7.1 of the Fund II LPA continues:

"The General Partner shall, in its sole discretion, exercise all powers necessary and convenient for the purposes of the Partnership and all of the power conferred by the [Delaware Revised Uniform Limited Partnership Act] on the general partner of a limited partnership, including the power to conduct the Partnership's business."

Furthermore Section 1.4 of the Fund II LPA, states, in relevant part:

"Subject to the limitations set forth herein, the business and purposes of the Partnership shall be to, directly and indirectly, acquire, hold, maintain, operate, improve, renovate, expand, originate, use, lease, finance, manage and dispose of Investments (as hereinafter defined) and to engage in any and all activities as are related or incidental to the foregoing, as determined by the General Partner in its sole discretion."

Finally, the Company's management evaluated ASC 810-20-25-13, which states that a limited partner's rights (whether granted by contract or by law) that would allow limited partners to effectively participate in the following actions of the limited partnership shall be considered substantive participating rights and would overcome the presumption that the general partner controls the limited partnership:

a. selecting, terminating and setting the compensation of management responsible for implementing the limited partnership's policies and procedures; and

b. establishing operating and capital decisions of the limited partnership, including budgets, in the ordinary course of business.

The Company's management concluded neither criteria was met by reference to the applicable sections noted above. Section 7.6 of the Fund II LPA explicitly states that:

"No Limited Partner, in its capacity as a Limited Partner, shall participate in the management of the business and affairs of the Partnership. No Limited Partner, in its capacity as a Limited Partner, shall have any right or power to sign for or to bind the Partnership in any manner or for any purpose whatsoever, or have any rights or powers with respect to the Partnership except those expressly granted to such Limited Partner by the terms of this Agreement or those conferred upon such Limited Partner by law, and no prior consent or approval of the Limited Partners shall be required in respect of any act or transaction to be taken by the General Partner on behalf of the Partnership unless otherwise provided in this Agreement."

Based on the guidance of ASC 810-20-25-3 and ASC 810-20-25-5, the Company's management concluded that the Company controls Fund II, the presumption of control by the general partner has not been overcome because the limited partner does not have kick-out rights or substantive participating rights, and, therefore, the Company properly consolidates Fund II.

Re: **Pennsylvania Real Estate Investment Trust**
Form 10-K for the year ended December 31, 2014
Filed February 23, 2015
File No. 001-06300

Dear Ms. Marrone:

Pennsylvania Real Estate Investment Trust (the "Company") has considered carefully each of the comments in your letter dated September 8, 2015, and on behalf of the Company, I respectfully provide the Company's responses to your comments below. For your convenience, the text of each comment is reproduced below before the applicable response.

Form 10-K for the Year Ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds From Operations, page 56

Comment 1:

Please tell us how your definition of FFO is consistent with the NAREIT definition of FFO, specifically addressing your adjustments for extraordinary items (computed in accordance with GAAP) and significant non-recurring events that materially distort the comparative measurement of company performance over time.

Response:

In future filings, the Company will state only the main definition set forth in NAREIT's White Paper on Funds From Operations (April 2002) (the "White Paper"). The clause regarding "extraordinary items (computed in accordance with GAAP) and significant non-recurring events that materially distort the comparative measurement of company performance over time" was derived from Section III.B of the White Paper, "Treatment of Non-recurring and Extraordinary Items," but it is not part of the main definition, and will be omitted in the future.

The Company's calculation of FFO has always been entirely consistent with the main definition in the White Paper and was not affected by the inclusion of that clause as we have not excluded any extraordinary items or significant non-recurring events. We note that we do exclude impairment write-downs of depreciable real estate, in accordance with NAREIT's longstanding guidance that it is consistent with NAREIT's definition to exclude impairment write downs of depreciable real estate. In 2011, NAREIT reiterated its guidance that excluding such impairments is consistent with the NAREIT definition. Thus, the Company's definition of FFO and our determination of FFO in accordance with that definition are wholly consistent with the NAREIT definition.

Comment 2:

We note that your calculation of FFO includes an adjustment for preferred share dividends. Please revise your presentation in future filings to clearly label your FFO measure (e.g., FFO attributable to common shareholders). Also make similar revisions to your future earnings releases filed on Form 8-K, as appropriate.

Response:

In future filings, the Company will revise its presentation to clearly label the applicable FFO measure, including in future earnings releases furnished on Form 8-K, as follows:

FFO attributable to common shareholders and OP Unit holders

<u>Reconciliation of GAAP Net Income (Loss) to Non-GAAP Measures, page 58</u>

Comment 3:

We note your reconciliations on pages 59 - 60 where you have adjusted the GAAP financial information to allocate your share of revenue and expense from unconsolidated partnerships. Please tell us the consideration you gave to Question 102.10 of the Compliance and Disclosure Interpretations on Non-GAAP Financial Measures.

Response:

The Company has given consideration to that Question as follows: Question 102.10 of the Compliance and Disclosure Interpretations on Non-GAAP Financial Measures addresses the presentation of a "full non-GAAP income statement." In the Company's view, as noted in its June 3, 2011 response to the Commission's May 16, 2011 comment letter, the tables on pages 59 and 60 of the Form 10-K constitute a selected or summary income statement, not a full non-GAAP income statement.

As also noted in that prior response, in connection with the preparation of its Form 10-K a few years ago, the Company obtained feedback from shareholders and investment research analysts as part of a process designed to develop a presentation format for this reconciliation table that displayed the information in a user-friendly, logical, accessible and succinct manner. The Company believes that its presentation constitutes informative, useful and easily understandable disclosure. The Company also believes that showing the relationship among these measures as well as the contribution from consolidated properties and unconsolidated partnerships in a single table is helpful to investors. For the foregoing reasons, in the Company's view, the Company's presentation constitutes valuable, clear and meaningful disclosure and is not inconsistent with Question 102.10 of the Compliance and Disclosure Interpretations on Non-GAAP Financial Measures.

Comment 4:

To the extent that this non-GAAP measure and reconciliation format is presented in future filings, please provide the following additional disclosures:

- **clearly label the "total" column as a non-GAAP measure**
- **explain why the current presentation is useful to investors and any limitations to its use**
- **explain the process used to derive the amounts reported in the "share of unconsolidated partnerships" column**
- **include explicit disclosure that the company does not control the unconsolidated partnerships or have legal claim to the assets, liabilities, revenues or expenses of the unconsolidated partnerships**
- **explain the economics of the unconsolidated partnerships to which the company is entitled under the partnership agreements.**

Please provide us with your proposed revisions.

Response:

In future filings, the Company will revise the presentation and explanations of the non-GAAP measures and the reconciliation as follows:

- The Company will clearly label the "total" column as a non-GAAP measure
- We note that, in accordance with Item 10(e)(1)(i)(C) and (D) of Regulation S-K, the Company has previously included on pages 52-53 and 56-57 statements disclosing the reasons why management believes that presentation of the non-GAAP financial measures of Net Operating Income ("NOI")(the determination of which involves use of the proportionate-consolidation method) and FFO provide useful information to investors and, to the extent material, the additional purposes for which the registrant's management uses these non-GAAP financial measures, as well as the limitations on the use of such measures. The Company will include in this disclosure an explanation as to why the presentation of the Company's share of the revenue and expenses from unconsolidated partnerships is useful to investors, as follows:

  "We believe that this presentation is helpful to management and investors because it provides comparable information about the operating results of our unconsolidated partnerships and is thus indicative of the return on property investment and of operating performance over time. Results based on our share of the results of unconsolidated partnerships do not represent cash generated from operating activities of our unconsolidated partnerships and should not be considered to be an alternative to cash flow from unconsolidated properties' operating activities as a measure of our liquidity, because we do not have a direct legal claim to the revenues or expenses of the unconsolidated partnerships beyond our rights as an equity owner or tenant in common owner."

- The Company will explain the process used to derive the amounts reported in the "share of unconsolidated partnerships" column as follows:

  "The amounts presented in the 'Share of Unconsolidated Partnerships' column are derived using the 'proportionate-consolidation method' (a non-GAAP measure), which includes our share of the results of our unconsolidated partnerships based on our ownership percentage in each such unconsolidated partnership.

  Under the partnership agreements relating to our current unconsolidated partnerships with third parties, we own a 25% to 50% economic interest in such partnerships. As such, in general, we have an indirect economic interest in our proportionate share of the revenue and expenses of the unconsolidated partnership, and, if there were to be some type of distribution of the assets and liabilities of the partnership, our proportionate share of those items. There are generally no provisions in such partnership agreements relating to special non-proportionate allocations of income or loss, and there are no preferred or priority returns of capital or other similar provisions. Thus, we believe that the proportionate-consolidation method represents a valuable means of showing the share of the operating results of our unconsolidated partnership properties that would be allocated to us based on our economic interest under the partnership agreement."

- The Company will include explicit disclosure that the Company does not control the unconsolidated partnerships or have legal claim to the assets, liabilities, revenues or expenses of the unconsolidated partnerships, as follows:

  "We hold a non-controlling interest in each of our unconsolidated partnerships, and account for such partnerships using the equity method of accounting. We do not control any of these equity method investees for the following reasons:

  - Except for two properties that we co-manage with our partner, all of the other entities are managed on a day-to-day basis by one of our other partners as the managing general partner in each of the respective partnerships. In the case of the co-managed properties, all decisions in the ordinary course of business are made jointly.

  - The managing general partner is responsible for establishing the operating and capital decisions of the partnership, including budgets, in the ordinary course of business.

  - All major decisions of each partnership, such as the sale, refinancing, expansion or rehabilitation of the property, require the approval of all partners.

  - Voting rights and sharing of profits and losses are generally in proportion to the ownership percentages of each partner.

  We do not have a direct legal claim to the assets, liabilities, revenues or expenses of the unconsolidated partnerships beyond our rights as an equity owner, in the event of any liquidation of such entity, and our rights as a tenant in common owner of certain unconsolidated properties.

  We record the earnings from the unconsolidated partnerships using the equity method of accounting under the statements of operations caption entitled 'Equity in income of partnerships,' rather than consolidating the results of the unconsolidated partnerships with our results. Changes in our investments in these entities are recorded in the balance sheet caption entitled 'Investment in partnerships, at equity.' In the case of deficit investment balances, such amounts are recorded in 'Distributions in excess of partnership investments.

We hold legal title to properties owned by three of our unconsolidated partnerships through tenancy in common arrangements. For each of these properties, such legal title is held by us and another person or persons, and each has an undivided interest in title to the property. With respect to each of the three properties, under the applicable agreements between us and the other persons with ownership interests, we and such other persons have joint control because decisions regarding matters such as the sale, refinancing, expansion or rehabilitation of the property require the approval of both us and the other person (or at least one of the other persons) owning an interest in the property. Hence, we account for each of the properties like our other unconsolidated partnerships using the equity method of accounting. The balance sheet items arising from these properties appear under the caption entitled 'Investments in partnerships, at equity.'

For further information regarding our unconsolidated partnerships, see note 3 to our consolidated financial statements."

- With respect to the Company's explanation of the economics of the unconsolidated partnerships to which the Company is entitled under the partnership agreements, the Company has set forth its proposed revisions in response to the third bullet point under this Response to Comment 4.

***

In connection with the responses to your comments set forth above, the Company acknowledges that:

- The Company is responsible for the adequacy and accuracy of the disclosure in its filings;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Securities and Exchange Commission from taking any action with respect to the filing; and
- The Company may not assert Staff comments as a defense in any proceeding initiated by the Securities and Exchange Commission or any person under the federal securities laws of the United States.

If you have any questions about any of the Company's responses to your comments or require further explanation, please do not hesitate to contact Robert McCadden, the Company's Chief Financial Officer, at (215) 454-1295 or Jonathen Bell, the Company's Chief Accounting Officer, at (215) 875-0426.

Sincerely,

/s/ Robert F. McCadden

SUBJECT: Response to your comment letter
PennyMac Mortgage Investment Trust
Form 10-K for the fiscal year ended December 31, 2014
Filed March 2, 2015
File No. 1-34416

Dear Ms. Monick:

I am writing in response to your letter dated June 22, 2015 regarding your review of the Annual Report on Form 10-K of PennyMac Mortgage Investment Trust (the "Company") for the fiscal year ended December 31, 2014 as filed on March 2, 2015.

Following are our responses to your comments. For ease of review, we have reprinted your comments in bold face followed by our responses.

General

1. Please tell us how you complied with Rule 5-04 of Regulation S-X, or tell us how you determined it was not necessary to provide a Schedule IV.

The Company provides mortgage loan concentration data in *Management's Discussion and Analysis of Financial Condition and Results of Operations – Investment Portfolio Composition – Mortgage Loans* that provides portfolio composition information for eight different attributions. The Company believes that its analysis provides more useful information than that required by Rule 5-04, given the nature of the assets acquired – distressed mortgage loans. The Company's presentation includes much of the information specified by Rule 12-29.

Specifically:

- the second table included in the Company's analysis groups its mortgage loans by categories (first or second trust deed);
- the first table included in the Company's analysis identifies mortgage loans between mortgage loans where principal and interest is payable at level amounts over life to maturity as well as those subject to balloon payments.

The tables also include information on:

- owner occupancy (the third table in the Company's presentation);
- loan seasoning (the fourth table in the Company's presentation);
- borrower creditworthiness as expressed by the borrower's FICO score (the fifth table in the presentation);
- current loan-to-value of the mortgage loans (the sixth table in the presentation);
- geographic distribution of the mortgage loans (the seventh table in the presentation); and
- the payment status of the mortgage loans (the eighth table in the presentation).

The Company does not group its mortgage loans at fair value by original loan amount as its mortgage loan investments are primarily comprised of distressed single-family mortgage loans that are carried at fair value, and the mortgage loans' fair values are generally significantly less than the mortgage loans' unpaid principal balances ("UPB"). Original loan amount and UPB are not significant indicators of risk. The Company believes that the attributes presented in Management's Discussion and Analysis of Financial Condition and Results of Operations are more relevant than the groupings of the portfolio's original mortgage loan amounts.

The Company supplements the loan attribution disclosures contained in Management's Discussion and Analysis of Financial Condition and Results of Operations in Note 8 – *Fair Value* and Note 12 – *Mortgage Loans at Fair Value* to its consolidated financial statements. In Note 8, the Company rolls forward its investment in distressed mortgage loans and discloses both the principal amount due upon maturity and the fair value of the mortgage loans. In Note 12 to its consolidated financial statements, the Company discloses the fair value and the unpaid principal balance by mortgage loan type.

The Company believes that its business operations have characteristics that are more similar to those of a bank holding company than those of a commercial company. Accordingly, the Company's financial statements in certain areas are prepared following the guidance of Article 9 of Regulation S-X. The Company also believes this position is supported by comment four of the staff's comment letter issued to the Company dated August 6, 2013 and in subsequent correspondence between the Company and staff relating thereto, whereby the Company was advised to conform with Rule 9-04 of Regulation S-X as it related to income statement presentation.

The Company therefore believes that the schedule specified in Rule 5-04 of Regulation S-X is rendered unnecessary as it is duplicative of much of the information provided by the Company and less relevant for understanding the Company's portfolio than the information provided in Management's Discussion and Analysis of Financial Condition and Results of Operations and the Notes to the consolidated financial statements.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations – Liquidity and Capital Resources, page 84

2. **You indicated in a response to the SEC Staff dated July 31, 2014 that in future annual reports, you would provide the average quarterly balance for your asset repurchase agreements for each of the past three years, the period-end balance for each of those quarters, and the maximum balance outstanding during each quarter and explain the cause and business reasons for material variances of such repurchase agreements. We are unable to locate such disclosure; please advise.**

The Company respectfully advises the staff that it inadvertently omitted the data from the Liquidity and Capital Resources section of the Company's Annual Report on Form 10-K (the "Annual Report") for the year ended December 31, 2014. The Company will include the tables in future Annual Reports.

Data on the average annual balance for the Company's repurchase agreements, the fiscal year-end balance and the maximum balance outstanding during each fiscal year are provided in Note 17 to the consolidated financial statements contained in the Company's Annual Report for the fiscal year ended December 31, 2014 and in Notes 18 – 22 to the consolidated financial statements contained in the Company's Annual Reports for the fiscal years ended December 31, 2013 and 2012.

Information on average and maximum balances outstanding, including the cause and business reasons for material variances between average and maximum balances of repurchase agreements, has also been included on a voluntary basis in the Liquidity and Capital Resources section of every Quarterly Report on Form 10-Q and Annual Report filed by the Company since the period ended September 30, 2010.

In its future Annual Reports, the Company will include the tabular disclosure of the average quarterly balance of assets sold under agreements to repurchase for each of the past three years, the period-end balance for each of those quarters, and the maximum balance outstanding during each quarter, along with an explanation of the cause and business reason for material variances of such repurchase agreements. The quarterly information for 2014, 2013 and 2012 is presented below.

	2014 quarter ended			
Assets sold under agreements to repurchase:	**December 31**	**September 30**	**June 30**	**March 31**
Average balance outstanding	$ 2.462.496	$2,501,816	$2,253,127	$1,795,702
Maximum daily balance outstanding	$ 3,187,742	$2,815,572	$2,814,572	$2,079,090
Ending balance	$ 2,730,130	$2,416,686	$2,701,755	$1,887,778

	2013 quarter ended			
Assets sold under agreements to repurchase:	**December 31**	**September 30**	**June 30**	**March 31**
Average balance outstanding	$ 1,839,662	$1,755,850	$1,385,350	$1,221,766
Maximum daily balance outstanding	$ 2,362,467	$2,736,873	$2,108,956	$1,619,022
Ending balance	$ 2,039,605	$1,980,058	$1,565,896	$1,615,050

Assets sold under agreements to repurchase:	2012 quarter ended December 31	September 30	June 30	March 31
Average balance outstanding	$ 1,031,394	$ 886,601	$ 736,305	$ 564,170
Maximum daily balance outstanding	$ 1,394,732	$1,372,720	$1,017,397	$ 734,585
Ending balance	$ 1,256,102	$1,041,371	$1,007,712	$ 501,441

The difference between the maximum and average daily amounts outstanding was due to increasing volume and the timing of mortgage loan purchases and sales in our correspondent production business and timing of distressed mortgage loan acquisitions.

Contractual Obligations, page 86

3. **It does not appear that you include interest expense related to certain debt agreements. In future periodic filings, please confirm that you will disclose the amount of interest related to your debt in future filings, or tell us why such information is not meaningful. Refer to footnote 46 of SEC Interpretive Release 33-8350 dated December 19, 2003.**

In future filings, the Company will include anticipated interest expense relating to its long-term debt agreements in its tabular disclosure of contractual obligations.

Consolidated Financial Statements – Note 8—Fair Value, page F-27 – Financial Statement Items Measured at Fair Value on a Recurring Basis

4. **We note that the mortgage loans at fair value consisting of fixed-rate jumbo loans held in a VIE are categorized as level 2 in the fair value hierarchy. Please tell us the differences in the valuation characteristics of these mortgages to those that underlie the remaining amount of mortgage loans at fair value categorized as level 3.**

The fixed-interest rate jumbo mortgage loans held in a VIE are prime-credit quality mortgage loans that the Company securitized shortly after acquisition. The Company has been able to estimate these mortgage loans' fair values using broker indications of fair value for all of the individual securities issued by the securitization trust to derive a fair value for the mortgage loans. The Company validates the brokers' indications of fair value using pricing models and inputs that are similar to the models and inputs used by other market participants. The Company believes that such methods and inputs are market-observable and therefore has classified such mortgage loans as "Level 2" financial statement items.

The remaining mortgage loans at fair value — mortgage loans classified as "Level 3" financial statement items — represent mortgage loans that were both seasoned and either severely delinquent or at heightened risk of default at acquisition. The market for such loans is limited and difficult to observe. Valuation of such mortgage loans therefore relies on significant unobservable inputs. Accordingly, such loans are categorized as "Level 3" financial statement items and their fair values are estimated using a discounted cash flow approach.

In future filings the Company will enhance its disclosure of its valuation techniques and inputs in Note 8 – *Fair Value* to further clarify its basis for classifying its mortgage loans held at fair value held in a VIE by adding the following sentences: For the mortgage loans at fair value held in a VIE, the fair values of all of the individual securities issued by the securitization trust are used to derive a fair value for the mortgage loans. The Company obtains indications of fair value from nonaffiliated brokers based on observed transactions for comparable securities and validates the brokers' indications of fair value using pricing models and inputs the Investment Manager believes are similar to the models and inputs used by other market participants.

Plum Creek Timber Company, Inc.

May 6, 2015

Ms. Erin E. Martin, Senior Counsel
Division of Corporation Finance
Securities and Exchange Commission
100 F Street NE
Washington, D.C. 20549-3010

Re: Plum Creek Timber Company, Inc. Form 10-K for the Fiscal Year Ended December 31, 2014

Dear Ms. Martin:

This letter is submitted on behalf of Plum Creek Timber Company, Inc. ("Plum Creek") in response to your letter dated April 23, 2015 ("Comment Letter") concerning Plum Creek's Form 10-K Annual Report for the Year Ended December 31, 2014 ("Form 10-K"). Plum Creek's response to the Comment Letter, along with certain requested acknowledgements, are hereby submitted below.

Segment Information, page 4

1. ***We note the disclosure of your aggregate standing timber inventory. Please tell us what consideration you have given to providing additional detail, to the extent available to management, regarding inventory data broken out by species and/or age of trees.***

Response: Plum Creek strives to provide meaningful and transparent disclosures in its periodic reports filed with the Securities and Exchange Commission. We try to strike a balance between providing enough details for our investors to understand the company's business while at the same time not overwhelming the reader with excess information that is not material to the company's results of operations or financial condition.

We believe that our current disclosure strikes that balance by providing investors with the most important information about our timber inventory: future harvest volume trends. By disclosing our current and forecasted harvest volumes, both short-term (5 years) and long-term (ten years and beyond), we provide our investors with one of the most important items of information necessary for estimating expected future cash flows from our timber segments. Coupled with price and cost information, harvest volume data is the key to understanding expected future cash flows, which we believe is of primary importance to our investors. That is why we focus on disclosure addressing these three items in our periodic reports filed with the Securities and Exchange Commission.

For example, on page 43 of our Form 10-K (Results of Operations, Northern Resources Segment), we explain why our 2014 northern sawlog and pulpwood harvest volumes have changed compared to the prior year. On page 44 of our Form 10-K (Results of Operations, Southern Resources Segment) we explain why our 2014 southern sawlog and pulpwood harvest volumes have changed compared to the prior year. Finally, on pages 41 and 42 of our Form 10-K (Events and Trends Affecting Operating Results, Harvest Plans), we explain how harvest levels in 2015 are expected to compare to 2014 and the reasons for the change, along with our expectations for short and long-term future harvest levels. In all cases, we provide this information for both our Northern Resources Segment and our Southern Resources Segment, broken out in each segment by sawlog and pulpwood data, because we believe this level of detail is most helpful to our investors to understand expected future harvest trends, and therefore, expected future cash flows from our timber segments. On the other hand, disclosing our timber inventory data by species and/or age class would not, in our opinion, help investors better assess expected future cash flows from our timber segments.

We believe that by disclosing our expected current and future harvest volume trends, we provide investors with material information that is more meaningful than disclosing our current timber inventory data broken out by species and/or age of trees. We hold quarterly calls with analysts, and we receive inquiry from analysts, investors, and prospective investors each day, and we are rarely asked about our inventory by species or age class. Each year we evaluate whether our periodic filings with the Securities and Exchange Commission provide investors with meaningful and material information. In the past, we have considered disclosing more detailed information about our timber inventory, but have concluded that disclosing future harvest levels is more meaningful to our investors because timber inventory is only one of many factors in determining future harvest levels.

In addition to the foregoing response to the Comment Letter, Plum Creek hereby acknowledges that:

- Plum Creek is responsible for the adequacy and accuracy of the disclosure in its Form 10-K;
- Staff comments or changes to disclosure in response to staff comments do not foreclose the Securities and Exchange Commission from taking any action with respect to the Form 10-K; and
- Plum Creek may not assert staff comments as a defense in any proceeding initiated by the Securities and Exchange Commission or any person under the federal securities laws of the United States.

If you have any questions regarding this matter, please contact Jose J. Quintana, our Assistant General Counsel, at (206) 467-3694.

Sincerely,

/s/ Rick R. Holley

Re: Potlatch Corporation
Form 10-K for the fiscal year ended December 31, 2014
Filed February 13, 2015
File No. 1-32729

Dear Mr. Gordon:

This letter is submitted on behalf of Potlatch Corporation (we and our) and responds to the Staff's comment letter of April 21, 2015 relating to our Form 10-K for our fiscal year ended December 31, 2014. For your convenience, we have reproduced the Staff's comments below and have provided our responses accordingly.

Form 10-K for the fiscal year ended December 31, 2014

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer

Repurchases of Equity Securities, page 19

1. *We are unable to locate the summary of shares authorized for issuance under your equity compensation plans, as contemplated by Item 201(d) of Regulation S-K. Please advise.*

Response:

The summary of shares authorized for issuance under our equity compensation plans, as required by Item 201(d) of Regulation S-K, was inadvertently omitted in our Annual Report on Form 10-K for the year ended December 31, 2014. The following table provides the information with respect to our equity compensation plans as of December 31, 2014:

EQUITY COMPENSATION PLAN INFORMATION

Plan category	Number of securities to be issued upon exercise of outstanding options, warrants or rights [1]	Weighted average exercise prices of outstanding options, warrants or rights [2]	Number of securities remaining available for future issuance under equity compensation plans
Equity compensation plans approved by security holders	376,040	—	1,388,704
Equity compensation plans not approved by security holders	—	—	—
Total	376,040	—	1,388,704

[1] Includes 160,233 performance shares, 32,455 restricted stock units (RSUs), 60,570 deferred RSUs and 122,782 deferred compensation director stock equivalent units.

[2] Performance shares, RSUs, deferred RSUs and director stock equivalent units do not have exercise prices.

The information in the equity compensation plan table is substantially disclosed in footnote 15 of our 2014 Annual Report on Form 10-K, which includes the number of outstanding performance shares, RSUs and deferred compensation director stock equivalent units. In addition, footnote 15 discloses approximately 1.1 million shares authorized for future use, which is lower than the number of securities remaining available for future issuance because we apply the maximum number of contingent performance shares to the calculation.

We will include the summary of shares authorized for issuance under our equity compensation plans in accordance with Item 201 (d) of Regulation S-K in our 2015 Annual Report on Form 10-K or by incorporation by reference in our 2015 Proxy Statement.

Management's Discussion and Analysis of Financial Condition and Results of Operations

2. *We note your use of EBITDDA and FAD in your investor presentation filed on March 10, 2015. Please tell us if you consider these measures to be key performance indicators. To the extent a measure is considered to be a key performance measure, in future filings please include the measure as well as the required disclosure in accordance with Item 10(e) of Regulation S-K within your Management's Discussion and Analysis. Please include an example of any future disclosure in your response.*

Response:

We do not consider EBITDDA or FAD to be key performance indicators for Potlatch. Our internal segment reports and variance analyses provided to our chief operating decision maker focus on our GAAP results. External discussions of our results in our Management's Discussion and Analysis, earnings release and earnings scripts utilize these GAAP internal segment reports and variance analyses, which serve to provide a view through the eyes of management. Our internal segment reports include EBITDDA as supplementary information at the bottom of a table or the back of a report, without commentary or analysis, consistent with our view that EBITDDA is not a key performance indicator. FAD is not presented in reports provided to our chief operating decision maker. We do not believe that adding EBITDDA and FAD to our Management's Discussion and Analysis would improve the ability of investors to assess our financial condition or results of operations.

Consolidated Results Comparing 2014 and 2013

Cost of Goods Sold, page 29

3. *You indicate impacts to your cost of goods sold line item for the increase from 2013 to 2014 include higher logging costs and forest management expenses in your Resource segment and higher log costs and labor-related expenses for your Wood Products segment. In future filings please quantify for us the consolidated amounts applicable to the material components of cost of goods sold and provide explanations for variances at this lower level or tell us why this is not necessary.*

Response:

Commencing with our Quarterly Report for the three months ended March 31, 2015, which was filed contemporaneously with this letter, we will present in tabular format the material components of cost of goods sold for each segment, along with explanations for variances at this lower level. Due to the alignment with segment revenues, we believe this segment level detail is more meaningful than consolidated cost of sales balances. Our segment footnote remains unchanged.

We hereby acknowledge that:

- the company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact me at 509-835-1508 if you have any questions or comments relating to the matters referenced above. Thank you for your attention to this matter.

Sincerely,

/s/ Stephanie A. Brady

Re: Prologis, Inc. and Prologis, L.P.
Form 10-K for the year ended December 31, 2014
Filed February 25, 2015
File No. 1-13545 and No. 1-14245

Dear Ms. Monick:

We are writing in response to your letter dated March 31, 2015, setting forth the comments of the staff of the Division of Corporation Finance (the "Staff") on the Form 10-K of Prologis, Inc. and Prologis, L.P. (together, the "Company") for the year ended December 31, 2014, filed with the Securities and Exchange Commission (the "SEC") on February 25, 2015 ("Form 10-K"). We have carefully considered the Staff's comments and our responses are set forth below. To facilitate the Staff's review, we have reproduced the Staff's comments in italicized text and added our response below.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Same Store Analysis, page 26

1. *In future annual filings, please reconcile same store portfolio – rental income, rental expenses and NOI on a full year basis. Additionally, please confirm for us and revise your disclosure in future periodic filings to reflect, if true, that the reconciling item for unconsolidated co-investment ventures represents your share of the unconsolidated co-investment. To the extent that the reconciling item for unconsolidated co-investment ventures represents total rental income, rental expenses and NOI for the unconsolidated co-investment ventures, please tell us how you determined that presentation is appropriate.*

We evaluate our operating properties in our same store pool on a quarterly basis and adjust the pool of properties to reflect dispositions for the quarter. We aggregate the net operating income

("NOI") for the same store pool for each of the four quarters to calculate a cumulative annual same store NOI. In our future annual filings, we will reconcile our same store rental income, rental expenses and NOI to amounts presented in our Consolidated Statements of Operations on an annual basis.

In our response dated June 26, 2008 (the "2008 Response") to the Staff's question regarding our Form 10-K for the year ended December 31, 2007, we had previously discussed with the Staff the appropriateness of our presentation of same store NOI with respect to our unconsolidated co-investment ventures. (Note that, ProLogis was the accounting acquirer in the 2011 merger between AMB Property Corporation and ProLogis. The 2008 Response was issued by ProLogis, the accounting predecessor of the combined companies.) The relevant sections from our 2008 Response are set forth below:

> "On June 16, 2008, Mr. Bill Sullivan and Mr. Jeff Finnin, the company's Chief Financial Officer and Chief Accounting Officer, respectively, spoke with Daniel Gordon and Jonathan Wiggins about the proposed disclosure of same store information in future filings. As we discussed, we include the results of our unconsolidated investees in our same store analysis due to our business model. We develop properties and then contribute such properties to unconsolidated investees but we continue to manage these properties after contribution and, as such, they are included in our same store analysis. We believe this presentation is more meaningful to investors because it more accurately represents our total portfolio of properties in which we invest and manage and it presents a more comprehensive and accurate reflection of the global rental markets in which we operate."

As further discussed in the 2008 Response

> "…we have separated the amounts included in the same store analysis and reflected them under the separate headings of "Consolidated" and "Unconsolidated Investees", we added Footnote (3) to the table to clearly disclose that the total amounts include the results of the properties owned by our unconsolidated investees and managed by us and we added the detail reconciliation to net operating income. As we agreed, we did not add a further reconciliation to operating income since we have reconciled to rental income, rental expenses and net operating income as disclosed in or computed from our consolidated statements of earnings, which are the most comparable measures included in our financial statements.
>
> A property that meets the definition to be included in the same store portfolio on an aggregate basis, would not always meet that definition if the same store portfolio was calculated on a stand alone basis for us or the unconsolidated investees. For example, if ProLogis contributed a property to an unconsolidated investee on January 1, 2008, the rental income and expenses of that property would be included in our consolidated rental income and expenses for the three months ended March 31, 2007 and in the rental income and expenses of the unconsolidated investee for the three months ended March 31, 2008. On a

combined basis it would be appropriate to include the results in a same store analysis, but on a ProLogis consolidated basis it would not be appropriate and would misrepresent the same store analysis, as the pools of properties are not consistent. We have further disclosed this in Footnote (1) to the table."

Since 2008, we have continued to disclose a reconciliation for same store NOI in a similar format as discussed in our 2008 Response. The explanation we provided to the Staff in our 2008 Response continues to be applicable to our business today. During the three year period ended December 31, 2014, we contributed 405 properties with more than 100 million aggregated square feet valued at $8.7 billion. We continue to monitor this disclosure to determine if additional information is necessary. To that end, we recently added additional disclosure by providing cumulative annual same store NOI in the Form 10-K, as discussed above. As stated above, in our future annual filings, we will reconcile our same store rental income, rental expenses and NOI to amounts presented in our Consolidated Statements of Operations on an annual basis.

Funds from Operations ("FFO"), page 37

2. *In the table on page 40, please tell us how the line items "Gains on dispositions of non-development properties and revaluation of equity investments upon acquisition of a controlling interest, net" and "Net gains on dispositions of development properties and land, net" are derived. For all periods presented, tell us how these line items reconcile to the line items "Gains on dispositions of investments in real estate and revaluation of equity investments upon acquisition of a controlling interest, net" and "Net gains on dispositions, including related impairment charges and taxes" from your consolidated statements of operations.*

In our FFO measure, we include "Gains (losses) from the contribution or sale of land and properties we develop." In our Core FFO measure, we exclude all gains. Prior to 2014, these gains could be reflected in continuing operations or discontinued operations. See below for a derivation of the line items "Gains on dispositions of non-development properties and revaluation of equity investments upon acquisition of a controlling interest, net" and "Net gains on dispositions of development properties and land, net" and a reconciliation to the amounts provided in our Statements of Operations.

	For the Year Ended December 31,		
	2014	2013	2012
Net gains per our Statements of Operations - by line item			
Continuing Operations			
Gains on dispositions of investments in real estate and revaluation of equity investments upon acquisition of a controlling interest, net	$ 725,790	$ 597,656	$ 305,607
Discontinued Operations			
Net gains on dispositions, including related impairment changes and taxes	—	116,550	35,098
Add back Impairment charges and taxes included in Discontinued Operations	—	1,187	30,828
Total gains included in our Statements of Operations	**$725,790**	**$715,393**	**$371,533**
Gains by type			
Net gains on dispositions of development properties and land, net (included in NAREIT and Prologis defined FFO, excluded from Core FFO)	$ 172,492	$ 428,738	$ 121,303
Gains on dispositions of non-development properties (excluded from FFO measures)	351,979	251,868	(36,105)
Gain on revaluation of equity investments upon acquisition of a controlling interest (excluded from FFO measures)	201,319	34,787	286,335
Total gains	**$725,790**	**$715,393**	**$371,533**
In our reconciliation from Net earnings (loss) to NAREIT defined FFO, we subtract gains not included in FFO.			
Gains on Dispositions of non-Development properties and revaluation of equity investments			
Gains on dispositions of non-development properties (excluded from FFO measures)	$ 351,979	$ 251,868	$ (36,105)
Gain on revaluation of equity investments upon acquisition of a controlling interest (excluded from FFO measures)	201,319	34,787	286,335
Adjustment for accumulated depreciation on development properties in discontinued operations	—	(15,340)	(43,197)
Total of adjustment "gains on dispositions of non-development properties and revaluation of equity investments upon acquisition of a controlling interest, net"	**$553,298**	**$271,315**	**$207,033**
In our reconciliation from FFO, as defined by Prologis, to Core FFO we subtract all gains and related items included in NAREIT and Prologis defined FFO.			
Net gains on dispositions of development properties and land, net			
Net gains of dispositions of development properties and land, net (included in NAREIT and Prologis defined FFO, excluded from Core FFO)	$ 172,492	$ 428,738	$ 121,303
Current tax expense recognized related to gains on dispositions of development properties and land (included in NAREIT and Prologis defined FFO, excluded from Core FFO)	(15,499)	(88,947)	—
Acquisition costs (included in NAREIT and Prologis defined FFO, excluded from Core FFO)	(4,195)	(2,976)	—
Total of adjustment "Net gains on dispositions of development properties and land, net"	**$152,798**	**$336,815**	**$121,303**

3. *In the table on page 40, please tell us the nature of the line item "Reconciling items related to noncontrolling interests." Further, please tell us how this adjustment is consistent with NAREIT defined FFO.*

In our calculation of NAREIT defined FFO, we make certain adjustments as outlined in the definition of FFO provided in our Form 10-K. For consolidated entities, these adjustments are made at 100% of the item included in our consolidated financial statements. In the line item "reconciling items related to noncontrolling interests" in the table on page 40 (the "FFO Reconciliation"), we remove the third-party share of the adjustments we made on a consolidated basis related to our consolidated co-investment ventures. For similar reasons we include a line item "our share of reconciling items included in earnings from unconsolidated entities" in the

FFO Reconciliation, which includes our share of the adjustments within the unconsolidated co-investment ventures. These adjustments primarily relate to depreciation expense and gains from disposition of properties in conformance with the NAREIT definition and result in a calculation of FFO that only includes our share of the FFO of these entities.

Financial Statements

Notes to Consolidated Financial Statements

17. Earnings/Loss per Common Share/Unit, page 86

4. *We note your disclosure on page 81 and 82 that RSUs and LTIP Units are considered participating securities. Please tell us how you considered these participating securities in your earnings per share calculation. Please refer to ASC 260-10-45-61A.*

We calculated earnings per share including participating securities in accordance with ASC 260-10-45-61A. The impact to earnings per share was less than $0.01 per share for both calculations and not considered significant to disclose. We will continue to calculate the impact each quarter and disclose the impact if it is significant.

Re: Prologis, Inc. and Prologis, L.P.
Form 10-K for the year ended December 31, 2014
Filed February 25, 2015
File No. 1-13545 and No. 1-14245

Dear Ms. Monick:

We are writing in response to your letter dated April 17, 2015, setting forth the comments of the staff of the Division of Corporation Finance (the "Staff") on the Form 10-K of Prologis, Inc. and Prologis, L.P. (together, the "Company") for the year ended December 31, 2014, filed with the Securities and Exchange Commission (the "SEC") on February 25, 2015 ("Form 10-K"). We have carefully considered the Staff's comments and our responses are set forth below. To facilitate the Staff's review, we have reproduced the Staff's comments in italicized text and added our response below.

<u>Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations</u>

<u>*Funds from Operations ("FFO"), page 37*</u>

1. *We note your response to prior comment 2. In the reconciliation, you adjust "Net gains on dispositions of development properties and land, net" for "Current tax expense recognized related to gains and dispositions of development properties and land (included in NAREIT and Prologis defined FFO, excluded from Core FFO)". Please clarify for us how you derived the 2014 and 2013 amounts for "Current tax expense recognized related to gains and dispositions of development properties and land*

(included in NAREIT and Prologis defined FFO, excluded from Core FFO)". Your response should include, but not necessarily limited to, a reconciliation of the "Current tax expense recognized related to gains and dispositions of development properties and land (included in NAREIT and Prologis defined FFO, excluded from Core FFO)" line item to your income statement and tell us the nature of any reconciling items.

Although we are a real estate investment trust ("REIT") under the Internal Revenue Code in the U.S., many of the foreign countries in which we have operations do not recognize REITs or do not accord REIT status under their respective tax laws to our entities that operate in their jurisdiction. In the United States, our taxable REIT subsidiaries are subject to taxation and we are taxed in certain states in which we operate.

When we dispose of a property, we may be required to pay a capital gains tax in the applicable jurisdiction based on the taxable gain. We derived the 2014 and 2013 current tax related to the sale of investments in real estate by totaling the taxes payable relating to property sales as well as the contributions of properties to our co-investment ventures in Mexico, Europe and Japan.

For purposes of calculating Core FFO, we exclude gains related to the sale of real estate and therefore, we adjust Prologis defined FFO to exclude any current tax specifically related to the sale of investments in real estate. To reconcile current tax expense related to the sale of investments in real estate to Current Income Tax Expense included in our Statements of Operations, we need to include the portion of current income tax expense that was offset by the deferred tax liability related to the real estate that was sold, plus other tax expense related to operating taxable income and state taxes.

Please see the below reconciliation of current tax expense related to the sale of investments in real estate (the amount we have excluded from Core FFO), to Current Income Tax Expense included in our Statements of Operations.

	2014	2013
Current tax expense related to the sale of investments in real estate (included in NAREIT and Prologis defined FFO, excluded from Core FFO) (1)	$ 15,499	$ 88,947
Current income tax expense offset by a deferred tax liability	30,521	20,722
All other current income tax expense	15,564	16,511
Current Income Tax Expense per our Statements of Operations	$ 61,584	$ 126,180

(1) In our letter to you dated April 6, 2015 we inadvertently referred to this line item as "Current tax expense recognized related to gains on dispositions of development properties and land (included in NAREIT and Prologis defined FFO, excluded from Core FFO").

2. *We note your response to prior comment 3. It appears that the measure you refer to as FFO is FFO attributable to common stockholders. In future periodic filings, please revise your disclosure to refer to this measure as FFO attributable to common stockholders. Additionally, please revise future periodic filings to clarify, as you have in your response, the nature of the adjustment "reconciling items related to noncontrolling interests."*

In future filings, we will refer to FFO as FFO attributable to common stockholders and we will clarify the nature of the adjustment “reconciling items related to noncontrolling interests” as we have in our response dated April 6, 2015.

* * * * *

In addition, we acknowledge that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact the undersigned at (415) 733-9405 if you have any questions or require additional information.

Sincerely,

/s/ Thomas S. Olinger

Re: PS Business Parks, Inc.
Form 10-K for the year ended December 31, 2014
Filed February 20, 2015
File No. 001-10709

Dear Ms. McManus:

On behalf of PS Business Parks, Inc. (the "**Company**"), I am responding to comments of the Staff of the Division of Corporation Finance (the "**Staff**") of the Securities and Exchange Commission (the "**Commission**") contained in the Staff's letter dated July 22, 2015 relating to the above-referenced filing.

I have recited the comment of the Staff in bold type below, and have followed the comment with the response of the Company. Capitalized terms used but not defined herein have the same meaning as defined in the above-referenced filing.

Item 2. Properties, page 17
1. We note that leases expiring by the end of the current and next fiscal year represent approximately 25.7% and 22.8% of annualized rental income. We also note disclosure on page 25 indicating that while new rental rates improved over expiring rental rates on an aggregate basis, you experienced declining rental rates in certain regions, including Virginia, Maryland and Orange County. In future filings, to the extent material, please address the relationship between market rents and expiring rents based on the regions in which you have material leases expiring at the end of the current fiscal year. In addition, to the extent material, please disclose if you have a concentration of expiring leases in particular regions.

We will include in our disclosures in future filings, to the extent material, (a) any known trend regarding the relationship of contractual rents on current year lease expirations and current market rents in those same markets and (b) if the Company has a concentration of expiring leases in particular regions.

Re: Public Storage
Form 10-K for the fiscal year ended December 31, 2014
Filed on February 25, 2015
File No. 001-33519

Dear Mr. John:

Set forth below is the response of Public Storage to the comments of the Staff that were set forth in your letter dated March 19, 2015, regarding our Form 10-K for the year ended December 31, 2014. The Staff's comments, indicated in bold, are followed by the response on behalf of Public Storage.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Self-Storage Operations Summary, page 29

1. **We note the line item in your table "Total net income" is not consistent with Net income included on your Statements of Income. In future filings, please revise the label for this line item to more accurately reflect the amount presented and provide clarifying disclosure to the extent necessary. Make similar adjustments to presentation in the tables on pages 30 and 38 and elsewhere throughout the filing, if necessary. In your response, tell us how you plan to revise your presentation in the future.**

Response:

In our future Exchange Act periodic reports, we will revise the line item labels on the tables in the following referenced pages of our Form 10-K for the year ended December 31, 2014: (i) "Total net income" on page 29 will be revised to "Operating income," (ii) "Net income" on pages 30 and 38 will each be revised to "Operating income," (iii) "Total ancillary net income" on page 43 will be revised to "Operating income," and (iv) "Self-storage net income" and "Total net income from self-storage" on page 47 will each be revised to "Operating income from self-storage." We will also ensure that the terminology in our future filings is otherwise consistent, where applicable, with our financial statement captions. We will also provide clarifying disclosure, as necessary.

In connection with Public Storage's response to the Staff's comments, Public Storage hereby acknowledges that:

? Public Storage is responsible for the adequacy and accuracy of the disclosure in the filing,
? Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing, and
? Public Storage may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact me or Lily Hughes, our Chief Legal Officer, at 818-244-8080, ext. 1537, if you have additional questions on this matter.

Sincerely,

/s/ John Reyes
Senior Vice President and
Chief Financial Officer

Re: Public Storage
Form 10-K for the fiscal year ended December 31, 2014
Filed on February 25, 2015
File No. 001-33519

Dear Mr. John:

Set forth below is the response of Public Storage to the comments of the Staff that were set forth in your letter dated April 15, 2015, regarding our Form 10-K for the year ended December 31, 2014. The Staff's comments, indicated in bold, are followed by the response on behalf of Public Storage.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Self-Storage Operations Summary, page 29

1. Your response to our prior comment one proposes changing the label associated with various line items to "Operating income". We note that these amounts are not consistent with Operating income presented on your Statements of Income. For example, we note that the line item references on Page 29 relates only to self-storage operations. Please clarify how your presentation in the future will address this matter for all instances where amounts presented as net income and operating income are not consistent with the amounts presented on the Statements of Income.

Response:

Please note that this response replaces our response dated March 31, 2015. It is meant to be responsive to your first letter dated March 19, 2015 as well as your letter dated April 15, 2015.

In our future Exchange Act periodic reports, we will ensure that the terminology in our future filings is consistent, when applicable, with our financial statement captions and that the amounts presented in our tables can be agreed to or reconciled by the reader to the applicable financial statement captions on our Statements of Income. In order to ensure that is the case, among other changes in narrative terminology and line-item labels, we will make the following changes in future filings, referenced to our Form 10-K for the year ended December 31, 2014:

(i) On page 29, the caption "Total net income" on the table will be revised to "Operating income from self-storage," and the revised caption will be footnoted as follows: See "Reconcilation of Depreciation and Amortization Expense and Operating Income" below for a reconciliation of the Operating Income from self-storage herein, to Operating Income on our Statements of Income. See (vii) below for an illustration of the referenced reconciliations.

(ii) Also on page 29, the caption "Total depreciation and amortization expense" will be footnoted as follows: See *"Reconcilation of Depreciation and Amortization Expense and Operating Income" below for a reconciliation of the Depreciation and Amortization expense from self-storage herein, to Depreciation and Amortization expense on our Statements of Income.* See (vii) below for an illustration of the referenced reconciliations.

(iii) Also on page 29, we will add a subtotal of "Operating income from self-storage" for the Same Store Facilities and Non Same Store Facilities, allowing Operating Income on the tables on pages 30 and 38, respectively, to be tied into this table, as they can be for the subtotals already provided for Revenues, Cost of operations, Net operating income, and Depreciation and amortization expense.

(iv) On pages 30 and 38, the current caption "Net income" on these tables will be revised to "Operating income from Same Store Facilities" and "Operating income from Non-Same Store Facilities", respectively.

(v) On page 43, the caption "Total ancillary net income" on the table will be revised to "Operating income from ancillary operations," and a footnote will be added to this caption and the existing caption entitled "commercial depreciation" as follows: *See "Reconciliation of Depreciation and Amortization Expense and Operating Income" below for a reconciliation of the Depreciation and Amortization Expense and Operating Income from ancillary operations herein, to the amounts on our Statements of Income.* See (vii) below for an illustration of the referenced reconciliations. The descriptor "Ancillary net income:" on this table will also be revised, to "Ancillary operating income:."

(vi) On page 47, the descriptor "Self-storage net income:" and the caption "Total net income from self-storage" on the table will be revised to "Self-storage operating income:" and "Operating income from self-storage", respectively.

(vii) Immediately following the section Net Operating Income, which begins on page 46, we will add the following section, which will allow the reader to reconcile from Depreciation and Amortization expense and Operating Income from self-storage and ancillary operations as mentioned in (i), (ii), and (v) above, to the amounts on our Statements of Income.

Reconciliation of Depreciation and Amortization Expense and Operating Income

In the tables above, we present "Depreciation and Amortization Expense" and "Operating Income" for our self-storage and ancillary operations. The table below reconciles from the amounts with respect to Self-Storage and Ancillary Operations to the aggregate amounts presented on our Statements of Income:

	Years ended December 31,		
	2014	2013	2012
	(Amounts in thousands)		
Depreciation and Amortization Expense			
Self-storage operations	$ 434,069	$ 384,623	$ 354,971
Ancillary (commercial) operations	3,045	2,779	2,810
Depreciation and amortization on our Statements of Income	$ 437,114	$ 387,402	$ 357,781
Operating Income			
Operating income from self-storage	$ 1,048,915	$ 941,174	$ 846,253
Operating income from ancillary operations	90,655	88,009	82,566
General and administrative expenses	(71,459)	(66,679)	(56,837)
Operating income on our Statements of Income	$ 1,068,111	$ 962,504	$ 871,982

In connection with Public Storage's response to the Staff's comments, Public Storage hereby acknowledges that:

Public Storage is responsible for the adequacy and accuracy of the disclosure in the filing,
Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing, and
Public Storage may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Please contact me or Lily Hughes, our Chief Legal Officer, at 818-244-8080, ext. 1537, if you have additional questions on this matter.

Sincerely,

/s/ John Reyes

RE: QTS Realty Trust, Inc.
Form 10-K for the year ended December 31, 2014
Filed February 23, 2015
File No. 001-36109 ("Form 10-K")

Form 8-K/A
Filed June 5, 2015
File No. 001-36109 ("Form 8-K")

Form 10-Q for the quarterly period ended June 30, 2015
Filed August 7, 2015
File No. 001-36109 ("Form 10-Q")

Dear Ms. John:

This letter sets forth the responses of QTS Realty Trust, Inc. (the "Company") to the comments from the staff (the "Staff") of the Division of Corporation Finance of the United States Securities and Exchange Commission (the "Commission") in a letter dated August 28, 2015 (the "Comment Letter") regarding the above referenced filings.

For ease of review, the Company has set forth below in bold type the numbered comments of the Staff in the Comment Letter, with the Company's responses thereto immediately following each comment.

Form 10-K for the year ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 67

1. **We note that over half of your NRSF is currently in the redevelopment pipeline. Please expand your discussion in future filings to disclose the portion of this space, if any, for which leases have already been executed and if your rentable space is typically built out to customer specifications or for general use.**

Response to Comment No. 1:

The Company respectfully submits that in future filings it will expand its disclosures to include the portion of its development pipeline NRSF which relates to space for which customer leases have already been executed. The Company will also disclose in future filings that its development pipeline NRSF is built out both to support general use (colocation) and for executed leases that require significant amounts of space and power, depending on the needs of each facility at that time.

The Company's future filings will include disclosure substantially similar to the following:

"We operate 12 data centers located in eight states, containing an aggregate of approximately 4.7 million gross square feet of space (approximately 94% of which is wholly owned by us), including approximately 2.1 million "basis-of-design" raised floor square feet, which represents the total data center raised floor potential of our existing data center facilities. This represents the maximum amount of space in our existing buildings that could be leased following full build-out, depending on the configuration that we deploy. We build out our data center facilities for both general use (colocation) and for executed leases that require significant amounts of space and power, depending on the needs of each facility at that time. As of December 31, 2014, this space included approximately 927,000 raised floor operating net rentable square feet, or NRSF, plus approximately 1.1 million square feet of additional raised floor in our development pipeline, of which approximately 97,000 NRSF is expected to become operational by December 31, 2015. Of the total 1.1 million NRSF in our development pipeline, approximately 130,000 square feet was related to customer leases which had been executed but not yet commenced."

Item 8. Financial Statement and Supplementary Data

Note 12. Earnings per share of QTS Realty Trust, Inc., page F-28

2. We note that your basic EPS calculation discloses net income per share *available to common shareholders*. Please label accordingly in future filings. We also note that you have presented diluted EPS on an aggregate basis, inclusive of noncontrolling interests in the partnership. Tell us why you believe it is appropriate to present basic EPS per common shareholder and diluted EPS inclusive of noncontrolling interests. Also disclose the number of potentially dilutive securities, if any, that were not included in the calculation because their effect was antidilutive for the periods presented. Refer to ASC 260-10-50-1.

Response to Comment No. 2:

In future filings, the Company will modify the current label, "Net income per share – basic," to an expanded label which reads, "Net income per share attributable to common stockholders – basic."

Regarding the presentation of diluted EPS, the Company has presented diluted EPS inclusive of noncontrolling interests, as prescribed by ASC 260-10-55-20(b), which states that "securities of a subsidiary that are convertible into its parent company's common stock shall be considered among the potential common shares of the parent company for the purposes of computing consolidated diluted EPS." The noncontrolling interests are primarily comprised of Class A units of QualityTech, LP, the Company's operating partnership (the "Operating Partnership"), which are redeemable for shares of Class A common stock of the Company ("Common Stock") on a one-for-one basis, which is discussed in Note 8 to the Consolidated Financial Statements of QTS Realty Trust, Inc. and QualityTech, LP for the year ended December 31, 2014 included in the Form 10-K ("2014 Financial Statements"). As such, in accordance with ASC 260-10-55-20(b), the Company has included these units (and their associated net income) in its diluted EPS calculation. The Company believes that including these units in its diluted EPS calculation presents investors and users of its financial statements a complete picture of the total number of shares and units (i.e., potential shares) that are party to the Company's consolidated net income, which is consistent with the way that the Company views this calculation.

The Company respectfully submits that while it has disclosed in Note 12 to its 2014 Financial Statements (Earnings per share of QTS Realty Trust, Inc.) the number and description of each of the types of dilutive securities it included in its diluted EPS calculation, in future filings the Company will disclose this information in a tabular reconciliation format and will disclose the number, if any, of antidilutive securities that it excluded from its diluted EPS calculation in a manner substantially similar to the following:

"Basic income (loss) per share is calculated by dividing the net income (loss) attributable to common shares by the weighted-average number of common shares outstanding during the period. Diluted income (loss) per share adjusts basic income (loss) per share for the effects of potentially dilutive common shares.

The computation of basic and diluted net income per share is as follows (in thousands, except per share data):

	Year Ended December 31, 2014	For the period October 15, 2013 through December 31, 2013
Numerator:		
Net income available to common stockholders - basic	$ 15,072	$ 3,154
Effect of net income attributable to noncontrolling interests	4,031	848
Net income available to common stockholders - diluted	$ 19,103	$ 4,002
Denominator:		
Weighted average shares outstanding - basic	29,055	28,973
Effect of Class A units and Class RS units *	7,770	7,797
Effect of Class O units and options to purchase Class A common stock on an "as if" converted basis *	309	24
Weighted average shares outstanding - diluted	37,134	36,794
Net income per share attributable to common stockholders - basic	$ 0.52	$ 0.11
Net income per share attributable to common stockholders - diluted	$ 0.51	$ 0.11

* The Class A units, Class RS units and Class O units represent limited partnership interests in the Operating Partnership, and are described in more detail in Note 8.

The computation of diluted net income per share for the year ended December 31, 2013 does not include 1,113,169 Class O units with an exercise price of $25.00, as their inclusion would have been antidilutive for that period. No securities were antidilutive for the year ended December 31, 2014, and as such, no securities were excluded from the computation of diluted net income per share for that period."

Note 16. Quarterly Financial Information (unaudited), page F-30

3. **Please tell us why the net income per share attributable to common shares – diluted is equal to the net income per share attributable to common shares – basic. Your disclosure on page F-28 indicates that there is a significant amount of dilutive shares outstanding.**

Response to Comment No. 3:

The Company respectfully submits that these two numbers are presented as being equal solely due to the effect of rounding. As described in the response to Comment 2 above, the vast majority of shares included in diluted shares (approximately 96% for the year ended December 31, 2014) that are not also included in basic shares are represented by Class A units of the Operating Partnership. Because these units are redeemable for shares of Common Stock on a one-for-one basis and because the Company's diluted net income also includes the income attributable to these units, these units have no effect on the EPS calculation (i.e., are neutrally dilutive). The remaining shares included in diluted shares that are not also included in basic shares (i.e., Class O units of the Operating Partnership on an "as if" converted basis and options to purchase Class A common stock on an "as if" converted basis, which totaled 309,378 on an "as if" converted basis for the year ended December 31, 2014), are not significant enough to change the disclosed EPS values, as those values are rounded to the nearest cent in all periods presented in Note 16 to the 2014 Financial Statements.

<u>Form 8-K/A filed June 5, 2015</u>

<u>Exhibit 99.3</u>

4. **We note that your pro forma financial statements include adjustments for the acquisition of the Princeton, NJ facility, the issuance of $300 million of senior unsecured notes, the issuance of $165 million Class A common stock, the acquisition of the Chicago, IL facility and the modification of the unsecured credit facility and the credit facility secured by the Richmond Property resulting in decreased interest rates on both. Please tell us whether these events are related to your Carpathia acquisition. To the extent that these events are not related to your Carpathia acquisition, please tell us why you included these adjustments within the pro forma financial statements in your Form 8-K.**

<u>Response to Comment No. 4</u>:

The Company's acquisition of its Princeton and Chicago facilities, issuance of $300 million of senior unsecured notes, issuance of $165 million Class A common stock and modification of its unsecured and secured credit facilities (the "Events") are not directly related to the Carpathia acquisition. The Company believes, however, that in presenting its pro forma financial statements in accordance with Rule 11-01(a)(1) of Regulation S-X, it is appropriate to include separate adjustments giving effect to the Events. The Company believes these separate adjustments are appropriate due to the materiality of the Events to investors and because each of the Events occurred during the period covered by the pro forma financial statements. Therefore, in accordance with Rule 11-01(a)(8), the Company included these adjustments in its pro forma financial statements, explicitly disclosing each of the Events in the introduction and footnotes to Exhibit 99.3 and including each of these adjustments in a separate column on the pro forma financial statements to distinguish them from the adjustments related to the Carpathia acquisition, allowing investors to explicitly identify the effects of the Carpathia acquisition. The Company believes this presentation provides the most meaningful information to users of its financial statements.

<u>Form 10-Q for the quarterly period ended June 30, 2015</u>

<u>Note 3 – Acquisitions</u>

<u>Carpathia Acquisition, page 19</u>

5. **We note that your allocation on page 20 is based upon a purchase price of $295 million inclusive of $44 million of assumed capital lease liabilities. We further note in your Form 8-K filed on June 2, 2015 that the $326 million purchase price disclosed on page 19 includes the assumption of capital lease liabilities which would appear to result in a $282 million purchase price. Please provide additional details regarding your basis for the $295 million purchase price.**

<u>Response to Comment No. 5</u>:

The Company respectfully submits that the $326 million purchase price disclosed in the Form 8-K and in the first sentence to Note 3 to the Interim Condensed Consolidated Financial Statements of QTS Realty Trust, Inc. and QualityTech, LP for the quarter ended June 30, 2015 included in the Form 10-Q ("Second Quarter Financial Statements") represents the purchase price for Carpathia Hosting, Inc. ("Carpathia") as defined in the related Stock Purchase Agreement. The Stock Purchase Agreement, which was filed as Exhibit 2.1 to the Company's Form 8-K filed on May 12, 2015, calculated the purchase price using Carpathia's historical *book value* of assets acquired and liabilities assumed. As such, the $295 million of net assets acquired was calculated by subtracting the book value of the capital leases of $37.1 million from the $326 million purchase price and adding back the cash acquired of $5.8 million. For clarification purposes, the Company disclosed in Note 3 to the Second Quarter Financial Statements that the $326 million purchase price was *<u>as defined in the purchase and sale agreement</u>*.

The purchase price based on the assessment of the *fair value* of assets acquired and liabilities assumed, as prescribed by GAAP, was approximately $352.5 million, calculated by adding the fair value of capital leases assumed of $43.8 million and the fair value of deferred income tax liability assumed of $19.8 million to the $294.7 million (i.e. $295 million), and subtracting the cash acquired of $5.8 million. In future filings, the Company will explicitly disclose the purchase price based on the assessment of the fair value of assets acquired and liabilities assumed rather than the purchase price as defined in the Stock Purchase Agreement.

6. We note that the pro forma financial information on page 20 includes adjustments for the acquisition of the Princeton, NJ facility, the issuance of $300 million of senior unsecured notes, the issuance of $387 million Class A common stock, the acquisition of the Chicago, IL facility and the modification of the unsecured credit facility and the credit facility secured by the Richmond Property resulting in decreased interest rates on both. Please tell us whether these events are related to your Carpathia acquisition. To the extent that these events are not related to your Carpathia acquisition, please tell us your basis in GAAP for including adjustments within your pro forma financial information.

Response to Comment No. 6:

As stated in the response to Comment No. 4 above, the Events are not directly related to the Carpathia acquisition, with the exception of the issuance of 5,750,000 shares of Class A common stock in June 2015, the net proceeds of which were used to fund a portion of the Carpathia acquisition. The Company included adjustments for each of the Events in the pro forma financial information on page 20 of Form 10-Q for the reason described in the response to Comment No. 4 above and in order to provide a presentation that was consistent with the pro forma presentation in the Form 8-K. In future filings, the Company will disclose pro forma financial information in accordance with GAAP (ASC 805), calculating pro forma adjustments based solely on the combined results of the Company and Carpathia.

* * * * *

The Company acknowledges that (i) it is responsible for the adequacy and accuracy of the disclosure in the filings; (ii) Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filings; and (iii) the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: Ramco-Gershenson Properties Trust
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 27, 2015
File No. 1-10093

Dear Ms. Marrone:

We are writing in response to the letter of the Division of Corporation Finance, dated August 31, 2015, addressed to Ramco-Gershenson Properties Trust, a Maryland corporation (the "Company"), in connection with the above-referenced filing. For convenience we have incorporated each of the comments included in your letter in italicized text followed by our response.

Item 6. Selected Financial Data, page 25

Business Objectives, Strategies and Significant Transactions, page 2

1. *Please tell us and disclose in future filings how you define Property NOI, highlighting any differences between Property NOI and Same Property NOI as disclosed on page 37.*
We may have additional comments.

Response:

Property NOI includes all consolidated property income and expenses, including sold and acquired properties, and excluding management and other fee income, depreciation and amortization, acquisition costs, general and administrative expenses and provision for impairment. The difference between Property NOI and Same Property NOI is that Same Property NOI makes non-comparable adjustments related to acquired, development/redevelopment, non-retail and sold properties as well as certain income/expense amounts as described on page 37 of the Form 10-K.

In future filings, we intend to replace Property NOI in the Item 6 disclosure with Operating Income (as presented in accordance with GAAP.)

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Comparison of the Year Ended December 31, 2014 to the Year Ended December 31, 2013 page 28

2. *We note that during 2014 you recorded impairment of $23.3 million to land available for development or sale due to changes to development plans and to estimated fair values. Please expand your disclosure in future filings to discuss how your plans changed and how this specifically impacted the carrying values of the subject properties.*

Response:

In future filings we will discuss how our plans changed and how this specifically impacted the carrying values of the subject properties

Funds From Operations, page 35

3. *Please tell us why you believe it is appropriate to include an adjustment for preferred share dividends only to the extent that they are dilutive when calculating FFO and Operating FFO. In that regard, it appears that the dilutive attribute of the preferred shares may only be relevant for calculating FFO per diluted share and Operating FFO per diluted share.*

Response:

The dilutive attribute of the preferred shares is only relevant for calculating FFO per diluted share and Operating FFO per diluted share. Therefore, in future filings we will exclude such adjustment when calculating FFO and Operating FFO. Instead, any adjustment required to FFO and to Operating FFO when computing such items per diluted share will be described in new footnotes to the table on page 36. In future filings, our presentation of the table will be as follows:

	Years Ended December 31,		
	2014	**2013**	**2012**
	(In thousands, except per share data)		
Net (loss) income available to common shareholders	$ (9,614)	$ 3,747	$ (46)
Adjustments:			
Rental property depreciation and amortization expense	80,826	56,316	39,240
Pro-rata share of real estate depreciation from unconsolidated joint ventures	4,719	3,689	6,584
Gain on sale of depreciable real estate	(10,022)	(2,120)	(336)
Loss on sale of joint venture depreciable real estate (1)	—	6,454	75
Provision for impairment on income-producing properties	4,580	9,342	2,355
Provision for impairment on joint venture income-producing properties (1)	—	—	50
Provision for impairment on equity investments in unconsolidated joint ventures	—	—	386
Deferred gain recognized on real estate	(117)	(5,282)	(845)
Noncontrolling interest in Operating Partnership (2)	(48)	465	353
FFO	$ 70,324	$ 72,611	$ 47,816
Provision for impairment for land available for development or sale	23,285	327	1,387
Loss on extinguishment of debt	860	340	—
Gain on extinguishment of joint venture debt, net of RPT expenses (1)	(106)	—	(178)
Acquisition costs (4)	1,890	1,322	314
Operating FFO	$ 96,253	$ 74,600	$ 49,339
Weighted average common shares	72,118	59,336	44,101
Shares issuable upon conversion of Operating Partnership Units (2)	2,250	2,257	2,509
Dilutive effect of securities	217	392	384
Subtotal	74,585	61,985	46,994
Shares issuable upon conversion of preferred shares (3) (5)	7,019	6,940	—
Weighted average equivalent shares outstanding, diluted	81,604	68,925	46,994
Funds from operations per diluted share (6)	$ 0.94	$ 1.16	$ 1.02
Operating FFO, per diluted share (7)	$ 1.27	$ 1.19	$ 1.05

(1) Amount included in earnings (loss) from unconsolidated joint ventures.

(2) The total noncontrolling interest reflects OP units convertible 1:1 into common shares.

(3) Series D convertible preferred shares were dilutive for FFO for the year ended December 31, 2013 and anti-dilutive for the comparable periods in 2014 and 2012.

(4) Prior periods have been restated to reflect the add back of acquisition costs beginning in 1Q14.

(5) Series D convertible preferred shares were dilutive for Operating FFO for years ended December 31, 2014 and 2013 and anti-dilutive for the comparable period in 2012

(6) FFO per diluted share calculated for the year ended December 31, 2013 includes the adjustment to FFO of $7.25 million in dividends related to convertible preferred shares

(7) Operating FFO per diluted share calculated for the years ended December 31, 2014 and 2013 include the adjustment to Operating FFO of $7.25 million in dividends related to convertible preferred shares

-

Same Property Operating Income, page 37

4. *We note that the adjustment for "properties excluded from pool" is significant to both operating income (loss) and Same Property NOI, though only twelve of your 68 properties are considered non-same property for purposes of calculating this measure. Please tell us why this adjustment is so large on a relative basis, and disclose in future filings to the extent material.*

Response:

The adjustment for "properties excluded from pool" is large on a relative basis primarily because it reflects six large acquisitions made during the periods being compared.

The significant adjustments for the three and the twelve months ended December 31, 2014 are attributable as follows:

Property Designation	Three Months Ended	Twelve Months Ended
	December 31, 2014	
Acquisitions	$ 7,070	$ 20,872
Dispositions	136	2,061
Development/Redevelopment	1,217	4,614
Non-Retail Properties	453	1,804
	$ 8,876	$ 29,351

In future filings, to the extent material, we will include an explanation for significant adjustments.

5. *Please expand your disclosure in future filings, and tell us supplementally, what is included in "non-comparable income/expense adjustments."*

Response:

As stated in our Form 10-K for the year ended December 31, 2014, in the first paragraph under the heading Same Property Operating Income on page 37, amounts included in “non-comparable income/expense adjustments” for the quarter and year ended December 31, 2014 and 2013 include: straight-line rents, lease termination fee, above/below market rents, and other non-comparable income and expense adjustments. Other non-comparable income and expense adjustments are public improvement fee income and prior-period recovery income adjustments.

In future filings, we will instead include a table footnote describing “non-comparable income/expense adjustments” for the reporting period.

Following is an example of the future table footnote disclosure:

(1) Includes adjustments for items that affect the comparability of the same property NOI results. Such adjustments include: straight-line rents, lease termination fee, above/below market rents, public improvement fee income and prior-period recovery income adjustments.

In connection with the response above, the Company acknowledges that (i) it is responsible for the adequacy and accuracy of the disclosure in the filing, (ii) Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing, and (iii) it may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions with regard to this letter or require additional information, please contact me at (248) 592-6200, or at gandrews@rgpt.com.

Sincerely,

/s/ GREGORY R. ANDREWS

Re: **Realty Income Corporation**
Form 10-K for the fiscal year ended December 31, 2014
Filed February 18, 2015
File No. 1-13374

Dear Mr. Rakip:

We are writing in response to your comment letter dated March 11, 2015 (the "Comment Letter") provided by the staff (the "Staff") of the Securities and Exchange Commission (the "Commission"). The Comment Letter relates to Realty Income Corporation's (the "Company") Annual Report on Form 10-K for the year ended December 31, 2014 (the "2014 Form 10-K") filed with the Commission on February 18, 2015.

The material in italics below sets forth the Staff's comment, followed by our response.

Financial Statements and Supplementary Data

Allocation of the Purchase Price of Real Estate Acquisitions, page 59

1. Regarding your below-market lease intangible liabilities, please tell us how you consider any bargain renewal options in determining the amortization period.

Response: We do consider bargain renewal options in the determination of the amortization period of below-market lease intangible liabilities. When making this determination we compare the contractual rents for the option period to the expected market rents at the time of exercise. If the contractual rent is sufficiently lower than the expected market rent, such that the exercise of the option appears to be reasonably assured, then the option period is considered to be a bargain renewal option and the option period is included in the lease term used for purposes of amortization.

In future filings, we will add the italicized phrase below to the following paragraph currently included on page 60 of the 2014 Form 10-K:

Capitalized above-market lease values are amortized as a reduction of rental income over the remaining terms of the respective leases. Capitalized below-market lease values are amortized as an increase to rental income over the remaining terms, *including expected below-market renewal option periods*, of the respective leases.

***

In making this response, the Company acknowledges that (i) we are responsible for the adequacy and accuracy of the disclosure in the filing, (ii) the Staff's comments or changes to disclosure in response to the Staff's comments do not foreclose the Commission from taking any action with respect to the filing, and (iii) the Company may not assert the Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions or comments to this letter, please do not hesitate to contact me at (858) 284-5109.

Sincerely,

Realty Income Corporation

Re: **Realty Income Corporation**
Form 10-K for the fiscal year ended December 31, 2014
Filed February 18, 2015
File No. 1-13374

Dear Mr. Rakip:

We are writing in response to your comment letter dated March 17, 2015 (the "Comment Letter") setting forth the additional comment of the staff (the "Staff") of the Securities and Exchange Commission (the "Commission"). The Comment Letter relates to Realty Income Corporation's Annual Report on Form 10-K for the year ended December 31, 2014 filed with the Commission on February 18, 2015.

The material in italics below sets forth the Staff's comment, followed by our response.

Financial Statements and Supplementary Data

Allocation of the Purchase Price of Real Estate Acquisitions, page 59

1. *We note your response to prior comment 1. Please tell us how you define sufficiently lower in determining the difference between the contractual and expected market rents. Also tell us how you determine that the exercise of a bargain renewal option is reasonably assured, including whether you consider historical experience in determining such exercises. Further, quantify for us the number of leases in your portfolio that have bargain renewal options. In your response, tell us the accounting literature relied upon and the basis for your conclusions.*

Response: The following bullet points summarize our internal "Valuation of Newly Acquired Properties" policy as it relates to the above question. As of December 31, 2014, we have 121 leases in our portfolio that have bargain renewal options.

- We refer to Accounting Standards Codification ("ASC") 840-10-20, when evaluating whether a below market option is considered a bargain renewal option. This accounting literature defines a bargain renewal option as:
  - A provision allowing the lessee, at his option, to renew the lease for a rental sufficiently lower than the fair rental of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured.

- We define contractual option rents as being “sufficiently lower” when they are:

    - o 15% below expected market rents and the option exercise date is within 15 years from the date of acquisition,

    - o 20% below expected market rents and the option exercise date is between 15 and 20 years from the date of acquisition, or

    - o 25% below expected market rents and the option exercise date is between 20 and 25 years from the date of acquisition.

  We recognize that options with an exercise date 25 years or more from the date of acquisition or options resulting in an extension of the lease term to a date more than 25 years from the date of acquisition are uncertain by nature, due to market volatility, going concern and other uncertain factors, and therefore do not meet the burden of reasonable assurance.

- In determining whether the exercise of a bargain renewal option is “reasonably assured,” we take into account both the size of the discount to expected market rents as well as the length of time between the acquisition date and the option exercise date. Our policy acknowledges that contractual option rents that are only slightly discounted (i.e. less than 15%) from market do not sufficiently incentivize a tenant to exercise their option, due to factors such as the availability of newer buildings and location optimization. When considering the additional costs and efforts necessary to relocate, in addition to the 15% discount on rents realized when extending the lease, we believe that tenants then become economically compelled to exercise their option. Accordingly, we assume that a minimum 15% discount between contractual option rents and expected market rents is required for the bargain renewal option to be reasonably assured.

- Our policy also acknowledges the fact that the longer the period from inception of the lease to the option exercise date, the more difficult it is to determine whether the exercise of the option is reasonably assured. Accordingly, as more time elapses from the date of acquisition, a larger discount is required between contractual option rents and expected market rents in order to offer reasonable assurance that the tenant will exercise their option.

We do have extensive experience with lease expirations, having resolved over 1,800 lease rollovers in the past 20 years. This experience offers us additional insight as to whether a tenant will likely renew a lease upon expiration. However, our specific experience with bargain renewal option rollover is relatively limited. We believe that the parameters established in our policy, although not directly driven by historical data, are reflective of the insight obtained through our lease rollover history and allow us to objectively apply the accounting literature included in ASC 840 in our determination of bargain renewal options.

***

Re: **Realty Income Corporation**
Form 10-K for the fiscal year ended December 31, 2014
Filed February 18, 2015
File No. 1-13374

Dear Mr. Rakip:

We are writing in response to your comment letter dated March 27, 2015 (the "Comment Letter") setting forth the additional comment of the staff (the "Staff") of the Securities and Exchange Commission (the "Commission"). The Comment Letter relates to Realty Income Corporation's Annual Report on Form 10-K for the year ended December 31, 2014 filed with the Commission on February 18, 2015.

The material in italics below sets forth the Staff's comment, followed by our response.

Financial Statements and Supplementary Data

Allocation of the Purchase Price of Real Estate Acquisitions, page 59

1. *We note your response to prior comment 1. Please tell us the basis for your use of discounts between expected market rents and the contractual option rents in assessing your bargain renewal option and how your policy complies with ASC 805-20-25-12. In your response, explain how you concluded that the parameters established in your policy are appropriate given your limited experience with bargain renewal option rollovers. Further, tell us the potential impact to your financial statements if you considered all bargain renewals exercised regardless of discount to expected market rents and duration between acquisition and renewal dates.*

Response:

For each lease we assume through acquisition of a property, we apply ASC 805-20-25-12 to determine whether the terms of the lease are favorable or unfavorable compared with the market terms of a lease for a similar property at the acquisition date. If the terms are favorable, an above-market lease intangible asset is recorded, and if the terms are unfavorable, a below-market lease liability is recorded. ASC 805-20-25-12 does not provide us with further guidance on how to arrive at the fair value of the above- or below-market lease intangible asset or liability, so we refer to ASC 820 and ASC 840 for the appropriate valuation guidance. Our reference to "discounts" in our prior response and as used below is in relation to the difference between our estimates of market rents at the time of the renewal in comparison to the rate available to the tenant under the renewal option. ASC 820 provides detailed guidance for using management's judgment and other market participant consideration in assessing fair value when quoted prices are not available.

As previously mentioned in our earlier responses, we have extensive experience in acquiring and managing operating properties over multiple business cycles throughout our 46-year history. During these 46 years, we have established in-house acquisition, portfolio management, asset management, credit research, and real estate research expertise. Within our portfolio management department, we have a leasing team that actively negotiates lease renewals with current and new tenants and has access to current market rental rate data in markets across the country where our properties are located. In fact, over the last several years, we have resolved over 1,800 lease rollovers.

Based on our experience with respect to pre-negotiated options to renew, we note that tenants typically make renewal decisions based upon a variety of both quantitative and qualitative factors. Our experience has shown that contractual option rents that are only slightly below market may not sufficiently incentivize a tenant to exercise their option, due to factors such as the availability of newer buildings and location optimization, among others. Accordingly, we believe that a renewal rate that is "sufficiently lower" than market rates is required for the threshold of "reasonably assured" to be met under ASC 840-10-20 (which defines bargain renewal options).

We have relied upon our extensive experience negotiating leases with tenants to both establish our "Valuation of Newly Acquired Properties" policy and to determine the parameters that we outlined in our previous response. We note that the authoritative guidance included in ASC 840-10-20 does not provide quantitative thresholds for us to use in making an assessment of whether rental rates are "sufficiently lower" so that exercise is reasonably assured; accordingly, we are required to apply professional judgment in determining whether this threshold is met. Therefore, based on our experience, our research of other real estate companies, and the methodologies utilized by third-party valuation experts, we believe and respectfully advise the Staff that our definition of "sufficiently lower", as described in our previous response letter, is in-line with how a market participant would consider such options.

Per our valuation policy referenced above, we define bargain renewal options as contractual rents being "sufficiently lower" (per ASC 840-10-20) than the estimated market rents for the property when they meet specific thresholds of between 15% to 25%, depending on the amount of time until the future option exercise date(s). However, we evaluate each real estate lease acquired to determine whether a renewal option is considered a bargain renewal option (i.e., reasonably assured of exercise) based on the facts and circumstances existing at the acquisition date. These factors include, but are not limited to, length of the in-place lease, the contractual ability of the tenant to sublease their space, financial performance of the property, financial performance of the individual tenant, the overall economic climate, and any other known facts or circumstances surrounding the tenant's business operations.

Based on our market knowledge and extensive leasing and re-leasing experience, we have developed our valuation policy in an attempt to reflect what an active market participant would consider as a "bargain" renewal option. Consequently, we have determined that the exercise of a bargain renewal option is "reasonably assured" when the lease renewal rate is at least 15% below expected market rents (we respectfully refer the Staff to our previous response for the various step parameters). Because we have determined that renewal rates that are less than 15% below estimated market rents are not reasonably assured of exercise and do not constitute a bargain renewal, we do not quantify the impact of such renewal options in our valuation models.

In response to your request, we quantified the incremental impact to our financial statements if we assumed that all renewal options would be exercised regardless of discount to expected market rents and duration between acquisition and renewal dates. For this quantification, we evaluated all 211 of our 2014 acquisitions that included the assumption of an in-place lease, which represents approximately 16% of the 1,291 in-place leases in our portfolio as of December 31, 2014. Of this population of 211 in-place leases, there were 87 with renewal options that were below the expected market rent. The following summarizes the overall incremental impact on our consolidated 2014 financial statements, assuming that all of the renewal options for these 87 in-place leases were exercised, regardless of discount to expected market rents and duration between acquisition and renewal dates. The "Projected incremental impact on financial statements" column below represents an extrapolation based on the 2014 impact from including renewal options less than 15% below estimated market rents, which, as described above, is something we do not include in our valuation models:

Impact on financial statement caption	Incremental impact from 2014 in-place lease acquisitions	Projected incremental impact on financial statements
Increase in acquired lease intangible liabilities, net	$22,000,000	$69,900,000
% of total assets as of December 31, 2014	0.20%	0.63%
Decrease to rental revenue (1)	$(800,000)	$(1,400,000)
% of total 2014 revenue	(0.09)%	(0.15)%

(1) When quantifying the income statement impact from the 2014 in-place lease acquisitions, we adjusted the amortization period to properly include all option periods considered to be exercised. The amortization impact of using this extended term outweighed the amortization impact from the incremental increase to acquired lease intangible liabilities, net, and resulted in a decrease to rental revenue on an annualized basis.

Based on the foregoing, we respectfully represent to the Staff that the projected impact from our in-place leases with renewal options that are below the expected market rents regardless of discount to expected market rents and duration between acquisition and renewal dates would not have a material impact on our consolidated 2014 financial statements.

Form 10-K for the Fiscal Year Ended December 31, 2014
Filed on February 25, 2015
Form 10-Q for the Quarterly Period Ended March 31, 2015
Filed May 7, 2015

File No. 1-13759

Dear Mr. John,

On behalf of Redwood Trust, Inc. ("Redwood"), I hereby provide the following response in reply to the Staff's comment letter dated June 24, 2015 (the "Comment Letter") in connection with the above-referenced Annual Report on Form 10-K (the "2014 Form 10-K") and Quarterly Report on Form 10-Q (the "2015 Q1 Form 10-Q"). For your convenience, each of my responses is preceded with an italicized recitation of the comment set forth in the Comment Letter.

Form 10-K for the fiscal year ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

1. *Please provide us with additional details regarding your Mortgage Servicing Rights investments (MSRs) including whether you have retained the basic MSR and excess MSR. Additionally, tell us the weighted average yield that you have earned on these assets for all periods presented and whether you have any outstanding servicer advances. Please update your disclosure in future filings accordingly.*

We own MSRs associated with both jumbo and conforming residential mortgage loans, which we refer to as "Jumbo MSRs" and "Conforming MSRs," respectively. Our MSRs are retained from the sale of loans or are purchased on a stand-alone basis, as outlined on page 63 of the 2014 Form 10-K.

Base and excess MSR

We distinguish base (or "basic") and excess MSRs in accordance with IRS specified "safe harbor" levels of servicing fees they consider to be reasonable compensation (or "base" fees) for servicing various loan types. For conforming loans, the IRS considers fees up to 0.25% (of associated loan principal) to be base fees, and for jumbo loans, fees up to 0.375% (of associated loan principal) to be base fees.

Our Jumbo MSRs entitle us to a contractually specified servicing fee, with rates ranging from 0.25% to 0.375%, and are therefore all considered base fees under the IRS safe harbor. As of December 31, 2014 and 2013, the weighted average servicing fee rate on our Jumbo MSRs was 0.25%. Our Conforming MSRs entitle us to a contractually specified servicing fee, with rates ranging from 0.25% to 0.70%. As of December 31, 2014 and 2013, our portfolio of Conforming MSRs had a fair value of $81.3 million and $3.3 million, respectively, and of these amounts MSRs with fair values of approximately $100,000 and $30,000, respectively, had servicing fees in excess of 0.25%.

MSR Yields

Our gross cash yield on MSRs (calculated by dividing the annual gross servicing fees we received, by the weighted average notional balance of loans associated with MSRs we owned during the year) was 0.23%, 0.23%, and 0.18% for the years ended December 31, 2014, 2013 and 2012, respectively.

Servicer Advances

At both December 31, 2014 and December 31, 2013, we had approximately $1.0 million and $800,000, respectively, of servicer advances, primarily related to recoverable escrow advances, presented in “Other assets” on our balance sheet.

In accordance with the comment letter request, in future filings, we will update our disclosures to include the amount of MSRs we own with excess servicing and the amount of servicing advances associated with MSRs as of each balance sheet date presented, as well as the gross cash yield on our MSRs for each period presented in our statements of income.

Item 8. Financial Statements and Supplementary Data

2. *We note your disclosure on page F-36 that the fair value for residential loans is determined based on either an exit price to securitization or the whole loan market. Please tell us how you determine which of these two markets to use for your residential loans and how you have concluded that the market used in your valuation is the principal or most advantageous market.*

We carry our jumbo residential mortgage loans (“jumbo loans”) at fair value, as they have historically represented our loan inventory for our residential mortgage banking activities. Our jumbo loans held-for-sale have typically been held on balance sheet from 30-60 days, until they are sold or securitized. With the reasonably high turnover, quarter-end estimates of fair value for these loans are quickly realized in subsequent quarters.

Since prices or quotes from exchanges or listed markets are not available for jumbo loans, we estimate fair value for these loans using internal models that incorporate various observable and unobservable inputs, including the transactional activity noted above. We have not viewed the various purchasers of jumbo loans (e.g., whole loan investors, resellers, or securitization aggregators) as representative of separate markets, but rather as part of a single “secondary market” for jumbo loans. In fact, many purchasers fall into more than one of these categories and acquire jumbo loans for differing reasons. Similarly, sellers of jumbo loans typically seek bids for jumbo loans from many different types of purchasers, rather than solely from one category of purchasers. We view this single secondary market as the principal market, with various market participants providing varying pricing inputs each quarter. During 2014, the difference in fair value estimates implied by pricing inputs provided by different types of purchasers was minimal.

In considering the Staff’s comment, we plan to update our disclosures in future filings to clarify the existence of a single principal market for jumbo loans, as opposed to two distinct markets. The updated language we intend to use is as follows:

> Estimated fair values for residential loans are determined using models that incorporate various observable and unobservable inputs, including pricing information from recent securitizations and whole loan sales. Certain significant inputs in these models are considered unobservable and are therefore Level 3 in nature. Pricing inputs obtained from market securitization activity include indicative spreads to indexed TBA prices for senior RMBS and indexed swap rates for subordinate RMBS, which are adjusted as necessary for current market conditions (Level 3). Pricing inputs obtained from market whole loan transaction activity include indicative spreads to indexed swap rates, adjusted as necessary for current market conditions (Level 3). Other observable inputs include Agency RMBS pricing, indexed swap yields, credit rating agency guidance on expected credit support levels for newly issued RMBS transactions, benchmark interest rates, and prepayment rates. These assets would generally decrease in value based upon an increase in the credit spread, prepayment speed, or credit support assumptions.
>
> Estimated fair values for conforming loans are determined based upon quoted market prices (Level 2). Conforming loans are mortgage loans that conform to Agency guidelines. As necessary, these values are adjusted for servicing value, market conditions and liquidity.

Form 10-Q for the quarterly period ended March 31, 2015

Item 2. Management’s Discussion and Analysis of Financial Condition and Results of Operations

3. *We note your disclosure on page 70 that you began to account for commitments to purchase jumbo loans as derivatives as a result of amendments to the agreements governing these commitments. Please provide to us additional details regarding the terms of the referenced amendments, how they qualify your loan purchase commitments to be accounted for as a derivative, and quantify the impact to your financial statements. Also, tell us the accounting guidance upon you which you relied.*

We purchase jumbo residential mortgage loans (“jumbo loans”) from various bank and non-bank loan originators, which we refer to as “Sellers.” Our purchases of jumbo loans from these Sellers are governed by mortgage loan purchase and sale agreements (or “MLPSAs”). Prior to January 1, 2015, our MLPSAs were drafted such that there was no legally enforceable commitment by us to purchase a jumbo loan that we and the Seller had specified until a purchase price and terms letter (“PPTL”) relating to that loan was executed by both parties. Once the PPTL was executed by both parties, a contractual purchase and sale commitment between the parties was established; and, consequently, it was only at the time the PPTL was executed that a commitment to purchase a jumbo loan could be assessed under derivatives accounting guidance. Of note, this commitment does not represent an “Interest Rate Lock Commitment” to a borrower as we do not originate any residential loans ourselves.

Prior to January 1, 2015, we generally entered into PPTLs on the same day we purchased the related jumbo loan – *i.e.*, on the same day we wired the purchase price to the Seller and the Seller conveyed ownership of the loan to us. Under this framework, even if an executed PPTL were to qualify as a derivative, we did not have open PPTLs at any quarter-end (because commitments to purchase jumbo loans were made and fulfilled on the same day) and, therefore, had no jumbo loan purchase commitments to assess as derivatives for financial reporting purposes.

During the latter part of 2014, we executed amendments to the MLPSAs we had in place with Sellers to affect certain new terms relating to purchase and sale commitments. Under the amendments, these new terms became effective on January 1, 2015. In addition, we changed our standard form MLPSA to affect the same new terms in new MLPSAs we entered into with new Sellers on and after January 1, 2015.

As of January 1, 2015, all of our MLPSAs specify that our commitment to purchase a jumbo loan (and the Seller's corresponding commitment to sell us that loan) is established when we deliver a confirmation to the Seller relating to that loan. We now typically deliver a confirmation 30-45 days prior to when we expect to fulfill our commitment to purchase a loan. Because a contractual commitment is established well before a jumbo loan will be purchased, beginning with the quarter ended March 31, 2015, we assessed our open commitments to purchase jumbo loans under derivative accounting guidance to determine if these open commitments qualified as derivatives.

In analyzing these open commitments, we looked to ASC 815-10-15, paragraphs 69-71, which discuss the accounting treatment for "Certain Loan Commitments." In accordance with paragraph 70 (formerly DIG C13), all commitments to purchase or sell mortgage loans must be evaluated under the definition of a derivative. Therefore, we have evaluated open commitments to purchase jumbo loans using the guidance in ASC 815-10-15-83, "Derivatives and Hedging – Definition of Derivative Instrument." In accordance with this guidance, we determined that our current MLPSAs and associated confirmations are contractual commitments and evaluated the following required criteria to assess whether they meet the definition of a derivative:

a. <u>Underlying, notional amount, payment provision requirement</u>

With respect to our jumbo loans, the related MLPSA and confirmation evidence a purchase and sale obligation (a settlement requirement), specify the principal amount of the loan to be purchased, and specify the purchase price for the loan.

This satisfies the first criterion under ASC 815-10-15-83's definition of a derivative.

b. <u>Initial net investment requirement</u>

With respect to our jumbo loans, the related MLPSA and confirmation require no initial net investment.

This satisfies the second criterion under ASC 815-10-15-83's definition of a derivative.

c. <u>Net settlement requirement</u>

ASC 815-10-15 paragraphs 99-139 discuss net settlement provisions. We evaluated each of the three means by which the net settlement criterion can be satisfied and determined that our underlying jumbo loans are readily convertible into cash.

This satisfies the third criterion under ASC 815-10-15-83's definition of a derivative.

Accordingly, as we meet the specified criteria in ASC 815-10-15, we concluded that our current jumbo loan purchase commitments are considered derivatives in accordance with GAAP and we began to account for commitments entered into under our amended MLPSAs as derivatives beginning on January 1, 2015.

At March 31, 2015, we had $5.3 million of derivative assets and $0.8 million of derivative liabilities associated with jumbo loan purchase commitments recorded on our balance sheet. These amounts are included in our disclosures on page 37 of our 2015 Q1 Form 10-Q.

Dear Mr. John,

On behalf of Redwood Trust, Inc. ("Redwood"), I hereby provide the following response in reply to the Staff's comment letter dated August 14, 2015 (the "Comment Letter") in connection with the above-referenced Annual Report on Form 10-K (the "2014 Form 10-K"). For your convenience, my response is preceded with an italicized recitation of the comment set forth in the Comment Letter.

Form 10-K for the fiscal year ended December 31, 2014

Item 8. Financial Statements and Supplementary Data

Note 5. Fair Value of Financial Instrument, F-29

1. *We note in your response to comment 2 that the difference in fair value estimates implied by pricing inputs obtained from market securitization activity versus from market whole loan transaction activity was minimal. Please clarify whether fair value estimates for your residential loans held-for-investment are based upon pricing inputs for both the securitization market and the whole loan market and if so, confirm that differences between fair value estimates based upon the two markets are minimal as it relates specifically to residential loans held-for-investment. Also, explain to us why you adjust the above pricing inputs and the nature of the adjustments.*

Fair value estimates for our residential loans held-for-investment are currently based only on whole loan pricing inputs. As such, there are not pricing differences between whole loan and securitization pricing inputs for our held-for-investment loans.

In the description of our determination of fair value in our Form 10-Q, we note that pricing inputs are "…adjusted as necessary for current market conditions." In certain cases, whole loan sales that provide comparative pricing inputs do not occur on the last day of the quarter and we must consider how spreads or other pricing inputs may have changed between the time of the most recent comparative sale and quarter-end. In certain cases, we will adjust pricing inputs from the most recent comparative sales to reflect changes in current market conditions that we observe. Generally speaking, adjustments made to pricing inputs for this purpose have been minimal as we have typically had sales that occurred close to quarter-end.

* * *

RETAIL OPPORTUNITY INVESTMENTS CORP.

Filed February 25, 2015
File No. 1-33749

Retail Opportunity Investments Partnership, LP
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 25, 2015
File No. 333-189057-01

Dear Ms. Monick:

On behalf of Retail Opportunity Investments Corp. and Retail Opportunity Investments Partnership, LP (together, the "Company"), set forth below are the responses of the Company to the comments of the staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission"), received by letter dated June 17, 2015 (the "June 17 Letter"), with respect to the Company's Form 10-K for the year ended December 31, 2014 (the "Form 10-K").

For the Staff's convenience, the responses to the Staff's comments are set out in the order in which the comments were set out in the June 17 Letter and are numbered accordingly. The text of the Staff's comments is set forth below in bold followed in each case by the response.

Form 10-K for the Fiscal Year Ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds From Operations, page 35

1. **We note you have recorded a gain on consolidation of joint venture for 2013 and 2012. In future periodic filings, please revise your reconciliation of Net income attributable to ROIC to FFO-basic and FFO-diluted to include an adjustment to exclude such gains.**

In response to the Staff's comment, the Company notes that during the respective periods in 2013 and 2012, the Company obtained control of two joint ventures and, following guidance from Accounting Standards Codification 805, *Business Combinations* ("ASC 805"), recorded gains on the consolidations. The Company also notes that in presenting funds from operations, or FFO, the Company follows the standard definition of FFO as set forth in the "White Paper" published by the National Association of Real Estate Investment Trusts ("NAREIT"), which defines FFO as "net income attributable to common stockholders (determined in accordance with GAAP) excluding gains or losses from debt restructuring, sales of depreciable property, and impairments, plus real estate related depreciation and amortization, and after adjustments for partnerships and unconsolidated joint ventures." The Company does not believe that the gains recorded on consolidation of joint ventures are of the type that under the White Paper should be excluded from net income in arriving at FFO.

Item 8. Financial Statements and Supplementary Data

Notes to Consolidated Financial Statements

1. Organization, Basis of Presentation and Summary of Significant Accounting Policies

Real Estate Investments, page 57

2. **We note your disclosure regarding your accounting policy for acquired intangible assets and liabilities. Specifically, we note your disclosure that the fair values associated with below-market rental renewal options are determined based on the Company's experience and the relevant facts and circumstances that existed at the time of the acquisitions. Please provide us with additional details regarding your evaluation of below-market rental renewal options. Your response should include, but not necessarily be limited to, whether or not you use a threshold in your evaluation. To the extent you use thresholds, please tell us how you concluded that these thresholds are appropriate and tell us the potential impact to your financial statements if you were to conclude that all below market fixed rate renewal options would be exercised.**

In response to the Staff's comment, the Company reviews each lease assumed through a property acquisition to determine whether the terms of the lease are favorable or unfavorable compared with market terms of a lease for a similar property. This review includes an evaluation of each lease acquired to determine whether renewal options, if any, are considered bargain renewal options, primarily based on comparing the contractual rents for the option period with the expected market rents at the time of option exercise. For this exercise, the Company uses a threshold of 5%. If a tenant's contractual rent is greater than 5% below expected market rent at the time of option exercise, our historical experience would indicate that it is probable that the tenant will choose to exercise their option and retain their space, thus avoiding business interruption and other costs associated with relocating their business. The Company believes, based on historical experience, that contractual option rents that are more than 5% below expected market rents provide sufficient reasonable assurance that the option will be exercised. The Company believes that contractual rents less than 5% below market may not be sufficiently below market to compel a tenant to exercise its option to extend.

In response to your request regarding the potential impact to the Company's financial statements, if the Company were to conclude that all below market fixed rate renewal options were to be exercised, the Company evaluated its 2014 acquisitions as a representative data set. During 2014 the Company acquired eight shopping centers. Of the 184 leases that were assumed, 35 were determined to have below market rental renewal options. Of these 35 leases, 30 were determined to have contractual option rents greater than 5% below expected market rents. Accordingly, the Company recorded intangible lease liabilities for these renewal options in the amount of $25,519,254. Five leases with below market rental renewal options were determined to have contractual rents that were less than 5% below expected market rents. The potential impact to the Company's financial statements of these five leases would be as follows:

Increase in acquired lease intangible liabilities, net	$	264,605
Total Liabilities as of December 31, 2014	$	888,914,167
% of Total Liabilities as of December 31, 2014		0.0003%
Increase to 2014 revenue due to amortization	$	423
Total Revenue for the year ending December 31, 2014	$	155,863,511
% of Total Revenue for the year ending December 31, 2014		inconsequential

Based on the foregoing, the Company believes that the potential impact, if it were to conclude that all below market fixed rate renewal options would be exercised, would not have a material impact on its consolidated financial statements for the year ending December 31, 2014.

Form 8-K filed April 29, 2015

Exhibit 99.1 Earnings Release, dated April 29, 2015

3. **We note that you present same-center cash net operating income (NOI) in your earnings releases. It appears that same-center cash NOI is a non-GAAP measure. Please revise future earnings releases to include all of the disclosures required by Item 10(e)(1)(i) of Regulation S-K for this measure. In your response, please provide an example of your proposed disclosure.**

In response to the Staff's comment, in future earnings releases, the Company will include all of the disclosures required by Item 10(e)(1)(i) of Regulation S-K. In addition, the following will be added to earnings releases using the quarter ending March 31, 2015 below as an example:

ACCOUNTING AND OTHER DISCLOSURES

The Company uses cash net operating income ("NOI") internally to evaluate and compare the operating performance of the Company's properties. The Company believes cash NOI provides useful information to investors regarding the Company's financial condition and results of operations because it reflects only those cash income and expense items that are incurred at the property level, and when compared across periods, can be used to determine trends in earnings of the Company's properties as this measure is not affected by non-cash revenue and expense recognition items, the cost of the Company's funding, the impact of depreciation and amortization expenses, gains or losses from the acquisition and sale of operating real estate assets, general and administrative expenses or other gains and losses that relate to the Company's ownership of properties. The Company believes the exclusion of these items from operating income is useful because the resulting measure captures the actual revenue generated and actual expenses incurred in operating the Company's properties as well as trends in occupancy rates, rental rates and operating costs.

Cash NOI is a measure of the operating performance of the Company's properties but does not measure the Company's performance as a whole and is therefore not a substitute for net income or operating income as computed in accordance with GAAP. The Company defines cash NOI as operating revenues (base rent and recoveries from tenants), less property and related expenses (property operating expenses and property taxes), adjusted for non-cash revenue and operating expense items such as straight-line rent and amortization of lease intangibles, debt-related expenses, and other adjustments. Cash NOI also excludes general and administrative expenses, depreciation and amortization, acquisition transaction costs, other expense, interest expense, gains and losses from property acquisitions and dispositions, extraordinary items, tenant improvements and leasing commissions. Other REITs may use different methodologies for calculating cash NOI, and accordingly, the Company's cash NOI may not be comparable to other REITs.

In this release, the Company has provided cash NOI information on a same-center basis. Same-center properties, which totaled 53 of the Company's 64 properties as of March 31, 2015, represent all operating properties owned by the Company during the entirety of both periods presented and consolidated into the Company's financial statements during such periods.

RECONCILIATION OF SAME-CENTER CASH NOI
TO OPERATING INCOME

(In thousands)

	Three months ended	
	3/31/2015	**3/31/2014**
Same-center cash NOI	$ 23,289	$ 22,401
Other adjustments (1)	(214)	875
Same-center cash NOI before adjustments	23,075	23,276
Non same-center cash NOI	6,987	750
Cash NOI	30,062	24,026
Straight-line rent adjustment	1,275	632
Amortization of above and below-market lease intangibles, net	2,330	1,997
Non-cash property operating expenses	(202)	(155)
Depreciation and amortization	(17,634)	(13,364)
General and administrative expenses	(2,641)	(2,561)
Acquisition transaction costs	(171)	(218)
Other expense	(149)	(217)
Operating Income	$ 12,870	$ 10,140

(1) Includes adjustments for items that affect the comparability of the same-center results. Such adjustments include: changes in estimates for common area maintenance costs and real estate taxes related to a prior period, lease termination fees, or other similar items that affect comparability.

Same-center cash NOI is a non-GAAP financial measure. The Company believes that same-center cash NOI is a widely used and appropriate supplemental measure of operating performance for REIT's and that it may provide a relevant basis for comparison among REITs. See also "Accounting and Other Disclosures" above.

4. **In addition to above, please tell us whether you consider same-center cash NOI a key performance indicator. To the extent you consider this measure to be a key performance indicator, please confirm that you will include this measure and the related Item 10(e) disclosures within your future periodic filings.**

In response to the Staff's comment, the Company advises the Staff that it considers same-center cash NOI to be a key performance indicator. In future periodic filings the Company will include this measure and the related disclosures required by Item 10(e) of Regulation S-K. The following will be added to future periodic filings using the quarter ending March 31, 2015 below as an example:

Cash Net Operating Income ("NOI")

Cash NOI is a non-GAAP financial measure of the Company's performance. The most directly comparable GAAP financial measure is operating income. The Company defines cash NOI as operating revenues (base rent and recoveries from tenants), less property and related expenses (property operating expenses and property taxes), adjusted for non-cash revenue and operating expense items such as straight-line rent and amortization of lease intangibles, debt-related expenses, and other adjustments. Cash NOI also excludes general and administrative expenses, depreciation and amortization, acquisition transaction costs, other expense, interest expense, gains and losses from property acquisitions and dispositions, extraordinary items, tenant improvements and leasing commissions. Other REITs may use different methodologies for calculating cash NOI, and accordingly, the Company's cash NOI may not be comparable to other REITs.

Cash NOI is used by management internally to evaluate and compare the operating performance of the Company's properties. The Company believes cash NOI provides useful information to investors regarding the Company's financial condition and results of operations because it reflects only those cash income and expense items that are incurred at the property level, and when compared across periods, can be used to determine trends in earnings of the Company's properties as this measure is not affected by non-cash revenue and expense recognition items, the cost of the Company's funding, the impact of depreciation and amortization expenses, gains or losses from the acquisition and sale of operating real estate assets, general and administrative expenses or other gains and losses that relate to the Company's ownership of properties. The Company believes the exclusion of these items from operating income is useful because the resulting measure captures the actual revenue generated and actual expenses incurred in operating the Company's properties as well as trends in occupancy rates, rental rates and operating costs.

Cash NOI is a measure of the operating performance of the Company's properties but does not measure the Company's performance as a whole and is therefore not a substitute for net income or operating income as computed in accordance with GAAP.

Same-Center Cash NOI

The following comparison for the three months ended March 31, 2015 compared to the three months ended March 31, 2014, makes reference to the effect of the same-center properties. Same-center properties, which totaled 53 of the Company's 64 properties as of March 31, 2015, represent all operating properties owned by the Company during the entirety of both periods presented and consolidated into the Company's financial statements during such periods.

The table below provides a reconciliation of same-center cash NOI to consolidated operating income for the three months ended March 31, 2015 and 2014 (in thousands).

	Three months ended	
	3/31/2015	**3/31/2014**
Same-center cash NOI	$ 23,289	$ 22,401
Other adjustments (1)	(214)	875
Same-center cash NOI before adjustments	23,075	23,276
Non same-center cash NOI	6,987	750
Cash NOI	30,062	24,026
Straight-line rent adjustment	1,275	632
Amortization of above and below-market lease intangibles, net	2,330	1,997
Non-cash property operating expenses	(202)	(155)
Depreciation and amortization	(17,634)	(13,364)
General and administrative expenses	(2,641)	(2,561)
Acquisition transaction costs	(171)	(218)
Other expense	(149)	(217)
Operating income	$ 12,870	$ 10,140

(1) Includes adjustments for items that affect the comparability of the same-center results. Such adjustments include: changes in estimates for common area maintenance costs and real estate taxes related to a prior period, lease termination fees, or other similar items that affect comparability.

During the three months ended March 31, 2015, the Company generated same-center cash NOI of approximately $23.3 million compared to same-center cash NOI of approximately $22.4 million generated during the three months ended March 31, 2014, representing a 4.0% increase.

In regards to the Form 10-K, the Company acknowledges that:

- the company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: Retail Opportunity Investments Corp.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 25, 2015
File No. 1-33749

Retail Opportunity Investments Partnership, LP
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 25, 2015
File No. 333-189057-01

Dear Ms. Monick:

On behalf of Retail Opportunity Investments Corp. and Retail Opportunity Investments Partnership, LP (together, the "Company"), further to a telephonic discussion on July 7, 2015 between the Company and the staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission") regarding the Staff's letter dated June 17, 2015 (the "June 17 Letter") with respect to the Company's Form 10-K for the year ended December 31, 2014 (the "Form 10-K"), set forth below is a supplemental response of the Company to the Staff's first comment set forth in the June 17 Letter.

For the Staff's convenience, the original comment set forth in the June 17 Letter is reproduced in bold below and is followed by the Company's supplemental response.

Form 10-K for the Fiscal Year Ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds From Operations, page 35

1. **We note you have recorded a gain on consolidation of joint venture for 2013 and 2012. In future periodic filings, please revise your reconciliation of Net income attributable to ROIC to FFO-basic and FFO-diluted to include an adjustment to exclude such gains.**

   As a supplemental response to the Staff's comment, and in response to the telephonic conversation with the Staff on July 7, 2015, in the Company’s Annual Report on Form 10-K for the year ending December 31, 2015, the Company will present the reconciliation of Net income attributable to ROIC to FFO-basic and FFO-diluted, for the year ended December 31, 2013, consistent with that which has been previously reported in periodic filings.

The Company currently does not have any unconsolidated joint ventures and does not anticipate recording any gains on consolidation of joint ventures in the future. Should opportunities arise that would result in recording of such gains, the Company will include an adjustment for such gains in the reconciliation of Net income to FFO and will also expand the definition the Company uses in determining FFO to read as follows:

The Company follows the standard definition of FFO as set forth in the "White Paper" published by the National Association of Real Estate Investment Trusts ("NAREIT"), which defines FFO as "net income attributable to common stockholders (determined in accordance with GAAP) excluding gains or losses from debt restructuring, sales of depreciable property, and impairments, plus real estate related depreciation and amortization, and after adjustments for partnerships and unconsolidated joint ventures." In addition, the Company also adjusts FFO to exclude gains recorded on the consolidation of joint ventures.

In regards to the Form 10-K, the Company acknowledges that:

- the company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

We hope the foregoing has been responsive to the Staff's comment. If you have any questions, please do not hesitate to contact the undersigned at (858) 255-4925 (telephone) or Jay Bernstein or Jacob Farquharson of Clifford Chance US LLP, counsel to the Company, at (212) 878-8527 (telephone) or (212) 878-3302 (telephone).

We thank the Staff in advance for its assistance.

Very truly yours,

/s/ Michael B. Haines

Attention: Mr. Wilson K. Lee, Senior Staff Accountant

RE: Retail Properties of America, Inc. (“RPAI”, “we” or the “Company”)
Form 10-K for the year ended December 31, 2014
Filed on February 18, 2015
File No. 001-35481

Dear Mr. Lee:

This letter responds to the letter from the staff of the Division of Corporation Finance (the “Staff”) of the Securities and Exchange Commission (the “Commission”) dated May 14, 2015 (the “Comment Letter”), providing a comment relating to the Company’s Form 10-K for the fiscal year ended December 31, 2014. In order to facilitate the Staff’s review of this letter, we have restated your numbered comment which required a response below and have included the Company’s response underneath the comment.

Form 10-K for the year ended December 31, 2014

Funds From Operations, pages 30-31

1. In arriving at Funds from operations, you start with Net income attributable to common shareholders. As a result, it appears Funds from operations is actually Funds from operations attributable to just common stockholders instead of all equity shareholders. In future periodic filings please re-title “Funds from operations” to the more appropriate “Funds from operations attributable to common shareholders”.

Response:

In future periodic filings, we will re-title “Funds from operations” to “Funds from operations attributable to common shareholders.”

As requested in the Comment Letter, the Company hereby acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: RLJ Lodging Trust
Form 10-K for the year ended December 31, 2014
Filed February 26, 2015
File No. 001-35169

Dear Ms. Monick:

This letter is submitted by RLJ Lodging Trust (the "**Company**") in response to comments from the staff of the Division of Corporation Finance (the "**Staff**") of the Securities and Exchange Commission (the "**Commission**") in a letter dated May 11, 2015 (the "**Comment Letter**") with respect to the Company's Annual Report on Form 10-K for the year ended December 31, 2014 filed with the Commission on February 26, 2015 (the "**Form 10-K**").

For your convenience, the Staff's numbered comments set forth in the Comment Letter have been reproduced in italics herein with responses immediately following each comment. Unless otherwise indicated, page references in the reproductions of the Staff's comments refer to the Form 10-K. Defined terms used herein but not otherwise defined herein have the meanings given to them in the Form 10-K.

Notes to Consolidated Financial Statements

Note 9. Commitments and Contingencies, page F-23

Data Breach, page F-25

1. *Please tell us and revise future periodic filings to clarify if you expect any amounts you may be required to pay to be material to the financial statements as a whole, as opposed to only your results of operations.*

Response to Comment No. 1

The Company currently believes that any amounts that the Company may ultimately be required to pay as a result of this incident will not have a material impact on its financial position, results of operations or cash flows. In future filings, the Company will revise the disclosure to provide an assessment of the impact on the Company's results of operations as well as the impact on the Company's financial position and cash flows.

The Company also acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filings;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filings; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: ***Sabra Health Care REIT, Inc.***
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 19, 2015
File No. 1-34950

Dear Ms. John:

This letter sets forth the response of Sabra Health Care REIT, Inc. ("Sabra," the "Company" "we" or "our") to the comments of the staff (the "Staff") of the Securities and Exchange Commission (the "Commission") contained in your letter dated September 22, 2015 (the "Comment Letter"), regarding the above-referenced Form 10-K for the year ended December 31, 2014 (the "2014 Form 10-K"). For the convenience of the Staff, each of the Staff's comments is restated in italics prior to the response to such comment.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds from Operations and Adjusted Funds from Operations, page 37

1. *We note that your FFO and AFFO calculations exclude preferred stock dividends and thus appear to represent FFO and AFFO attributable to common shareowners. In future periodic filings, please revise to clearly label your non-GAAP measure as "FFO attributable to common stockholders". Also make a similar revision to properly label AFFO.*

Response: In our future periodic filings, we will revise to clearly label our non-GAAP measures as "FFO attributable to common stockholders" and "AFFO attributable to common stockholders."

Item 8. Financial Statements and Supplementary Data

General

1. *Please tell us the consideration you gave to the financial statement disclosure requirements regarding your dependence on significant customers Genesis Healthcare, Inc. and Holiday AL Holdings LP; refer to paragraph 42 of ASC 280-10-50.*

Response: We note that paragraph 42 of ASC 280-10-50 provides that "[a] public entity shall provide information about the extent of its reliance on its major customers," which is defined as a single external customer that amounts to 10% or more of a public entity's revenues.

In several locations in the 2014 Form 10-K, we disclosed information regarding our dependence on Genesis Healthcare, Inc. ("Genesis") and Holiday AL Holdings LP ("Holiday"). For example, (1) in the section captioned "Business-Significant Credit Concentrations" on page 8 of the 2014 Form 10-K, we noted that Genesis and Holiday are the relationships that represent more than 10% of our annualized revenues as of December 31, 2014 and provided the number of investments, percentage of total investments, gross, and percentage of annualized revenues represented by each of Genesis and Holiday; (2) in the section captioned "Risk Factors-Risks Related to Tenant Concentration" on pages 12-13 of the 2014 Form 10-K, we included a separate risk factor regarding our dependence on each of Genesis and Holiday; and (3) in the section captioned "Management's Discussion and Analysis of Financial Condition and Results of Operations-Concentration of Credit Risk" on pages 41-42 of the 2014 Form 10-K, we disclosed again the percentage of annualized revenues represented by Genesis and Holiday and noted that the obligations under the master leases with both such tenants are guaranteed by their respective parent entities.

In Note 4, "Real Estate Properties Held for Investment-Operating Leases" in the Notes to Consolidated Financial Statements on pages F-15 to F-16 in the 2014 Form 10-K, we also included disclosure regarding our efforts to monitor the creditworthiness of our tenants. In our future periodic filings, consistent with the disclosures described above, we will expand the disclosure in Note 4 to provide the information required by paragraph 42 of ASC 280-10-50 with respect to our tenants that represent more than 10% of our total revenues, including Genesis and Holiday if applicable. For example, we would include the following disclosure in Note 4 (to the extent applicable and updated for 2015 information): "As of December 31, 2014, our two largest tenants, Genesis and Holiday, represented 36.2% and 17.8%, respectively, of our annualized revenues. Other than these two tenants, none of our tenants individually represented 10% or more of our annualized revenues as of December 31, 2014."

****

As requested in the Comment Letter, Sabra acknowledges that:

- Sabra is responsible for the adequacy and accuracy of the disclosure in the filing;

Filed March 6, 2015
File No. 001-12254

Ladies and Gentlemen:

This letter sets forth the response of Saul Centers, Inc., a Maryland corporation (the “Company”), to your letter dated July 31, 2015, with respect to the Company’s Annual Report on Form 10-K for the year ended December 31, 2014.

The Company hereby confirms that, in future filings after the date of this response letter, the Company will use the label “FFO available to common stockholders and non-controlling interests” instead of “FFO available to common shareholders.”

As requested by the Staff, we are providing the following acknowledgements:

- the Company is responsible for the adequacy and accuracy of the disclosure in its filings with the Commission;

- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and

- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Thank you for your courtesy.

Very truly yours,

SL Green Operating Partnership, L.P.
Form 10-K for the year ended December 31, 2014
Filed February 24, 2015
File No. 33-167793-02

Dear Mr. Gordon:

Set forth below are responses to the comments of the staff (the "Staff") of the Securities and Exchange Commission (the "SEC") contained in your letter, dated May 1, 2015 (the "Comment Letter"), relating to the Annual Report on Form 10-K for the year ended December 31, 2014 filed by SL Green Realty Corp. (the "Company") and SL Green Operating Partnership, L.P. (the "Partnership") on February 24, 2015 (the "Form 10-K"). The headings and numbered paragraphs of this letter correspond to the headings and numbered paragraphs contained in the Comment Letter, and to facilitate your review, we have reproduced the text of the Staff's comments in italics below in the first paragraph of each response.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 41

Funds From Operations, page 63

1. *We note that you have calculated FFO based upon net income attributable to SL Green common stockholders and non-controlling interests. In future filings, please revise the label of this non-GAAP measure to indicate that it is attributable to SL Green common stockholders and non-controlling interests.*

The Company and the Partnership advise the Staff that in future filings it will label FFO to indicate that this is attributable to SL Green common stockholders and non-controlling interests.

Consolidated Statements of Equity, page 75

2. *Please include reconciliations for equity interests classified outside of permanent equity as required by ASC 810-10-50-1A in the consolidated statements of equity, or in a note thereto. In that regard, we note that you have provided a rollforward of the noncontrolling interests in the operating partnership in Note 11 but no such rollforward has been included for the preferred units.*

420 Lexington Avenue • New York, NY 10170 • (212) 594-2700 • Fax (212) 216-1790

The Company and the Partnership advise the Staff that the Company and the Partnership propose to revise the disclosure regarding reconciliations for equity interests classified outside of permanent equity in a note to the consolidated financial statements in the following manner in future filings:

Below is the rollforward analysis of the activity relating to the preferred units in the Operating Partnership as of December 31, 2014 and December 31, 2013 (in thousands):

	December 31, 2014	December 31, 2013
Balance at beginning of period	$ 49,550	$ 49,500
Issuance of preferred units	23,565	—
Redemption of preferred units	(2,000)	—
Balance at end of period	$ 71,115	$ 49,550

Note 3. Property Acquisitions, page 100

2014 Acquisitions, page 100

3. *Please disclose the acquisition-date fair value of your equity interest in 388-390 Greenwich Street immediately before the acquisition date and the valuation technique(s) used to measure fair value. Refer to ASC 805-10-50-1(g).*

The Company and the Partnership advise the Staff that the Company and the Partnership believe that it has met the disclosure requirements of ASC 805-10-50-2(g) in the Notes to the Financial Statements as follows:

1. The acquisition-date fair value of the equity interest in the acquiree held by the acquirer immediately before the acquisition date:

Refer to the calculation below. This information is also included in Note 3 to the Financial Statements.

($ in thousands)	388-390 Greenwich
Net purchase price (100%)	$ 1,585,000
Less amount paid to partner	(208,614)
Less debt assumed	(1,162,379)
Fair value of retained equity interest	214,007
SL Green equity interest	(148,025)
Purchase price fair value adjustment	$ 65,982

The remaining purchase price fair value adjustment balance of $5.5 million relates to the acceleration of a deferred leasing commission from the joint venture to the Company.

2. The amount of any gain or loss as a result of remeasuring to fair value the equity interest in the acquiree held by the acquirer immediately before the business combination (refer to paragraph 805-10-25-10) and the line item in the income statement in which that gain or loss is recognized:

Refer to the footnotes to the table in Note 3 to the Financial Statements for the gain recognized in connection with this transaction. The purchase price fair value adjustment is also discussed as a separate line item on the income statement.

3. The valuation technique(s) used to measure the acquisition-date fair value of the equity interest in the acquiree held by the acquirer immediately before the business combination:

The fair value of this property was determined to be the agreed upon purchase price.

4. Information that enables users of the acquirer's financial statements to assess the inputs used to develop the fair value measurement of the equity interest in the acquiree held by the acquirer immediately before the business combination:

The fair value of this property was determined to be the agreed upon purchase price.

Re: **Starwood Property Trust, Inc.**
Form 10-K
Filed February 25, 2015
File No. 001-34436

Ladies and Gentlemen:

Starwood Property Trust, Inc. ("Starwood") hereby responds to the comments of the staff (the "Staff") of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (the "SEC") contained in your letter dated March 25, 2015 (the "Comment Letter") regarding Starwood's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "2014 Form 10-K"). For the convenience of the Staff, we have set forth below the comments contained in the Comment Letter followed by Starwood's response to each comment.

Form 10-K for the fiscal year ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 57

COMMENT:

1. *In future filings please disclose the weighted average yield on your assets and the weighted average borrowing costs, including related hedging costs.*

STARWOOD RESPONSE:

Beginning with our Form 10-Q filing for the quarter ended March 31, 2015, we will disclose the weighted average yield on our investment portfolio and our weighted average borrowing costs inclusive of related hedging costs.

Non-GAAP Financial Measures, page 65

COMMENT:

2. *Please reconcile the number of diluted weighted average shares used in Core Earnings per share to the number of diluted weighted average shares used in your GAAP EPS measures.*

STARWOOD RESPONSE:

In our 2014 Form 10-K, we disclosed the following in an effort to reconcile the number of diluted weighted average shares used in our earnings per share ("EPS") calculation as determined pursuant to generally accepted accounting principles ("GAAP") to the shares used in our Core EPS calculation:

> "In assessing the appropriate weighted average diluted share count to apply to Core Earnings for purposes of determining Core earnings per share ("EPS"), management considered the following attributes of our current GAAP diluted share methodology: (i) our participating securities were determined to be anti-dilutive and were thus excluded from the denominator of the EPS calculation; and (ii) the portion of the Convertible Notes that are "in-the-money" (referred to as the "conversion spread value"), representing the value that would be delivered to investors in shares upon an assumed conversion, is included in the denominator. Because compensation expense related to participating securities is added back for Core Earnings purposes pursuant to the definition above, there is no dilution to Core Earnings resulting from the associated expense recognition. As a result, our GAAP EPS methodology was adjusted to include (instead of exclude) participating securities. Further, conversion of the Convertible Notes is an event that is contingent upon numerous factors, none of

which are in our control, and is an event that may or may not occur. Consistent with the treatment of other unrealized adjustments to Core Earnings, our GAAP EPS methodology was adjusted to exclude (instead of include) the conversion spread value in determining Core EPS until a conversion actually occurs. For the year ended December 31, 2014, 3.4 million shares, representing the conversion spread value, were excluded from Core EPS."

Beginning with our Form 10-Q filing for the quarter ended March 31, 2015, in addition to the written reconciliation disclosed above, we will disclose a tabular reconciliation of diluted weighted average shares used in our calculation of Core Earnings per share to diluted weighted average shares used to calculate diluted GAAP earnings per share. A pro forma of this reconciliation for the year ended December 31, 2014 is as follows:

GAAP Diluted Weighted Average Shares	218,781
Add: Participating Securities	2,650
Less: Conversion Spread Value	(3,432)
Core Diluted Weighted Average Shares	217,999

Consolidated Balance Sheets, page 91

COMMENT:

3. *We note that you separately present the assets and liabilities held by variable interest entities on your balance sheet. In future filings, please recast your balance sheet to present the consolidated totals for each line item required by Rule 5-02 of Regulation S-X. Please note that you may state parenthetically after each line item the amount that relates to consolidated VIEs, or you may include a table following the consolidated balance sheets to present assets and liabilities of consolidated VIEs that have been included in the preceding balance sheet.*

STARWOOD RESPONSE:

We respectfully note to the Staff that, since the consolidation rules were contemplated, LNR Property LLC ("LNR"), our wholly-owned subsidiary that we acquired on April 19, 2013, and related parties have engaged in numerous discussions, both written and oral, with the Financial Accounting Standards Board ("FASB") and the SEC on this topic, with such discussions directed towards the seemingly unintended financial statement consequences of these standards on a unique business such as ours. In that regard, we are providing, under separate cover and with a request for confidential treatment, correspondence with the SEC's Office of the Chief Accountant of the Division of Corporation Finance describing the facts and circumstances surrounding our financial statement presentation of VIEs. We also note that, as a result of these discussions, we assisted the FASB in understanding the nature of commercial mortgage-backed securities ("CMBS") trusts and the impact of consolidation of these vehicles in order to arrive at the ultimate conclusions outlined in Accounting Standards Update ("ASU") 2014-13, "Measuring the Financial Assets and the Financial Liabilities of a Consolidated Collateralized Financing Entity."

In order to fully understand the presentation of our consolidated variable interest entities ("VIEs"), it is important to understand the nature of these vehicles and the careful consideration we have dedicated to determining the most appropriate presentation of the consolidation of these vehicles. Since our acquisition of LNR on April 19, 2013, Starwood owns one of the nation's largest commercial mortgage special servicers, which comprised approximately 44% of our 2014 net income on a GAAP basis. LNR services nearly one third of the nation's CMBS trusts, and is the only commercial mortgage special servicer whose financial results are included in a public filing. The nature of LNR's business is vastly different from the more typical residential mortgage servicers and other structures for which we believe the consolidation literature was intended and structured.

In the normal course of business, LNR, comprising our real estate investing and servicing ("REIS") segment, invests in investment grade, unrated and non-investment grade portions of various issues of CMBS. The securities are issued by special purpose trusts, which are structured as pass through entities. A significant portion of LNR's CMBS holdings are in the

lowest tranche of the issued debt of these CMBS trusts. This tranche is typically referred to as the "controlling class", which carries the right to name the special servicer of the trust.

In structuring these trusts, a third party (normally a financial institution) originates loans and then securitizes those loans into a special purpose vehicle. Once securitized into a CMBS trust structure, the loans do not trade. At that point, the loans become part of a closed system, with the special purpose structure effectively transforming the loans into a mathematical waterfall of liability cash flows. After securitization, the sole purpose of the loans is to provide cash flows to the bondholders of the structure. While the loans are restricted from being traded, the liabilities trade regularly, with observable market prices readily available. At inception, a CMBS trust consists only of commercial real estate loans as its assets and debt to bondholders as its liabilities. Over time, some of those loans default and are foreclosed upon, creating a second asset category of foreclosed real estate ("REO") within the trust prior to the asset being liquidated.

The CMBS trusts in which LNR invests are generally considered VIEs under ASC 810. The VIE is deliberately structured as passive whereby a pool of commercial real estate loans is selected for transfer into the VIE and then held constant over its life. No reinvestment is permitted and the entities are not actively managed. As a result, individual loans are not permitted to be sold from the trust or traded in the marketplace. These assets are restricted and can only be used to fulfill the obligations of the trust. The fair value of this type of loan is very different from a loan which would trade freely outside of such a structure.

Due to the difficulties in valuing loans within this type of structure, the guidance outlined in ASU 2014-13 permits an entity to use the financial liabilities of the VIE to value the overall pool of assets of a VIE. This guidance indicates that the financial assets and financial liabilities of a consolidated collateralized financing entity ("CFE", which is used synonymously with VIE for purposes of this letter) should be measured using the "more observable of the fair value of the financial assets and the fair value of the financial liabilities." In the case of our VIEs, the financial liabilities of a CMBS trust are more observable, and we thus apply this approach in consolidating these vehicles.

Other than loans, the only other potential assets of a CMBS trust are REO. In the context of CMBS trusts consolidated pursuant to ASC 810, an REO asset only appears on a reporting entity's balance sheet in one of two instances: (1) the new consolidation of a CMBS trust structure; and (2) the foreclosure of a loan in an already consolidated CMBS trust structure. When an asset becomes REO, it is due to nonperformance of the loan, which is already at fair value due to the election of the fair value option. The valuation of REO assets at fair value occurs quite often under the current ASC 810 model. As a result, the carrying value of an REO asset is generally fair value under existing GAAP. In addition, once an asset becomes REO, its disposition time is relatively short, and deconsolidation of the trust could occur during that time if we are terminated as special servicer of the trust. As a result, distinguishing an asset between a loan and an REO does not provide any incremental value in this context.

In addition, REO assets generally represent a very small percentage of the overall asset pool of a CMBS trust, and for our portfolio, are 4% of our VIE assets. In a new issue CMBS trust, REO is

zero. This is supported by the Basis of Conclusions section of ASU 2014-13, paragraph BC18, which states, in part, "… respondents to the proposed Update indicated that the value of any nonfinancial assets held by a collateralized financing entity is generally insignificant and nonfinancial assets are held temporarily." Consistent with Rule 5-02 of Regulation S-X, any balance sheet line item which does not exceed 5% of an entity's assets need not be separately presented.

In addition, ASC 810-10-45-25 requires that a reporting entity present each of the following separately on the face of the statement of financial position:

> "a. Assets of a consolidated variable interest entity (VIE) that can be used only to settle obligations of the consolidated VIE
>
> b. Liabilities of a consolidated VIE for which creditors (or beneficial interest holders) do not have recourse to the general credit of the primary beneficiary."

In its deliberations of ASC 810, the FASB considered, but rejected, a single-line-item display of assets and liabilities that meet the separate presentation criteria. In order to avoid potential inconsistency and comparability issues in a reporting entity's consolidated financial statements, the FASB decided to require separate presentation of elements of consolidated variable interest entities as described in the excerpt above. While some could interpret this requirement to mean that each consolidated VIE's assets and liabilities that qualify for disclosure must be separately presented, certain of the large accounting firms have issued guidance stating their understanding that this requirement means that the same or similar assets of all consolidated VIEs that meet this separate presentation criterion could be presented in the aggregate on the relevant balance sheet line item. This guidance states, in part:

> "The VIE model does not provide guidance on how assets and liabilities that meet the separate presentation criteria should be presented in the primary beneficiary's balance sheet. We believe that a reporting entity has presentation alternatives provided the assets and liabilities that meet the separate presentation criteria are separately presented on the face of the balance sheet. For example, a reporting entity that is the primary beneficiary of a VIE could present each asset element that meets the separate presentation criteria as one line item and parenthetically disclose the amount of the asset in a VIE. Alternatively, the reporting entity could present an asset element in two separate line items, one line item for the asset in a VIE that meet the separate presentation criteria and another line item for the reporting entity's corresponding asset. There may be other acceptable alternatives."

While on a dollars basis, REO assets are insignificant to VIE assets and to our consolidated assets overall, our VIE asset pool currently contains approximately 500 REO properties. As a result, determining fair value for each of these 500 properties on a quarterly basis would be an extremely time consuming effort. More importantly, it would result in no incremental utility to the users of our financial statements, and ultimately, would be less accurate than our current methodology, particularly since the assets of the VIE can only be used to settle the obligations of the VIE. This approach is consistent with the disclosure objectives of ASC 810, as published in ASC 810-10-50-10:

> "A reporting entity shall determine, in light of the facts and circumstances, how much detail it shall provide to satisfy the requirements of the Variable Interest Entities Subsections. A reporting entity shall also determine how it aggregates information to display its overall involvements with VIEs with different risk characteristics. The reporting entity must strike a balance between obscuring important information as a result of too much aggregation and overburdening financial statements with excessive detail that may not assist financial statement users to understand the reporting entity's financial position. For example, a reporting entity shall not obscure important information by including it with a large amount of insignificant detail."

Because CMBS trust financial liabilities are more observable, the methodology prescribed by ASU 2014-13 effectively results in a derived number for VIE assets as a pool. This makes sense because, in the case of a CMBS trust, all of the assets as a pool are used to satisfy the liabilities of the trust. This methodology is ultimately designed to arrive at the critical conclusion for investors, which is for the consolidated net income (loss) of a reporting entity to only reflect amounts that reflect changes in its own economic interests in the consolidated trust. Any segregation of the assets beyond the total pool would result in balances that are not meaningful because (i) a bondholder could not access those assets individually; and (ii) determining a precise value for these assets would be nearly impossible. Said another way, as two lines in our balance sheet, the numbers would be estimates and allocations of a total liability number, whereas in total, they agree to a market value that is observable.

As one of the nation's largest special servicers, servicing nearly one third of the nation's CMBS trusts, our entire business is predicated on owning the controlling class. As a result, consolidation of CMBS structures is commonplace; we regularly consolidate and deconsolidate CMBS trusts due to ordinary course transactions such as purchases and sales of CMBS and special servicer appointments. As a public company, we are concerned about creating any confusion for users beyond that which already exists as a result of consolidating these vehicles.

Based on the above, we arrived at our current presentation of including all of the assets of a VIE in a single line on our balance sheet. We believe this presentation is consistent with Rule 5-02 of Regulation S-X based on the insignificance of the REO balance generally, with the requirements of ASC 810-10-45-25, with certain public accounting firms' published interpretive guidance, with the above-referenced correspondence with the SEC, which we are providing to the Staff under separate cover and with a request for confidential treatment, and with the overall objective of financial reporting to provide meaningful information to investors. The liabilities of our VIEs consist solely of debt to bondholders of the CMBS trust, and are thus properly classified as a single line item in accordance with Rule 5-02 of Regulation S-X.

Consolidated Statements of Operations, page 92

COMMENT:

4. *We note your separate presentation of income of consolidated VIE's, net related to the assets and liabilities of your consolidated VIEs. Please tell us your basis for this*

presentation and specifically address how it complies with the requirements of Rule 5-03 of Regulation S-X which requires consolidated totals for each line item.

STARWOOD RESPONSE:

Similar to our response to Comment 3, we respectfully note to the Staff that the basis for our income statement presentation was determined after careful consideration of the impact of CMBS trust consolidation to our financial statements and which presentation would be most meaningful to the users of our financial statements. As noted in our response to Comment 3, the critical conclusion that is contained in ASU 2014-13 is that a reporting entity's consolidated net income (loss) should only reflect the reporting entity's own economic interests in the consolidated VIE. In the context of consolidated CMBS trusts, LNR's economic interest is its ownership of a CMBS security.

Because we elect the fair value option for initial and subsequent recognition of our consolidated VIE assets and liabilities, and because the fair value of the VIE assets equals the fair value of the liabilities pursuant to ASU 2014-13, the only change to VIE assets each period is the change in fair value of the liabilities. As a result, the two primary line items which would appear in our income statement on a gross basis would be the inflated change in fair value of VIE assets and the change in fair value of VIE liabilities, both of which would appear within the "other income" section of our consolidated statement of operations, consistent with Rule 5-03 of Regulation S-X. Before consolidation, these two numbers are the same because total VIE assets equal total VIE liabilities under ASU 2014-13. The numbers individually total in the billions, but net to zero. However, in consolidation, we would eliminate the portion of the change in fair value of VIE liabilities that pertains to our beneficial interest in the CMBS trust (i.e., the CMBS security asset we hold, which is reflected as debt on the VIE's balance sheet). The resulting net number is the portion that pertains to our economic interest in the consolidated VIE.

Additionally, as discussed above, we elected the fair value option for both our VIE assets and liabilities in the trust; therefore, interest income and interest expense presentation as separate line items are no longer relevant on a standalone basis. These amounts are effectively included in the total fair value changes period to period, but obviated because of the overlay of the fair value option. ASC 825-10 does not include guidance on geography for items measured at fair value under the fair value option. Rather, it implies that the presentation of such items is a policy election. Since adoption of ASC 810, our elected policy has been to present these items through the same line item on our statement of operations. Certain of the large accounting firms have published interpretive guidance supporting this. In discussing the segregation of interest income from other changes in fair value, one such publication states, "We encourage reporting entities to use the single line presentation because splitting the change in fair value creates an amount in a line item that is just a residual difference. In either case, reporting entities should select a policy for income statement presentation that is appropriate for their facts and circumstances, disclose the policy in the footnotes, and follow it consistently." In our case, the difference between the change in fair value of VIE assets and the change in fair value of VIE liabilities is simply the residual difference attributable to our beneficial interest in the VIE.

Similar to our response to Comment 3, we respectfully submit that we do not see any added benefit to providing the users of our financial statements with two inflated line items in our statement of operations, neither of which individually pertains to our beneficial interest in the VIE. In fact, we would view this presentation as somewhat distortive because our beneficial interest in the VIE would be eliminated and hidden in the residual difference between the change in fair value of assets and the change in fair value of liabilities. Consistent with the underlying purpose of ASU 2014-13, the consolidation of VIEs should result in a reporting entity only reflecting its own economic interest in the VIE. We believe that netting the changes in fair value of liabilities against the changes in fair value of assets on a consolidated basis accomplishes this objective. However, we will include in future filings additional disclosure in Footnote 2, *Summary of Significant Account Policies*, related to our financial statement presentation of consolidated VIEs.

COMMENT:

5. We note that a majority of your revenue is derived from interest on leveraged investments. Please tell us why interest expense has been presented as a component of costs and expenses, rather than as part of net interest margin. In this regard, a "net interest income" presentation is generally appropriate for companies with interest expense related to financing its investments earnings interest income. Please see ASC 942-10-S99-4 for reference.

STARWOOD RESPONSE:

As discussed in our response to Comment 3, on April 19, 2013, Starwood and its affiliates acquired LNR, a diversified real estate operating business which houses one of the nation's largest special servicers. Prior to the LNR acquisition, Starwood applied the "net interest income" presentation prescribed by ASC 942-10-S99-4. Because our operations at that time consisted principally of originating and acquiring commercial mortgage loans, the industry-specific accounting and reporting guidance for depository and lending financial institutions that is outlined in ASC 942 was appropriate. This was the same presentation followed by our competitors who were strictly mortgage real estate investment trusts ("REITs").

However, with the acquisition of LNR and our growing single-family residential real estate rental portfolio, our business became much more diversified, as did our operating results. As a result, we reevaluated the presentation of our statement of operations. In connection with that evaluation, we determined that the more general income statement presentation outlined in Rule 5-03 of Regulation S-X was more appropriate. We disclosed this change in presentation in our Form 10-Q for the quarter ended June 30, 2013, our Form 10-Q for the quarter ended September 30, 2013, and our Form 10-K for the year ended December 31, 2013.

The LNR acquisition set Starwood apart from its competitors, establishing it as a diversified commercial real estate finance operating business, which now includes not only a traditional commercial mortgage lending business, but also a special servicing operation, a conduit loan origination platform, a CMBS investment portfolio, a growing portfolio of real estate equity

investments and, until its spin-off in early 2014, a billion-dollar single-family residential real estate rental portfolio.

We respectfully note to the Staff that we believe the diverse nature of Starwood's operations justifies our use of the general income statement presentation outlined in Rule 5-03 versus the "net interest income" presentation in ASC 942-10-S99-4, which is intended for depository and lending financial institutions, such as traditional mortgage REITs. Referencing our segment disclosure, during the year ended December 31, 2014, only 56% of our net income on a GAAP basis came from our commercial mortgage lending business (i.e., our Lending Segment, as defined in our 2014 Form 10-K), while the remainder was sourced from our other operating businesses described above. For the latter 44%, we do not believe a "net interest income" presentation would be appropriate.

In addition, because we use corporate level debt to fund business acquisitions (i.e., LNR), investments other than loans, as well as construction and similar loans which cannot be leveraged with traditional repurchase financing, the interest expense associated with this debt would not be appropriate for a "net interest income" presentation. We believe a hybrid of "net interest income" presentation and the more traditional presentation which we currently provide for operating businesses would only further confuse our investors and the users of our financial statements. However, we do believe that net interest income disclosure for just our Lending Segment would be useful to investors. As a result, we will include this as a supplemental disclosure in future filings, beginning with our Form 10-Q filing for the quarter ended March 31, 2015.

Starwood hereby acknowledges that:

- Starwood is responsible for the adequacy and accuracy of the disclosures it has made in its filings, including the 2014 Form 10-K;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the SEC from taking any action with respect to Starwood's filings; and
- Starwood may not assert Staff comments as a defense in any proceeding initiated by the SEC or any person under the federal securities laws of the United States.

We acknowledge and appreciate that the discussion of VIEs, as outlined above and in various communications with the FASB and the SEC, is complex. As a result, we would welcome a discussion with you on this topic to assist you in better understanding the nature of these vehicles and the resulting impact to our consolidated financial statements. In the meantime, if you should need any further information, please contact Rina Paniry, Chief Financial Officer, by phone at 305-695-5470 or by email at rpaniry@starwood.com.

Re: **Starwood Property Trust, Inc.**
Form 10-K
Filed February 25, 2015
File No. 001-34436

Ladies and Gentlemen:

Starwood Property Trust, Inc. ("Starwood") hereby responds to the comments of the staff (the "Staff") of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (the "SEC") contained in your letter dated May 19, 2015 (the "Comment Letter") regarding Starwood's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "2014 Form 10-K"). For the convenience of the Staff, we have set forth below the comments contained in the Comment Letter followed by Starwood's response to each comment.

Form 10-K for the fiscal year ended December 31, 2014

Consolidated Balance Sheets, page 91

COMMENT:

1. *We have reviewed your responses to comments 3 and 4. We are considering your responses and we may have further comments.*

STARWOOD RESPONSE:

We acknowledge and appreciate that the discussion of our variable interest entities (VIEs) is complex. As a result, we would welcome a discussion with you on this topic to assist you in better understanding the nature of these vehicles and the resulting impact to our consolidated financial statements. In the meantime, if you should need any further information, please do not hesitate to contact us.

Consolidated Statements of Operations, page 92

COMMENT:

2. *We note your response to comment 4. Please confirm to us the nature of the $212,506 and $116,377 recorded as income of consolidated VIEs, net in 2014 and 2013, respectively. If this represents the change in fair value of your economic interest in consolidated VIEs, please consider using a more descriptive label in future filings.*

STARWOOD RESPONSE:

Amounts recorded as "income of consolidated VIEs, net" relate to the change in fair value of our economic interests in the VIEs which we consolidate. In future filings, we will use a more descriptive label for this line item.

Form 10-Q for the quarter ended March 31, 2015

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 50

COMMENT:

3. *We note your response to comment 1. As previously requested, please disclose the weighted average yield on your investment assets, or tell us where this disclosure has been provided. Please also include a discussion of any trends in the weighted average yield on assets and weighted average borrowing costs for those assets.*

STARWOOD RESPONSE:

We have disclosed the weighted average yields on each of our investment assets within the table on page 62 of our Form 10-Q for the quarter ended March 31, 2015 under the column heading "Unlevered Return on Asset." Beginning with our Form 10-Q filing for the quarter ended June 30, 2015, we will include a discussion of any established trends in our weighted average yield on assets and weighted average borrowing costs for those assets.

File No. 001-34436

Ladies and Gentlemen:

Starwood Property Trust, Inc. ("Starwood") hereby responds to the comments of the staff (the "Staff") of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (the "SEC") contained in your letter dated June 9, 2015 (the "Comment Letter") regarding Starwood's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "2014 Form 10-K"). For the convenience of the Staff, we have set forth below the comments contained in the Comment Letter followed by Starwood's response to each comment.

Form 10-K for the fiscal year ended December 31, 2014

Consolidated Balance Sheets, page 91

COMMENT:

1. *We have reviewed your response to comment 3. We continue to believe that your balance sheet is not in compliance with Rule 5-02 of Regulation S-X. Please recast your balance sheet to present the consolidated totals for each line item required by Rule 5-02. Please note that you may state parenthetically after each line item the amount that relates to consolidated VIEs, or you may include a table following the consolidated balance sheets to present assets and liabilities of consolidated VIEs that have been included in the preceding balance sheet.*

STARWOOD RESPONSE:

We believe that Starwood is dissimilar to all other companies in the mortgage real estate investment trust ("MREIT") space. The reason for this is the acquisition by Starwood of LNR Property LLC ("LNR") on April 19, 2013, which appended a special servicer that invests in subordinate commercial mortgage backed securities ("CMBS") to a traditional MREIT, setting Starwood in a class by itself with no single competitor containing a comparative business model. At that point, Starwood began trading, and continues to trade, vastly different from its competitors.

Prior to the acquisition of LNR, Starwood was not meaningfully impacted by the amendments to Accounting Standards Codification ("ASC") 810, Consolidation, included in Accounting Standards Update ("ASU") 2009-17, and as a result, its financial statements looked very similar to traditional MREITs. However, LNR's financial statements were significantly impacted by these amendments due to its dual role as special servicer and investor in subordinate securities for the same trusts, which led to the consolidation of over 100 CMBS trusts. The nature of LNR's business is vastly different from the more typical residential mortgage servicers and other structures for which we believe the consolidation literature was intended and structured. These other structures are what we believe other MREITs are investing in.

However, Starwood now consolidates over 100 CMBS trusts due solely to LNR's dual role as CMBS investor and special servicer, a role that is not shared by any other public filer, let alone any filer in the MREIT space. It is important to note that the legacy Starwood business has no impact to the consolidation of these structures. In the normal course of business, LNR, comprising our real estate investing and servicing ("REIS") segment, invests in investment grade, unrated and non-investment grade portions of various issues of CMBS. A significant portion of LNR's CMBS holdings are in the lowest tranche of the issued debt of these CMBS trusts. This tranche is typically referred to as the "controlling class", which carries the right to name the special servicer of the trust. LNR's investment in the controlling class and its role as special servicer together trigger consolidation of these trusts.

In order to understand our presentation for these trusts, it is important to understand the nature of the vehicles themselves. In structuring these trusts, a third party (normally a financial institution) originates loans and then securitizes those loans into a special purpose vehicle. Once securitized into a CMBS trust structure, the loans do not trade. At that point, the loans become part of a closed system, with the special purpose structure effectively transforming the loans into a mathematical waterfall of liability cash flows. After securitization, the sole purpose of the loans is to provide cash flows to the bondholders of the structure. LNR is typically a bondholder at the most subordinate level within these structures. While the loans are restricted from being traded, the liabilities trade regularly, with observable market prices readily available.

At inception, a CMBS trust consists only of performing commercial real estate loans as its assets and debt to bondholders as its liabilities. Over time, some of those loans default, becoming nonperforming loans which LNR services, and relatively infrequently, nonperforming loans are foreclosed upon, creating a second asset category of foreclosed real estate ("REO") within the trust prior to the asset being liquidated.

The VIE is deliberately structured as passive whereby a pool of commercial real estate loans is selected for transfer into the VIE and then held constant over its life. No reinvestment is permitted and the entities are not actively managed. As a result, individual loans are not permitted to be sold from the trust or traded in the marketplace. These assets are restricted and can only be used to fulfill the obligations of the trust. The fair value of this type of loan is very different from a loan which would trade freely outside of such a structure.

Due to the difficulties in valuing loans within this type of structure, the guidance outlined in Accounting Standards Update ("ASU") 2014-13, "Measuring the Financial Assets and the Financial Liabilities of a Consolidated Collateralized Financing Entity," permits an entity to use the financial liabilities of the VIE to value the overall pool of assets of a VIE. This guidance indicates that the financial assets and financial liabilities of a consolidated collateralized financing entity ("CFE", which is used synonymously with VIE for purposes of this letter) should be measured using the "more observable of the fair value of the financial assets and the fair value of the financial liabilities." In the case of our VIEs, the financial liabilities of a CMBS trust are more observable, and we thus apply this approach in consolidating these vehicles.

This approach results in the fair value of the assets of the VIE equaling the liabilities of the VIE. Because VIE assets in total equal VIE liabilities in total, distinguishing an asset between a loan and an REO does not provide any incremental value and would result in assigning a residual number to either loans or REO. Further, distinguishing between loans and REO would be arbitrary given the VIE liabilities are measured by looking into securitization markets, while the unit of account for the loans and REO would be the individual asset level. The difficulties of reliably fair valuing the assets inside a CMBS structure was detailed in our comment letter to the FASB dated October 15, 2013. Relevant portions of that letter are repeated herein.

Upon our initial adoption of the provisions of ASU 2009-17, we attempted to implement the standard using a very similar methodology to what you are requesting. In doing so, we encountered numerous difficulties and significant limitations, some of which we found impossible to overcome. We spent significant resources, both in time and cost, in the over twelve months in which we attempted to implement the standard pursuant to this approach. We consulted with the most experienced experts in this space, and ultimately concluded that the results were unreliable measurements that could not be validated by management.

The reason the assets of a CMBS trust are difficult to value, particularly for a special servicer, are multifold. A special servicer has no visibility into the performing loans of a CMBS trust. The industry delinquency rate for U.S. issued conduit CMBS has averaged less than 10% historically. This is the only portion of the assets for which the special servicer has detailed knowledge. As such, in order to determine the value of the remaining 90% of the trust's assets that are performing, we engaged a nationally recognized third party pricing service. The results proved to be inconsistent and were formulated by a proprietary, statistical regression created by the third party pricing service that Starwood management had no ability to verify or observe.

The determination of fair value for the loans securitized by a securitization trust contains inherent limitations and is subject to significant judgment. As noted above, these loans are maintained in a static CMBS trust and are unable to be sold if the loans are performing. As such, there is no active market related to these assets. In order to properly fair value this pool of commercial real estate loans, certain factors related to the loans and the underlying real estate collateral must be considered. Certain of these factors are objective and observable such as loan vintage, loan interest rate, market interest rate, loan to value ratio at origination, debt service coverage ratio, payment history, collateral type and collateral location.

These are the factors which were utilized by the pricing service in valuing the loans. However, we have no visibility into the details behind the pricing service's calculation of each loan's fair value. The pricing service collects a standardized set of information which they believe to be predictive of a loan's selling price. Through a multiple regression analysis based on actual loan trade data, the pricing service determines a set of statistically relevant variables that affect an asset's price and estimates its corresponding coefficients. Fair value is estimated by applying these coefficients to an existing loan's relevant variables. This formula is inherently very subjective, and due to its proprietary nature, is invisible to management of the entity that has to report these values in its financial statements.

In addition to factors that may be deemed objective, other more subjective factors are often unobservable and unavailable, including borrower intent with respect to the asset, whether the asset is a "trophy" asset, the special servicer of the asset, the experience, expertise and sophistication of the property owner/manager, and the structure of the loan itself. In addition to these factors, other factors inherent in a securitization structure should ideally be considered, including diversification of the assets, credit enhancement, liquidity of the debt and desired yield of investors.

However, these factors are not considered in pricing an individual loan. Rather, pricing is based on inputs which are not necessarily all inclusive, with the determination of price made by a third party pricing service who may not have access to all relevant data related to the loan. While the pricing service maintains comparable data for both nonperforming loans inside the CMBS trust and values for the underlying collateral, the exact asset is not traded and the assets which do trade may not necessarily be deemed similar to the asset being priced. The evaluation of price is based on the perception of one market participant and lacks transparency in terms of the specific computation behind the regression analysis which ultimately determines the price. Many of the inputs discussed above are not able to be derived (or individually inferred) from transparent, market-based data.

The area where we as special servicer have some visibility is on the REO assets. However, on a dollars basis, the REO assets are insignificant to VIE assets, representing only 4% of such assets. From a practical standpoint, our VIE asset pool currently contains approximately 500 REO properties, and determining a fair value for each of these 500 properties on a quarterly basis would be an extremely time consuming effort because it would involve tracking each of these 500 real estate assets during a relatively short holding period. More importantly, it would not result in the most accurate information. Under ASU 2014-13, we would still have to fair value the liabilities for each VIE and subtract this number to arrive at a residual for the loan pool. Given the relatively small balance of REO and the short period until liquidation of this real estate, we do not believe this exercise would result in any incremental utility to the users of our financial statements, and ultimately, would be less accurate than our current methodology. It would force us to present a line item on our balance sheet for the loan pool that is simply a residual difference as opposed to a number that is meaningful and correct on a stand-alone basis.

Management would have to assert that each of the two line items for REO and loans is correct, knowing that VIE assets can only be correct in total.

Because CMBS trust financial liabilities are more observable, the methodology prescribed by ASU 2014-13 effectively results in a derived number for VIE assets as a pool. This makes sense because, in the case of a CMBS trust, all of the assets as a pool are used to satisfy the liabilities of the trust. This methodology is ultimately designed to arrive at the critical conclusion for investors, which is for the consolidated net income (loss) of a reporting entity to only reflect amounts that reflect changes in its own economic interests in the consolidated trust. Any segregation of the assets beyond the total pool would result in balances that are not meaningful because (i) a bondholder could not access those assets individually; and (ii) determining a precise value for these assets would be nearly impossible. Said another way, as two lines in our balance sheet, the numbers would be allocations of a total liability number, one of which is a residual difference, whereas in total, they agree to a market value that is observable.

Based on the above, we arrived at our current presentation of including all of the assets of a VIE in a single line on our balance sheet. We continue to believe this presentation is consistent with Rule 5-02 of Regulation S-X and results in the most accurate and reliable measure of assets, with the overall objective of financial reporting to provide meaningful information to investors. We suggest including as a supplemental disclosure in future filings, added disclosure to our footnotes describing the components of VIE assets and the reasons for which the presentation is more appropriate and correct as a single line item.

Re: **Starwood Property Trust, Inc.**
Form 10-K
Filed February 25, 2015
File No. 001-34436

Ladies and Gentlemen:

Starwood Property Trust, Inc. ("Starwood") hereby responds to the comments of the staff (the "Staff") of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (the "SEC") contained in your letter dated July 30, 2015 (the "Comment Letter") regarding Starwood's Annual Report on Form 10-K for the fiscal year ended December 31, 2014 (the "2014 Form 10-K"). For the convenience of the Staff, we have set forth below the comment contained in the Comment Letter followed by Starwood's response.

Form 10-K for the fiscal year ended December 31, 2014

Consolidated Balance Sheets, page 91

COMMENT:

1. *We note your response to comment 1. In future filings please provide clear and robust footnote disclosure describing the components of VIE assets and liabilities recorded on your balance sheet, including the approximate relative values of each type of VIE asset. Please also include a discussion of the reasons why you believe the presentation of these assets as a single line item is more appropriate. Please provide us with your proposed disclosure in your response.*

STARWOOD RESPONSE:

Within the summary of significant accounting policies section of our Form 10-Q for the three months ended June 30, 2015, we included supplemental disclosure describing the components of VIE assets and the reasons why the presentation is more appropriate as a single line item. We propose enhancing this disclosure to incorporate the additional items you have requested.

The proposed disclosure in its entirety is as follows:

> "We separately present the assets and liabilities of our consolidated VIEs as individual line items on our consolidated balance sheets. The liabilities of our consolidated VIEs consist solely of obligations to the bondholders of the related CMBS trusts, and are thus presented as a single line item entitled "VIE liabilities." The assets of our consolidated VIEs consist principally of loans, but at times, also include foreclosed loans which have been temporarily converted into real estate owned ("REO"). These assets in the aggregate are likewise presented as a single line item entitled "VIE assets."
>
> Loans comprise the vast majority of our VIE assets and are carried at fair value due to the election of the fair value option. When an asset becomes REO, it is due to nonperformance of the loan. Because the loan is already at fair value, the carrying value of an REO asset is also initially at fair value. Furthermore, when we consolidate a CMBS trust, any existing REO would be consolidated at fair value. Once an asset becomes REO, its disposition time is relatively short. As a result, the carrying value of an REO generally approximates fair value under existing GAAP.
>
> In addition to sharing a similar measurement method as the loans in a CMBS trust, the VIE assets as a whole can only be used to settle the obligations of the consolidated VIE. The assets of our VIEs are not individually accessible by the bondholders, which creates inherent limitations from a valuation perspective. Also creating limitations from a valuation perspective is our role as special servicer, which provides us very limited visibility, if any, into the performing loans of a CMBS trust.
>
> REO assets generally represent a very small percentage of the overall asset pool of a CMBS trust. In a new issue CMBS trust, REO is zero. We estimate that REO assets constitute approximately 4% of our consolidated VIE assets, with the remaining 96% representing loans. However, it is important to note that the fair value of our VIE assets is determined by reference to our VIE liabilities as permitted under ASU 2014-13. In other words, our VIE liabilities are more reliably measurable than the VIE assets, resulting in our current measurement methodology which utilizes this value to determine the fair value of our VIE assets as a whole. As a result, these percentages are not necessarily indicative of the relative fair values of each of these asset categories if the assets were to be valued individually.
>
> Due to our accounting policy election under ASU 2014-13, separately presenting two different asset categories would result in an arbitrary assignment of value to each, with

one asset category representing a residual amount, as opposed to its fair value. However, as a pool, the fair value of the assets in total is equal to the fair value of the liabilities.

For these reasons, the assets of our VIEs are presented in the aggregate."

Starwood hereby acknowledges that:

- Starwood is responsible for the adequacy and accuracy of the disclosures it has made in its filings, including the 2014 Form 10-K;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the SEC from taking any action with respect to Starwood's filings; and
- Starwood may not assert Staff comments as a defense in any proceeding initiated by the SEC or any person under the federal securities laws of the United States.

We appreciate your time and attention to this complex matter. If you would like to discuss the above proposed disclosure or any matters related to our VIEs, please let us know. We would gladly accommodate an in-person or telephonic discussion at your convenience. In the meantime, should you need any further information, please contact Rina Paniry, Chief Financial Officer, by phone at 305-695-5470 or by email at rpaniry@starwood.com.

Very truly yours,

/s/ RINA PANIRY

Attention: Ms. Jennifer Monick, Staff Accountant
Mr. Isaac Esquivel, Staff Accountant

Re: Starwood Waypoint Residential Trust Form
10-K for the fiscal year ended December 31, 2014
Filed March 6, 2015
File No. 1-36163

Form 8-K
Filed May 12, 2015
File No. 1-36163

Form 8-K/A
Filed May 14, 2014
File No. 1-36163

Dear Ms. Monick:

Starwood Waypoint Residential Trust (the "Company") hereby responds to the comments of the staff (the "Staff") of the U.S. Securities and Exchange Commission (the "Commission") contained in your letter dated July 10, 2015 (the "Comment Letter"), regarding the Company's Form 10-K for the fiscal year ended December 31, 2014 (the "2014 Form 10-K"), the Company's Form 8-K, filed with the Commission on May 12, 2015, and the Company's Form 8-K/A, filed with the Commission on May 14, 2014. For the convenience of the Staff, the Company has set forth below the comments contained in the Comment Letter followed by the Company's response to each comment.

Form 10-K for the year ended December 31, 2014

General

COMMENT:

1. We note you purchased $958 million of real estate during 2014. We further note you have provided Rule 3-14 financial statements in a Form 8-K/A for your purchase of 707 homes from Waypoint Fund XI, LLC. Please tell us if the additional real estate acquisitions during 2014 are significant to require Rule 3-14 financial statements and related pro forma financial information.

RESPONSE: Other than the acquisition of 707 homes from Waypoint Fund XI, LLC (the "Waypoint Fund Acquisition"), the Company had no acquisitions of real estate during 2014 that met the financial requirements of Rule 3-14. Other than the Waypoint Fund Acquisition, the Company only purchased approximately 177 homes in 2014 (totaling $21.1 million in gross purchase price, which represented 2.1% of the Company's total consolidated assets as of its last audited balance sheet) with leasing histories of more than three months. These acquisitions were not significant to require Rule 3-14 financial statements and related pro forma financial information. Other than Waypoint Fund Acquisition and the 177 homes mentioned above, the remaining real estate acquisitions in 2014 had leasing histories of less than three months and thus were not subject to the Rule 3-14 financial statement requirements pursuant to Section 2330.10 of the Staff's Financial Reporting Manual.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

COMMENT:

2. Please tell us the amount of personnel costs you have capitalized to real estate and deferred leasing costs. To the extent material, in future periodic filings, please also separately quantify and disclose the costs capitalized to real estate and deferred leasing costs for all periods presented and discuss fluctuations in capitalized personnel costs for all periods presented within your MD&A. To the extent you do not believe these amounts are material, please tell us how you made that determination.

RESPONSE: As noted on page 72 of the Company's 2014 Form 10-K, the Company capitalizes costs associated with the successful acquisition and stabilization of homes, including certain personnel costs associated with the time spent by such personnel in connection with the planning and execution of all capital improvement activities at the property level. The Company also defers successful leasing costs and amortizes them over the life of the relevant lease. During the year ended December 31, 2014, the Company capitalized $12.8 million of personnel costs to real estate and $8.3 million of personnel costs to deferred leasing costs (other assets).

In the case of personnel costs capitalized to real estate, the $12.8 million the Company capitalized during the year ended December 31, 2014 represents approximately 0.65% of total investments in real estate, net as reported in the Company's 2014 Form 10-K. As a result, the Company does not view this amount to be material. The $8.3 million of personnel costs capitalized to deferred leasing costs (other assets) during the year ended December 31, 2014 represents approximately 46% of total deferred leasing costs (other assets) as reported in the Company's 2014 Form 10-K; however, the Company does not view the amount to be a material percentage of total assets, as it represented 0.28% of total assets as reported in the Company's 2014 Form 10-K.

In addition, the Company does not believe that information concerning capitalized personnel costs is material. The Company has not provided and investors have not inquired about these costs during the Company's past earnings calls or in other communications with investors, which the Company believes demonstrates that analysts and investors do not find information about such costs to be material. To the Company's knowledge, the other public single-family home companies do not disclose this information, which the Company believes also demonstrates that information about such costs is not material. Further, if the Company disclosed this information, the Company believes such disclosure would put the Company at a competitive disadvantage to the other public single-family home companies.

As a result, the Company respectfully submits that capitalized personnel costs are not material information that is required to be included in the Company's future Securities Exchange Act of 1934, as amended (the "Exchange Act"), periodic reports.

Our Portfolio, page 62

COMMENT:

3. In future periodic filings, please disclose the weighted average year of purchase in your tabular portfolio disclosure on page 62.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports.

COMMENT:

4. We note the table that provides a summary of your leasing as of December 31, 2014 on page 63. In future periodic filings, please also include the weighted average original lease term and the weighted average remaining length of leases in your tabular disclosure.

RESPONSE: The Company advises the Staff that it does not currently track and report portfolio data in the manner requested. Therefore, modifications will need to be made to the Company's record keeping systems, which will take some time to implement. As a result, the Company will revise the disclosure as requested in future Exchange Act periodic reports beginning with its periodic report for the three months ended September 30, 2015.

Results of Operations

Property Operating and Maintenance, page 78

COMMENT:

5. Please revise future filings to provide a discussion reflecting property operating expenses as a percentage of revenues for all periods presented. Please explain any significant variances among these percentages.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports.

Liquidity and Capital Resources, page 81

COMMENT:

6. We note that you paid dividends of $5.5 million and had net cash used in operating activities of $81.1 million during the year ended December 31, 2014. In future periodic filings, please discuss the source(s) of these distributions within your Management's Discussion and Analysis of Financial Condition and Results of Operations, as this disparity raises concerns about the sustainability of distributions into the future. Please provide an example of your proposed disclosure.

RESPONSE: The Company's dividend distributions are not directly impacted by net cash used in operating activities. As a real estate investment trust ("REIT"), the Company is required, among other things, to distribute at least 90% of its annual REIT taxable income to its shareholders. In normal course, the Company alerts the public to differences between U.S. generally accepted accounting principle ("GAAP") and taxable calculations, as illustrated in the "Risk Factors" section of the Company's 2014 Form 10-K, which includes the following:

> "We intend to make distributions to our shareholders to comply with the REIT requirements of the Code. From time to time, we may generate taxable income greater than our income for financial reporting purposes prepared in accordance with GAAP, or differences in timing between the recognition of taxable income and the actual receipt of cash may occur."

In response to the Staff's comment regarding the source(s) of distributions to the Company's shareholders, in future Exchange Act periodic reports, the Company will include the following disclosure in the "Management's Discussion and Analysis of Financial Condition and Results of Operations" section:

“***Distributions to Shareholders***

We seek to generate income for distribution to our shareholders, typically by earning a spread between the yield on our stabilized portfolio of single-family rental homes and the cost of our borrowings. Our REIT taxable income, which serves as the basis for distributions to our shareholders, is generated primarily from this spread. The negative net cash flows from operating activities reported in our consolidated statements of cash flows primarily relate to development period expenses. However, cash flows related to our stabilized portfolio of single-family rental homes are positive and sufficient to support distributions to our shareholders.”

Master Repurchase Agreement, page 82

COMMENT:

7. With respect to your repurchase agreements, please quantify the average quarterly balance for all quarterly periods for which you have repurchase agreements. In addition, quantify the period end balance for each of those quarters and the maximum balance at any month-end. Explain the causes and business reasons for significant variances among these amounts. This information should be provided in future periodic filings for any repurchase agreement activity in the past three years, as applicable.

RESPONSE: The table below represents the weighted-average quarterly balance, maximum month-end balance and quarter-end balance of the Company’s master repurchase agreement with Deutsche Bank AG, Cayman Islands Branch as of each quarter end since the execution of such repurchase agreement on February 5, 2014. The table represents all repurchase agreement activity since the Company was spun-off as a separate public company. The smaller balances included in the table for the quarter ended March 31, 2014 reflect the fact that the repurchase agreement was not in place for that entire quarter, and changes in the balances included in the table for subsequent quarters reflects normal course variances in the level of acquisition activity financed with the repurchase agreement in the applicable quarter. The Company will revise the disclosure as requested in future Exchange Act periodic reports.

Quarter Ended	**Weighted-Average Quarterly Balance ($000s)**	**Maximum Month-End Balance ($000s)**	**Quarter-End Balance ($000s)**
March 31, 2014	$ 31,140	$ 140,129	$ 140,129
June 30, 2014	$ 198,291	$ 251,599	$ 251,599
September 30, 2014	$ 351,023	$ 448,320	$ 448,320
December 31, 2014	$ 453,897	$ 454,249	$ 454,249
March 31, 2015	$ 438,371	$ 434,858	$ 422,972

Asset-Backed Securitization Transaction, page 83

COMMENT:

8. In future filings, please provide a summary of the portfolio of the 4,081 homes in your securitization transaction. The information provided should be similar to the information you have provided in your table on page 62.

RESPONSE: The following table summarizes certain information with respect to homes in the Company's securitization (the "Securitization Properties") transaction as of March 31, 2015:

Markets	Number of Homes	Percent Leased	Average Acquisition Cost per Home	Average Investment Per Home(1)	Average Home Size (square feet)	Weighted Average Age (years)	Average Monthly Rent Per Leased Home (2)
Atlanta	826	97%	$ 103,182	$ 130,288	1,882	22	$ 1,188
South Florida	646	100%	$ 133,342	$ 167,975	1,591	45	$ 1,591
Houston	602	98%	$ 128,567	$ 146,499	2,085	30	$ 1,510
Tampa	420	100%	$ 107,767	$ 133,675	1,510	41	$ 1,295
Dallas	444	97%	$ 128,555	$ 149,396	2,041	22	$ 1,495
Denver	126	96%	$ 173,457	$ 211,073	1,439	30	$ 1,723
Chicago	249	98%	$ 120,428	$ 146,259	1,526	39	$ 1,646
Orlando	183	100%	$ 121,371	$ 142,204	1,640	38	$ 1,289
Southern California	251	96%	$ 241,836	$ 252,228	1,622	35	$ 1,784
Northern California	166	95%	$ 218,784	$ 235,427	1,497	44	$ 1,756
Phoenix	182	97%	$ 142,453	$ 160,496	1,537	38	$ 1,187
Total / Average	**4,095**	**98%**	**$ 133,847**	**$ 158,104**	**1,752**	**33**	**$ 1,451**

(1) Includes acquisition costs and actual and estimated upfront renovation costs.
(2) Represents average monthly contractual cash rent.

Because the characteristics of the Securitization Properties other than occupancy are substantially similar to the Company's portfolio of properties (see for comparison the March 31, 2015 property information disclosed in the table on page 38 of the Company's Form 10-Q for the three months ended March 31, 2015 filed on May 13, 2015), the Company respectfully submits that additional property level information for the Securitization Properties is not material information that is required to be included in the Company's future Exchange Act periodic filings.

Cash Flows, page 84

COMMENT:

9. We note that you incur significant capital expenditures to renovate and maintain your homes. In future periodic filings, please disclose the amount of capital expenditures related to renovations on new acquisitions, redevelopments of stabilized properties, and other capital expenditures for the periods presented.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports.

Aggregate Contractual Obligations, page 85

COMMENT:

10. It does not appear that you have included interest payments in your contractual obligations table. Please confirm, that you will disclose the amount of interest related to your debt in future filings. Please refer to footnote 46 in our Release 33-8350.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports.

Consolidated Balance Sheets, page 90

COMMENT:

11. Please revise future period filings to disaggregate your repurchase agreement from your senior SFR facility, or advise. Please refer to Rule 5-02 of Regulation S-X. Please also disaggregate the related cash flow activity on your Consolidated Statements of Cash Flows.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports.

Consolidated Statements of Operations, page 91

COMMENT:

12. We note you have classified gains on loan conversions, net, as realized gains. Please tell us if you sold the related real estate or if you continue to own the real estate. To the extent you continue to own the real estate, please tell us how you were able to determine that these gains are realized. Within your response, please reference the authoritative accounting literature management relied upon.

RESPONSE: As described below, the Company believes that loan conversions are nonmonetary exchange transactions and that the earnings process on the applicable loans have culminated, as the Company no longer has an ongoing transaction with the borrowers/customers and, instead, now has an investment in real property.

Realized gains on loan conversions, net as used in the Company's consolidated statements of operations represents non-performing loans ("NPLs") that were converted into real estate owned ("REO"). Generally, the Company purchases these NPLs at prices significantly below their unpaid principal balances. For the majority of the Company's NPLs, at the time of acquisition, the Company does not expect to receive the contractually required payments due under the terms of the NPLs. Upon acquisition, each NPL is reviewed to determine whether the NPL qualifies to be accounted for under Financial Accounting Standards Board Accounting Standards Codification Topic ("ASC") 310-30, *Receivables - Loans and Debt Securities Acquired with Deteriorated Credit Quality*, ("ASC 310-30") formerly SOP 03-3, *Accounting for Certain Loans or Debt Securities Acquired in a Transfer*. As part of this assessment, the Company determines whether there is evidence of credit deterioration since the origination of the loan and whether it is probable that the Company will be unable to collect all of the contractually required payments.

Upon a foreclosure, the "asset" (i.e., the NPL) effectively converts from a financial instrument to real property (i.e., REO), and the Company records the newly received REO asset at its fair value as of the date the Company obtains title to the REO and removes the recorded investment in the NPL from the Company's balance sheet. While there is no explicit guidance in GAAP to account for REO obtained in full satisfaction of a loan when the value received is in excess of the recorded investment, the Company considered paragraph 75 of the *Basis for Conclusions of FAS 15* ("FAS 15"), which states, in part:

> "The Board concluded that a troubled debt restructuring that involves transfer of resources or obligations requires accounting for the resources or obligations transferred whether that restructuring involves an exchange transaction or a nonreciprocal transfer."

Both kinds of transfers are accounted for in the existing accounting framework on essentially the same basis (exchange price received or paid or fair value received or given). The foreclosure transactions that the Company undertakes involve the "transfer of resources or obligations" even though the transaction is technically not within the scope of a troubled debt restructure ("TDR"). The Company does not believe the board conclusions expressed in paragraph 75 of FAS 15 is predicated on the fact that the transfer involves a TDR and, therefore, believes that such conclusion supports that the foreclosure should also be accounted for as a non-monetary transaction. As such, the Company believes that, when the NPL is fully settled through a foreclosure and the fair value of the REO exceeds the recorded investment in the NPL, it is appropriate to apply the guidance for nonmonetary asset transactions under ASC 845, *Nonmonetary Transactions* ("ASC 845"). Pursuant to ASC 845, the difference between the fair value of the REO at the time of foreclosure and the recorded investment of the NPL should be recorded as a realized gain in the Company's income statement. The realization of the above described transaction results in the Company owning REO at fair value with a permanent basis adjustment from the Company's initial investment in the related NPL and represents ownership in a separate and distinct asset, and, therefore, the gain/loss from the exchange is a realization event as prescribed by GAAP.

In summary, when the Company purchases a NPL, the counterparty to the NPL is the underlying borrower, and, as discussed in FAS 15 and above, a foreclosure represents an exchange transaction. The future profitability of operating or selling the REO does not relate to the settlement/extinguishment with the borrower. As a result of the nonmonetary exchange transaction, the Company believes the earnings process on the NPL has culminated, as the Company no longer has an ongoing transaction with the borrower/customer and now has an investment in real property.

This conclusion is consistent with Section 5A, Other Real Estate Owned, of the September 2013 version of the Bank Accounting Advisory Series of the Office of the Comptroller of the Currency (the "OCC Guide"). Although not authoritative, the OCC Guide indicates that upon foreclosure, a bank should record the property acquired at its fair value less costs to sell with a resulting gain for the excess over the carrying value.

COMMENT:

13. We note that you characterize realized gain on loan conversions, net as revenue. Please tell us how you determined this gain meets the definition of revenue pursuant to paragraph 78 of CON 6.

RESPONSE: When determining the appropriate characterization of realized gains on loan conversions, net in the Company's consolidated statements of operations, the Company considered the nature of the Company's ongoing core operations and whether the conversions resulted in enhancements of assets, as defined within paragraph 78 of Statement of Financial Accounting Concepts No. 6 ("CON 6"). The realization on loan conversions represents the creation of value for the Company's shareholders through conversion of a NPL into REO that will generate rental income or is monetized through a sale process. The value creation reflects expected cash inflows that will result from the Company's ongoing major operations. To further evaluate the Company's classification, the Company considered paragraphs 82 and 83 of CON 6 and determined that an NPL conversion does not meet the criteria to be considered a below the line "gain," as the NPL conversion is not "incidental" or "peripheral." Rather, NPL conversions are the realization and execution of the Company's strategy and an important element of the Company's core business.

As described in the Company's 2014 Form 10-K, the core business strategy of the Company's Prime Asset Fund VI, LLC ("Prime") joint venture is to acquire NPLs and (1) convert the loans into REO that can then either be contributed to the Company's rental portfolio or sold or (2) modify and resell NPLs at higher prices if circumstances warrant (the "NPL Strategies"). The Company's core strategy is not, however, to be a long term holder of NPLs once they start to re-perform post modification, and, as such, the Company markets for sale or otherwise disposes (typically within 12 months) of loans once they are re-performing. The Company believes that both of the NPL Strategies create value for the Company's shareholders and are essential to the Company's core business. In addition, the Company believes the NPL conversion process provides a means to significantly grow its real estate portfolio, and the Company considers such conversions to be a significant business strategy.

Notes to Consolidated Financial Statements

Note 2. Basis of Presentation and Significant Accounting Policies

Investments in Real Estate, page 98

COMMENT:

14. We note that the fair value of your Real Estate is primarily determined using BPOs. We note your disclosure on page 103 regarding the nature of the brokers activities used to value the real estate. Please revise your disclosures to (1) Describe the process you undertake to validate the BPOs received; (2) Confirm the BPOs you receive provide you with sufficient detail such that you are able to assess whether the pricing methodology complies with ASC 820; and (3) Discuss any adjustments you make to brokers' valuation of real estate. Please provide us an example of your proposed disclosure.

RESPONSE: The Company will revise the disclosure as requested in future Exchange Act periodic reports. An example of the Company's proposed disclosure is as follows:

> "In order to validate the broker price opinions ("BPOs") received and used in our assessment of fair value of real estate, we perform an internal review to determine if an acceptable valuation approach was used to estimate fair value in compliance with guidance provided by ASC 820, *Fair Value Measurements*. Additionally, we undertake an internal review to assess the relevance and appropriateness of comparable transactions that have been used by the broker in its BPO and any adjustments to comparable transactions made by the broker in reaching its value opinion. As a further review, we order an independent valuation of the property from a third-party automated valuation model ("AVM") service provider and compare the AVM value to the BPO value. In cases where the AVM and BPO values differ beyond a tolerated threshold, an internal evaluation is performed by a licensed appraiser using the market approach, and the value from the internal evaluation is used as our estimated fair value."

COMMENT:

15. Please provide the following for all periods presented:

   a. Please tell us the gross realized gains and gross realized losses on sales of investments in real estate. Further, please compare the net proceeds for the real estate sold to the value assigned to the real estate based on the BPO. Please provide an explanation for any significant variances between the net proceeds and the fair value assigned.

   b. We note you have recorded impairment on real estate. Please clarify for us the change in circumstances that resulted in impairment from the initial fair value assessment.

We may have further comment.

RESPONSE:

a. The gross realized gains on sales of investments in real estate for the years ended 2014 and 2013 and the period from May 23, 2012 (inception) through December 31, 2012 were $3.4 million, $2.2 million and $0.9 million, respectively. The gross realized losses on sales of investments in real estate for years ended 2014 and 2013 and the period from May 23, 2012 (inception) through December 31, 2012 were $3.6 million, $1.0 million and $0.3 million, respectively.

The Company's experience is that the net proceeds for the real estate sold is generally in line with the BPO values of the real estate. However, the Company occasionally encounters differences between net sales proceeds and the fair value assigned due to a number of factors, including bulk sale discounts, changes in market conditions between the date of initial valuation and date of disposition, differences in the actual condition of the home and the perceived value of the home based on the BPO at the conversion date and the impact of broker commissions and other transaction related expenses.

b. Impairments on real estate mainly represent assets originally purchased as part of NPL pools that were subsequently converted to REO. When an NPL is converted to REO, the REO is recorded on the Company's balance sheet at the fair value as of the date the Company takes title to the REO. As part of the standard process of measuring fair value on NPLs, the Company relies in part on BPOs, which incorporate certain assumptions about the internal quality of the underlying home that cannot be fully verified due to the lack of access to the interior of the underlying home. Occasionally, after taking title to the REO, the Company will gain information about the REO that was not evident at the time of the REO conversion and that results in a downward adjustment in estimated fair value and the recognition of an impairment loss. Further, when the Company lists the REO for sale, the REO meets the criteria as held-for-sale under GAAP, and, also in accordance with GAAP, all held-for-sale assets are recorded at the lower of net sales value or carrying value. Due to the fact that REO is initially booked at gross fair value but impairment is tested using fair value net of estimated transaction costs, this can sometimes lead to the recording of impairment on assets held-for-sale.

Non-Performing Loans, page 99

COMMENT:

16. For NPLs for which you have not elected the fair value option, please tell us if these loans gave rise to an accretable yield and nonaccretable difference. Within your response, please refer to ASC 310-30.

RESPONSE: In evaluating the Company's NPL portfolio, the Company considered ASC 310-30 as it relates to NPLs in which the Company did not elect the fair value option. One of the Company's NPL Strategies is to modify and resell NPLs at higher prices if circumstances warrant; however, the Company's holding period for such NPLs is short. When a borrower demonstrates the intent and ability to make principal and interest payments, an NPL may be modified, first on a trial basis, and later on a permanent basis after a period of successful performance, which results in a so-called "re-performing loan." However, such re-performing loans are characterized by high re-default rates and sporadic pay performance. As a result, until an NPL has been permanently modified and the borrower shows a consistent payment history of 12 months or more, the Company does not have the ability to reasonably project the timing and amount of future cash flows to be collected as prescribed in ASC 310-30. For the small percentage of NPLs within the Company's portfolio that will ultimately become re-performing loans, the Company's strategy is to quickly dispose of such loans (typically within 12 months), and, as a result, the Company will not recognize the vast majority of any accretable yield on such loans. Therefore, the Company believes that the accretable yield is both quantitatively and qualitatively immaterial to the users of the financial statements.

Schedule IV, page 130

COMMENT:

17. We note your disclosure that the carrying value of your loans approximates the aggregate cost for federal income tax purposes. We further note that you have elected the fair value option on certain NPLs. Please confirm for us that you continue to believe that the carrying value of your loans approximates that aggregate cost for federal income tax purposes or revise future periodic filings.

RESPONSE: It is no longer the Company's belief that the carrying value of the Company's loans approximates their aggregate cost for federal income tax purposes. In the Company's future Exchange Act periodic reports, the Company will revise its disclosure accordingly.

<u>Form 8-K filed on May 12, 2015</u>

<u>Exhibit 99.1 Press Release, dated May 12, 2015</u>

<u>Estimated NAV, page 8</u>

COMMENT:

18. We note your non-GAAP disclosure related to your estimated NAV measure. Please explain to us and disclose in future filings the methodologies used to determine the fair value of the investments in real estate and non-performing loans, including a qualitative and quantitative description of the material assumptions and estimates used in the analysis.

RESPONSE: The fair value of investments in real estate is determined using a progressive method that incorporates three value sources: automated valuation model values ("AVMs"), BPOs and internal desktop evaluations. AVM values, which are value estimates provided by service providers based on their proprietary mathematical modeling platforms that utilize historical sales and public records data of comparable homes and are adjusted based on characteristics specific to the relevant home being valued, are ordered for each home, and the AVMs the Company receives are accompanied with a confidence index which provides a measure for the perceived reliability of the AVM value. When a home's AVM confidence index falls below a specified score, the Company will order a BPO, which is a value estimate provided by a local broker based on comparable sales data and adjusted based on characteristics specific to the relevant home being valued. If for some reason a current BPO is not available, an internal evaluation is performed by a licensed appraiser using the market approach as defined by the Appraisal Institute to estimate the fair value.

The fair value of investments in NPLs is determined using the net present values of the BPOs of the underlying homes discounted at the then current market discount rate. The net present values of the BPOs of the underlying homes are determined using estimates of the length of time to foreclose or convert the relevant homes, with such estimates made on a state-by-state basis pursuant to market data received from service providers as adjusted from time to time based on the Company's experience.

The Company will revise the disclosure as requested in future Exchange Act periodic reports.

<u>Form 8-K/A filed May 14, 2014</u>

COMMENT:

19. We note you have provided Rule 3-14 financial statement for the period from March 3, 2013 to December 31, 2013. Please tell us if there is a leasing history for these properties for the period from January 1, 2013 to March 2, 2013. To the extent these properties were leased during that time, please tell us how you complied with Rule 3-14 of Regulation S-X.

RESPONSE: For the Waypoint Fund Acquisition, the Company provided Rule 3-14 financial statements for the period from March 5, 2013 to December 31, 2013, because Waypoint Fund XI, LLC, the entity from which the Company acquired the properties, began operations on March 5, 2013. Prior to March 5, 2013, Waypoint Fund XI, LLC did not own the properties, and the properties were not leased.

Mr. Isaac Esquivel, Staff Accountant

Re: Starwood Waypoint Residential Trust Form 10-K for the fiscal year ended December 31, 2014
Filed March 6, 2015
File No. 1-36163

Dear Ms. Monick:

Starwood Waypoint Residential Trust (the "Company") hereby responds to the comments of the staff (the "Staff") of the U.S. Securities and Exchange Commission (the "Commission") contained in your letter dated August 31, 2015 (the "Comment Letter"), regarding the Company's Form 10-K for the fiscal year ended December 31, 2014 and the Company's Form 8-K, filed with the Commission on May 12, 2015. For the convenience of the Staff, the Company has set forth below the comments contained in the Comment Letter followed by the Company's response to each comment.

Form 10-K for the year ended December 31, 2014

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

COMMENT:

1. We note your response to prior comment two and the amount of personnel costs you have capitalized. It appears that these amounts are material to your financial statements taken as a whole and the amounts capitalized need to be disclosed. In future periodic filings, please separately quantify and disclose the costs capitalized to real estate and deferred leasing costs for all periods presented and discuss fluctuations in capitalized personnel costs for all periods presented within your MD&A or advise.

RESPONSE: The Company will revise the disclosure as requested in future Securities Exchange Act of 1934, as amended, periodic reports.

Investments in Real Estate, page 98

COMMENT:

2. We note your response to prior comment 14. In cases where the AVM and BPO values differ beyond a tolerated threshold, please define what is considered a tolerated threshold. Additionally, please tell us how often the AVM and BPO values differ beyond the tolerated threshold.

RESPONSE: The automated valuation models ("AVMs") the Company receives from its third-party AVM service provider (the "AVM Provider") include a corresponding confidence score. An AVM confidence score of 72 from the AVM Provider equates to a statistical error margin of roughly 5%, which the Appraisal Institute has determined is within the acceptable margin of error for an appraisal. Therefore, the Company accepts AVMs with a confidence score equal to or above 72 and discards those with a score below 72, as well as AVMs that appear to have abnormal values (e.g., a significant increase or decrease from the previous AVM value and/or purchase price of the home), and the Company replaces discarded AVMs with a current broker price opinion ("BPO"). Historically, approximately 90% of the AVMs provided to the Company have had a confidence score equal to or greater than 72.

In instances where the Company receives BPOs with valuation dates within 90 days of an available AVM (e.g., where a BPO is required for financing purposes and the Company already has AVMs on file for that particular home), the two are compared, and, historically, the variance in such cases has been approximately 2.5%. In instances where the variance between an AVM value and a BPO value is 10% (which the Appraisal Institute has determined is within the acceptable margin of error for valuations of the same property by different appraisers) or higher, a licensed staff appraiser of the Company performs an internal evaluation to determine the final value estimate. Historically, where current AVMs and BPOs have been compared, the variance between the two has differed beyond the 10% tolerated threshold in approximately 4% of the cases.

Form 8-K filed on May 12, 2015

Exhibit 99.1 Press Release, dated May 12, 2015

Estimated NAV, page 8

COMMENT:

3. We note your response to prior comment 18. Please address the following:

   a. Please tell us the differences between the processes used to arrive at a valuation using a BPO as compared to an AVM.

   b. Please tell us who provides the confidence index and how that confidence index is determined.

c. Please tell us what the "specified score" that the confidence index must fall below to require the Company to order a BPO. Additionally, please tell us how often the confidence index falls below the specified score.

d. Please tell us if you compare the AVMs to BPOs received when you initially converted the NPLs into real estate. To the extent that you do perform such a comparison, please provide us with detail about this process; your response should include, but not be limited to, any additional procedures that you perform as the length of time increases between the date of the BPO and the date of the AVM value. To the extent that you do not perform such a comparison, please tell us how you determined the valuations provided by the AVMs are reasonable.

e. Please tell us if you adjust the AVMs for the physical condition of the property. In your response, please tell us if a property manager, or similar, provides any additional information that is considered in assessing the need to adjust the AVM values.

RESPONSE:

a. An AVM for a home is a valuation generated from approximately 20 individual sub-valuation models, including (i) a number of hedonic or multiple regression models, (ii) an appraisal emulation model and (iii) a time adjustment model, and, after evaluating comparable sales, the AVM value for such home is adjusted by the AVM Provider as if such home was in "after repair" condition. Because not all of the Company's homes are in "after repair" condition, in order to arrive at a valuation using an AVM, the Company (i) for a non-stabilized home, deducts the average remaining estimated capital expense of the Company's non-stabilized homes from the AVM value or (ii) for a stabilized home, deducts the average cost to repair the Company's stabilized homes from the AVM value.

A BPO is an opinion of value given by a licensed real estate broker that inspects the exterior of the subject home in person and performs a form report valuation using the sales comparison approach. The sales comparison approach is a real estate appraisal method that compares the subject home to other homes with similar characteristics that have been sold recently. The BPOs received provide an "as-repaired" value and an "as-is" value. When using a BPO to arrive at a valuation, the Company utilizes the "as-is" value, and, as such, deductions for estimated capital expense or average cost to repair, as applicable, are not required.

b. The AVM confidence score is prepared by the AVM Provider and is a statistically based measurement of how similar or dissimilar the results of the approximately 20 individual sub-valuation models mentioned in the first paragraph of Response 3(a) above are to each other. The AVM confidence score is based on the covariance of the individual sub-valuation models.

c. An AVM confidence score of 72 from the AVM Provider equates to a statistical error margin of roughly 5%, which the Appraisal Institute has determined is within the acceptable margin of error for an appraisal. Therefore, the Company accepts AVMs with a confidence score equal to or above 72. Historically, approximately 90% of the AVM's provided to the Company have had a confidence score equal to or greater than 72. See Response 2 above.

d. Upon initial conversion of non-performing loans ("NPLs") into real estate ("REO"), the Company relies exclusively on BPOs to assess fair value. AVMs are used for subsequent measurements of REO fair value in periods after initial conversion and for the ongoing assessment of fair value of the Company's real estate portfolio. The Company does, however, periodically test for variances between AVMs and BPOs. In particular, in instances where the Company receives BPOs with valuation dates within 90 days of an available AVM (e.g., where a BPO is required for financing purposes and the Company already has AVMs on file for that particular home), the two are compared, and, historically, the variance in such cases has been approximately 2.5%. In instances where the variance between an AVM valve and a BPO value is 10% (which the Appraisal Institute has determined is within the acceptable margin of error for valuations of the same property by different appraisers) or higher, a licensed staff appraiser of the Company performs an internal evaluation to determine the final value estimate. See Response 2 above.

e. The AVM value for a home is adjusted by the AVM Provider as if such home was in "after repair" condition. Because not all of the Company's homes are in "after repair" condition, in order to arrive at a valuation using an AVM, the Company (i) for a non-stabilized home, deducts the average remaining estimated capital expense of the Company's non-stabilized homes from the AVM value or (ii) for a stabilized home, deducts the average cost to repair the Company's stabilized homes from the AVM value. See Response 3(a) above. In general, the Company has not relied on specific feedback from property managers, or similar persons, for the purpose of ongoing real estate valuation.

The Company acknowledges that:

- The Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- The Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Re: Strategic Hotels & Resorts, Inc.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 24, 2015
File No. 001-32223

Dear Ms. Monick:

In connection with the Staff's comment letter dated May 14, 2015 regarding Strategic Hotels & Resorts, Inc.'s (the "Company") annual report on Form 10-K for the fiscal year ended December 31, 2014 (the "10-K") filed with the Securities and Exchange Commission (the "Commission") on February 24, 2015, I hereby submit the Company's response. The Staff's comments are reproduced in their entirety below, and the responses thereto are set forth in bold after each comment.

Form 10-K for the Fiscal Year Ended December 31, 2014 filed February 24, 2015

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

FFO, FFO-Fully Diluted, and Comparable FFO, page 53

1. We note that you reconcile Funds from Operations (FFO) from Net income (loss) attributable to SHR common shareholders. Based upon your reconciliation, it appears that FFO represents FFO attributable to common shareholders. Please revise your presentation in future filings to clearly label FFO as FFO attributable to common shareholders. Also make similar revisions to your future earnings releases filed on Form 8-K, as appropriate.

Response:

We advise the Staff that we will revise our presentation in future filings, including future earnings releases filed on Form 8-K, to clearly label FFO as 'FFO attributable to SHR common shareholders' or as 'FFO attributable to common shareholders,' as appropriate.

2. Please tell us the nature of the line item 'Adjustment from consolidated affiliates' in your FFO reconciliation. Additionally, please tell us how this adjustment is consistent with NAREIT defined FFO.

Response:

We advise the Staff that the line item 'Adjustment from consolidated affiliates' in our FFO reconciliation represents the portion of depreciation and amortization and gains or losses on the sale of assets that is attributable to the noncontrolling interests in affiliates that are consolidated but not wholly owned by us. The line items labeled 'Depreciation and amortization' and '(Gain) loss on sale of assets' in the FFO reconciliation include amounts attributable to both us and the noncontrolling interests in our consolidated affiliates. We make this adjustment to reflect only our portion of depreciation and amortization and gains or losses on the sale of assets related to our consolidated affiliates. Our FFO represents FFO attributable to common shareholders; therefore, we believe that reflecting only our portion of these items is appropriate and is consistent with the NAREIT definition of FFO.

We further advise the Staff that the 'Noncontrolling interests adjustments' line item in the FFO reconciliation represents the portion of depreciation and amortization attributable to the redeemable noncontrolling interests in our operating partnership.

We will revise our presentation in future filings, including future earnings releases filed on Form 8-K, to clearly distinguish adjustments related to redeemable noncontrolling interests in our operating partnership from adjustments related to noncontrolling interests in our consolidated affiliates.

Item 8. Financial Statements and Supplemental Data

2. Summary of Significant Accounting Policies

Intangible Assets, page 67

3. We note that you have recorded an intangible asset not subject to amortization in connection with the acquisition of the Hotel del Coronado. Please tell us more about the trade name and the factors you considered in determining that is has an indefinite life. In this regard, please tell us how you determined there are no legal, regulatory, contractual, competitive, economic, or other factors that limit the useful life of the trade name. See ASC 350-30-35-1 through -5.

Response:

We advise the Staff that the intangible asset not subject to amortization is the trade name, Hotel del Coronado. The hotel is an iconic beachfront resort located in Coronado, California that has garnered a strong reputation since it opened in 1888 under the Hotel del Coronado name. This trade name clearly adds value to the property. As noted in ASC 350-30-35-4, if no legal, regulatory, contractual, competitive, economic, or other factors limit the useful life of an intangible asset to the reporting entity, the useful life of the asset shall be considered to be indefinite. ASC 350-30-35-4 further states that the useful life of an intangible asset is indefinite if that life extends beyond the foreseeable horizon – that is, there is no foreseeable limit on the period of time over which it is expected to contribute to the cash flows of the reporting entity. We advise the Staff that we have not identified, after performing due diligence procedures customary with the acquisition of new properties, any legal, regulatory or contractual limitations related to the trade name, Hotel del Coronado. There are few comparable hotels with a similar history and unique reputation as the Hotel del Coronado, which limits any significant competitive factors. The Hotel del Coronado has endured many economic cycles throughout its history, which we believe is a strong indicator that there are no foreseeable economic factors that would limit the useful life of the name. The Hotel del Coronado name has been in existence for over 100 years and will continue to be used at the resort for the foreseeable future. Based on these factors, we have concluded that there is no foreseeable limit on the period of time over which the trade name is expected to contribute to our cash flows and have concluded that it has an indefinite life.

RE: Summit Hotel Properties, Inc.
Form 10-K for the Year Ended December 31, 2014
Filed March 2, 2015
File No. 1-9044

Dear Mr. Gordon:

This letter is being submitted in response to the comment letter of the staff of the Division of Corporate Finance (the "Staff") of the United States Securities and Exchange Commission (the "SEC") regarding the above-referenced Annual Report on Form 10-K filed by Summit Hotel Properties, Inc. (the "Company").

For the Staff's convenience, the Staff's comment appears below in italics with the Company's response to the comment set out immediately below it.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Funds From Operations, page 35

1. We note that your reconciliation of FFO excludes the impact of preferred dividends. Therefore it appears your FFO measure represents FFO attributable to common shareholders and OP unitholders. Please revise your presentation in future filings to clearly label such measure.

RESPONSE: For future SEC filings beginning with the Company's Quarterly Report on Form 10-Q for the quarter ending September 30, 2015, the Company will clearly indicate that its FFO is applicable to common shareholders and OP unitholders and that its reconciliation of FFO begins with the Company's GAAP net income or loss applicable to common shareholders and OP unitholders.

The Company hereby acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in its filings;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the Company's filings;
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

This response has been shared with our Audit Committee and they concur with the Company's response.

If you have any questions or comments regarding our response above, please do not hesitate to call the undersigned at 512-538-2303.

Very truly yours,

/s/ Greg A. Dowell

Re: Sun Communities, Inc.
Form 10-K for the year ended December 31, 2014
Filed March 2, 2015
File No. 1-12616

Dear Mr. Gordon:

This letter contains our response to the comment from the Staff of the Commission contained in your letter dated June 11, 2015. For convenience of reference, the comments contained in your letter are reprinted below in italics and are followed by our corresponding response.

1. *In future filings, please revise your disclosure on page 54 to identify the line items "Funds from Operations" and "FFO excluding certain items" as "Funds from operations attributable to Sun Communities, Inc. common stockholders" and "FFO excluding certain items attributable to Sun Communities, Inc. common stockholders".*

Company Response:

The Company respectfully requests the Commission's consideration of the following description of "Funds from operations" and "FFO excluding certain items":

"Funds from operations attributable to Sun Communities, Inc. common stockholders and dilutive convertible securities [(1)]"

"FFO attributable to Sun Communities, Inc. common stockholders and dilutive convertible securitiesexcluding certain items [(1)]"

The footnote ascribed to these line items will read as follows:

[(1)] The effect of certain anti-dilutive convertible securities is excluded from these items.

We will also change the description of "FFO per Share - fully diluted" and "FFO per Share excluding certain items - fully diluted" to:

FFO attributable to Sun Communities, Inc. common stockholders and dilutive convertible securities per Share - fully diluted

FFO attributable to Sun Communities, Inc. common stockholders and dilutive convertible securities per Share excluding certain items - fully diluted

As you requested in the original letter, the Company acknowledges that: it is responsible for the adequacy and accuracy of the disclosure in the filing; staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Tanger Properties Limited Partnership
Form 10-K
Filed February 24, 2015
File No. 333-3526-01

Dear Mr. Gordon:

Tanger Factory Outlet Centers, Inc. and Tanger Properties Limited Partnership (collectively, the “Company”) are responding to the comments of the staff of the Division of Corporation Finance (the “Staff”) of the U.S. Securities and Exchange Commission (the “Commission”) set forth in your letter dated May 22, 2015.

For your convenience, the Staff's comments are set forth below in bold, followed by the Company's response to each comment.

Form 10-K filed February 24, 2015

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

1. We note your disclosure of commitments related to construction and development activity as of December 31, 2014. Please reconcile the disclosed amounts to your table on page 48 which shows projected total net cost of Foxwoods, Grand Rapids and Southaven of $270.9 million and costs incurred to date of $93.1 million. Based upon this table, it appears that you are expecting to incur approximately $177.8 million in development costs for those three centers alone.

Response:

The purpose of our table on page 48 is to provide information regarding the estimated total net costs associated with our consolidated development projects. The $177.8 million represents an estimate of the projected total net costs remaining to complete the construction and leasing of the outlet centers. The projected total net cost of Foxwoods, Grand Rapids and Southaven includes projected expenditures for land, building, permits, professional services such as engineering and architects fees, tenant allowances, capitalized interest, and other miscellaneous costs. Many of these expenditures listed above are not, or will not, be subject to contracts which are legal binding agreements; thus, as of December 31, 2014, we had entered into legally binding agreements committing us to pay only a portion of these total net costs.

As a result, the disclosure on page 48 differs from our disclosure of commitments on page 52, which is intended to disclose only commitments related to construction and development activity that are enforceable and legally binding, as required under Item 303(a)(5) of Regulation S-K. At December 31, 2014, our legally binding contractual commitments included $54.6 million related to construction contracts and $25.7 million related to tenant improvement allowances associated with executed lease agreements for which the tenant improvements had not been constructed.

Notes to Consolidated Financial Statements

Note 6. Investments in Unconsolidated Real Estate Joint Ventures, page F-28

2. Please provide to us additional details regarding your Savannah joint venture. In this regard, we note that your ownership interest is only 50% yet your equity contribution was significantly higher than that of your joint venture partner.

Response:

Our ownership interest is stated in terms of our legal interest, which is generally based on our voting rights and/or our portion of the proceeds to be received upon a liquidation event after all partner contributions and required returns on those contributions have been paid. Please refer to footnote 1 to the table on page F-28 of our Notes to Consolidated Financial Statements where we state that we expect our economic interest in the joint venture to be greater than our legal interest due to the capital contribution and distribution provisions in the joint venture agreement. Further, please refer to our disclosure on Page F-30 of our Notes to Consolidated Financial Statements under the caption "Savannah, Georgia", where we state that contributions we make in excess of our partner's equity contributions earn a preferred rate of return of 8% from the date the contributions are made until the outlet center's grand opening date, and then 10% annually thereafter.

3. We note your disclosure on page 53 that indicates your joint venture agreements contain provisions by which a partner can force the other partners to either buy or sell their investment in the joint venture. Please describe to us the terms of these put and call options as they relate to each of the individual joint ventures.

Response:

Our joint ventures are generally subject to buy-sell provisions which are customary for joint venture agreements in the real estate industry. Either partner may initiate these provisions (subject to any applicable lock up period), which could result in either the sale of our interest or the use of available cash or additional borrowings to acquire the other party's interest. Under these provisions, one partner sets a price for the property, then the other partner has the option to either (1) purchase their partner's interest based on that price or (2) sell its interest to the other partner based on that price. Since the partner other than the partner who triggers the provision has the option to be the buyer or seller, we don't consider this arrangement to be a mandatory redeemable obligation. In future filings, we will expand our disclosure to include the discussion above.

Form 8-K filed February 10, 2015

Exhibit 99.2

Pro Rata Balance Sheet as of December 31, 2015, page 15

4. We note the Pro Rata Balance Sheet and Pro Rata Statement of Operations included on pages 15 and 16. As the pro rata information appears to include non-GAAP measures, please revise your presentation in future filings to include the disclosures required by Regulation G and Item 10(e)(1)(i) of Regulation S-K including identifying the Pro Rata Balance Sheet and Pro Rata Statement of Operations as non-GAAP. Provide us with a draft of the disclosure you intend to include.

Response:

We will revise our presentation in future filings to clearly identify the Pro Rata Balance Sheet and Pro Rata Statement of Operations as non-GAAP within the headings and columns of each statement. We will also provide an introduction that will provide explanatory and cautionary language similar to the example below:

"The following pro rata information is not, and is not intended to be, a presentation in accordance with GAAP. The pro rata balance sheet and income statement data reflect our proportionate economic ownership of each asset in our portfolio that we do not wholly own. These assets may be found in the table above entitled, “Unconsolidated Joint Venture Information.” The amounts shown in the column labeled “Consolidated” were derived from the Company's consolidated financial statements as filed with the SEC on Form 10-Q or 10-K, as applicable. The amounts in the columns labeled “Prorata” were derived on a property-by-property basis by applying to each financial statement line item the ownership percentage interest used to arrive at our share of net income during the period when applying the equity method of accounting. A similar calculation was performed for the amounts in the columns labeled “Noncontrolling interests” and “Company.”

We provide pro rata balance sheet and income statement information because we believe it assists investors and analysts in estimating our economic interest in our unconsolidated joint ventures when read in conjunction with the Company’s reported results under GAAP. The presentation of pro rata financial statements has limitations as an analytical tool. Some of these limitations include:

- The amounts shown on the individual line items were derived by applying our overall ownership interest percentage determined when applying the equity method of accounting and do not necessarily represent our actual claim to the individual assets and liabilities; and
- Other companies in our industry may calculate their pro rata interest differently than we do, limiting the usefulness as a comparative measure.

Because of these limitations, the pro rata balance sheet and income statement should not be considered in isolation or as a substitute for our financial statements as reported under GAAP, We compensate for these limitations by relying primarily on our GAAP results and using the pro rata balance sheet and income statement only supplementally.”

5. Further, this presentation may attach undue prominence to the non-GAAP information and may give investors the impression that the non-GAAP information represents a comprehensive basis of accounting. Please tell us the consideration you gave to Question 102.10 of the Compliance and Disclosure Interpretations on Non-GAAP Financial Measures.

Response:

We respectfully acknowledge the Staff’s comment. We note that Exhibit 99.2, which contained the pro rata balance sheet and income statement as well as other supplemental operating and financial data, was furnished pursuant to Item 7.01 of the Current Report on Form 8-K filed on February 10, 2015 (the “Form 8-K”). The Company believes that Item 7.01 is appropriate because it considers the information contained in Exhibit 99.2 to be supplemental to its reported GAAP financial results and key non-GAAP financial measures (Funds from Operations and Adjusted Funds from Operations) for the year ended December 31, 2014, which were furnished in Exhibit 99.1 pursuant to Item 2.02 of the Form 8-K.

As a result, we respectfully believe that Regulation G, and not Item 10(e)(1)(i) of Regulation S-K, applies to Exhibit 99.2 and the pro rata balance sheet and income statement contained therein. We note that unlike Item 10(e)(1)(i) of Regulation S-K, Regulation G does not contain the “equal or greater prominence” requirement when presenting the most directly comparable GAAP measure, and therefore we believe that Question 102.10 of the Compliance and Disclosure Interpretations on Non-GAAP Financial Measures does not apply to the pro rata balance sheet and income statement contained in Exhibit 99.2, and that the Company’s presentation of the pro rata balance sheet and income statement, as modified by the proposed additional disclosure contained in our response to Comment 4 above, is appropriate.

File No. 001-11986

Tanger Properties Limited Partnership
Form 10-K
Filed February 24, 2015
File No. 333-3526-01

Dear Ms. Jaime G. John:

Tanger Factory Outlet Centers, Inc. and Tanger Properties Limited Partnership (collectively, the “Company”) are responding to the comment of the staff of the Division of Corporation Finance (the “Staff”) of the U.S. Securities and Exchange Commission (the “Commission”) set forth in your letter dated June 30, 2015.

For your convenience, the Staff's comment is set forth below in bold, followed by the Company's response.

Form 8-K filed February 10, 2015

Exhibit 99.2

Pro Rata Balance Sheet as of December 31, 2014, page 15

1. **We note your response to comment 4 and the proposed revisions. In the introductory paragraph to your Pro Rata Balance Sheet and Pro Rata Statement of Operations please also include language indicating that you do not control, nor do you have any legal claim to the revenues and expenses of the unconsolidated joint ventures. Additionally, expand your disclosure to provide details regarding your ownership and claims to the operations of the joint ventures.**

   Response:

   The introductory paragraph provided in our original response to comment 4 has been restated below in its entirety to incorporate the staff comment above.

   "The following pro rata information is not, and is not intended to be, a presentation in accordance with GAAP. The pro rata balance sheet and income statement data reflect our proportionate economic ownership of each asset in our portfolio that we do not wholly own. These assets may be found in the table above entitled, “Unconsolidated Joint Venture Information.” The amounts shown in the column labeled “Consolidated” were prepared on a basis consistent with the Company’s consolidated financial statements as filed with the SEC on the most recent Form 10-Q or 10-K, as applicable. The amounts in the columns labeled “Pro rata” were derived on a property-by-property basis by applying to each financial statement line item the ownership percentage interest used to arrive at our share of net income during the period when applying the equity method of accounting. A similar calculation was performed for the amounts in the columns labeled “Noncontrolling interests” and “Company.”

We do not control the unconsolidated joint ventures and the presentations of the assets and liabilities and revenues and expenses do not represent our legal claim to such items. The operating agreements of the unconsolidated joint ventures generally provide that partners may receive cash distributions (1) quarterly, to the extent there is available cash from operations, (2) upon a capital event, such as a refinancing or sale or (3) upon liquidation of the venture. The amount of cash each partner receives is based upon specific provisions of each operating agreement and vary depending on factors including the amount of capital contributed by each partner and whether any contributions are entitled to priority distributions. Upon liquidation of the joint venture and after all liabilities, priority distributions and initial equity contributions have been repaid, the partners generally would be entitled to any residual cash remaining based on the legal ownership percentage shown in the table above entitled “Unconsolidated Joint Venture Information”.

We provide pro rata balance sheet and income statement information because we believe it assists investors and analysts in estimating our economic interest in our unconsolidated joint ventures when read in conjunction with the Company’s reported results under GAAP. The presentation of pro rata financial statements has limitations as an analytical tool. Some of these limitations include:

- The amounts shown on the individual line items were derived by applying our overall economic ownership interest percentage determined when applying the equity method of accounting and do not necessarily represent our legal claim to the assets and liabilities, or the revenues and expenses; and

- Other companies in our industry may calculate their pro rata interest differently than we do, limiting the usefulness as a comparative measure.

Because of these limitations, the pro rata balance sheet and income statement should not be considered in isolation or as a substitute for our financial statements as reported under GAAP, We compensate for these limitations by relying primarily on our GAAP results and using the pro rata balance sheet and income statement only supplementally.”

Attention: Ms. Jaime G. John

Re: Taubman Centers, Inc.
Form 10-K for the Fiscal Year Ended December 31, 2014
Filed February 24, 2015
File No. 001-11530

Dear Ms. John:

We refer to your letter dated April 22, 2015, in which you provided comments on behalf of the staff (the "Staff") of the U.S. Securities and Exchange Commission (the "Commission") to Taubman Centers, Inc. ("we" or the "Company") with respect to the Company's Annual Report on Form 10-K for the year ended December 31, 2014 filed on February 24, 2015 (the "2014 Form 10-K"). This letter responds to the Staff's comments as indicated below. For convenience of reference, each Staff comment contained in your April 22, 2015 comment letter is reprinted below in bold italics, numbered to correspond with the paragraph numbers assigned in your letter, and is followed by the corresponding response of the Company.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Reconciliation of Net Income Attributable to Taubman Centers, Inc. Common Shareowners to Funds from Operations and Adjusted Funds from Operations, page 53

1. We note that you reconcile Funds from Operations (FFO) from Net income attributable to TCO common shareowners - Basic. Based upon your reconciliation, it appears that the $280.5 million FFO represents FFO attributable to common shareowners, partnership unitholders and participating securities holders. Similarly, it appears that the $200.4 million FFO attributable to TCO represents FFO attributable to TCO common shareowners and participating securities holders. Please advise and revise your presentation in future filings to clearly label each measure. Also make adjustments to earnings releases filed on Form 8-K, as appropriate.

Response

We advise that in reconciling the Company's FFO from Net income attributable to TCO common shareowners, the Company first arrives at a measure of the Operating Partnership (TRG)'s FFO, which is the $280.5 million referenced by the Staff in its comment. This measure is attributable to partnership unitholders and participating securities holders of TRG.

As the controlling general partner of TRG, the majority of the FFO attributable to TRG's partnership unitholders ultimately flows through to the Company's common shareowners. Therefore, after arriving at TRG's FFO as described above, we calculate the FFO attributable to TCO's common shareholders, which is the $200.4 million referenced in the Staff's comment.

The Company takes the approach of first reconciling to TRG's FFO, as the Company conducts all of its operations through its only significant asset, its consolidated subsidiary TRG. This approach is consistent with the guidance provided by the National Association of Real Estate Investment Trusts ("NAREIT"), the real estate industry trade group that originally defined FFO. NAREIT reminded its members through its Financial Reporting Alert dated October 1, 2003 that "FFO…represents FFO applicable to all equity shares - not just FFO attributable to common shareholders." This Alert ultimately confirmed our strategy for this reconciliation, with the FFO of TRG and that allocable to the Company also previously having been the subject of correspondence with the Staff in April 2006.

We agree with the Staff that the captioning in the reconciliation could be enhanced to accurately distinguish and label the two measures of FFO referred to in the Staff's comment. In future filings, the Company will revise the caption of TRG's FFO (currently captioned simply as "Funds from Operations") to "Funds from Operations attributable to partnership unitholders and participating securities of TRG". Similarly, in future filings, the Company will caption the measure of TCO's FFO as "Funds from Operations attributable to TCO's common shareowners". These revised captions will also be used in earnings releases filed on Form 8-K.

Item 8. Financial Statements and Supplementary Data

Note 5 - Investments in Unconsolidated Joint Ventures, page F-22

> ***2. We note your disclosure of combined financial information for your unconsolidated joint ventures. Given the changes in ownership of your unconsolidated joint ventures during 2014, please tell us what consideration you gave to the requirement to file separate financial statements for significant equity method investments pursuant to Rule 3-09 of Regulation S-X.***

Response

The Company considered the requirements to file separate financial statements for significant equity method investments pursuant to Rule 3-09 of Regulation S-X, performing the required income and the investment tests set forth in Regulation S-X 1-02(w) using 20 percent thresholds. Pursuant to these tests, none of the Company's equity method investees qualified as significant and therefore no separate financial statements were filed.

The Company's significance tests considered the changes in our unconsolidated joint ventures during 2014, most notably the disposition of Arizona Mills in January 2014, the sale of a partial ownership interest, including certain governance rights, in International Plaza resulting in its recognition under the equity method starting in January 2014, and the start of operations of University Town Center in October 2014. The Company's income-based significance tests reflected the operations of these particular investees for the portions of the year during which the investments were accounted for using the equity method, consistent with guidelines in the Staff's Financial Reporting Manual. As additional information about the Company's significance tests, note that the unconsolidated joint ventures for which the ownership changed during 2014 would not qualify as significant even if the income-based tests included the entire annual period.

The Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions or comments regarding the foregoing, or have additional comments or questions, please contact the undersigned at (248) 258-7610, or email lpayne@taubman.com, cc: rhogrebe@taubman.com.

Very truly yours,

/s/ Lisa A. Payne____________________________

Re: Ventas, Inc.
Form 10-K for the fiscal year ended December 31, 2014
Filed February 13, 2015
File No. 1-10989

Dear Ms. Barros:

Set forth below are the responses of Ventas, Inc., a Delaware corporation (together with its subsidiaries, the "Company"), to the comments of the staff (the "Staff") of the Securities and Exchange Commission (the "Commission") contained in the letter dated May 5, 2015 from you to Debra A. Cafaro, the Company's Chairman and Chief Executive Officer, with respect to the above-referenced filing.

For the convenience of the Staff, we have set forth below each of the Staff's comments in italics, immediately followed by our response thereto.

Form 10-K for the Year Ended December 31, 2014

Funds from Operations and Normalized Funds from Operations, page 61

1. *We note that you reconcile Funds from Operations (FFO) from Net income attributable to common stockholders and it appears FFO represents FFO attributable to common stockholders. In future filings please revise the label of this non-GAAP measure to indicate that it is FFO attributable to common shareholders or tell us why this is not necessary.*

   As requested, the Company will use the labels "FFO attributable to common stockholders" and "Normalized FFO attributable to common stockholders" and continue to reconcile such non-GAAP measures to net income attributable to common stockholders in its future Exchange Act periodic reports.

Triple-Net Lease Expirations, page 69

2. *We note your disclosure that you re-leased to Kindred, transitioned to new operators or sold 107 of the 108 licensed healthcare assets whose lease terms with Kindred were scheduled to expire on September 30, 2014. Please tell us in your response whether you incurred any material leasing costs with respect to the renewal or transition of these expired leases. In future Exchange Act periodic reports, to the extent material, please provide disclosure on the amount of leases signed with new tenants in the reporting period and the costs of such leasing.*

   The Company incurred aggregate leasing costs of $4.5 million in connection with the re-leasing to Kindred Healthcare, Inc. ("Kindred"), transition to new operators or sale of the 107 licensed healthcare assets whose lease terms with Kindred were scheduled to expire on September 30, 2014. These costs were deferred on our consolidated balance sheets and are being amortized over the respective lives of the new leases. These costs represented less than 0.025% of the Company's total assets as of December 31, 2014 and were, therefore, immaterial to the Company's financial condition. As requested, the Company will, to the extent material, provide disclosure on the amount of leases signed with new tenants and the costs incurred by the Company in connection with such leasing in its future Exchange Act periodic reports.

Definitive Proxy Statement on Schedule 14A

Transactions with Related Persons, page 17

3. *We note the disclosure of the aggregate annual rent Sutter Health paid in 2014. Please tell us how you determined that the company should disclose only the aggregate annual rent rather than the aggregate amount of lease payments based on Instruction 3(a) to Item 404(a) of Regulation S-K.*

   The Company determined that its ownership of two medical office buildings ("MOBs") that are 100% leased to Sutter Health, for whom Robert D. Reed served as Senior Vice President and Chief Financial Officer during 2014, did not constitute a transaction with a related person that was required to be disclosed in accordance with Item 404 of Regulation S-K. In particular, Mr. Reed did not have a material direct or indirect interest in the transaction, as the aggregate amount of all rent payments due to the Company from Sutter Health on or after January 1, 2014 was $63.5 million, or less than 0.7% of Sutter Health's annual revenues (Sutter Health reported $10.2 billion of operating revenues in 2014). However, the Company disclosed the lease transactions in its Definitive Proxy Statement because the transactions had been approved by the Company's Audit Committee pursuant to the Company's written Policy on Transactions with Related Persons.

We hope that the foregoing has been responsive to the Staff's comments. The Company hereby acknowledges that:

- it is responsible for the adequacy and accuracy of the disclosure in the above-referenced filing;
- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

Should any member of the Staff have any questions or comments or wish to discuss further the foregoing responses to your May 5, 2015 letter, please call me at (312) 660-3725.

Very truly yours,

/s/ Robert F. Probst

Form 10-K/A for the year ended December 31, 2014
Filed on April 30, 2015
File No. 333-197780

Dear Mr. Woody:

We are writing in response to your letter dated May 11, 2015, setting forth the comments of the staff of the Division of Corporation Finance (the "Staff") on the above mentioned filings for American Realty Capital Properties, Inc. and ARC Properties Operating Partnership, L.P. (together, the "Company"). We have considered the Staff's comments and our responses are set forth below. To facilitate the Staff's review, we have keyed our responses to the headings and numbered comments used in the Staff's comment letter, which we have reproduced in bold print.

<u>Form 10-K for the year ended December 31, 2015</u>

<u>Item 1. Business</u>

<u>Primary Investment Focus, page 8</u>

1. **We note your disclosure indicating that your business strategy includes receiving the majority of your revenue from "investment grade and creditworthy tenants," as well as your explanation of the term "creditworthy tenant" on page 4. In future Exchange Act periodic reports, please also include a discussion of how management monitors the tenant credit quality of its current portfolio.**

Response: In future Exchange Act periodic reports, the Company will include the following additional disclosure:

We consistently monitor the credit quality of our portfolio by seeking to lease space and/or acquire properties leased to creditworthy tenants that meet our underwriting and operating guidelines and we actively monitor tenant creditworthiness following the initiation of a lease. When we assess tenant credit quality, we: (i) review relevant financial information, including financial ratios, net worth, revenue, cash flows, leverage and liquidity; (ii) evaluate the depth and experience of the tenant's management team; and (iii) assess the strength/growth of the tenant's industry. On an on-going basis, we evaluate the need for an allowance for doubtful accounts arising from estimated losses that could result from the tenant's inability to make required current rent payments and an allowance against accrued rental income for future potential losses that we deem to be unrecoverable over the term of an applicable lease. The factors considered in determining the credit risk of our tenants include, but are not limited to: payment history; credit status and change in status (credit ratings for public companies are used as a primary metric); change in tenant space needs (i.e., expansion/downsize); tenant financial performance; economic conditions in a specific geographic region; and industry specific credit considerations. The credit risk of our portfolio is mitigated by the high quality of our existing tenant base, reviews of prospective tenants' risk profiles prior to lease execution and consistent monitoring of our portfolio to identify potential problem tenants.

<u>Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities</u>

<u>Securities Authorized for Issuance Under Equity Compensation Plans, page 46</u>

2. **We were unable to locate all of the disclosures required by Item 201(d) of Regulation S-K. In future Exchange Act periodic reports, please include tabular equity compensation plan information, or advise. Refer to Item 201(d) of Regulation S-K.**

Response: The Company included the tabular equity compensation plan information required by Item 201(d) of Regulation S-K on page 34 of the Form 10-K/A for the year ended December 31, 2014, which was filed with the U.S. Securities and Exchange Commission (the "SEC") on April 30, 2015. The Company will continue to provide the information required by Item 201(d) of Regulation S-K in its future Exchange Act periodic reports.

<u>Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 47</u>

3. **We note your disclosure on page 13 that, following the announcement that certain of your financial statements could no longer be relied upon, various broker-dealers and clearing firms participating in offerings of Cole Capital's managed REITs suspended sales activity. In future Exchange Act periodic reports, please revise your disclosure in MD&A to more fully describe (i) the impact of such decline in revenue generated by Cole Capital, (ii) the general and administrative expenses associated with Cole Capital's capital raising activity and (iii) any known trends or uncertainties that have had or you reasonably expect will have a material impact on Cole Capital's revenues.**

Response: The Company added additional disclosure on the suspension of certain selling agreements on page 60 of its Quarterly Report on Form 10-Q for the quarter ended March 31, 2015, which was filed with the SEC on May 7, 2015. In response to the Staff's comment, the Company will add similar additional disclosure on such suspensions in future Exchange Act periodic reports to the extent such disclosure is still relevant to the Company.

<u>Funds from Operations and Adjusted Funds from Operations, page 63</u>

4. **We note you have labeled certain items as one time when presenting Company AFFO. Given the nature of these adjustments, it is not clear why they are one time. Please clarify and/or revise to remove the reference to one time from your disclosure in future filings. Reference is made to Question 102.03 of the Division´s Compliance and Disclosure Interpretations for Non-GAAP Financial Measures.**

Response: The Company was using the term "one time" to describe the nature of the adjustments as they related to a specific transaction and not as those adjustments pertained to the Company. In future Exchange Act periodic reports, the Company will revise its disclosure with respect to its adjustments to clarify the nature of such adjustments and replace the reference to one time with "non-routine."

5. We note your adjustment related to the deferred tax benefit to arrive at AFFO. Please provide further clarification as to why management believes this adjustment is appropriate.

Response: The Company's management uses AFFO to evaluate the Company's operating performance, and AFFO also allows for a comparison of the Company's operating performance with other REITs that utilize an equivalent measure. In order to determine the best practice regarding AFFO in the Company's industry, the Company assessed the methodology used by other companies within its peer group that utilize taxable REIT subsidiaries. After reviewing these peers' AFFO calculations, the Company believes that the most appropriate and prevalent practice is to adjust for the deferred portion of the tax provision/benefit. The Company believes that it is appropriate to adjust for the deferred portion of the tax provision/benefit so that only the current portion of the tax provision/benefit, which generally approximates the tax payable/receivable, respectively, attributable to the period, impacts the Company's AFFO.

Liquidity and Capital Resources

Availability of Funds from Credit Facilities, page 66

6. **We note that your credit facilities contain financial covenants. To the extent you have material sources of liquidity, such as a credit facility, that include financial covenants that may restrict future financing flexibility, please include a more detailed discussion of these covenants in future Exchange Act periodic reports.**

Response: In future Exchange Act periodic reports, to the extent the Company has material sources of liquidity that include financial covenants that may restrict future financing flexibility, the Company will include more detailed discussion of these covenants and note whether the Company is in compliance with such covenants.

Related Party Transactions and Agreements, page 69

7. **You state on page 70 that the audit committee investigation identified certain payments made by the company to the former manager and its affiliates that were not sufficiently documented or that otherwise warrant scrutiny. In future Exchange Act periodic reports, please revise to more fully describe and quantify these certain payments to the extent material and clarify whether you intend to seek recovery for such payments.**

Response: The Company is continuing to evaluate whether it has a right to seek recovery for any of these payments and, if so, its alternatives for seeking recovery. The Company has not concluded that recovery of any such payments is reasonably possible. The Company believes that further disclosure about these payments at this time may mislead investors about the likelihood of recovery of such payments. The Company will make additional disclosure in future periodic reports at such time, if any, as it concludes that recovery of any material amount of such payments is reasonably possible.

Contractual Obligations, page 68

8. In future filings, please include a footnote to the table that describes the significant assumptions used to determine the interest payments presented.

Response: In future Exchange Act periodic reports, the Company will include a footnote to the Contractual Obligations table that describes the significant assumptions used to determine the interest payments presented.

File No. 333-197780

Dear Ms. Gowetski:

We are writing in response to your letter dated June 5, 2015, setting forth the additional comments of the staff of the Division of Corporation Finance (the "Staff") on the above mentioned filings for American Realty Capital Properties, Inc. and ARC Properties Operating Partnership, L.P. (together, the "Company"). We have considered the Staff's comments and our responses are set forth below. To facilitate the Staff's review, we have keyed our responses to the headings and numbered comments used in the Staff's comment letter, which we have reproduced in bold print.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations, page 47

1. **We note your response to comment 3 of our letter. Additionally, we note the disclosure on page 60 of your Quarterly Report on Form 10-Q for the quarter ended March 31, 2015 that "[d]ue to the Restatement, selling agreements for the Managed REITs in their offering stages were suspended. Accordingly, our Cole Capital results of operations for the three months ended March 31, 2015, compared to the three months ended March 1, 2014, reflect decreases in most categories." In future Exchange Act periodic reports, please revise your disclosure to more specifically describe and quantify the effect of this suspension on (i) the revenue generated by Cole Capital, (ii) the general and administrative expenses associated with Cole Capital's capital raising activity and (iii) any known trends or uncertainties that have had or you reasonably expect will have a material impact on Cole Capital's revenues.**

Response: In future Exchange Act periodic reports, the Company will add disclosure to more specifically describe and quantify the effect of the suspension on (i) the revenue generated by Cole Capital, (ii) the general and administrative expenses associated with Cole Capital's capital raising activity and (iii) any known trends or uncertainties that have had or we reasonably expect will have a material impact on Cole Capital's revenues, to the extent such disclosure is still relevant to the Company.

Liquidity and Capital Resources

Availability of Funds from Credit Facilities, page 66

2. **We note your response to comment 7 of our letter. In future Exchange Act periodic reports, to the extent material, we continue to believe that you should revise your disclosure to more fully describe and quantify these certain payments made by the company to the former manager and its affiliates that were not sufficiently documented or that otherwise warrant scrutiny and clarify that you have not concluded that the recovery of such payments is reasonably possible. Please revise accordingly or advise.**

Response: As the Company's counsel advised you by telephone, we are still evaluating whether it would be appropriate to expand on our existing disclosure concerning potential claims arising from past transactions with the Former Manager and its affiliates. If we determine that additional disclosure is appropriate, we will advise you in advance of our upcoming quarterly filing.

Re: Weingarten Realty Investors
Form 10-K for the Year Ended December 31, 2014
Filed February 19, 2015
File No. 001-09876

Dear Ms. Monick:

Weingarten Realty Investors (the “Company”, “we”, “us”, or “our”) is submitting this letter in response to the Staff’s comment letter, dated May 20, 2015, with respect to the Company’s Annual Report on Form 10-K for the year ended December 31, 2014.

Set forth below are the Company’s responses. For the convenience of the Staff, the Company has repeated each of the Staff’s comments followed by the Company’s responses.

Form 10-K for the year ended December 31, 2014

Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations

Funds from Operations, page 38

1. We note that your calculation of FFO starts with Net income attributable to common shareholders and as such, it appears that the resulting amount of FFO represents FFO attributable to common shareholders rather than FFO for the entire company. In future filings please re-label "Funds from operations" to "Funds from operations attributable to common shareholders".

Response:

In response to the Staff's comment, we will, in future fillings, use the label "Funds from operations attributable to common shareholders".

Item 8. Financial Statements and Supplementary Data

Consolidated Statements of Equity, page 47

2. We note that you recorded $144 million in Disposition of noncontrolling interests. Please provide to us additional details regarding this transaction. In addition, please disclose the nature of this adjustment within future periodic filings.

Response:

This transaction relates to the dissolution, which is disclosed on page 78 of our 10-K in Note 20 Related Parties, of a consolidated joint venture with Hines Retail REIT ("Hines"), of which we owned a 30% interest. (For additional information on this consolidated joint venture, please refer to our 10-K Note 22 Variable Interest Entities.) The joint venture owned 13 properties and upon dissolution, five were distributed to us, accounted for under ASC 810 and eight were distributed to Hines, accounted for under ASC 360. Upon the distribution of the eight properties, we reduced our remaining noncontrolling interests associated with the joint venture in the amount of $144 million.

The current disclosure in our 10-K, Note 20 regarding this transaction is as follows:

In 2014, we completed the dissolution of our consolidated real estate joint venture with Hines Retail REIT ("Hines"), in which we owned a 30% interest. At December 31, 2013, this joint venture held a portfolio of 13 properties located in Texas, Tennessee, Georgia, Florida and North Carolina with $172.9 million in total assets and $11.1 million of debt, net, which was assumed by Hines. This transaction was completed through the distribution of five properties to us, resulting in an increase to our equity of $11.0 million, and eight properties to Hines. The eight properties distributed to Hines were classified as held for sale at December 31, 2013, and we realized a $23.3 million gain in discontinued operations associated with this transaction.

We will, in future filings, update our Related Party Note to include the following disclosure:

"In 2014, we completed the dissolution of our consolidated real estate joint venture with Hines Retail REIT ("Hines"), in which we owned a 30% interest. At December 31, 2013, this joint venture held a portfolio of 13 properties located in Texas, Tennessee, Georgia, Florida and North Carolina with $172.9 million in total assets and $11.1 million of debt, net, which was assumed by Hines. This transaction was completed through the distribution of five properties to us and eight properties to Hines, resulting in an increase to our equity and a decrease to noncontrolling interests of $11.0 million.

Additionally, upon the distribution of the eight properties to Hines, we realized a $23.3 million gain in discontinued operations and a decrease in noncontrolling interest of $144.3 million associated with this transaction."

The Company acknowledges that:

- the Company is responsible for the adequacy and accuracy of the disclosure in the filing;
- staff comments or changes to disclosure in response to staff comments do not foreclose the Commission from taking any action with respect to the filing; and
- the Company may not assert staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions, please do not hesitate to contact me at 713-866-6054 should you require any additional information.

Sincerely,

/s/ Stephen C. Richter

Re: Comment Letter Dated April 21, 2015
Regarding Weyerhaeuser Company
Form 10-K
Filed February 13, 2015
File No. 001-04825

Dear Ms. Martin:

We received your correspondence dated April 21, 2015 in which you commented on Weyerhaeuser Company's annual report on Form 10-K for the year ended December 31, 2014. We set forth below first the comments of the Staff of the U.S. Securities and Exchange Commission (the "Staff") in italics and follow with our responses.

Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A), page 33

1. *We note your use of adjusted EBITDA in your earnings release. Please tell us if you consider this measure to be a key performance indicator. To the extent this measure is considered to be a key performance measure, in future filings please include the measure as well as the required disclosure in accordance with Item 10(e) of Regulation S-K within your Management's Discussion and Analysis. Please include an example of any future disclosure in your response.*

Response: The Company considers this measure to be a key performance indicator and, accordingly, we will include this measure and the required disclosure in accordance with Item 10(e) of Regulation S-K in our future filing. An example of our future disclosure is as follows:

PERFORMANCE MEASURES

We use Adjusted Earnings before Interest, Taxes, Depreciation, Depletion and Amortization (Adjusted EBITDA) as a key performance measure to evaluate the performance of the consolidated company and our business segments. This measure should not be considered in isolation from and is not intended to represent an alternative to our results reported in accordance with U.S. generally accepted accounting principles (U.S. GAAP). However, we believe Adjusted EBITDA provides meaningful supplemental information about our operating performance, better facilitates period to period comparisons, and is widely used by analysts, lenders, rating agencies and other interested parties.

Our definition of Adjusted EBITDA may be different from similarly titled measures reported by other companies. Adjusted EBITDA, as we define it, is operating income from continuing operations adjusted for depreciation, depletion, amortization, pension and postretirement costs not allocated to business segments (primarily interest cost, expected return on plan assets, amortization of actuarial loss and amortization of prior service cost/credit), special items and discontinued operations.

ADJUSTED EBITDA BY SEGMENT

DOLLAR AMOUNTS IN MILLIONS	2014
Adjusted EBITDA by Segment:	
Timberlands	$ 820
Wood Products	446
Cellulose Fibers	447
	1,713
Unallocated Items	(79)
Total	**$ 1,634**

We reconcile Adjusted EBITDA to net earnings for the consolidated company and to operating income for the business segments, as those are the most directly comparable U.S. GAAP measures for each.

The table below reconciles Adjusted EBITDA to net income by segment during the year ended 2014:

DOLLAR AMOUNTS IN MILLIONS	Timberlands	Wood Products	Cellulose Fibers	Unallocated Items	Total
Adjusted EBITDA by Segment:					
Net earnings					$ 1,826
Earnings from discontinued operations, net of income taxes					(998)
Interest expense, net of capitalized interest					344
Income taxes					185
Net contribution to earnings	**$ 613**	**$ 327**	**$ 291**	**$ 126**	**1,357**
Interest income and other	—	—	1	(38)	(37)
Operating income	**613**	**327**	**292**	**88**	**1,320**
Depreciation, depletion and amortization	207	119	155	12	493
Non-operating pension and postretirement credits	—	—	—	(45)	(45)
Special items[1]	—	—	—	(134)	(134)
Adjusted EBITDA	**$ 820**	**$ 446**	**$ 447**	**$ (79)**	**$ 1,634**

(1) Special items include: a $151 million pretax gain related to a previously announced postretirement plan amendment, $39 million in restructuring and closure charges related to our selling, general and administrative cost reduction initiative and a $22 million pretax gain on the sale of a landfill in Washington State.

Economic and Market Conditions Affecting Our Operations, page 33

2. *We note your disclosure regarding the impact of the U.S. housing market, demand in China and Japan and the strength of the U.S. dollar on your operations in 2014. In future filings please expand your disclosure to describe how management expects such economic and market conditions will effect continuing operations in the next year or advise. Refer to Item 303(a)(3)(ii) of Regulation S-K for guidance.*

Response: The Company will include in its future filings disclosure that describes how management expects such economic and market conditions to affect continuing operations in the next year.

Re: Washington Prime Group Inc.
Form 10-K for the Year Ended December 31, 2014
Filed February 26, 2015
Form 10-Q for the Period Ended March 31, 2015
Filed May 7, 2015
Form 8-K/A
Filed March 17, 2015
File No. 001-36252

Dear Ms. Monick:

WP Glimcher Inc. (the "Company") is transmitting for filing the Company's responses to the comments of the staff of the Division of Corporation Finance (the "Staff") of the Securities and Exchange Commission (the "Commission") contained in your letter dated June 8, 2015 related to the filings listed above.

For convenience, each comment contained in your June 8, 2015 letter is reprinted below in italics, followed by the Company's response.

Form 10-K for the Year Ended December 31, 2014

Note 3. Summary of Significant Accounting Policies

Intangibles, page F-18

1. With respect to your below market lease intangibles, please tell us how you considered any fixed rate renewal options in your estimate of the remaining term of the underlying leases and your basis for your determination. Your response should address, but not necessarily be limited to, whether or not you use a threshold in your evaluation. To the extent you use thresholds, please tell us how you concluded that these thresholds are appropriate and tell us the potential impact to your financial statements, including the impact from the acquisition of Glimcher, if you were to conclude that all below market fixed rate renewal options would be exercised.

COMPANY RESPONSE:

For each lease assumed through the acquisition of a property, the Company applies Accounting Standards Codification ("ASC") 805-20-25-12 to determine whether the terms of the lease are favorable or unfavorable compared with the market terms of a lease for a similar property at the acquisition date. If the terms are favorable, an above market lease intangible asset is recorded, and if the terms are unfavorable, a below market lease liability is recorded. Because ASC 805-20-25-12 does not provide further guidance on how to arrive at the fair value of the above or below market lease intangible asset or liability, the Company refers to ASC 820 and ASC 840 for the appropriate valuation guidance. ASC 820 provides detailed guidance for using management’s judgment and other market participant consideration in assessing fair value when quoted prices are not available.

With respect to leases that are deemed to be below market, the Company considers fixed rate renewal options in its calculation of the fair value of resulting below market lease intangible liabilities and their remaining terms. Based on the Company's experience, tenants typically make renewal decisions based upon a variety of both quantitative and qualitative factors.

Per the Company's experience, contractual option rents that are only slightly below market may not sufficiently incentivize a tenant to exercise their option, due to factors such as the availability of newer buildings and location optimization, among others. Accordingly, the Company believes that a renewal option must qualify as a "bargain renewal option" (as defined below) with a renewal rate that is "sufficiently lower" than market rates in order for exercise to be "reasonably assured." ASC 840-10-20 defines a bargain renewal option as "a provision allowing the lessee, at his option, to renew the lease for a rental sufficiently lower than the fair rental of the property at the date the option becomes exercisable that exercise of the option appears, at the inception of the lease, to be reasonably assured." The authoritative guidance included in ASC 840-10-20 does not provide quantitative thresholds to use in making an assessment of whether rental rates are “sufficiently lower” so that exercise is reasonably assured. Therefore, the Company is required to apply professional judgment in determining whether this "reasonably assured" test is met.

The Company has developed its policy (included in its "Purchase Accounting Allocation" policy) in an attempt to reflect what an active market participant would consider a “bargain renewal option." Based on the Company's market knowledge and extensive leasing and re-leasing experience, its research of policies of other real estate companies, and the methodologies utilized by third-party valuation experts, the Company has determined that generally an option should be considered “sufficiently lower” if it is at least 10% below projected market rates, depending on the amount of time until future option exercise date(s). Generally, the further into the future the option exercise date, the less likely the tenant is to exercise the renewal option and the higher the threshold to be applied. The Company believes that this methodology is in-line with how a market participant would consider such an option, and therefore the 10% quantitative threshold represents a starting point for the Company's analysis.

In addition, the Company evaluates each real estate lease acquired from a qualitative perspective to determine whether a renewal option is considered a bargain renewal option (i.e., reasonably assured of exercise) based on the facts and circumstances existing at the acquisition date. These factors include, but are not limited to, length of the in-place lease, the contractual ability of the tenant to sublease their space, financial performance of the property, financial performance of the individual tenant, the overall economic climate, and any other known facts or circumstances surrounding the tenant’s business operations.

In summary, based on the factors described above, the Company has determined that generally the exercise of a bargain renewal option is “reasonably assured” when the lease renewal rate is at least 10% below expected market rents (as discussed above) and certain qualitative factors are met. The Company has determined that, in general, renewal rates that are less than 10% below estimated market rents are not reasonably assured of exercise and do not constitute a bargain renewal, and therefore, the Company generally does not quantify the impact of such renewal options in its valuation models. Similarly, the Company has determined that, in general, renewal rates that are more than 10% below estimated market rents are reasonably assured of exercise, absent qualitative factors that would suggest otherwise, and therefore, the Company records the impact of such an option as a below market lease liability. For all below market leases with fixed option renewals (regardless of threshold), the Company also analyzes all of the qualitative factors discussed above in determining whether the recording of an intangible below market lease liability related to such an option is appropriate.

In response to your comment, the Company has quantified the potential impact to its financial statements if it concluded that all below market fixed rate renewal options would be exercised, without considering the "reasonably assured" test described above. For this quantification as of December 31, 2014, the Company evaluated its 2014 acquisitions that included the assumption of in-place leases, which represent approximately 76% of the below market lease liability balance recorded in the Company's consolidated financial statements at that date. Because essentially all of the extension options on below market leases were deemed bargain renewal options (i.e., in excess of the 10% threshold described above, taking into consideration qualitative factors), the Company included all of the extension options when valuing the below market lease liabilities and determining the amortization periods for the 2014 acquisitions. Therefore, there would be no material impact to below market lease liabilities and rental revenue, based on the analysis of 2014 acquisitions and extrapolation to the remaining prior year leases as of and for the year ended December 31, 2014.

The Glimcher purchase price allocation, including our evaluation of the fair value of acquired leases, is preliminary as of March 31, 2015, and the Company continues to analyze the various assumptions and estimates utilized in the analysis of the fair value of acquired leases. The following analysis considers the Company's current best estimate of the below market lease liability as compared to the potential liability balance if all below market renewal options were to be valued as part of that liability. For the quantification of the potential impact to the financial statements as of March 31, 2015, the Company evaluated its 2014 acquisitions (zero impact as noted above) and its first quarter 2015 acquisitions including its acquisition of 23 properties in the merger with Glimcher on January 15, 2015. Because some extension options on below market leases were not deemed bargain renewal options (i.e., below the 10% threshold described above, taking into consideration qualitative factors), the Company excluded them when valuing the below market lease liabilities and determining the amortization periods for the first quarter 2015 acquisitions. After including all such extension options, there would be an increase to below market lease liabilities of approximately $7.8 million, with a corresponding increase to other real estate assets, as of March 31, 2015. There would be no resulting material change to rental revenue (due to longer amortization periods) or depreciation expense for the three months ended March 31, 2015. There would also be no resulting material annual change to rental revenue (due to longer amortization periods) or depreciation expense. Therefore, if the Company assumed that all below market fixed rate renewal options would be exercised, the impact of this assumption would not be material to the financial statements. Moreover, the Company believes the methodology it has used in its historical financial statements to value and amortize its below market lease liabilities (including consideration of whether the exercise of the related extension options is "reasonably assured") is proper for the reasons presented above.

Form 10-Q for the Period Ended March 31, 2015

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

Non-GAAP Financial Measures, page 41

2. In future filings, please revise your reconciliation to identify the line item "FFO allocable to shareholders" as "FFO allocable to common shareholders." This comment also applies to your presentation in future earnings releases such as the release furnished as an exhibit to your Form 8-K filed May 7, 2015.

COMPANY RESPONSE:

In future filings, the Company will label the line item "FFO allocable to common shareholders" to more accurately describe the item.

3. We note your adjustment for NOI from Glimcher properties prior to the Merger. Please revise future periodic filings to quantitatively and qualitatively disclose how you arrived at that adjustment. Your revision should include, but not necessarily be limited to, how you derived the related revenues and expenses, how you derived any adjustments to historical revenues and expenses, and your basis for any such adjustments. Please provide us with an example of your proposed disclosure.

COMPANY RESPONSE:

In future filings, the Company will more thoroughly describe the adjustment to NOI reflected by the line item "Add: NOI from Glimcher properties prior to the Merger," disclosing quantitatively and qualitatively how it arrived at the adjustment. The adjustment consists of the historical revenues and expenses from the 23 properties acquired in the Merger with no adjustments to the historical amounts. This adjustment is deemed necessary in order to provide comparability in the NOI calculations across all periods presented. An example of the Company's proposed disclosure, to be included in a footnote to the NOI table (renumbering other footnotes as needed), is as follows:

"(2) Represents an adjustment to add the historical NOI amounts from the 23 properties acquired in the Merger for periods prior to the January 15, 2015 Merger date. This adjustment is included to provide comparability across all periods presented."

Form 8-K/A Filed March 17, 2015

4. We note you have accounted for the JV transaction in the pro forma financial information using the equity method of accounting. We further note that you will retain a 51% ownership interest in the joint venture, you will retain management and leasing responsibilities, and that major decisions require mutual consent of the joint venture partners. Please tell us how you determined it was not necessary to consolidate this entity. Your response should include, but not necessary be limited to, how you resolve disagreements involving major decisions.

COMPANY RESPONSE:

As disclosed in Note 2 to the audited financial statements in its Form 10-K for the year ended December 31, 2014 filed with the Commission on February 26, 2015, the Company's financial statements "reflect the consolidation of properties that are wholly owned or properties in which we own less than a 100% interest but that we control." Per Note 2, "we also consolidate a variable interest entity, or VIE, when we are determined to be the primary beneficiary."

In determining whether or not to consolidate the JV Properties (as defined in the above referenced Form 8-K/A), the Company first tested to determine if the JV Properties would qualify as VIE's. In reviewing this, the Company tested to determine whether the equity at risk was sufficient upon its sale on June 1, 2015 (the "Sale Date") of the 49% economic interest in the JV Properties to O'Connor Mall Partners, L.P ("O'Connor"). The Company notes the following items:

A. As of the Sale Date, the JV Properties had total equity (fair value) of approximately $884.0 million which was in excess of 50% of the book value of the assets, and book value materially approximates fair value since the assets had been recorded at fair value in connection with the Glimcher acquisition on January 15, 2015.

B. The loans encumbering the JV Properties owned by the JV are non-recourse and do not require guarantees of financial performance.

Based upon the factors above and other considerations, the Company determined that the JV's equity is sufficient to permit the entity to finance its activities without additional subordinated financial support.

With respect to ASC 810-10-15-14b and 14c, there are no provisions in the governing documents that would cause the equity holders as a group to lack any of the characteristics of a controlling financial interest. That is, the equity holders as a group make all of the decisions and are exposed to all of the risks and rewards of ownership based upon the economic interest within the JV. Accordingly, the Company determined that the JV is not a VIE.

The Company then tested to determine which, if any, member effectively controlled the JV. As described below, ASC 810 -25-1 discusses when it is appropriate to consolidate an entity:

"Consolidation is appropriate if a reporting entity has a controlling financial interest in another entity and a specific scope exception does not apply (see Section 810-10-15). The usual condition for a controlling financial interest is ownership of a majority voting interest, but in some circumstances control does not rest with the majority owner."

The Company, as disclosed in Note 2 to the audited financial statements referenced above, determines that "control of a property is demonstrated by, among other factors, our ability to refinance debt and sell the property without the consent of any other member or owner and the inability of any other member or owner to replace us." The following decision items, which include the Company's major criteria for determining control, are viewed as major decisions within the JV ("Major Decisions"):

- The approval of debt refinancing related to the properties.
- The approval of the sale of property.
- The approval of the removal or replacement of a member.
- The approval of the operating budgets, including general leasing parameters.
- The approval of the capital expenditure budget.
- The approval of the property marketing plans.
- The approval of major leases or other leases outside of the general parameters.

All of these Major Decisions require the unanimous consent of both the Company and the O'Connor member.

Also as noted, the Company, through one of its subsidiaries, is responsible for the operational management and leasing of the JV Properties through separate agreements. However, in its capacity as manager, the Company is strictly executing upon the strategic direction and operating parameters previously approved by the JV members unanimously. Under the terms of the JV and related property management agreements, the property manager is not permitted to operate (e.g., allow the properties to incur operating or capital expenditures, enter into leasing arrangements, etc.) the properties outside of the terms of the previously approved budgets, marketing plans and leasing parameters, without obtaining the consent of each of the JV members.

The agreements that govern the JV (the “JV Agreements”) also provide a course of resolution for disagreements over Major Decisions, which requires both JV members, within set time frames, of a disagreement of a Major Decision, to negotiate in good faith. It further provides for escalating levels of management negotiations and extended timelines to negotiate in good faith. In the event no decision can be reached on certain operational Major Decisions, the JV Agreements provide for continued operation of the property or properties in accordance with the previous year’s budgets. This feature of the JV Agreements strongly encourages the JV members to negotiate and mutually resolve their disagreements over such Major Decisions, because continued operation under the previous year’s budget does not allow the property manager to adapt the operations of the properties to current market conditions, and thus provides an unsustainable approach to operating the properties in a manner that would allow the JV Properties to achieve their long-term strategic direction and maximize economic results. For non-operational Major Decisions, in the event an agreement cannot be reached, no action will be taken on a proposed Major Decision.

Therefore, since decisions over all of the criteria that the Company considers when determining whether financial control exists require unanimous consent with significant input from all JV members, the Company has concluded that joint control exists over the JV properties, precluding consolidation by the Company. The Company concluded, given its significant influence over the operations of the JV properties, that the equity method of accounting was the appropriate model to use within the pro forma financial information.

Additionally, the Company acknowledges the following:

- the Company is responsible for the adequacy and accuracy of the disclosures in the filing;

- Staff comments or changes to disclosure in response to Staff comments do not foreclose the Commission from taking any action with respect to the filing; and

- the Company may not assert Staff comments as a defense in any proceeding initiated by the Commission or any person under the federal securities laws of the United States.

If you have any questions or comments regarding the foregoing, or have additional questions or comments, please contact the undersigned at 614-887-5610.

Sincerely,

/s/ Mark E. Yale
Mark E. Yale
Executive Vice President and
Chief Financial Officer

U.S. Securities and Exchange Commission

Securities Act of 1933
Rule 144

March 14, 2016

Response of the Office of International Corporate Finance
Division of Corporation Finance

Re: Bank of America, N.A., Merrill Lynch, Pierce, Fenner & Smith Incorporated
Incoming letter dated March 11, 2016

Based on the specific facts and representations in your letter, and without necessarily agreeing with your analysis, the Division's views are as follows. Capitalized terms have the same meanings as defined in your letter.

For purposes of Rule 144(d)(1) under the Securities Act of 1933, the holding period for the shares of REIT Common Stock issued in the transactions described in your letter commenced upon the acquisition of the OP Units. In reaching this conclusion, we note in particular your representations that the Unit Holders paid the full purchase price for the OP Units at the time they were acquired from the OP; an OP Unit is the economic equivalent of a share of REIT Common Stock, representing the same right to the same proportional interest in the same underlying pool of assets; the exchange of REIT Common Stock for OP Units is entirely at the discretion of the REIT; and no additional consideration is paid by the Unit Holders for the shares of REIT Common Stock.

Because this position is based upon the representations made in your letter, any different facts or conditions might require the Division to reach a different conclusion.

Sincerely,

David Fredrickson
Chief Counsel and Associate Director

Concurrent Session: State and Local Taxes

Thursday, March 31st
11:15am – 12:30pm
Marriott Marquis, Washington DC

Moderator:
William DeKlerk, Sr. Director-Tax, Essex Property Trust

Panelists:
Darren Chesser, Director-Tax, RLJ Lodging Trust
Sam Melehani, Partner, PwC
Michele Randall, Partner-Tax, EY

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1

2016

State and Local Tax

March 30-April 1, 2016

Presenters:

Moderator:

- William DeKlerk, Sr. Director-Tax, Essex Property Trust

Panelists:

- Darren Chesser, Director-Tax, RLJ Lodging Trust
- Sam Melehani, Partner, PwC
- Michele Randall, Partner-Tax, EY

Agenda

- Optimal State Tax Structures
- State Apportionment and Economic Nexus
- Combined Return Issues
- Indirect Tax Issues

Optimal state tax structures

- Choice of entity can impact franchise and entity level taxes
  - Planning for minimum taxes and fees

- Franchise Tax Planning
  - QRSs versus LLCs
  - Planning with business trusts
  - Benefits of an LP structure

Minimum and Franchise Taxes

- States with some form of minimum tax due include:
- AZ, CA, CT, DC, ID, KY, MA, MT, NJ, NY, OR, RI, UT, VT
- States that impose some form of franchise tax include:
- AL, AR, CA, CT, DC, GA, ID, IL, KY, LA, MA, MO (repealed), MS, NC, NE, NM, NY, OK, PA, RI, SC, SD, TN, TX, WV (repealed)

Minimum Tax and Fees

- Alabama imposes a business privilege tax (BPT) on LLCs and partnerships of up to $15,000 for most entities. SMLLCs doing business in Alabama are subject to BPT unless the sole member is qualified or doing business in Alabama. If a SMLLC's sole member is subject to tax, the SMLLC is subject to a $100 minimum tax.
    - Multiple SMLLCs could result in multiple fees of up to $15,000. The SMLLC fee can be limited to $100 by managing the sole members activities in Alabama

- California requires LLCs to file Form 568 and pay an $800 annual tax and a filing fee of up to $11,790 based on California gross receipts. California requires limited partnerships to file Form 565 and pay an $800 filing fee.

- California QRSs are not required to file or pay these fees.
    - LLCs and LPs that are wholly-owned by the REIT could make check-the-box elections to be taxed as corporations (Form 8832) and automatically become QRSs.

Minimum Tax and Fees

- New York
  - Corporate fixed dollar minimum ranges from $25 to $200,000 for 2015 tax year and forward based on gross receipts
  - Partnerships are subject to minimum tax of $25 to $5000
  - SMLLCs are subject to $25 minimum tax
- Oregon –
  - Partnerships subject to $150 minimum tax
  - Corporations are subject to minimum tax that ranges from $150 to $100,000 based on gross receipts

Franchise Tax Planning

- QRSs are subject to franchise tax in certain states can be used as blockers
  - Examples include LA, MS, NC and SC
- REIT and QRS business trusts may be exempt from franchise tax in certain states
  - Examples include LA, MO, SC and PA
- Limited partnership structure could be beneficial
  - States may not follow check the box for franchise tax (LA and NC)
  - Limited partner nexus – LA franchise tax
    - Utelcom, Inc. v. Bridges, Dkt. No. 535,407 (Division "D", Ct. App., First Dist., Sept. 12, 2011).
    - Bridges v. Polychim USA, Inc., Court of Appeal of Louisiana, First Circuit, No. 2014 CA 0307, April 24, 2015

QRS Business Trust –Example 1

- REIT is subject to SC income tax but not subject to SC license tax
- QRS business trust is exempt from license tax.

QRS Business Trust –Example 2

- REIT is subject to SC income tax but not subject to SC license tax.
- Operating partnership is flow through entity for both SC income and license tax.

Franchise Tax Planning

- North Carolina
  - Historically, North Carolina has imposed .15% franchise tax on the highest of the following three bases: (a) issued and outstanding capital stock, surplus, and undivided profits; (b) actual investment in tangible property in North Carolina; or (c) 55% of the appraised valuation of real and tangible personal property in North Carolina.
  - HB 97 replaces the capital stock, surplus, and undivided profits base with a "net worth" base. Generally, the legislation simplifies the capital base by defining it as a taxpayer's "net worth" is the entity's "[t]otal assets without regard to the deduction for accumulated depreciation, depletion, or amortization less its total liabilities" computed in accordance with GAAP as of the end of the corporation's taxable year. A deduction is allowed for accumulated depreciation, depletion, or amortization in accordance with the method used for federal income tax purposes. Note, there are changes to the affiliated debt add back that could broaden the tax base.

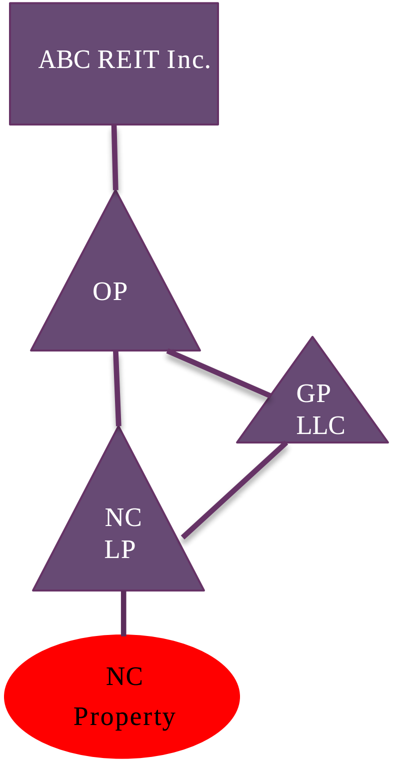
Franchise Tax Planning

- North Carolina continued
  - HB 97 appears to preserve the special deduction afforded REITs for the aggregate market value of investments in the stock, bonds, debentures, or other securities or evidences of debt of other corporations, partnerships, individuals, municipalities, governmental agencies or governments.
  - HB 97 eliminates the deduction for indebtedness incurred and existing for the purchase or improvement of North Carolina real estate. This change could be significant for REITs that directly/indirectly own SMLLCs holding North Carolina property, as these taxpayers often pay franchise tax based on actual investment in tangible property in North Carolina.

Limited Partnership Example

NC Example

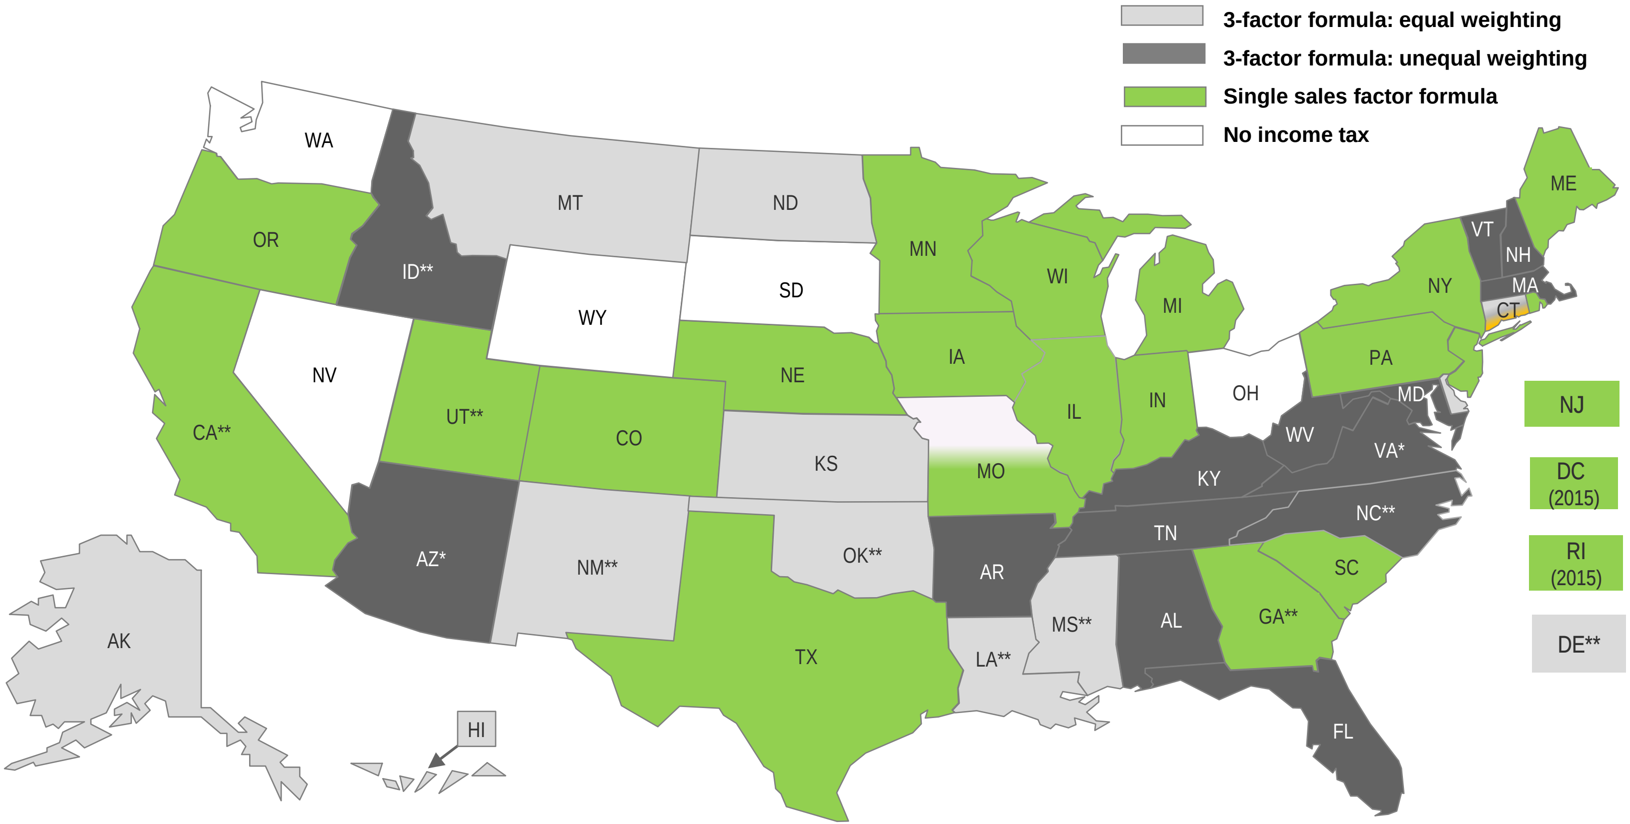
- REIT is subject to tax on higher of its apportioned net worth, investment in tangible property base or appraised value base.
- REIT is allowed a deduction for investment in stock, bonds and partnerships for its apportioned net worth base.
- Holding property in LP limits the flow up from the NC property for its investment in tangible property and appraised value base.



State apportionment

- Apportionment trends
  - Single sales factor
  - Market sourcing
    - What is market sourcing
    - Potential impact
      - Interest
      - Dividends
      - Management fees
- Economic Nexus

Single Sales Factor Adoption (thru Sept 2014)

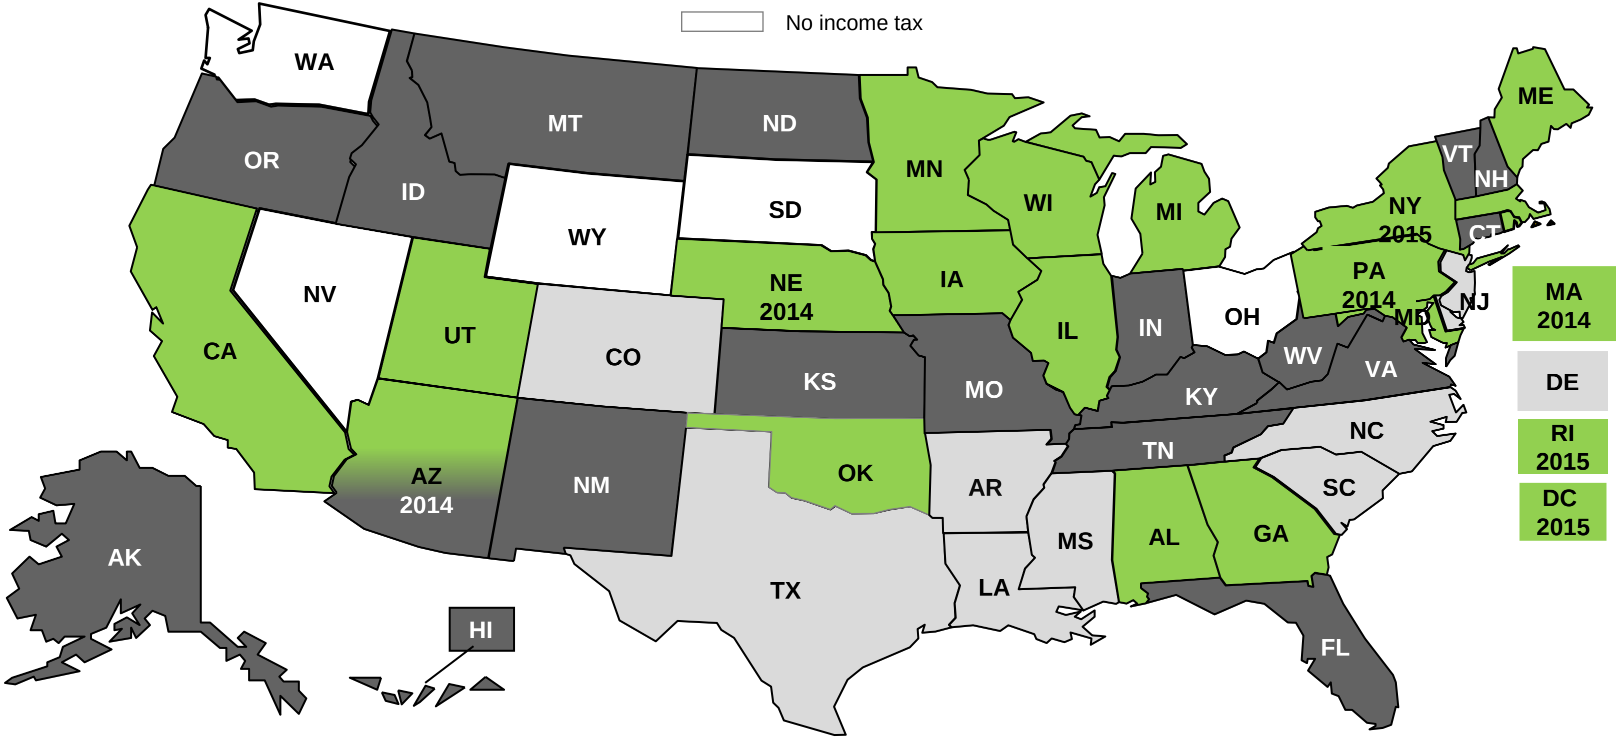


* Single sales factor is either electable or being phased-in

** Different apportionment rules apply to certain industries

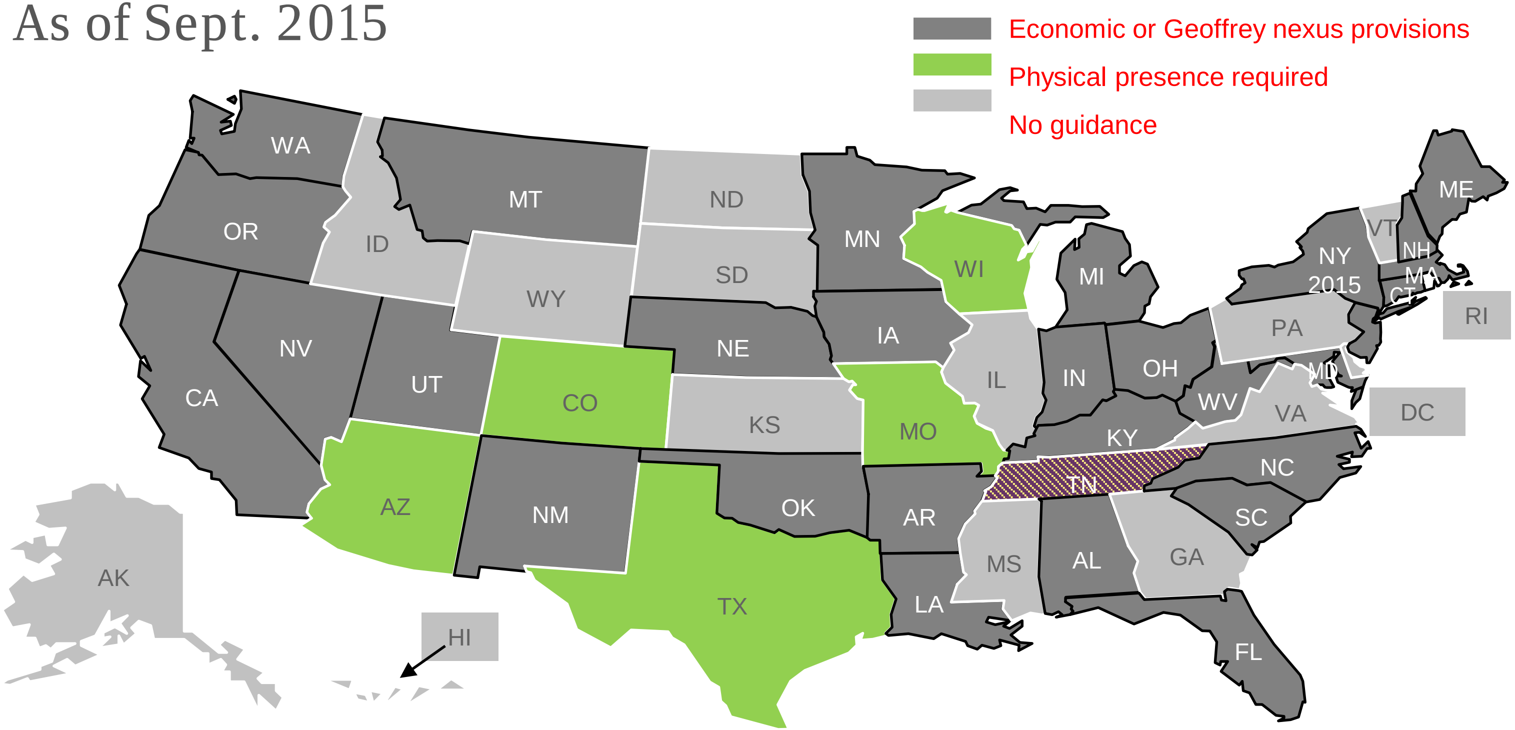
Market Sourcing (thru Sept 2014)

- Source to state where greater portion of income producing activity performed ("all or nothing")
- Source to state to the extent services performed in state ("to the extent of" or "direct")
- Source to state where benefit of service received ("benefit" or "market")
- No income tax



Economic nexus: non-financial

As of Sept. 2015



Combined return issues

- General mechanics of computing tax on combined basis
- What is a unitary business and who's included?
- W/E Elections and Inclusions
- REIT and TRS combinations
  - States that apply combined rules broadly
  - States that specifically address REITs and combination
  - States that exclude public or non-captive REITs
  - States that follow federal consolidated return rules in determining group
- NOL computation
- Foreign operations and impact to combined returns

Expansion of combined reporting***

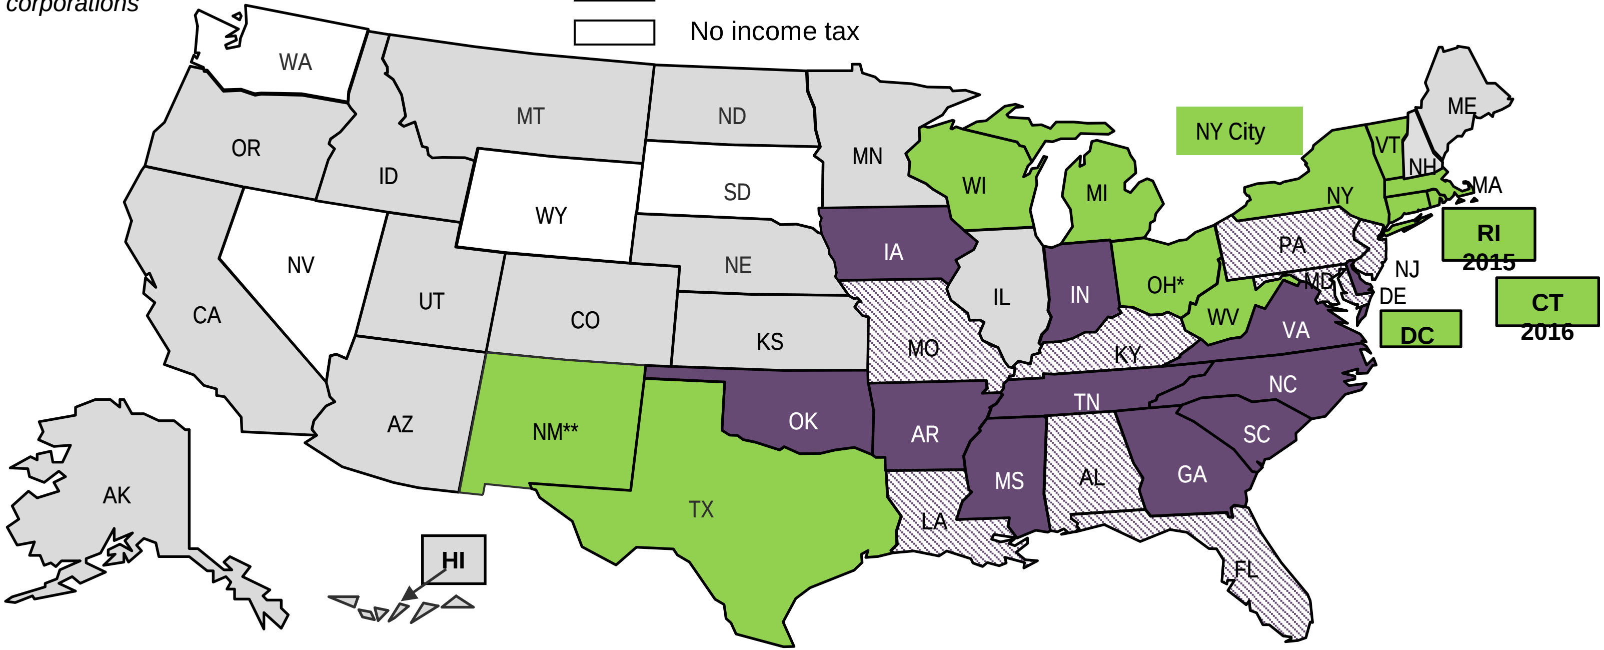
As of 08 December 2015

** For purposes of the CAT*

*** Limited to big box retailers*

****General corporations*

- Combined reporting/consolidated return required prior to 2004
- Combined reporting/consolidated return adopted for 2004 or later
- Combined reporting legislation proposed in 2015
- Separate return state
- No income tax



Other income tax reporting issues

- Non-conformity Issues
  - Tax Add backs
  - Depreciation
  - Related Party Interest Expense Add backs
  - NOLs
  - Recent Developments
    - New federal partnership procedures
    - Path Act
  - US Treaties

Indirect Taxes

- Sales and use taxes
  - Taxable income streams
    - Real property rental
    - Management fees
    - Real estate repair and maintenance
    - Construction
  - Intercompany transactions
    - Rental of tangible personal property
    - States may not exempt internal rent on real property lease (Hawaii)
  - Audit Issues

Indirect Taxes

- Sales & Use tax due on services, potentially taxable on:
- Janitorial services – AR, CT, DC, FL, HI, IA, MD, MN, NE, NJ, NM, NY, OH, PA, SD, TX & WV
- Repair services – AR, CT, DC, FL, HI, IA, KS, LA, MS, NE, NJ, NM, NY, OH, PA, SD, TN, TX, UT, WA, WI & WY

Indirect Taxes

- Locals may impose tax on real estate rental receipts
  - California
    - Los Angeles/Oakland
    - San Francisco has phased in new tax
    - Other city local taxes
  - Delaware
  - Kentucky
  - Michigan
  - Ohio
  - Philadelphia/Other Pennsylvania Cities
  - Virginia
  - West Virginia
  - Washington

Indirect tax issues

- Transfer Taxes
  - The taxability of real estate transactions is dependent on both the type of the transaction and the jurisdiction in which the property is located as states have taken different approaches.
  - Two types of real estate transfer tax transactions
    - Direct Asset Transfer
    - Controlling Interest Transfer
  - For example, both Texas and Arizona have opted to not impose any tax on the transfer of real property whether it is done directly or indirectly.
  - Alternatively, 17 states have elected to impose a tax on the indirect transfer of a controlling interest in real property.

Indirect tax issues

- Transfer Tax Compliance
  - Non-recorded transactions
    - Generally, filed with State Department of Revenue but can be required at the local level
    - Forms may not be available
    - County recorders may not understand non-recorded transactions
  - Buyer/seller tax responsibility
  - Timing of returns
    - Due dates can range from date of close to 45 days after close
  - Audits and other issues
    - Local non-conformity
    - Review of fair market value
    - California case law - *Ardmore*

General Session: State of the Capital Markets

Thursday, March 31st
8am – 9:30am
Marriott Marquis, Washington DC

Moderator:
Neil Wolitzer, Managing Director, Goldman Sachs & Co.

Panelists:
Thomas Carr, Managing Partner, Federal Capital Partners
Ronald Dickerman, President & Founder, Madison International Realty
Michael Nash, Executive Chairman of the Board of Directors, Blackstone Mortgage Trust, Inc.
Sarah Wade, SVP & Sr. Research Analyst, Nuveen Asset Management

REIT Industry Fact Sheet
Data as of February 29, 2016, except where noted.
Unless otherwise noted, all data are derived from, and apply only to, publicly traded US REITs.

Leverage and Coverage Ratios
(Data as of 2015: Q3)

Equity REITs

- Debt Ratio: 36.0%
- Coverage Ratio: 4.3x
- Fixed Charge Ratio: 3.9x
- 46 Equity REITs are rated investment grade, 68 percent by equity market capitalization.

All REITs

- Debt Ratio: 46.4%
- Coverage Ratio: 4.0x
- Fixed Charge Ratio: 3.7x
- 46 REITs are rated investment grade, 62 percent by equity market capitalization.

- Debt ratio equals total debt divided by total market capitalization. Total market capitalization is the sum of total debt and implied equity market capitalization (common shares plus operating partnership units).
- Coverage ratio equals EBITDA divided by interest expense.
- Fixed charge ratio equals EBITDA divided by interest expense plus preferred dividends.

Average Daily Dollar Trading Volume

- February 2016: $7.4 billion
- February 2011: $3.8 billion
- February 2006: $1.9 billion

Glossary of REITWatch terms:

REIT Name:	Full name of the company.
Ticker:	The company's stock exchange symbol.
Share Price ($):	The closing price per share on the date noted.
52-Week Share Price ($):	The high and low closing prices for the shares over the previous 52 weeks.
Price/FFO Multiples:	Price on the date indicated divided by the FactSet mean FFO estimate for the current and following year.
FFO per Share Estimates ($):	FactSet mean FFO estimate for the current and following year.
FFO Growth (%):	The percentage change between the current and following year mean FFO estimate as reported by FactSet.
Debt/EBITDA Multiples	Average Total Debt over the prior 2 quarters divided by the the most recent quarter's annualized EBITDA.
FFO Payout (%):	Regular cash dividends paid on the company's primary issue of common stock as a percent of funds from operations, on a per-share basis.
Dividend Yield (%):	The current indicated dividend rate annualized and divided by the current stock price.
Dividend Spread (%):	The difference between the REIT dividend yield and the 10-year constant maturity treasury yield.
Total Returns (%):	Total returns are calculated by taking the closing price for the current period, adding any dividends with an ex-dividend date in that period then subtracting the closing price for the previous period and dividing the result by the closing price of the prior period.
Month:	The monthly total return as calculated at month-end.
Year to Date:	The total return for the calendar year through the latest month-end.
One Year:	The total return for the previous year.
Two Year:	The annualized total return for the previous 2 years.
Three Year:	The annualized total return for the previous 3 years.
Five Year:	The annualized total return for the previous 5 years.
Equity Market Capitalization ($ Millions):	Price on the date indicated times the number of common shares outstanding.
Implied Market Capitalization ($ Millions):	Price on the date indicated times the number of shares outstanding including Operating Partnership Units.
Debt Ratio (%):	A leverage ratio calculated by taking the REIT's total debt and dividing it by the total market capitalization. Total capitalization is the sum of implied market capitalization and total debt.
Long-Term Issuer Rating:	The long-term credit rating, as announced by Standard & Poors, and obtained from SNL Financial.
Average Share Volume:	The average number of shares traded daily over the past month, represented in thousands.
Average Daily Dollar Volume:	The average of the daily value of shares traded over the past month, represented in thousands. Daily value is computed by multiplying shares traded by the closing price on that date.
Relative Liquidity (%):	Average daily dollar volume divided by equity market capitalization.

Concurrent Session: Tax Reform Debate

Thursday, March 31st
11:15am – 12:30pm
Marriott Marquis, Washington DC

Moderator:
Cathy Barre, SVP-Policy & Politics, NAREIT

Panelists:
Kenneth Kies, Managing Director, The Federal Policy Group (former Chief of Staff, Joint Committee on Taxation)
Russell Sullivan, Partner, McGuire Woods (former Staff Director, Senate Finance Committee)

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1

2016

Tax Reform Debate

March 31, 2016

Reality Check on the Federal Deficit

A Promising Start

“Congress passed a two-year bipartisan budget plan that avoids a default on U.S. debt… The 64-35 Senate vote early Oct. 30, following House passage two days earlier, sends President Barack Obama a bill that will extend U.S. borrowing authority until March 2017, after he leaves office.”

BNA
U.S. Avoids Debt Default as Congress Passes Fiscal Plan
October 30, 2015

A Promising Start

The Congressional Budget Office projects that the budget deal will cut the ten-year deficit by $79.9 billion.

A Surprising End

“In its final act of the year, the Senate sped to pass a $1.8 trillion bill that funds the government until October and extends sweeping tax breaks, many permanently.”

Huffington Post

Senate Passes $1.8 Trillion Spending, Tax Package To Fund Government

December 18, 2015

A Surprising End

The Congressional Budget Office projects that the year-end deal will increase the ten-year deficit by $679.5 billion.

Washington Ignores the Deficit Reality

Let me start with the economy, and a basic fact: The United States of America, right now, has the strongest, most durable economy in the world. We're in the middle of the longest streak of private sector job creation in history. More than 14 million new jobs, the strongest two years of job growth since the '90s, an unemployment rate cut in half. Our auto industry just had its best year ever. That's just part of a manufacturing surge that's created nearly 900,000 new jobs in the past six years. And we've done all this while cutting our deficits by almost three-quarters.

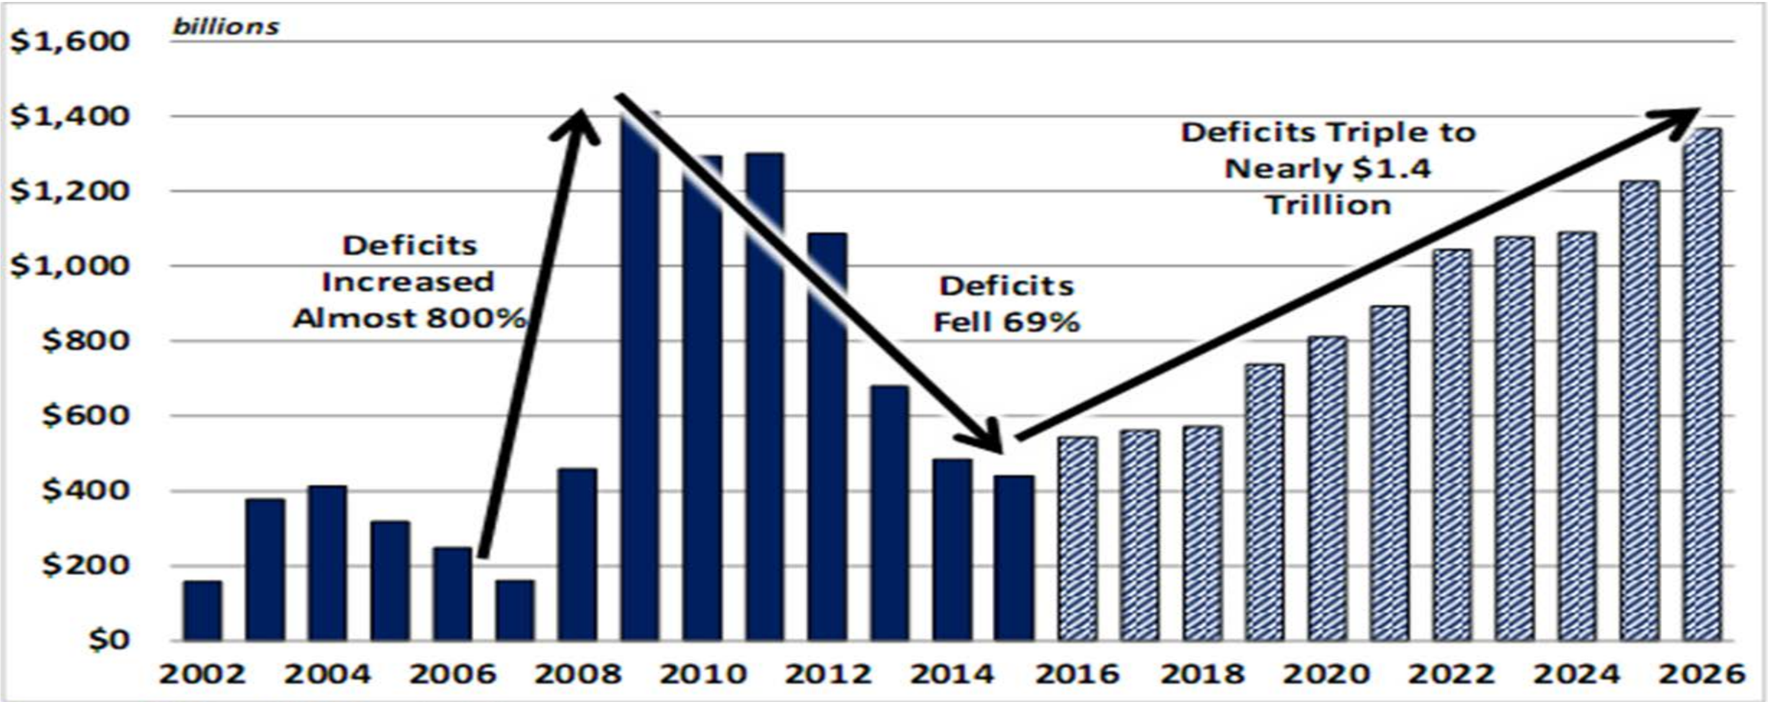
President Barack Obama
2016 State of the Union Address
January 12, 2016

Presidential Candidates are Equally Blind

“A fair summary of the debate over fiscal policy in the presidential campaign so far might go like this: Republicans spout apocalyptic but vague rhetoric about the federal debt, while proposing few if any specific spending cuts — and backing immense new tax cuts, skewed in favor of upper-income Americans. Democrats propose to expand existing entitlement programs and otherwise increase social spending, while treating deficits and the debt as yesterday’s problems, if at all.”

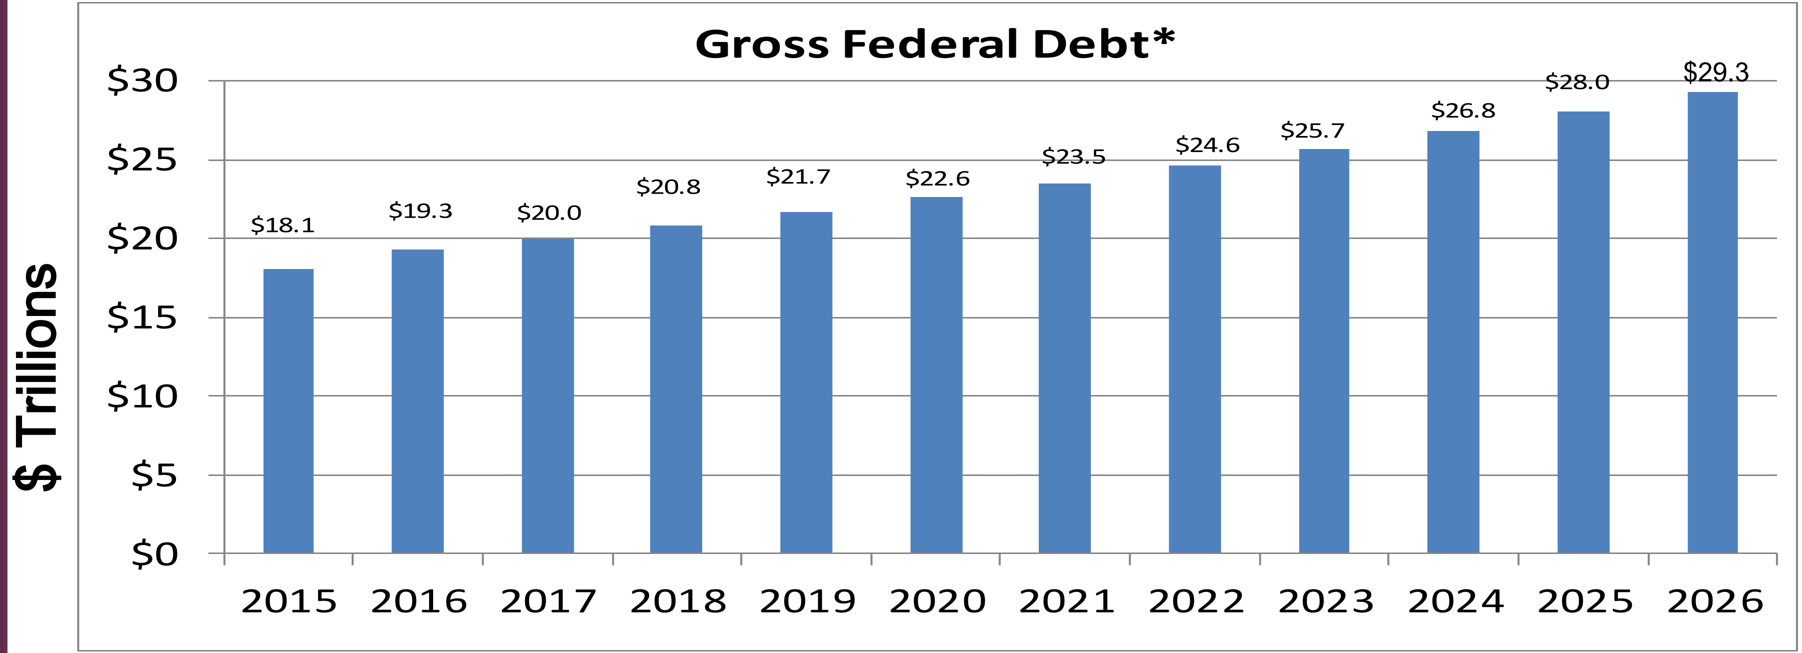
The Washington Post
The presidential candidates have one thing in common
— a disregard for our debt predicament
January 20, 2016

Trillion-Dollar Deficits Set to Return by 2022



Sources: CBO and CRFB calculations

Federal Debt Outlook: CBO



Source: CBO Baseline Budget Outlook, January, 2016

*Gross Federal Debt is Federal debt held by the public plus Treasury securities held by federal trust funds and other government accounts.

Interest costs on federal debt are projected to grow rapidly: by 2022, they could exceed what the federal government has historically spent on R&D, infrastructure, and education combined, and could exceed them by more than three times by 2050

Source: CBO Updated Budget Projections: 2016– 2026: January, 2016

Putting the Debt in Perspective for Fiscal Year 2011

U.S. Tax Revenue:	$2,314,000,000,000
Federal Budget:	$3,597,000,000,000
New Debt:	$1,283,000,000,000
National Debt:	$14,698,625,550,307.37 (and counting)
Budget Cuts:	$38,500,000,000

Source: The Congressional Budget Office, Treasury Department's Bureau of Public Debt

Drop 8 Digits, the Debt becomes a Family Budget

Annual Family Income:	$23,140
Money Family Spent:	$35,970
New Credit Card Debt:	$12,830
Credit Card Balance:	$146,986.37 (and counting)
Budget Cuts:	$385

The Real Kicker

"A federal budget compromise that was hailed as historic for proposing to cut about $38 billion would reduce federal spending by only $352 million this fiscal year, less than one percent of the bill's advertised amount, according to the Congressional Budget Office."

- The Washington Post, April 14, 2011

Translation:

The Family Budget was cut by $3.85, not $385

Tax Plans for the Presidential Candidates Still Alive

Marco Rubio Tax Reform Proposals

- Individual:
  - Three income tax brackets: 15%, 25%, and 35%
  - Eliminate itemized deductions, except charitable deduction and mortgage interest deduction
  - Cap mortgage interest deduction at $300,000 of mortgage debt
  - Enact $2,500 additional child tax credit
  - Replace standard deduction, personal exemption, and 10% tax bracket with refundable personal credit
  - Eliminate AMT
  - Reduce capital gain and QDI rate to 0%
  - Eliminate estate tax
  - Eliminate additional Medicare tax on compensation above $200,000
  - Eliminate head-of-household filing status
  - Exempt interest from income, and eliminate interest deduction (except mortgage interest), except for interest earned by financial firms

Marco Rubio Tax Reform Proposals

- Business:
  - Lower top corporate rate to 25%
  - Enact immediate investment cost expensing
  - Tax pass-through income at 25%
  - Enact credit for businesses that offer paid family leave
  - Enact territorial tax system
  - Enact one-time deemed repatriation at 6% rate
  - Excepting financial institutions, remove interest from tax base (*i.e.*, not taxable, not deductible)
  - Enact tax credit for businesses that offer paid family leave

John Kasich Tax Reform Proposals

- Individual:
  - Three income tax brackets, with a top rate of 28%
  - Retain charitable deduction and mortgage interest deduction (presumably, repeals other itemized deductions)
  - Increase EITC by 10%
  - Reduce long-term capital gain rate to 15%
  - Repeal estate tax

- Business:
  - Lower top corporate rate to 25%
  - Double value of R&D credit for businesses with less than $20 million in gross revenues
  - Enact immediate investment cost expensing
  - Enact one-time deemed repatriation at unspecified “low” rate
  - Enact territorial tax system

Donald Trump Tax Reform Proposals

- Individual:
  - Single filers earning less than $25,000 and married filers earning less than $50,000 will owe no taxes
  - Four tax brackets: 0%, 10%, 20%, and 25%
  - Eliminate AMT
  - Eliminate marriage penalty
  - Eliminate estate tax
  - Eliminate NIIT
  - Enhance personal exemption phase-out and “Pease” limitation
  - Phase-out all itemized deductions except for charitable deduction and mortgage interest deduction
  - Tax carried interest for “speculative partnerships” as ordinary income
  - Phase-out “tax exemption on life insurance interest for high-income earners” (presumably, tax “inside buildup”)

Donald Trump Tax Reform Proposals

- Business:
  - Lower top “business” rate to 15% (*i.e.*, corporate and pass-through business income)
  - Enact one-time deemed repatriation at 10% rate
  - End deferral of foreign source income
  - Phase-in “reasonable” cap of interest expense deductions
  - Eliminate unspecified deductions and “loopholes”

Bernie Sanders Tax Reform Proposals

- Individual:
  - Enact 4 new tax brackets of 37%, 43%, 48%, and 52%, and raise all existing tax brackets by 2.2%
  - Cap benefit of itemized deductions at 28% for high-earning households
  - Tax capital gains and dividends as ordinary income for households making more than $250,000
  - Eliminate AMT
  - Eliminate Pease limitation and personal exemption phase-out
  - Tax carried interest as ordinary income
  - Apply Social Security payroll tax to earnings over $250,000
  - Increase top estate tax rate to 65%; lower estate exclusion to $3,500,000
  - Increase net investment income surtax to 10%
  - Tax carried interest as ordinary income

Bernie Sanders Tax Reform Proposals

- Business:
  - Lower top corporate rate to 24%
  - Enact financial transactions tax (“FTT”) at a rate between 0.005% and 0.5%
  - Enact FTT credit for low-income investors
  - End deferral of foreign-source income
  - Enact additional limits on foreign tax credits
  - Revise inversion rules to make them more stringent
  - Revise rules with respect to foreign corporations operating in the U.S.
  - Increase employer payroll tax by 6.2%
  - Enact 0.2% payroll tax to fund paid family leave

Ted Cruz Tax Reform Proposals

- Individual:
  - Establish flat tax rate of 10%
  - Lower capital gain and dividend income rate to 10%
  - Increase standard deduction by $10,000 per filer
  - Eliminate all itemized deductions other than charitable deduction and deduction for mortgage interest
  - Eliminate all credits other than EITC and CTC
  - Expand EITC by 20%
  - Eliminate estate tax
  - Enact tax-free savings accounts for up to $25,000 per year

Ted Cruz Tax Reform Proposals

- Business:
  - Replace corporate income tax with 16% business transfer tax
  - Tax pass-through income at 10%
  - Enact immediate investment cost expensing
  - Eliminate payroll tax
  - Enact territorial tax system
  - Enact one-time deemed repatriation at 10% rate

Ben Carson Tax Reform Proposals

- Individual:
  - Enact flat tax at 14.9% rate, phased-in over time
  - Enhance standard deduction and personal exemption such that income under 150% of poverty level is exempt from tax
  - Eliminate tax on social security benefits
  - Eliminate all itemized deductions
  - Eliminate all tax credits except for FTC
  - Eliminate AMT
  - Lower tax rate on capital gains and dividends to 0%
  - Eliminate exclusion for fringe benefits
  - Eliminate interest deduction or inclusion of interest in income
  - Eliminate estate tax

Ben Carson Tax Reform Proposals

- Business:
  - Lower top corporate tax rate (and rate for pass-through businesses) to 14.9%
  - Enact immediate investment cost expensing
  - Enact territorial tax system
  - Allow corporations to repatriate offshore income tax-free for six months, provided that they use 10% of the repatriated funds to create jobs for the unemployed or in enterprise zones
  - Eliminate interest deduction or inclusion of interest in income for non-financial businesses

Hillary Clinton Tax Reform Proposals

- Individual:
  - Cap benefit of itemized deductions at 28%
  - Make American Opportunity Tax Credit permanent
  - Enact $1,200 caregiver tax credit
  - Increase capital gains rate for investments held for less than 6 years to between 24% and 39.6%
  - Enact new minimum tax at 30% rate for persons earning more than $1 million
  - Enact 4% surtax on income above $5 million
  - Tax carried interest as ordinary income
  - Increase top estate tax rate to 45% and lower the deduction to $3.5 million

- Business:
  - Enact business tax credits for profit-sharing and apprenticeships
  - Enact transaction tax on high-frequency financial transactions
  - Strengthen anti-inversion rules in some specified way
  - Enact “exit tax” on foreign earnings of inverting U.S. firms

A Difficult Path to Achieving Tax Reform

Revenue Considerations:

- How Much Revenue Should Be Raised?
  - Republicans support tax reform that is revenue neutral.
  - Democrats support tax reform that raises revenue.

- How Should Tax Reform be “Scored”?
  - Republicans think that “Dynamic Scoring” is a more realistic way to score tax reform.
    - Dynamic Scoring takes into account behavioral changes and their impact on the economy.
  - Democrats think that “Static Scoring” is a more realistic way to score tax reform.
    - Static Scoring takes into account behavior changes but not their impact on the economy.

Differing Viewpoints:

- Democrats speak of "fair share" and increasing revenues
  - "The primary goals of comprehensive tax reform should be to progressively raise sufficient revenue to (1) make investments that will grow the economy, and (2) set us on a path for long-term deficit reduction. The writing is on the wall: a revenue-neutral approach to tax reform – on either the corporate or individual side of the tax code – is not an option."[1]

- Republicans speak of lowering rates and pro-growth policies
  - "The first step we can take toward overall pro-growth tax reform is to permanently lower the tax gates to allow our U.S. companies to bring their profits back home to invest in our communities, in our jobs, in our research and development, in growth."[2]

1. CONG. PROGRESSIVE CAUCUS, PROGRESSIVE PRINCIPLES FOR TAX REFORM, http://cpc-grijalva.house.gov/progressive-principles-for-tax-reform/ (last visited Mar. 1, 2016).

2. H. WAYS AND MEANS COMM., Int'l Tax Reform = More Jobs, More Growth, More Opportunity at Home (Feb. 24, 2016) (statement of Chairman Kevin Brady), http://waysandmeans.house.gov/international-tax-reform-more-jobs-more-growth-more-opportunity-at-home/.

Actions Abroad: Impact of BEPS:

- BEPS spurs U.S. leaders to action, but also companies to respond
  - “American companies competing overseas are rightly concerned that the BEPS project will result in higher foreign taxes, higher compliance costs, and double taxation. As countries around the world incorporate the BEPS ideas into their tax systems, many more companies could be forced to restructure their business operations and move U.S. activities, such as research and development, overseas.”[1]

1. H. WAYS AND MEANS COMM., Chairman Brady Opening Statement at Hearing on the Global Tax Env’t in 2016 and Implications for Int’l Tax Reform (Feb. 24, 2016), http://waysandmeans.house.gov/chairman-brady-opening-statement-at-hearing-on-the-global-tax-environment-in-2016-and-implications-for-international-tax-reform/.

Entitlement Considerations:

- Some Argue that Tax Reform is not worth doing if it doesn't reform Entitlements.
  - Between 2017 and 2026 the Federal government will spend over $32 trillion on Entitlements.
  - Entitlements is primarily funded through the payroll tax. Between 2017 and 2026 this tax is projected to raise only $13.5 trillion.
  - Entitlement spending dwarfs "discretionary" spending, which is projected to be only $12 trillion between 2017 and 2026.
  - As a percent of GDP, between 2016 and 2026, Social Security outlays are expected to increase 28% and health programs like Medicare are expected to grow 32%. Meanwhile, outlays for "discretionary" programs are expected to increase only 17% over this same time period.

Source: Congressional Budget Office's Budget Outlook, January, 2016

Pathways to Tax Reform:

- Scenario 1: Republicans retain House and Senate, and win White House
  - Result: broad-based tax reform enacted during first year of new President's term in office.
- Scenario 2: Republicans retain House, but lose Senate and/or fail to win White House
  - Result: broad-based tax reform stalls, devolving into piecemeal "deals" to tinker with various aspects of the Code.

Concurrent Session: The Future of Financial Reporting

Thursday, March 31st
9:45am – 11am
Marriott Marquis, Washington DC

Moderator:
George Yungmann, SVP-Financial Standards, NAREIT

Panelists:
Russell Golden, Chair, Financial Accounting Standards Board
Wesley Bricker, Deputy Chief Accountant, U.S. Securities and Exchange Commission

15 December 2015

2015 AICPA National Conference on Current SEC and PCAOB Developments

Compendium of significant accounting and reporting issues

In this issue:

Summary

Representatives of the Securities and Exchange Commission (SEC or Commission), the Financial Accounting Standards Board (FASB or Board) and the International Accounting Standards Board (IASB) (collectively, the Boards) and the Public Company Accounting Oversight Board (PCAOB) shared their views on various accounting, financial reporting and auditing issues at the annual AICPA National Conference on Current SEC and PCAOB Developments (Conference) last week in Washington, DC.

Highlights included:

Internal control over financial reporting — SEC and PCAOB officials emphasized the importance of strong internal controls throughout the Conference. They observed that recent PCAOB inspection findings on internal control over financial reporting (ICFR) may indicate deficiencies in the design of management's controls, particularly the documentation of key management review controls, and said auditors must take a risk-based approach when auditing ICFR. They said auditors must discuss with management and audit committees their expectations about the extent of documentation management needs to support the effectiveness of key controls, which should be commensurate with the associated risk.

New revenue recognition standards — Representatives of the SEC, the FASB and the IASB discussed efforts to implement the new revenue recognition standards the Boards jointly developed. The SEC staff members stressed the objectives of achieving consistent application of the standards for similar fact patterns and resolving significant implementation issues that could result in diversity in practice when companies adopt the standards. The SEC staff also said it expects disclosures about the effects of the new revenue standards to be more robust as their effective date approaches.

Building a better working world

Disclosure effectiveness, including non-GAAP financial measures — Representatives of the SEC and the FASB provided updates on their disclosure effectiveness initiatives. The SEC representatives said they expect additional rulemaking in 2016 related to Regulations S-X and S-K, as well as improved search functionality for filings on the SEC's website. FASB representatives provided an update on the Board's disclosure framework project and its focus on material disclosures. SEC representatives said they were encouraged by recent efforts by companies to make voluntary improvements to their disclosures but highlighted several focus areas where they expect more meaningful disclosures. For example, they said the use and disclosure of non-GAAP financial measures requires close attention.

Segment reporting — SEC and PCAOB representatives said that segment reporting continues to be a critical focus area because investors continue to identify it as the most important disclosure area in SEC filings. They are focusing on whether companies are appropriately identifying and aggregating operating segments, as well as the design and operation of internal controls over these judgments.

Remarks of senior representatives

Remarks by Mary Jo White, SEC Chair

SEC Chair Mary Jo White highlighted the importance of reporting reliable financial information so that investors can make informed decisions. She talked about the shared responsibility of preparers, auditors, audit committees, standard setters and regulators for reliable financial reporting to investors and the vital role each plays in making sure that the US capital markets remain "the safest and strongest in the world."

'... ICFR must remain the strong bulwark of reliable financial reporting that it has become.'
— Mary Jo White, SEC Chair

Internal control over financial reporting

Chair White observed that preparers often make difficult judgments to meet the objectives of US GAAP or IFRS (e.g., revenue recognition, impairment, fair value) and said that reliable financial reporting depends on accounting staff and internal auditors challenging management's conclusions if they have questions about transactions, judgments and risk areas.

Chair White also said that management's ability to fulfill its financial reporting responsibilities depends on effective ICFR. She noted that there is still a debate about the extent of testing and related documentation that companies and auditors are required to perform related to the assessment of ICFR and said the SEC staff is monitoring discussions PCAOB officials are having with companies and auditors about these issues. She encouraged preparers, auditors and regulators to continue the dialogue to address any challenges in the operation and assessment of ICFR but said ICFR must remain "the strong bulwark of reliable financial reporting that it has become."

Non-GAAP measures

Chair White observed that non-GAAP financial measures are used extensively by companies and analysts but can be a source of confusion. Chair White said that the use of non-GAAP measures deserves close attention to make sure that the rules are being followed and to ask whether the rules are sufficient. She asked preparers to carefully consider the following questions when they use such measures:

- Why is the non-GAAP measure being used and how does it provide investors with useful information?
- Are any non-GAAP measures being given greater prominence than the GAAP measures?
- Is the explanation of the non-GAAP measure and its usefulness to investors, accurate and complete rather than boilerplate?
- Are there appropriate controls over the calculation of the non-GAAP measure?

How we see it

Chair White's comments suggest that the SEC is closely monitoring the expanding use of non-GAAP measures. Registrants should ensure that their non-GAAP measures are transparent, balanced and fully comply with the SEC's requirements.

Gatekeepers for high-quality audits

Chair White talked about the critical role of external audits performed by independent, knowledgeable and skeptical auditors in maintaining the strength of financial reporting. She said the PCAOB's inspection program and enhancements the PCAOB has made to its auditing standards have improved audit quality. However, Chair White expressed concern that PCAOB inspections still find significant deficiencies in various areas and that the SEC has had to bring enforcement actions against audit firms for missing or ignoring red flags.

Chair White expressed concerns about the increasing workload of some audit committees and questioned whether directors who serve on multiple boards and audit committees can effectively discharge their responsibilities. She said that only people who have the time, commitment and relevant experience should be selected to serve on audit committees. She said that audit committees of every public company should be able to properly oversee the auditors and adequately review how management is designing and implementing ICFR and how non-GAAP measures are being used. She noted that the SEC has issued a concept release on possible revisions to audit committee disclosures and said the audit committee report should evolve to meet the needs and expectations of investors.

Standard setters and regulators

Chair White said the FASB needs to preserve its independence and that accounting standards must provide objective, accurate and credible information that is useful for investor decisions. She commended the FASB and the IASB for working jointly in several areas to develop converged, high-quality globally accepted accounting standards (e.g., revenue recognition, business combinations, fair value measurements), even though certain priority projects did not result in completely converged guidance.

She also said that the SEC staff has developed a recommendation for the Commission's consideration on the possibility of allowing US issuers to voluntarily disclose supplemental IFRS information and that the staff will be discussing it with the Commissioners to help them determine a path forward. Chair White further added that she believes "it is important for the Commission, as a Commission, to make a further statement about its general views on the goal of a single set of high-quality global accounting standards."

Chair White observed that the SEC has seen "concrete progress" by companies in making their disclosures clearer and more understandable. However, she said that there is more work to be done. She said that while it may be beneficial to reduce the volume and complexity of disclosures to help investors focus on important matters, there are certain areas (e.g., foreign income taxes) where more transparency would be beneficial. She talked about the status of the SEC's disclosure effectiveness initiative and its request for comment on Regulation S-X requirements. She said that she expects the SEC to issue a release on Regulation S-K in 2016, as well as other changes related to financial statement disclosures and improvements to the presentation of filing information and search tools on the SEC's website (i.e., EDGAR).

Chair White also noted that one of the tools to ensure high-quality financial reporting is a strong enforcement program. She discussed several recent cases in which auditors and other gatekeepers did not meet requirements. She also noted that financial reporting will continue to be a high-priority area for the SEC's enforcement program.

Remarks by James Schnurr, Chief Accountant

ICFR and enforcement actions

Mr. Schnurr said management's ability to fulfill its financial reporting responsibilities depends on the effective design and operation of ICFR. He noted that the PCAOB continues to issue frequent inspection findings related to ICFR, which may reflect not only inadequate audit execution but also deficiencies in management's controls and assessments. He encouraged auditors, management and audit committees to have a robust discussion about the design and assessment of ICFR.

He also said that the SEC's Enforcement Division has focused on internal control matters and the role of gatekeepers, including audit firms and audit committee members. He highlighted recent enforcement actions brought against audit firms for dismissing red flags and failing to evaluate contrary evidence and exercise professional skepticism.

IFRS reporting by US registrants

As mentioned by Chair White, Mr. Schnurr said the SEC staff will soon discuss its recommendation with the Commissioners to allow US issuers to voluntarily disclose IFRS information as a supplement to their US GAAP financial statements. The SEC staff's recommendation would permit companies to voluntarily provide IFRS information without it being considered non-GAAP information subject to additional disclosures, including reconciliation to US GAAP.

The Commission will soon consider the SEC staff's recommendation to allow US issuers to voluntarily provide supplemental IFRS information.

In response to a question, Mr. Schnurr said that he believes there will be market demand for voluntary IFRS disclosures by certain US issuers, particularly if they have foreign peers that adopt new IFRS standards that are not converged with US GAAP.

In the near term, Mr. Schnurr emphasized the importance of continued convergence efforts in order to further the objective of a single set of a high-quality global accounting standards.

Disclosure effectiveness

Mr. Schnurr said that companies must have appropriate processes and internal controls to apply judgment about financial statement disclosures. He observed that these judgments might result in eliminating immaterial disclosures or adding disclosures beyond the specific requirements to avoid misleading investors. The process of making such judgments should include coordination between management and the audit committee as well as consideration of the perspective of a "reasonable investor." Mr. Schnurr also emphasized the need for registrants to reevaluate whether existing disclosures continue to be relevant.

As part of the SEC's disclosure effectiveness initiatives, Mr. Schnurr shared that the staff expects to coordinate with the FASB to reduce duplication in the SEC and FASB disclosure requirements in addition to making other recommendations to the Commission.

Mr. Schnurr supported the recent efforts by the FASB to develop a disclosure framework that emphasizes principles and materiality when communicating information to users rather than a checklist of required disclosures.

Auditor independence

Mr. Schnurr noted that the staff is focused on the growing consulting practices of accounting firms. He said that consulting practices may benefit accounting firms by fostering specialized skill sets and driving profits that can be invested in improving audit quality but said this trend may raise independence questions when there are not appropriate safeguards to mitigate "scope creep" in consulting engagements.

Audit committee oversight

Mr. Schnurr observed that many audit committees have assumed responsibilities beyond regulatory requirements, such as the oversight of cybersecurity risks, emerging technologies and other compliance risks. He suggested that audit committees may need to "get back to basics" in their oversight of financial reporting, including:

- The appointment, compensation and oversight of auditors
- Preparation and disclosure of the audit committee charter
- Audit committee reporting to shareholders

He stressed the need for audit committees to establish a culture of compliance, ask probing questions about management's significant judgments and estimates and require follow-up on corrective actions when necessary. He also said that the selection of the independent auditor should be based principally on audit quality not the audit fee. He encouraged audit committee members to consider the PCAOB's concept release on audit quality indicators, which can be used to help evaluate audit quality even without further PCAOB action.

PCAOB standard-setting activities

Mr. Schnurr commended the PCAOB for efforts to improve its standard-setting process, which included engaging an external consultant to review the process. While he noted that the PCAOB plans to adopt a final transparency rule and is moving ahead with its auditor reporting project, he emphasized the importance of finalizing auditor performance standards as the most effective way to improve audit quality.

Remarks by Russell Golden, Chairman of the FASB

FASB Chairman Russell Golden echoed SEC Chair White's remarks on the importance of maintaining independence from the influence of politics and special interests in setting financial accounting and reporting standards. For many FASB projects (e.g., impairment of financial instruments, leases, materiality), stakeholders and, in some cases, members of the Board, have expressed conflicting points of view. Mr. Golden said that it is the Board's job to sort through these views and to set standards that accurately reflect economic transactions and provide the most useful information to users of financial statements.

Mr. Golden commented on the ongoing implementation efforts for the revenue recognition standard and what has been learned during that process to prepare for the implementation of future standards. He also discussed the status of several other active projects and briefly discussed the future direction of the FASB's agenda.

Revenue recognition standard

The FASB and the IASB formed a transition resource group (TRG) to help manage implementation issues for the new revenue recognition standard in an effort to limit diversity in how preparers interpret the standard prior to its effective date. Mr. Golden indicated that this was a successful initiative and has helped the Boards promote global comparability in revenue. He said 98% of the 87 implementation questions raised by constituents have been discussed by the TRG or resolved with the FASB staff. Although most of the issues discussed by the TRG did not lead to additional standard-setting, the results of those discussions help to educate stakeholders about the new standard. The FASB also has issued three proposals based on feedback from the TRG. Mr. Golden said that the practical expedients and other proposals will reduce the cost and complexity of applying the standard without significantly changing the quality of the information reported to users of financial statements.

Impairment of financial instruments

Mr. Golden said that the Board intends to apply the lessons learned in implementing the revenue recognition standard to the implementation of the upcoming standard on the impairment of financial instruments. As a result, a TRG has been formed before the standard is issued to identify any significant issues requiring the FASB's attention.

One of the major issues that TRG is facing involves misconceptions about what the standard will require. Mr. Golden addressed and dispelled each of the following common misconceptions related to the credit impairment standard:

- The new standard will require businesses to develop and install costly, complex new systems.
- Bank examiners will take a more conservative view than the standard requires.
- The credit crisis involved only large banks.
- The standard takes an unrealistic view of the economics of loan financing.

Other projects

Disclosure framework

The FASB's two materiality proposals in its disclosure framework project have received a lot of attention. The first would amend the definition of materiality in the Conceptual Framework to conform to the definition that is used by the SEC and PCAOB. Mr. Golden indicated that this proposal would not change the legal definition of materiality, as the FASB does not have this authority. Mr. Golden also clarified that the amended Concepts Statement would only apply to the Board's observation of materiality as part of its standard-setting process and would not apply to preparers and auditors.

The second Exposure Draft is intended to clarify the process that preparers follow in assessing the materiality of information in notes to financial statements. Mr. Golden indicated that this proposal would clarify what the Board understands to be the predominant current practice related to the assessment of materiality by preparers.

Leases

The FASB plans to issue its new leases standard in early 2016. Mr. Golden said that the Board is not planning to create a TRG for the leases standard, but will carefully monitor discussions with stakeholders during the implementation process and will be prepared to increase its education efforts if needed.

The new leases standard will require lessees to recognize most leases on their balance sheets. One of the major concerns the FASB heard was that additional liabilities would affect compliance with debt covenants. Mr. Golden stated that lenders have told the FASB that the addition of lease liabilities to a company's balance sheet will not alter a lender's view of the organization's financial position because most lenders currently adjust financial statements to recognize lease liabilities when making lending decisions. However, to help mitigate concerns, the FASB decided that most lease liabilities should be characterized as operating obligations in the financial statements rather than obligations that are equivalent to debt.

Future agenda

Mr. Golden said the FASB recently conducted a survey to identify future projects that should be considered a priority for the Board. The top five areas for improvement in financial reporting identified in the survey were (1) financial performance reporting, (2) cash flow classification, (3) pensions and other post-retirement benefits, (4) liabilities and equity and

(5) intangible assets. He also said that segment reporting was the top area of improvement identified by investors. Stakeholders will be given an opportunity to comment on a discussion paper that includes these and other potential FASB projects. The FASB plans to issue the discussion paper in early 2016.

Remarks of PCAOB Chairman James Doty

PCAOB Chairman James Doty observed that the PCAOB's overall responsibility is to serve investors by setting audit and professional standards, performing inspections of audits and firms' quality control systems and, when necessary, taking disciplinary actions against auditors who fail to comply with the standards. He stated that the PCAOB focuses auditors on their role as gatekeepers to the capital markets when they determine and report on whether a company's financial statements comply with the relevant financial reporting framework.

He said the PCAOB's work has resulted in the following three trends:

- Auditor conduct has changed.
- Audit quality has improved.
- The audit has gained credibility from stakeholders due to credible regulation.

Inspections update

Mr. Doty noted that, for firms that are committed to remediating deficiencies and identifying root causes, inspection findings have started to decline. He believes the PCAOB has established an interactive, fair and transparent inspection process. The PCAOB plans further engagement with preparers and audit committee members to educate and inform them about the inspection process and the results of inspections and help the PCAOB better understand the effects of its inspection process.

Mr. Doty spoke about the PCAOB's inspections in 46 foreign jurisdictions and expressed optimism that the European Commission's Adequacy Decision will be renewed in 2016. The PCAOB continues to have challenges reaching an agreement to perform inspections in China. In June, a pilot inspection program was approved by the China State Council, but Mr. Doty said it has been difficult to finalize the details of the program.

Auditor incentives

Mr. Doty stated that the PCAOB's programs both deter bad conduct and incentivize exemplary conduct. He said the PCAOB works to recognize the effects of incentives, both systemic and personal, and implement countermeasures for those that adversely affect audit quality.

Mr. Doty stated that research by the PCAOB's Center for Economic Analysis indicates there is a statistically significant increase in effort by the engagement partner and quality reviewer in the year following a deficiency being identified through inspections, without a statistically significant change in fees. The research also indicates that there is a statistically significant decrease in effort and increase in restatement rate following inspections in which no significant deficiencies were identified.

Mr. Doty also said audit committees that see their job as negotiating the lowest audit fee may not always be promoting audit quality. In his view, highly competent and strong audit committees promote auditor objectivity and independence from management.

Standard-setting projects

Mr. Doty said the PCAOB's standard-setting considers appropriate audit procedures as well as mechanisms that provide appropriate auditor incentives, with the overriding objective of enhancing the relevance and reliability of the audit. Mr. Doty highlighted the status of several ongoing projects and said the Board soon will adopt a final rule related to the disclosure of the engagement partner.

Maintaining public confidence

Mr. Doty said this is an exciting time to be in or entering the audit profession but noted that the profession faces the challenge of maintaining public confidence in the audit. He observed that auditors' value to the capital markets resides in their ability to provide an independent, objective and skeptical mindset when evaluating a company's financial statements.

Internal control over financial reporting

As discussed earlier, ICFR continues to be a source of significant PCAOB inspection findings. The SEC Chair and Chief Accountant stressed the importance of ICFR in providing high-quality financial information to investors and said the level of PCAOB inspection findings likely indicated problems with companies' controls.

In his remarks, the PCAOB Chair acknowledged that PCAOB inspections of audits of internal control had raised concerns among preparers about the extent of the auditor's assessment of management review controls, including the assessment of their precision and the level of documentation needed to support their effective operation. A panel comprised of representatives of the SEC, the PCAOB, large accounting firms and preparers discussed these and related matters:

- *Management review controls* — Panelists noted that not all management review controls are created equal. Representatives from the SEC and PCAOB said the Commission's guidance for management[1] and the PCAOB's Auditing Standard (AS) No. 5 are aligned with respect to the assessment of financial reporting risks and the selection of controls that adequately address those risks. They reinforced the importance of management and auditors having an appropriate understanding of the design of the management review control in order to assess whether it operates at a sufficient level of precision to address the financial statement risk(s) or whether lower level controls also need to be tested. SEC staff noted that in a number of higher-risk areas, it is unlikely that management review controls alone would be sufficient to address the risk, given the number of judgments required and the inputs needed to make them.

- *Population of controls* — During their outreach, the SEC and PCAOB noted that, in some cases, auditors and management were testing different controls to address certain financial reporting risks. Panelists noted that, in some cases, auditors may be testing lower-level controls while management may be relying on higher-level review controls. The panelists noted that management and the auditor may reach different conclusions about the precision of controls and said it is important that auditors and management communicate to make sure they understand the reasons for any differences. These discussions can help both parties understand the controls and potentially lead to improvements in the design of the controls or the control-testing approach. Discussing these differences also could minimize the risk of auditors and management reaching different conclusions on the effectiveness of the controls.

- *Evaluation and evidence of effectiveness of controls* — Mr. Schnurr and Brian Croteau, SEC Deputy Chief Accountant, stressed that the Commission's guidance for management requires documentation of how the design of a control addresses the relevant financial reporting risk as well as evidence to support that the control is operating effectively. Importantly, Mr. Croteau said the Commission's guidance requires more evidence of the operating effectiveness of controls in higher-risk areas. Mr. Croteau also noted that this principle is integral to the performance of an assessment using a risk-based approach, supports effective and consistent operation of the company's controls over time and is consistent with the auditor's requirements under AS 5.

- *Auditor's use of templates and checklists* — Panelists observed that auditors frequently use templates and checklists to facilitate ICFR documentation. Staff members from the SEC and PCAOB said these templates and checklists can help auditors consistently consider and document important elements of their procedures, particularly in higher-risk areas. However, the panelists agreed that templates and checklists should not be used as substitutes for auditor judgment and understanding, and they encouraged management and auditors to discuss any questions regarding the nature and purpose of the auditor's procedures.

In other remarks regarding material weaknesses in ICFR, Mr. Croteau reminded management and auditors that evaluating the severity of a control deficiency requires consideration of the "could factor," meaning whether it is reasonably possible that a material misstatement "could" occur and not be prevented or detected on a timely basis. That is, management and the auditor should not just consider whether a material misstatement occurred. Mr. Croteau also discussed the importance of considering whether changes to internal controls in conjunction with the adoption of a new accounting standard require disclosure as material change in ICFR in the relevant quarter under Item 308(c) of Regulation S-K.

How we see it

- We support the efforts by the SEC and PCAOB to encourage dialogue between financial statement preparers and auditors in response to the number of PCAOB inspection findings involving audits of ICFR.

- Management and auditors should work together early in the audit process to understand and agree on the level of documentation that should be retained by both parties for the audit of ICFR.

Accounting and independence matters

Segment reporting

Courtney Sachtleben, a staff member in the Office of the Chief Accountant (OCA), said that over the past year, OCA has been working closely with the Division of Corporation Finance and others, including the PCAOB, to emphasize the objectives and principles outlined in the standard on segment reporting. Ms. Sachtleben and other members of the SEC staff shared their observations related to the identification of operating segments, aggregation into reportable segments and ICFR.

EY resources

- *Financial reporting developments, Segment reporting* (SCORE No. BB0698)

Identification of operating segments

Accounting Standards Codification (ASC) 280 requires entities to identify operating segments in a manner consistent with the way management organizes the segments (i.e., management's approach). Ms. Sachtleben observed that, as business operations evolve, registrants should reassess their identification of operating segments, particularly after a change in organizational structure, key personnel changes or significant acquisitions and dispositions.

Ms. Sachtleben said that the periodic financial reporting package provided to the Chief Operating Decision Maker (CODM) and the registrant's organizational structure will often provide insight into how management has organized the company for purposes of making operating decisions and assessing performance. However, she cautioned that neither is determinative in the identification of operating segments and that a variety of information sources can enhance and corroborate this analysis, including information about the basis on which budgets and forecasts are prepared and how executive compensation is determined.

Ms. Sachtleben said that if applying the guidance in ASC 280 results in the identification of a single operating segment, a registrant should disclose that it allocates resources and assesses financial performance on a consolidated basis and explain the basis for that management approach. However, she said that it would seem counter to the objectives of segment reporting if the business description indicates the company is diversified across businesses or products but is not managed in a disaggregated way.

Nili Shah, a Deputy Chief Accountant in the SEC's Division of Corporation Finance, also discussed segment reporting in a panel with other members of the Division. Regarding the identification of operating segments, she emphasized the following points:

- When identifying the CODM, companies should focus on which person or group in the organization is making the key operating decisions and not necessarily the person who has the ultimate decision-making authority (e.g., CEO). ASC 280 contemplates that a company's Chief Operating Officer may be the CODM.
- When determining whether discrete financial information is available, a company shouldn't conclude that such information is not available simply because certain costs are shared and not allocated specifically to each component. She said this view would not be persuasive. Gross profit information provided to the CODM and used to assess performance and make resource allocation decisions could be considered discrete financial information.

Aggregation of operating segments

While the identification of operating segments follows a management approach, the determination of reportable segments considers both aggregation criteria and quantitative thresholds. The aggregation of operating segments is one of the more judgmental areas of the segment reporting literature. Two or more operating segments may be aggregated into a single reportable segment only when all the following criteria are met: (1) aggregation is consistent with the objectives and principles of ASC 280, (2) the segments have similar economic characteristics and (3) the segments are similar in each of the five criteria specified in the standard.

Ms. Sachtleben reminded registrants that the guidance on determining whether two operating segments are "similar" requires the evaluation to be made relative to the range of the company's business activities and the economic environment in which it operates. She added that it would be helpful to consider similarity from the perspective of a reasonable investor and that it is important to consider information such as industry reports and other analyses by users of the financial statements that may provide evidence of how a reasonable investor would analyze the company.

Ms. Sachtleben also reminded registrants that once they identify segments that require separate reporting, they need to consider additional guidance on combining any remaining segments. She said that in performing this analysis, registrants should consider what additional level of detail would be useful to the users of the financial statements consistent with the first criterion above. She noted that registrants also may want to consider whether their reportable segments facilitate a consistent description of the company in its annual report and other published information such as its earnings releases, investor presentations and financial information on its website.

Ms. Shah also highlighted aggregation of operating segments as an area of focus in the review of filings by the staff in the Division of Corporation Finance, and she emphasized the following points:

- When responding to SEC staff comments on segment disclosures, companies should discuss why aggregation is consistent with the objectives and basic principles of ASC 280 (i.e., how aggregation helps users better understand the company's performance and assess its prospects for future net cash flows).
- When evaluating economic similarity, registrants should understand that there are no bright lines and significant judgment is required. In addition, the types of metrics considered and the acceptable level of differences in those metrics among the segments being evaluated for aggregation may differ across industries.
- An expectation that operating segments will have similar economic characteristics (e.g., long-term average gross margins) in the future does not take precedence over the lack of similarity in current and past performance.
- The SEC staff has increased its focus on the qualitative criteria in ASC 280. She reminded registrants of the requirement to meet all of the aggregation criteria in ASC 280 and said that at times the staff has objected to aggregation even when the quantitative economic characteristics were considered similar.

Effective internal control over financial reporting supports the judgments required in segment reporting.

Internal control over financial reporting

Ms. Sachtleben highlighted that the guidance on segment reporting requires the application of reasonable judgment and that effective ICFR supports those judgments, including the determination of operating segments, aggregation and entity-wide disclosures. Input from, and interaction with, the CODM may be an important element in the design of effective ICFR, specifically how the CODM allocates resources and assesses performance. She said that documenting the design and effective operation of management's controls over these judgments is an integral part of management's support for the effectiveness of its ICFR and will be essential to the auditor's ability to evaluate these controls.

Other segment reporting discussions and considerations

Wesley Bricker, Deputy Chief Accountant, observed that segment reporting was ranked in the top three consultation areas in OCA during 2015. Mr. Bricker observed that some registrants have contended in their consultations, including on segment reporting, that they should not be required to apply a US GAAP standard because the result would be "competitively harmful" or "misleading." He noted that these arguments are troubling because they disregard the thoughtful balance taken by the accounting standard setters in crafting reporting standards that provide transparent, useful information to investors. He concluded that a better approach starts with identifying what information is useful to investors, as well as why and how that information can be appropriately reported.

Ms. Shah also mentioned that when the SEC staff has objected to a company's segment reporting conclusions, it generally has permitted the registrant to reflect changes to its segment disclosure in future filings. However, she cautioned that if goodwill is impaired as a result of a change in the registrant's reporting units, the SEC staff likely would require restatement of prior periods.

Finally, Helen Munter, Director of the PCAOB's Division of Registration and Inspections, said that PCAOB inspections in 2016 will include a focus on segment reporting, including the identification of the CODM, the identification and aggregation of operating segments, and the continued assessment of an issuer's ICFR related to segment reporting.

How we see it

Segment reporting continues to be a top focus area by the SEC staff. Entities should continue to reassess their segment reporting conclusions and evaluate whether internal controls are designed to make sure that the CODM, operating segments and reportable segments are appropriately identified in accordance with ASC 280. Management review controls often will be an important element of a registrant's internal control over segment reporting.

EY resources

- *Financial reporting developments, Share-based payment* (SCORE No. BB1172)

Effect of post-vesting restrictions on the measurement of share-based awards

ASC 718-10-30-10[3] clarifies that "a restriction that continues in effect after an entity has issued instruments to employees, such as the inability to transfer vested equity share options to third parties or the inability to sell vested shares for a period of time, is considered in estimating the fair value of the instruments at the grant date."

Barry Kanczuker, a member of the OCA staff, addressed the effect of post-vesting restrictions on the measurement of share-based payment awards and noted that market participant assumptions used in the fair value measurement of a restricted share may result in some discount relative to the fair value of a similar but unrestricted share. However, Mr. Kanczuker noted the SEC staff looks to ASC 718-10-55-5 to evaluate the appropriateness of any discount. It states that "if shares are traded in an active market, post-vesting restrictions may have little, if any, effect on the amount at which the shares being valued would be exchanged." He encouraged registrants to consult with the SEC staff if they believe their post-vesting restrictions would result in a significant discount being applied to the grant-date fair value of an award.

EY resources

- *To the Point, Potential alternative to develop discount rates used to measure defined benefit plan costs* (SCORE No. BB3053)

Discount rates used to measure the interest cost of defined benefit pension plans

The interest cost component of net periodic pension cost is the increase in the projected benefit obligation due to the passage of time at a rate equal to the assumed discount rate. Many companies use a weighted average discount rate, developed using a yield curve, to calculate the interest cost.

Ashley Wright, a member of the OCA staff, discussed a recent consultation on an alternative approach (a spot rate approach) to determine the discount rate used in the interest cost calculation. Under a spot rate approach, a company that determines its discount rate from a yield curve uses the individual spot rates along the yield curve that correspond with the timing of each future cash outflow for benefit payments to calculate interest cost. Ms. Wright stated that the use of individual discount rates results in a different amount of interest cost compared with the interest cost calculated using a weighted-average discount rate.

Ms. Wright indicated that the SEC staff would not object to a registrant that employs the yield curve approach changing from using a weighted average discount rate approach to a spot rate approach for measuring interest cost and accounting for this change as either a change in estimate or a change in estimate inseparable from a change in accounting principle.

However, Ms. Wright shared the following observations about companies that use a different method for measuring the pension benefit obligation (e.g., hypothetical bond matching methodology) and are considering changing to a yield curve methodology and the spot rate approach:

- A company's decision to select, or change the selection of, a particular methodology for determining the discount rate should align with the requirement to select the best rate(s) for which the obligation could be effectively settled.
- A change in the methodology used to determine the discount rate should be made only if alternative market information (i.e., source data) results in better information being used in measuring the pension benefit obligation.
- The selection of a best estimate is generally not made on the basis of materiality.
- Any change in the method used to calculate the best estimate of those rates should be made when a change in the facts and circumstances may warrant the use of a different method.
- A registrant may need to consider its arguments when it previously changed from a yield curve approach to a bond matching approach (if applicable).
- A change in the approach to calculate interest cost would not seem persuasive to change the basis for selecting a different source of market information (i.e., the approach to determining the discount rate(s)) used for measuring the pension benefit obligation.

The SEC staff said the examples in the accounting standard about discontinued operations do not establish bright lines or safe harbors.

How we see it

A registrant that believes it has facts and circumstances that would support a change from the bond matching approach to the yield curve approach, considering the points above, should discuss its fact pattern with the SEC staff.

EY resources

- *Financial reporting developments, Discontinued operations* (SCORE No. BB2878)

Presentation of discontinued operations

The revised guidance in ASC 205-20 raises the threshold for reporting a discontinued operation by requiring that a component (or group of components) disposed of or classified as held for sale represent a strategic shift that has (or will have) a major effect on an entity's operations and financial results. Mr. Kanczuker discussed how ASC 205-20 allows for judgment to determine whether a disposal group meets the definition of a discontinued operation under the revised guidance.

He addressed concerns about which financial results should be considered in evaluating whether a disposal group is a discontinued operation. In his view, these metrics should be the primary metrics that are prominently presented in the financial statements and communicated to investors (e.g., revenue, net income) as well as other metrics that may be relevant from an investor's perspective, particularly when the company has used such measure(s) on a consistent basis for communicating operating and financial results. There is no single financial metric that is determinative of whether a disposal group meets the discontinued operations criteria. Instead, the totality of the evidence should be considered from the perspective of current, historical and forecast financial results.

In Mr. Kanczuker's view, entities should consider both quantitative and qualitative factors when determining whether a disposal group represents a strategic shift that has (or will have) a major effect on an entity's operations and financial results. ASC 205-20 provides examples that include quantitative thresholds (e.g., 15% of total revenue, 20% of total assets) of what may constitute a strategic shift that has or will have a major effect on an entity's operations and financial results. However, Mr. Kanczuker indicated that the quantitative thresholds included in these examples are illustrative and do not establish bright lines or safe harbors. The staff member also noted that the less significance a disposal group has to the financial results, the more qualitative evidence is needed to support discontinued operations presentation (e.g., entities should consider how the disposal group and related qualitative factors were disclosed in previous filings).

EY resources

- *Financial reporting developments, Fair value measurement* (SCORE No. BB1462)

Fair value measurements

Kris Shirley, a member of the OCA staff, discussed several considerations for companies determining fair value measurements.

Identifying the principal or most advantageous market

A fair value measurement assumes the transaction to sell an asset or transfer a liability takes place in either the principal market or, in the absence of the principal market, the most advantageous market for the asset or liability. If an entity cannot transact in a market on the measurement date, that market may not constitute the principal or most advantageous market.

Mr. Shirley said that the company may need to consider whether the characteristics of its asset or liability being measured at fair value differ from the asset or liability that transacts in an observable market, as differences may prevent the company from accessing this market. This determination could lead to a different conclusion about whether the observable market is the principal or most advantageous market. For example, restrictions that may be unique to the entity's asset or liability that are not embedded in the asset or liability in the observable market may prevent an entity from accessing the particular price within the market. He also said there may be situations in which the market where the initial transaction occurred will not be the principal or most advantageous market.

Mr. Shirley noted that even when a market does not constitute the principal or most advantageous market, a company may still use observable prices from that market as one input into its fair value measurement. However, appropriate adjustments should be made for any differences in the characteristics of the company's particular asset or liability and those for which there is an observable price. Mr. Shirley provided an example of a company that measures a loan at fair value and on the measurement date looks to the securitization market for observable prices. The company would need to make appropriate adjustments to reflect the fact that its loan has not been securitized as of the measurement date.

Use of cost basis as fair value

Mr. Shirley observed that some companies use the initial cost basis of certain illiquid assets or liabilities as their fair value measurement for a period of time following the initial transaction. He noted that in determining fair value of an asset or liability, the transaction price may be a good starting point, but fair value under ASC 820 is an exit price at the measurement date under current market conditions and those conditions likely will be different from when the initial investment was made. This may be due to a number of factors, including changes in macroeconomic conditions (e.g., changes in interest rates), a change in market participants or a change in the expectation of cash flows.

Mr. Shirley said that companies will need to obtain evidence to support a conclusion that cost basis approximates fair value at the measurement date or why the fair value may not have changed materially from the initial cost basis. This may be supported through quantitative evidence, such as observable market pricing for the asset or liability or for comparable assets or liabilities with observable market prices, or qualitative evidence in certain cases.

ICFR for fair value measurements

Mr. Shirley also provided reminders about the importance of having a system of internal control over financial reporting related to fair value measurements, including those for illiquid assets or liabilities. The nature of these controls may differ based on the complexity of the estimate and whether the estimate was derived internally or by using a third-party service provider, among other factors.

Allowance for loan losses

Christopher Rickli, a member of the OCA staff, provided several reminders on management's responsibility under the SEC staff guidance in Staff Accounting Bulletin (SAB) Topic 6.L[4] for determining the allowance for loan losses (ALL).

Mr. Rickli said SAB Topic 6.L establishes expectations for management related to the development, documentation and application of a systematic methodology for determining the ALL. This includes an expectation that management will provide written documentation on certain decisions, strategies and processes for its ALL methodology. These processes should include effective internal controls designed to ensure use of relevant, reliable and sufficient data on which to base the ALL estimate. Mr. Rickli noted that these controls should not only include management review controls, but also transaction level controls in order to satisfy SAB Topic 6.L's expectations of data relevance and reliability.

When adjustments are made to the allowance that are intended to capture factors not already included in the entity's loss estimation model (e.g., changes in risk selection and underwriting standards, lending policies and certain economic trends and conditions), Mr. Rickli said that there is an expectation that management maintain sufficient, objective evidence to support the amount of the adjustments and explain why the adjustments are necessary. Also, management is expected to have an adequate understanding of the data currently being used in the ALL estimation model in order to be able to evaluate the necessity and the reasonableness of proposed adjustments.

EY resources

- *Financial reporting developments, Consolidation and the Variable Interest Model: Determination of a controlling financial interest (following the adoption of ASU 2015-02, Amendments to the Consolidation Analysis)* (SCORE No. BB3099)

Determining whether fees are a variable interest

Mr. Semesky discussed several considerations when determining whether a decision maker's fee is a variable interest when applying Accounting Standards Update (ASU) 2015-02, *Amendments to the Consolidation Analysis.*[5]

Three conditions must all be met to conclude that fees received by an entity's decision maker or service provider do not represent variable interests in that entity:

- The fees are compensation for services provided and are commensurate with the level of effort required to provide those services (i.e., commensurate).
- The service arrangement includes only terms, conditions or amounts that are customarily present in arrangements for similar services negotiated at arm's length (i.e., customary).
- The decision maker or service provider (and its related parties or de facto agents) does not hold other interests in the variable interest entity (VIE) that individually, or in the aggregate, would absorb more than an insignificant amount of the VIE's expected losses or receive more than an insignificant amount of the VIE's expected residual returns.[6]

Customary and commensurate

Mr. Semesky said that the determination of whether fees are commensurate often can be accomplished with a qualitative evaluation of whether an arrangement was negotiated on an arm's-length basis when the decision maker had no obligations other than to provide the services to the entity being evaluated for consolidation. He cautioned that this analysis requires a careful consideration of the services to be provided in relation to the fees.

On the evaluation of whether terms, conditions and amounts included in an arrangement are customary, Mr. Semesky said that this may be accomplished in ways such as benchmarking the key characteristics of the arrangement against other market participants' arrangements negotiated on an arm's-length basis or, in some instances, against other arm's-length arrangements entered into by the decision maker. Mr. Semesky emphasized that there are no bright lines in evaluating whether an arrangement is customary, and reasonable judgment is required in such an evaluation.

How we see it

The SEC staff member's observations are consistent with our view that determining whether a fee is commensurate and customary requires the use of professional judgment and a qualitative evaluation of the purpose and design of each entity and the terms and conditions of the fee arrangement. The presence of unrelated investors may be helpful in performing this evaluation, but is not determinative; all facts and circumstances should be considered.

Interests held by related parties

ASU 2015-02[7] states that, when an entity evaluates whether the fees paid to a decision maker or service provider are a variable interest, "any interest in an entity that is held by a related party of the decision maker or service provider should be considered in the analysis. Specifically, a decision maker or service provider should include its direct economic interests in the entity and its indirect economic interests in the entity held through related parties, considered on a proportionate basis … Indirect interests held through related parties that are under common control with the decision maker should be considered the equivalent of direct interests in their entirety." Questions have arisen about how a decision maker (e.g., manager) should apply this guidance when the decision maker does not have an ownership interest in the related party under common control (i.e., when the decision maker does not have an indirect interest).

Mr. Semesky highlighted an example in which an entity has four investors that are unrelated to one another and has a manager that is under common control with one of the investors. The manager has no direct or indirect interests in any of the investors or the entity other than through its fee, and it has the power to direct the activities of the entity that most significantly impact its economic performance.

Mr. Semesky said that in this example, if the manager's fee would otherwise not meet the criteria to be considered a variable interest (i.e., it was customary and commensurate), the fact that an investor under common control with the manager has a variable interest would not by itself cause the manager's fee to be considered a variable interest. However, Mr. Semesky cautioned that when a controlling party in a common control group designs an entity to separate power from economics to avoid consolidation in the separate company financial statements of a decision maker, OCA has viewed such separation to be non-substantive.

Additionally, Mr. Semesky concluded that once the manager determined that its fee is not a variable interest, it would not be required to consolidate the entity as a result of applying the related party tiebreaker test.

How we see it

The SEC staff member's observations on evaluating interests held by parties under common control provide much needed clarity to entities as they adopt the new consolidation standard. Absent the clarification, in many cases, the manager would have considered the interest of the party under common control as its own interest, which may have caused the fee to be considered a variable interest. While such a conclusion may not have resulted in consolidation of the entity by the manager, it would have resulted in further analysis by the manager and may have subjected the manager to additional disclosures.

EY resources

- *Technical Line, New Venezuelan currency regime — same accounting and reporting considerations* (SCORE No. BB2970)

Foreign exchange restrictions and evaluating control

Mr. Semesky noted that OCA has observed registrants deconsolidating subsidiaries in Venezuela. He reminded registrants of the need to reassess that conclusion continuously. If the conclusion to deconsolidate was based on foreign exchange restrictions and the severity of government-imposed controls, an improvement in exchangeability or loosening of government-imposed controls may result in the restoration of control and consolidation. He said that he would expect consistency in a registrant's judgments of whether it has lost control or regained control of a subsidiary, and that registrants should have internal controls over the assessment.

Further, Mr. Semesky cautioned that careful consideration should be given to whether a Venezuelan subsidiary would be considered a VIE, because power may no longer reside with the equity-at-risk holders. As a result, Mr. Semesky stated that registrants should clearly disclose their judgments on, and the financial reporting effect of, deconsolidation. They should also consider the required disclosures for interests in VIEs that are not consolidated.

How we see it

The conclusion to deconsolidate a Venezuelan operation (or to change the accounting for an investment from the equity method to the cost method) should be based on entity-specific facts and circumstances and will require significant judgment.

Accounting consultation activities and restatements

Mr. Bricker commented that OCA's primary consultation activities included revenue recognition, business combinations and identification and reporting of segments (which interestingly are not in the top three areas of restatement, he noted). For consultations that come through the Division of Corporation Finance, he cautioned registrants against benchmarking other registrants' disclosures or responses to SEC comment letters to establish their accounting policies without management doing the necessary work to determine and support their own policies.

Mr. Bricker provided observations regarding the top three restatement areas, which relate to debt/equity accounting, statement of cash flows classification and income tax accounting. Because the guidance in these areas can be difficult to apply, Mr. Bricker reminded companies and audit committees about the need to continually assess whether they have resources with sufficient training and competence available to support high-quality financial reporting and make sure proper controls and processes exist.

Auditor independence matters

Michael Husich, Senior Associate Chief Accountant in OCA, and Mr. Croteau emphasized that compliance with the auditor independence rules is the shared responsibility of auditors, management and the audit committee. When non-audit services are provided, the SEC staff members encouraged management and the audit committee to have policies and procedures for ongoing monitoring of the services provided. Mr. Croteau further highlighted the risk of "scope creep" that could impair auditor independence, result in unplanned changes in auditors and the potential need for re-audits, which can be costly for companies and could adversely affect capital-raising activities.

Mr. Husich discussed prohibited services related to bookkeeping services and financial statement preparation for broker-dealer audit clients, which have led to recent SEC and PCAOB enforcement actions. He emphasized that prohibitions on these services are not intended to discourage two-way communications or further engagement between the auditor and its audit client, as long as management takes ultimate responsibility for the accounting conclusions and does not rely on the audit firm to design or implement the controls. For example, SEC staff noted that audit firms may provide guidance about the proper application of the revenue recognition standard, including important factors to be considered in making judgments important to the accounting process. However, SEC staff cautioned that audit firms should always be mindful to not put themselves in the position of auditing their own work or of acting as management by, for example, having direct involvement in the development of specific revenue recognition policies.

Financial reporting and disclosure matters

SEC staff from the Division of Corporation Finance discussed specific reporting matters it commonly focuses on in filing reviews and in which disclosures could be more effective.

Non-GAAP financial measures

Keith Higgins, Director of the SEC's Division of Corporation Finance, reiterated the SEC's focus on non-GAAP measures, which Chair White highlighted in her remarks. Cicely LaMothe, Associate Director in the Division of Corporation Finance, outlined the following general themes related to the staff's review of non-GAAP measures:

- **Prominence** — Non-GAAP measures should not be presented more prominently than the comparable GAAP measures.
- **Compliance with securities rules** — Depending on the presentation, non-GAAP measures must comply with the disclosure and presentation requirements of Regulation G or Item 10(e) of Regulation S-K. In particular, registrants must clearly disclose how the non-GAAP measures are useful to investors without using boilerplate language.
- **Labeling** — Registrants should clearly label non-GAAP measures and related adjustments so they are understandable and not misleading. For example, registrants sometimes identify non-GAAP measures or adjustments using terms that are used in US GAAP, or they use a non-GAAP measure that they define differently than other companies. Instead, registrants should accurately describe the non-GAAP measures in their disclosures to minimize confusion and foster comparability.
- **Consistency** — As registrants make changes to their non-GAAP measures (or GAAP measures used as a base for non-GAAP), appropriate disclosures should be made to describe how these changes affect comparability with the measure previously disclosed.

SEC staff members also made the following points about specific non-GAAP measures. They said adjustments to pension costs should provide enough information for a user to understand the nature of the adjustments made. For example, a label such as "pension adjustment" does not provide enough information. In addition, describing the adjustment as non-cash is inappropriate because pensions are generally cash settled. They also said registrants should provide robust disclosures when eliminating the actuarial gain or loss on pension assets to help users understand the ultimate pension cost reflected in the non-GAAP measure as well as how the expected rate of return reflected in the non-GAAP measure compares with the actual rate of return.

The SEC staff has recently allowed registrants to disclose a "system-wide sales" non-GAAP measure with appropriate disclosures, but the staff has objected to measures that eliminate the effect of commodity price volatility with a "normalized market price." Panelists discussing MD&A said constant currency is a useful non-GAAP measure because it describes one of the three factors affecting changes in revenue (i.e., price, quantity, the effect of currency changes) and referred the audience to the Compliance and Disclosure Interpretations (C&DI) issued by the staff in 2010 stating that a reconciliation was not necessary for such a measure.[8]

Income tax disclosures

Ms. Shah said that registrants should continue to focus on the quality and clarity of key income tax disclosures within MD&A, including those related to income tax rate reconciliations and indefinitely reinvested earnings. Consistent with prior years, the SEC staff has requested that companies disclose the amount of large cash balances held overseas when the indefinite reinvestment assertion is made. Ms. Shah discussed the following ways income tax disclosures could be improved:

- **Discussing the items and changes in the effective income tax rate reconciliation** — Using the income tax rate reconciliation as a starting point for the narrative income tax disclosures in MD&A and tying MD&A disclosures directly to the rate reconciliation helps reduce confusion about where the items discussed flow through the reconciliation. The narrative disclosures should include detailed discussion of what drove the change in the effective tax rate, and the overall susceptibility of the rate to changes. This helps users determine whether the past rate is indicative of the future rate.

- **Clarity and transparency** — The SEC staff may question registrants if there are material items in the rate reconciliations that are not clearly identified and discussed in MD&A. Also, reconciling items affected by multiple factors should be clarified and disaggregated so that users can understand factors driving the reconciling item. For example, reconciling items labelled "foreign rate differential" should be limited to only statutory tax rate differences and not include other differences within the foreign jurisdiction. As an example, the SEC staff suggested a multi-column reconciliation that separately presents the reconciling items and taxable income by material foreign jurisdictions in addition to domestically and on a consolidated basis.

Fair value disclosures

Craig Olinger, a Deputy Chief Accountant of the Division of Corporation Finance, said the adequacy of fair value disclosures required by ASC 820 continues to be an area of focus. Investors have said that disclosures that allow them to assess the quantitative techniques and inputs used, particularly for measurements categorized in levels 2 and 3 of the fair value hierarchy, are important for making informed investment decisions. Registrants can achieve this by challenging the level of aggregation and related description of each class of instrument[9] (e.g., mortgage backed, treasury, collateralized debt) and the related quantitative inputs used to value each class. Mr. Olinger reminded registrants to appropriately consider the nature, characteristics and risk in aggregating assets and liabilities for disclosure. The description of the valuation techniques and inputs used should be linked to each class and provide a detailed description of how the instruments were valued and the related inputs used, not merely list all potential valuation techniques or inputs.

How we see it

Earlier this year, the SEC staff issued several comment letters to registrants in the insurance industry about their basis for aggregating in their disclosures certain fixed maturity securities into defined classes and their descriptions of valuation techniques. Mr. Olinger's comments indicate that the SEC staff may be focusing on this topic more broadly.

EY resources

- *Technical Line, IPO financial statement accounting and disclosure considerations* (SCORE No. CC0423)

Predecessors in IPO registration statements

Initial public offering (IPO) structures may involve the combination of multiple entities in a "put-together" transaction or the carve-out or spin-off of operations from another company. In certain cases, the IPO registrant also may be a newly formed entity, or Newco, that has no significant activities but will acquire a business when or before the IPO becomes effective. The SEC staff said that these transactions require a careful evaluation of the facts and circumstances to determine whether an acquired entity represents a predecessor.

Identifying the predecessor is a matter of judgment and is based on whether an acquired business will constitute the main thrust of the business or operations of the combined entities. More information must be provided for a predecessor (i.e., the same as for a registrant) than for an acquired business under Rule 3-05 of Regulation S-X. For example, unlike a significant acquisition under Rule 3-05, separate schedules, selected financial data, MD&A and other disclosures required under Regulation S-K must be provided for each predecessor.

The SEC staff made the following observations about determining the predecessor:

- Factors to consider when identifying the predecessor may include the order in which the entities were acquired (i.e., which entity was acquired first), the size and fair value of the entities and the ongoing management structure. None of these factors is determinative, and all facts and circumstances should be evaluated.
- It is rare not to identify a predecessor, even if a Newco is determined to be the accounting acquirer.
- It is possible to identify more than one predecessor entity.

The SEC staff also reminded registrants that the predecessor's financial statements may reflect operations that will not be part of the IPO registrant. The SEC staff generally applies a legal entity concept when defining the predecessor. Therefore, if the IPO registrant or the predecessor is a legal entity that disposes or spins off businesses at or prior to the IPO, it may not be able to retroactively omit those businesses from the historical financial statements.

EY resources

- *Technical Line, Accounting risks related to the decline in oil prices* (SCORE No. BB3077)

Depressed oil and gas prices

The SEC staff said that it is focusing on changes in the reserve estimates of oil and gas registrants as well as potential asset impairment issues that may affect any registrant materially exposed to change in oil and gas prices.

The SEC staff noted that it commonly sees boilerplate language about the effects of the continued decline in oil and gas prices that do not address how the registrant is affected. The SEC staff has asked registrants to consider additional disclosures about material uncertainties and the range of potential outcomes related to their impairment estimates and judgments. For example, if management has projected a recovery in oil and gas prices that supports the valuation of the company's assets, the company should consider disclosure about whether a material impairment could result from a longer recovery period.

The SEC staff also said registrants should expand their disclosures if the depressed oil and gas prices materially affect the company's operational or growth prospects or if there is a reasonable likelihood that the reported results may not be indicative of future results.

Accounting, SEC and audit standard-setting update

EY resources

- *Financial reporting developments, Revenue from contracts with customers (ASC 606)* (SCORE No. BB3043)

SEC staff views about the revenue standard

In discussing implementation of the FASB's new revenue recognition standard, Mr. Bricker mentioned a recent survey that indicated "75% of responding companies had not completed their initial impact assessment and, of those, a third had not begun [the assessment]." This statistic is consistent with the results of a polling question posed to attendees during the conference. Mr. Bricker emphasized the need for audit committees to be involved and informed of management's detailed implementation plans and to make sure the company has sufficient resources to complete the work timely.

He said it is important for the TRG to continue its efforts as well as consider a global perspective to foster comparability among registrants. The SEC staff will interpret and expect consistent application among foreign private issuers (FPIs) and domestic registrants where the language in the FASB and IASB standards is the same. Mr. Bricker and others echoed statements previously made by Mr. Schnurr about the need to work through implementation issues in robust discussions with the AICPA's industry groups, the TRG, audit firms and SEC staff.

The SEC staff and other panelists further emphasized the need for registrants to give thoughtful consideration to the evolution of their SAB Topic 11.M[10] disclosures. Mr. Bricker emphasized that the SEC staff is looking forward to reviewing more detailed disclosures in upcoming filings about how companies expect to be affected by the new standard. He also said that companies that don't yet know how they will be affected should disclose that the effect is unknown, along with information about when they plan to complete their assessment of how they will be affected.

How we see it

As companies evaluate and determine the qualitative and quantitative effect of the new revenue recognition standard, their SAB Topic 11.M disclosures should evolve through the adoption date. These disclosures should provide users with detailed information relating to the adoption and should not include boilerplate language. We believe this may become a focus area for the SEC staff in its reviews of filings next year.

Ms. Wright shared some observations about the implementation of the new revenue standard. First, she said all companies will experience some degree of change, which may include changes to disclosures, processes, systems or controls, in adopting the new principles-based standard. She said management and audit committees should create a change management plan and should make sure that sufficient resources are allocated to the project. She also observed that some companies are achieving good results by taking a bottom-up approach to implementation, which begins with the identification of different revenue streams and contracts.

Ms. Wright also reiterated that one of the objectives of the new revenue standard is to improve comparability among companies with similar fact patterns. In this regard, she noted that the SEC staff is focused on achieving consistency in the application of the new revenue standard, even if diversity existed under prior revenue guidance. If different accounting conclusions are identified for similar facts and circumstances, companies should raise those differences during the implementation phase of the standard with the TRG, AICPA industry task forces or the SEC's OCA. Raising issues as soon as possible could potentially prevent companies from incurring costs to make changes to achieve consistent accounting conclusions (e.g., due to future interpretive standard setting by the Emerging Issues Task Force).

Mark Kronforst, Chief Accountant of SEC's Division of Corporation Finance, discussed questions the SEC has received about the requirement in Item 11(b) of Form S-3 to recast annual financial statements upon adoption of a new accounting principle, specifically how it applies to adoption of the new revenue recognition standard. Mr. Kronforst said that Item 11(b) is clear that retrospective revision of the annual financial statements in a new or amended registration statement is required for registrants applying a full retrospective method, if the change is material. For example, a calendar-year registrant filing a Form S-3 registration statement in 2018 after it adopts the revenue standard retrospectively in a Form 10-Q filing would be required to recast its prior-period annual financial statements (e.g., for 2015, 2016 and 2017). He acknowledged registrants' concerns of having to recast an additional year of financial statements, but said that any changes to the requirement would require rulemaking by the Commission. However, Mr. Olinger said the staff plans to issue guidance that would not require companies that adopt the revenue standard on a full retrospective basis to retest the significance of equity method investees for the periods that are revised.

How we see it

Given the continued uncertainty on this topic, companies should consider accelerating the timing for refreshing any shelf registration statements that expire in the year they will adopt the revenue recognition standard. Companies planning to register securities in the year of adoption for other reasons should consider how the need to recast the financial statements might affect their adoption and choice of transition method.

EY resources

- *To the Point, New legislation makes changes to JOBS Act and other SEC requirements* (SCORE No. CC0432)
- *To the Point, SEC proposes requiring 'clawback' policies and disclosures* (SCORE No. CC0413)

SEC rulemaking and other initiatives

Mr. Higgins discussed the new Fixing Americas Surface Transportation Act (FAST Act), which included amendments to the Jumpstart Our Business Startups Act (JOBS Act), many of which are effective upon enactment, and certain other mandates for the SEC (which we discuss in our To the Point, *New legislation makes changes to JOBS Act and other SEC requirements* (SCORE No. CC0432)). [11]

Under the FAST Act, in its IPO filing or confidential submission an EGC may omit the earlier of the two required years of annual financial statements if it reasonably believes it will provide an additional full year of annual financial statements by the effective date of its IPO. The SEC staff clarified that this relief extends to other entity financial statements (e.g., S-X Rule 3-05).

The SEC staff clarified that interim financial information for the current and prior year must be included in the EGC's IPO filing or submission because the interim periods are ***part of*** the financial information that will be required at effectiveness. For example, an EGC that is contemplating an IPO in 2016 could submit or file the registration statement for SEC staff review in early 2016 with only 2014 audited financial statements and the most recent interim period of 2015 (and comparable interim period of 2014) assuming it will include 2015 audited financial statements prior to distributing its preliminary prospectus.

Mr. Higgins said the SEC continues to focus on its remaining rulemaking under the Dodd-Frank Wall Street Reform and Consumer Protection Act, including rules relating to hedging, executive compensation and resource extraction payments, which the Commission recently re-proposed.

Audit committee reporting

In July 2015, the SEC issued a concept release seeking public comment on possible revisions to audit committee disclosures, with a focus on areas related to the audit committee's oversight of the independent auditor. Mr. Croteau observed that the Sarbanes-Oxley Act of 2002 (SOX) significantly expanded the audit committee's responsibilities, but that the SEC's disclosure requirements predate SOX. The concept release was developed in response to a desire by some investors to hear more from audit committees about how they perform their role as gatekeepers for the benefit of investors.

Mr. Croteau noted that many commenters support considering improvements to audit committee disclosure requirements. However, there were mixed views about the need for mandatory detailed disclosures, with some commenters suggesting that voluntary disclosures could be sufficient. Mr. Croteau noted that commenters were particularly interested in areas such as:

- The selection and appointment of the auditor
- The evaluation of the audit team
- Auditor compensation
- Composition of the audit committee

With respect to voluntary disclosure, both Chair White and Mr. Croteau observed that many audit committees have enhanced their disclosures beyond those required by today's rules in response to increased investor interest. Mr. Croteau encouraged audit committee members to consider the usefulness of their disclosures and whether additional insights could make the report more meaningful.

EY resources

- *To the Point, Our recommendations for changing Regulation S-X disclosures about entities other than the registrant* (SCORE No. CC0429)
- *Disclosure effectiveness – What companies can do now* (SCORE No. CC0403)
- *Disclosure effectiveness – What investors, company executives and other stakeholders are saying* (SCORE No. CC0404)

Disclosure effectiveness initiative

The Division staff continues to review the business and financial disclosures in Regulation S-K and S-X as part of the SEC's disclosure effectiveness initiative. The SEC staff also is considering how to leverage technology and the EDGAR delivery system to facilitate user access to meaningful information. Mr. Higgins said that the initiative continues to be a priority and he expects there will be significant progress in 2016.

Regulation S-X rulemaking

In October 2015, the SEC issued a request for comment on how it might enhance the effectiveness of disclosure requirements in Regulation S-X applicable to entities other than the registrant, including acquired businesses, equity method investees, subsidiary issuers and guarantors. Although the comment letter period has ended, the SEC staff said that it continues to accept and consider any comments submitted.

Mr. Kronforst said that the SEC received a wide range of recommendations from constituents, but comment letters highlighted several specific areas for improvements that the SEC staff is considering.

How we see it

The consistency of recommendations on some topics could enable the SEC staff to make recommendations to the Commission in a relatively short time frame about changes to the rules that could reduce complexity and costs for preparers and improve the usefulness of information for investors.

Regulation S-K requirements

The SEC staff is currently reviewing how to enhance the Regulation S-K requirements, including the following disclosure areas:[12]

- Eliminating overlapping and outdated requirements
- Determining the appropriate balance between bright lines and principles-based requirements
- Scaling disclosures for EGCs and smaller reporting companies
- Updating and incorporating the industry guides, particularly for bank holding companies

Technology improvements

Mr. Higgins cited a comment letter from the Center for Audit Quality and several trade organizations, including the US Chamber of Commerce, Financial Executives International and Business Roundtable, that suggested modernizing the SEC's website and the EDGAR system.[13] The SEC staff said that it plans to implement changes over the next couple of months in response to this letter.

Voluntary improvements by companies

In a panel, an SEC staff member and several company executives discussed voluntary efforts that registrants have made to improve their disclosures. The SEC staff member observed that more companies are considering their SEC filings to be communication documents, rather than merely compliance filings. Company executives summarized changes they have made to disclosures, including eliminating immaterial information, using charts and tables to highlight material information and reducing duplicative information by using cross-references.

The SEC staff said that it supports the use of cross-references to or from the financial statement notes and other sections of the Form 10-K as long as it is clear which disclosure has been audited. However, company executives said that they and their auditors rarely support cross-referencing from the financial statement notes (e.g., to MD&A) due to concerns about the clarity of audit responsibility.

PCAOB standard setting and other initiatives

Martin Baumann, PCAOB Chief Auditor and Director of Professional Standards, and Jay Hanson, PCAOB Board Member, provided an overview of the PCAOB's standard setting and other projects. They also discussed the evaluation of the PCAOB's standard-setting process that occurred during 2015 to create a more thorough, efficient approach to the standard-setting projects.

Recently approved standards

- *Related parties* — Mr. Baumann highlighted the Board's standard on related parties, AS 18, which is effective for audits of financial statements for fiscal years beginning on or after 15 December 2014. Mr. Hanson and Mr. Baumann noted concerns that have been raised by auditors and preparers as the standard has been implemented, particularly with respect to the requirement for auditors to obtain a representation from management that they have provided the auditor with a list of all related parties. Mr. Baumann observed that obtaining a list of all related parties is the starting point for an auditor's procedures. In response to a question, Mr. Hanson observed that this was not an area in which commenters raised concerns during standard setting.

- *Reorganization* — Mr. Baumann described the reorganization of the PCAOB's auditing standards that was completed this year and will be effective as of 31 December 2016. The PCAOB undertook this project to organize its auditing standards using a topical structure and a single numbering system for easier navigation.

Reporting standards

- *Transparency* — Mr. Baumann said the objective of this project was to provide important information to investors and promote accountability through disclosure of the name of the engagement partner and certain other participants in the audit. A supplemental request for comment was issued on 30 June 2015 to propose disclosing this information in a new PCAOB form, Form AP, rather than in the auditor's report. Mr. Baumann stated that this alternative would balance the benefits of such disclosure with the liability concerns raised by including the information in the auditor's report. The standard, which is subject to approval by the SEC, is expected to be approved by Board on 15 December 2015.

- *Auditor's reporting model* — Mr. Baumann said the PCAOB plans to re-propose a standard on the auditor's reporting model in the first half of 2016. It will reflect feedback the PCAOB received from comment letters and in public hearings on an earlier proposal. Mr. Baumann noted that expanded auditor reporting is already required in the United Kingdom and has been considered successful. Additionally, the International Auditing and Assurance Standards Board (IAASB) approved a new audit reporting standard, which includes the identification of key audit matters and how those matters were addressed during the audit, effective for 2016 listed company audits.

- *Audit quality indicators (AQIs)* — Mr. Hanson said that while constituents support the PCAOB's AQI concept release, they expressed diverse views on the next steps the PCAOB should take in the project. He said he believes the PCAOB should continue to monitor discussions between auditors and audit committees, encourage firms to issue quality reports and then assess whether to mandate the use of AQIs.

Performance standards

- *Supervision of other auditors* — Mr. Baumann said a proposal on supervision of other auditors in multinational audits would seek to strengthen the oversight of the other firms by the lead audit firm and provide improved guidance on directing, reviewing and using the work of other auditors.

- *Auditing estimates, including fair value measurements* — Mr. Baumann said the staff is planning to recommend that the PCAOB propose a single standard to replace the multiple existing standards that govern the auditor's work in this area. The proposal would address changes in the related accounting frameworks, the increased use of fair value measurements and pricing services and provide better linkage with the Board's risk assessment standards.

- *Specialists* — Mr. Baumann said the staff plans to recommend that the PCAOB propose general requirements for the oversight of specialists (whether used by the auditor or by management) and to develop more rigorous requirements on using the work of management's specialists.

Other projects requiring additional research or outreach

- *Going concern* — Mr. Baumann said that evaluating whether there is substantial doubt about a company's ability to continue as a going concern is important to investors. Following the FASB's adoption of a requirement for management to make an evaluation of substantial doubt, which it defined differently than existing PCAOB standards, the PCAOB reminded auditors that their evaluation of an entity's ability to continue as a going concern needed to comply with the PCAOB's existing auditing standards. The PCAOB is currently evaluating its next steps.

- *Other information accompanying the financial statements* — Mr. Baumann noted that in its 2013 proposal on the auditor's reporting model, the PCAOB proposed requirements for the auditor to read and evaluate the other information accompanying the financial statements and include a discussion of this evaluation in the auditor's report. Commenters expressed concerns about this proposed requirement, and the PCAOB is exploring its next steps.

- *Quality control standards* — Mr. Baumann said improved quality control standards could lead to improved audit quality and a reduction of inspection findings by the PCAOB and other global regulators. The IAASB has undertaken a similar project, and the PCAOB is planning to coordinate its efforts with the IAASB.

- *Other emerging issues* — The PCAOB's recently asked its Standing Advisory Group to identify the most important issues that could affect audits, auditors and the PCAOB. The issues identified included whistleblower activity, economic developments, use of data/data auditing, non-GAAP measures, the effect of FASB's materiality proposal, revenue recognition and cybersecurity.

International matters

The IFRS footprint and outlook for IFRS

Hans Hoogervorst, IASB Chairman, discussed the success of convergence efforts between the IASB and the FASB, including their revenue recognition and leases standards. He noted that the revenue standards are substantially the same and demonstrate that rules-based and principles-based cultures can be reconciled. He said the leases standards the Boards plan to issue early next year are converged on their main objective to put most operating leases on the balance sheet.

Mr. Hoogervorst said that 116 jurisdictions currently require the use of IFRS. He noted developments in Japan, India and China that advance the use of IFRS. He said these developments are clear progress for investors and preparers because companies will be able to use one accounting language in expanding parts of the world. However, Mr. Hoogervorst acknowledged that consistent application of IFRS requires "permanent attention and rigorous enforcement."

Mr. Hoogervorst also discussed the outlook for the IASB's standard setting over the next 12 months. The IASB and IFRS Foundation will conduct outreach on their standard-setting agenda and the effectiveness of their structure in 2016. He said the IASB needs to improve the communication value of financial reporting by addressing disclosure effectiveness and performance reporting. Other issues the IASB may address include how financial reporting relates to broader issues of corporate reporting (e.g., sustainability, value creation) and the effect of technology and Big Data on financial reporting. He encouraged entities to comment on the consultation papers that will be released in 2016.

Finally, Mr. Hoogervorst noted that the US has substantive interests at stake in IFRS due to its expanding use in the global economy. He gave an example of a recent high-profile IPO by an FPI that listed on a major US stock exchange using financial statements in accordance with IFRS as issued by the IASB. That's why, he said, regardless of its use by domestic companies, US constituents should stay engaged and help the IASB build IFRS in the future.

Considerations for IFRS in the US capital markets

Julie Erhardt, Deputy Chief Accountant in OCA, discussed the interaction between the US and IFRS and benefits of a single set of global accounting standards. She made the following points:

- **Shared origins** — The US was a strong supporter and active participant in the global accounting profession's decision to convert the International Accounting Standards Committee into the IASB, and there are many companies and organizations in the US with a connection to the IASB's work (e.g., US headquartered global corporations) suggesting that the US should continue to be actively involved with IFRS.
- **Shared knowledge** — The US is perceived as a leader on financial reporting policy matters. There is a potential benefit in US companies and standard setters sharing their experiences and views across borders.
- **Shared benefits** — A single recognizable/comparable set of standards benefits domestic companies and investors in the expanding global economy.

How we see it

While it appears that any SEC action in the short-term related to IFRS may be limited to acceptance of voluntary supplemental disclosures, there continues to be consistent support for continued convergence efforts and US engagement with the IASB and global standard setting.

Foreign private issuers

Mr. Olinger said that as of 31 December 2014, about 500 of the approximately 900 FPIs registered with the SEC prepared their financial statements in accordance with IFRS and about 400 prepared their financial statements in accordance with US GAAP. Very few FPIs prepare financial statements in accordance with local country GAAP reconciled to US GAAP.

Common issues and best practices related to foreign transactions

Mr. Olinger participated in an international reporting panel discussion with others on areas that are challenging in cross-border transactions. The panel highlighted the following reporting considerations for transactions that will be registered with the SEC:

- **Foreign status** — When contemplating a foreign transaction, a registrant needs to consider whether it and the target are US domestic filers, foreign businesses or FPIs. This distinction is important in understanding the basis (i.e., US GAAP, IFRS) of the financial information to be presented in the registration statement. Mr. Olinger clarified that a foreign incorporated joint venture that is 50% owned by a US-domiciled entity and 50% owned by a foreign entity does not qualify as a foreign business because neither entity controls the joint venture. When such a joint venture is consolidated by the non-US registrant for reasons other than voting rights under the consolidation rules, Mr. Olinger encouraged registrants to consult with the SEC staff to determine whether any of the foreign business accommodations could be used. Paul Dudek, Chief of the SEC's Office of International Corporate Finance, said that SEC rules do not specify the date on which the assessment must be made whether an acquiree meets the foreign business criteria; therefore, judgment is required, and registrants may consult with the SEC staff.

- **Auditor reporting framework** — The panel observed that, in an SEC filing, a target's financial statements must be audited under AICPA standards or PCAOB standards, but audits performed under International Standards of Auditing are not acceptable. Certain disclosures required by IFRS (e.g., market risks and critical accounting estimates) may be disclosed in MD&A and incorporated by reference in the notes to the financial statements. As a result, the audit report on IFRS financial statements must clearly extend to those disclosures.

Losing FPI status

Mr. Dudek discussed some considerations for a registrant that loses its FPI status when it makes the required assessment at the end of the second quarter of its fiscal year. For example, a calendar-year company that loses its FPI status as of 30 June 2015 may continue to file forms that are applicable to FPIs for the remainder of the year. The company will be subject to all of the requirements of a domestic company beginning 1 January 2016, including the requirement to file current reports and quarterly reports. The 2015 Form 10-K would need to include three years of audited financial statements prepared using US GAAP. The registrant must also reassess the significance of equity method investees under S-X Rule 3-09 of Regulation S-X using its US GAAP financial statements.

Considerations for certain Canadian companies

Certain Canadian companies listed in the US register with the SEC under the Multi-Jurisdictional Disclosure System (MJDS) and are afforded certain accommodations including the ability to provide two years of audited financial statements in their SEC filings. A public float of at least $75 million at year end is one of several eligibility criteria. Recent declines in energy prices and their effect on a company's stock price could result in a Canadian filer losing its MJDS status and having to comply with requirements as an FPI, including the requirement to provide three years of audited financial statements and comply with S-X Rule 3-09 for purposes of filing Form 20-F.

SEC enforcement and PCAOB inspection matters

Remarks of SEC enforcement staff

Andrew Ceresney, Director of the SEC's Division of Enforcement, and Michael Maloney, Chief Accountant in the Division of Enforcement, discussed the SEC's enforcement actions over the past year. The SEC filed more than 800 cases (a record) in fiscal 2015. In fiscal 2014, the SEC collected approximately $2 billion of disgorgements and penalties, which is either paid to wronged individuals or the US Department of Treasury (depending on the nature of the case).

Mr. Ceresney said the number of financial reporting and auditing cases continued to rise in fiscal 2015 to 114 from 79 in 2014 and 53 in 2013. The increase was driven in part by the Division of Enforcement's creation of a financial reporting and auditing task force and its use of data analytics. Mr. Maloney indicated the allegations in those enforcement actions stem from poor tone at the top, pressure to meet financial targets/earnings management, and growth outpacing infrastructure. The financial reporting actions focused on a variety of topics from revenue recognition (e.g., percentage of completion, accelerated/false revenues, bill and hold arrangements) to disclosure issues (e.g., missing or insufficient). The SEC also has filed enforcement actions against auditors for lack of professional skepticism, overreliance on management representations, failure to obtain audit evidence and having insufficient documentation.

Finally, Mr. Maloney discussed enforcement actions related to faulty valuations. He said these actions involved improper methodologies and unsupported or outdated assumptions, but the Division does not question valuations made in good faith. These actions often found that auditors did not obtain a sufficient understanding of the models/assumptions used or placed overreliance on outside specialists. He emphasized that management, auditors and valuation specialists need to remain vigilant in complying with their respective responsibilities.

PCAOB inspections

Ms. Munter said that she believes the state of audit quality is improving. Ms. Munter stated that audit firms and audit partners are more engaged, and firms are focusing on root cause analyses and on timely and substantive remedial actions. Specifically, the PCAOB has seen improvements in the tone at the top, the training on complex audit areas, new practice aids and checklists to help auditors consistently and thoroughly apply the PCAOB auditing standards, coaching and support to audit teams and monitoring activities of firms.

Ms. Munter said the goal of the inspection process is not to only to identify deficiencies on specific audits but to leverage any observations from specific audits to help identify any systemic problems that may exist. The identification and remediation of any potential systemic issues can lead to more significant improvements in audit quality.

Ms. Munter also noted that many inspections result in no deficiencies being identified, and the PCAOB is looking to further its understanding of the root causes of high-quality audits inspected.

However, Ms. Munter noted there are still opportunities for improvement in certain areas of recurring inspection findings, including internal control, fair value and revenue recognition. These recurring inspection findings are consistent with findings identified by the annual survey of inspection results produced by the International Forum of Independent Audit Regulators. Other areas noted for improvement by the PCAOB staff include effective remedial action, root cause analysis, consistent global execution of an audit methodology and monitoring of independence.

Ms. Munter said the PCAOB's 2016 inspections will likely focus on:

- Recurring deficiencies, including ICFR, assessing and responding to risks of material misstatement and auditing accounting estimates
- Challenges created by the appreciation of the US dollar
- Segment disclosures, including identifying the CODM and determining the operating and reportable segments
- Mergers and acquisitions
- Income taxes, including management's assertion of indefinite reinvestment outside of the US and the related internal controls
- Going concern evaluation
- Cybersecurity
- Implementation of AS 18

Finally, Ms. Munter highlighted the PCAOB's focus on increasing the inspection information that is shared with the public. Inspection reports have been expanded to include industry information, and the staff introduced Inspection Briefs to highlight important matters about inspections. The PCAOB staff plan to further expand the data available about inspections on the PCAOB website, beginning in 2016.

Disclosure effectiveness

What companies can do now

October 2014

EY

Building a better working world

Table of contents

Introduction

Overview

With regulators and standard setters now looking at how to make corporate disclosures more effective, companies can take steps now to make their own disclosures more meaningful.

The problems with disclosures are well known. As the volume of disclosures has grown,[1] regulators and financial statement users have repeatedly said that disclosure documents contain too much boilerplate and are so repetitive that it is difficult for investors to find the most important information. Meanwhile, some investors and other users have called for new disclosures or improvements in existing ones.

Companies that have successfully streamlined their disclosures by focusing on relevant and material information cite many benefits, including:[2]

- Increased investor confidence due to communication of more meaningful information
- Greater efficiency in preparing investor communications and auditing disclosures
- Improved coordination throughout the organization, including the board of directors, and with regulators and external advisers
- Strengthened market reputation and leadership

Companies that want to make their disclosures more effective will need to consider time, cost and resource constraints, as well as regulatory disclosure requirements. Developing appropriate processes to enhance disclosures often requires planning and support from executive management and the Audit Committee; outreach to investors; and coordination with lawyers, auditors and other advisers.

It may be more productive for a company to target specific disclosure areas that are particularly complex or lengthy rather than start with a blank sheet to rewrite the financial statements and SEC reports. We believe both preparers and users are best served when there is sustained focus on improving the quality of information provided to investors.

This publication discusses how companies might consider making their disclosures more effective. It highlights our recommendations, along with illustrations that may help companies take steps to improve their disclosures.

> "When disclosure gets to be 'too much' or strays from its core purpose, it could lead to what some have called 'information overload' — a phenomenon in which ever-increasing amounts of disclosure make it difficult for an investor to wade through the volume of information she receives to ferret out the information that is most relevant."
>
> — SEC Chair Mary Jo White[3]

1 In an EY study, we found that the average number of pages devoted to footnotes and management's discussion and analysis in the annual reports of 20 well-known companies quadrupled from 1992 to 2011. See our To the Point publication, *Now is the time to address disclosure overload*

2 Center for Audit Quality, *Financial Statement Disclosure Effectiveness: Forum Observations Summary*

3 *The Path Forward on Disclosure*, National Association of Corporate Directors — Leadership Conference, 15 October 2013

Disclosure effectiveness initiatives

The Securities and Exchange Commission (SEC) staff is reviewing the requirements of both Regulations S-K and S-X to identify ways to reduce the costs and burdens on companies while still providing material information to investors.

The initiative grew out of a December 2013 study of disclosure requirements in Regulation S-K, which was required by the Jumpstart Our Business Startups Act. In this study, the staff of the SEC's Division of Corporation Finance recommended that the SEC undertake a comprehensive review of the existing disclosure requirements. SEC Chair Mary Jo White has called the disclosure effectiveness initiative a priority and has directed the SEC staff to make specific recommendations this year.

Reducing the volume of disclosures is not the SEC staff's sole objective. If the staff identifies potential gaps in disclosure or opportunities to increase transparency, it may recommend new or enhanced disclosure requirements. It also will consider how technology and cross-referencing can promote these objectives.

The SEC is encouraging companies, investors and other market participants to submit their views on how to make disclosures more effective. Suggestions can be submitted through the spotlight page on the SEC's website.[4] The SEC is expected to issue one or more concept releases later this year to seek public input.

The Financial Accounting Standards Board (FASB) and International Accounting Standards Board (IASB) also are seeking ways to improve disclosures in the financial statement notes.[5]

The FASB has proposed adding a new chapter to its conceptual framework in an effort to improve the process for establishing new disclosure requirements and evaluating existing ones. In addition, the FASB will be revisiting certain disclosure requirements (e.g., for pensions, fair value measurements, interim reporting) in narrow, short-term projects. The FASB also is working on a project to provide guidance on the decision process companies should employ for evaluating what disclosures to make.

The IASB also is taking steps to improve disclosures, including:

- Identifying a set of principles that would inform the organization, format and linkage of information in financial statement disclosures
- Reviewing existing disclosure requirements to identify duplication and overlap
- Researching how materiality is applied in practice and considering whether further guidance is necessary

The following EY publications provide more information on these initiatives:

EY resources

- SEC in Focus, Issue 4 (SCORE No. CC0402), October 2014
- Financial reporting briefs (SCORE No. BB2827), September 2014
- SEC in Focus, Issue 3 (SCORE No. CC0396), July 2014
- Applying IFRS – Improving disclosure effectiveness (EYG No. AU2513), July 2014
- To the Point – A framework to help the FASB establish effective disclosures (SCORE No. BB2707), March 2014
- To the Point – SEC staff recommends a comprehensive review of SEC disclosure requirements (SCORE No. CC0386), January 2014
- To the Point – The SEC's opportunity to consider disclosure overload (SCORE No. CC0359), October 2012

In addition, several other regulators, standard setters and organizations around the world are undertaking similar disclosure effectiveness projects. These projects are summarized in the appendix to this publication.

> "[O]ur goal is to both improve disclosure content – make it more useful to investors – and at the same time, where we can, reduce the amount of disclosure content … The framework is designed to lead to disclosures that clearly communicate the information that is most important to the users of the financial statements."
>
> – Russell G. Golden, FASB Chairman[6]

4 http://www.sec.gov/spotlight/disclosure-effectiveness.shtml

5 The primary advisory committees of the Boards, Financial Accounting Standards Advisory Council (FASAC) and IFRS Advisory Council, also have highlighted disclosure initiatives as top priorities.

6 *Remarks of Russell G. Golden, AICPA Conference on Current SEC and PCAOB Developments*, December 2013

The SEC call to action

While the SEC staff is reviewing the SEC's disclosure requirements, staff members also are asking companies to proactively enhance their disclosures by:

- Reducing repetition
- Tailoring the disclosure to focus on material information
- Eliminating outdated and immaterial information

In a recent speech at the US Chamber of Commerce, SEC Division of Corporation Finance Director Keith Higgins also invited companies that would like to discuss changes to their disclosures before including them in a filing to contact the SEC staff.

In this publication, we explore the staff's suggestions in greater detail and highlight areas where companies may apply them.

> "Our effort will truly succeed only if all of the stakeholders in our current disclosure system — companies, investors, legal and accounting professionals and other market participants — contribute to the dialogue about the improvements that could be made to the quality and effectiveness of disclosure so that it is less burdensome both for companies to prepare and for investors to read."
>
> — SEC Division of Corporation Finance Director Keith Higgins[7]

[7] *Disclosure Effectiveness: Remarks Before the American Bar Association Business Law Section Spring Meeting*, 11 April 2014

Materiality considerations

Materiality is one of the key principles of financial reporting. Efforts to make disclosures more effective typically focus on evaluating whether existing or proposed disclosures provide material information to financial statement users or merely add clutter.

The US Supreme Court ruled that a fact is material if there is "a substantial likelihood that the disclosure of the omitted fact ***would*** have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." (Emphasis added.) The Court rejected the view that a fact is material if an investor ***might*** find it important, concluding that "management's fear of exposing itself to substantial liability may cause it simply to bury the shareholders in an avalanche of trivial information — a result that is hardly conducive to informed decision making."[8]

Several SEC staff members and commissioners have questioned whether the Supreme Court's fear has become a reality. In a recent speech,[9] SEC Commissioner Daniel Gallagher stated, "Companies' disclosure documents are being cluttered with non-material information that can drown out or obscure the information that is at the core of a reasonable investor's investment decision."

We agree with the view that investors are not well-served if disclosure documents are filled with immaterial disclosures. Materiality should determine whether information is included in or excluded from a disclosure document. Materiality also should influence how prominently the information is presented.

Evaluating materiality, however, requires significant judgment. SEC Staff Accounting Bulletin (SAB) Topic 1.M, *Assessing Materiality*, provides further guidance about materiality and states that materiality judgments involve the consideration of both quantitative and qualitative factors. The SAB provides a list of quantitative and qualitative factors for evaluating the materiality of a misstatement. While this list is neither easily applied to disclosure considerations nor all-inclusive, companies must eventually evaluate whether omitted or misstated disclosures, individually or in the aggregate, would affect a reasonable investor. When evaluating materiality, companies may consider whether their disclosures:

- Affect the fair presentation of the financial statements
- Indicate potential areas of management bias
- Relate to sensitive matters (e.g., executive compensation disclosures, fraud, noncompliance with laws)
- Affect significant accounting policies in areas for which there is a lack of authoritative guidance or consensus
- Relates to accounts or disclosures for which significant judgment is used in the application of accounting principles, including critical accounting policies

Making and documenting materiality judgments will never be an easy task, but companies that take a fresh look at their disclosures often identify areas that could be eliminated or substantially reduced without significantly altering the total mix of information.

"After nearly a century in the making, our disclosure regime is not based entirely on line item requirements; rather, it is fundamentally grounded on the standard of 'materiality.' "

— SEC Chair Mary Jo White[10]

The FASB defines materiality differently than the US Supreme Court did. In defining materiality, the FASB says, "information is material if omitting it or misstating it ***could*** influence decisions that users make on the basis of the financial information of a specific reporting entity."[11] (Emphasis added.) We believe that the FASB's use of the word ***could***, may contribute to excessive footnote disclosures.[12]

11 FASB Concepts Statement 8, *Qualitative Characteristics of Useful Financial Information*

12 In our comment letter to the FASB on its Discussion Paper, *Disclosure Framework*, we recommended that the FASB amend its definition to be consistent with the Supreme Court's opinion.

Materiality of an item

FASB Accounting Standards Codification (ASC) 105-10-05-6 states that "the provisions of the Codification need not be applied to immaterial items." However, neither the FASB nor the SEC provides specific guidance clarifying how to consider the materiality of individual disclosure requirements. As a result, companies often provide every specified GAAP disclosure that relates to each area (e.g., stock compensation expense) that they determine is material to their financial statements.

We believe that companies should consider how individual disclosures affect the total mix of information available. That is, companies don't need to include all specified disclosures if they conclude that an individual disclosure is immaterial. We believe this view is consistent with the Supreme Court's definition of materiality.

Materiality considerations as part of SEC review process

Companies tend to retain disclosures that were material in a previous period but may no longer be material. This phenomenon is especially true when the disclosure was added in response to an SEC staff comment. The SEC staff has said publicly that companies should remove disclosures made in response to earlier SEC staff comment letters if those matters are no longer material.

The SEC staff also has said that just because it raises questions, companies should not assume that they need to add more disclosures to their filings, particularly immaterial information. The SEC staff often issues comments seeking clarification rather than additional disclosure. In some cases, registrants should respond by revising their disclosure to make it more effective rather than adding new disclosures.

The SEC staff is assessing whether its comment letter practices have contributed to the disclosure of immaterial information and will consider whether any changes to its filling review and comment practices are necessary.

Leading practices on structure and content

The SEC has said that companies can improve the relevancy of disclosures and reduce clutter by presenting information in a logical, easy-to-read manner.

In 2003, the SEC issued FR-72, *Commission Guidance Regarding Management's Discussion and Analysis of Financial Condition and Results of Operations*, which provides interpretive guidance concerning the preparation, format and content of management's discussion and analysis (MD&A). FR-72 states that MD&A should provide an explanation of the company's financial statements that enables investors to see the company through the eyes of management.

In addition, FR-72 says the primary purpose of MD&A is for management to communicate with investors in a straightforward manner. It states that companies should:

- Focus on material information, eliminate immaterial information and avoid unnecessary duplicative disclosure
- Use a "layered" approach to present their disclosure so that the most important material information is most prominent
- Present MD&A in a clear and understandable way by using tables and headings to help readers follow the flow of pertinent information
- Provide not only required disclosure but also an analysis that explains management's view of the implications and significance of that information

We encourage companies to revisit these principles when enhancing the effectiveness of their MD&A disclosures. We also believe companies should consider whether similar principles can be applied to the presentation of financial statement notes or other disclosures outside their financial statements. For example, these principles may guide how a company presents and discusses both financial and nonfinancial information, including operational and strategic goals, key performance indicators, and corporate and social responsibility information considered material to its investors.

In the following sections, we discuss these concepts and best practices based on our review of filings by companies that have already applied them.

Use of layering

Layering refers to emphasizing the most important information and providing additional details elsewhere. Layering can be accomplished in several ways.

FR-72 encourages companies to use an executive-level overview to provide context for their MD&A. The summary should present the important factors in evaluating the company's financial condition and operating performance without merely repeating the detailed discussion and analysis that follows.

The SEC staff expects an informative executive-level overview to provide insight into material opportunities, challenges and risks on which the company's executives are most focused for both the short and long term, as well as the actions they are taking to address them.

In our view, companies can apply this concept to other disclosures. They can use summaries, activity rollforwards or hyperlinks that emphasize or allow navigation to the most important information, provide additional context and details, or minimize redundancies.

See below for recommendations and illustrations of how layering can be used to make MD&A and footnote disclosures more effective.

Longer term, we expect technology to play an important role in disclosure reform. For several years, the SEC has contemplated using technology to structure disclosure and make it easier for investors to find material information.[13]

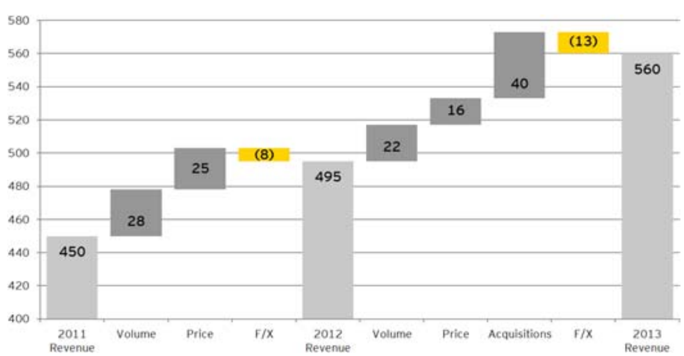
[13] For example, in 2008, the SEC formed the 21st Century Disclosure Initiative and released a report, *Toward Greater Transparency: Modernizing the Securities and Exchange Commission's Disclosure System*, with recommendations for comprehensive changes to the disclosure system.

Use of graphs, charts and tables

Information often can be presented more clearly and concisely in graphs, charts and tables than in text. In recent standards and rule releases, the FASB and SEC have encouraged and, in some cases, required tabular presentations of disclosure. For example, the rules related to executive compensation disclosures require tabular disclosures along with narrative discussion that supplements the tables.[14] Furthermore, FR-72 encourages the use of tables to compare and explain changes in results between different periods. The following is an example of a "waterfall" chart that some companies have used to depict changes in balances from one period to the next:

Illustration: Waterfall chart

Three-year comparison of total revenues (in millions)



As companies make greater use of charts and graphs in their disclosures, the presentation in annual reports is becoming more like that of investor-day presentations and internal managerial and board reporting.

As a leading practice, companies should avoid simply repeating in text information that is evident in the charts or tables. For example, some companies have stopped describing a change between periods that is reflected in a table and focused instead on discussing the reason(s) for the change. See our illustration under "MD&A — results of operations."

Use of cross-references

Regulators often point to duplicative disclosures as a factor contributing to information overload and investor confusion. When a company provides substantially similar disclosure in different areas of a filing, the document is longer than it needs to be and users aren't likely to understand why disclosure is repeated. Disclosures about significant accounting policies, loss and legal contingencies, and business descriptions are often repeated in different places in the disclosure documents (e.g., risk factors, MD&A, footnote disclosure).

Cross-referencing is an effective way to reduce repetition and direct the reader to a section that contains additional relevant information on a topic. There are valid concerns that cross-referencing from the financial statement notes to MD&A may result in confusion with respect to audit responsibility. Conversely, there are valid concerns that referencing from MD&A to the notes results in the loss of safe-harbor protections for forward-looking disclosures. Despite these concerns, we believe there are several areas where companies can use properly worded cross-references (e.g., from MD&A to the notes) to enhance their disclosure.

In addition, if information is complementary but not required content and could provide additional context, insight or detail, a company may point to such information outside the disclosure document (e.g., on the company's website) without making the information part of the SEC filing. A company also may consider, as appropriate, incorporating by reference disclosure from previous filings, thereby avoiding repetition.

[14] Executive Compensation and Related Person Disclosure, Release Nos. 33-8732A; 34-54302A; IC-27444A, 6 September 2006

> "Whatever is disclosed should be presented, when practicable, in a more accessible, straightforward manner — such as charts, graphs, tables, and summaries — so that the information is more digestible and understandable. A simpler presentation can make it easier for investors to focus on and process the information that matters most."
>
> — Former SEC Commissioner Troy A. Paredes[15]

Eliminating immaterial disclosures

We have seen companies effectively reduce the size of their filings by removing immaterial disclosures that have accumulated over time. For example, disclosures that were included for business conditions or events that are no longer material to understanding the company's operating results or financial condition may linger in filings for several periods.

As part of their financial reporting processes, companies should identify immaterial disclosures that can be omitted or substantially reduced. In conjunction with that, they should document their rationale. Contemporaneous documentation of the rationale for omitting immaterial disclosure items can be valuable if those omissions are later challenged by regulators or litigants.

In many cases, because the FASB does not list all specified disclosures in a single place,[16] companies use disclosure checklists that accumulate all individual SEC and FASB disclosure requirements to evaluate which disclosures are applicable and material. Companies should also use these checklists to document the relevant quantitative and qualitative factors they evaluated when deciding to exclude disclosures they deemed not material.

15 Remarks at The SEC Speaks in 2013, 22 February 2013

16 If the FASB accumulated all specified disclosures in one location, that list would represent approximately 400 pages of the Accounting Standards Codification.

Recommendations to improve disclosures

In this section, we explore how companies are making their disclosures more meaningful. The illustrations below reflect effective practices that we have seen in company filings. However, because every company's facts and circumstances are different, companies must tailor the structure and content of disclosure based on their needs.

Financial statement footnotes

Several companies have focused on making certain lengthy footnote disclosures more meaningful while still providing the required information.[17] Most commonly, we have seen companies change how disclosures about pensions and other postretirement benefits, stock-based compensation, loss contingencies, derivatives and hedging, and fair value measurements are presented such that required information is conveyed in a meaningful manner.

Order of financial statement notes

Most companies disclose their significant accounting policies in the first note to their financial statements. ASC 235, *Notes to Financial Statements*, encourages this format: "Disclosure is preferred in a separate summary of significant accounting policies preceding the notes to financial statements, or as the initial note, under the same or a similar title."

However, ASC 235 states that entities have the flexibility to disclose information about accounting policies differently. The FASB's Discussion Paper, *Disclosure Framework,* also considers other ways to organize these disclosures that may be more appropriate. For example, notes could be grouped (e.g., by related transaction or by operating, financing or investing activities) and organized from most to least relevant. The Discussion Paper acknowledges that grouping information may make it harder to compare a company's disclosures with those of other companies but could make the disclosures more relevant to users.

Some companies have grouped the disclosure of certain accounting policies with the more expanded disclosures for that particular area presented elsewhere in the footnotes to avoid discussion of financial statement line items in multiple footnotes. In most of these cases, the company includes an initial note with a discussion of some significant accounting policies and uses a table to link to the relevant footnote where there is a more complete discussion of other policies, along with the related estimates and other required disclosures:

Illustration: Summary of significant accounting policies

The following table includes other significant accounting policies that are described in other notes to the financial statements, including the number and page of the note:

Significant Accounting Policy	Note #	Page #
Accounts Receivable	4	34
Fair Value Measurements	5	35
Investments	6	40
Derivatives and Hedging Activities	7	43
Goodwill	8	50
Pension and Other Postretirement Benefit Plans	9	52
Income Taxes	14	60
Stock-Based Compensation	15	65
Legal Contingencies	16	70
Reportable Segments	17	73

[17] In our comment letter on the FASB's Proposed Statement of Financial Accounting Concepts, Chapter 8: Notes to Financial Statements, we support the FASB's decision to address disclosure effectiveness. While reducing the volume of disclosure is not the FASB's primary objective in its project, we believe the FASB should use the project as an opportunity to develop a roadmap to address disclosure overload.

In addition, we also have seen companies make other changes to the financial statement presentation, such as:

- Organizing the notes based on importance
- Listing the applicable note about certain financial statement captions on the face of the balance sheet or income statement for ease of reference
- Using a chart immediately before the notes that provides a brief description of each financial statement caption and related accounting policy as well as a link to the related footnote[18]

Quarterly disclosures

Registrants may presume that users of quarterly financial information have read previously filed annual reports.[19] Therefore, they are not required to repeat annual disclosures from the latest annual report unless necessary for a fair presentation or to comply with ASC 270, *Interim Reporting,* and other accounting standards that specify interim disclosure requirements. Some companies have eliminated or streamlined quarterly disclosures of items that are required only in annual financial statements such as when no material changes have occurred in significant accounting policies since the last annual report. However, some quarterly filings include disclosures beyond those specified in US GAAP.

In recent years, new FASB standards have required essentially the same disclosures in both interim and annual financial statements. As part of its disclosure framework project, the FASB is considering amendments to ASC 270 to clarify that updated disclosures are not required if they don't significantly alter the total mix of information available to investors.[20]

Disclosure of significant accounting policies

The significant accounting policies note should identify and describe the material accounting principles followed by the company, the methods of applying those principles and the important judgments made in applying them. In particular, ASC 235 requires disclosure of material accounting principles and methods that involve any of the following:

- A selection from existing acceptable alternatives
- Principles and methods peculiar to the industry in which the entity operates, even if such principles and methods are predominantly followed in that industry
- Unusual or innovative applications of US GAAP

We often see companies go well beyond this requirement and describe policies for every line item. For example, a company may disclose its accounting policy for prepaid expenses even when it has made no material judgments or policy elections in the periods presented. Companies should consider removing disclosures of accounting policies that are not currently applicable or material to the financial statements or that require little to no discretion to apply.

Furthermore, companies frequently cite the requirements in the FASB Codification when they describe their policies. In our view, disclosure should not repeat what a standard says about policy requirements if the standard does not permit alternative methods. Instead, companies should describe policy elections they have made and the related judgments and estimates required to apply the authoritative literature to their transactions, if relevant.

---

[18] This presentation can be useful for a web-enabled version of the annual report that can be placed on a company's website and can replace the outdated pdf version of the Word file.

[19] Regulation S-X, Rule 10-01 *Interim financial statements*

[20] Our To the Point, *A framework to help the FASB establish effective disclosures*, provides an overview of the FASB's exposure draft. In our comment letter, we supported the FASB's objective of improving disclosure effectiveness by developing a framework the Board would apply when instituting new disclosure requirements and evaluating existing ones. However, we are concerned that the proposed framework would actually perpetuate the significant expansion in disclosure that has occurred over the past few decades. We suggested changes to the framework and recommended that the Board provide guidance on materiality and clearly distinguish between annual and interim requirements.

SAB 11-M disclosures

SAB Topic 11-M, *Disclosure Of The Impact That Recently Issued Accounting Standards Will Have On The Financial Statements Of The Registrant When Adopted In A Future Period,* requires a company to disclose the effect of new standards that are not yet adopted "unless the impact on its financial position and results of operations is not expected to be material."

However, companies commonly include in their disclosures a description of each new standard, the alternative methods of adoption permitted by the standard and the method that the company expects to use, if determined, followed by this or a similar statement:

> "The Company does not expect the adoption of this standard to have a material effect on its financial position or results of operations."

Because companies are not required to summarize or disclose when effects of new standards are immaterial, companies should consider condensing these disclosures into one paragraph or eliminating these disclosures entirely.[21] A company should consider including a discussion of only new standards that are reasonably likely to have a material effect on its financial statements. A table also could be used to provide SAB 11-M disclosure in a concise manner as shown in the following before and after illustration:

---

[21] SAB Topic 11-M encourages, but does not require, the registrant to disclose that a standard has been issued and that its adoption will not have a material effect on its financial position or results of operations.

Recent accounting pronouncements

Existing disclosure:

In May 2014, the Financial Accounting Standards Board (FASB) issued Accounting Standards Update (ASU) No. 2014-09, *Revenue from Contracts with Customers (Topic 606).* This ASU will replace existing revenue recognition standards and significantly expand the disclosure requirements for revenue arrangements. The provisions of ASU 2014-09 are effective for annual periods beginning after December 15, 2016, including interim periods within that reporting period, and early application is not permitted. The new standard may be adopted retrospectively for all periods presented, or adopted using a modified retrospective approach. Under the retrospective approach, the fiscal 2016 and 2015 financial statements would be adjusted to reflect the effects of applying the new standard on those periods. Under the modified retrospective approach, the new standard would only be applied for the period beginning January 1, 2017 to new contracts and those contracts that are not yet complete at January 1, 2017, with a cumulative catch-up adjustment recorded to beginning retained earnings for existing contracts that still require performance. Management is currently evaluating the methods of adoption allowed by the new standard and the effect the standard is expected to have on our financial statements and related disclosures.

In April 2014, the FASB issued ASU 2014-08, *Reporting Discontinued Operations and Disclosures of Disposals of Components of an Entity*. ASU 2014-08 changes the criteria for determining which disposals can be presented as discontinued operations and modifies the related disclosure requirements. Under the new guidance, a disposal of a component of an entity or a group of components of an entity is required to be reported in discontinued operations if the disposal represents a strategic shift that has (or will have) a major effect on an entity's operations and financial results and is disposed of or classified as held for sale. The standard also introduces several new disclosures. The guidance applies prospectively to new disposals and new classifications of disposal groups as held for sale after the effective date. ASU 2014-08 is effective for annual and interim periods beginning after December 15, 2014, with early adoption permitted. We do not expect that the adoption of this standard will have a material effect on our financial statements.

In July 2013, the FASB issued ASU 2013-11, *Income Taxes* (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Exists. This update requires unrecognized tax benefits to be offset against a deferred tax asset for a net operating loss carryforward, similar tax loss or tax credit carryforward in certain situations. This update was issued due to the diversity in practice in presentation of unrecognized tax benefits in those instances. Some entities present unrecognized tax benefits as a liability unless the unrecognized tax benefit is directly associated with a tax position taken in a tax year that results in, or resulted in, the recognition of a net operating loss or tax credit carryforward for that year and the net operating loss or tax credit carryforward for that year has not been utilized. Other entities present unrecognized tax benefits as a reduction of a deferred tax asset for a net operating loss or tax credit carryforward in certain circumstances. The objective of this update is to eliminate this diversity in practice. The amendments in this update must be applied prospectively for reporting periods beginning after December 15, 2013. We adopted the standard on January 1, 2014. As a result of the adoption we decreased noncurrent deferred income tax assets by $95 million with a corresponding decrease in other noncurrent liabilities.

Alternative enhanced disclosure:

The following table provides a brief description of recent accounting pronouncements that could have a material effect on our financial statements:

Standard	Description	Date of adoption	Effect on the financial statements or other significant matters
Standards that are not yet adopted			
ASU 2014-09, *Revenue from Contracts with Customers (Topic 606)*	The standard will replace existing revenue recognition standards and significantly expand the disclosure requirements for revenue arrangements. It may be adopted either retrospectively or on a modified retrospective basis to new contracts and existing contracts with remaining performance obligations as of the effective date.	January 1, 2017	We are currently evaluating the alternative methods of adoption and the effect on our financial statements and related disclosures.[22]
Standards that were adopted			
ASU 2013-11, *Income Taxes (Topic 740): Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Exists*	The standard requires unrecognized tax benefits to be offset against a deferred tax asset for a net operating loss carryforward, similar tax loss or tax credit carryforward in certain situations.	January 1, 2014	The adoption of this standard resulted in a reduction in noncurrent deferred income tax assets of $95 million and a corresponding decrease in other noncurrent liabilities.

[22] The SEC staff expects that an entity's SAB 11-M disclosures will evolve in each reporting period as more information about the effects of the new standard becomes available.

MD&A disclosures

As discussed, FR-72 encourages companies to focus their MD&A on material information from management's perspective. However, MD&A continues to be the top area of focus in SEC staff comment letters.

EY resources

- SEC Comments and Trends: An analysis of current reporting issues (SCORE No. CC0398), September 2014

Executive overviews

While many companies include an MD&A overview in their filings, the SEC staff has emphasized that the overview should continue to evolve over time and avoid generic or boilerplate language. The overview should summarize the most important aspects of the company, including its performance and financial condition, and complement the more detailed discussions in the rest of the document. It should not repeat discussion about the company's business provided earlier in the filing or language from management's detailed analysis in the sections that follow.

We believe the executive overview is one area that could be improved if companies started with a clean sheet of paper each period and outlined the significant and new information affecting their operations and financial performance.

Results of operations

The SEC staff often requests that registrants explain the results of their operations with greater specificity, including identifying underlying drivers of each material factor that has affected their earnings or that is reasonably likely to have a material effect on future earnings. MD&A also should disclose key performance indicators, financial or nonfinancial, used to manage the business.

Companies should provide insightful analyses of items that are material to understanding their results and trends. They should focus on an effective presentation and ensure their analysis highlights the most important information while omitting discussions of items that are not material. Many companies have moved away from MD&A presentations that list every financial line item and include separate discussions of each period-over-period analysis (i.e., separate sections to discuss 2014 vs. 2013 and 2013 vs. 2012 changes in financial statement line items).

Instead, we have seen effective MD&A disclosures that incorporate some or all of the following:

- Combine the discussion and analysis of material financial statement line items over three years
- Provide tables or charts to compare the periods, including the components of changes (e.g., table showing the components of sales growth), as well as trends in key performance indicators
- Include narrative discussion that does not repeat information that is evident in the tables or charts
- Use bullet points to quantify and explain reasons for changes, including the offsetting factors
- Disclose activity rollforwards followed by a description of material known trends, events or uncertainties
- Analyze trends in financial and nonfinancial information in a separate MD&A section about key performance indicators

The example on the next page shows how to apply several of these best practices to MD&A disclosures to reduce repetition and structure the discussion to enhance the analysis of key drivers and trends.

MD&A — Results of operations

Existing disclosure:

	2013	2012	2011
Revenue	$ 415,000	$ 350,000	$ 335,000

[*other line items excluded for illustration purposes*]

Year ended December 31, 2013, compared to year ended December 31, 2012

Revenues

Total revenues increased by approximately $65 million, or 19%, to $415 million during the year ended December 31, 2013 as compared to $350 million for the year ended December 31, 2012. The revenue growth results from the acquisition of ABC, Inc. in the US which contributed $35 million during the year, and increased sales of customers primarily as a result of significant focus on selling new products. Excluding the ABC, Inc. acquisition, North America revenue increased $29 million to $285 million in 2013 from $256 million in 2012 due to the increased sales of our new routing and switch products. Revenue in Europe increased from $94 million in 2012 to $95 million in 2013 due to a slight increase in data center equipment sales offset by the unfavorable effects of foreign currency.

Year ended December 31, 2012, compared to year ended December 31, 2011

Revenues

Total revenues increased by approximately $15 million, or 4%, to $350 million during the year ended December 31, 2012, as compared to $335 million for the year ended December 31, 2011. The revenue growth is primarily attributed to increased sales volume from our routing and switch products. North America revenue increased $21 million to $256 million in 2012 from $235 million in 2011 due to stronger demand for our networking, router and switch products. Revenue in Europe declined from $100 million in 2011 to $94 million in 2012 due to lower sales of data center equipment as a result of intense competition and the unfavorable effects of foreign currency.

Alternative enhanced disclosure:

Revenues

	2013	2012	2011
North America	$ 320,000	$ 256,000	$ 235,000
Europe	95,000	94,000	100,000
Total revenue	415,000	350,000	335,000
$ Change	65,000	15,000	
% Change	19%	4%	

The following are components of revenue growth compared to the prior year:

	2013 vs. 2012	2012 vs. 2011
Volume	7%	4%
Price	3%	1%
Acquisitions	10%	–
Foreign currency effects	(1)%	(1)%
	19%	4%

Total revenue changes are due to:

- North America revenues in 2013 rose by $35 million, or 14%, due to the ABC, Inc. acquisition and by $29 million, or 11%, due to organic growth related primarily to sales of our new routing and switch products. Increases in 2012 were due to stronger demand for our networking, router and switch products.
- Europe revenues were relatively flat in 2013 as the slight increase in data center product sales was offset by unfavorable foreign currency effects. Decreases in 2012 resulted from lower volumes of 3%, primarily in data center products, resulting from increased competition. The remaining change was due to unfavorable foreign currency effects.

Critical accounting estimates

Critical accounting estimates are those that are most important to the financial statement presentation and that require the most difficult, subjective and complex judgments. FR-72 reminds SEC registrants that MD&A rules require disclosure of a critical accounting estimate in either of the following cases:

- The nature of the estimates or assumptions is material because of the levels of subjectivity and judgment needed to account for matters that are highly uncertain and susceptible to change
- The effect of the estimates and assumptions is material to the financial statements

Disclosures about critical accounting estimates should provide a robust analysis that supplements the description of accounting policies in the notes to the financial statements and (1) addresses why the accounting estimate or assumption may be susceptible to change and (2) analyzes the following:

- How the company arrived at the estimate/assumption
- How accurate the estimate/assumption has been in the past
- How much the estimate/assumption has changed in the past
- Whether the estimate/assumption is reasonably likely to change in the future

The SEC staff has commented that some registrants repeat verbatim in MD&A portions of the significant accounting policies footnote. While accounting policies in the notes to the financial statements generally describe the method used to apply significant accounting principles, the discussion in MD&A should be limited to only those areas that use assumptions and judgments that most materially affect the financial statements. That section of MD&A should provide insight into the uncertainties involved in applying the principle at a given time and the variability that is reasonably likely to result from its application.

SEC registrants should consider a cross-reference to footnote disclosure about significant accounting policies if necessary, but should limit the MD&A disclosure to an analysis of the specific underlying assumptions and judgments.

The following illustration uses cross-references and tailors the discussion of critical accounting estimates. While the enhanced disclosure in the illustration is roughly the same length, it uses cross-references, bullets and tables to make the disclosures more effective.

Critical accounting estimates

The following excerpt from the critical accounting estimates section about pensions illustrates improvements that tailor the discussion to provide appropriate insight into management's judgments and uncertainties and use cross-references, bullet points and tables for more effective presentation:

Existing disclosure:

The Company sponsors multiple defined benefit pension plans that cover certain US employees. The Company accounts for its pension plans in accordance with Accounting Standards Codification (ASC) 715, *Compensation — Retirement Benefits*. The funded status of the plans is measured as the difference between the fair value of the plan assets and the projected benefit obligation. Liabilities and expense for pension plans are actuarially determined using significant assumptions, including the rate used to discount the projected benefit obligation, the long-term rate of return on plan assets and several assumptions related to the employee workforce (salary increases, mortality rates and other factors). There are inherent uncertainties related to these assumptions and management's judgment in applying them. Consistent with the accounting guidance, the Company has policies that generally defer the effect of changes in actuarial assumptions and differences between the expected and actual return of plan assets over future periods. Unrealized gains or losses are recorded in other comprehensive income (OCI), a component of shareholders' equity.

A significant estimate in determining pension cost in accordance with accounting guidance is the expected return on plan assets. The Company estimated the expected long-term rate of return on plan assets was 7.25% and 7.50% as of December 31, 2013 and 2012, respectively. The expected return assumptions were developed by considering various factors, such as the plans' investment guidelines, mix of asset classes, historical returns of equities and bonds, and expected future returns. Management believes these assumptions are reasonable. If the plan assets earn an average return less than 7.25% over time, future pension cost likely would increase.

In addition, the Company estimates the discount rate by performing an analysis of the rates of return on high-quality, fixed-income investments. The Company estimated discount rates of 4.50% and 3.75% at December 31, 2013 and 2012, respectively. Management believes these assumptions are reasonable. However, an increase in the discount rate would decrease the plan obligations and the net periodic benefit cost, while a decrease in the discount rate would increase the plan obligations and the net periodic benefit cost.

Alternative enhanced disclosure:

We sponsor multiple defined benefit pension plans that cover certain US employees. For a description of our related accounting policies, refer to Note 2 in the consolidated financial statements. Changes in significant assumptions could materially affect the amounts, particularly the long-term rate of return on plan assets and the rate used to discount the projected benefit obligation:

- Return on plan assets — We determine the expected long-term rate of return on plan assets based on the building block method, which consists of aggregating the expected rates of return for each component of the plan's asset mix. Our assumed expected rate of return considers past returns on plan assets as well as various other factors, such as the plans' investment guidelines, the expected mix of asset classes and current market conditions. The expected long-term rate of return on plan assets was 7.25% and 7.50% as of December 31, 2013 and 2012, respectively. The decline in the expected long-term rate of return is primarily attributed to a shift in the plan asset mix to fixed income securities from equities, which comprised 42% and 37% of plan assets as of December 31, 2013 and 2012, respectively.
- Discount rate — In estimating this rate, we analyze the rates of return on high-quality, fixed-income investments that receive one of the two highest ratings from a recognized rating agency and the schedule of expected cash needs of the plans. We estimated discount rates of 4.50% and 3.75% at December 31, 2013 and 2012, respectively.

The following illustrates the sensitivity of the net periodic benefit cost and projected benefit obligation to a 1% change in the discount rate or return on plan assets (in millions):

Assumption	Change	2014 net periodic benefit cost	2013 projected benefit obligation
Discount rate	1% increase	$ (8)	$ (85)
	1% decrease	9	90
Return on plan assets	1% increase	(15)	N/A
	1% decrease	15	N/A

For 2015, we expect net periodic pension cost to decline by approximately $2 million due to the 75 basis point increase in the discount rate partially offset by the 25 basis point decline in the expected long-term rate of return due to the shift in plan asset mix.

Other disclosure areas

Business disclosures

Item 101 of Regulation S-K, *Description of Business*, specifies disclosure about the registrant's business, including its operating segments and geographic areas.

Many companies have identified the business section in Item 1 of Form 10-K as one of the first areas where disclosures can be improved. Although the business disclosures may be fairly static from period to period, the discussion becomes lengthy when disclosures are added over time. In addition, certain portions of the business discussion often are repeated in other sections of the filing, including MD&A and risk factors. The company's website also may provide significant information about the company's business.

Although the company's Form 10-K should comply with the requirements of Item 101 of Regulation S-K, we believe companies can reduce repetition throughout their filings by using cross-references to other areas of the document or to other publicly available information.

Risk factors

Item 503(c) of Regulation S-K requires a registrant to disclose its significant risks and how it is affected by each of them. Risk factors should be specific to the company's facts and circumstances and not merely general risks that could apply to any company.

Because of the safe harbor in the Private Securities Litigation Reform Act of 1995, many companies are hesitant to limit the number or length of risk factor disclosures. However, investors frequently have said that risk factors are generic and confusing. The most important risk factors often are not presented first, and readers have a hard time determining whether a risk is likely to become a reality. The SEC staff also has questioned risk factor disclosures that could apply to any public company, saying they are not sufficiently specific or detailed to address the facts and circumstances of a particular company.

At a minimum, we believe risk factor disclosures can benefit from better organization and tailoring the discussion of the risk to the business.

For example, Item 503(c) requires the discussion of risk factors to be "concise and organized logically." Some companies have used headers to group risks by the type of factors, such as the following:

- Risks related to operational factors
- Risks related to technology factors
- Risks related to economic or market factors
- Risks related to legal and regulatory factors

Companies then use sub-captions to describe the risk factor specific to them.

Companies also may want to emphasize recent trends or changes during the period in the likelihood that certain risk factors may occur as well as their approach to manage and mitigate these risks.

Legal proceedings

Companies may include loss contingency disclosures in several sections of the filing, including the legal proceedings section, risk factors, MD&A and loss contingencies footnote to the financial statements.

There is significant overlap between the disclosure requirements for loss contingencies under US GAAP and Regulation S-K. Accordingly, many filings duplicate disclosure of litigation matters.

However, the SEC staff has emphasized that the disclosure requirements are different. For example, Item 103 of Regulation S-K requires registrants to briefly describe any material pending legal proceedings to which the registrant or any of its subsidiaries is a party. US GAAP[23] requires disclosures based on the likelihood of loss, including an estimate of reasonably possible losses or a statement that such an estimate cannot be made.

To improve disclosures in this area, companies should consider using a bullet-point list of material legal proceedings with the descriptions required by Regulation S-K and appropriate cross-references to MD&A and the financial statements footnotes where each matter might be discussed.

Process to improve disclosures

It is important for companies to have a process in place to regularly review the effectiveness of their disclosures and a plan to make ongoing improvements to their financial reporting.

Key stakeholders

First, companies need to identify key stakeholders and confirm their commitment to improving the company's financial reporting process and SEC filings. The following individuals (and/or senior members of their functions) typically are the key participants and influencers:

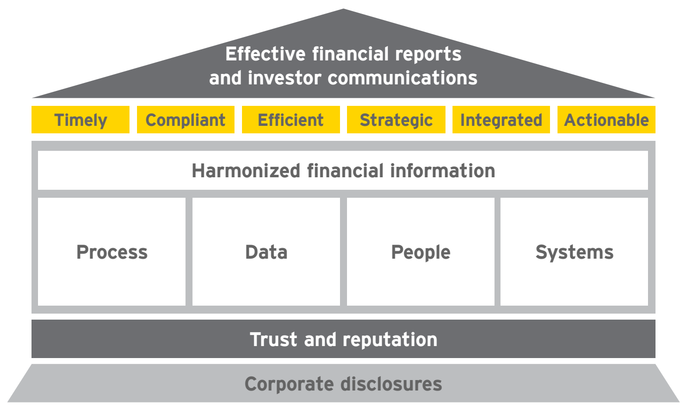
- Chief executive officer and chief financial officer (CFO)
- Controller, chief accounting officer, director of external reporting or equivalent roles
- Chair of the audit committee
- Head of the disclosure committee, if applicable
- General counsel
- Head of investor relations
- Chief risk officer and head of strategy
- Managers and CFOs of key operating business units or divisions

Depending on the nature of the business, input may be needed from other members of the management team (i.e., head of research of a pharmaceutical company, chief credit officer of a banking institution). Communication with the external auditor also is essential. In addition, companies can contact the SEC staff to discuss potential changes to their disclosures.

Process and plan

Companies should develop an overall plan with a clear timeline and project management support. Ideally, the focus should be the reporting process as a whole, not just the financial statement disclosures or MD&A in isolation. An effective plan integrates the company's processes, people, data and systems to:

- Address investor communications more holistically
- Identify and implement any necessary process, content and system changes
- Establish greater synergies between strategic, operational, financial, regulatory, and sustainability reporting and messaging
- Produce compliant SEC filings in a timely and efficient manner



Companies should consider benchmarking their disclosures against those of their peers. Benchmarking can identify best practices within the industry. Such an approach also can identify potential gaps that can be addressed with additional information or performance metrics to meet the needs and expectations of investors and/or analysts who follow the company or industry.

In addition, many companies are making meaningful improvements to their investor communications by developing web-enabled versions of financial reports that look better and are easier to navigate than traditional reports. These reports help readers focus more quickly on areas of interest, move from section to section, or find additional information using hyperlinks.

A journey, not an initiative

Companies may decide to make significant disclosure improvements all at once or incrementally by targeting one particular disclosure area at a time.

Some companies may start by focusing on making specific disclosures more effective as an initiative, but it is important to embed the objective of disclosure effectiveness into the company's financial reporting DNA to ensure that the changes are successful and sustainable.

Conclusion

As the SEC staff and the FASB work on their disclosure effectiveness initiatives, companies can take immediate action to make their disclosures more meaningful. These actions can go a long way toward enhancing disclosure and providing investors with information that is easier to understand.

We believe that companies that take the steps we describe in this publication will see a variety of benefits, including more efficient reviews by executives and directors and greater investor confidence.

While meaningful and lasting change to the disclosure regime will take time, we hope this publication has provided you with a road map of improvements you can follow in drafting your upcoming filings and financial statements.

To the Point

SEC — concept release

SEC seeks feedback on possible changes to audit committee disclosures

'Effective audit committee oversight is essential to investor protection and the functioning of our capital markets.'

— SEC Chair Mary Jo White

What you need to know

- The SEC issued a concept release seeking public comment on whether there would be benefit from mandating more disclosures from audit committees about how they execute their existing audit oversight responsibilities.
- The concept release seeks comment on whether more audit committee disclosures would help close the expectation gap by providing investors with better insights into the responsibilities of the audit committee. It also asks whether new disclosures would inform their investment decisions and voting decisions about whether to ratify the selection of the auditor or re-elect members of the audit committee to the Board.
- Comments are due 60 days after the concept release is published in the Federal Register.

Overview

The Securities and Exchange Commission (SEC) issued a concept release on possible revisions to its audit committee disclosure rules that explores whether audit committees should provide more qualitative disclosures about how they execute existing responsibilities to oversee the audit. The audit committee report in the annual proxy statement currently must affirm only that the audit committee carried out certain specific responsibilities related to communications with the external auditor.[1]

The SEC observed that while the Sarbanes-Oxley Act of 2002 (the Act) codified the role of the audit committee in overseeing a company's financial reporting process and the audit, the SEC's disclosure requirements for audit committee reporting to shareholders have not changed significantly since 1999. The Act required the audit committee to be independent from management and made the audit committee directly responsible for the retention, compensation and oversight of the independent external auditor. The SEC noted that, in recent years, many audit committees have voluntarily provided more robust disclosures about their oversight of the external auditor. It also observed that investors have increased their focus on activities and transparency of audit committees.

The concept release is part of a broader effort by the SEC and the Public Company Accounting Oversight Board (PCAOB) to increase transparency of the audit process. The PCAOB has proposed that auditors name the engagement partner and other public accounting firms that participated in the audit in regulatory filings.[2] The PCAOB also issued a concept release on audit quality indicators it believes might be useful to various stakeholders, including audit committees, audit firms, investors, regulators and others.[3] The comment period for all of these initiatives is now open so stakeholders have the opportunity to consider them holistically.

In its concept release, the SEC said it is seeking to understand whether mandating additional disclosure about the audit committee's oversight of the auditor would provide useful information that would help investors to make better investment decisions and voting decisions about whether to ratify the selection of the auditor or re-elect members of the audit committee to the Board. While the concept release discusses the views of certain investors and groups that have called for more audit committee reporting, it acknowledges that others have expressed concerns about the potential usefulness of additional audit committee disclosures.

Key considerations

The concept release requests public comment on 74 questions about possible disclosure changes primarily in the following areas:

- Oversight of the auditor
- Process for appointing or retaining the auditor
- Evaluation of the audit firm and engagement team qualifications

Oversight of the auditor

The concept release questions whether the SEC should require additional qualitative disclosures about the nature, timing and frequency of the communications between the audit committee and the auditor.[4] For example, the SEC seeks input on whether the audit committee should report on its communications with the auditor about topics such as the overall audit strategy, significant risks, the nature and extent of specialized skills used in the audit and the use of a company's internal audit personnel.

The concept release also asks whether disclosure would be useful about how the audit committee assesses, promotes and reinforces the auditor's objectivity and professional skepticism. In addition, it seeks feedback on whether the audit committee should disclose how it considered the results of PCAOB inspection reports and the audit firm's internal quality control reviews.

Process for appointing or retaining the auditor

The concept release discusses possible disclosures about the process and criteria the audit committee used to assess the auditor and its rationale for selecting or retaining the auditor. It cites the PCAOB's concept release on possible indicators of audit quality and asks whether an audit committee that uses these or other indicators should disclose which indicators it used to evaluate the auditor.

The concept release also discusses possible disclosures about the number of firms that were asked to propose providing audit services and what information the audit committee considered in making its selection. And it requests feedback about disclosures of any policy on shareholder ratification of the auditor and how the results of these votes were considered in the audit committee's decision to retain the audit firm.

Evaluation of the audit firm and engagement team qualifications

The concept release asks whether the SEC should require disclosures about the length of the company's relationship with the auditor (which the PCAOB previously proposed requiring in the audit report) and how the audit committee considered the auditor's tenure in deciding to retain the auditor. It also asks whether the audit committees should name and report on the qualifications of certain individuals who perform the audit (e.g., the engagement partner, the engagement quality reviewer, additional individuals subject to PCAOB rotation requirements) and identify other public accounting firms that participated in the audit. As discussed above, the PCAOB has proposed requiring disclosure of the engagement partner and other participating public accounting firms, either in the auditor's report or a new form to be filed with the PCAOB.

Applicability and location of possible disclosures

The concept release also seeks input on whether new and existing audit committee disclosures should be required to appear in one location and whether the requirements should apply to smaller reporting companies and emerging growth companies. Disclosures required by existing SEC rules are included in proxy statements but they are not required in the prospectus delivered to investors for public offerings. The concept release asks whether investors would benefit from these disclosures being included in that prospectus.

The SEC is seeking input on whether and how additional reporting may be useful to investors.

How we see it

- Enhancing audit committee transparency can increase investors' confidence in financial reporting and their confidence in the role of the audit committee in overseeing the audit process and promoting audit quality in the interest of investors.
- Many audit committees have begun telling investors more about what they do in overseeing the audit and the independent auditor. Meaningful disclosure about what audit committees do and how they oversee auditors would provide a window into the work they perform, which could further the alignment among auditors, audit committees and investors, an outcome we strongly support. However, additional requirements that result in largely "boilerplate" disclosures would offer little value to investors.
- Commenters should consider the range of possible disclosures presented in the concept release to identify disclosures that would provide the most decision-useful information to investors.

U.S. Securities and Exchange Commission

STRATEGIC PLAN
FISCAL YEARS 2014–2018

Protecting investors, maintaining fair, orderly, and efficient markets, and facilitating capital formation

This document presents the U.S. Securities and Exchange Commission's Strategic Plan prepared in accordance with the Government Performance and Results Act Modernization Act of 2010. The plan sets out the Commission's mission, vision, values, and strategic goals for fiscal years 2014 through 2018. Furthermore, it discusses the SEC's environment, details the strategic objectives the Commission seeks to achieve, presents the strategies and initiatives that will be undertaken to accomplish those objectives, and lists the performance goals that will be used to gauge the agency's progress.

CONTENTS

The U.S. Securities and Exchange Commission is an independent federal agency established pursuant to the Securities Exchange Act of 1934 (Exchange Act). It is headed by a bipartisan five-member Commission, comprised of the Chair and four Commissioners, who are appointed by the President and confirmed by the Senate. The Chair is responsible for the executive and administrative functions of the Commission. The SEC employs over 4,100 people.

MISSION

The mission of the SEC is to protect investors, maintain fair, orderly, and efficient markets, and facilitate capital formation.

VISION

The SEC strives to promote a securities market that is worthy of the public's trust and characterized by:

- Transparent disclosure to investors of the risks of particular investments;
- Oversight of key market participants, including exchanges, brokers and dealers, investment advisers, and others;
- Focus on strengthening market structure and systems;
- Promotion of disclosure of market-related information;
- Protection against fraud and abuse; and
- Evaluation, development and maintenance of appropriate rules and regulations.

VALUES

Integrity: As the SEC is the independent federal agency entrusted with regulating and conducting enforcement for the U.S. securities markets; each member of the Commission's workforce has a responsibility to demonstrate the highest ethical standards to inspire confidence and trust.

Excellence: The SEC is committed to the highest standards of excellence in pursuit of its mission. The investing public and the U.S. securities markets deserve nothing less.

Accountability: The SEC embraces the responsibility with which it is charged. In carrying out its mission, SEC employees hold themselves accountable to the public and take responsibility for achieving SEC goals.

Effectiveness: The SEC strives to work creatively, proactively, and effectively in assessing and addressing risks to the securities markets, the public, and other market participants. The staff is committed to finding innovative and flexible approaches to the SEC's work and using independent judgment to explore new ways to fulfill the SEC's mission in the most efficient and effective manner possible.

Teamwork: The SEC recognizes that its success depends on a diverse, coordinated team committed to the highest standards of trust, hard work, cooperation, and communication. The staff is committed to working together and coordinating effectively with investors, business, governments, and other organizations in the U.S. and abroad.

Fairness: The SEC treats investors, market participants, and others fairly and in accordance with the law. As an employer, the SEC seeks to hire and to retain a skilled and diverse workforce, and to ensure that all decisions affecting employees and applicants are fair and ethical.

STRATEGIC GOALS AND STRATEGIC OBJECTIVES

Strategic Goal 1: Establish and maintain an effective regulatory environment

- **Strategic Objective 1.1**
  The SEC establishes and maintains a regulatory environment that promotes high-quality disclosure, financial reporting and governance, and that prevents abusive practices by registrants, financial intermediaries and other market participants.

- **Strategic Objective 1.2**
  The SEC promotes capital markets that operate in a fair, efficient, transparent and competitive manner, fostering capital formation and useful innovation.

- **Strategic Objective 1.3**
  The SEC adopts and administers regulations and rules that are informed by robust economic analysis and public comment and that enable market participants to understand clearly their obligations under the securities laws.

- **Strategic Objective 1.4**
  The SEC engages with a multitude of stakeholders to inform and enhance regulatory activities domestically and internationally.

Strategic Goal 2: Foster and enforce compliance with the federal securities laws

- **Strategic Objective 2.1**
  The SEC fosters compliance with the federal securities laws.

- **Strategic Objective 2.2**
  The SEC promptly detects and deters violations of the federal securities laws.

- **Strategic Objective 2.3**
  The SEC prosecutes violations of federal securities laws and holds violators accountable through appropriate sanctions and remedies.

Strategic Goal 3: Facilitate access to the information investors need to make informed investment decisions

- **Strategic Objective 3.1**
  The SEC works to ensure that investors have access to high-quality disclosure materials that facilitate informed investment decision-making.

- **Strategic Objective 3.2**
  The SEC works to understand investor needs and educate investors so they are better prepared to make informed investment decisions.

Strategic Goal 4: Enhance the Commission's performance through effective alignment and management of human, information and financial capital

- **Strategic Objective 4.1**
  The SEC promotes a results-oriented work environment that attracts, engages, and retains a technically proficient and diverse workforce, including leaders who provide motivation and strategic direction.

- **Strategic Objective 4.2**
  The SEC encourages a collaborative environment across divisions and offices and leverages technology and data to fulfill its mission more effectively and efficiently.

- **Strategic Objective 4.3**
  The SEC maximizes the use of agency resources by continually improving agency operations and bolstering internal controls.

ENVIRONMENTAL PERSPECTIVE & OUTLOOK

The SEC's goals and priorities are influenced by a number of external environmental factors, including the demands of fulfilling its mission in an increasingly complex and globally interconnected securities market and the statutory structure within which the Commission works. In recent years, this environment has changed dramatically. While this Strategic Plan attempts to anticipate various ways in which the markets, regulated industries and legislative requirements may evolve over time, no plan can anticipate all possible scenarios. The following discussion outlines the agency's perspective and outlook on the most significant environmental factors that have influenced—and are expected to continue to influence—the SEC's fulfillment of its mission.

Increasingly Dispersed and Complex Financial Markets

Driven by competition, technology, regulation and market participants' innovation, today's financial markets offer more products, services, strategies and opportunities than ever before. Investors are confronted by a growing number of increasingly complex product offerings. Sophisticated technology brings remarkable speed and efficiency to the financial markets, making both routine trades and complex transactions easier and less expensive to execute. At the same time, this technology brings new risks of accidental or intentional disruptions which are capable of spreading across markets, international borders and institutional firewalls. In addition, market structure has become highly fragmented as trading volume is dispersed among many highly automated trading centers that compete for order flow of securities.

New Aspects of the Agency's Jurisdiction

The SEC's role has significantly expanded in recent years, as historic legislation like the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) and the Jumpstart Our Business Startups Act (JOBS Act) have increased the Commission's regulatory responsibility for advisers to hedge funds and other private funds, clearing houses, rating agencies, municipal advisers, crowdfunding portals and, together with the Commodity Futures Trading Commission (CFTC), the entire market structure surrounding swaps.

Actions designed to ease the acquisition of new capital by new and smaller enterprises—chiefly through crowdfunding and general solicitation—will increasingly demand SEC time and resources as well.

The Globally Interconnected Financial Markets

At the same time that domestic responsibilities are expanding, activities the SEC regulates increasingly have international implications. Traders in today's global financial market can move billions of dollars thousands of miles away in a fraction of a second; issuers can explore a whole world of choices as they decide where to list and raise new capital; and investor portfolios are more diverse and global than ever before. Engagement and appropriate coordination with foreign regulators, both bilaterally and multilaterally, on everything from enforcement strategies to swaps regulations, are necessary for the SEC to oversee today's markets, to combat fraud and to identify global risks that could impact U.S. securities markets.

Continuing Risks

Many of the initiatives outlined in this Strategic Plan are designed to address specific problems brought to light by the global financial crisis and its aftermath. Despite best efforts, however, it is impossible to predict and plan for all potential challenges. The degree of the SEC's success in achieving its goals and strategic objectives may depend upon factors such as those listed below.

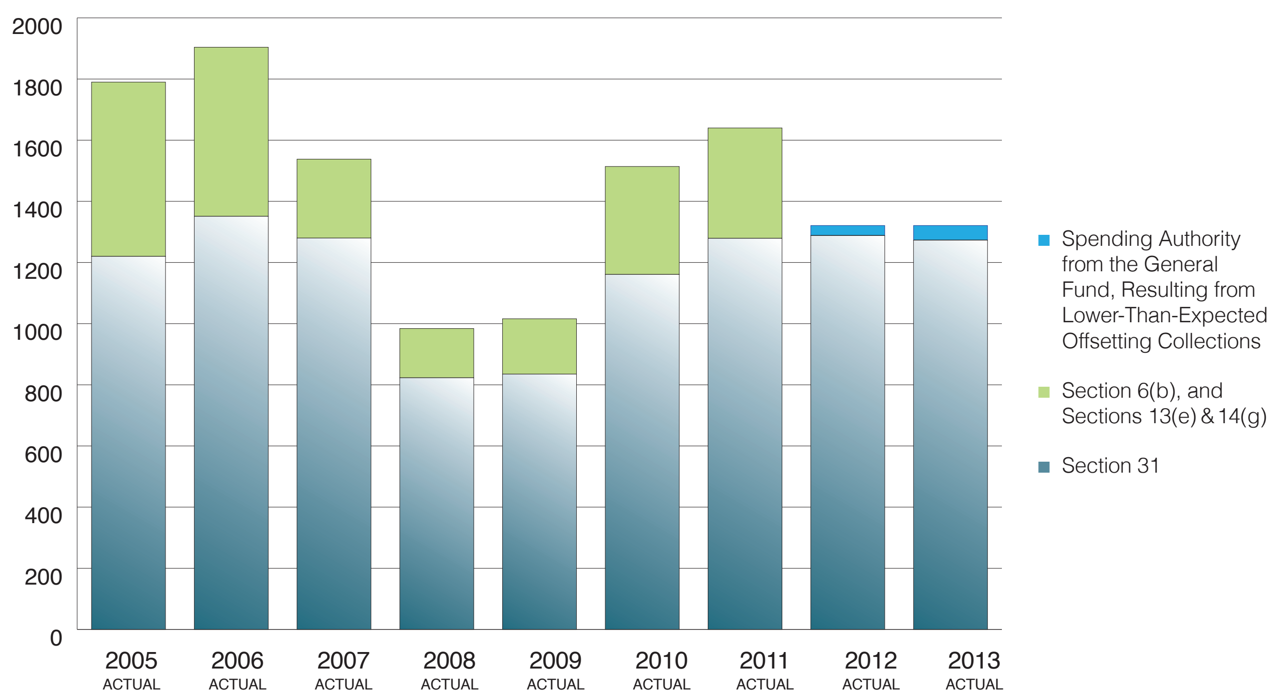
- The SEC's ability to meet its statutory mission and the performance goals and strategic objectives outlined in this Strategic Plan are inherently dependent upon the SEC obtaining sufficient resources, which the agency needs to keep pace with the growing size and complexity of the securities markets and the broad oversight and enforcement responsibilities. The SEC submits an annual budget request which outlines the funding it is seeking and the intended use of such funding. The appropriation that the SEC receives is fully offset by securities transaction fees and, accordingly, the SEC's funding is not borne by taxpayers. Budgetary constraints will impact the ability of the SEC to fulfill its goals and objectives as outlined in this Strategic Plan.
- Legislative and regulatory changes may not be successful in providing regulators with a comprehensive understanding of systemic risk or sufficient tools to manage that risk more effectively.
- Changes in financial industry regulation may unintentionally hamper behavior that would benefit the market and investors.
- Regulations may be perceived as a substitute for care and diligence on the part of investors in their own decision-making.
- Over-regulation or under-regulation may undermine the competitiveness of the U.S. capital markets in an increasingly competitive global marketplace.
- Over-regulation or under-regulation may chill innovation, entrepreneurship, and prudent risk taking.

RESOURCES

The SEC is an independent federal government agency funded through annual appropriations enacted by Congress and the President. Until FY 2012, the agency's appropriations were offset by transaction and registration fees collected by the agency. The Offsetting Collections and Spending Authority chart below presents the SEC's budgetary authority derived from offsetting collections from transaction fees collected pursuant to Section 31 of the Exchange Act and registration fees collected under Section 6(b) of the Securities Act of 1933, Sections 13(e) and 14(g) of the Exchange Act and Section 24(f) of the Investment Company Act of 1940 during the period FY 2005 through 2011. Pursuant to the Dodd-Frank Act and beginning in FY 2012, registration fee collections are no longer offsetting collections, and are now either deposited into the Securities and Exchange Commission Reserve Fund or the U.S. Treasury General Fund. Thus, the columns for FY 2012 through FY 2013 reflect only Section 31 transaction fee collections.

The SEC's appropriation is deficit-neutral since, under the Dodd-Frank Act, the Commission's appropriation is matched by anticipated collections of Section 31 securities transaction fees. Thus, each year, Congress and the President can decide the size of the SEC's appropriation without diverting resources from other priorities or adding to the nation's debt. Since personnel and technology typically comprise about 70 percent of the SEC's appropriation, constraints on the Commission's budget can have a direct and significant impact on the staff and systems the Commission has available to enforce and implement the federal securities laws.

OFFSETTING COLLECTIONS AND SPENDING AUTHORITY (Dollars in Millions)



"Effective regulation of the U.S. financial system requires us to grapple with a global financial system that transcends boundaries. And it demands that we match our regulatory and enforcement priorities with those of scores of jurisdictions around the world."

CHAIR MARY JO WHITE

STRATEGIC GOAL 1

Establish and Maintain an Effective Regulatory Environment

THE SEC IS RESPONSIBLE FOR ESTABLISHING a regulatory environment in which the agency's mission can be met and sustained. Most securities laws and regulations flow from two central principles. First, all investors should have equal access to accurate, complete and timely information about the investments they buy, sell, and hold. Second, investors should be able to rely upon self-regulatory organizations (SRO), exchanges, broker-dealers, investment advisers, investment companies and other market participants to conduct investors' securities transactions efficiently and according to the informed choices made by investors.

The SEC has broad authority to shape the regulatory framework for the securities industry. Rulemaking often is required to remedy abusive practices, to respond to Congressional mandates, to address changing economic conditions, to address risks in advances in technology or novel products or services. In general, rulemaking and policies are designed to improve disclosure, facilitate the flow of important information to investors and the public, improve governance, promote high-quality accounting standards and financial reporting, enhance the responsibilities and accountability of financial intermediaries and other market participants and strengthen the structure of the trading markets, among other goals. When properly crafted, these rules serve to further the SEC's mission. In addition, when existing laws are not sufficient to achieve this mission, the SEC also has a duty to advise Congress about necessary corrective measures. The SEC recognizes that regular reviews of Commission regulations and its rulemaking processes are necessary to confirm that intended results are being achieved as well as to identify gaps and redundancies in regulation.

In addition to promulgating its rules and regulations, the SEC provides guidance when, among other things, it sets forth the views of the Commission or its staff on questions of current concern without stating them in the form of legal requirements. The most prevalent form of this guidance is publicly available staff statements on a particular legal or accounting issue or on an interpretation of a rule or regulation. The staff also responds to inquiries from individuals and companies about whether an activity, undertaken in a specified manner, would violate the securities laws. The inquiries can take the form of written requests that the staff not recommend enforcement or other action to the Commission if the activity is completed as specified. The SEC also issues individual orders granting relief from provisions of the securities laws when the specific facts indicate that doing so is consistent with the protection of investors and the policy and purposes behind the laws. These orders can serve as a testing ground for useful innovation and may pave the way for rulemaking.

STRATEGIC OBJECTIVE 1.1

The SEC establishes and maintains a regulatory environment that promotes high-quality disclosure, financial reporting and governance, and prevents abusive practices by registrants, financial intermediaries and other market participants.

The investments of Americans and their families are dependent upon the maintenance of healthy capital markets. The greater availability of and access to investment opportunities can help Americans build their portfolios to create a better life for themselves and their children. Investment opportunities may include the potential for abuse by market intermediaries, and other market participants. Such abuses erode the investing public's trust and undermine investor confidence in markets as a whole.

To protect investors and to promote confidence in the integrity and fairness of the markets, the SEC uses its regulatory authority to deter potentially abusive behavior.

The federal securities laws entrust the SEC with authority to shape the regulatory framework so that investors are protected through the availability of high-quality disclosure about their investments. In addition, the agency develops regulations that promote and strengthen corporate and fund governance.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Improve the quality and usefulness of disclosure:** The SEC will continue to evaluate and, where necessary, amend its requirements to improve the quality and usefulness of registrants' disclosures to investors, including continuing to modernize the collection and dissemination of timely, machine-readable, structured data to investors when appropriate. Areas of focus will include disclosure about registrants' financial condition, operations, risk management and executive compensation decisions and practices. Additionally, the SEC will continue to pursue data standards and methods that permit investors to more efficiently search for information within forms as well as aggregate and compare financial data across filers.

- **Engage in rulemaking mandated by Congress:** The SEC will continue to fulfill its obligations under the Dodd-Frank Act and the JOBS Act to develop and promulgate mandated rules and regulations with appropriate notice comment and economic analysis.
- **Analyze trends in new financial products and instruments, including exchange traded products, and market innovations:** The SEC will proactively seek out information from market experts both inside and outside the SEC to help inform the regulatory process, look for new risks, understand the impact of significant market events and ensure that rules and registrants' disclosures take into account the latest market environment and practices. When possible, the SEC will directly collect and analyze relevant market data to identify upcoming trends, patterns, or relationships among asset classes, instruments and market participants, and to identify areas of regulatory need. One area of focus will be to consider requiring mutual funds to provide additional information on portfolio holdings and other operations.
- **Strengthen proxy infrastructure:** The SEC will consider issues related to the mechanics of proxy voting and shareholder-company communications, including the role of proxy advisory firms.
- **Modernize beneficial ownership reporting:** The SEC will consider how to modernize its beneficial ownership reporting requirements to, among other things, address the disclosure obligations relating to the use of equity swaps and other derivative instruments.
- **Analyze regulatory structures for investment advisers and broker-dealers providing personalized investment advice:** The SEC will continue to analyze whether the different regulatory obligations that apply to broker-dealers and investment advisers providing personalized investment advice should be changed for the protection of investors.
- **Modernize the regulatory treatment and valuation of certain portfolio holdings of registered investment companies:** The SEC will consider regulatory initiatives and/or guidance needed to update and improve the current regulatory regime for the use of derivatives by mutual funds, exchange-traded funds and other registered investment companies. A related initiative is consideration of updated guidance for registered investment companies regarding the valuation of their portfolio securities and other assets.
- **Promote high-quality accounting standards:** The SEC will continue to promote the establishment of high-quality accounting standards by independent standard setters in order to meet the needs of investors. In overseeing the Financial Accounting Standards Board (FASB), the SEC will strengthen and support the FASB's independence and maintain the focus of financial reporting on the needs of

investors. Due to the increasingly global nature of the capital markets, the agency will work to promote higher quality financial reporting worldwide and will consider, among other things, whether a single set of high-quality global accounting standards is achievable.

- **Foster high-quality audits through the oversight of the accounting profession:** The SEC will continue to oversee the Public Company Accounting Oversight Board (PCAOB) and its regulation of independent auditors through the PCAOB's inspection and disciplinary programs. The SEC also will work closely with the PCAOB on the promulgation and interpretation of auditing standards to address current issues in the capital markets.
- **Enhance the regulation of broker-dealers, clearing agencies, and other major market participants:** The SEC will continue to enhance its oversight of broker-dealers, clearing agencies, and other major market participants by, among other things, evaluating the current regulatory structure related to financial responsibility, customer protection and governance.
- **Monitor disclosures related to asset-backed securities:** The SEC is considering revising its rules and forms to improve registration and disclosure requirements for asset-backed securities, and will monitor disclosures and compliance with current and any revised rules that have been promulgated by the Commission. The SEC will continue to fulfill its statutory mandate to work with other federal regulators in the promulgation of joint rules concerning credit risk retention in securitized transactions.
- **Strengthen oversight of municipal advisors and consider guidance for private fund advisers:** The SEC will continue to enhance the program for registration and oversight of municipal advisors, with a particular focus on registering municipal advisors under the permanent registration rules and reviewing rule filings by the Municipal Securities Rulemaking Board (MSRB) to implement the permanent municipal advisor registration rules. Another area of focus will be the application of rules under the Investment Advisers Act to private fund advisers and the need to provide guidance regarding the application of those rules.

Related Indicator

The following indicator is useful for understanding the SEC's activities, but should not be considered a performance metric. As this indicator is not used to assess performance, it does not require a target or timeframe.

INDICATOR	DESCRIPTION
Number of investor testing research projects	This metric tracks the number of research initiatives used to gather feedback from investors on the usefulness of disclosures and other input on SEC rulemaking.

STRATEGIC OBJECTIVE 1.2
The SEC promotes capital markets that operate in a fair, efficient, transparent, and competitive manner, fostering capital formation and innovation.

Through rulemaking and other initiatives, the Commission works to assure that investors have fair access to securities markets; that their orders are handled in an efficient and transparent manner throughout the order entry, execution, clearing, and settlement process; that securities laws and regulations do not promote regulatory arbitrage; and that U.S. securities markets remain vibrant, competitive and resilient. These efforts help to promote markets in which investors have the necessary information to make investment decisions, the price discovery process is fair and free from manipulation, and trades can be executed efficiently. The Commission also fosters capital formation by facilitating market access for novel products and innovative and competitive investment company structures when consistent with investor protection.

Self-regulation is a fundamental component of the regulation of U.S. securities markets and market intermediaries. SROs must balance multiple interests and responsibilities. The SEC oversees SROs to ensure that securities markets operate in a fair, efficient and orderly manner; that they are competitive; and that they promote capital formation. The SEC has authority over the rulemaking and other activities of SROs, which include national securities exchanges, the Financial Industry Regulatory Authority (FINRA) and clearing agencies. In approving SRO rules, the SEC must determine, among other things, that these rules are designed to prevent fraudulent and manipulative practices, promote just and equitable principles of trade, and foster cooperation in the clearing and settling of trades, and that they do not impose an unnecessary or inappropriate burden on competition. At the same time, SROs face unique challenges balancing their regulatory responsibilities with business and other interests. In this respect, the SEC's oversight over SROs provides it with the ability to monitor conflicts of interest by, among other things, ensuring that an SRO's rules, as well as any changes to those rules, assure a fair representation among members and participants in the selection of an SRO's directors and administration of its affairs, and also are not designed to permit unfair discrimination between customers and other participants.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Foster a fair and efficient market structure:** The SEC will continue to pursue initiatives that promote the goals of the national market system in the trading of securities, such as enhancing price transparency, facilitating best execution, assuring fair access to trading systems and fostering fair competition. These may include:
  - Reviewing the impact of algorithmic and other automated trading on the markets, including its potential contribution to market volatility and, if warranted, developing an appropriate policy response;
  - Strengthening the incentives for investors to display trading interest, and thereby contribute to the price discovery process;
  - Enhancing the post-trade transparency of alternative trading systems (including dark pools) in order to address market fragmentation and facilitate best execution;
  - Continuing and expanding a comprehensive review of equity market structure; and
  - Considering a comprehensive review of the structure and operation of the listed options markets to promote fair, efficient, transparent, and competitive markets.
- **Oversee the system of self-regulation:** Through its review of SRO proposed rule changes, ongoing dialogue with SROs, and rulemaking and other initiatives, the SEC will appropriately oversee the system of self-regulation. This is particularly important in light of conflicts of interests.
- **Enhance the technological resilience of securities markets:** The SEC is working with securities markets, securities firms and other key market participants to ensure the development of adequate policies and procedures with regard to their automated systems and to guard against technological failures. The SEC recently proposed rulemaking to require securities markets, clearing agencies, and plan processors to assure that their systems have adequate levels of capacity, integrity, resiliency, availability and security to maintain their operational capability and

that those markets operate in the manner intended. The SEC anticipates continuing its work on this rulemaking proposal and continuing its dialogue with securities markets to assure a robust and sound U.S. market infrastructure.

- **Reduce reliance on credit ratings references in SEC rules:** The SEC will continue to work to implement the credit rating reference removal provisions required by the Dodd-Frank Act and insert appropriate substitutes as required by law.
- **Enhance oversight of derivatives:** The SEC will continue to implement the derivatives provisions of Title VII of the Dodd-Frank Act, including through cooperative measures with foreign counterparts. The SEC will work with the CFTC to seek to harmonize futures and securities laws for economically equivalent instruments.
- **Help prevent market manipulation:** As part of this initiative, the SEC will review recent changes to the regulation of short sales to assess their effectiveness and determine whether additional modifications are warranted. The agency also intends to explore ways to enhance the transparency of trading activities to better deter and detect manipulation. In addition, the SEC will pursue initiatives to update and enhance the anti-manipulation rules that address the activities of underwriters, issuers, selling security holders and others in connection with securities offerings, as well as update and enhance the anti-manipulation rules that address issuer repurchases and timely public notice of dividends and other distributions.
- **Improve transparency and oversight of small capitalization securities:** The SEC will pursue initiatives focused on the special characteristics of the market for small capitalization securities, in order to enhance the transparency of this market and promote vigorous oversight. Goals of these initiatives will include assuring appropriate investor protections and promoting market efficiency. The SEC also will review its rule that governs the publication of quotations for securities that are not listed on a national securities exchange, to ensure that it adequately addresses securities and situations most likely to raise concerns about fraud and manipulation.
- **Consider implementing further money market fund reforms:** The SEC plans to consider final amendments to its rule regulating money market funds (MMFs), which would be designed to reduce their susceptibility to runs, improve their ability to manage the effects of high levels of shareholder redemptions in times of stress, increase the transparency of risk in MMF portfolios and preserve, as much as possible, the benefits of MMFs for investors and the short-term financing markets.
- **Enhance the market structure for fixed income securities:** The SEC plans to pursue many of the recommendations highlighted in the July 2012 Report on the Municipal Securities Market through a combination of SEC, MSRB, and FINRA initiatives, in an effort to enhance the market structure for all fixed income securities,

including taxable and tax-exempt securities. This effort will include initiatives aimed at promoting transparency and the development of new mechanisms to facilitate the provision of liquidity, as well as initiatives to improve the execution quality of investor orders.

- **Consider streamlining the process for introducing new exchange-traded funds:** The SEC will consider whether or not to permit certain exchange-traded funds to be introduced to the market without first submitting an application under the Investment Company Act of 1940 and receiving an exemptive order from the Commission.
- **Improve clearance and settlement:** The SEC will pursue initiatives to develop registration practices that facilitate appropriate access to U.S. financial markets for different types of clearing agencies and transfer agents, and supervisory resources and practices that allow the SEC to appropriately consider the systemic and other risks of registered and exempt clearing agencies and transfer agents performing payment, clearance and settlement activity in the U.S. and for U.S. persons. The SEC also will consider whether and how to modify existing rules covering clearing agencies and transfer agents to enhance the safety and efficiency of securities clearance and settlement practices and ensure that such practices are harmonized with the broader U.S. financial system.

Performance Goal

The SEC intends to use the following performance metric to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Time to complete SEC review of SRO rules that are subject to SEC approval	The SEC reviews SRO rule proposals for consistency with the Exchange Act standards of investor protection, fair and orderly operation of the markets and market structure, as well as other statutory requirements. This metric gauges the timeliness of those reviews.

Related Indicators

The following indicators are useful for understanding the SEC's activities, but should not be considered performance metrics. As these indicators are not used to assess performance, they do not require targets or timeframes.

INDICATOR	DESCRIPTION
Percentage of SRO rule filings submitted for immediate effectiveness	This indicator gauges the proportion of SRO rule proposals that are submitted for immediate effectiveness.
Percentage of transaction dollars settled on time each year	This indicator measures the efficiency of the U.S. clearance and settlement system for equity securities.
Percentage and number of market outages at SROs and electronic communications networks (ECNs) that are corrected within targeted timeframes	Market outages reflect problems in the systems underlying the securities markets that could have an adverse effect on the markets' ability to function as required. The SEC assesses the reliability and resiliency of these systems to minimize the number and duration of outages. This indicator gauges how quickly outages are resolved, so that market activity can resume.

STRATEGIC OBJECTIVE 1.3

The SEC adopts and administers regulations and rules that are informed by robust economic analysis and public comment and that enable market participants to understand their obligations under the securities laws.

The process of developing and administering rules and regulations is one of the primary functions of the SEC and involves staff from virtually every division and office. One of the agency's primary objectives is to maintain a regulatory framework that enables market participants to understand their obligations.

The success of this strategic objective requires collaboration and coordination among staff members who bring a variety of different perspectives, with appropriate tools and support. In addition, the agency must continually reevaluate its regulatory framework so that it provides sufficient protections to investors as new products and services enter the market. In addition to drafting its own rules, the SEC often coordinates with other federal regulators in joint rulemaking to ensure consistency and clarity throughout the market.

The SEC's economic analysis supports a wide spectrum of activities, including policy-making and rulemaking. The SEC integrates robust economic analysis into the rule-making process and rule releases, so that its rules and regulations are appropriately informed by economic reasoning and impacts. The SEC also identifies developing risks and trends in the financial markets and engages in long-range planning and training to address such developments.

The SEC plans to continue to encourage investor participation and comments on proposed rules, regulations and other issues materially affecting investors through a variety of methods, including supporting the work of the Investor Advisory Committee, staffing the Office of the Investor Advocate and working with the Office of Investor Education and Advocacy to highlight issues that may be of particular interest to investors.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Improve agency-wide coordination of the rulemaking process:** The SEC will seek additional ways to foster greater and earlier collaboration among divisions and offices on rulemaking initiatives. The agency will establish collaboration tools to more effectively gather and analyze data from across the SEC and manage rulemaking activities.
- **Enhance the process for no-action, interpretive, and exemptive regulatory requests:** The SEC will continue reviewing its process for handling written requests for no-action, interpretive, and exemptive relief, so that the agency's responses are completed in a timely and efficient manner.
- **Respond accurately and promptly to informal guidance requests from market participants and others:** The SEC will strive to respond to informal requests for guidance regarding the laws and rules it administers to provide appropriate informal guidance as quickly as possible.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Length of time to respond to written requests for no-action letters (NAL), exemptive applications, and written interpretive requests	The SEC staff responds to requests for guidance from individuals and market participants about specific provisions of the federal securities laws. These queries may seek interpretations of the securities laws or regulations, or assurances that no enforcement action will be taken if the individual or market participant engages in a specified activity. The staff also reviews applications for exemptions from the securities laws. Written responses to such requests for guidance, when provided, generally are publicly available, as are applications and related notices and orders, when issued. This metric gauges the timeliness of initial comments issued by the Divisions of Trading and Markets, Investment Management, and Corporation Finance.
Timeliness of responses to requests for informal guidance received by the Devision of Trading & Markets dedicated hotline or email box	The Division of Trading and Markets maintains a dedicated phone line and an email account to provide market participants with avenues to request information and informal guidance regarding the Exchange Act and rules thereunder. This metric will reflect the timeliness of the staff's responses to these requests.

Related Indicators

The following indicators are useful for understanding the SEC's activities, but should not be considered performance metrics. As these indicators are not used to assess performance, they do not require targets or timeframes.

INDICATOR	DESCRIPTION
Number of amendments to national securities exchange registrations (Form 1)	This indicator provides information about the volume of material filed with the SEC that involves amendments to exchange registrations.
Number of Alternative Trading System registrations (Form ATS)	This indicator provides information about the volume of material filed with the SEC that involves filings related to ATS registrations.
Number of new investment product submissions	This indicator provides information about the volume of material filed with the SEC that involves new product submissions pursuant to Rule 19b-4(e) of the Exchange Act.
Number of published economic reports	This indicator gauges the number of economic reports that staff of the Division of Economic and Risk Analysis publishes annually on the SEC's website.

STRATEGIC OBJECTIVE 1.4

The SEC engages with a multitude of stakeholders to inform and enhance regulatory activities domestically and internationally.

In today's markets, capital can cross jurisdictional boundaries with the click of a mouse. It is more important than ever to coordinate with other U.S. and foreign regulatory authorities and stakeholders on the best regulatory responses to the changing market landscape. Failure to effectively coordinate can significantly hamper the SEC's ability to achieve its policy objectives or avoid significant unintended consequences.

Domestically, the Chair of the SEC will continue to participate actively in the Financial Stability Oversight Committee (FSOC) with the heads of others FSOC member agencies, such as the Board of Governors of the Federal Reserve, the Department of the Treasury and the CFTC.

The SEC also will actively participate in international multilateral organizations, including the International Organization of Securities Commissions (IOSCO), the Financial Stability Board, the Organization for Economic Cooperation and Development, and the Financial Action Task Force. These efforts will be complemented by direct bilateral consultations with foreign regulatory counterparts on enforcement and regulatory cooperation matters. In addition, the SEC continues to promote international coordination and cooperation through its technical assistance programs for foreign regulators.

The SEC will continue to coordinate with domestic stakeholders including investors, industry representatives, technical experts and other market participants. The SEC will also continue to work with the Investor Advisory Committee on a variety of regulatory issues.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Collaborate with other authorities on enforcement and market oversight matters:** In order to create a more effective and coordinated regulatory environment, the SEC will partner with U.S. federal and state regulatory authorities to share data, information, and expertise on regulatory issues as appropriate. The SEC will similarly utilize arrangements to share appropriate and relevant data, information, and expertise with foreign authorities about cross-border issues.

- **Continue global coordination and assistance:** The SEC will continue to work closely with its regulatory counterparts abroad, as well as with relevant international organizations, to promote high-quality securities regulation worldwide and regulatory convergence where appropriate. The SEC will conduct technical assistance programs that promote emerging and recently-emerged markets' capacity to take steps to minimize the likelihood of regulatory arbitrage and promote cross-border enforcement and supervisory assistance.
- **Facilitate input from stakeholders in rulemaking initiatives:** The SEC will continue to seek input from stakeholders to inform its rulemaking initiatives through a variety of methods including, as appropriate to the initiative, meeting with investors, industry representatives, technical experts and other market participants, holding roundtables and issuing concept releases.
- **Coordinate closely with the Investor Advisory Committee:** The SEC will continue to work closely with the Investor Advisory Committee, which was established to present the views and experience of a wide variety of investors and to advise the Commission on regulatory priorities and practices. The Investor Advisory Committee is authorized by statute to submit findings and recommendations to the Commission for review and consideration.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Supervisory cooperation requests from foreign authorities for SEC assistance and SEC requests for assistance on supervisory cooperation from foreign authorities	The SEC makes requests to foreign authorities for supervisory cooperation assistance and responds to such requests from foreign regulators both through formal mechanisms, such as supervisory memoranda of understanding, and on an ad hoc basis.
Number of non-U.S. regulators trained	This metric shows the reach of the SEC's technical assistance programs for regulators around the world. The SEC conducts these training sessions to assist countries in developing and maintaining robust protections for investors and promoting cross-border enforcement and supervisory assistance.

"The ability to identify and bring timely, high-quality enforcement actions when violations of the federal securities laws occur is integral to the SEC's core mission. The SEC must enhance its enforcement function not only to send strong messages to wrongdoers that misconduct will be swiftly and aggressively addressed, but also to adapt to the highly automated, high-speed markets of today and tomorrow."

CHAIR MARY JO WHITE

STRATEGIC GOAL 2

Foster and Enforce Compliance with the Federal Securities Laws

FOSTERING COMPLIANCE WITH FEDERAL SECURITIES LAWS is interwoven through all of the Commission's programs and is central to fulfilling its mission of protecting investors; maintaining fair, orderly and efficient markets; and facilitating capital formation. Through disclosure reviews and examinations of broker-dealers, investment advisers, SROs and other market participants, the SEC seeks both to detect violations of the securities laws and rules and to foster strong compliance and risk management practices within these firms and organizations.

When violations do occur, the SEC strives to take prompt action to stop the misconduct, penalize the wrongdoers and, where possible, return funds to harmed investors. These actions span the broad spectrum of the securities laws including, among others, matters of financial reporting, disclosure, accounting fraud, securities offerings, insider trading and market manipulation. These critical investor protection functions contribute to investors' confidence in our capital markets.

The SEC will continue to enhance its National Examination and Enforcement programs. As discussed further below, these improvements include expanding the SEC's training programs, hiring staff with new skill sets, streamlining processes, enhancing information-sharing, leveraging the knowledge of third parties, improving the processing of the thousands of tips the agency receives annually and improving risk assessment techniques. These, and other significant efforts, contribute to the SEC's objective of creating an enduring structure for improved protection of investors and markets.

STRATEGIC OBJECTIVE 2.1
The SEC fosters compliance with the federal securities laws.

While detecting violations of the federal securities laws is an integral aspect of the SEC's programs (see Strategic Objective 2.2), working to prevent future violations can be even more important to protecting investors and enhancing market integrity. The SEC's goal is to encourage regulated entities and reporting companies to do all that they reasonably can to identify possible compliance pitfalls and take preventive action before a violation occurs.

Initiatives designed to foster greater compliance with securities laws run throughout this Strategic Plan. They include efforts designed to provide investors with information they need so that they can wisely select and monitor their investments and professional intermediaries (see Strategic Objective 3.1); to ensure that rules are written in an understandable way, so that those charged with compliance clearly understand their responsibilities (see Strategic Objective 1.3); to create, as appropriate, prophylactic rules that prevent abusive trading or marketing practices (see Strategic Objective 1.2); and to deter regulated entities and reporting companies from engaging in unlawful conduct (see Strategic Objective 2.2).

The SEC seeks to encourage within organizations of all sizes that participate in the securities markets a strong "culture of compliance"—an environment that fosters, from top leadership down, ethical behavior and decision-making. This philosophy should underpin all that the organization does, so that when employees make decisions, large and small, they are guided by a culture that reinforces acting in both a legal and ethical manner.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- Expand outreach efforts for promoting compliance practices: The SEC will enhance efforts to promote compliance by engaging in more proactive communications with registrants and their personnel, including chief compliance officers, senior executives and board members. These efforts will include expanding participation in compliance outreach events; disseminating targeted materials to firms by means of risk alerts; detailing areas where examiners have identified significant compliance deficiencies, best practices identified by examiners or industry groups, and rule changes; and raising registrant awareness of the seriousness of certain exam findings by holding post-examination compliance conferences.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Number of industry outreach and education programs targeted to areas identified as raising particular compliance risks	Targeted communication with industry participants on topics shaping the examination program is intended to enhance compliance practices and prevent violations before they occur. This metric identifies the number of major outreach efforts conducted including the SEC's national and regional compliance outreach events, published risk alerts, and other educational programs and initiatives.
Percentage of firms receiving deficiency letters that take corrective action in response to all exam findings	At the conclusion of examinations, the staff communicates identified deficiencies to registrants in the form of a deficiency letter. Registrants are then given a chance to respond to staff findings and often take action to remedy any problems and potential risks, including monetary compensation to clients and enhancements to disclosures, policies and procedures. Most often, registrants respond that they have corrected the deficiencies and implemented measures to prevent recurrence.

STRATEGIC OBJECTIVE 2.2

The SEC promptly detects and deters violations of the federal securities laws.

Violations of the securities laws have a tremendous impact on investors. Accordingly, prompt detection of potential securities law violations is important in limiting the harm caused to investors. By identifying violations early, the SEC seeks to punish wrongdoers promptly, correct violative behavior in the financial markets before it proliferates, stop fraud and manipulation before it affects a large number of investors, and locate and preserve investors' assets before they are lost or dissipated.

Detecting violations of the federal securities laws is a difficult but critical function, and one in which the agency continuously seeks to enhance its efforts. In the midst of constantly evolving financial markets, the SEC seeks to strengthen its oversight of the large number of registrants by focusing its resources on the areas of greatest risk. This risk-based approach, which the Commission continually seeks to refine, is implemented across agency programs through various methodologies aimed at identifying, assessing and managing risks to investors.

In addition, each year the SEC receives thousands of tips and complaints, as well as referrals from SROs, that staff analyze to determine matters requiring investigation. The Commission works closely with others—SROs, the Department of Justice and other criminal authorities, and state, federal, and foreign regulators—to maximize the breadth and depth of its combined efforts. As described below, the SEC will continue working to improve its detection and deterrence efforts.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Enhance surveillance and risk assessment capabilities:** The SEC will continue to enhance the methods and tools for more effectively identifying and assessing risks in the markets and focusing surveillance efforts on entities, persons, and practices that pose a high risk to investors and financial markets. As part of this effort, the SEC will seek to obtain greater access to data and insights from a variety of sources including data from registrants, SROs, commercial vendors, and other sources. In addition, the SEC will expand the use of analytics to enhance the ability of examination and enforcement staff to detect potentially violative activity.
- **Improve management of tips, complaints, and referrals:** The SEC will enhance the process for receiving, processing, and acting upon tips, complaints and referrals so they can continue to be handled consistently and appropriately, including through examinations or enforcement investigations. This effort will also enhance the SEC's data on tips, complaints, and referrals, to help the agency spot trends and patterns about potential issues or violations that may warrant further Commission action.
- **Build upon the establishment and successes of the Office of the Whistleblower:** The SEC will continue to encourage individuals and entities with timely, credible and specific information about potential securities law violations to provide information to the Commission to further investigations and promote more efficient use of the Commission's limited resources. Pursuant to the Dodd-Frank Act, the SEC is required to compensate eligible whistleblowers with an award of 10 to 30 percent of amounts collected as a result of original information provided by a whistleblower that leads to a successful enforcement action resulting in monetary sanctions exceeding $1,000,000.
- **Bolster the expertise of SEC staff:** The SEC will continue to develop and implement specialized teams focusing on particular market issues that directly affect investors and the functioning of the markets, by enhancing the expertise of SEC staff through targeted training in critical and emerging areas, and enabling staff to obtain additional training resulting in certifications, such as "Certified Fraud Examiners" and "Chartered Financial Analysts."

- **Build upon Enforcement's Cooperation Program:** The staff will use a variety of tools—including cooperation agreements, deferred prosecution agreements and non-prosecution agreements—to encourage individuals and companies to promptly report violations and provide assistance to the agency.
- **Enhance sharing, cooperation, and joint initiatives both within the agency and with other regulators:** The SEC will focus on improving the sharing of information between divisions and offices of the Commission and with other regulators. This type of communication will help ensure that expertise is shared and that areas of mutual interest are addressed in an efficient and effective manner. This includes continuing the use of joint specialized working groups within the agency that are focused on market issues and entities presenting significant risks. This would also include continuing efforts to collaborate and share information with other regulators, such as FINRA, state regulators, the CFTC, international counterparts and many others.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Percentage of investment advisers, investment companies, and broker-dealers examined during the year	This metric indicates the number of registrants examined by the SEC or an SRO as a percentage of the total number of registrants. This metric includes all types of examinations: risk priority examinations, cause inspections to follow up on tips and complaints, limited-scope special inspections to probe emerging risk areas, oversight examinations of broker-dealers to test compliance and the quality of examinations by FINRA.
Percentage of compliance exams that are concluded in accordance with the Office of Compliance Inspections and Examination's (OCIE) statutory deadline	The staff conducts examinations each year of registered entities, including investment advisers, investment company complexes, transfer agents, and broker-dealers. The staff strives to complete its examinations and communicate findings in the most efficient and effective manner and within its statutory deadline. This metric reflects the percentage of examinations concluded within the statutory deadline.
Number of joint exams, information sharing agreements, and formal meetings with other regulators	The SEC attempts to coordinate and collaborate with other regulators on areas of mutual interest. This helps to ensure that all regulators are informed of ongoing risks and issues related to broad market practices as well as specific entities of mutual interest. This cooperation is critical to the exam program to ensure that certain higher risk firms and activities are addressed in the most efficient and effective manner. This metric tracks critical cooperation activities that are occurring between the SEC's exam program and other regulators.

Related Indicators

The following indicators are useful for understanding the SEC's activities, but should not be considered performance metrics. As these indicators are not used to assess performance, they do not require targets or timeframes.

INDICATOR	DESCRIPTION
Percentage of exams that identify deficiencies, the percentage that result in a "significant finding," and the percentage referred to the Division of Enforcement	Examiners find a wide range of deficiencies during examinations. Some of the deficiencies are more technical in nature, such as failing to include all information that is required to be in a record. However, other deficiencies may cause harm to customers or clients of a firm, have a high potential to cause harm, or reflect recidivist misconduct. The latter deficiencies are among those categorized as "significant." This indicator identifies the percentage of exams that identified deficiencies, that resulted in significant deficiency findings, and that were referred to Enforcement.
Number of cause exams that result from tips, complaints and referrals	Analysis of a tip can support the request for a cause exam. This indicator would identify the number of SEC cause exams that result from tips collected through outreach efforts.
Number of rule-making initiatives assisted by the National Exam Program	The examination program interacts with registrants on a regular basis and this work provides feedback critical to ensuring effective and practical rulemaking and policy efforts. This indicator tracks how frequently the examination program assists with rulemaking initiatives.
Number of investigations or inquiries originating from a tip or complaint	Analysis of a tip or complaint can result in the need for an enforcement investigation. The indicator identifies the number of SEC investigations that result from tips and complaints received by the SEC.
SEC investigations in which requests for access to information were granted by the SEC to other authorities, such as SROs or other state, federal, and foreign enforcement authorities	The SEC works closely with other regulators and authorities. This metric identifies the number of investigations in which the SEC granted one or more authorities access to information concerning an investigation during the fiscal year. This may include requests for access to SEC investigative files concerning investigations that the SEC continues to pursue, as well as those in which the SEC has completed its investigation.
Requests from foreign authorities for SEC assistance and SEC requests for assistance from foreign authorities	Each year, the SEC makes hundreds of requests for enforcement assistance to foreign regulators, while responding to hundreds of such requests from other nations. To facilitate this type of assistance, and encourage other countries to enact laws necessary to allow regulators to cooperate with their foreign counterparts, the SEC has entered into bilateral information-sharing arrangements, as well as the Multilateral Memorandum of Understanding, an information-sharing arrangement negotiated through IOSCO.

STRATEGIC OBJECTIVE 2.3

The SEC prosecutes violations of federal securities laws and holds violators accountable through appropriate sanctions and remedies.

Investors are not truly protected unless those who prey on them are swiftly and appropriately sanctioned. The enforcement staff strives to obtain swift and firm sanctions, while remaining fair and reasonable. The breadth of the enforcement program's capabilities in this area derives, in part, from its close cooperation with the other SEC divisions that perform regulatory functions and also have deep knowledge of the market and its participants.

To improve the quality and efficiency of its investigations, the SEC is committed to streamlining internal processes wherever possible. In pursuing potential violations of the securities laws, the SEC regularly works closely with other regulators and law enforcement agencies. The enforcement program also has seen a dramatic increase in its coordination efforts with foreign authorities, including requests for assistance to and from foreign regulators under bilateral and multilateral information-sharing arrangements. These efforts also include requests to trace proceeds of fraud to foreign countries, and actions to obtain asset freezes. The SEC is committed to further expanding its coordination with these entities in order to strengthen the Commission's ability to hold wrongdoers accountable.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Continue utilizing specialty groups within the enforcement program:** The SEC will continue to use specialized groups and task forces to move quickly and to centralize expertise on the most critical issues emerging in the markets. As market conditions and market events dictate, Enforcement will evaluate the need to add, eliminate or implement changes to specialized groups and task forces.
- **Enhance timeliness of distributions to wronged investors:** The SEC will improve timeliness and efficiency of its efforts to return money collected in enforcement actions to harmed investors.
- **Enhance communications among SEC divisions and offices and the enforcement program:** The SEC will improve communication and sharing of information between the enforcement program and other divisions and offices to bring to bear the collective expertise of the Commission in a timely and efficient manner, such as continuing meetings of the Cross-Border Working Group.

- **Review approach for enforcement penalties:** The SEC will continue to assess its approach to the use of penalties in connection with enforcement recommendations/actions so that penalties have the appropriate punitive and deterrent effect, having in mind avoiding unnecessary harm to shareholders.
- **Broaden the range of enforcement sanctions:** The SEC will develop alternative approaches to sanctions to gain greater flexibility in bringing actions to conclusions that benefit investors.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Percentage of enforcement actions in which the Commission obtained relief on one or more claims	This metric identifies, as to all parties to enforcement actions that were resolved in the fiscal year, the percentage against whom the Commission obtained a judgment or order entered on consent, a default judgment, a judgment of liability on one or more charges, and/or the imposition of monetary or other relief. The Division of Enforcement is currently assessing this metric, and evaluating how to incorporate qualitative considerations of the results of its enforcement actions.
Percentage of first enforcement actions filed within two years of the opening of an investigation	This metric concerns the pace of investigations that lead to the filing of enforcement actions. Specifically, this metric captures the rate at which the first enforcement action arising out of an investigation was filed within two years of the opening of the investigation. If the investigation was preceded by a matter under inquiry, the metric draws on the date of the opening of the matter under inquiry. In conducting investigations, the Enforcement program continually strives to balance the need for complete, effective and fair investigations with the need to file enforcement actions in as timely a manner as possible.
Average months between opening a matter under inquiry or an investigation and commencing an enforcement action	This metric captures the average number of months between the opening of an investigation and the filing of the first enforcement action arising out of that investigation. If the investigation was preceded by a matter under inquiry, the metric draws on the date of opening of the matter inquiry. In conducting investigations, the enforcement program continually strives to balance the need for complete, effective, and fair investigation with the need to file enforcement actions in as timely a manner as possible. While not all investigations result in the filing of enforcement actions, this metric provides information concerning the pace of investigations that do lead to such actions and supplements the previous goal, which measures the percentage of first enforcement actions filed within two years.

PERFORMANCE GOAL	DESCRIPTION
Percentage of debts where either a payment has been made or a collection activity has been initiated within 180 days of the due date of the debt	The SEC can seek a wide range of remedies for failure to comply with the securities laws. These remedies include civil monetary penalties and disgorgement. When the remedies are imposed by the SEC or the federal district court, payments must be made by a certain date. This metric identifies the percentage of debts where debtors have made payments or the SEC has initiated a collection activity within 180 days of the due date. Such collection activities include, among other things, demand letters, negotiation of payment plans, enforcing the payment of the debt through the courts or other judicial remedies.
Percentage of Fair Fund and disgorgement fund plans that have distributed 80 percent of the available funds for distribution within twenty four (24) months of the approval of the distribution plan	In addition to other types of relief, the SEC may seek orders requiring parties to disgorge any money obtained through wrongdoing. The SEC also is empowered to seek civil penalties for violations of the securities laws. Where appropriate, the SEC has sought to return disgorged funds to harmed investors and, as a result of the Fair Funds provisions of the Sarbanes-Oxley Act and the Dodd-Frank Act, to combine amounts paid as penalties with disgorged funds, or to create a Fair Fund from penalties only, to reduce losses to injured parties and to maximize funds available for distribution. This metric identifies the percentage of distribution plans that reached a critical mass during the fiscal year and within twenty four (24) months of the approval of the distribution plan. The distribution plan includes the timeline and procedures required to return the funds to injured investors. This reflects Commission-wide efforts to implement plans to return money to investors quickly. Any funds not returned to investors are sent to the U.S. Treasury or the Investor Protection Fund established pursuant to Section 21F(g) of the Securities Exchange Act of 1934. Neither disgorgement nor penalties are used for the SEC's own expenses.

Related Indicators

The following indicators are useful for understanding the SEC's activities, but should not be considered performance metrics. As these indicators are not used to assess performance, they do not require targets or timeframes.

INDICATOR	DESCRIPTION
Percentage of filed enforcement actions reflecting characteristics that present enhanced risk to investors and markets, as measured by the nature of the investigation, conduct, parties and impact.	This indicator assesses the quality of the cases filed by the Division of Enforcement. The indicator focuses on cases filed by the SEC that involve factors reflecting enhanced risk to investors and markets. Such cases may involve: (i) those identified through risk analytics and cross-disciplinary initiatives to reveal difficult-to-detect or early stage misconduct, thus minimizing investor loss and preventing the spread of unlawful conduct and practices; (ii) particularly egregious or widespread misconduct and investor harm; (iii) vulnerable victims; (iv) a high degree of scienter; (v) involvement of individuals occupying substantial positions of authority, or having fiduciary obligations or other special responsibilities to investors; (vi) involvement of recidivists; (vii) high amount of investor loss prevented; (viii) misconduct that is difficult to detect due to the complexity of products, transactions, and practices; (ix) use of innovative investigative or analytical techniques; (x) effective coordination with other law enforcement partners; and/or (xi) whether the matter involves markets, transactions or practices identified as an enforcement priority, or that advances the programmatic priorities of other SEC divisions or offices.
Total amount distributed within the fiscal year, and the number of Fair Funds from which those distributions came	In its enforcement actions, the SEC may seek to return funds to harmed investors through disgorgement of ill-gotten gains or through the Fair Funds provision of the Sarbanes-Oxley Act. This provision permits the SEC to combine amounts paid as penalties with disgorged funds, or to create a Fair Fund from penalties only, to reduce losses to injured parties. This reflects the SEC's efforts to return funds to injured investors. This indicator identifies the total amount distributed within the fiscal year, and the number of Fair Funds from which those distributions came. This indicator may increase or decrease in dollar amount and number of distribution funds based on the number of SEC enforcement actions brought involving distributions, amounts ordered and paid in those actions, and other factors. Due to the variation in reporting timelines established for each individual distribution, reported amounts are based on the agency's best available information. Reported amounts do not include those funds distributed through receiverships. Any funds not returned to investors are sent to the U.S. Treasury or the Investor Protection Fund established pursuant to Section 21F(g) of the Securities Exchange Act of 1934. Neither disgorgement nor penalties are used for the Commission's own expenses.

INDICATOR	DESCRIPTION
Percent of enforcement actions filed that arose out of national priority investigations	The Division of Enforcement brings many enforcement actions each year that can be characterized as high impact and of national priority. High impact or national priority investigations include those investigations which are significant for one or more of the following reasons: (i) presents an opportunity to send a particularly strong and effective message of deterrence, including with respect to markets, products and transactions that are newly developing, or that are long established but which by their nature present limited opportunities to detect wrongdoing and thus to deter misconduct; (ii) involves particularly egregious or extensive misconduct; (iii) involves potentially widespread and extensive harm to investors; (iv) involves misconduct by persons occupying positions of substantial authority or responsibility, or who owe fiduciary or other enhanced duties and obligations to a broad group of investors or others; (v) involves potential wrongdoing as prohibited under newly-enacted legislation or regulatory rules; (vi) concerns potential misconduct that occurred in connection with products, markets, transactions or practices that pose particularly significant risks for investors or a systemically important sector of the market; (vii) involves a substantial number of potential victims and/or particularly vulnerable victims; (viii) involves products, markets, transactions or practices that the Division of Enforcement has identified as priority areas (i.e., conduct relating to the financial crisis; fraud in connection with mortgage-related securities; financial fraud involving public companies whose stock is widely held; misconduct by investment advisers; and matters involving priorities established by particular regional offices or the specialized units); and/or (ix) provides an opportunity to pursue priority interests shared by other law enforcement agencies on a coordinated basis.
Criminal actions related to conduct under investigation by the SEC	In some instances, conduct may involve both civil and criminal violations and may be investigated by both the SEC and the criminal authorities. This indicator identifies the number of criminal actions that are related to conduct under investigation by the SEC.
Disgorgement and penalties ordered and the amounts collected	In addition to other types of relief, the SEC may seek orders requiring parties to disgorge any money obtained through wrongdoing. The SEC is also empowered to seek civil penalties for violations of the securities laws. In some cases, the SEC will seek to obtain large monetary sanctions even in instances where the prospects of collecting on a judgment are slight. The rationale for seeking monetary relief in these circumstances is that such relief, even when likely uncollectible, might become collectible in the future based on the defendant's changed circumstances, and also because such relief can serve to deter others from violating the securities laws. Where appropriate, the SEC has sought to return disgorged funds to harmed investors. Funds not returned to investors are sent to the Treasury or the Investor Protection Fund established pursuant to Section 21F(g) of the Securities Exchange Act of 1934. This indicator lists disgorgement and penalties ordered as a result of SEC cases and the amounts collected in those actions. This indicator could increase or decrease based on various factors.

"Increasing investor understanding should always be one of our primary goals. But it is not enough merely to make accurate, timely, and useful information available; we also have to make it accessible. We have to provide information in the ways that investors want to receive it. Investor outreach is crucial to success. Finding out what is on investors' minds will improve the overall quality of the information we provide."

CHAIR MARY JO WHITE

STRATEGIC GOAL 3

Facilitate Access to the Information Investors Need to Make Informed Investment Decisions

THE FEDERAL SECURITIES LAWS require that corporations, investment companies, and other entities provide investors with timely and meaningful information about, among other things, their operations and financial condition. Because an educated and informed investor ultimately provides the best defense against fraud and costly mistakes, these laws place great emphasis on providing material information to the investing public.

The SEC promotes informed investment decisions through two main approaches. The first is to require that investors have accurate, useful, and timely public access to disclosure materials that can be easily understood and analyzed. The second is to implement a variety of investor education initiatives aimed at providing investors with a better understanding of the operations of the nation's securities markets.

In administering its disclosure program, the SEC requires reporting entities to disclose financial and non-financial information to the investing public, thereby providing a common pool of knowledge for all investors to use to judge for themselves whether a security is an appropriate investment. Similarly, SEC rules require that investors have access to certain information about the financial intermediaries they rely upon for investment advice and other services. SEC staff reviews the disclosure and other filings that corporations, investment companies, and other entities submit to assess whether the disclosures appear adequate and accurate under the relevant rules and regulations.

The goal of the SEC's investor education program is to give investors the information they need to evaluate current and potential investments, while also providing agency staff with critical insight about emerging trends and factors shaping investor decision-making. The SEC staff aims to collect investor-focused data from a variety of sources and use it both to track trends in the securities industry and to identify, among other things, problematic brokers, investment advisers, firms, and sales practices.

STRATEGIC OBJECTIVE 3.1

The SEC works to ensure that investors have access to high-quality disclosure materials that facilitate informed investment decision-making.

Investors who have access to information and know what questions to ask are more likely to invest wisely, and to choose professional intermediaries that will best meet their objectives. The SEC understands that not all investors need the same information and that those needs are affected by their backgrounds, resources and goals. The SEC seeks to structure disclosure requirements so that investors are armed with timely and useful information they need to make informed investment decisions.

As technology and the complexity of financial instruments change, so too do the needs of modern day investors. Providing investors with information in concise, easy-to-use formats that are tailored to their needs helps investors to help themselves. On a recurring basis, the Commission examines its filing review program to explore whether its disclosure requirements, review criteria, approach to comments, and professional and technology resources provide maximum impact to benefit investors. As described below, the SEC will engage in a number of initiatives to further enhance its programs in this key area.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Update disclosure and reporting requirements to reflect the informational needs of today's investors:** The SEC will continue its efforts to enhance disclosure requirements for the benefit of investors, including a reassessment of current core corporate disclosure requirements. In proposing changes for the Commission to consider, the staff will seek to modernize disclosure requirements and eliminate redundant reporting requirements. The staff's efforts will continue to include a review of proxy voting and shareholder communications to identify ideas and proposals for potential improvement to those rules.
- **Evaluate the effectiveness of filing review programs for reporting entities so that investors receive material information in a timely manner without imposing undue regulatory burdens on filers:** The staff will continue to evaluate the Commission's filing review processes and make changes in response to evolving trends or market developments. The staff will also work to ensure that the SEC has reliable risk management tools to identify material issues in offering documents and periodic reports for review, and obtain enhancements in disclosure. This assessment will explore the criteria used to identify filings for review, the process of issuing comments to reporting entities and new ways for technology to help improve the Commission's programs.

- **Design and implement new disclosure regimes for specialized categories of issuers so that investors in these products have relevant and useful information to make informed investment decisions:** The SEC will continue to evaluate and improve the disclosure requirements for securitized financial products and other complex financial instruments. The SEC plans to consider rules designed to provide variable annuity investors with more user-friendly disclosure and to improve the delivery of information about variable annuities through increased use of the internet and other electronic means of delivery. In addition, the SEC will continue work on proposed amendments to its advertising rules that would require target date retirement funds' marketing materials to provide investors enhanced information about those funds.
- **Design and implement enhancements to EDGAR and SEC.gov to facilitate investor and market participant access to and utilization of disclosure documents and other information:** The SEC will continue to modernize its IT systems and the dissemination and rendering of electronic disclosure documents to improve investor access to relevant information and the ease of interacting with the SEC. The SEC is working on enhancements to data standards and XBRL filing requirements that improve the quality of structured data and reduce burdens on filers.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Percentage of public companies and investment companies with disclosures reviewed each year	The Sarbanes-Oxley Act requires that the SEC review, at least once every three years, the disclosures of all companies and investment company portfolios reporting under the Exchange Act. These reviews help improve the information available to investors and may identify possible violations of the federal securities laws. This metric gauges the number of public companies and investment companies reviewed each year.
Time to issue initial comments on Securities Act filings	The target of 30 days or less has become a de facto industry standard for issuers and underwriters' expectations for the maximum time to receive initial comments on Securities Act registration statements. This metric will measure the Commission's frequency in meeting this 30-day target.
Percentage of investment company disclosure reviews for which initial comments are completed within timeliness goals	For initial registration statements, the SEC's goal is for staff to issue initial comments within 30 days after they are filed (60 days for registration statements of insurance product separate accounts and related mutual funds). The SEC also aims for staff comment on post-effective amendments within 45 days and preliminary proxy statements within 10 days after they are filed. This metric will show how often the Commission is meeting this goal.

Related Indicator

The following indicator is useful for understanding the SEC's activities, but should not be considered a performance metric. As this indicator is not used to assess performance, it does not require a target or timeframe.

INDICATOR	DESCRIPTION
Total digital audience including website, social media and mobile media	Digital media has become the dominant channel for investors seeking to access information. These statistics will help evaluate the extent to which investors are turning to the SEC, identify the channels they use, and quantify the amount of information they receive.

STRATEGIC OBJECTIVE 3.2

The SEC works to understand investor needs and educate investors so they are better prepared to make informed investment decisions.

Understanding the interests and concerns of investors is critical to carrying out the Commission's investor protection mission. The SEC advances this mission by regularly communicating with investors, responding to their complaints and inquiries, and providing educational programs and materials.

The SEC will obtain more comprehensive information about the views and perspectives of investors. It will seek more robust information regarding the behavioral characteristics of investors and the types of information investors need and use as they make informed investment decisions. It will compile and provide this information to the Commission to help in the development of rules and educational programs that address investors' views and concerns.

The SEC is exploring ways to encourage investor input by presenting investors with clear, easily understandable explanations of Commission rules and rule proposals and other activities through a variety of communication channels, including social media. These efforts will complement those of the Investor Advisory Committee, which was constituted to present the views and experience of a broad spectrum of investors, and which will serve as an additional source of information concerning investors' priorities and perspectives on the Commission's regulatory agenda.

More comprehensive data about investors also will drive the Commission's investor education efforts. Working in partnership with other federal and state agencies, financial industry associations, consumer groups and educational organizations, the SEC will develop investor education initiatives that are targeted to specific audiences.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Use feedback from individual investors to improve investor education resources:** In addition to responding to investor complaints and inquiries and conducting in-person outreach, the SEC will use informational surveys to evaluate whether investors are engaging in prudent investing behaviors and to gauge the usefulness of its investor education materials and responsiveness of its investor assistance program.
- **Inform rulemaking with investors' views:** The SEC will use investor testing and other outreach efforts, as appropriate, to gather input from investors on rulemaking initiatives and better understand their informational needs.
- **Address Investor Advisory Committee input:** The SEC will consider information and respond to recommendations from the Investor Advisory Committee regarding investors' perspectives and priorities.
- **Expand collaborative partnerships:** The SEC will partner with other federal and state agencies, securities regulators and non-profit organizations to shape and target educational initiatives to maximize their impact on specific communities of interest.
- **Promote investor awareness:** The SEC staff will issue Investor Alerts and other educational materials designed to both arm investors to be their own first line of defense against fraud and assist them in understanding new products and the role of financial intermediaries.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Number of page views of online investor education content, and number of in-person events, including those with specifically targeted communities and organizations	The Office of Investor Education and Advocacy (OIEA) initiates investor education campaigns on key strategies for making informed investment decisions, including publicizing online resources for researching investment professionals and investments, understanding fees, and identifying fraud. OIEA staff also participates in in-person events for investors generally and those targeted to specific investors, such as seniors, service members, and other affinity groups. This metric tracks page views of SEC online investor education materials and the number of investor events in which OIEA staff participated.
Timeliness of responses to investor contacts	OIEA serves the tens of thousands of investors each year who contact the SEC with investment-related complaints and questions. The staff aims to close out as many new investor assistance matters as possible within seven and thirty business days.
Customer satisfaction rating of OIEA's online investor education resources	This metric gauges the effectiveness, helpfulness, and usability of OIEA's online investor education resources.
Number of new investor education materials designed primarily to help investors protect themselves from fraud	Through OIEA, and often in conjunction with other organizations, the staff issues Investor Alerts and other forms of educational material that inform investors about different permutations of fraud, new investment products, and other topical issues. This metric measures the number of new investor education materials issued by OIEA.

Related Indicators

The following indicators are useful for understanding the SEC's activities, but should not be considered performance metrics. As these indicators are not used to assess performance, they do not require targets or timeframes.

INDICATOR	DESCRIPTION
Number of investor testing research projects	This indicator tracks the number of research initiatives used to gather feedback from investors on the usefulness of disclosures and other input on SEC rulemaking.
Number of sets of recommendations prepared by the investor advisory committee	This indicator tracks the recommendations from the Investor Advisory Committee regarding investors' perspectives and priorities.

"The SEC's hardworking and dedicated staff is the core component of the agency's strength."

CHAIR MARY JO WHITE

STRATEGIC GOAL 4

Enhance the Commission's Performance Through Effective Alignment and Management of Human, Information, and Financial Capital

THE PUBLIC AND THE SECURITIES MARKETS are best served by an efficient, effective, and agile SEC. Given the immense size of the securities markets the SEC regulates, the SEC's success in fulfilling its mission and in achieving the goals and objectives outlined in this Plan is highly dependent upon whether it's adequately funded and its ability to continually direct its resources towards the most productive uses. The SEC also is extremely mindful of its responsibility to optimize the use of its resources because it is a government agency entrusted with public funds.

The SEC continuously strives to enhance its performance by making sound investments in human capital and new technologies and by employing strong financial management and operational risk management practices. With respect to its workforce, the SEC must be able to attract and retain high-performing staff, continually update their skills so they are abreast of the latest developments in the industry and create organizational structures and work processes that are efficient and effective. The Commission's information technology environment must give employees the tools they need to view, analyze and act upon the enormous volume of financial data and other information relevant to oversight of the securities markets. The SEC must demonstrate a continued commitment to maintaining strong internal controls to support effectiveness and efficiency of Commission operations. Finally, the SEC must continually direct its financial resources to their highest and best use, always subject to strong internal controls.

STRATEGIC OBJECTIVE 4.1

The SEC promotes a results-oriented work environment that attracts, engages, and retains a technically proficient and diverse workforce, including leaders who provide motivation and strategic direction.

The SEC is committed to being an employer of choice by consistently attracting, hiring, developing, and retaining a high-quality, diverse, and results-oriented workforce. The SEC is continually refining a series of programs to enhance its human capital, such as rewarding high performance, promoting high employee satisfaction and updating staff skills.

The SEC continues to build and maintain an effective training program to deepen expertise and skills, not only in the rapidly evolving nature of the markets, but also in areas of new responsibility for the Commission. The training supports development for employees directly involved in examinations, investigations, fraud detection, litigation, and other core mission responsibilities of the SEC. The training consists of specialized in-depth topics concerning new trends in the securities industry and changing market conditions, as well as analytics and forensics. It also allows staff to obtain certain specialized financial certifications and regulatory credentials, as well as the advanced continuing education credits required for maintaining legal and financial credentials.

The SEC's success at fulfilling its strategic goals depends upon effective leadership at all levels. From branch chiefs to the Commission's senior leadership, the SEC's leaders must not only motivate and manage employees effectively, but also play a critical role in identifying the key areas on which staff should focus their attention to generate the greatest benefit for investors. Through leadership and employee development programs, the Commission seeks to maintain a diverse cadre of technically proficient leaders that can conduct their supervisory responsibilities effectively and meet the dynamic challenges of market oversight.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Increase employee engagement and retention:** To retain high caliber and diverse talent, the SEC will implement programs and initiatives focused on employee engagement and retention. In response to employee viewpoint survey results, the SEC has conducted numerous interviews and focus groups with its workforce at every level. The recommendations derived from this information will form the basis for action plans aimed at improving the Commission's organizational climate and workforce morale. These plans will be implemented and evaluated in a manner designed to promote continuous improvement. Improvements in organizational climate and workforce morale should lead to greater employee engagement and increased retention, particularly of high-performing employees.
- **Enhance employee development program:** For the SEC to fulfill its mission it must attract and select a diverse cadre of highly talented and accomplished people and provide them with opportunities to develop the knowledge and skills to achieve high levels of performance and address changes in market conditions, securities laws, federal regulations, best practices and technology. The Office of Human Resources (OHR) will work to identify training and learning needs within each division and office and to procure or develop high-quality training that will develop employee skills. OHR will utilize, encourage and monitor the use of individual development plans so that employee-specific needs are met and that progress can be tracked.
- **Leadership development program:** To ensure the SEC has the caliber of leadership commensurate with its mission, the SEC will continue the construction and implementation of a comprehensive leadership development program that will address the needs of a diverse group of supervisors, managers, and leaders. Specific aspects of the program include improving training for new supervisors, building skills in change management, enhancing cultural awareness and inclusiveness, increasing the number and scope of developmental opportunities for all leaders, and instituting a succession planning program to prepare non-supervisors to assume supervisory roles and supervisors to assume key executive positions.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Turnover	When employee morale and engagement are high, high-performing employees tend to remain in the organization. Although turnover can fluctuate based on a variety of factors, the SEC aims to keep its turnover rate relatively low, below 8% per year.
Expanding staff expertise	Internal training and hiring programs are designed to help the agency recruit and develop a diverse and qualified staff with the key skills, industry knowledge, and expertise to support the SEC mission. In particular, there is a need to train examiners, attorneys, economists, and other experts for subject matter expertise relevant to the marketplace and investment and trading practices. This metric tracks whether certain areas requiring significant training are being addressed. The agency will track the number of SEC staff participants in mission-focused training and development programs and will report on specific items through the use of post-course evaluations to assess the impact and results of this training on a five-point scale.
Number of diversity-related partnerships/alliances	Increased numbers of diversity-related partnerships or alliances with professional associations and educational organizations provide opportunities to educate students about the SEC's work and to recruit career professionals from all segments of society. The SEC will track the number of partnerships and/or alliances with diverse professional associations and educational organizations.
Survey rankings	Annual and other rankings, together with other metrics and indicators of federal government agencies will be used as one kind of metric to determine the SEC's overall success in improving employee morale and employee engagement.
Bench strength	To maintain mission effectiveness, it is essential that attrition in the leadership ranks is quickly addressed by having a highly qualified and diverse pool of candidates ready to assume those critical roles. Success is measured by the percentage of key leadership positions for which the SEC has identified a pool of qualified candidates.

STRATEGIC OBJECTIVE 4.2

The SEC encourages a collaborative environment across divisions and offices and leverages technology and data to fulfill its mission more effectively and efficiently.

The SEC's divisions and offices collaborate in a variety of ways, both formal and informal, to advance the Commission's mission. Such coordination is essential for any organization as large and complex as the SEC to bring together different perspectives, decide on the best course of action, and implement that course in the most effective way. Given the importance and complexity of the SEC's mission, it is imperative that the Commission continuously improve its ability to break down silos, share information and work jointly towards a common purpose.

Information technology plays a crucial role in the mission of the SEC and its ability to share information and data both internally and externally. The SEC gathers a wide variety of data and other information from a variety of sources, including corporate disclosures, equity exchange feeds, investigations and examinations, tips, complaints, and referrals, and commercial vendors. The SEC is working to develop systems that will allow more of this information to be quickly shared, analyzed, and joined with other information about the same entity or individual. These efforts should save staff time, provide better information about the firms the SEC regulates and enhance the ability to uncover hidden risks to investors.

The increasing size and complexity of the U.S. markets require that the SEC continue to leverage technology to improve its productivity, as well as identify and address the most significant threats to investors. Information technology is an increasingly vital function to the SEC in modernizing filing practices, disseminating the vast quantity of regulatory filings, managing the large number of internal business processes and work products and protecting the Commission's information assets.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Work smarter to achieve the SEC mission:** A multi-year technology transformation plan called "Working Smarter" will ensure the SEC's business processes are streamlined, integrated, and implemented with the best technology to reduce costs and increase efficiencies and effectiveness; deliver better services to both employees and the public; and provide greater accountability, transparency, and security. Leveraging modern, reliable, and innovative technologies and predictive analytics will transform the way the SEC performs its mission and provide a proactive view into how technology impacts capital markets. By ensuring people "work smarter," the SEC will derive significant and measurable performance improvements in core operations and increase value through the use of automated processes.
- **Make disclosure information more useful for analysis:** Disclosure documents are submitted to the Commission electronically and, as appropriate, disseminated electronically to the investing public. This initiative will review the current disclosure systems and processes and identify ways to optimize the use of technology to improve the way disclosure documents are constructed and submitted with more emphasis on data collection. A new filing system that is optimized for data retrieval and analysis will provide features that help users create filings that are appropriate to their purpose and that allow computers to extract data from the filings for automated analysis. The system will be more flexible, so that, as new disclosure documents are defined, they can be implemented much more quickly, with all of the features of a modern, web-based filing system. Eventually, new filings structured for automated data retrieval and analysis will replace all filings submitted through the EDGAR system.
- **Improve SEC's information management and analysis functions:** The SEC aims to provide its staff with the access to information and effective analytical capabilities needed to perform their duties. To accomplish this outcome, the SEC will work on several fronts to improve its abilities to acquire, store, manage, and deliver data and information in support of its critical business functions. Among the steps in this effort are standardization of enterprise-wide platforms, knowledge management, seamless integration of structured and unstructured data sources, cloud computing, modernization of SEC.gov and EDGAR filer systems, cataloging the SEC's data and its interrelationships in an electronic data warehouse (EDW); ensuring data quality; and establishing new methods for capturing information, including from SEC staff themselves as they conduct examinations, investigations, and other activities.

- **Enhance workflow and document management:** Virtually all business processes within the Commission involve the acquisition, creation, review, and editing of documents. These processes are conducted informally, without the benefit of automated tracking, notification and auditing capabilities. Under this initiative, the SEC will assess its critical business processes and apply document management tools to increase productivity, enhance collaboration and create a shared repository of essential documents and data. Among the business areas that would benefit from this effort are enforcement case management, disgorgement and penalties, examination management, management of Commission actions, filing of administrative proceedings and rulemaking.
- **Enhance the SEC's electronic discovery program:** The SEC must have the technical capability to electronically organize and retrieve an extraordinary volume of documents obtained in the conduct of investigations. Under this initiative, the SEC will enhance its current electronic discovery tools and improve its document storage, organization, and analytic capabilities. The SEC also will create a repository of documents and data that is more widely available across cases and with other Commission business functions as appropriate.
- **Enhance operational resiliency:** The SEC will support a reliable computing environment that provides high performance, security and cost effectiveness. The Commission also will enhance the computing infrastructure, including through server virtualization and clustering, to eliminate down time if systems at one site fail, enhance security, and achieve cost savings.
- **Enhance internal communications to staff:** Led by the Offices of Public Affairs and Chief Operating Officer, the SEC will track and recognize exceptional staff achievements, awards and other successful outcomes to promote a sense of pride and accomplishment throughout the Commission. Additionally the SEC will initiate a program leveraging technology and best practices to centralize all administrative, technology, financial, procurement, human capital and other operational information, news and resources so that staff can easily "self-service" and find the tools, forms, guidance and support they need.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Ensure SEC's systems and applications are available	The SEC aims to enhance its computing infrastructure to eliminate down time if systems at one site fail, among other objectives. This metric will capture the percentage of systems and applications that can fail over or within 8 hours.
Equip the SEC with an enhanced enterprise infrastructure	The SEC aims to promote collaboration and information sharing across the enterprise. To improve efficiency and knowledge management, the SEC will consolidate and centralize its collaborative technologies to a commonly used enterprise set by 2020. This metric will measure the percentage of the SEC's offices and divisions that utilize centralized enterprise collaboration solutions.
Expand the SEC's video teleconferencing (VTC) capabilities to support an increasingly geographically dispersed workforce	The SEC seeks to develop a state-of-the-art video teleconference solution that allows users to conduct a video/teleconference meeting between HQ, regional offices and multiple endpoints simultaneously; collaborate and share presentation materials; and use VoIP technology to host video teleconferences from their offices/workspaces with other SEC users or conference rooms. This metric will measure the average "uptime" or availability of all VTC systems.
Pursue continuous technology cost reductions and efficiencies	Recent technology enhancements- e.g., data center consolidation, virtualization and maintenance contract reductions- are producing technical efficiencies and cost savings. This metric will measure the amount of these costs savings.
Enhance the SEC's enterprise data warehouse infrastructure and performance	The Enterprise Data Warehouse (EDW) infrastructure will enable the provisioning of data to Commission staff for search and analysis through a virtual data warehouse platform. This metric will measure the availability of EDW and data sources.

STRATEGIC OBJECTIVE 4.3

The SEC maximizes the use of agency resources by continually improving agency operations and bolstering internal controls.

As an agency of the federal government entrusted with public funds, the SEC must always strive to enhance the value for investors it creates from every budget dollar. The SEC continually strives to allocate the resources approved by Congress and the President towards the highest and best use. The SEC also constantly reevaluates its operations to identify cost savings and maximize their benefit.

The SEC will strive to maintain strong financial management practices and robust internal controls. The SEC is placing great emphasis on bolstering its processes and systems in its budgeting, accounting, and internal control functions over operations. In addition, the SEC continues to focus on delivering complete, concise, and meaningful information about the financial and operating performance of the Commission that supports management decision-making.

Initiatives

To accomplish this strategic objective, the SEC plans to implement the following initiatives:

- **Better integrate data from SEC operational functions into management decisions:** To accomplish the SEC's mission it is essential that management decisions are based on the best available information from multiple sources. This requires SEC leaders to consider information from human resources, financial management, information technology and support operations functions when making management decisions. To improve decision-making and reporting capabilities, the SEC will examine its data collection, analysis and reporting methods to determine areas for improvement.
- **Further enhance financial systems to achieve operational efficiency and effectiveness:** The SEC is in the early stages of building a financial datamart as part of a broader Commission-wide EDW initiative. The datamart is expected to integrate data from various systems to provide more comprehensive management and financial reporting on a regular basis, to facilitate better decision-making. The SEC also will participate in the federal government-wide deployment of a new travel system, work to replace the system supporting budget execution and formulation, and focus on reforming the systems related to filing fees and registrant deposits.

- **Continue enhancing internal controls:** Although the SEC has made significant progress in strengthening internal controls over financial reporting, the Commission is still focused on further optimizing its controls to enhance financial accounting, reporting and operations. Many of these areas are interdisciplinary and involve collaboration between different offices within the SEC. Such areas include accounting for property and contract obligations, as well as disgorgements, penalties, and filing fees. The SEC also will continue to focus on areas that are highly manual and therefore more at risk for error, with a view towards further automation where possible.
- **Further enhance management assurance to achieve operational efficiency and effectiveness via an agency-wide operational risk management program:** The SEC will continue to build its Operational Risk Management program to manage internal risks that may impact its ability to successfully fulfill its mission. Risk management processes and procedures will be institutionalized and consistently applied within all operating units to ensure that internal operating risks are identified, analyzed, and managed at all levels of the organization. The SEC is in the early stages of formalizing governance structures through the Operational Risk Management Oversight Committee (RMOC). The RMOC will provide oversight of the development and implementation of operational risk policies, framework, methodologies, and provide leadership and monitoring of Commission-wide operational risks.
- **Enhance consideration of diverse sources in SEC's business activities:** For the SEC to enhance the diversity of its suppliers to ensure that it is procuring the best goods and services to meet its contracting needs, the SEC actively will engage in outreach to diverse vendors to evaluate and consider their capabilities, and publicize procurement opportunities in diverse sources.

Performance Goals

The SEC intends to use the following performance metrics to gauge its progress in achieving this strategic objective:

PERFORMANCE GOAL	DESCRIPTION
Financial audit results	Under the Accountability of Taxpayer Dollars Act of 2002, the SEC is required to meet all proprietary and budgetary accounting guidelines for federal agencies and to undergo annual audits. The SEC's audits are conducted by the Government Accountability Office (GAO).
Assurance statement on internal control over operations	In accordance with OMB A-123 and Section 961 of the Dodd-Frank Act, the SEC conducts an annual assessment of the effectiveness of internal controls. The SEC will continue to develop its Operational Risk program and enhance cross-organizational processes to support all division and office management assurance statements. Success is measured by the quality of risk and control assessments and management self-identification and resolution of improvement opportunities.
Timely completion of corrective action on Office of Inspector General (OIG)	Timely completion of audit recommendations is an important SEC priority. This metric measures how well the Commission is doing in completing corrective action on OIG audit recommendations within established timeframes.

PROGRAM EVALUATION

The SEC values independent, high-quality assessments of the agency's performance against its goals and desired strategic objectives. Such assessments are critical to the Commission's ability to evaluate its work, refine its programs and redirect resources accordingly. The more than 150 audits, studies, and evaluations of SEC programs and securities industry-related issues completed since the release of the agency's previous Strategic Plan have served as an important resource in the development of this Strategic Plan. Over the next five years, the SEC will continue to draw on evaluations from a variety of sources to improve its programs.

Annual Performance Report

In February 2013, the SEC published an Annual Performance Report (APR) describing the agency's accomplishments and presenting the results of the agency's performance metrics for FY 2012. The most recent version of the SEC's APR can be found on the agency's website, at http://www.sec.gov/about/secreports.shtml.

Consultation with Outside Groups

The SEC frequently seeks the input of investors, industry groups, academia, and other experts to gain outside perspectives about its programs and various issues in the securities industry. These efforts include the SEC's Investor Advisory Committee; Commission-sponsored roundtables focused on specific issues; the agency's Annual Government-Business Forum on Capital Formation, focused particularly on the needs of new, small, medium-sized, and independent businesses; the SEC's annual conference with the North American Securities Administrators Association; and solicitations of public comments on Commission rule proposals.

Government Accountability Office

The Government Accountability Office conducts dozens of studies or investigations related to the SEC's programs every year. In FY 2013, GAO's reports covered internal supervisory controls, requirements and costs associated with newly developed SEC rules, and the criteria for qualifying as an accredited investor, among other areas. In addition, GAO performs an annual audit of the SEC's financial statements and internal controls over financial reporting.

Office of the Inspector General

The Office of Inspector General (OIG) is an independent office within the SEC that conducts audits of programs and operations of the Commission and investigations into allegations of misconduct by staff or contractors. The mission of the OIG is to detect fraud, waste and abuse, and to promote integrity, economy, efficiency and effectiveness in the Commission's programs and operations.

U.S. SECURITIES AND EXCHANGE COMMISSION

100 F STREET NE | WASHINGTON, DC 20549 | WWW.SEC.GOV

Concurrent Session: Treasurer Takeaways

Thursday, March 31st
11:15am – 12:30pm
Marriott Marquis, Washington DC

Moderator:
Kelly Shiflett, VP-Finance & Treasurer-Capital Markets, Washington REIT

Panelists:
Gregory Andrews, CFO, CyrusOne Inc.
Mark Wallace, CFO & Treasurer, Communications Sales & Leasing, Inc.

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1 2016

Treasurer Takeaways

March 31, 2016

Faculty

- Moderator -- Kelly Shiflett, VP Finance and Treasurer, Washington REIT
- Panelists:
- Greg Andrews, Chief Financial Officer, Cyprus One
- Mark Wallace, SVP – Chief Financial Officer and Treasurer, CS&L Inc.

Topics to be Discussed

- Cybersecurity: strategies to reduce risk
- Protecting the organization against phishing fraud
- Controlling bank fees
- Considering implementing “same day ACH”
- Transaction costs for A/P and A/R processes and outsourcing possibilities
- Use of positive pay, UPIC

Topics to be Discussed

- Payment automation
- Cash forecasting – systems and other tools
- eBAM – electronic bank account management
- Managing divided responsibilities between treasury function and other related functions, *e.g.* investor relations and acquisitions

Concurrent Session: Timberland REIT Roundtable

Thursday, March 31st
9:45am – 11am
Marriott Marquis, Washington DC

Discussion Leaders:
Karen Balek, Sr. Director-Tax, Weyerhaeuser
Scott Winer, VP-Taxes, Rayonier Inc.

C

D

Dear :

This is in reply to a letter dated April 30, 2015, requesting a ruling that the patronage dividends described below do not constitute gross income to Taxpayer for purposes of § 856(c)(2) or § 856(c)(3).

FACTS

Taxpayer is a domestic corporation whose common stock is publicly traded. Taxpayer elected to be treated as a real estate investment trust ("REIT") beginning with its taxable year ending Date 1. Taxpayer is a calendar year taxpayer that uses an overall accrual method of accounting. Taxpayer's primary business is to own and manage timberland properties.

The Lenders are subchapter T (§§ 1381-1388) cooperatives owned by the patrons who borrow from them. The Lenders make distributions to their patrons in the form of "patronage dividends." The amounts of patronage dividends are based on the quantity or value of business done with the patron.

Taxpayer entered into a seven year credit agreement dated Date 2, (the "Credit Agreement") with the Initial Lenders to borrow $A from the Initial Lenders. Prior to closing the Credit Agreement, one of the Initial Lenders assigned $B of its commitment under the Credit Agreement to the Administrative Agent and Administrative Agent together with the Initial Lenders became the Lenders under the Credit Agreement. Administrative Agent sold participating shares in its share of the loan under the Credit Agreement to the Voting Participants in the cumulative amount of $C.

Taxpayer receives annual patronage dividends from the Lenders (and not from any Voting Participants), the terms of which are set by each Lender in its respective bylaws and other relevant documents (the patronage dividends received specifically by Taxpayer with respect to amounts borrowed under the Credit Agreement are "Patronage Dividends"). The amount of any Patronage Dividend depends on the amount borrowed and the time such amount is outstanding. Administrative Agent pays part of its Patronage Dividends in the form of equity. Per its bylaws, Administrative Agent targets D% of its total patronage dividends to be paid in equity until the target equity percentage has been met by the patron (in this case the Taxpayer).

REPRESENTATIONS

The following representations are made by Taxpayer:

(a) Taxpayer has used the proceeds of the Credit Agreement to pay off a mortgage of an affiliate secured by real estate assets described in § 856(c)(4)(A).

(b) The Patronage Dividends will be patronage dividends within the meaning of § 1388(a) and will be included on the tax return of Taxpayer as gross income.

(c) For financial accounting purposes, Taxpayer will treat the Patronage Dividends as a reduction in the interest expense related to Borrowings under the Credit Agreement.

LAW AND ANALYSIS

Section 856(c)(2) provides that in order for a corporation to qualify as a REIT, at least 95 percent of the corporation's gross income (excluding gross income from prohibited transactions) must be derived from sources that include dividends, interest, rents from real property, and gain from the sale or other disposition of stock, securities, and real property (other than property in which the corporation is a dealer).

Section 856(c)(3) provides that in order for a corporation to qualify as a REIT, at least 75 percent of the corporation's gross income (excluding gross income from prohibited transactions) must be derived from rents from real property, interest on obligations secured by real property, gain from the sale or other disposition of real property (other than property in which the corporation is a dealer), dividends from REIT stock and gain from the sale of REIT stock, abatements and refunds of taxes on real property, income and gain derived from foreclosure property, commitment fees to make loans secured by mortgages on real property or to purchase or lease real property, gain from certain sales or other dispositions of real estate assets, and qualified temporary investment income.

Section 856(c)(5)(J) provides that to the extent necessary to carry out the purposes of part II of subchapter M of the Code, the Secretary is authorized to determine, solely for purposes of such part, (i) whether any item of income or gain which does not otherwise qualify under §§ 856(c)(2) or (c)(3) may be considered as not constituting gross income for purposes of §§ 856(c)(2) or (c)(3), or (ii) whether any item of income or gain which otherwise constitutes gross income not qualifying under §§ 856(c)(2) or (c)(3) may be considered as gross income which qualifies under §§ 856(c)(2) or (c)(3).

Section 301(a) provides that except as otherwise provided in chapter 1 of subtitle A of the Code (which chapter includes §§ 301, 316, 317, 856, and 1388), a distribution of property (as defined in § 317(a)) made by a corporation to a shareholder with respect to its stock shall be treated in the manner provided in § 301(c).

Section 301(c) provides, in part, that in the case of a distribution to which § 301(a) applies, that portion of the distribution which is a dividend (as defined in § 316) shall be included in gross income.

Section 316(a) provides that for purposes of subtitle A (which subtitle includes §§ 856 and 1388), the term “dividend” means any distribution of property made by a corporation to its shareholders (1) out of its earnings and profits accumulated after February 28, 1913, or (2) out of its earnings and profits of the taxable year (computed as of the close of the taxable year without diminution by reason of any distributions made during the taxable year), without regard to the amount of the earnings and profits at the time the distribution was made.

Section 316(a) provides in the flush language that, except as otherwise provided in subtitle A, every distribution is made out of earnings and profits to the extent thereof, and from the most recently accumulated earnings and profits. It provides further that to the extent that any distribution is, under any provision of subchapter C of chapter 1 of subtitle A, treated as a distribution of property to which § 301 applies, such distribution shall be treated as a distribution of property for purposes of this subsection.

Section 1388(a) provides that, for purposes of subchapter T, the term “patronage dividend” means an amount paid to a patron by an organization to which part I of subchapter T applies (1) on the basis of quantity or value of business done with or for such patron, (2) under an obligation of such organization to pay such amount, which obligation existed before the organization received the amount so paid, and (3) which is determined by reference to the net earnings of the organization from business done with or for its patrons. For this purpose, net earnings shall not be reduced by amounts paid during the year as dividends on capital stock or other proprietary capital interests of the organization to the extent that the articles of incorporation or bylaws of such organization or other contract with patrons provide that such dividends are in addition to amounts otherwise payable to patrons which are derived from business done with or for patrons during the taxable year.

Section 1388(a) further provides that the term patronage dividend does not include any amount paid to a patron to the extent that (A) such amount is out of earnings other than from business done with or for patrons, or (B) such amount is out of earnings from business done with or for other patrons to whom no amounts are paid, or to whom smaller amounts are paid, with respect to substantially identical transactions.

Section 1385(a)(1) provides, that, except as otherwise provided, each person shall include in gross income the amount of any patronage dividend which is paid in money, a qualified written notice of allocation, or other property (except a nonqualified written notice of allocation), and which is received by him during the taxable year from an organization described in § 1381(a).

The legislative history underlying the tax treatment of REITs indicates that a central concern behind the gross income restrictions is that a REIT's gross income should largely be composed of passive income. For example, H.R. Rep. No. 2020, 86th Cong., 2d Sess. 4 (1960) at 6, 1960-2 C.B. 819, at 822-23 states, "[o]ne of the principal purposes of your committee in imposing restrictions on types of income of a qualifying real estate investment trust is to be sure the bulk of its income is from passive income sources and not from the active conduct of a trade or business."

Patronage dividends paid by a subchapter T cooperative are a return of earnings to its cooperative patrons based on the amount of business that the patron transacts with the cooperative. The patronage dividends paid by a subchapter T financing cooperative effectively reduce the costs that its patrons incur to borrow funds from the cooperative. The amounts paid by Lenders as Patronage Dividends represent earnings that the cooperatives are able to refund to Taxpayer based on the average amounts that Taxpayer borrowed from Lenders during the prior year. Thus, while Taxpayer must include Patronage Dividend income in its gross income under § 1385(a)(1), the Patronage Dividends effectively reduce Taxpayer's interest expense paid during the prior year. Under the facts of the instant case, exclusion of the Patronage Dividends from gross income for purposes of §§ 856(c)(2) and (c)(3) does not interfere with Congressional policy objectives in enacting the income tests under those provisions.

CONCLUSION

Accordingly, pursuant to § 856(c)(5)(J)(i), we conclude that the Patronage Dividends included in Taxpayer's gross income under § 1385 are excluded from its gross income for purposes of §§ 856(c)(2) and (c)(3).

Except as specifically ruled upon above, no opinion is expressed concerning any federal income tax consequences related to the facts herein under any other provisions of the Code. Specifically, we do not rule whether Taxpayer qualifies as a REIT under Part II of Subchapter M of Chapter 1 of the Code. Additionally, we are not ruling on the tax treatment of the Credit Agreement and whether the agreement is a loan for federal income tax purposes.

This ruling is directed only to the taxpayer requesting it. Taxpayer should attach a copy of this ruling to each tax return to which it applies. Section 6110(k)(3) of the Code provides that it may not be used or cited as precedent.

The rulings contained in this letter are based upon information and representations submitted by the Taxpayer under a penalties of perjury statement executed by an appropriate party. While this office has not verified any of the material submitted in support of the request for rulings, it is subject to verification on examination.

In accordance with the Power of Attorney on file with this office, a copy of this letter is being sent to your authorized representative.

Sincerely,

____

Taxpayer =

State =

Dear :

This is in reply to a letter dated April 21, 2015, in which Taxpayer requests rulings in connection with its real estate investment trust ("REIT") foreign income under section 856 of the Internal Revenue Code of 1986, as amended (the "Code").

Facts:

Taxpayer is a corporation organized under the laws of State that has elected to be taxed as a REIT. Taxpayer was organized for the purpose of making direct and indirect investments in commercial timberland businesses. Taxpayer realizes profits from the harvest and sale of timber and the long-term appreciation of the underlying timber properties.

Taxpayer operates in foreign countries through one or more foreign subsidiaries and associated intermediate holding companies (each, a "Foreign Sub"). Some Foreign Subs are qualified REIT subsidiaries ("QRSs") under section 856(i), partnerships, or disregarded entities. Taxpayer has jointly elected section 856(l) taxable REIT subsidiary ("TRS") status with other Foreign Subs that are corporations for federal income tax purposes (each, a "Foreign TRS").

Taxpayer expects that its Foreign TRSs will be either (i) controlled foreign corporations ("CFCs") within the meaning of section 957(a), with respect to which Taxpayer will be a United States shareholder within the meaning of section 951(b) (a "United States Shareholder"), (ii) passive foreign investment companies ("PFICs") within the meaning of section 1297(a), for which Taxpayer has made or intends to make elections under section 1295(a) to treat as qualified electing funds ("QEFs") for all taxable years during which the corporation was a PFIC that are included in the Taxpayer's holding period of the PFIC stock ("pedigreed QEFs"), or (iii) PFICs for which Taxpayer has not made a mark-to-market election and which are not pedigreed QEFs with respect to Taxpayer.

As a United States Shareholder with respect to the CFCs, Taxpayer is required under section 951(a)(1)(A)(i) to include in gross income its pro rata share of the CFCs' subpart F income, as defined in section 952(a). Taxpayer expects that the subpart F income of the CFCs will consist of items that are foreign personal holding company income ("FPHCI") within the meaning of section 954(c). Taxpayer's inclusions under section 951(a)(1)(A) that are attributable to the CFCs' deriving (i) interest; (ii) dividends; (iii) gains from the sale or other disposition of stock, securities, or real property that is not property described in section 1221(a)(1); and (iv) items that also would constitute "rents from real property" under section 856(d) if received by a REIT are referred to hereinafter as the "Subpart F Inclusions."

As a shareholder in PFICs for which Taxpayer has made QEF elections, Taxpayer is required under section 1293(a) to include in gross income its pro rata share of the earnings and profits of each QEF. Taxpayer expects to include amounts in income under section 1293(a) with respect to numerous PFICs for which it has made (or will make) QEF elections. Taxpayer's inclusions under section 1293(a) that are attributable to the QEFs' deriving (i) interest; (ii) dividends; (iii) gains from the sale or other disposition of stock, securities, or real property that is not property described in section 1221(a)(1); and (iv) items that also would constitute "rents from real property" under section 856(d) if received by a REIT are referred to hereinafter as the "QEF Inclusions."

As a shareholder in PFICs for which Taxpayer has not made mark-to-market elections and which are not pedigreed QEFs with respect to Taxpayer, Taxpayer is required under section 1291(a)(1)(B) to include certain amounts in gross income. Taxpayer expects to include amounts in income under section 1291(a)(1)(B) with respect to PFICs for which it has not made (and will not make) a QEF or mark-to-market elections (the "Non-QEF Inclusions" and, together with QEF Inclusions, the "PFIC Inclusions"). Taxpayer represents that the majority of the gross income that each of these PFICs will derive while owned by Taxpayer will be comprised of one or more of the following items: (i) interest; (ii) dividends; (iii) gains from the sale or other disposition of stock, securities, or real property that is not property described in section

1221(a)(1); and (iv) items that also would constitute “rents from real property” under section 856(d) if received by a REIT.

Taxpayer expects to recognize foreign currency gains with respect to distributions of previously taxed earnings and profits (“PTI”) as described in section 986(c)(1) attributable to the Subpart F Inclusions and QEF Inclusions (the “Section 986(c) Gains”).

Taxpayer requests the following rulings:

1) The Subpart F Inclusions and the PFIC Inclusions will be treated as qualifying income under section 856(c)(2).

2) The Section 986(c) Gains will not be taken into account for purposes of section 856(c)(2).

Law and Analysis:

Ruling #1: Whether the Subpart F Inclusions and PFIC Inclusions will be treated as qualifying income under section 856(c)(2).

Section 856(c)(2) provides that, in order for a corporation to qualify as a REIT, at least 95 percent of the corporation’s gross income must be derived from certain enumerated sources, which include dividends, interest, rents from real property, gain from the sale or other disposition of stock, securities, and real property (other than property in which the corporation is a dealer), abatements and refunds of taxes on real property, income and gain derived from foreclosure property, and certain commitment fees.

Section 856(c)(5)(J) provides that to the extent necessary to carry out the purposes of part II of subchapter M of the Code, the Secretary is authorized to determine, solely for purposes of such part, (i) whether any item of income or gain that does not otherwise qualify under sections 856(c)(2) or (3) may be considered as not constituting gross income for purposes of sections 856(c)(2) or (3), or (ii) whether any item of income or gain that otherwise constitutes gross income not qualifying under sections 856(c)(2) or (3) may be considered as gross income which qualifies under sections 856(c)(2) or (3).

The legislative history underlying the tax treatment of REITs indicates that a central concern behind the gross income restrictions is that a REIT’s gross income should largely be composed of passive income. For example, H.R. Rep. No. 2020, 86th Cong., 2d Sess. 4 (1960) at 6, 1960-2 C.B. 819, at 822-23 states, “[o]ne of the principal purposes of your committee in imposing restrictions on types of income of a qualifying real estate investment trust is to be sure the bulk of its income is from passive income sources and not from the active conduct of a trade or business.”

Subpart F Inclusions

Section 957 defines a CFC as a foreign corporation in which more than 50 percent of the total combined voting power of all classes of stock entitled to vote, or the total value of the stock is owned by United States Shareholders on any day during the corporation’s taxable year. A United States Shareholder is defined in section 951(b) as a United States person who owns 10 percent or more of the total voting power of the foreign corporation.

Section 951(a)(1)(A)(i) generally provides that if a foreign corporation is a CFC for an uninterrupted period of 30 days or more during a taxable year, every person who is a United States Shareholder of the corporation and who owns stock in the corporation on the last day of the taxable year in which the corporation is a CFC shall include in income the shareholder’s pro rata share of the CFC’s subpart F income for the taxable year.

Under section 952, subpart F income includes foreign base company income. Under section 954(a)(1), foreign base company income includes FPHCI, which is defined under section 954(c)(1) to mean certain enumerated types of income. Subject to certain exceptions, FPHCI includes (i) dividends, interest, royalties, rents, and annuities under section 954(c)(1)(A); and (ii) the excess of gains over losses from the sale or exchange of certain property under section 954(c)(1)(B).

Taxpayer’s Subpart F Inclusions will be attributable to subpart F income of CFCs that consists of: (i) interest; (ii) dividends; (iii) gains from the sale or other disposition of stock, securities, or real property that is not property described in section 1221(a)(1); and (iv) items that also would constitute “rents from real property” under section 856(d) if received by a REIT. Therefore, treatment of the Subpart F Inclusions attributable to such income as qualifying income for purposes of section 856(c)(2) does not interfere with or impede the policy objectives of Congress in enacting the income test under section 856(c)(2).

PFIC Inclusions

Section 1297(a) provides that a foreign corporation is a PFIC if either (1) 75 percent or more of the gross income of such corporation for the taxable year is passive income, or (2) the average percentage of assets (as determined in accordance with section 1297(e)) held by such corporation during the taxable year which produce passive income or which are held for the production of passive income is at least 50 percent. Section 1297(b) defines the term “passive income” as income of a kind that would be FPHCI under section 954(c), subject to certain exceptions.

Section 1295(a) provides that a PFIC will be treated as a QEF with respect to a shareholder if (1) an election by the shareholder under section 1295(b) applies to such PFIC for the taxable year; and (2) the PFIC complies with such requirements as the Secretary may prescribe for purposes of determining the ordinary earnings and net capital gains of such company and otherwise carrying out the purposes of the PFIC provisions. Section 1293(a) provides that every United States person who owns (or is treated under section 1298(a) as owning) stock of a QEF at any time during the taxable year of such fund shall include in gross income (A) as ordinary income, such shareholder's pro rata share of the ordinary earnings of such fund for such year, and (B) as long-term capital gain, such shareholder's pro rata share of the net capital gain of such fund for such year.

Section 1291(a)(1) provides that if a United States person receives an excess distribution (as defined in section 1291(b)) in respect of stock in a PFIC that is a section 1291 fund (as defined in §1.1291-1T(b)(2)(v)), then (A) the amount of the excess distribution shall be allocated ratably to each day in the shareholder's holding period for the stock, (B) with respect to such excess distribution, the shareholder's gross income for the current year shall include (as ordinary income) only the amounts allocated under section 1291(a)(1)(A) to (i) the current year, or (ii) any period in the shareholder's holding period before the 1st day of the 1st taxable year of the company which begins after December 31, 1986, and for which it was a PFIC, and (C) the tax imposed by chapter 1 of the Code for the current year shall be increased by the deferred tax amount (determined under section 1291(c)). Under section 1291(a)(2), the rules of section 1291(a)(1) apply to any gain recognized on the disposition of stock of a section 1291 fund as if the gain were an excess distribution.

Taxpayer's QEF Inclusions will be attributable to income of PFICs (with respect to which a QEF election has been or will be made) that consists of: (i) interest; (ii) dividends; (iii) gains from the sale or other disposition of stock, securities, or real property that is not property described in section 1221(a)(1); and (iv) items that also would constitute "rents from real property" under section 856(d) if received by a REIT. Taxpayer's Non-QEF Inclusions are derived with respect to PFICs that will generate the same types of passive income. Therefore, treatment of the PFIC Inclusions as qualifying income for purposes of section 856(c)(2) does not interfere with or impede the policy objectives of Congress in enacting the income test under section 856(c)(2).

Ruling #2: Whether the Section 986(c) Gains will be taken into account for purposes of section 856(c)(2).

In general, sections 959(d) and 1293(c) provide that when a taxpayer includes in income a Subpart F Inclusion or QEF Inclusion, the subsequent distribution to the shareholder of the PTI attributable to the inclusion is not treated as a dividend for purposes of chapter 1 of the Code.

Section 986(c)(1) provides that foreign currency gain or loss with respect to distributions of PTI (as described in section 959 or section 1293(c)) attributable to movements in exchange rates between the times of the deemed and actual distribution shall be recognized and treated as ordinary income or loss from the same source as the associated income inclusion.

Section 856(n)(1)(A) provides that “passive foreign exchange gain” for any taxable year will not constitute gross income for purposes of section 856(c)(2).

Section 856(n)(3) defines passive foreign exchange gain as: (A) real estate foreign exchange gain (as defined in section 856(n)(2)); (B) foreign currency gains (as defined in section 988(b)(1)) which is not described in subparagraph A and is attributable to (i) any item of income or gain described in section 856(c)(2), (ii) the acquisition or ownership of obligations (other than foreign currency gains attributable to any item described in clause (i)), or (iii) becoming or being the obligor under obligations (other than foreign currency gain attributable to any item of income or gain described in clause (i)); and (C) any other foreign currency gains determined by the Secretary.

While the Section 986(c) Gains are not foreign currency gains defined in section 988(b)(1), such Section 986(c) Gains are attributable to the Subpart F Inclusions and QEF Inclusions, items of income that are qualifying income for purposes of section 856(c)(2). This Section 986(c) Gain is substantially similar to passive foreign exchange gain described in section 856(n)(3)(B)(i). Therefore, pursuant to section 856(n)(3)(C), the Section 986(c) Gains are excluded from gross income for purposes of section 856(c)(2) because these foreign currency gains are considered passive foreign exchange gain that is excluded from gross income for purposes of section 856(c)(2).

Conclusion:

Based on the facts and representations set forth above, we rule that (i) under section 856(c)(5)(J)(ii), the Subpart F Inclusions are considered gross income that qualifies for purposes of section 856(c)(2), (ii) under section 856(c)(5)(J)(ii), the PFIC Inclusions are considered gross income that qualifies for purposes of section 856(c)(2), and (iii) under section 856(n)(3)(C), the Section 986(c) Gains are excluded from gross income for purposes of section 856(c)(2).

Except as expressly provided herein, no opinion is expressed or implied concerning the tax consequences of any aspect of any transaction or item discussed or referenced in this letter. In particular, no opinion is expressed concerning whether Taxpayer otherwise qualifies as a REIT under subchapter M of the Code.

This ruling is directly only to the taxpayer requesting it. Section 6110(k)(3) of the Code provides that it may not be used or cited as precedent.

In accordance with the Power of Attorney on file with this office, a copy of this letter is being sent to your authorized representatives.

Sincerely,

Steven Harrison
Branch Chief, Branch 1
Office of Associate Chief Counsel
(Financial Institutions and Products)

[JOINT COMMITTEE PRINT]

GENERAL EXPLANATION OF TAX LEGISLATION ENACTED IN 2015

PREPARED BY THE STAFF

OF THE

JOINT COMMITTEE ON TAXATION

MARCH 2016

JCS–1–16

pitalization. Accordingly, the collection period expires 10 years after assessment, plus the actual time spent in a combat zone, regardless of the length of the postponement period available for hospitalized taxpayers to comply with their tax obligations.

Effective Date

The provision applies to taxes assessed before, on, or after the date of the enactment (December 18, 2015).

B. Real Estate Investment Trusts

Overview

In general

A real estate investment trust ("REIT") is an entity that otherwise would be taxed as a U.S. corporation but elects to be taxed under a special REIT tax regime. To qualify as a REIT, an entity must meet a number of requirements. At least 90 percent of REIT income (other than net capital gain) must be distributed annually;[848] the REIT must derive most of its income from passive, generally real estate-related, investments; and REIT assets must be primarily real estate-related. In addition, a REIT must have transferable interests and at least 100 shareholders, and no more than 50 percent of the REIT interests may be owned by five or fewer individual shareholders (as determined using specified attribution rules). Other requirements also apply.[849]

If an electing entity meets the requirements for REIT status, the portion of its income that is distributed to its shareholders as a dividend or qualifying liquidating distribution each year is deductible by the REIT (whereas a regular subchapter C corporation cannot deduct such distributions).[850] As a result, the distributed income of the REIT is not taxed at the entity level; instead, it is taxed only at the investor level. Although a REIT is not required to distribute more than the 90 percent of its income described above to retain REIT status, it is taxed at ordinary corporate rates on amounts not distributed or treated as distributed.[851]

A REIT may designate a capital gain distribution to its shareholders, who treat the designated amount as long-term capital gain when distributed. A REIT also may retain net capital gain and pay corporate income tax on the amount retained, while the shareholders include the undistributed capital gain in income, obtain a credit for the corporate tax paid, and step up the basis of their

[848] Even if a REIT meets the 90-percent income distribution requirement for REIT qualification, more stringent distribution requirements must be met in order to avoid an excise tax under section 4981.

[849] Secs. 856 and 857.

[850] Liquidating distributions are covered to the extent of earnings and profits, and are defined to include redemptions of stock that are treated by shareholders as a sale of stock under section 302. Secs. 857(b)(2)(B), 561, and 562(b).

[851] An additional four-percent excise tax is imposed to the extent a REIT does not distribute at least 85 percent of REIT ordinary income and 95 percent of REIT capital gain net income within a calendar year period. In addition, to the extent a REIT distributes less than 100 percent of its ordinary income and capital gain net income in a year, the difference between the amount actually distributed and 100 percent is added to the distribution otherwise required in a subsequent year to avoid the excise tax. Sec. 4981.

REIT stock for the amount included in income.[852] In this manner, capital gain also is taxed only once, whether or not distributed, rather than at both the entity and investor levels.

Income tests

A REIT is restricted to earning certain types of generally passive income. Among other requirements, at least 75 percent of the gross income of a REIT in each taxable year must consist of real estate-related income. Such income includes: rents from real property; gain from the sale or other disposition of real property (including interests in real property) that is not stock in trade of the taxpayer, inventory, or other property held by the taxpayer primarily for sale to customers in the ordinary course of its trade or business; interest on mortgages secured by real property or interests in real property; and certain income from foreclosure property (the "75-percent income test").[853] Qualifying rents from real property include rents from interests in real property and charges for services customarily furnished or rendered in connection with the rental of real property,[854] but do not include impermissible tenant service income.[855] Impermissible tenant service income includes amounts for services furnished by the REIT to tenants or for managing or operating the property, other than amounts attributable to services that are provided by an independent contractor or taxable REIT subsidiary, or services that certain tax exempt organizations could perform under the section 512(b)(3) rental exception from unrelated business taxable income.[856] Qualifying rents from real property include rent attributable to personal property which is leased under, or in connection with, a lease of real property, but only if the rent attributable to such personal property for the taxable year does not exceed 15 percent of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, the lease.[857]

In addition, rents received from any entity in which the REIT owns more than 10 percent of the vote or value generally are not qualifying income.[858] However, there is an exception for certain rents received from taxable REIT subsidiaries (described further below), in which a REIT may own more than 10 percent of the vote or value.

In addition, 95 percent of the gross income of a REIT for each taxable year must be from the 75-percent income sources and a sec-

[852] Sec. 857(b)(3).

[853] Secs. 856(c)(3) and 1221(a)(1). Income from sales that are not prohibited transactions solely by virtue of section 857(b)(6) also is qualified REIT income.

[854] Sec. 856(d)(1)(A) and (B).

[855] Sec. 856(d)(2)(C).

[856] Sec. 856(d)(7)(A) and (C). If impermissible tenant service income with respect to any real or personal property is more than one percent of all amounts received or accrued during the taxable year directly or indirectly with respect to such property, then the impermissible tenant service income with respect to such property includes all such amounts. Sec. 856(d)(7)(B). The amount treated as received for any service (or management or operation) shall not be less than 150 percent of the direct cost of the trust in furnishing or rendering the service (or providing the management or operation). Sec. 856(d)(7)(D). For purposes of the 75-percent and 95-percent income tests, impermissible tenant service income is included in gross income of the REIT. Sec. 856(d)(7)(E).

[857] Sec. 856(d)(1)(C).

[858] Sec. 856(d)(2)(B).

ond permitted category of other, generally passive sources such as dividends and interest (the "95-percent income test").[859]

A REIT must be a U.S. domestic entity, but it is permitted to hold foreign real estate or other foreign assets, provided the 75-percent and 95-percent income tests and the other requirements for REIT qualification are met.[860]

Asset tests

At least 75 percent of the value of a REIT's assets must be real estate assets, cash and cash items (including receivables), and Government securities[861] (the "75-percent asset test").[862] Real estate assets are real property (including interests in real property and interests in mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.[863] No more than 25 percent of a REIT's assets may be securities other than such real estate assets.[864]

Except with respect to securities of a taxable REIT subsidiary, not more than five percent of the value of a REIT's assets may be securities of any one issuer, and the REIT may not possess securities representing more than 10 percent of the outstanding value or voting power of any one issuer.[865] In addition, not more than 25 percent of the value of a REIT's assets may be securities of one or more taxable REIT subsidiaries.[866]

The asset tests must be met as of the close of each quarter of a REIT's taxable year. However, a REIT that has met the asset tests as of the close of any quarter does not lose its REIT status solely because of a discrepancy during a subsequent quarter between the value of the REIT's investments and such requirements, unless such discrepancy exists immediately after the acquisition of any security or other property and is wholly or partly the result of such acquisition.[867]

Taxable REIT subsidiaries

A REIT generally cannot own more than 10 percent of the vote or value of a single entity. However, there is an exception for ownership of a taxable REIT subsidiary ("TRS") that is taxed as a corporation, provided that securities of one or more TRSs do not represent more than 25 percent of the value of REIT assets.

A TRS generally can engage in any kind of business activity except that it is not permitted directly or indirectly to operate either a lodging facility or a health care facility, or to provide to any other person (under a franchise, license, or otherwise) rights to any

[860] See Rev. Rul. 74–191, 1974–1 C.B. 170.

[861] Government securities are defined for this purpose under section 856(c)(5)(F), by reference to the Investment Company Act of 1940. The term includes securities issued or guaranteed by the United States or persons controlled or supervised by and acting as an instrumentality thereof, but does not include securities issued or guaranteed by a foreign, state, or local government entity or instrumentality.

[862] Sec. 856(c)(4)(A).

[863] Temporary investments in certain stock or debt instruments also can qualify if they are temporary investments of new capital, but only for the one-year period beginning on the date the REIT receives such capital. Sec. 856(c)(5)(B).

[864] Sec. 856(c)(4)(B)(i).

[865] Sec. 856(c)(4)(B)(iii).

[866] Sec. 856(c)(4)(B)(ii).

[867] Sec. 856(c)(4). In the case of such an acquisition, the REIT also has a grace period of 30 days after the close of the quarter to eliminate the discrepancy.

brand name under which any lodging facility or health care facility is operated.[868]

However, a TRS may rent a lodging facility or health care facility from its parent REIT and is permitted to hire an independent contractor[869] to operate such facility. Rent paid to the parent REIT by the TRS with respect to hotel, motel, or other transient lodging facility operated by an independent contractor is qualified rent for purposes of the REIT's 75-percent and 95-percent income tests.[870] This lodging facility rental rule is an exception to the general rule that rent paid to a REIT by any corporation (including a TRS) in which the REIT owns 10 percent or more of the vote or value is not qualified rental income for purposes of the 75-percent or 95-percent REIT income tests.[871] There is also an exception to the general rule in the case of a TRS that rents space in a building owned by its parent REIT if at least 90 percent of the space in the building is rented to unrelated parties and the rent paid by the TRS to the REIT is comparable to the rent paid by the unrelated parties.[872]

REITs are subject to a tax equal to 100 percent of redetermined rents, redetermined deductions, and excess interest. These are defined generally as the amounts of specified REIT transactions with a TRS of the REIT, to the extent such amounts differ from an arm's length amount.[873]

Prohibited transactions tax

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions. For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is "stock in trade of a taxpayer or other property which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary course of his trade or business"[874] and is not foreclosure property. The PTT for a REIT does not apply to a sale if the REIT satisfies certain safe harbor requirements in section 857(b)(6)(C) or (D), including an asset holding period of at least two years.[875] If the conditions are met, a REIT may either (1) make no more than seven sales within a taxable year (other than sales of foreclosure property or involuntary conversions under section 1033), or (2) sell either no more than 10 percent of the aggregate bases, or no more than 10

[868] The latter restriction does not apply to rights provided to an independent contractor to operate or manage a lodging or health care facility if such rights are held by the corporation as a franchisee, licensee, or in similar capacity and such lodging facility or health care facility is either owned by such corporation or is leased by such corporation from the REIT. Sec. 856(l)(3).

[869] An independent contractor will not fail to be treated as such for this purpose because the TRS bears the expenses of operation of the facility under the contract, or because the TRS receives the revenues from the operation of the facility, net of expenses for such operation and fees payable to the operator pursuant to the contract, or both. Sec. 856(d)(9)(B).

[870] Sec. 856(d)(8)(B).

[871] Sec. 856(d)(2)(B).

[872] Sec. 856(d)(8)(A).

[873] Sec. 857(b)(7).

[874] This definition is the same as the definition of certain property the sale or other disposition of which would produce ordinary income rather than capital gain under section 1221(a)(1).

[875] Additional requirements for the safe harbor limit the amount of expenditures the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property, require marketing to be done by an independent contractor, and forbid a sales price that is based on the income or profits of any person.

percent of the aggregate fair market value, of all its assets as of the beginning of the taxable year (computed without regard to sales of foreclosure property or involuntary conversions under section 1033), without being subject to the PTT tax.[876]

REIT shareholder tax treatment

Although a REIT typically does not pay corporate level tax due to the deductible distribution of its income, and thus is sometimes compared to a partnership or S corporation, REIT equity holders are not treated as being engaged in the underlying activities of the REIT as are partners or S corporation shareholders, and the activities at the REIT level that characterize its income do not generally flow through to equity owners to characterize the tax treatment of REIT distributions to them. A distribution to REIT shareholders out of REIT earnings and profits is generally treated as an ordinary income REIT dividend and is treated as ordinary income taxed at the shareholder's normal rates on such income.[877] However, a REIT is permitted to designate a "capital gain dividend" to the extent a distribution is made out of its net capital gain.[878] Such a dividend is treated as long-term capital gain to the shareholders.[879]

REIT shareholders are not taxed on REIT income unless the income is distributed to them (except in the case of REIT net capital gain retained by the REIT and designated for inclusion in the shareholder's income as explained in the preceding footnote). However, since a REIT must distribute 90 percent of its ordinary income annually, and typically will distribute or designate its income as capital gain dividends to avoid a tax at the REIT level, REIT income generally is taxed in full at the shareholder level annually.

REIT shareholders are not entitled to any share of REIT losses to offset against other shareholder income. However, if the REIT itself has income, its losses offset its income in determining how much it is required to distribute to meet the distribution requirements. Also, REIT losses that reduce earnings and profits can cause a distribution that exceeds the REIT's earnings and profits to be treated as a nontaxable return of capital to its shareholders.

Tax exempt shareholders

A tax exempt shareholder is exempt from tax on REIT dividends, and is not treated as engaging in any of the activities of the REIT. As one example, if the REIT borrowed money and its income at the REIT level were debt-financed, a tax exempt shareholder would not

[876] Sec. 857(b)(6).

[877] Because a REIT dividend is generally paid out of income that was not taxed to the distributing entity, the dividend is not eligible for the dividends received deductions to a corporate shareholder. Sec. 243(d)(3). A REIT dividend is not eligible for the 20 percent qualified dividend rate to an individual shareholder, except to the extent such dividend is attributable to REIT income from nondeductible C corporation dividends, or to certain income of the REIT that was subject to corporate level tax. Sec. 857(c).

[878] Sec. 857(b)(3)(C). Net capital gain is the excess of the net long-term capital gain for the taxable year over the net short-term capital loss for the taxable year. Sec. 1222.

[879] A REIT may also retain its net capital gain without distribution, while designating a capital gain dividend for inclusion in shareholder income. In this case, the REIT pays corporate-level tax on the capital gain, but the shareholder includes the undistributed capital gain in income, receives a credit for the corporate level tax paid, and steps up the basis of the REIT stock for the amount included in income, with the result that the net tax paid is the shareholder-level capital gain tax. Sec. 857(b)(3)(D).

have debt-financed unrelated business income from the REIT dividend.

Foreign shareholders

Except as provided by the Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA"),[880] a REIT shareholder that is a foreign corporation or a nonresident alien individual normally treats its dividends as fixed and determinable annual and periodic income that is subject to withholding under section 1441 but not treated as active business income that is effectively connected with the conduct of a U.S. trade or business, regardless of the level of real estate activity of the REIT in the United States.[881] A number of treaties permit a lower rate of withholding on REIT dividends than the Code would otherwise require.

Although FIRPTA applies in many cases to foreign investment in U.S. real property through a REIT, REITs offer foreign investors some ability to invest in U.S real property interests without subjecting gain on the sale of REIT stock to FIRPTA (for example, if the REIT is domestically controlled).[882] In general, if any class of stock of a corporation is regularly traded on an established securities market, stock of such class is subject to FIRPTA only in the case of a person who, at some time during the testing period, held more than 5 percent of such class of stock.[883] Also, if the REIT stock is publicly traded and the foreign investor does not own more than five percent of such stock, the investor can receive distributions from the sale by the REIT of U.S. real property interests without such distributions being subject to FIRPTA.[884]

1. Restriction on tax-free spinoffs involving REITs (sec. 311 of the Act and secs. 355 and 856 of the Code)

Present Law

A corporation generally is required to recognize gain on the distribution of property (including stock of a subsidiary) to its shareholders as if the corporation had sold such property for its fair market value.[885] In addition, the shareholders receiving the distributed property are ordinarily treated as receiving a dividend equal to the value of the distribution (to the extent of the distributing corporation's earnings and profits),[886] or capital gain in the case of an acquisition of its stock that significantly reduces the shareholder's interest in the parent corporation.[887]

An exception to these rules applies if the distribution of the stock of a controlled corporation satisfies the requirements of section 355.

[880] Pub. L. No. 96–499. FIRPTA treats income of a foreign investor from the sale or disposition of U.S. real property interests as effectively connected with the operation of a trade or business in the United States. Such income is taxed at regular U.S. rates and withholding obligations are imposed on payors of the income. Secs. 897 and 1445.

[881] As noted above, REITs are not permitted to receive income from property that is inventory or that is held for sale to customers in the ordinary course of the REIT's business. However, REITs may engage in certain activities, including acquisition, development, lease, and sale of real property, and may provide "customary services" to tenants.

[882] Sec. 897(h)(2).

[883] Sec. 897(c)(3).

[884] Sec. 897(h)(1).

[885] Sec. 311(b).

[886] Sec. 301(b)(1) and (c)(1).

[887] Sec. 302(a) and (b)(2).

If all the requirements are satisfied, there is no tax to the distributing corporation or to the shareholders on the distribution.

One requirement to qualify for tax-free treatment under section 355 is that both the distributing corporation and the controlled corporation must be engaged immediately after the distribution in the active conduct of a trade or business that has been conducted for at least five years and was not acquired in a taxable transaction during that period (the "active business test").[888]

For this purpose, the active business test is satisfied only if (1) immediately after the distribution, the corporation is engaged in the active conduct of a trade or business, or (2) immediately before the distribution, the corporation had no assets other than stock or securities in the controlled corporations and each of the controlled corporations is engaged immediately after the distribution in the active conduct of a trade or business.[889] For this purpose, the active business test is applied by reference to the relevant affiliated group rather than on a single corporation basis. For the parent distributing corporation, the relevant affiliated group consists of the distributing corporation as the common parent and all corporations affiliated with the distributing corporation through stock ownership described in section 1504(a)(1) (regardless of whether the corporations are otherwise includible corporations under section 1504(b)),[890] immediately after the distribution. The relevant affiliated group for a controlled distributed subsidiary corporation is determined in a similar manner (with the controlled corporation as the common parent).

In determining whether a corporation is directly engaged in an active trade or business that satisfies the requirement, IRS ruling practice formerly required that the value of the gross assets of the trade or business being relied on must ordinarily constitute at least five percent of the total fair market value of the gross assets of the corporation directly conducting the trade or business.[891] The IRS suspended this specific rule in connection with its general administrative practice of moving IRS resources away from advance rulings on factual aspects of section 355 transactions in general.[892]

Section 355 does not apply to an otherwise qualifying distribution if, immediately after the distribution, either the distributing or the controlled corporation is a disqualified investment corporation and any person owns a 50 percent interest in such corporation and did not own such an interest before the distribution. A disqualified investment corporation is a corporation of which two-thirds or more

[888] Sec. 355(b).
[889] Sec. 355(b)(1).
[890] Sec. 355(b)(3).
[891] Rev. Proc. 2003–3, sec. 4.01(30), 2003–1 I.R.B. 113.
[892] Rev. Proc. 2003–48, 2003–29 I.R.B. 86. Since then, the IRS discontinued private rulings on whether a transaction generally qualifies for nonrecognition treatment under section 355. Nonetheless, the IRS may still rule on certain significant issues. See Rev. Proc. 2016–1, 2016–1 I.R.B. 1; Rev. Proc. 2016–3, 2016–1 I.R.B. 126. Recently, the IRS announced that it will not rule in certain situations in which property owned by any distributing or controlled corporation becomes the property of a RIC or a REIT; however, the IRS stated that the policy did not extend to situations in which, immediately after the date of the distribution, both the distributing and controlled corporation will be RICs, or both of such corporations will be REITs, and there is no plan or intention on the date of the distribution for either the distributing or the controlled corporation to cease to be a RIC or a REIT. See Rev. Proc. 2015–43, 2015–40 I.R.B. 467.

of its asset value is comprised of certain passive investment assets. Real estate is not included as such an asset.[893]

The IRS has ruled that a REIT may satisfy the active business requirement through its rental activities.[894] More recently, the IRS has issued a private ruling indicating that a REIT that has a TRS can satisfy the active business requirement by virtue of the active business of its TRS.[895] Thus, a C corporation that owns REIT-qualified assets may create a REIT to hold such assets and spin off that REIT without tax consequences to it or its shareholders (if the newly-formed REIT satisfies the active business requirement through its rental activities or the activities of a TRS). Following the spin-off, income from the assets held in the REIT is no longer subject to corporate level tax (unless there is a disposition of such assets that incurs tax under the built in gain rules).

Explanation of Provision

The provision makes a REIT generally ineligible to participate in a tax-free spin-off as either a distributing or controlled corporation under section 355. There are two exceptions, however. First, the general rule does not apply if, immediately after the distribution, both the distributing and the controlled corporations are REITs.[896] Second, a REIT may spin off a TRS if (1) the distributing corporation has been a REIT at all times during the 3-year period ending on the date of the distribution, (2) the controlled corporation has been a TRS of the REIT at all times during such period, and (3) the REIT has had control (as defined in section 368(c)[897] applied by taking into account stock owned directly or indirectly, including through one or more partnerships, by the REIT) of the TRS at all times during such period. For this purpose, control of a partnership means ownership of at least 80 percent of the profits interest and at least 80 percent of the capital interests.

A controlled corporation will be treated as meeting the control requirements if the stock of such corporation was distributed by a TRS in a transaction to which section 355 (or so much of section 356 as relates to section 355) applies and the assets of such corporation consist solely of the stock or assets held by one or more TRSs of the distributing corporation meeting the control requirements noted above.

If a corporation that is not a REIT was a distributing or controlled corporation with respect to any distribution to which section 355 applied, such corporation (and any successor corporation) shall not be eligible to make a REIT election for any taxable year beginning before the end of the 10-year period beginning on the date of such distribution.

---

[893] Sec. 355(g).

[894] Rev. Rul. 2001–29, 2001–1 C.B. 1348.

[895] Priv. Ltr. Rul. 201337007. A private ruling may be relied upon only by the taxpayer to which it is issued. However, private rulings provide some indication of administrative practice.

[896] As long as a REIT election for each corporation is effective immediately after the distribution, the elections may be made after that time.

[897] Under section 368(c), the term "control" means the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote and at least 80 percent of the total number of shares of all other classes of stock of the corporation.

Effective Date

The provision generally applies to distributions on or after December 7, 2015,[898] but does not apply to any distribution pursuant to a transaction described in a ruling request initially submitted to the Internal Revenue Service on or before such date, which request has not been withdrawn and with respect to which a ruling has not been issued or denied in its entirety as of such date.

2. Reduction in percentage limitation on assets of REIT which may be taxable REIT subsidiaries (sec. 312 of the Act and sec. 856 of the Code)

Present Law

A REIT generally is not permitted to own securities representing more than 10 percent of the vote or value of any entity, nor is it permitted to own securities of a single issuer comprising more than 5 percent of REIT value.[899] In addition, rents received by a REIT from a corporation of which the REIT directly or indirectly owns more than 10 percent of the vote or value generally are not qualified rents for purposes of the 75-percent and 95-percent income tests.[900]

There is an exception from these rules in the case of a TRS.[901] No more than 25 percent of the value of total REIT assets may consist of securities of one or more TRSs.[902]

Explanation of Provision

The provision reduces to 20 percent the permitted percentage of total REIT assets that may be securities of one or more TRSs.

Effective Date

The provision applies to taxable years beginning after December 31, 2017.

3. Prohibited transaction safe harbors (sec. 313 of the Act and sec. 857 of the Code)

Present Law

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions. For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is "stock in trade of a taxpayer or other property which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary

[898] The provision does not apply to distributions by a corporation pursuant to a plan under which stock constituting control (within the meaning of section 368(c)) of the controlled corporation was distributed before December 7, 2015.

[899] Sec. 856(c)(4)(B)(iii).

[900] Sec. 856(d)(2)(B).

[901] Sec. 856(d)(8).

[902] Sec. 856(c)(4)(B)(ii).

course of his trade or business"[903] and is not foreclosure property. The PTT for a REIT does not apply to a sale if the REIT satisfies certain safe harbor requirements in section 857(b)(6)(C) or (D), including an asset holding period of at least two years.[904] If the conditions are met, a REIT may either (1) make no more than seven sales within a taxable year (other than sales of foreclosure property or involuntary conversions under section 1033), or (2) sell either no more than 10 percent of the aggregate bases, or no more than 10 percent of the aggregate fair market value, of all its assets as of the beginning of the taxable year (computed without regard to sales of foreclosure property or involuntary conversions under section 1033), without being subject to the PTT tax.[905]

The additional requirements for the safe harbor limit the amount of expenditures the REIT or a partner of the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property. Also, if more than seven sales are made during the taxable year, substantially all marketing and development expenditures with respect to the property must have been made through an independent contractor from whom the REIT itself does not derive or receive any income.

Explanation of Provision

The provision expands the amount of property that a REIT may sell in a taxable year within the safe harbor provisions, from 10 percent of the aggregate basis or fair market value, to 20 percent of the aggregate basis or fair market value. However, in any taxable year, the aggregate adjusted bases and the fair market value of property (other than sales of foreclosure property or sales to which section 1033 applies) sold during the three taxable year period ending with such taxable year may not exceed 10 percent of the sum of the aggregate adjusted bases or the sum of the fair market value of all of the assets of the REIT as of the beginning of each of the 3 taxable years that are part of the period.

The provision clarifies that the determination of whether property is described in section 1221(a)(1) is made without regard to whether or not such property qualifies for the safe harbor from the prohibited transactions rules.

Effective Date

The provision generally applies to taxable years beginning after the date of enactment (December 18, 2015). However, the provision clarifying the determination of whether property is described in section 1221(a)(1) has retroactive effect, but does not apply to any sale of property to which section 857(b)(6)(G) applies.

---

[903] This definition is the same as the definition of certain property the sale or other disposition of which would produce ordinary income rather than capital gain under section 1221(a)(1).

[904] Additional requirements for the safe harbor limit the amount of expenditures the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property, require marketing to be done by an independent contractor, and forbid a sales price that is based on the income or profits of any person.

[905] Sec. 857(b)(6).

4. Repeal of preferential dividend rule for publicly offered REITs; authority for alternative remedies to address certain REIT distribution failures (secs. 314 and 315 of the Act and sec. 562 of the Code)

Present Law

A REIT is allowed a deduction for dividends paid to its shareholders.[906] In order to qualify for the deduction, a dividend must not be a "preferential dividend."[907] For this purpose, a dividend is preferential unless it is distributed pro rata to shareholders, with no preference to any share of stock compared with other shares of the same class, and with no preference to one class as compared with another except to the extent the class is entitled to a preference.

Similar rules apply to regulated investment companies ("RICs").[908] However, the preferential dividend rule does not apply to a publicly offered RIC (as defined in section 67(c)(2)(B)).[909]

Explanation of Provision

The provision repeals the preferential dividend rule for publicly offered REITs. For this purpose, a REIT is publicly offered if it is required to file annual and periodic reports with the Securities and Exchange Commission under the Securities Exchange Act of 1934.

For other REITs, the provision provides the Secretary of the Treasury with authority to provide an appropriate remedy to cure the failure of the REIT to comply with the preferential dividend requirements in lieu of not considering the distribution to be a dividend for purposes of computing the dividends-paid deduction where the Secretary determines the failure to comply is inadvertent or is due to reasonable cause and not due to willful neglect, or the failure is a type of failure identified by the Secretary as being so described.

Effective Date

The provision to repeal the preferential dividend rule for publicly offered REITs applies to distributions in taxable years beginning after December 31, 2014.

The provision granting authority to the Secretary of the Treasury to provide alternative remedies addressing certain REIT distribution failures applies to distributions in taxable years beginning after December 31, 2015.

5. Limitations on designation of dividends by REITs (sec. 316 of the Act and sec. 857 of the Code)

Present Law

A REIT that has a net capital gain for a taxable year may designate dividends that it pays or is treated as paying during the

[906] Sec. 857(b)(2)(B).
[907] Sec. 562(c).
[908] Sec. 852(b)(2)(D).
[909] Sec. 562(c).

year as capital gain dividends.[910] A capital gain dividend is treated by the shareholder as gain from the sale or exchange of a capital asset held more than one year.[911] The amount that may be designated as capital gain dividends for any taxable year may not exceed the REIT's net capital gain for the year.

A REIT may designate dividends that it pays or is treated as paying during the year as qualified dividend income.[912] Qualified dividend income is taxed to individuals at the same tax rate as net capital gain, under rules enacted by the Taxpayer Relief Act of 1997.[913] The amount that may be designated as qualified dividend income for any taxable year is limited to qualified dividend income received by the REIT plus some amounts subject to corporate taxation at the REIT level.

The IRS has ruled that a RIC may designate the maximum amount permitted under each of the provisions allowing a RIC to designate dividends even if the aggregate of all the designated amounts exceeds the total amount of the RIC's dividends distributions.[914]

The IRS also has ruled that if a RIC has two or more classes of stock and it designates the dividends that it pays on one class as consisting of more than that class's proportionate share of a particular type of income, the designations are not effective for federal tax purposes to the extent that they exceed the class's proportionate share of that type of income.[915] The Internal Revenue Service announced that it would provide guidance that RICs and REITs must use in applying the capital gain provision enacted by the Taxpayer Relief Act of 1997.[916] The announcement referred to the designation limitations of Revenue Ruling 89–91.

Explanation of Provision

The provision limits the aggregate amount of dividends designated by a REIT for a taxable year under all of the designation provisions to the amount of dividends paid with respect to the taxable year (including dividends described in section 858 that are paid after the end of the REIT taxable year but treated as paid by the REIT with respect to the taxable year).

The provision provides the Secretary of the Treasury authority to prescribe regulations or other guidance requiring the proportionality of the designation for particular types of dividends (for example, capital gain dividends) among shares or beneficial interests in a REIT.

Effective Date

The provision applies to distributions in taxable years beginning after December 31, 2015.

[910] Sec. 857(b)(3)(C).
[911] Sec. 857(b)(3)(B).
[912] Sec. 857(c)(2).

[916] Notice 97–64, 1997–2 C.B. 323. Recently, the IRS modified Notice 97–64 and provided certain new rules for RICs; the designation limitations in Revenue Ruling 89–81, however, continue to apply. Notice 2015–41, 2015–24 I.R.B. 1058.

6. Debt instruments of publicly offered REITs and mortgages treated as real estate assets (sec. 317 of the Act and sec. 856 of the Code)

Present Law

At least 75 percent of the value of a REIT's assets must be real estate assets, cash and cash items (including receivables), and Government securities (the "75-percent asset test").[917] Real estate assets are real property (including interests in real property and mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.[918] No more than 25 percent of a REIT's assets may be securities other than such real estate assets.[919]

Except with respect to a TRS, not more than five percent of the value of a REIT's assets may be securities of any one issuer, and the REIT may not possess securities representing more than 10 percent of the outstanding value or voting power of any one issuer.[920] No more than 25 percent of the value of a REIT's assets may be securities of one or more TRSs.[921]

The asset tests must be met as of the close of each quarter of a REIT's taxable year.[922]

At least 75 percent of a REIT's gross income must be from certain real estate related and other items. In addition, at least 95 percent of a REIT's gross income must be from specified sources that include the 75 percent items and also include interest, dividends, and gain from the sale or other disposition of securities (whether or not real estate-related).

Explanation of Provision

Under the provision, debt instruments issued by publicly offered REITs are treated as real estate assets, as are interests in mortgages on interests in real property (for example, an interest in a mortgage on a leasehold interest in real property). Such assets therefore are qualified assets for purposes of meeting the 75-percent asset test, but are subject to special limitations described below.

As under present law, income from debt instruments issued by publicly offered REITs that is interest income or gain from the sale or other disposition of a security is treated as qualified income for purposes of the 95-percent gross income test. Income from debt instruments issued by publicly offered REITs that would not have been treated as real estate assets but for the new provision, however, is not qualified income for purposes of the 75-percent income

[917] Sec. 856(c)(4)(A).

[918] Such term also includes any property (not otherwise a real estate asset) attributable to the temporary investment of new capital, but only if such property is stock or a debt instrument, and only for the one-year period beginning on the date the REIT receives such capital. Sec. 856(c)(5)(B).

[919] Sec. 856(c)(4)(B)(i).

[920] Sec. 856(c)(4)(B)(iii).

[921] Sec. 856(c)(4)(B)(ii).

[922] Sec. 856(c)(4). However, a REIT that has met the asset tests as of the close of any quarter does not lose its REIT status solely because of a discrepancy during a subsequent quarter between the value of the REIT's investments and such requirements, unless such discrepancy exists immediately after the acquisition of any security or other property and is wholly or partly the result of such acquisition. Sec. 856(c)(4).

test, and not more than 25 percent of the value of a REIT's total assets is permitted to be represented by such debt instruments.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

7. Asset and income test clarification regarding ancillary personal property (sec. 318 of the Act and sec. 856 of the Code)

Present Law

75-percent income test

Among other requirements, at least 75 percent of the gross income of a REIT in each taxable year must consist of real estate-related income. Such income includes: rents from real property; income from the sale or exchange of real property (including interests in real property) that is not stock in trade, inventory, or held by the taxpayer primarily for sale to customers in the ordinary course of its trade or business; interest on mortgages secured by real property or interests in real property; and certain income from foreclosure property (the "75-percent income test"). Amounts attributable to most types of services provided to tenants (other than certain "customary services"), or to more than specified amounts of personal property, are not qualifying rents.

The Code definition of rents from real property includes rent attributable to personal property which is leased under, or in connection with, a lease of real property, but only if the rent attributable to such property for the taxable year does not exceed 15 percent of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, such lease.[923]

For purposes of determining whether interest income is from a mortgage secured by real property, Treasury regulations provide that where a mortgage covers both real property and other property, an apportionment of the interest must be made. If the loan value of the real property is equal to or exceeds the amount of the loan, then the entire interest income is apportioned to the real property. However, if the amount of the loan exceeds the loan value of the real property, then the interest income apportioned to the real property is an amount equal to the interest income multiplied by a fraction, the numerator of which is the loan value of the real property and the denominator of which is the amount of the loan.[924] The remainder of the interest income is apportioned to the other property.

The loan value of real property is defined as the fair market value of the property determined as of the date on which the commitment by the REIT to make the loan becomes binding on the REIT. In the case of a loan purchased by a REIT, the loan value

---

[923] Sec. 856(d)(1)(C).

[924] Treas. Reg. sec. 1.856–5(c)(1). The amount of the loan for this purpose is defined as the hightest principal amount of the loan outstanding during the taxable year. Treas. Reg. sec. 1.856–5(c)(3).

of the real property is the fair market value of the real property determined as of the date on which the commitment of the REIT to purchase the loan becomes binding.[925]

75-percent asset test

At the close of each quarter of the taxable year, at least 75 percent of the value of a REIT's total assets must be represented by real estate assets, cash and cash items, and Government securities.

Real estate assets generally mean real property (including interests in real property and interests in mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.

Neither the Code nor regulations address the allocation of value in cases where real property and personal property may both be present.

Explanation of Provision

The provision allows certain ancillary personal property leased with real property to be treated as real property for purposes of the 75-percent asset test, applying the same threshold that applies under present law for purposes of determining rents from real property under section 856(d)(l)(C) for purposes of the 75-percent income test.

The provision also modifies the present-law rules for determining when an obligation secured by a mortgage is considered secured by a mortgage on real property if the security includes personal property as well. Under the provision, in the case of an obligation secured by a mortgage on both real property and personal property, if the fair market value of such personal property does not exceed 15 percent of the total fair market value of all such property, such personal property is treated as real property for purposes of the 75-percent income and 75-percent asset test computations.[926] In making this determination, the fair market value of all property (both personal and real) is determined at the same time and in the same manner as the fair market value of real property is determined for purposes of apportioning interest income between real property and personal property under the rules for determining whether interest income is from a mortgage secured by real property.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

8. Hedging provisions (sec. 319 of the Act and sec. 857 of the Code)

Present Law

Except as provided by Treasury regulations, income from certain REIT hedging transactions that are clearly identified, including gain from the sale or disposition of such a transaction, is not included as gross income under either the 95-percent income or 75-

---

[925] Special rules apply to construction loans. Treas. Reg. sec. 1.856–5(c)(2).
[926] Sec. 856(c)(3)(B) and (4)(A).

percent income test. Transactions eligible for this exclusion include transactions that hedge indebtedness incurred or to be incurred by the REIT to acquire or carry real estate assets and transactions entered primarily to manage risk of currency fluctuations with respect to items of income or gain described in section 856(c)(2) or (3).[927]

Explanation of Provision

The provision expands the scope of the present-law exception of certain hedging income from gross income for purposes of the income tests, under section 856(c)(5)(G). Under the provision, if (1) a REIT enters into one or more positions described in clause (i) of section 856(c)(5)(G) with respect to indebtedness described therein or one or more positions described in clause (ii) of section 856(c)(5)(G) with respect to property that generates income or gain described in section 856(c)(2) or (3); (2) any portion of such indebtedness is extinguished or any portion of such property is disposed of; and (3) in connection with such extinguishment or disposition, such REIT enters into one or more transactions which would be hedging transactions described in subparagraph (B) or (C) of section 1221(b)(2) with respect to any position referred to in (1) above, if such position were ordinary property,[928] then any income of such REIT from any position referred to in (1) and from any transaction referred to in (3) (including gain from the termination of any such position or transaction) shall not constitute gross income for purposes of the 75-percent or 95-percent gross income tests, to the extent that such transaction hedges such position.

The provision is intended to extend the current treatment of income from certain REIT hedging transactions as income that is disregarded for purposes of the 75-percent and 95-percent income tests to income from positions that primarily manage risk with respect to a prior hedge that a REIT enters in connection with the extinguishment or disposal (in whole or in part) of the liability or asset (respectively) related to such prior hedge, to the extent the new position qualifies as a section 1221 hedge or would so qualify if the hedged position were ordinary property.

The provision also clarifies that the identification requirement that applies to all hedges under the hedge gross income rules is the requirement described in section 1221(a)(7), determined after taking account of any curative provisions provided under the regulations referred to therein.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

[927] Sec. 856(c)(5)(G).

[928] Such definition of a hedging transaction is applied for purposes of this provision without regard to whether or not the position referred to is ordinary property.

9. Modification of REIT earnings and profits calculation to avoid duplicate taxation (sec. 320 of the Act and secs. 562 and 857 of the Code)

Present Law

For purposes of computing earnings and profits of a corporation, the alternative depreciation system, which generally is less accelerated than the system used in determining taxable income, is used in the case of the depreciation of tangible property. Also, certain amounts treated as currently deductible for purposes of computing taxable income are allowed as a deduction ratably over a period of five years for computing earnings and profits. Finally, the installment method is not allowed in computing earnings and profits from the installment sale of property.[929]

In the case of a REIT, the current earnings and profits of a REIT are not reduced by any amount which is not allowable as a deduction in computing its taxable income for the taxable year.[930] In addition, for purposes of computing the deduction for dividends paid by a REIT for a taxable year, earnings and profits are increased by the total amount of gain on the sale or exchange of real property by the trust during the year.[931]

These rules can by illustrated by the following example:

Example.—Assume that a REIT had $100 of taxable income and earnings and profits in each of five consecutive taxable years (determined without regard to any energy efficient commercial building deduction[932] and without regard to any deduction for dividends paid). Assume that in the first of the five years, the REIT had an energy efficient commercial building deduction in computing its taxable income of $10, reducing its pre-dividend taxable income to $90. Assume further that the deduction is allowable at a rate of $2 per year over the five-year period beginning with the first year in computing its earnings and profits.

Under present law, the REIT's earnings and profits in the first year are $98 ($100 less $2). In each of the next four years, the REIT's current earnings and profits are $100 ($98 as computed for the first year plus an additional $2 under section 857(d)(1) for the $2 not deductible in computing taxable income for the year).

Assume the REIT distributes $100 to its shareholders at the close of each of the five years. Under present law, the shareholders have $98 dividend income in the first year and a $2 return of capital and $100 dividend income in each of the following four years, for a total of $498 dividend income, notwithstanding that the REIT had only $490 pre-dividend taxable income over the period. The dividends paid by the REIT reduce its taxable income to zero in each of the taxable years.

Explanation of Provision

Under the provision, the current earnings and profits of a REIT for a taxable year are not reduced by any amount that (1) is not

[929] Sec. 312(k)(3) and (n)(5).
[930] Sec. 857(d)(1). This provision applies to a REIT without regard to whether it meets the requirements of section 857(a) for the taxable year.
[931] Sec. 562(e).
[932] Sec. 179D.

allowable as a deduction in computing its taxable income for the current taxable year and (2) was not so allowable for any prior taxable year. Thus, under the provision, if an amount is allowable as a deduction in computing taxable income in year one and is allowable in computing earnings and profits in year two (determined without regard to present-law section 857(d)(1)), section 857(d)(1) no longer applies and the deduction in computing the year two earnings and profits of the REIT is allowable. Thus, a lesser maximum amount will be a dividend to shareholders in that year. This provision does not change the present-law determination of current earnings and profits for purposes of computing a REIT's deduction for dividends paid.

In addition, the provision provides that the current earnings and profits of a REIT for a taxable year for purposes of computing the deduction for dividends paid are increased by any amount of gain on the sale or exchange of real property taken into account in determining the taxable income of the REIT for the taxable year (to the extent the gain is not otherwise so taken into account). Thus, in the case of an installment sale of real property, current earnings and profits for purposes of the REIT's deduction for dividends paid for a taxable year are increased by the amount of gain taken into account in computing its taxable income for the year and not otherwise taken into account in computing the current earnings and profits.

The following illustrates the application of the provision:

Example.—Assume the same facts as in the above example. Under the provision, as under present law, in the first taxable year, the earnings and profits of the REIT were $98 and the shareholders take into account $98 dividend income and $2 is a return of capital. Under the provision, in each of the next four years, the earnings and profits are $98 (i.e., section 857(d)(1) does not apply) so that the shareholders take into account $98 of dividend income in each year and $2 is a return of capital each year.

For purposes of the REIT's deduction for dividends paid, present law remains unchanged so that the REIT's taxable income will be reduced to zero in each of the taxable years.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

10. Treatment of certain services provided by taxable REIT subsidiaries (sec. 321 of the Act and sec. 857 of the Code)

Present Law

Taxable REIT subsidiaries

A TRS generally can engage in any kind of business activity except that it is not permitted directly or indirectly to operate either a lodging facility or a health care facility, or to provide to any other person (under a franchise, license, or otherwise) rights to any brand name under which any lodging facility or health care facility is operated.

REITs are subject to a tax equal to 100 percent of redetermined rents, redetermined deductions, and excess interest. These are defined generally as the amounts of specified REIT transactions with a TRS of the REIT, to the extent such amounts differ from an arm's length amount.

Prohibited transactions tax

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions.[933] For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is stock in trade of a taxpayer or other property that would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary course of his trade or business and is not foreclosure property. The PTT for a REIT does not apply to a sale of property which is a real estate asset if the REIT satisfies certain criteria in section 857(b)(6)(C) or (D).

Section 857(b)(6)(C) provides that a prohibited transaction does not include a sale of property which is a real estate asset (as defined in section 856(c)(5)(B)) and which is described in section 1221(a)(1) if (1) the REIT has held the property for not less than two years; (2) aggregate expenditures made by the REIT, or any partner of the REIT, during the two year period preceding the date of sale which are includible in the basis of the property do not exceed 30 percent of the net selling price of the property; (3) either: (A) the REIT does not make more than seven sales of property[934] during the taxable year, or (B) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property[935] sold during the taxable year does not exceed 10 percent of the aggregate bases (as so determined) of all of the assets of the REIT as of the beginning of the taxable year, or (C) the fair market value of property[936] sold during the taxable year does not exceed 10 percent of the aggregate fair market value of all the assets of the REIT as of the beginning of the taxable year; (4) in the case of land or improvements, not acquired through foreclosure (or deed in lieu of foreclosure), or lease termination, the REIT has held the property for not less than two years for production of rental income; and (5) if the requirement of (3)(A) above is not satisfied, substantially all of the marketing and development expenditures with respect to the property were made through an independent contractor (as defined in section 856(d)(3)) from whom the REIT does not derive or receive any income.

Section 857(b)(6)(D) provides that a prohibited transaction does not include a sale of property which is a real estate asset (as defined in section 856(c)(5)(B)) and which is described in section 1221(a)(1) if (1) the REIT has held the property for not less than two years in connection with the trade or business of producing timber; (2) the aggregate expenditures made by the REIT, or any partner of the REIT, during the two year period preceding the date

[933] Sec. 857(b)(6).
[934] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[935] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[936] Sales of foreclosure property or sales to which section 1033 applies are excluded.

of sale which (A) are includible in the basis of the property (other than timberland acquisition expenditures), and (B) are directly related to operation of the property for the production of timber or for the preservation of the property for use as a timberland, do not exceed 30 percent of the net selling price of the property; (3) the aggregate expenditures made by the REIT, or a partner of the REIT, during the two year period preceding the date of sale which (A) are includible in the basis of the property (other than timberland acquisition expenditures), and (B) are not directly related to operation of the property for the production of timber or for the preservation of the property for use as a timberland, do not exceed five percent of the net selling price of the property; (4) either: (A) the REIT does not make more than seven sales of property [937] during the taxable year, or (B) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property [938] sold during the taxable year does not exceed 10 percent of the aggregate bases (as so determined) of all of the assets of the REIT as of the beginning of the taxable year, or (C) the fair market value of property [939] sold during the taxable year does not exceed 10 percent of the aggregate fair market value of all the assets of the REIT as of the beginning of the taxable year; (5) if the requirement of (4)(A) above is not satisfied, substantially all of the marketing expenditures with respect to the property were made through an independent contractor (as defined in section 856(d)(3)) from whom the REIT does not derive or receive any income, or, in the case of a sale on or before the termination date, a TRS; and (6) the sales price of the property sold by the trust is not based in whole or in part on income or profits derived from the sale or operation of such property.

Foreclosure property

Under current law, certain income and gain derived from foreclosure property satisfies the 95-percent and 75-percent REIT income tests.[940] Property will cease to be foreclosure property, however, if used in a trade or business conducted by the REIT, other than through an independent contractor from which the REIT itself does not derive or receive any income, more than 90 days after the day on which the REIT acquired such property.[941]

Explanation of Provision

For purposes of the exclusion from the prohibited transactions excise tax, the provision modifies the requirement of section 857(b)(6)(C)(v), that substantially all of the development expenditures with respect to the property were made through an independent contractor from whom the REIT itself does not derive or receive any income, to allow a TRS to have developed the property.[942]

---

[937] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[938] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[939] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[940] Sec. 856(c)(2)(F) and (3)(F).
[941] Sec. 856(e)(4)(C).
[942] The requirement limiting the amount of expenditures added to basis that the REIT, or a partner of the REIT, may make within two years prior to the sale, as well as other requirements for the exclusion, are retained.

The provision also allows a TRS to make marketing expenditures with respect to property under section 857(b)(6)(C)(v) or 857(b)(6)(D)(v) without causing property that is otherwise eligible for the prohibited transaction exclusion to lose such qualification.

The provision allows a TRS to operate foreclosure property without causing loss of foreclosure property status, under section 856(e)(4)(C).

The items subject to the 100-percent excise tax on certain non-arm's-length transactions between a TRS and a REIT are expanded to include "redetermined TRS service income." Such income is defined as gross income of a TRS of a REIT attributable to services provided to, or on behalf of, such REIT (less the deductions properly allocable thereto) to the extent the amount of such income (less such deductions) would be increased on distribution, apportionment, or allocation under section 482 (but for the exception from section 482 if the 100-percent excise tax applies). The term does not include gross income attributable to services furnished or rendered to a tenant of the REIT (or deductions properly attributable thereto), since that income is already subject to a separate provision of the 100-percent excise tax rules.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

11. Exception from FIRPTA for certain stock of REITs; exception for interests held by foreign retirement and pension funds (secs. 322 and 323 of the Act and secs. 897 and 1445 of the Code) [943]

Present Law

General rules relating to FIRPTA

A foreign person that is not engaged in the conduct of a trade or business in the United States generally is not subject to any U.S. tax on capital gain from U.S. sources, including capital gain from the sale of stock or other capital assets.[944]

However, the Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA") [945] generally treats a foreign person's gain or loss from the disposition of a U.S. real property interest ("USRPI") as income that is effectively connected with the conduct of a U.S. trade or business, and thus taxable at the income tax rates applica-

[943] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 2 of that bill contained a provision similar to section 322 of the Protecting Americans from Tax Hikes Act of 2015 (Division Q of Pub. L. No. 114–113).

[944] Secs. 871(b) and 882(a). Property is treated as held by a person for use in connection with the conduct of a trade or business in the United States, even if not so held at the time of sale, if it was so held within 10 years prior to the sale. Sec. 864(c)(7). Also, all gain from an installment sale is treated as from the sale of property held in connection with the conduct of such a trade or business if the property was so held during the year in which the installment sale was made, even if the recipient of the payments is no longer engaged in the conduct of such trade or business when the payments are received. Sec. 864(c)(6).

[945] Pub. L. No. 96–499. The rules governing the imposition and collection of tax under FIRPTA are contained in a series of provisions enacted in 1980 and subsequently amended. See secs. 897, 1445, 6039C, and 6652(f).

ble to U.S. persons, including the rates for net capital gain.[946] With certain exceptions, if a foreign corporation distributes a USRPI, gain is recognized on the distribution (including a distribution in redemption or liquidation) of a USRPI, in an amount equal to the excess of the fair market value of the USRPI (as of the time of distribution) over its adjusted basis.[947] A foreign person subject to tax on FIRPTA gain is required to file a U.S. tax return under the normal rules relating to receipt of income effectively connected with a U.S. trade or business.[948]

The payor of amounts that FIRPTA treats as effectively connected with a U.S. trade or business ("FIRPTA income") to a foreign person generally is required to withhold U.S. tax from the payment.[949] Withholding generally is 10 percent of the sales price, in the case of a direct sale by the foreign person of a USRPI (but withholding is not required in certain cases, including on any sale of stock that is regularly traded on an established securities market[950]), and 10 percent of the amount realized by the foreign shareholder in the case of certain distributions by a corporation that is or has been a U.S. real property holding corporation ("USRPHC") during the applicable testing period.[951] The withholding is generally 35 percent of the amount of a distribution to a foreign person of net proceeds attributable to the sale of a USRPI from an entity such as a partnership, REIT, or RIC.[952] The foreign person can request a refund with its U.S. tax return, if appropriate, based on that person's total U.S. effectively connected income and deductions (if any) for the taxable year.

USRPHCs and five-percent public shareholder exception

USRPIs include not only interests in real property located in the United States or the U.S. Virgin Islands, but also stock of a USRPHC, generally defined as any domestic corporation, unless the taxpayer establishes that the fair market value of the corporation's USRPIs was less than 50 percent of the combined fair market value of all its real property interests (U.S. and worldwide) and all its assets used or held for use in a trade or business, at all times during a "testing period," which is the shorter of the duration of the taxpayer's ownership of the stock after June 18, 1980, or the five-year period ending on the date of disposition of the stock.[953]

Under an exception, even if a corporation is a USRPHC, a shareholder's shares of a class of stock that is regularly traded on an established securities market are not treated as USRPIs if the shareholder holds (applying attribution rules) no more than five percent

[946] Sec. 897(a).
[947] Sec. 897(d). In addition, such gain may also be subject to the branch profits tax at a 30-percent rate (or lower treaty rate).
[948] In addition, section 6039C authorizes regulations that would require a return reporting foreign direct investments in U.S. real property interests. No such regulations have been issued, however.
[949] Sec. 1445(a).
[950] Sec. 1445(b)(6).
[951] Sec. 1445(e)(3). Withholding at 10 percent of a gross amount may also apply in certain other circumstances under regulations. See sec. 1445(e)(4) and (5).
[952] Sec. 1445(e)(6) and Treasury regulations thereunder. The Treasury Department is authorized to issue regulations that would reduce the 35 percent withholding on distributions to 20 percent during the time that the maximum income tax rate on dividends and capital gains of U.S. persons is 20 percent.
[953] Sec. 897(c)(1) and (2).

of that class of stock at any time during the testing period.[954] Among other things, the relevant attribution rules require attribution between a corporation and a shareholder that owns five percent or more in value of the stock of such corporation.[955] The attribution rules also attribute stock ownership between spouses and between children, grandchildren, parents, and grandparents.

FIRPTA rules for foreign investment through REITs and RICs

Special FIRPTA rules apply to foreign investment through a "qualified investment entity," which includes any REIT and certain RICs that invest largely in USRPIs (including stock of one or more REITs).[956]

Stock of domestically controlled qualified investment entities not a USRPI

If a qualified investment entity is "domestically controlled" (defined to mean that less than 50 percent in value of the qualified investment entity has been owned (directly or indirectly) by foreign persons during the relevant testing period[957]), stock of such entity is not a USRPI and a foreign shareholder can sell the stock of such entity without being subject to tax under FIRPTA, even if the stock would otherwise be stock of a USRPHC. Treasury regulations provide that for purposes of determining whether a REIT is domestically controlled, the actual owner of REIT shares is the "person who is required to include in his return the dividends received on the stock."[958] The IRS has issued a private letter ruling concluding that the term "directly or indirectly" for this purpose does not require looking through corporate entities that, in the facts of the ruling, were represented to be fully taxable domestic corporations for U.S. federal income tax purposes "and not otherwise a REIT, RIC, hybrid entity, conduit, disregarded entity, or other flow-through or look-through entity."[959]

---

[954] Sec. 897(c)(3). The constructive ownership attribution rules are specified in section 897(c)(6)(C).

[955] If a person owns, directly or indirectly, five percent or more in value of the stock in a corporation, such person is considered as owning the stock owned directly or indirectly by or for such corporation, in that proportion which the value of the stock such person so owns bears to the value of all the stock in such corporation. Sec. 318(c)(2)(C) as modified by section 897(c)(6)(C). Also, if five percent or more in value of the stock in a corporation is owned directly or indirectly, by or for any person, such corporation shall be considered as owning the stock owned, directly or indirectly, by or for such person. Sec. 318(c)(3)(C) as modified by section 897(c)(6)(C).

[956] Sec. 897(h)(4)(A)(i). The provision including certain RICs in the definition of qualified investment entity previously expired December 31, 2014. Section 133 of the Protecting Americans from Tax Hikes Act of 2015 (Division Q of Pub. L. No. 114–113) reinstated the provision and made it permanent as of January 1, 2015, as described above in item 22 of Title I.A.

[957] The testing period for this purpose if the shorter of (i) the period beginning on June 19, 1980, and ending on the date of disposition or distribution, as the case may be, (ii) the five-year period ending on the date of the disposition or distribution, as the case may be, or (iii) the period during which the qualified investment entity was in existence. Sec. 897(h)(4)(D).

[958] Treas. Reg. sec. 1.897–1(c)(2)(i) and –8(b).

[959] PLR 200923001. A private letter ruling may be relied upon only by the taxpayer to which it is issued. However, private letter rulings provide some indication of administrative practice.

FIRPTA applies to qualified investment entity (REIT and certain RIC) distributions attributable to gain from sale or exchange of USRPIs, except for distributions to certain five-percent or smaller shareholders

A distribution by a REIT or other qualified investment entity, to the extent attributable to gain from the entity's sale or exchange of USRPIs, is treated as FIRPTA income.[960] The FIRPTA character is retained if the distribution occurs from one qualified investment entity to another, through a tier of REITs or RICs.[961] An IRS notice (Notice 2007–55) states that this rule retaining the FIRPTA income character of distributions attributable to the sale of USRPIs applies to any distributions under sections 301, 302, 331, and 332 (i.e., to dividend distributions, distributions treated as sales or exchanges of stock by the investor, and both nonliquidating and liquidating distributions) and that the IRS will issue regulations to that effect.[962]

There is an exception to this rule in the case of distributions to certain public shareholders. If an investor has owned no more than five percent of a class of stock of a REIT or other qualified investment entity that is regularly traded on an established securities market located in the United States during the one-year period ending on the date of the distribution, then amounts attributable to gain from entity sales or exchanges of USRPIs can be distributed to such a shareholder without being subject to FIRPTA tax.[963] Such distributions that are dividends are treated as dividends from the qualified investment entity,[964] and thus generally would be subject to U.S. dividend withholding tax (as reduced under any applicable treaty), but are not treated as income effectively connected with the conduct of a U.S. trade or business. An IRS Chief Counsel advice memorandum concludes that such distributions which are made in complete liquidation of a REIT are not treated as dividends from the qualified investment entity and thus generally would not be subject to U.S. dividend withholding tax (in addition to not being treated as income effectively connected with the conduct of a U.S. trade or business).[965]

Explanation of Provision

Exception from FIRPTA for certain REIT stock

In the case of REIT stock only, the provision increases from five percent to 10 percent the maximum stock ownership a shareholder may have held, during the testing period, of a class of stock that is publicly traded, to avoid having that stock be treated as a USRPI on disposition.

---

[960] Sec. 897(h)(1).

[961] In 2006, the Tax Increase Prevention and Reconciliation Act of 2005 ("TIPRA"), Pub. L. No. 109–222, sec. 505, specified the retention of this FIRPTA character on a distribution to an upper-tier qualified investment entity, and added statutory withholding requirements.

[962] Notice 2007–55, 2007–2 C.B.13. The Notice also states that in the case of a foreign government investor, because FIRPTA income is treated as effectively connected with the conduct of a U.S. trade or business, proceeds distributed by a qualified investment entity from the sale of USRPIs are not exempt from tax under section 892. The Notice cites and compares existing temporary regulations and indicates that Treasury will apply those regulations as well to certain distributions. See Temp. Treas. Reg. secs. 1.892–3T, 1.897–9T(e), and 1.1445–10T(b).

[963] Sec. 897(h)(1), second sentence.

[964] Secs. 852(b)(3)(E) and 857(b)(3)(F).

[965] AM 2008–003, February 15, 2008.

The provision likewise increases from five percent to 10 percent the percentage ownership threshold that, if not exceeded, results in treating a distribution to holders of publicly traded REIT stock, attributable to gain from sales of exchanges of USRPIs, as a dividend, rather than as FIRPTA gain.

The attribution rules of section 897(c)(6)(C) retain the present-law rule that requires attribution between a shareholder and a corporation if the shareholder owns more than five percent of a class of stock of the corporation. The attribution rules now apply, however, to the determination of whether a person holds more than 10 percent of a class of publicly traded REIT stock.

The provision also provides that REIT stock held by a qualified shareholder, including stock held indirectly through one or more partnerships, is not a U.S real property interest in the hands of such qualified shareholder, except to the extent that an investor in the qualified shareholder (other than an investor that is a qualified shareholder) holds more than 10 percent of that class of stock of the REIT (determined by application of the constructive ownership rules of section 897(c)(6)(C)). Thus, so long as the "more than 10 percent" rule is not exceeded, a qualified shareholder may own and dispose of any amount of stock of a REIT (including stock of a privately-held, non-domestically controlled REIT that is owned by such qualified shareholder) without the application of FIRPTA.

If an investor in the qualified shareholder (other than an investor that is a qualified shareholder) directly, indirectly, or constructively holds more than 10 percent of such class of REIT stock (an "applicable investor"), then a percentage of the REIT stock held by the qualified shareholder equal to the applicable investor's percentage ownership of the qualified shareholder is treated as a USRPI in the hands of the qualified shareholder and is subject to FIRPTA. In that case, an amount equal to such percentage multiplied by the disposition proceeds and REIT distribution proceeds attributable to underlying USRPI gain is treated as FIRPTA gain in the hands of the qualified shareholder.

The provision is intended to override in certain cases one of the conclusions reached in AM 2008–003. Specifically, the provision contains special rules with respect to certain distributions that are treated as a sale or exchange of REIT stock under section 301(c)(3), 302, or 331 with respect to a qualified shareholder. Any such amounts attributable to an applicable investor are ineligible for the FIRPTA exception for qualified shareholders, and thus are subject to FIRPTA. Any such amounts attributable to other investors are treated as a dividend received from a REIT for purposes of U.S. dividend withholding tax and the application of income tax treaties, notwithstanding their general treatment under the Code.

A qualified shareholder is defined as a foreign person that (i) either is eligible for the benefits of a comprehensive income tax treaty which includes an exchange of information program and whose principal class of interests is listed and regularly traded on one or more recognized stock exchanges (as defined in such comprehensive income tax treaty), or is a foreign partnership that is created or organized under foreign law as a limited partnership in a jurisdiction that has an agreement for the exchange of information with respect to taxes with the United States and has a class of limited partnership units representing greater than 50 percent of the value of all the partnership units that is regularly traded on the NYSE or NASDAQ markets, (ii) is a qualified collective investment vehicle (as defined below), and (iii) maintains records on the identity of each person who, at any time during the foreign person's taxable year, is the direct owner of 5 percent or more of the class of interests or units (as applicable) described in (i), above.

A qualified collective investment vehicle is defined as a foreign person that (i) would be eligible for a reduced rate of withholding under the comprehensive income tax treaty described above, even if such entity holds more than 10 percent of the stock of such REIT,[966] (ii) is publicly traded, is treated as a partnership under the Code, is a withholding foreign partnership, and would be treated as a USRPHC if it were a domestic corporation, or (iii) is designated as such by the Secretary of the Treasury and is either (a) fiscally transparent within the meaning of section 894, or (b) required to include dividends in its gross income, but is entitled to a deduction for distributions to its investors.

The provision also contains rules with respect to partnership allocations of USRPI gains to applicable investors. If an applicable investor's proportionate share of USRPI gain for the taxable year exceeds such partner's distributive share of USRPI gain for the taxable year then such partner's distributive share of non-USRPI income or gain is recharacterized as USRPI gain for the taxable year in the amount that the distributive share of USRPI gain exceeds the proportionate share of USRPI gain. For purposes of these partnership allocation rules, USRPI gain is defined to comprise the net of gain recognized on disposition of a USRPI, distributions from a REIT that are treated as USRPI gain, and loss from the disposition of USRPIs. An investor's proportionate share of USRPI gain is determined based on the applicable investor's largest proportionate share of income or gain for the taxable year, and if such proportionate amount may vary during the existence of the partnership, such share is the highest share the applicable investor may receive.

Domestically controlled qualified investment entity

The provision redefines the term "domestically controlled qualified investment entity" to provide a number of new rules and presumptions relating to whether a qualified investment entity is domestically controlled. First, a qualified investment entity shall be permitted to presume that holders of less than five percent of a class of stock regularly traded on an established securities market in the United States are U.S. persons throughout the testing period, except to the extent that the qualified investment entity has actual knowledge that such persons are not U.S. persons. Second, any stock in the qualified investment entity held by another qualified investment entity (I) which has issued any class of stock that is regularly traded on an established stock exchange, or (II) which is a RIC that issues redeemable securities (within the meaning of section 2 of the Investment Company Act of 1940) shall be treated

[966] The qualified collective investment vehicle must be eligible for a reduced rate of withholding under a provision in the dividends article of the relevant treaty dealing specifically with dividends paid by REITs. For example, the U.S. income tax treaties with Australia and the Netherlands provide such a reduced rate of withholding under certain circumstances.

as held by a foreign person unless such other qualified investment entity is domestically controlled (as determined under the new rules) in which case such stock shall be treated as held by a U.S. person. Finally, any stock in a qualified investment entity held by any other qualified investment entity not described in (I) or (II) of the preceding sentence shall only be treated as held by a U.S. person to the extent that the stock of such other qualified investment entity is (or is treated under the new provision as) held by a U.S. person.

Exception for interests held by foreign retirement and pension funds

The provision exempts from the rules of section 897 any USRPI held directly (or indirectly through one or more partnerships) by, or to any distribution received from a real estate investment trust by, a qualified foreign pension fund or by a foreign entity wholly-owned by a qualified foreign pension fund. A qualified foreign pension fund means any trust, corporation, or other organization or arrangement [967] (A) which is created or organized under the law of a country other than the United States, (B) which is established to provide retirement or pension benefits to participants or beneficiaries that are current or former employees (or persons designated by such employees) of one or more employers in consideration for services rendered,[968] (C) which does not have a single participant or beneficiary with a right to more than five percent of its assets or income, (D) which is subject to government regulation and provides annual information reporting about its beneficiaries to the relevant tax authorities in the country in which it is established or operates, and (E) with respect to which, under the laws of the country in which it is established or operates, (i) contributions to such organization or arrangement that would otherwise be subject to tax under such laws are deductible or excluded from the gross income of such entity or taxed at a reduced rate, or (ii) taxation of any investment income of such organization or arrangement is deferred or such income is taxed at a reduced rate.

The provision also makes conforming changes to section 1445 to eliminate withholding on sales by qualified foreign pension funds (and their wholly-owned foreign subsidiaries) of USRPIs.

The Secretary of the Treasury may provide such regulations as are necessary to carry out the purposes of the provision.

Effective Date

The provision to extend exceptions from FIRPTA for certain REIT stock applies to dispositions and distributions on or after the date of enactment (December 18, 2015).

The provision to modify the definition of a domestically controlled qualified investment entity is effective on the date of enactment (December 18, 2015).

[967] Foreign pension funds may be structured in a variety of ways, and may comprise one or more separate entities. The word "arrangement" encompasses such alternative structures.

[968] Multi-employer and government-sponsored public pension funds that provide pension and pension-related benefits may satisfy this prong of the definition. For example, such pension funds may be established for one or more companies or professions, or for the general working public of a foreign country.

The exception for interests held by foreign retirement and pension funds generally applies to dispositions and distributions after the date of enactment (December 18, 2015).

12. Increase in rate of withholding of tax on dispositions of United States real property interests (sec. 324 of the Act and sec. 1445 of the Code)[969]

Present Law

A purchaser of a USRPI from any person is obligated to withhold 10 percent of gross purchase price unless certain exceptions apply.[970] The obligation does not apply if the transferor furnishes an affidavit that the transferor is not a foreign person. Even absent such an affidavit, the obligation does not apply to the purchase of publicly traded stock.[971] Also, the obligation does not apply to the purchase of stock of a nonpublicly traded domestic corporation, if the corporation furnishes the transferee with an affidavit stating the corporation is not and has not been a USRPHC during the applicable period (unless the transferee has actual knowledge or receives a notification that the affidavit is false).[972]

Treasury regulations[973] generally provide that a domestic corporation must, within a reasonable period after receipt of a request from a foreign person holding an interest in it, inform that person whether the interest constitutes a USRPI.[974] No particular form is required. The statement must be dated and signed by a responsible corporate officer who must verify under penalties of perjury that the statement is correct to his knowledge and belief. If a foreign investor requests such a statement, then the corporation must provide a notice to the IRS that includes the name and taxpayer identification number of the corporation as well as the investor, and indicates whether the interest in question is a USRPI. However, these requirements do not apply to a domestically controlled REIT or to a corporation that has issued any class of stock which is regularly traded on an established securities market at any time during the calendar year. In such cases a corporation may voluntarily choose to comply with the notice requirements that would otherwise have applied.[975]

In addition to these exceptions that might be determined at the entity level, even if a corporation is a USRPHC, its stock is not a USRPI in the hands of the seller if the stock is of a class that is publicly traded and the foreign shareholder disposing of the stock has not owned (applying attribution rules) more than five percent of such class of stock during the relevant period.

[969] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 3 of that bill contained an identical provision.

[970] Sec. 1445.

[971] Sec. 1445(b)(6).

[972] Sec. 1445(b)(3). Other exceptions also apply. Sec. 1445(b).

[973] Treas. Reg. Sec. 1.897–2(h).

[974] As described previously, stock of a U.S. corporation is not generally a USRPI unless it is stock of a USRPHC. However, all U.S. corporate stock is deemed to be such stock, unless it is shown that the corporation's U.S. real property interests do not amount to the relevant 50 percent or more of the corporation's relevant assets. Also, even if a REIT is a USRPHC, if it is domestically controlled its stock is not a USRPI.

[975] Treas. Reg. sec. 1.897–2(h)(3).

Explanation of Provision

The provision generally increases the rate of withholding of tax on dispositions and certain distributions of URSPIs, from 10 percent to 15 percent. There is an exception to this higher rate of withholding (retaining the 10 percent withholding tax rate under present law) for sales of residences intended for personal use by the acquirer, with respect to which the purchase price does not exceed $1,000,000. Thus, if the present law exception for personal residences (where the purchase price does not exceed $300,000) does not apply, the 10 percent withholding rate is retained so long as the purchase price does not exceed $1,000,000.

Effective Date

The provision applies to dispositions after the date which is 60 days after the date of enactment (December 18, 2015).

13. Interests in RICs and REITs not excluded from definition of United States real property interests (sec. 325 of the Act and sec. 897 of the Code)[976]

Present Law

An interest in a corporation is not a USRPI if (1) as of the date of disposition of such interest, such corporation did not hold any USRPIs and (2) all of the USRPIs held by such corporation during the shorter of (i) the period of time after June 18, 1980, during which the taxpayer held such interest, or (ii) the five-year period ending on the date of disposition of such interest, were either disposed of in transactions in which the full amount of the gain (if any) was recognized, or ceased to be USRPIs by reason of the application of this rule to one or more other corporations (the so-called "cleansing rule").[977]

Explanation of Provision

Under the provision, the cleansing rule applies to stock of a corporation only if neither such corporation nor any predecessor of such corporation was a RIC or a REIT at any time during the shorter of the period after June 18, 1980 during which the taxpayer held such stock, or the five-year period ending on the date of the disposition of such stock.

Effective Date

The provision applies to dispositions on or after the date of enactment (December 18, 2015).

[976] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 6 of that bill contained an identical provision.
[977] Sec. 897(c)(1)(B).

14. Dividends derived from RICs and REITs ineligible for deduction for United States source portion of dividends from certain foreign corporations (sec. 326 of the Act and sec. 245 of the Code) [978]

Present Law

A corporation is generally allowed to deduct a portion of the dividends it receives from another corporation. The deductible amount is a percentage of the dividends received. The percentage depends on the level of ownership that the corporate shareholder has in the corporation paying the dividend. The dividends-received deduction is 70 percent of the dividend if the recipient owns less than 20 percent of the stock of the payor corporation, 80 percent if the recipient owns at least 20 percent but less than 80 percent of the stock of the payor corporation, and 100 percent if the recipient owns 80 percent or more of the stock of the payor corporation.[979]

Dividends from REITs are not eligible for the corporate dividends received deduction.[980] Dividends from a RIC are eligible only to the extent attributable to dividends received by the RIC from certain other corporations, and are treated as dividends from a corporation that is not 20-percent owned.[981]

Dividends received from a foreign corporation are not generally eligible for the dividends-received deduction. However, section 245 provides that if a U.S. corporation is a 10-percent shareholder of a foreign corporation, the U.S. corporation is generally entitled to a dividends-received deduction for the portion of dividends received that are attributable to the post-1986 undistributed U.S. earnings of the foreign corporation. The post-1986 undistributed U.S. earnings are measured by reference to earnings of the foreign corporation effectively connected with the conduct of a trade or business within the United States, or received by the foreign corporation from an 80-percent-owned U.S. corporation.[982] A 2013 IRS chief counsel advice memorandum advised that dividends received by a 10-percent U.S. corporate shareholder from a foreign corporation controlled by the shareholder are not eligible for the dividends-received deduction if the dividends were attributable to interest income of an 80-percent owned RIC.[983] Treasury regulations section 1.246–1 states that the deductions provided in sections "243 . . . 244 . . . and 245 (relating to dividends received from certain foreign corporations)" are not allowable with respect to any dividend received from certain entities, one of which is a REIT.

[978] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 7 of that bill contained an identical provision.

[979] Sec. 243.

[980] Secs. 243(d)(3) and 857(c)(1).

[981] Secs. 243(d)(2) and 854(b)(1)(A) and (C).

[982] Sec. 245

[983] IRS CCA 201320014. The situation addressed in the memorandum involved a controlled foreign corporation that had terminated its "CFC" status before year end, through a transfer of stock to a partnership. The advice was internal IRS advice to the Large Business and International Division. Such advice is not to be relied upon or cited as precedent by taxpayers, but may offer some indication of administrative practice.

Explanation of Provision

Under the provision, for purposes of determining whether dividends from a foreign corporation (attributable to dividends from an 80-percent owned domestic corporation) are eligible for a dividends-received deduction under section 245, dividends from RICs and REITs are not treated as dividends from domestic corporations.

Effective Date

The provision applies to dividends received from RICs and REITs on or after the date of enactment (December 18, 2015). No inference is intended with respect to the proper treatment under section 245 of dividends received from RICs or REITs before such date.

C. Additional Provisions

1. Provide special rules concerning charitable contributions to, and public charity status of, agricultural research organizations (sec. 331 of the Act and secs. 170(b) and 501(h) of the Code)[984]

Present Law

Public charities and private foundations

An organization qualifying for tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986, as amended (the "Code") is further classified as either a public charity or a private foundation. An organization may qualify as a public charity in several ways.[985] Certain organizations are classified as public charities per se, regardless of their sources of support. These include churches, certain schools, hospitals and other medical organizations (including medical research organizations), certain organizations providing assistance to colleges and universities, and governmental units.[986] Other organizations qualify as public charities because they are broadly publicly supported or support specific public charities. First, a charity may qualify as publicly supported if at least one-third of its total support is from gifts, grants or other contributions from governmental units or the general public.[987] Alternatively, it may qualify as publicly supported if it receives more than one-third of its total support from a combination of gifts, grants, and contributions from governmental units and the public plus revenue arising from activities related to its exempt purposes (*e.g.*, fee for service income). In addition, this category of public charity must not rely excessively on endowment income as a source of support.[988] A supporting organization, i.e., an organization that

[984] The Senate Committee on Finance reported S. 906 on April 14, 2015 (S. Rep. No. 114–19).

[985] The Code does not expressly define the term "public charity," but rather provides exceptions to those entities that are treated as private foundations.

[986] Sec. 509(a)(1) (referring to sections 170(b)(1)(A)(i) through (iv) for a description of these organizations).

[987] Treas. Reg. sec. 1.170A–9(f)(2). Failing this mechanical test, the organization may qualify as a public charity if it passes a "facts and circumstances" test. Treas. Reg. sec. 1.170A–9(f)(3).

[988] To meet this requirement, the organization must normally receive more than one-third of its support from a combination of (1) gifts, grants, contributions, or membership fees and (2) certain gross receipts from admissions, sales of merchandise, performance of services, and fur-

COMMITTEE ON
WAYS AND MEANS
CHAIRMAN KEVIN BRADY

SECTION-BY-SECTION SUMMARY OF THE PROPOSED "PROTECTING AMERICANS FROM TAX HIKES ACT OF 2015"

TITLE I – EXTENDERS

Subtitle A –Permanent Extensions

PART 1 – Tax Relief for Families and Individuals

Section 101. Enhanced child tax credit made permanent. The child tax credit (CTC) is a $1,000 credit. To the extent the CTC exceeds the taxpayer's tax liability, the taxpayer is eligible for a refundable credit (the additional child tax credit) equal to 15 percent of earned income in excess of a threshold dollar amount (the "earned income" formula). Until 2009, the threshold dollar amount was $10,000 indexed for inflation from 2001 (which would be roughly $14,000 in 2015). Since 2009, however, this threshold amount has been set at an unindexed $3,000 and is scheduled to expire at the end of 2017, returning to the $10,000 (indexed for inflation) amount. The provision permanently sets the threshold amount at an unindexed $3,000.

Section 102. Enhanced American opportunity tax credit made permanent. The Hope Scholarship Credit is a credit of $1,800 (indexed for inflation) for various tuition and related expenses for the first two years of post-secondary education. It phases out for AGI starting at $48,000 (if single) and $96,000 (if married filing jointly) – these amounts are also indexed for inflation. The American Opportunity Tax Credit (AOTC) takes those permanent provisions of the Hope Scholarship Credit and increases the credit to $2,500 for four years of post-secondary education, and increases the beginning of the phase-out amounts to $80,000 (single) and $160,000 (married filing jointly) for 2009 to 2017. The provision makes the AOTC permanent.

Section 103. Enhanced earned income tax credit made permanent. Low- and moderate-income workers may be eligible for the earned income tax credit (EITC). For 2009 through 2017, the EITC amount has been temporarily increased for those with three (or more) children and the EITC marriage penalty has been reduced by increasing the income phase-out range by $5,000 (indexed for inflation) for those who are married and filing jointly. The provision makes these provisions permanent.

Section 104. Extension and modification of deduction for certain expenses of elementary and secondary school teachers. The provision permanently extends the above-the-line deduction (capped at $250) for the eligible expenses of elementary and secondary school teachers. Beginning in 2016, the provision also modifies the deduction to index the $250 cap to inflation and include professional development expenses.

Section 105. Extension of parity for exclusion from income for employer-provided mass transit and parking benefits. The provision permanently extends the maximum monthly exclusion amount for transit passes and van pool benefits so that these transportation benefits match the exclusion for qualified parking benefits. These fringe benefits are excluded from an employee's wages for payroll tax purposes and from gross income for income tax purposes.

Section 106. Extension of deduction of State and local general sales taxes. The provision permanently extends the option to claim an itemized deduction for State and local general sales taxes in lieu of an itemized deduction for State and local income taxes. The taxpayer may either deduct the actual amount of sales tax paid in the tax year, or alternatively, deduct an amount prescribed by the Internal Revenue Service (IRS).

PART 2 – Incentives for Charitable Giving

Section 111. Extension and modification of special rule for contributions of capital gain real property made for conservation purposes. The provision permanently extends the charitable deduction for contributions of real property for conservation purposes. The provision also permanently extends the enhanced deduction for certain individual and corporate farmers and ranchers. The provision modifies the deduction beginning in 2016 to permit Alaska Native Corporations to deduct donations of conservation easements up to 100 percent of taxable income.

Section 112. Extension of tax-free distributions from individual retirement plans for charitable purposes. The provision permanently extends the ability of individuals at least 70½ years of age to exclude from gross income qualified charitable distributions from Individual Retirement Accounts (IRAs). The exclusion may not exceed $100,000 per taxpayer in any tax year.

Section 113. Extension and modification of charitable deduction for contributions of food inventory. The provision permanently extends the enhanced deduction for charitable contributions of inventory of apparently wholesome food for non-corporate business taxpayers. The provision modifies the deduction beginning in 2016 by increasing the limitation on deductible contributions of food inventory from 10 percent to 15 percent of the taxpayer's AGI (15 percent of taxable income (as modified by the provision) in the case of a C corporation) per year. The provision also modifies the deduction to provide special rules for valuing food inventory.

Section 114. Extension of modification of tax treatment of certain payments to controlling exempt organizations. The provision permanently extends the modification of the tax treatment of certain payments by a controlled entity to an exempt organization.

Section 115. Extension of basis adjustment to stock of S corporations making charitable contributions of property. The provision permanently extends the rule providing that a shareholder's basis in the stock of an S corporation is reduced by the shareholder's pro rata share of the adjusted basis of property contributed by the S corporation for charitable purposes.

PART 3 – Incentives for Growth, Jobs, Investment, and Innovation

Section 121. Extension and modification of research credit. The provision permanently extends the research and development (R&D) tax credit. Additionally, beginning in 2016 eligible small businesses ($50 million or less in gross receipts) may claim the credit against alternative minimum tax (AMT) liability, and the credit can be utilized by certain small businesses against the employer's payroll tax (i.e., FICA) liability.

Section 122. Extension and modification of employer wage credit for employees who are active duty members of the uniformed services. The provision permanently extends the 20-percent employer wage credit for employees called to active military duty. Beginning in 2016, the provision modifies the credit to apply to employers of any size, rather than employers with 50 or fewer employees, as under current law.

Section 123. Extension of 15-year straight-line cost recovery for qualified leasehold improvements, qualified restaurant buildings and improvements, and qualified retail improvements. The provision permanently extends the 15-year recovery period for qualified leasehold improvements, qualified restaurant property, and qualified retail improvement property.

Section 124. Extension and modification of increased expensing limitations and treatment of certain real property as section 179 property. The provision permanently extends the small business expensing limitation and phase-out amounts in effect from 2010 to 2014 ($500,000 and $2 million, respectively). These amounts currently are $25,000 and $200,000, respectively. The special rules that allow expensing for computer software and qualified real property (qualified leasehold improvement property, qualified restaurant property, and qualified retail improvement property) also are permanently extended. The provision modifies the expensing limitation by indexing both the $500,000 and $2 million limits for inflation beginning in 2016 and by treating air conditioning and heating units placed in service in tax years beginning after 2015 as eligible for expensing. The provision further modifies the expensing limitation with respect to qualified real property by eliminating the $250,000 cap beginning in 2016.

Section 125. Extension of treatment of certain dividends of regulated investment companies. The provision permanently extends provisions allowing for the pass-through character of interest-related dividends and short-term capital gains dividends from regulated investment companies (RICs) to foreign investors.

Section 126. Extension of exclusion of 100 percent of gain on certain small business stock. The provision extends the temporary exclusion of 100 percent of the gain on certain small business stock for non-corporate taxpayers to stock acquired and held for more than five years. This provision also permanently extends the rule that eliminates such gain as an AMT preference item.

Section 127. Extension of reduction in S-corporation recognition period for built-in gains tax. The provision permanently extends the rule reducing to five years (rather than ten years) the period for which an S corporation must hold its assets following conversion from a C corporation to avoid the tax on built-in gains.

Section 128. Extension of subpart F exception for active financing income. The provision permanently extends the exception from subpart F income for active financing income.

PART 4 – Incentives for Real Estate Investment

Section 131. Extension of temporary minimum low-income housing tax credit rates for non-Federally subsidized buildings. The provision permanently extends application of the 9-percent minimum credit rate for the low-income housing tax credit for non-Federally subsidized new buildings.

Section 132. Extension of military housing allowance exclusion for determining whether a tenant in certain counties is low-income. The provision permanently extends the exclusion of military basic housing allowances from the calculation of income for determining eligibility as a low-income tenant for purposes of low-income housing tax credit buildings.

Section 133. Extension of RIC qualified investment entity treatment under FIRPTA. The provision permanently extends the treatment of RICs as qualified investment entities and, therefore, not subject to withholding under the Foreign Investment in Real Property Tax Act (FIRPTA).

Subtitle B – Extensions through 2019

Section 141. Extension of new markets tax credit. The provision authorizes the allocation of $3.5 billion of new markets tax credits for each year from 2015 through 2019.

Section 142. Extension and modification of work opportunity tax credit. The provision extends through 2019 the work opportunity tax credit. The provision also modifies the credit beginning in 2016 to apply to employers who hire qualified long-term unemployed individuals (i.e., those who have been unemployed for 27 weeks or more) and increases the credit with respect to such long-term unemployed individuals to 40 percent of the first $6,000 of wages.

Section 143. Extension and modification of bonus depreciation. The provision extends bonus depreciation for property acquired and placed in service during 2015 through 2019 (with an additional year for certain property with a longer production period). The bonus depreciation percentage is 50 percent for property placed in service during 2015, 2016 and 2017 and phases down, with 40 percent in 2018, and 30 percent in 2019. The provision continues to allow taxpayers to elect to accelerate the use of AMT credits in lieu of bonus depreciation under special rules for property placed in service during 2015. The provision modifies the AMT rules beginning in 2016 by increasing the amount of unused AMT credits that may be claimed in lieu of bonus depreciation. The provision also modifies bonus depreciation to include qualified improvement property and to permit certain trees, vines, and plants bearing fruit or nuts to be eligible for bonus depreciation when planted or grafted, rather than when placed in service.

Section 144. Extension of look-thru treatment of payments between related controlled foreign corporations under foreign personal holding company rules. The provision extends through 2019 the look-through treatment for payments of dividends, interest, rents, and royalties between related controlled foreign corporations.

Subtitle C – Extensions through 2016

PART 1 – Tax Relief for Families and Individuals

Section 151. Extension and modification of exclusion from gross income of discharge of qualified principal residence indebtedness. The provision extends through 2016 the exclusion from gross income of a discharge of qualified principal residence indebtedness. The provision also modifies the exclusion to apply to qualified principal residence indebtedness that is discharged in 2017, if the discharge is pursuant to a written agreement entered into in 2016.

Section 152. Extension of mortgage insurance premiums treated as qualified residence interest. The provision extends through 2016 the treatment of qualified mortgage insurance premiums as interest for purposes of the mortgage interest deduction. This deduction phases out ratably for a taxpayer with AGI of $100,000 to $110,000.

Section 153. Extension of above-the-line deduction for qualified tuition and related expenses. The provision extends through 2016 the above-the-line deduction for qualified tuition and related expenses for higher education. The deduction is capped at $4,000 for an individual whose AGI does not exceed $65,000 ($130,000 for joint filers) or $2,000 for an individual whose AGI does not exceed $80,000 ($160,000 for joint filers).

PART 2 – Incentives for Growth, Jobs, Investment, and Innovation

Section 161. Extension of Indian employment tax credit. The provision extends through 2016 the Indian employment tax credit. The Indian employment credit provides a credit on the first $20,000 of qualified wages paid to each qualified employee who works on an Indian reservation.

Section 162. Extension and modification of railroad track maintenance credit. The provision extends through 2016 the railroad track maintenance tax credit. The provision modifies the credit to apply to expenditures for maintaining railroad track owned or leased as of January 1, 2015 (rather than January 1, 2005, as under current law).

Section 163. Extension of mine rescue team training credit. The provision extends through 2016 the mine rescue team training tax credit. Employers may take a credit equal to the lesser of 20 percent of the training program costs incurred, or $10,000.

Section 164. Extension of qualified zone academy bonds. The provision authorizes the issuance of $400 million of qualified zone academy bonds during 2016. The bond proceeds are used for school renovations, equipment, teacher training, and course materials at a qualified zone academy, provided that private entities have promised to donate certain property and services to the academy with a value equal to at least 10 percent of the bond proceeds.

Section 165. Extension of classification of certain race horses as 3-year property. The provision extends the 3-year recovery period for race horses to property placed in service during 2015 or 2016.

Section 166. Extension of 7-year recovery period for motorsports entertainment complexes. The provision extends the 7-year recovery period for motorsport entertainment complexes to property placed in service during 2015 or 2016.

Section 167. Extension and modification of accelerated depreciation for business property on an Indian reservation. The provision extends accelerated depreciation for qualified Indian reservation property to property placed in service during 2015 or 2016. The provision also modifies the deduction to permit taxpayers to elect out of the accelerated depreciation rules.

Section 168. Extension of election to expense mine safety equipment. The provision extends the election to expense mine safety equipment to property placed in service during 2015 or 2016.

Section 169. Extension of special expensing rules for certain film and television productions. The provision extends through 2016 the special expensing provision for qualified film, television, and live theater productions. In general, only the first $15 million of costs may be expensed.

Section 170. Extension of deduction allowable with respect to income attributable to domestic production activities in Puerto Rico. The provision extends through 2016 the eligibility of domestic gross receipts from Puerto Rico for the domestic production deduction.

Section 171. Extension and modification of empowerment zone tax incentives. The provision extends through 2016 the tax benefits for certain businesses and employers operating in empowerment zones. Empowerment zones are economically distressed areas, and the tax benefits available include tax-exempt bonds, employment credits, increased expensing, and gain exclusion from the sale of certain small-business stock. The provision modifies the incentive beginning in 2016 by allowing employees to meet the enterprise zone facility bond employment requirement if they are residents of the empowerment zone, an enterprise community, or a qualified low-income community within an applicable nominating jurisdiction.

Section 172. Extension of temporary increase in limit on cover over of rum excise taxes to Puerto Rico and the Virgin Islands. The provision extends the $13.25 per proof gallon excise tax cover-over amount paid to the treasuries of Puerto Rico and the U.S. Virgin Islands to rum imported into the United States during 2015 or 2016. Absent the extension, the cover-over amount would be $10.50 per proof gallon.

Section 173. Extension of American Samoa economic development credit. The provision extends through 2016 the existing credit for taxpayers currently operating in American Samoa.

Section 174. Moratorium on medical device excise tax. The provision provides for a two-year moratorium on the 2.3-percent excise tax imposed on the sale of medical devices. The tax will not apply to sales during calendar years 2016 and 2017.

PART 3 – Incentives for Energy Production and Conservation

Section 181. Extension and modification of credit for nonbusiness energy property. The provision extends through 2016 the credit for purchases of nonbusiness energy property. The provision allows a credit of 10 percent of the amount paid or incurred by the taxpayer for qualified energy improvements, up to $500.

Section 182. Extension of credit for alternative fuel vehicle refueling property. The provision extends through 2016 the credit for the installation of non-hydrogen alternative fuel vehicle refueling property. (Under current law, hydrogen-related property is eligible for the credit through 2016.) Taxpayers are allowed a credit of up to 30 percent of the cost of the installation of the qualified alternative fuel vehicle refueling property.

Section 183. Extension of credit for 2-wheeled plug-in electric vehicles. The provision extends through 2016 the 10-percent credit for plug-in electric motorcycles and 2-wheeled vehicles (capped at $2,500).

Section 184. Extension of second generation biofuel producer credit. The provision extends through 2016 the credit for cellulosic biofuels producers.

Section 185. Extension of biodiesel and renewable diesel incentives. The provision extends through 2016 the existing $1.00 per gallon tax credit for biodiesel and biodiesel mixtures, and the small agri-biodiesel producer credit of 10 cents per gallon. The provision also extends through 2016 the $1.00 per gallon production tax credit for diesel fuel created from biomass. The provision extends through 2016 the fuel excise tax credit for biodiesel mixtures.

Section 186. Extension and modification of production credit for Indian coal facilities. The provision extends through 2016 the $2 per ton production tax credit for coal produced on land owned by an Indian tribe, if the facility was placed in service before 2009. A coal facility is allowed only nine years of credit. The provision modifies the credit beginning in 2016 by removing the placed-in-service-date limitation, removing the nine-year limitation, and allowing the credit to be claimed against the AMT.

Section 187. Extension and modification of credits with respect to facilities producing energy from certain renewable resources. The provision extends the production tax credit for certain renewable sources of electricity to facilities for which construction has commenced by the end of 2016.

Section 188. Extension of credit for energy-efficient new homes. The provision extends through 2016 the tax credit for manufacturers of energy-efficient residential homes. An eligible contractor may claim a tax credit of $1,000 or $2,000 for the construction or manufacture of a new energy efficient home that meets qualifying criteria.

Section 189. Extension of special allowance for second generation biofuel plant property. The provision extends through 2016 the 50-percent bonus depreciation for cellulosic biofuel facilities.

Section 190. Extension of energy efficient commercial buildings deduction. The provision extends through 2016 the above-the-line deduction for energy efficiency improvements to lighting, heating, cooling, ventilation, and hot water systems of commercial buildings.

Section 191. Extension of special rule for sales or dispositions to implement FERC or State electric restructuring policy for qualified electric utilities. The provision extends through 2016 a rule that permits taxpayers to elect to recognize gain from qualifying electric transmission transactions ratably over an eight-year period beginning in the year of sale (rather than entirely in the year of sale) if the amount realized from such sale is used to purchase exempt utility property within the applicable period.

Section 192. Extension of excise tax credits relating to alternative fuels. The provision extends through 2016 the 50 cents per gallon alternative fuel tax credit and alternative fuel mixture tax credit.

Section 193. Extension of credit for new qualified fuel cell motor vehicles. The provision extends through 2016 the credit for purchases of new qualified fuel cell motor vehicles. The provision allows a credit of between $4,000 and $40,000 depending on the weight of the vehicle for the purchase of such vehicles.

TITLE II – PROGRAM INTEGRITY

Section 201. Modification of filing dates of returns and statements relating to employee wage information and nonemployee compensation to improve compliance. The provision requires forms W-2, W-3, and returns or statements to report non-employee compensation (e.g., Form 1099-MISC), to be filed on or before January 31 of the year following the calendar year to which such returns relate. The provision also provides additional time for the IRS to review refund claims based on the earned income tax credit and the refundable portion of the child tax credit in order to reduce fraud and improper payments. The provision is effective for returns and statements relating to calendar years after the date of enactment (e.g., filed in 2017).

Section 202. Safe harbor for de minimis errors on information returns and payee statements. The provision establishes a safe harbor from penalties for the failure to file correct information returns and for failure to furnish correct payee statements by providing that if the error is $100 or less ($25 or less in the case of errors involving tax withholding), the issuer of the information return is not required to file a corrected return and no penalty is imposed. A recipient of such a return (e.g., an employee who receives a Form W-2) can elect to have a corrected return issued to them and filed with the IRS. The provision is effective for returns and statements required to be filed after December 31, 2016.

Section 203. Requirements for the issuance of ITINs. The provision provides that the IRS may issue taxpayer identification numbers (ITIN) if the applicant provides the documentation required by the IRS either (a) in person to an IRS employee or to a community-based certified acceptance agent (as authorized by the IRS), or (b) by mail. The provision requires that individuals who were issued ITINs before 2013 are required to renew their ITINs on a staggered schedule between 2017 and 2020. The provision also provides that an ITIN will expire if an individual fails to file a tax return for three consecutive years. The provision also directs the Treasury Department and IRS to study the current procedures for issuing ITINs with a goal of adopting a system by 2020 that would require all applications to be filed in person. The provision is effective for requests for ITINs made after the date of enactment.

Section 204. Prevention of retroactive claims of earned income credit after issuance of social security number. The provision prohibits an individual from retroactively claiming the earned income tax credit by amending a return (or filing an original return if he failed to file) for any prior year in which he did not have a valid social security number. The provision applies to returns, and any amendment or supplement to a return, filed after the date of enactment.

Section 205. Prevention of retroactive claims of child tax credit. The provision prohibits an individual from retroactively claiming the child tax credit by amending a return (or filing an original return if he failed to file) for any prior year in which the individual or a qualifying child for whom the credit is claimed did not have an ITIN. The provision applies to returns, and any amendment or supplement to a return, filed after the date of enactment.

Section 206. Prevention of retroactive claims of American opportunity tax credit. The provision prohibits an individual from retroactively claiming the American Opportunity Tax Credit by amending a return (or filing an original return if he failed to file) for any prior year in which the individual or a student for whom the credit is claimed did not have an ITIN. The provision applies to returns, and any amendment or supplement to a return, filed after the date of enactment.

Section 207. Procedures to reduce improper claims. The provision expands the paid-preparer due diligence requirements with respect to the earned income tax credit, and the associated $500 penalty for failures to comply, to cover returns claiming the child tax credit and American Opportunity Tax Credit. The provision also requires the IRS to study the effectiveness of the due diligence requirements and whether such requirements should apply to taxpayer who file online or by filing a paper form. The provision applies to tax years beginning after December 31, 2015.

Section 208. Restrictions on taxpayers who improperly claimed credits in prior year. The provision expands the rules under current law, which bar individuals from claiming the earned income tax credit for ten year if they are convicted of fraud and for two years if they are found to have recklessly or intentionally disregarded the rules, to apply to the child tax credit and American Opportunity Tax Credit. The provision adds math error authority, which permits the

IRS to disallow improper credits without a formal audit if the taxpayer claims the credit in a period during which he is barred from doing so due to fraud or reckless or intentional disregard. The provision applies to tax years beginning after December 31, 2015.

Section 209. Treatment of credits for purposes of certain penalties. The provision applies the 20-percent penalty for erroneous claims under current law to the refundable portion of credits (reversing the Tax Court decision in *Rand v. Commissioner*). The provision also eliminates the exception from the penalty for erroneous refunds and credits that currently applies to the earned income tax credit, and the provision provides reasonable-cause relief from the penalty. The provision generally applies to returns filed after December 31, 2015.

Section 210. Increase the penalty applicable to paid tax preparers who engage in willful or reckless conduct. The provision expands the penalty for tax preparers who engage in willful or reckless conduct, which is currently the greater of $5,000 or 50 percent of the preparer's income with respect to the return, by increasing the 50 percent amount to 75 percent. The provision applies to returns prepared for tax years ending after the date of enactment.

Section 211. Employer identification number required for American opportunity tax credit. The provision requires a taxpayer claiming the American opportunity tax credit to report the employer identification number (EIN) of the educational institution to which the taxpayer makes qualified payments under the credit. The provision applies to tax years beginning after December 31, 2015, and expenses paid after such date for education furnished in academic periods beginning after such date.

Section 212. Higher education information reporting only to include qualified tuition and related expenses actually paid. The provision reforms the reporting requirements for Form 1098-T so that educational institutions are required to report only qualified tuition and related expenses actually paid, rather than choosing between amounts paid and amounts billed, as under current law. The provision applies to expenses paid after December 31, 2015 for education furnished in academic periods beginning after such date.

TITLE III – MISCELLANEOUS PROVISIONS

Subtitle A – Family Tax Relief

Section 301. Exclusion for amounts received under the Work Colleges Program. The provision exempts from gross income any payments from certain work-learning-service programs that are operated by a work college as defined in section 448(e) of the Higher Education Act of 1965. The provision is effective for amounts received in tax years beginning after date of enactment.

Section 302. Improvements to section 529 accounts. The provision expands the definition of qualified higher education expenses for which tax-preferred distributions from 529 accounts are eligible to include computer equipment and technology. The provision modifies 529-account rules to treat any distribution from a 529 account as coming only from that account, even if the individual making the distribution operates more than one account. The provision treats a refund of tuition paid with amounts distributed from a 529 account as a qualified expense if such amounts are re-contributed to a 529 account within 60 days. The provision is effective for distributions made or refunds after 2014, or in the case of refunds after 2014 and before the date of enactment, for refunds re-contributed not later than 60 days after date of enactment.

Section 303. Elimination of residency requirement for qualified ABLE programs. The provision allows ABLE accounts (tax-preferred savings accounts for disabled individuals), which currently may be located only in the State of residence of the beneficiary, to be established in any State. This will allow individuals setting up ABLE accounts to choose the State program that best fits their needs, such as with regard to investment options, fees, and account limits. The provision is effective for tax years beginning after December 31, 2014

Section 304. Exclusion for wrongfully incarcerated individuals. The provision allows an individual to exclude from gross income civil damages, restitution, or other monetary awards that the taxpayer received as compensation for a wrongful incarceration. A "wrongfully incarcerated individual" is either: (1) an individual who was convicted of a criminal offense under Federal or state law, who served all or part of a sentence of imprisonment relating to such offense, and who was pardoned, granted clemency, or granted amnesty because of actual innocence of the offense; or (2) an individual for whom the conviction for such offense was reversed or vacated and for whom the indictment, information, or other accusatory instrument for such offense was dismissed or who was found not guilty at a new trial after the conviction was reversed or vacated. The provision applies to tax years beginning before, on, or after the date of enactment.

Section 305. Clarification of special rule for certain governmental plans. The provision extends the special rule under current law for certain benefits paid by accident or health plans of a public retirement system to such benefits paid by plans established by or on behalf of a State or political subdivision. To qualify, such plans must have been authorized by a State legislature or received a favorable ruling from the IRS that the trust's income is not includible in gross income under either section 115 or section 501(c)(9) of the tax code, and on or before January 1, 2008, have provided for payment of medical benefits to a deceased participant's beneficiary. The provision is effective for payments after the date of enactment.

Section 306. Rollovers permitted from other retirement plans into simple retirement accounts. The provision allows a taxpayer to roll over amounts from an employer-sponsored retirement plan (e.g., 401(k) plan) to a SIMPLE IRA, provided the plan has existed for at least two years. The provision applies to contributions made after the date of enactment.

Section 307. Technical amendment relating to rollover of certain airline payment amounts. The provision clarifies the effective dates of Public Law 113-243 to allow certain airline employees to contribute amounts received in certain bankruptcies to an IRA without being subject to the annual contribution limit. The provision is effective as if included in Public Law 113-243.

Section 308. Treatment of early retirement distributions for nuclear materials couriers, United States Capitol Police, Supreme Court Police, and diplomatic security special agents. The provision extends the relief under current law, which provides an exception to the 10-percent penalty on withdrawals from retirement accounts before age 50 for public safety officer, to include nuclear materials couriers, United States Capitol Police, Supreme Court Police, and diplomatic security special agents. The provision is effective for distributions after December 31, 2015.

Section 309. Prevention of extension of tax collection period for members of the Armed Forces who are hospitalized as a result of combat zone injuries. The provision requires that the collection period for members of the Armed Forces hospitalized for combat zone injuries may not be extended by reason of any period of continuous hospitalization or the 180 days after hospitalization. Accordingly, the collection period expires 10 years after assessment, plus the actual time spent in a combat zone. The provision applies to taxes assessed before, on, or after the date of the enactment.

Subtitle B– Real Estate Investment Trusts

Section 311. Restriction on tax-free spinoffs involving REITs. The provision provides that a spin-off involving a REIT will qualify as tax-free only if immediately after the distribution both the distributing and controlled corporation are REITs. In addition, neither a distributing nor a controlled corporation would be permitted to elect to be treated as a REIT for ten years following a tax-free spin-off transaction. The provision applies to distributions on or after December 7, 2015, but shall not apply to any distribution pursuant to a transaction described in a ruling request initially submitted to the IRS on or before such date, which request has not been withdrawn and with respect to which a ruling has not been issued or denied in its entirety as of such date.

Section 312. Reduction in percentage limitation on assets of REIT which may be taxable REIT subsidiaries. The provision modifies the rules with respect to a REIT's ownership of a taxable REIT subsidiary (TRS), which is taxed as a corporation. Under the provision, the securities of one or more TRSs held by a REIT may not represent more than 20 percent (rather than 25 percent under current law) of the value of the REIT's assets. The provision is effective for tax years beginning after 2017.

Section 313. Prohibited transaction safe harbors. The provision provides for an alternative three-year averaging safe harbor for determining the percentage of assets that a REIT may sell annually. In addition, the provision clarifies that the safe harbor is applied independent of whether the real estate asset is inventory property. The provision generally is effective for tax years beginning after the date of enactment. However, the clarification of the safe harbor takes effect as if included in the Housing Assistance Tax Act of 2008.

Section 314. Repeal of preferential dividend rule for publicly offered REITs. The provision repeals the preferential dividend rule for publicly offered REITs. The provision is effective for distributions in tax years beginning after 2014.

Section 315. Authority for alternative remedies to address certain REIT distribution failures. The provision provides the IRS with authority to provide an appropriate remedy for a preferential dividend distribution by non-publicly offered REITs in lieu of treating the dividend as not qualifying for the REIT dividend deduction and not counting toward satisfying the requirement that REITs distribute 90 percent of their income every year. Such authority applies if the preferential distribution is inadvertent or due to reasonable cause and not due to willful neglect. The provision applies to distributions in tax years beginning after 2015.

Section 316. Limitations on designation of dividends by REITs. The provision provides that the aggregate amount of dividends that could be designated by a REIT as qualified dividends or capital gain dividends will not exceed the dividends actually paid by the REIT. The provision is effective for distributions in tax years beginning after 2014.

Section 317. Debt instruments of publicly offered REITs and mortgages treated as real estate assets. The provision provides that debt instruments issued by publicly offered REITs, as well as interests in mortgages on interests in real property, are treated as real estate assets for purposes of the 75-percent asset test. Income from debt instruments issued by publicly offered REITs are treated as qualified income for purposes of the 95-percent income test, but not the 75-percent income test (unless they already are treated as qualified income under current law). In addition, not more than 25 percent of the value of a REIT's assets is permitted to consist of such debt instruments. The provision is effective for tax years beginning after 2015.

Section 318. Asset and income test clarification regarding ancillary personal property. The provision provides that certain ancillary personal property that is leased with real property is treated as real property for purposes of the 75-percent asset test. In addition, an obligation secured by a mortgage on such property is treated as real property for purposes of the 75-percent income and asset tests, provided the fair market value of the personal property does not exceed 15 percent of the total fair market value of the combined real and personal property. The provision is effective for tax years beginning after 2015.

Section 319. Hedging provisions. The provision expands the treatment of REIT hedges to include income from hedges of previously acquired hedges that a REIT entered to manage risk associated with liabilities or property that have been extinguished or disposed. The provision is effective for tax years beginning after 2015.

Section 320. Modification of REIT earnings and profits calculation to avoid duplicate taxation. The provision provides that current (but not accumulated) REIT earnings and profits for any tax year are not reduced by any amount that is not allowable in computing taxable income for the tax year and was not allowable in computing its taxable income for any prior tax year (e.g., certain amounts resulting from differences in the applicable depreciation rules). The provision applies only for purposes of determining whether REIT shareholders are taxed as receiving a REIT dividend or as receiving a return of capital (or capital gain if a distribution exceeds a shareholder's stock basis). The provision is effective for tax years beginning after 2015.

Section 321. Treatment of certain services provided by taxable REIT subsidiaries. The provision provides that a taxable REIT subsidiary (TRS) is permitted to provide certain services to the REIT, such as marketing, that typically are done by a third party. In addition, a TRS is permitted to develop and market REIT real property without subjecting the REIT to the 100-percent prohibited transactions tax. The provision also expands the 100-percent excise tax on non-arm's length transactions to include services provided by the TRS to its parent REIT. The provision is effective for tax years beginning after 2015.

Section 322. Exception from FIRPTA for certain stock of REITs. The provision increases from 5 percent to 10 percent the maximum stock ownership a shareholder may have held in a publicly traded corporation to avoid having that stock treated as a U.S. real property interest on disposition. In addition, the provision allows certain publicly traded entities to own and dispose of any amount of stock treated as a U.S. real property interest, including stock in a REIT, without triggering FIRPTA withholding. However, an investor in such an entity that holds more than 10 percent of such stock is still subject to withholding. The provision applies to dispositions and distributions on or after the date of enactment.

Section 323. Exception for interests held by foreign retirement or pension funds. The provision exempts any U.S. real property interest held by a foreign pension fund from FIRPTA withholding. The provision applies to dispositions and distributions after the date of enactment.

Section 324. Increase in rate of withholding of tax on dispositions of United States real property interests. The provision provides that the rate of withholding on dispositions of United States real property interests is increased from 10 percent to 15 percent. The increased rate of withholding, however, does not apply to the sale of a personal residence where the amount realized is $1 million or less. The provision is effective for dispositions occurring 60 days after the date of enactment.

Section 325. Interests in RICs and REITs not excluded from definition of United States real property interests. The provision provides that the "cleansing rule" (which applies to corporations that either have no real estate or have paid tax on their real-estate transactions) applies only to interests in a corporation that is not a qualified investment entity. In addition, the proposal provides that the cleansing rule applies to stock of a corporation only if neither the corporation nor any predecessor of such corporation was a regulated investment company (RIC) or REIT at any time during the shorter of (a) the period after June 18, 1980 during which the taxpayer held such stock, or (b) the five-year period ending on the date of the disposition of the stock. The provision applies to dispositions on or after the date of enactment.

Section 326. Dividends derived from RICs and REITs ineligible for deduction for United States source portion of dividends from certain foreign corporations. The provision provides that for purposes of determining whether dividends from a foreign corporation (attributable to dividends from an 80-percent owned domestic corporation) are eligible for a dividend received deduction, dividends from RICs and REITs are not treated as dividends from domestic corporations, even if the RIC or REIT owns shares in a foreign corporation. The provision applies to dividends received from RIC and REITs on or after the date of enactment of this Act.

Subtitle C – Additional Provisions

Section 331. Deductibility of charitable contributions to agricultural research organizations. The provision provides that charitable contributions to an agricultural research organization are subject to the higher individual limits (generally up to 50 percent of the taxpayer's contribution base) if the organization commits to use the contribution for agricultural research before January 1 of the fifth calendar year that begins after the date of the contribution. In addition, agricultural research organizations are treated as public charities *per se*, without regard to their sources of financial support. The provision is effective for contributions made on or after the date of enactment.

Section 332. Removal of bond requirements and extending filing periods for certain taxpayers with limited excise tax liability. The provision allows producers of alcohol that reasonably expect to be liable for not more than $50,000 per year in alcohol excise taxes to pay such taxes on a quarterly basis rather than twice per month (and those reasonably expecting to be liable for not more than $1,000 per year to pay such taxes annually, rather than on a quarterly basis). The provision also exempts such producers from bonding requirements with the IRS. The provision is effective 90 days after the date of enactment.

Section 333. Modifications to alternative tax for certain small insurance companies. The provision increases the maximum amount of annual premiums that certain small property and casualty insurance companies can receive and still elect to be exempt from tax on their underwriting income, and instead be taxed only on taxable investment income. The provision increases the maximum amount from $1.2 million to $2.2 million for calendar years beginning after 2015, and indexes it to inflation thereafter. To ensure that this special rule is not abused, the provision also requires that no more than 20 percent of net written premiums (or if greater, direct written premiums) for a tax year is attributable to any one policyholder. Alternatively, a company would be eligible for the exception if each owner of the insured business or assets has no greater an interest in the insurer than he or she has in the business or assets, and each owner holds no smaller an interest in the business than his or her interest in the insurer. The provision is effective for tax years beginning after 2016.

Section 334. Treatment of timber gains. The provision provides that C corporation timber gains are subject to a tax rate of 23.8 percent. The provision is effective for tax year 2016.

Section 335. Modification of definition of hard cider. The provision defines hard cider for purposes of alcohol excise taxes as a wine with an alcohol content of between 0.5 percent and 8.5 percent alcohol by volume, with a carbonation level that does not exceed 6.4 grams per liter, which is derived primarily from apples, apple juice concentrate, pears, or pear juice concentrate, in combination with water. The provision is effective for articles removed from the distillery or bonding facility during calendar years beginning after 2015.

Section 336. Church Plan Clarification. The provision prevents the IRS from aggregating certain church plans together for purposes of the non-discrimination rules, which prevent highly compensated participants from receiving disproportionate benefits under the plan, and it provides flexibility for church plans to decide which other church plans with which they associate. The provision also prevents certain grandfathered church defined-benefit plans from having to meet certain requirements relating to maximum benefit accruals, and it allows church plans to offer auto-enroll accounts similar to 401(k)s. Additionally, the provision make it easier for church plans to engage in certain reorganizations and allows church plans to invest in collective trusts. The provision generally is effective on or after the date of enactment.

Subtitle D – Revenue Provisions

Section 341. Updated ASHRAE standards for energy efficient commercial buildings deduction. The provision modifies the deduction for energy efficient commercial buildings by updating the energy efficiency standards to reflect new standards of the American Society of Heating, Refrigerating, and Air Conditioning Engineers beginning in 2016.

Section 342. Excise tax credit equivalency for liquefied petroleum gas and liquefied natural gas. The provision converts the measurement of the alternative fuel excise tax credit for liquefied natural gas and liquefied petroleum gas from 50 cents per gallon to 50 cents per energy equivalent of a gallon of diesel fuel, which is approximately 29 cents per gallon for liquefied natural gas and approximately 36 cents per gallon for liquefied petroleum gas. The provision is effective for fuel sold or used after 2015.

Section 343. Exclusion from gross income of certain clean coal power grants to non-corporate taxpayers. The provision excludes from gross income certain clean power grants received under the Energy Policy Act of 2005 by an eligible taxpayer that is not a corporation. The provision requires an eligible taxpayer to reduce the basis of tangible depreciable property related to such grants by the amount excluded. The provision requires eligible taxpayers to make payments to the Treasury equal to 1.18 percent of amounts excluded under the provision. The provision is effective for grants received in tax years after 2011.

Section 344. Clarification of valuation rule for early termination of certain charitable remainder unitrusts. The provision clarifies the valuation method for the early termination of certain charitable remainder unitrusts. The provision is effective for the termination of trusts after the date of enactment.

Section 345. Prevention of transfer of certain losses from tax indifferent parties. The provision modifies the related-party loss rules, which generally disallow a deduction for a loss on the sale or exchange of property to certain related parties or controlled partnerships, to prevent losses from being shifted from a tax-indifferent party (e.g., a foreign person not subject to U.S. tax) to another party in whose hands any gain or loss with respect to the property would be subject to U.S. tax. The provision generally is effective for sales and exchanges of property acquired after 2015.

Section 346. Treatment of certain persons as employers with respect to motion picture projects. The provision allows motion picture payroll services companies to be treated as the employer of their film and television production workers for Federal employment tax purposes. The provision is effective for remuneration paid after 2015.

TITLE IV – TAX ADMINISTRATION

Subtitle A – Internal Revenue Service Reforms

Section 401. Duty to ensure that IRS employees are familiar with and act in accord with certain taxpayer rights. The provision amends the tax code to require the IRS Commissioner to ensure that IRS employees are familiar with and act in accordance with the taxpayer bill of rights, which includes the right to:

1. be informed;
2. quality service;
3. pay no more than the correct amount of tax;
4. challenge the position of the IRS and be heard;
5. appeal a decision of the IRS in an independent forum;
6. finality;
7. privacy;
8. confidentiality;
9. retain representation;
10. a fair and just tax system.

The provision is effective on the date of enactment.

Section 402. IRS employees prohibited from using personal email accounts for official business. The provision prohibits employees of the IRS from using a personal email account to conduct any official business, codifying an already established agency policy barring use of personal email accounts by IRS employees for official governmental business. The provision is effective on the date of enactment.

Section 403. Release of information regarding the status of certain investigations. The provision allows taxpayers who have been victimized by the IRS, for example, through the unauthorized disclosure of private tax information, to find out basic facts, such as whether the case is being investigated or whether the case has been referred to the Justice Department for prosecution. The provision applies to disclosures made on or after the date of enactment.

Section 404. Administrative appeal relating to adverse determinations of tax-exempt status of certain organizations. The provision requires the IRS to create procedures under which a 501(c) organization facing an adverse determination may request administrative appeal to the IRS Office of Appeals. This includes determinations relating to the initial or continuing classification of (1) an organization as tax-exempt under section 501(a); (2) an organization under section 170(c)(2); (3) a private foundation under section 509(a); or (4) a private operating foundation under section 4942(j)(3). The provision applies to determinations made after May 19, 2014.

Section 405. Organizations required to notify Secretary of intent to operate under 501(c)(4). The provision provides for a streamlined recognition process for organizations seeking tax exemption under section 501(c)(4). The process requires 501(c)(4) organizations to file is a simple one-page notice of registration with the IRS within 60 days of the organization's formation. The current, voluntary 501(c)(4) application process will be eliminated. Within 60 days after an application is submitted, the IRS is required to provide a letter of acknowledgement of the registration, which the organization can use to demonstrate its exempt status, typically with state and local tax authorities.

Section 406. Declaratory judgments for 501(c)(4) and other exempt organizations. The provision permits 501(c)(4) organizations and other exempt organizations to seek review in Federal court of any revocation of exempt status by the IRS. The provision applies to pleadings filed after the date of enactment.

Section 407. Termination of employment of Internal Revenue Service employees for taking official actions for political purposes. The provision makes clear that taking official action for political purposes is an offense for which the employee should be terminated. The bill amends the Internal Revenue Service Restructuring and Reform Act of 1998 to expand the grounds for termination of employment of an IRS employee to include performing, delaying, or failing to perform any official action (including an audit) by an IRS employee for the purpose of extracting personal gain or benefit for a political purpose. The provision takes effect on the date of enactment.

Section 408. Gift tax not to apply to contributions to certain exempt organizations. The provision treats transfers to organizations exempt from tax under section 501(c)(4), (c)(5), and (c)(6) of the tax code as exempt from the gift tax. The provision applies to transfers made after the date of enactment.

Section 409. Extend Internal Revenue Service authority to require truncated Social Security numbers on Form W-2. The provision requires employers to include an "identifying number" for each employee, rather than an employee's SSN, on Form W-2. This change will permit the Department of the Treasury to promulgate regulations requiring or permitting a truncated SSN on Form W-2. The provision is effective on the date of enactment.

Section 410. Clarification of enrolled agent credentials. The provision permits enrolled agents approved by the IRS to use the designation "enrolled agent," "EA," or "E.A." The provision is effective on the date of enactment.

Section 411. Partnership audit rules. The provision corrects and clarifies certain technical issues in the partnership audit rules enacted in the Bipartisan Budget Act of 2015.

Subtitle B – United States Tax Court

PART 1 – Taxpayer Access to United States Tax Court

Section 421. Filing period for interest abatement cases. The provision permits a taxpayer to seek review by the Tax Court of a claim for interest abatement when the IRS has failed to issue a final determination. The provision applies to claims for interest abatement filed after the date of enactment.

Section 422. Small tax case election for interest abatement cases. The provision expands the current-law procedures for the Tax Court to consider small tax cases (i.e., cases with amount in dispute that are under $50,000) to include the review of IRS decisions not to abate interest, provided the amount of interest for which abatement is sought does not exceed $50,000. The provision applies to cases pending and cases commenced after the date of enactment.

Section 423. Venue for appeal of spousal relief and collection cases. The provision clarifies that Tax Court decisions in cases involving spousal relief and collection cases are appealable to the U.S. Court of Appeals for the circuit in which an individual's legal residence is located or in which a business' principal place of business or principal office of agency is located. The provision applies to Tax Court petitions filed after the date of enactment.

Section 424. Suspension of running of period for filing petition of spousal relief and collection cases. The provision suspends the statute of limitations in cases involving spousal relief or collections when a bankruptcy petition has been filed and a taxpayer is prohibited from filing a petition for review by the Tax Court. Under the provision, the suspension is for the period during which the taxpayer is prohibited from filing such a petition, plus 60 days. The provision applies to Tax Court petitions filed after the date of enactment.

Section 425. Application of Federal rules of evidence. The provision requires the Tax Court to conduct its proceedings in accordance with the Federal Rules of Evidence (rather than the rules of evidentiary rules applied by the United States District Court of the District of Columbia, as under current law). The provision applies to proceedings commenced after the date of enactment.

PART 2 – United States Tax Court Administration

Section 431. Judicial conduct and disability procedures. The provision authorizes the Tax Court to establish procedures for the filing of complaints with respect to the conduct of any judge or special trial judge of the Tax Court and for the investigation and resolution of such complaints. The provision applies to proceedings commenced 180 days after the date of enactment.

Section 432. Administration, judicial conference, and fees. The provision extends to the Tax Court the same general management, administrative, and expenditure authorities that are available to Article III courts and the Court of Appeals for Veterans Claims. The provision also permits the Tax Court to conduct an annual judicial conference and charge reasonable registration fees. Additionally, the provision authorizes the Tax Court to deposit certain fees into a special fund held by the Treasury Department, with such funds available for the operation and maintenance of the Tax Court. The provision is effective on the date of enactment.

PART 3 – Clarification Relating to United States Tax Court

Section 441. Clarification relating to United States Tax Court. The provision clarifies that the Tax Court is not an agency of, and shall be independent of, the Executive Branch. The provision is effective upon the date of enactment.

TITLE V – TRADE-RELATED PROVISIONS

Section 501. Modification of effective date of provisions relating to tariff classification of recreational performance outer wear. The provision delays implementation of changes in the classification of certain recreation performance outerwear products that would inadvertently increase tariffs on some of those products.

Section 502. Agreement by Asia-Pacific Economic Co-operation members to reduce rates of duty on certain environmental goods. The provision ensures that the reduction of tariffs on certain environmental goods to fulfill an agreement by members of the Asia-Pacific Economic Cooperation (APEC) forum is implemented in accordance with the Trade Priorities and Accountability Act of 2015.

TITLE VI –BUDGETARY EFFECTS

Section 601. Budgetary effects. The provision provides for the bill's treatment for PAYGO purposes.
