Financial Instruments — FASB Makes Tentative Decisions About Purchased Credit-Impaired Assets

April 23, 2015 — At its meeting yesterday, the FASB discussed (1) the definition of a purchased credit-impaired (PCI) asset and (2) assets acquired in a business combination. Specifically, the Board tentatively decided to revise the definition of a PCI asset[1] such that an entity would be required to apply the gross-up approach[2] to an asset for which there has been a "more than insignificant" deterioration in credit quality since origination. In addition, the Board reaffirmed the proposed ASU's[3] requirement under which an entity would use the gross-up approach to account for PCI assets acquired in a business combination.

Editor's Note: The Board chose to revise the definition of a PCI asset partially in response to continued stakeholder feedback suggesting that if an entity were to recognize expected credit losses in its income statement upon purchase of any asset, regardless of the level of credit deterioration in the asset's credit quality since origination, the entity would be "double-counting" expected credit losses on that asset because those losses were already contemplated in the purchase price. Although the Board decided not to require an entity to apply the gross-up approach to all acquired assets, stakeholders are likely to support the change to the definition of a PCI asset because an entity is likely to apply the gross-up approach to more assets than it would have under the proposed ASU's requirements. The Board also indicated at the meeting that the final standard will include implementation guidance to help entities assess whether there has been a "more than insignificant" deterioration in a purchased asset's credit quality since origination.

The Board tentatively decided to require an entity to apply the gross-up approach to assets acquired in a business combination that are determined to be PCI assets because the Board believes that in the measurement of expected credit losses, there is no inherent difference between PCI assets acquired in a business combination and those acquired outside of one. Consequently, an entity would continue to account for non-PCI assets acquired in a business combination in accordance with existing U.S. GAAP. That is, for non-PCI assets acquired in a business combination, an entity would measure the assets at fair value upon acquisition and would be prohibited from recognizing a separate valuation allowance for those assets.

---

1 The proposed ASU defines PCI assets as "[a]cquired individual assets (or acquired groups of financial assets with shared risk characteristics at the date of acquisition) that have experienced a significant deterioration in credit quality since origination."

2 Under the gross-up approach, an entity would recognize its initial expectation of credit losses on PCI assets as an allowance for expected credit losses with an adjustment that increases the cost basis of the asset. As a result of applying this approach, the entity avoids immediately recognizing expected credit losses in its income statement upon acquiring the asset. For more information about the gross-up approach, see Deloitte's March 13, 2015, *Heads Up*.

Targeted Therapy
FASB Amends Guidance on Classification and Measurement of Financial Instruments

by Jamie Davis and Shahid Shah, Deloitte & Touche LLP

Introduction

On January 5, 2016, the FASB issued ASU 2016-01,[1] which amends the guidance in U.S. GAAP on the classification and measurement of financial instruments. Although the ASU retains many current requirements, it significantly revises an entity's accounting related to (1) the classification and measurement of investments in equity securities and (2) the presentation of certain fair value changes for financial liabilities measured at fair value. The ASU also amends certain disclosure requirements associated with the fair value of financial instruments.

This *Heads Up* provides a comprehensive summary of the FASB's changes to its classification and measurement model for financial instruments. In addition, the appendix to this *Heads Up* compares the classification and measurement models under current U.S. GAAP, the ASU, and IFRS 9 (2014).[2]

Editor's Note: Although the FASB and IASB had been working to converge their respective classification and measurement models (see the FASB's February 2013 exposure draft), after performing stakeholder outreach and a cost-benefit analysis, the FASB ultimately decided to make only limited changes to existing U.S. GAAP. Consequently, the ASU's amendments do not achieve convergence with IFRSs. The IASB's final guidance on this topic was issued in July 2014 in the form of amendments to IFRS 9 (see Deloitte's August 8, 2014, *Heads Up* for more information about the amendments to IFRS 9 (2014)).

Summary of Changes to U.S. GAAP on Classification and Measurement

Key changes as a result of the ASU are discussed below.

Classification and Measurement of Equity Investments

The ASU requires entities to carry all investments in equity securities, including other ownership interests such as partnerships, unincorporated joint ventures, and limited liability companies, at fair value through net income (FVTNI). This requirement does not apply to investments that qualify for the equity method

[1] FASB Accounting Standards Update No. 2016-01, *Recognition and Measurement of Financial Assets and Financial Liabilities*.
[2] IFRS 9, *Financial Instruments* (revised 2014).

of accounting or to those that result in consolidation of the investee or for which the entity has elected the practicability exception to fair value measurement (as discussed below).

Editor's Note: Under current U.S. GAAP, marketable equity securities other than (1) equity method investments (those for which the investor has significant influence over the investee) or (2) those that result in consolidation of the investee are classified as either held for trading or available for sale (AFS). For AFS equity securities, any amounts in accumulated other comprehensive income (OCI) are recycled to net income upon sale or an other-than-temporary impairment. Investments in nonmarketable equity securities other than equity method investments or those that result in consolidation of the investee are measured at cost (less impairment) unless the fair value option has been elected. Because equity securities would no longer be accounted for as AFS securities or by using the cost method, entities that hold such equity investments could see significant volatility in earnings. For instance, this new requirement would significantly affect certain types of mutual funds (e.g., bond funds and fixed-income funds) that are currently accounted for as AFS securities. According to ASC 320-10-55-9,[3] a mutual fund is considered an equity security even if it invests only in U.S. government debt securities. Consequently, investments in bond funds and fixed-income mutual funds are considered equity securities and must be accounted for at FVTNI under the ASU.

For investments in equity securities without a readily determinable fair value that do not qualify for the net asset value (NAV) practical expedient in ASC 820-10-35-59, an entity is permitted to elect a practicability exception to fair value measurement, under which the investment will be measured at cost, less impairment, plus or minus observable price changes (in orderly transactions) of an identical or similar investment of the same issuer. The ASU clarifies that when identifying observable price changes, an entity should consider relevant transactions "that are known or can reasonably be known" and that an entity is not required to spend undue cost and effort to identify such transactions. The ASU also indicates that an entity should consider a security's rights and obligations, such as voting rights, distribution rights and preferences, and conversion features, when evaluating whether the security issued by the same issuer is similar to the equity security held by the entity.

The practicability exception is not available to (1) reporting entities that are investment companies, (2) broker-dealers in securities, or (3) postretirement benefit plans.

Editor's Note: Entities that elect the practicability exception would still need to assess the equity investment for impairment (see discussion below).

Furthermore, investments in Federal Home Loan Bank (FHLB) and Federal Reserve Bank (FRB) stock issued to member financial institutions are not subject to this guidance. Instead, FHLB and FRB stock would continue to be accounted for at cost less impairment under ASC 942-325-35-3. The ASU's impairment guidance on equity investments for which fair value is not readily determinable also does not apply to FHLB or FRB stock.

[3] For titles of *FASB Accounting Standards Codification* (ASC) references, see Deloitte's "Titles of Topics and Subtopics in the *FASB Accounting Standards Codification*."

Impairment Assessment of Equity Investments Without Readily Determinable Fair Values That Are Measured by Using the Practicability Exception

In an effort to simplify the impairment model for equity securities for which an entity has elected the practicability exception, the FASB eliminated the requirement in U.S. GAAP to assess whether an impairment of such an investment is other than temporary. Under the new guidance, as of each reporting period, an entity will qualitatively consider the following indicators (from ASC 321-10-35-3, which was added by the ASU) to determine whether the investment is impaired:

a. A significant deterioration in the earnings performance, credit rating, asset quality, or business prospects of the investee
b. A significant adverse change in the regulatory, economic, or technological environment of the investee
c. A significant adverse change in the general market condition of either the geographical area or the industry in which the investee operates
d. A bona fide offer to purchase, an offer by the investee to sell, or a completed auction process for the same or similar investment for an amount less than the carrying amount of that investment
e. Factors that raise significant concerns about the investee's ability to continue as a going concern, such as negative cash flows from operations, working capital deficiencies, or noncompliance with statutory capital requirements or debt covenants.

If it determines that the equity security is impaired on the basis of the qualitative assessment, the entity will recognize an impairment loss equal to the amount by which the security's carrying amount exceeds its fair value. By contrast, the current guidance in ASC 320-10-35-30 requires an entity to perform a two-step assessment under which it first determines whether an equity security is impaired and then evaluates whether any impairment is other than temporary.

Presentation of Fair Value Changes Attributable to Instrument-Specific Credit Risk for Fair Value Option Liabilities

The ASU establishes an incremental recognition and disclosure requirement related to the presentation of fair value changes of financial liabilities for which the fair value option has been elected. Under this guidance, an entity would be required to separately present in OCI the portion of the total fair value change attributable to instrument-specific credit risk as opposed to reflecting the entire amount in earnings. For derivative liabilities, however, any changes in fair value attributable to instrument-specific credit risk would continue to be presented in net income, which is consistent with current U.S. GAAP. This new requirement to separately present in OCI the portion of the total fair value change attributable to instrument-specific credit risk does not apply to financial liabilities of consolidated collateralized financing entities that are measured in accordance with ASC 810-10-30-10 through 30-15 and ASC 810-10-35-6 through 35-8.

An entity would measure the portion of the change in fair value attributable to instrument-specific credit risk as the excess of total change in fair value over the change in fair value that results from a change in a base market risk, such as a risk-free interest rate or a benchmark interest rate. Alternatively, an entity would be permitted to use another method that it considers to more faithfully represent the portion of the total change in fair value resulting from a change in instrument-specific credit risk. In either case, the entity would disclose the method it used to determine the gains and losses attributable to instrument-specific credit risk and would be required to apply the method consistently from period to period.

Any accumulated gains or losses reflected in OCI as a result of this provision would be recognized through earnings once the financial liability is derecognized.

Editor's Note: During the financial crisis of 2008, many stakeholders expressed concerns about the counterintuitive impact on earnings of recording changes in the fair value of financial liabilities when such changes are related to an entity's own debt for which the fair value option had been elected.

Under U.S. GAAP today, for financial liabilities measured at fair value, an entity would recognize a gain in earnings when there is an increase in instrument-specific credit risk or a loss when there is a decrease in instrument-specific credit risk. The new guidance aims to eliminate this counterintuitive result by requiring entities to present in OCI changes in fair value that result from changes in an entity's own credit risk.

As discussed in more detail below in the Effective Date and Early Adoption section, entities are permitted to early adopt this provision of the ASU for financial statements that have not yet been issued.

Valuation Allowance on a Deferred Tax Asset Related to an AFS Debt Security

The new guidance eliminates the diversity in practice related to the evaluation of the need for a valuation allowance for deferred tax assets (DTAs) related to debt securities that are classified as AFS. Under current U.S. GAAP, entities may perform this evaluation either separately from their other DTAs or in combination with them. The new guidance clarifies that an entity should "evaluate the need for a valuation allowance on a [DTA] related to [AFS] securities in combination with the entity's other [DTAs]."

Editor's Note: When a financial instrument is measured at fair value, the tax basis of that instrument is not usually affected. This causes a temporary difference between the tax basis and financial reporting basis of an investment, thereby creating a DTA or DTL pursuant to ASC 740. Historically, some entities have evaluated the need for a valuation allowance on DTAs associated with AFS debt securities separately from other DTAs. The revised guidance clarifies that such separate evaluation is not permitted.

Disclosure Requirements

Summarized below are some of the ASU's notable changes related to disclosures.

Amendments to Disclosures in ASC 825

For financial instruments not recognized at fair value in the statement of financial position, the ASU specifies that:

- Entities that do not meet the definition of a public business entity (PBE) are no longer required to provide the disclosures[4] in ASC 825-10-50 about fair value.
- PBEs are no longer required to disclose the information in ASC 825-10-50-10(b) and (c) related to (1) the methods and significant assumptions they used to estimate fair value or (2) a description of the changes in the methods and significant assumptions they used to estimate fair value.

[4] Before ASU 2016-01's amendments, ASC 825-10-50-10 states that "a reporting entity shall disclose all of the following:

a. Either in the body of the financial statements or in the accompanying notes, the fair value of financial instruments for which it is practicable to estimate that value
b. The method(s) and significant assumptions used to estimate the fair value of financial instruments consistent with the requirements of paragraph 820-10-50-2(bbb) except that a reporting entity is not required to provide the quantitative disclosures . . . by that paragraph
c. A description of the changes in the method(s) and significant assumptions used to estimate the fair value of financial instruments, if any, during the period
d. The level of the fair value hierarchy within which the fair value measurements are categorized in their entirety (Level 1, 2, or 3)."

However, the ASU retains the current requirements in U.S. GAAP for PBEs to provide fair value information about (1) financial instruments not recognized at fair value in the statement of financial position either in the body of the financial statement or in accompanying notes and (2) the level of the fair value measurement hierarchy in which financial instruments are classified (i.e., Level 1, Level 2, or Level 3).

Editor's Note: The option permitting entities to omit ASC 825-10-50 fair value disclosures if it is not "practicable to estimate fair value" has been eliminated.

The ASU also clarifies U.S. GAAP by eliminating the guidance in ASC 825 that had been interpreted to permit an "entry" price notion for estimating the fair value of loans for disclosure purposes. The amendments instead require a PBE to disclose the fair value, in accordance with the "exit" price notion in ASC 820, of financial assets and financial liabilities measured at amortized cost, except for (1) receivables and payables due within one year or less; (2) equity investments for which the practicability exception is applied; and (3) deposit liabilities with no defined or contractual maturities.

Editor's Note: Practitioners may have interpreted the current illustrative guidance in ASC 825-10-55-3 to allow entities to disclose the fair value of loans on the basis of an "entry" price notion. The ASU's requirement to disclose fair value on the basis of an "exit" price notion may represent a major shift for some entities that have continued to disclose the fair value of loans on the basis of entry price. The new guidance was intended to achieve greater consistency and comparability related to fair value measurements for financial statement users.

The ASU also requires all entities to disclose either on the balance sheet or in the notes to the financial statements all financial assets and financial liabilities grouped by (1) measurement category (i.e., amortized cost or fair value — net income or OCI) and (2) form of financial asset (i.e., securities and loans/receivables).

Equity Investments Without Readily Determinable Fair Values

The new guidance requires entities that have elected the practicability exception to fair value measurement (discussed above) to disclose (1) the carrying amount of investments without readily determinable fair values, (2) the amount of the adjustment (either upward or downward) made to the carrying amount due to observable price changes, (3) any impairment charge during the reporting period, and (4) additional information to help users understand the information the entity considered in determining the quantitative information disclosed in items (1) through (3).

Effective Date and Early Adoption

For PBEs, the new standard is effective for fiscal years and interim periods within those fiscal years beginning after December 15, 2017. For all other entities, including not-for-profit entities and employee benefit plans within the scope of ASC 960 through ASC 965 on plan accounting, the effective date is in line with the recommendation of the private-company decision-making framework — that is, the guidance is effective for fiscal years beginning one year after the effective date for PBEs (i.e., December 15, 2018) and interim reporting periods within fiscal years beginning two years after the PBE effective date (i.e., December 15, 2019).

Early adoption is permitted for all entities whose financial statements have not yet been issued or have not been made available for issuance with respect to the following changes made to ASC 825:

- For financial liabilities measured under the fair value option, fair value changes resulting from a change in instrument-specific credit risk would be presented separately in other comprehensive income.
- The fair value disclosure requirements for financial instruments not recognized at fair value would be eliminated for non-PBEs.

Early adoption of other provisions is not permitted for PBEs. Non-PBEs are permitted to early adopt the new standard when it becomes effective for PBEs (i.e., fiscal years beginning after December 15, 2017, including interim periods therein).

To adopt the amendments, entities will be required to make a cumulative-effect adjustment to beginning retained earnings as of the beginning of the fiscal year in which the guidance is effective, with the exception of the following:

- Guidance (including disclosure requirements) on equity securities without readily determinable fair values will be applied prospectively to all equity investments that exist as of the date of adoption.
- Guidance consistent with ASC 820 on using the exit price notion to measure the fair value of financial instruments for disclosure purposes will be applied prospectively. If information is no longer comparable as a result of adopting the guidance, entities will be required to disclose that fact.

Appendix — Comparison of Classification and Measurement Models

The table below compares the classification and measurement models under current U.S. GAAP, the ASU, and IFRS 9 (2014).

Subject	Current U.S. GAAP	ASU 2016-01	IFRS 9 (2014)
Classification and measurement categories for financial assets other than equity investments	Under ASC 320, three categories are used to classify and measure investments in securities: • Trading (FVTNI). • AFS (FVTOCI). • Held to maturity (amortized cost). Under ASC 310, two categories are used to classify and measure loans: • Held for investment (amortized cost). • Held for sale (lower of cost or fair value).	No changes.	Three categories are used: • Amortized cost. • Fair value through other comprehensive income (FVTOCI). • Fair value through profit or loss (FVTPL).
Classification and measurement categories for equity investments	Under ASC 320, marketable equity securities other than equity method investments (those for which the investor has significant influence over the investee) or those that result in consolidation of the investee are classified as either held for trading (FVTNI) or AFS (FVTOCI). For AFS equity securities, any amounts in accumulated OCI are recycled to net income upon sale or when the security becomes other than temporarily impaired. Investments in nonmarketable equity securities other than equity method investments are measured at cost (less impairment) unless the fair value option has been elected.	Under ASC 321, entities will carry all investments in equity securities that do not qualify for equity method accounting or result in consolidation of the investee at FVTNI. For equity investments that do not have a readily determinable fair value, entities are permitted to elect a practicability exception and measure the investment at cost less impairment plus or minus observable price changes (in orderly transactions). The exception would not be available to investment companies, broker-dealers, defined benefit plans, and investors in equity investments that apply the NAV practical expedient under ASC 820-10-35-59.	Equity investments other than equity method investments or those that result in consolidation of the investee are accounted for at FVTPL with an option to irrevocably designate equity investments that are not held for trading at FVTOCI at initial recognition. For FVTOCI equity investments, any amounts in accumulated OCI are not transferred to profit or loss, even if the investment is sold or impaired. In limited circumstances, "cost may be an appropriate estimate of fair value."
Classification and measurement categories for financial liabilities	Nonderivative financial liabilities (primarily an entity's own debt) are accounted for at amortized cost unless the fair value option is elected. Derivative financial liabilities and short-sale obligations are measured at fair value.	No changes, except for the presentation of certain fair value changes for fair value option liabilities (see below).	Financial liabilities are carried at amortized cost, except for derivative and trading liabilities and those designated under the fair value option (see below).
Method for classifying financial assets	For securities, the classification depends on whether the entity holds the security for trading or has the intent and ability to hold it to maturity. For loans, the classification depends on whether the entity intends to hold the loan to maturity or for the foreseeable future.	No changes.	The classification is based on both the entity's business model for managing the financial assets and the contractual cash flow characteristics of the financial asset.
Criteria for carrying financial assets at amortized cost	The following financial assets are carried at amortized cost: • Debt securities that the entity has the positive intent and ability to hold to maturity. • Loans that the entity has the intent and ability to hold to maturity or for the foreseeable future.	No changes.	Financial assets are carried at amortized cost if they satisfy both of the following criteria: • They meet the cash flow characteristics criterion (i.e., solely payments of principal and interest). • They are held in a business model whose objective is to hold assets for the collection of contractual cash.

Subject	Current U.S. GAAP	ASU 2016-01	IFRS 9 (2014)
Criteria for measuring financial assets other than equity investments at FVTOCI	The following financial assets other than equity investments are measured at FVTOCI: • Investments in debt securities that are not classified as either trading or held to maturity. • Loans not classified as held for trading if the investor is contractually at risk of not recovering substantially all of its initially recorded investment.	No changes.	Financial assets other than equity investments are measured at FVTOCI if they satisfy both of the following criteria: • They meet the cash flow characteristics criterion. • They are held in a business model in which assets are managed both to collect contractual cash flows and for sale.
Criteria for measuring financial assets other than equity investments at FVTNI (or FVTPL)	The following financial assets other than equity investments are measured at FVTNI: • Debt securities bought and held principally for trading. • Loans bought and held principally for trading if the investor is contractually at risk of not recovering substantially all of its initially recorded investment. • Financial assets elected under the fair value option (see below).	No changes.	The following financial assets other than equity investments are measured at FVTPL: • Financial assets that fail to qualify for either amortized cost or FVTOCI. • Financial assets designated under the fair value option (see below).
Criteria for measuring financial assets at the lower of cost or fair value	Loans held for sale.	No changes.	Not applicable.
Unrealized foreign currency gains and losses on financial assets accounted for at FVTOCI	For AFS debt securities, unrealized foreign currency gains and losses are deferred in OCI in a manner similar to how other unrealized gains and losses are deferred.	No changes.	Unrealized foreign currency gains and losses on nonequity investments accounted for at FVTOCI are recognized in profit or loss.
Hybrid financial assets	Embedded derivatives in hybrid financial assets are bifurcated and accounted for separately at FVTNI when certain conditions are met.	No changes.	Measured and classified in their entirety in accordance with their contractual cash flow characteristics and the business model under which they are managed. Bifurcation of embedded derivatives in hybrid financial assets is prohibited.
Fair value option — qualifying conditions	For financial instruments within the scope of the guidance, qualifying conditions need not be met before the fair value option may be elected.	No changes.	The fair value option may be elected only if qualifying conditions are met. For a financial asset, the option may be elected if exercising it would eliminate or significantly reduce an accounting mismatch. For a financial liability, the option may be elected if either of the following applies: • Exercising the option would eliminate or significantly reduce an accounting mismatch. • A "group of financial liabilities or [a group of] financial assets and financial liabilities is managed and its performance is evaluated on a fair value basis, in accordance with a documented risk management or investment strategy, and information about the group is provided internally on that basis to the entity's key management personnel." In addition, the fair value option may be elected for a hybrid financial liability unless either of the following applies: • The embedded derivative or derivatives do not "significantly modify the cash flows that otherwise would be required by the contract." • "[I]t is clear with little or no analysis when a similar hybrid instrument is first considered that separation of the embedded derivative(s) is prohibited."

Subject	Current U.S. GAAP	ASU 2016-01	IFRS 9 (2014)
Presentation of fair value changes attributable to instrument-specific credit risk for financial liabilities designated under the fair value option	There are no similar requirements under current U.S. GAAP.	The portion of the total fair value change caused by a change in instrument-specific credit risk is recognized in OCI. Any accumulated amount remaining in OCI is reclassified to earnings when the liability is extinguished.	The portion of the total fair value change caused by a change in the liability's credit risk is recognized in OCI unless such treatment would create or enlarge an accounting mismatch in profit or loss. This amount is not subsequently transferred to profit or loss.
Reclassification of financial assets other than equity investments	Reclassification is permitted in certain circumstances. Transfers from the held-to-maturity category and transfers into or out of the trading category are expected to be rare.	No changes.	Reclassification is required if the business model changes and would be recorded as of the first day of the period after the period in which the business model changes.

FASB Finalizing Credit Impairment Guidance

by Abhinetri Velanand, Anthony Mosco, and Stephen McKinney, Deloitte & Touche LLP

The FASB is currently finalizing amendments to its guidance on the impairment of financial instruments. The proposed amendments would introduce a new impairment model[1] based on expected losses rather than incurred losses. Under this current expected credit loss (CECL) model, an entity would recognize as an allowance its estimate of the contractual cash flows not *expected* to be collected. The FASB believes that the CECL model will result in more timely recognition of credit losses and will reduce the complexity of U.S. GAAP by decreasing the number of credit impairment models used to account for debt instruments.[2]

This *Heads Up* provides a comprehensive summary of the FASB's proposed changes to the credit impairment guidance under current U.S. GAAP, which are reflected in the Board's December 2012 proposed ASU[3] and subsequent tentative decisions.[4] In addition, this newsletter contains several appendixes. Appendix A compares the impairment models under current U.S. GAAP, the FASB's tentative approach, and the IASB's recently amended IFRS 9, respectively. Appendix B gives an overview of the existing impairment models under U.S. GAAP for loans and debt securities. Appendix C and Appendix D provide illustrative examples of how an entity might apply the CECL model to purchased credit-impaired (PCI) assets and trade receivables, respectively.

Editor's Note: Although the FASB has completed nearly all significant redeliberations and its staff has begun drafting a final ASU, the Board has yet to discuss the effective date of its proposed amendments to the current guidance on accounting for credit losses. A final standard is likely to be issued in the second half of this year.

The CECL Model

Scope

The CECL model would apply to most[5] debt instruments (other than those measured at fair value through net income (FVTNI)), trade receivables, lease receivables, reinsurance receivables that result from

[1] Although impairment began as a joint FASB and IASB project, constituent feedback on the boards' "dual-measurement" approach led the FASB to develop its own impairment model. The IASB, however, continued to develop the dual-measurement approach and issued final impairment guidance based on it as part of the July 2014 amendments to IFRS 9. For more information about the IASB's impairment model, see Deloitte's August 8, 2014, *Heads Up*.

[2] Note that the proposed CECL model would replace or amend several existing U.S. GAAP impairment models. See Appendix B for a tabular summary of those models.

[3] FASB Proposed Accounting Standards Update, *Financial Instruments — Credit Losses*.

[4] Decisions are as of the FASB's March 11, 2015, meeting. Although the Board has nearly completed its deliberations in the project, the guidance in the final ASU may differ from that in the tentative decisions as a result of changes made during the finalization process.

[5] The CECL model would not apply to the following debt instruments:
- Loans made to participants by defined contribution employee benefit plans.
- Policy loan receivables of an insurance entity.
- Pledge receivables (promises to give) of a not-for-profit entity.
- Loans and receivables between entities under common control.

insurance transactions, financial guarantee contracts,[6] and loan commitments. However, available-for-sale (AFS) debt securities would be excluded from the model's scope and would continue to be assessed for impairment under ASC 320[7] (the FASB has proposed limited changes to the impairment model for AFS debt securities, as discussed below).

Recognition of Expected Credit Losses

Unlike the incurred loss models in existing U.S. GAAP, the CECL model does not specify a threshold for the recognition of an impairment allowance. Rather, an entity would recognize an impairment allowance equal to the current estimate of expected credit losses (i.e., all contractual cash flows that the entity does not expect to collect) for financial assets as of the end of the reporting period. Credit impairment would be recognized as an allowance — or contra-asset — rather than as a direct write-down of the amortized cost basis of a financial asset. However, the carrying amount of a financial asset that is deemed uncollectible would be written off in a manner consistent with existing U.S. GAAP.

Editor's Note: Because the CECL model does not have a minimum threshold for recognition of impairment losses, entities will need to measure expected credit losses on assets that have a low risk of loss (e.g., investment-grade held-to-maturity (HTM) debt securities). However, the FASB tentatively decided that an "entity would not be required to recognize a loss on a financial asset in which the risk of nonpayment is greater than zero [but] the amount of loss would be zero."[8] U.S. Treasury securities and certain highly rated debt securities may be assets the FASB contemplated when it tentatively decided to allow an entity to recognize zero credit losses on an asset, but the Board decided not to specify the exact types of assets. Nevertheless, the requirement to measure expected credit losses on financial assets whose risk of loss is low is likely to result in additional costs and complexity.

Measurement of Expected Credit Losses

Under the proposed amendments, an entity's estimate of expected credit losses represents all contractual cash flows that the entity does not expect to collect over the contractual life of the financial asset. When determining the contractual life of a financial asset, the entity would consider expected prepayments but would not be allowed to consider expected extensions unless it "reasonably expects that it will execute a troubled debt restructuring with the borrower."[9]

The entity would consider all available relevant information in making the estimate, including information about past events, current conditions, and reasonable and supportable forecasts and their implications for expected credit losses. That is, while the entity would be able to use historical charge-off rates as a starting point in determining expected credit losses, it would have to evaluate how conditions that existed during the historical charge-off period differ from its current expectations and accordingly revise its estimate of expected credit losses. However, the entity would not be required to forecast conditions over the contractual life of the asset. Rather, for the period beyond the period for which the entity can make reasonable and supportable forecasts, the entity would revert to an unadjusted historical credit loss experience.

Editor's Note: Measuring expected credit losses will most likely be a significant challenge for all entities, particularly financial institutions. As a result of moving to an expected loss model, entities could incur one-time and recurring costs when estimating expected credit losses, some of which may be related to system changes and data collection. While the costs associated with implementing the CECL model will vary by entity, nearly all entities will incur some costs when using forward-looking information to estimate expected credit losses over the contractual life of an asset.

[6] The CECL model would not apply to financial guarantee contracts that are accounted for as insurance or measured at FVTNI.

[7] For titles of *FASB Accounting Standards Codification* (ASC) references, see Deloitte's "Titles of Topics and Subtopics in the *FASB Accounting Standards Codification*."

[8] Quoted text is from the FASB's summary of tentative Board decisions reached at the joint meeting of the FASB and IASB on September 17, 2013.

[9] Quoted text is from the FASB's summary of tentative Board decisions reached at its September 3, 2014, meeting.

Unit of Account

The CECL model would not prescribe a unit of account (e.g., an individual asset or a group of financial assets) in the measurement of expected credit losses. However, an entity would be required to evaluate financial assets within the scope of the model on a collective (i.e., pool) basis when similar risk characteristics are shared. If a financial asset does not share similar risk characteristics with the entity's other financial assets, the entity would evaluate the financial asset individually. If the financial asset is individually evaluated for expected credit losses, the entity would not be allowed to ignore available external information such as credit ratings and other credit loss statistics.

Editor's Note: The FASB's tentative decisions would require an entity to collectively measure expected credit losses on financial assets that share similar risk characteristics (including HTM securities). While the concept of pooling and collective evaluation currently exists in U.S. GAAP for certain loans, the FASB has not specifically defined "similar risk characteristics." As a result, it remains to be seen whether the FASB expects an aggregation based on "similar risk characteristics" to be consistent with the existing practice of pooling PCI assets on the basis of "common risk characteristics." Entities may need to make changes to systems and processes to capture loss data at more granular levels depending on the expectations of market participants such as standard setters, regulators, and auditors.

Practical Expedients for Measuring Expected Credit Losses

The FASB tentatively decided to permit entities to use practical expedients when measuring expected credit losses for two types of financial assets:

- *Collateral-dependent financial assets* — In a manner consistent with existing U.S. GAAP, an entity would be allowed to measure its estimate of expected credit losses for collateral-dependent financial assets as the difference between the financial asset's amortized cost and the collateral's fair value (adjusted for selling costs, when applicable).
- *Financial assets for which the borrower must continually adjust the amount of securing collateral (e.g., certain repurchase agreements and securities lending arrangements)* — The estimate of expected credit losses would be measured consistently with how it is measured for other financial assets within the scope of the CECL model but would be limited to the difference between the amortized cost basis of the asset and the collateral's fair value (adjusted for selling costs, when applicable).

Write-Offs

Under the proposed ASU, an entity would write off a financial asset if it determines that it has no reasonable expectation of future recovery. However, in light of stakeholders' concerns that the proposed requirement could conflict with regulatory guidance and may result in entities' recognizing write-offs significantly later than under current practice, the FASB tentatively agreed to retain the write-off requirements in existing U.S. GAAP. That is, an entity would write off the carrying amount of a financial asset when the asset is deemed uncollectible. The Board also tentatively decided that this write-off guidance would apply to AFS debt securities.

AFS Debt Securities

Under the proposed ASU, the CECL model would have applied to AFS debt securities. However, during redeliberations, the FASB tentatively decided not to include AFS debt securities within the scope of the CECL model. Instead, the impairment of AFS debt securities would continue to be accounted for under ASC 320. However, the FASB tentatively decided to revise ASC 320 by:

- Requiring an entity to use an allowance approach (vs. permanently writing down the security's cost basis).
- Removing the requirement that an entity must consider the length of time fair value has been less than amortized cost when assessing whether a security is other-than-temporarily impaired.
- Removing the requirement that an entity must consider recoveries in fair value after the balance sheet date when assessing whether a credit loss exists.

Editor's Note: The Board did not revise (1) step 1 of the existing other-than-temporary impairment model (i.e., an "investment is impaired if the fair value of the investment is less than its cost") and (2) the requirement under ASC 320 that entities recognize the impairment amount only related to credit in net income and the noncredit impairment amount in other comprehensive income (OCI). However, the FASB did tentatively decide that entities would use an allowance approach when recognizing credit losses (as opposed to a permanent write-down of the AFS security's cost basis). As a result, in both of the following instances, an entity would reverse credit losses through current-period earnings on an AFS debt security:

- If the fair value of the debt security exceeds its amortized cost in a period after a credit loss had been recognized through earnings (because fair value was less than amortized cost), the entity would reverse the *entire* credit loss previously recognized and recognize a corresponding adjustment to its allowance for credit losses.
- If the fair value of the debt security does not exceed its amortized cost in a period after a credit loss had been recognized through earnings (because fair value was less than amortized cost) but the credit quality of the debt security improves in the current period, the entity would reverse the credit loss previously recognized only in an amount that would reflect the improved credit quality of the debt security.

The FASB's tentative decisions to revise the impairment model in ASC 320 could result in earlier recognition of impairment.

PCI Assets

For PCI assets as defined[10] in the proposed ASU, an entity would measure expected credit losses consistently with how it measures expected credit losses for originated and purchased non-credit-impaired assets. Upon acquiring a PCI asset, the entity would recognize as its allowance for expected credit losses the amount of *contractual* cash flows not expected to be collected as an adjustment that increases the cost basis of the asset (the "gross-up" approach). After initial recognition of the PCI asset and its related allowance, the entity would continue to apply the CECL model to the asset — that is, any changes in the entity's estimate of cash flows that it expects to collect (favorable or unfavorable) would be recognized immediately in the income statement. Consequently, any subsequent changes to the entity's estimate of expected credit losses — whether unfavorable or favorable — would be recorded as impairment expense (or reduction of expense) during the period of change. Interest income recognition would be based on the purchase price plus the initial allowance accreting to the contractual cash flows. See Appendix C for an illustrative example on how to apply the proposed guidance to PCI assets.

Editor's Note: Under the current accounting for PCI assets, an entity recognizes unfavorable changes in cash flows as an immediate credit impairment but treats favorable changes in cash flows that are in excess of the allowance as prospective yield adjustments. The CECL model's proposed approach to PCI assets eliminates this asymmetrical treatment in cash flow changes. However, in a manner consistent with current practice, the CECL model precludes an entity from recognizing as interest income the discount embedded in the purchase price that is attributable to expected credit losses as of the date of acquisition.

An acquired asset is currently considered credit-impaired when it is probable that the investor would be unable to collect all contractual cash flows as a result of deterioration in the asset's credit quality since origination. Under the FASB's tentative approach, a PCI asset is an acquired asset that has experienced significant deterioration in credit quality since origination. Consequently, entities will most likely need to use more judgment than they do under current U.S. GAAP in determining whether an acquired asset has experienced significant credit deterioration.

[10] The proposed ASU defines PCI assets as "[a]cquired individual assets (or acquired groups of financial assets with shared risk characteristics at the date of acquisition) that have experienced a significant deterioration in credit quality since origination."

Certain Beneficial Interests Within the Scope of ASC 325-40

The FASB tentatively decided that an impairment allowance for "purchased or retained beneficial interests for which there is a significant difference between contractual and expected cash flows" should be measured in the same manner as PCI assets under the CECL model. Therefore, at initial recognition, a beneficial interest holder would present an impairment allowance equal to the estimate of expected credit losses (i.e., the estimate of *contractual* cash flows not expected to be collected). In addition, the FASB indicated that "changes in expected cash flows due to factors other than credit should be accreted into interest income over the life of the asset (that is, the difference between contractual and expected cash flows attributable to credit would not be included in interest income)."[11]

Editor's Note: Under the CECL model, an entity would be required to determine the contractual cash flows of beneficial interests in securitized transactions. However, there may be certain structures in which the beneficial interests do not have contractual cash flows (e.g., when a beneficial interest holder receives only residual cash flows of a securitization structure). In these situations, an entity may need to use a proxy for the contractual cash flows of the beneficial interest (e.g., the gross contractual cash flows of the underlying debt instrument).

Modified Financial Assets

In a manner consistent with the proposed ASU, the FASB decided not to comprehensively reconsider the accounting for modifications during redeliberations (e.g., when a modification results in derecognition or what constitutes a troubled debt restructuring (TDR)). However, the Board affirmed its previous decision that the CECL model would apply to modified debt instruments.

For non-TDR modifications that do not result in derecognition, an entity would measure expected credit losses on the basis of the cash flows expected after the modification, discounted at the post-modification effective interest rate. However, as stated in the proposed ASU, when an entity executes a TDR, "the cost basis of the modified asset shall be adjusted . . . so that the effective interest rate on the modified asset continues to be the original effective rate, given the new series of contractual cash flows. The basis adjustment . . . would be determined as the amortized cost basis before modification less the present value of the new series of contractual cash flows (discounted at the original effective interest rate)." The basis adjustment that reflects a *decrease* in cash flows post-modification would be recognized as a credit loss with a corresponding reduction to the amortized cost basis of the instrument. The basis adjustment that reflects an *increase* in cash flows post-modification would be recognized as an increase to the instrument's amortized cost basis with a corresponding increase in the allowance for expected credit losses.

Loan Commitments

Off-balance-sheet arrangements such as commitments to extend credit, guarantees, and standby letters of credit that are not considered derivatives under the guidance in ASC 815 are subject to credit risk and are therefore within the scope of the CECL model. In a manner consistent with the proposed ASU, the FASB tentatively decided that the estimate of expected credit losses on the *funded* portion of a loan commitment should be determined similarly to how the estimate is determined for other loans. For an *unfunded* portion of a loan commitment, the Board tentatively decided to retain the guidance in the proposed ASU that would require an entity to "estimate [expected] credit losses over the full contractual period over which the entity is exposed to credit risk [under an unconditional] present legal obligation to extend credit." Such an estimate would take into account both the likelihood that funding will occur and the expected credit losses on commitments to be funded.

Editor's Note: An entity's estimate of expected credit losses on unfunded loan commitments (e.g., credit card receivables) will most likely depend on (1) whether the entity has the unconditional ability to cancel the commitment to extend credit and, if so, (2) the time it takes for the cancellation to become effective.

[11] Quoted text is from the FASB's summary of tentative Board decisions reached at its June 11, 2014, meeting.

Disclosures

Many of the disclosures that would be required under the proposed ASU are similar to those already required under U.S. GAAP as a result of ASU 2010-20.[12] Accordingly, entities would be required to disclose information related to:

- Credit quality.[13]
- Allowance for expected credit losses.
- Policy for determining write-offs.
- Past-due status.
- PCI assets.
- Collateralized financial assets.

In addition, the FASB affirmed the provision in the proposed ASU that would require an entity to provide a rollforward of its allowance for expected credit losses for assets measured at amortized cost and AFS debt securities. However, in a change from the proposed ASU, an entity would not be required to provide rollforward disclosures of the amortized cost balances of its debt instruments. Instead, an entity would be required to disclose credit-quality indicators for each asset class, disaggregated by vintage, for a period not to exceed five years (although upon transition, the entity would be required to provide this disclosure only for the current and prior-year amortized cost balances). The disclosure would be required for annual and interim periods and would not be required for an entity's revolving lines of credit.

Editor's Note: The FASB's decision not to require the amortized cost rollforward disclosure is in response to the concerns raised by financial statement preparers about the operational challenges in providing such information. The FASB believes that disclosing credit-quality information disaggregated by asset class and by vintage would be operationally easier for financial statement preparers and would provide financial statement users with information similar to that provided in a rollforward of the amortized cost balance. Because the FASB's tentative decision to require this new disclosure has not been exposed for public comment, the Board directed its staff to conduct significant outreach activities to obtain feedback from financial statement users, preparers, and other stakeholders on the proposed requirement.

Transition

Approach

For most debt instruments, the amendments would require entities to record a cumulative-effect adjustment to the statement of financial position as of the beginning of the first reporting period in which the guidance is effective (modified retrospective approach). However, the Board tentatively decided on the following instrument-specific transition provisions:

- *Other-than-temporarily impaired debt securities* — An entity would be required to apply (1) the CECL model prospectively to HTM debt securities and (2) the changes to ASC 320 prospectively to AFS debt securities. As a result, previous write-downs of a debt security's amortized cost basis would not be reversed; rather, only changes in the estimate of expected cash flows of the debt security occurring on or after the effective date of the guidance would be reflected as an allowance for credit losses. Upon adoption of the new guidance, any impairment previously recognized in OCI would be accounted for as a prospective adjustment to the accretable yield of the debt instrument.
- *PCI assets* — An entity would be required to apply the changes to PCI assets prospectively. That is, the change in the definition of a PCI asset would apply only to assets acquired on or after the effective date of the guidance. For debt instruments accounted for under ASC 310-30, an entity would apply the gross-up approach as of the transition date (i.e., establish an allowance for expected credit losses with a corresponding adjustment to the debt instrument's cost basis).

[12] FASB Accounting Standards Update No. 2010-20, *Disclosures About the Credit Quality of Financing Receivables and the Allowance for Credit Losses.*

[13] Short-term trade receivables resulting from revenue transactions within the scope of ASC 605 are excluded from these disclosure requirements.

In addition, any post-adoption changes in the entity's estimate of cash flows that it expects to collect (favorable or unfavorable) would be recognized immediately in the income statement as impairment expense (or reduction of expense). Accordingly, the yield on a PCI asset as of the date of adoption would be "locked" and would not be affected by subsequent changes in the entity's estimate of expected credit losses.

- *Certain beneficial interests within the scope of ASC 325-40* — Entities holding such interests would need to comply with the same transition requirements as those that apply to PCI assets.

Disclosures

The FASB tentatively decided to retain the following transition disclosure guidance in ASC 825-15-65-1(d) and 65-1(e) of the proposed ASU:

d. An entity shall provide the following disclosures in the period that the entity adopts [the new guidance]:

1. The nature of the change in accounting principle, including an explanation of the newly adopted accounting principle.
2. The method of applying the change.
3. The effect of the adoption on any line item in the statement of financial position, if material, as of the beginning of the first period for which the guidance is effective. Presentation of the effect on financial statement subtotals is not required.
4. The cumulative effect of the change on retained earnings or other components of equity in the statement of financial position as of the beginning of the first period for which the guidance is effective.

e. An entity that issues interim financial statements shall provide the disclosures in item (d) in each interim financial statement of the year of change and the annual financial statement of the period of the change.

Next Steps

An effective date for the final guidance has not yet been proposed but will be determined at a future FASB meeting. The FASB directed its staff to prepare a draft of the final ASU for distribution to stakeholders (including financial statement users, preparers, and auditors) to obtain feedback on the proposed amendments ("fatal flaw review").

Appendix A — Comparison of Impairment Models

The table below compares the impairment models under current U.S. GAAP, the FASB's tentative approach, and IFRS 9 (2014), respectively.

Subject	Current U.S. GAAP	FASB's Tentative Approach	IFRS 9 (2014)
Scope	Applicable to: • Large groups of smaller-balance, homogeneous loans that are collectively evaluated for impairment. • Loans identified for individual evaluation. • Loans acquired with deteriorated credit quality. • Debt securities (including beneficial interests in securitized financial assets).	Applicable to: • Most debt instruments (other than those measured at FVTNI). • Lease receivables. • Reinsurance receivables from insurance transactions. • Financial guarantee contracts. • Loan commitments. AFS debt securities are excluded.	Applicable to: • Financial assets measured at amortized cost. • Financial assets mandatorily measured at fair value through OCI. • Loan commitments when there is a present obligation to extend credit (except for those measured at fair value through profit or loss (FVTPL) under IFRS 9 (2014)). • Financial guarantee contracts to which IFRS 9 applies (except for those measured at FVTPL). • Lease receivables within the scope of IAS 17.[1] • Contract assets within the scope of IFRS 15.[2]
Recognition threshold	Depending on the nature of the financial asset, credit losses must be either probable or other-than-temporary before recognition.	None. Impairment is based on expected (rather than incurred) credit losses.	None. Impairment is based on expected (rather than incurred) credit losses.
Measurement	Varies depending on the nature of the financial asset and unit of account. Approaches used in practice include: • Fair value measurement. • Present value of expected cash flows. • Fair value of underlying collateral.	Single-measurement approach: current expected credit losses (i.e., all contractual cash flows that the entity does not expect to collect).	Dual-measurement approach: • For assets in the first category, 12-month expected credit losses. • For assets in the second category, lifetime expected credit losses.
Transfer criteria between measurement categories	Not applicable under existing U.S. GAAP models.	Not applicable under CECL model. Only one measurement category.	Transfer to lifetime expected credit losses when there has been significant deterioration in credit quality since initial recognition unless credit risk is low. Transfer back to 12-month expected credit losses when transfer criteria are no longer satisfied.
Trade receivables	No specific guidance or applicable simplified approach.	No specific guidance or applicable simplified approach.	For trade receivables with a significant financing component, the three-bucket impairment model or a simplified model with an allowance of lifetime expected losses could be used.
PCI assets	Credit impairment is recognized when, on the basis of current information and events, it is probable that an investor will be unable to collect (1) all cash flows expected at acquisition plus (2) additional cash flows expected to be collected that arise from changes in post-acquisition estimates. Significant increases in the estimate of expected cash flows expected to be collected at acquisition are recognized as prospective yield adjustments.	The allowance for PCI assets is the current expected credit losses. Interest income recognition is based on purchase price plus the initial allowance accreting to the contractual cash flows. The non-credit-related discount or premium that results from acquiring a pool of PCI assets is allocated to each individual financial asset.	The allowance for PCI assets is based on the cumulative change (from the original expectation at acquisition) in lifetime expected credit losses. Interest income recognition is based on applying the credit-adjusted effective interest rate to the amortized cost of the financial asset (rather than contractual cash flows).

[1] IAS 17, *Leases.*

[2] IFRS 15, *Revenue From Contracts With Customers.*

Subject	Current U.S. GAAP	FASB's Tentative Approach	IFRS 9 (2014)
Nonaccrual accounting	No applicable guidance.	No applicable guidance.	IFRSs do not permit nonaccrual of interest. However, for assets that have become credit-impaired, interest income is based on the net carrying amount of the credit-impaired financial asset.
Write-offs	An entity writes off a financial asset in the period in which the financial asset is deemed *uncollectible*.	Same as under current U.S. GAAP.	An entity writes off the carrying amount of a financial asset if it ultimately determines that it has no reasonable expectation of future recovery.

Appendix B — Impairment Models Under U.S. GAAP

The table below highlights several impairment models under current U.S. GAAP for loans and debt securities.

Impairment Models for Loans and Debt Securities		
Guidance	**Scope**	**Measurement Objective**
ASC 450-20	Large groups of smaller-balance, homogeneous loans that are collectively evaluated for impairment.	All probable and reasonably estimable losses.
ASC 310-10-35	Loans that are identified for individual evaluation.	If it is probable that all of the contractual cash flows will not be collected, the difference between the carrying amount and the present value of the expected future cash flows discounted at the original effective interest rate. Certain practical expedients exist.
ASC 310-30	Loans acquired with deteriorated credit quality.	See ASC 310-10-35 or ASC 450-20, as applicable (as discussed in ASC 310-30-35-10). Or, for a loan accounted for as a debt security, see ASC 320-10-35 (as discussed in ASC 310-30-35-8). Recoveries (i.e., reversals of impairments) are not permitted for a loan accounted for as a debt security.
ASC 320-10-35 ASC 325-40-15	Debt securities (including beneficial interests in securitized financial assets).	If the investor intends to sell a debt security or it is more likely than not the investor will be required to sell the security before recovery of its amortized cost basis, impairment is deemed to be other than temporary and the difference between the amortized cost and fair value of the security is recognized in earnings. However if (1) the investor does not intend to sell, (2) it is not more likely than not that the investor will be required to sell the security before recovery, and (3) the investor does not expect to recover the entire cost basis of the security, the security is other than temporarily impaired and only the credit-related component of the impairment loss is recognized in earnings, and the noncredit portion is recorded in OCI. Credit losses might be measured in accordance with ASC 310-10-35, ASC 325-40, or ASC 310-30 depending on the circumstances. Recoveries are not permitted for debt securities.

Appendix C — Application of the CECL Model to PCI Assets

The example below, which is reproduced from ASC 825-15-55-40 through 55-42 of the proposed ASU, illustrates the application of the proposed guidance to PCI assets.

> Entity E is a bank that records [PCI] assets in its existing systems by recognizing the amortized cost of the asset, at acquisition, as equal to the sum of the purchase price and the associated expected credit loss at the date of acquisition. The difference between amortized cost and the par amount of the debt is recognized as a noncredit discount or premium. By doing so, the asset is accreted from this amortized cost to the contractual cash flows without ever recognizing as interest income the purchase discount attributable to expected credit losses at acquisition.
>
> Assume that Entity E pays $750,000 for a debt instrument with a par amount of $1,000,000. The instrument is classified at amortized cost. At the time of purchase, the expected credit loss embedded in the purchase price is $175,000. At that date of acquisition, the statement of financial position would reflect a financial asset carrying value of $925,000 (that is, par less the non-credit-related discount) and an associated allowance for expected credit losses of $175,000. The acquisition-date journal entry is as follows.

Loan — par amount	$	1,000,000		
Loan — noncredit discount			$	75,000
Allowance for credit losses				175,000
Cash				750,000

> Subsequently, the $75,000 noncredit discount would be accreted into interest income over the life of the debt instrument . . . . The $175,000 allowance for expected credit losses would be updated in subsequent periods . . . , with changes in the allowance for expected credit losses reflected immediately in the statement of financial performance as a provision for credit losses.

Appendix D — Application of the CECL Model to Trade Receivables

The CECL model would apply to trade receivables that result from revenue transactions within the scope of ASC 605 (or ASC 606, if adopted). The example below, which is reproduced from ASC 825-15-55-37 and 55-38 of the proposed ASU, illustrates how an entity would apply the proposed guidance to trade receivables by using a provision matrix.

> Entity D manufactures and sells toys to a broad range of customers, primarily retail toy stores. Customers typically are provided payment terms of 90 days with a 2 percent discount if paid within 60 days. The entity has tracked historical loss experience for its trade receivables over the past five years and calculated the following historical loss experience:
>
> a. 0.3 percent for receivables that are current
>
> b. 8 percent for receivables that are 1–30 days past due
>
> c. 26 percent for receivables that are 31–60 days past due
>
> d. 58 percent for receivables that are 61–90 days past due
>
> e. 82 percent for receivables that are more than 90 days past due.
>
> Entity D believes that this historical loss experience is consistent with what will be experienced for financial assets held at the reporting date because the composition of the receivables at the reporting date is consistent with that used in developing the historical statistics (that is, the shared risk characteristics of its customers has not changed significantly over time) and the economic conditions in which the historical statistics were calculated generally are consistent with the economic conditions expected over the remaining lives of the receivables.
>
> At the reporting date, Entity D develops the following provision matrix to estimate current expected credit losses.

Past-Due Status	Carrying Value	Loss Rate	Expected Credit Loss Estimate
Current	$ 5,984,698	0.3%	$ 17,954
1–30 days past due	8,272	8%	662
31–60 days past due	2,882	26%	749
61–90 days past due	842	58%	488
More than 90 days past due	1,100	82%	902
	$ 5,997,794		$ 20,755

Editor's Note: The proposed ASU's example highlights that application of the CECL model to trade receivables through the use of a provision matrix may not differ significantly from an entity's current methods for determining the allowance for doubtful accounts. However, the example illustrates that moving to an expected loss model would require entities to consider the following when using a provision matrix to estimate credit losses on trade receivables:

- Under the CECL model, an entity would be required to consider whether expected credit losses should be recognized for trade receivables that are considered "current" (i.e., not past due). In the example above, a loss rate of 0.3 percent is applied to the trade receivables that are classified as current.
- When using historical loss rates in a provision matrix, an entity would be required to consider whether and, if so, how the historical loss rates differ from what is currently expected over the life of the trade receivables (on the basis of current conditions and reasonable and supportable forecasts about the future).

Technical Library and US GAAP Plus

Deloitte makes available, on a subscription basis, access to its online library of accounting and financial disclosure literature. Called Technical Library: The Deloitte Accounting Research Tool, the library includes material from the FASB, EITF, AICPA, PCAOB, IASB, and SEC, in addition to Deloitte's own accounting and SEC manuals and other interpretive accounting and SEC guidance.

Updated every business day, Technical Library has an intuitive design and navigation system that, together with its powerful search features, enable users to quickly locate information anytime, from any computer. Technical Library subscribers also receive *Technically Speaking,* the weekly publication that highlights recent additions to the library. For more information, including subscription details and an online demonstration, visit www.deloitte.com/us/techlibrary.

In addition, be sure to visit US GAAP Plus, our free Web site that features accounting news, information, and publications with a U.S. GAAP focus. It contains articles on FASB activities and updates to the *FASB Accounting Standards Codification*™ as well as developments of other U.S. and international standard setters and regulators, such as the PCAOB, AICPA, SEC, IASB, and IFRS Interpretations Committee. Check it out today!

To the Point

FASB —final guidance

FASB makes targeted amendments to guidance on classifying and measuring financial instruments

Entities will have to measure many equity investments at fair value and recognize changes in fair value in net income unless they qualify for the new practicability exception.

What you need to know

- The FASB issued final guidance that will require entities to measure equity investments that do not result in consolidation and are not accounted for under the equity method at fair value and recognize any changes in fair value in net income unless the investments qualify for the new practicability exception.
- The standard doesn't change the guidance for classifying and measuring investments in debt securities and loans.
- Entities will have to record changes in instrument-specific credit risk for financial liabilities measured under the fair value option in other comprehensive income.
- Entities that are not public business entities (PBEs) will no longer have to disclose the fair value of financial instruments measured at amortized cost.
- The guidance is effective for calendar-year PBEs beginning in 2018. For all other calendar-year entities, it is effective for annual periods beginning in 2019 and interim periods beginning in 2020. Non-PBEs can adopt the standard at the same time as PBEs, and both PBEs and non-PBEs can early adopt certain provisions.

Overview

The Financial Accounting Standards Board (FASB) issued final guidance[1] that will change how entities measure certain equity investments and present changes in the fair value of financial liabilities measured under the fair value option (FVO) that are attributable to their own credit.

Building a better working world

The new guidance also changes certain disclosure requirements and other aspects of current US GAAP. It does not change the guidance for classifying and measuring investments in debt securities and loans.

Under the new guidance, entities will have to measure many equity investments at fair value and recognize any changes in fair value in net income unless the investments qualify for the new practicability exception. For financial liabilities measured using the FVO in Accounting Standards Codification (ASC) 825, *Financial Instruments*, entities will need to present any change in fair value caused by a change in instrument-specific credit risk (own credit risk) separately in other comprehensive income (OCI).

The new standard differs significantly from the model the FASB developed jointly with the International Accounting Standards Board (IASB) and from IFRS 9, *Financial Instruments*, which the IASB issued in July 2014. The FASB plans to issue a separate standard on credit losses later this quarter with requirements that will also differ from those in IFRS 9. Entities that invest in debt securities should monitor that project because the guidance will affect the measurement, presentation and disclosure of impairment related to these securities.

This publication summarizes the key provisions of the new guidance and includes a summary of changes in presentation and disclosure requirements in the appendix.

Summary of key amendments

Equity investments

The new guidance requires the fair value measurement of investments in equity securities and other ownership interests in an entity, including investments in partnerships, unincorporated joint ventures and limited liability companies (collectively, equity investments) that do not result in consolidation and are not accounted for under the equity method. Entities will have to measure these investments at the end of each reporting period and recognize changes in fair value in net income (FV-NI). Entities will no longer be able to recognize unrealized holding gains and losses on equity securities they classify today as available for sale (AFS) in OCI. They also will no longer be able to use the cost method of accounting for equity securities that do not have readily determinable fair values.

The guidance applies to all entities except those in certain industries that are required to account for substantially all of their investments at fair value with changes in fair value recognized in net income or in the change in net assets (e.g., broker-dealers in securities, investment companies, defined benefit pension and other postretirement plans). It also does not apply to (1) derivative instruments that are subject to the requirements of ASC 815, *Derivatives and Hedging*, (2) Federal Home Loan Bank and Federal Reserve Bank stock and (3) an exchange membership that has the characteristics of an ownership interest specified in ASC 940-340-25-1(b).

A practicability exception will be available for equity investments that do not have readily determinable fair values and do not qualify for the practical expedient to estimate fair value under ASC 820, *Fair Value Measurement* (i.e., the net asset value practical expedient). These investments may be measured at cost, less any impairment, plus or minus changes resulting from observable price changes in orderly transactions for an identical or similar investment of the same issuer. Entities will have to reassess at each reporting period whether an investment qualifies for this practicability exception.

To identify observable price changes, entities should consider relevant transactions that occurred on or before the balance sheet date that are known or can reasonably be known. To identify price changes that can be reasonably known, entities will be expected to make a reasonable effort (without expending undue cost and effort) to identify any observable transactions. However, they will not be required to perform exhaustive searches. In addition, when determining whether an equity instrument issued by the same issuer is similar to the equity investment it holds, an entity should consider the different rights and obligations associated with the instruments. Differences in rights and obligations could include characteristics such as voting rights, distribution rights and preferences, and conversion features. Entities should adjust the observable price of the similar instrument for the different rights and obligations to determine the amount that should be recorded as an adjustment in the carrying value of the instrument being measured.

How we see it

An entity will have to exercise judgment and consider its facts and circumstances to determine whether an equity instrument issued by the same issuer is similar to the equity investment it holds and to apply the concepts of "undue cost and effort," and "reasonably known" under the new practicability exception.

For each reporting period, an entity that uses the practicability exception to measure an equity investment will be required to make a qualitative assessment of whether the investment is impaired. If an impairment exists, the entity will have to estimate the investment's fair value in accordance with ASC 820 and recognize an impairment loss in net income equal to the difference between the investment's carrying value and its fair value. The entity will no longer be able to consider whether the decline is other than temporary, as is required under current US GAAP. This single-step model for assessing impairment is expected to accelerate the recognition of losses in investments without readily determinable fair values.

The guidance is expected to accelerate recognition of impairment losses in equity investments without readily determinable fair values.

Financial liabilities measured under the fair value option

For financial liabilities measured using the FVO in ASC 825, the change in fair value caused by a change in instrument-specific credit risk (own credit risk) will be presented separately in OCI. An entity may consider this amount to be the difference between the total change in fair value and the amount resulting from a change in a base market rate (e.g., a risk-free interest rate). This is a significant change from current US GAAP, which requires the instrument's entire change in fair value to be recognized through earnings. An entity may use another method that it believes results in a faithful measurement of the fair value change attributable to instrument-specific credit risk. However, it will have to apply the method consistently to each financial liability from period to period.

Upon derecognition of the financial liability, the accumulated gains and losses due to changes in the instrument-specific credit risk will be reclassified from OCI to net income.

How we see it

The only own-credit relief the guidance provides is for financial liabilities measured using the FVO. The effect of an entity's own credit risk for other financial liabilities measured at FV-NI, including derivatives, will continue to be reported in net income, resulting in continued earnings volatility due to changes in an entity's nonperformance risk.

Deferred tax assets

The remeasurement of a financial instrument at fair value generally creates a temporary difference between the reporting basis and the tax basis of the instrument under ASC 740, *Income Taxes*, because the tax basis generally remains unchanged. This difference requires recognition of deferred taxes. Unrealized losses can give rise to deferred tax assets (DTAs), which must be assessed for realizability. Under the new guidance, entities will have to assess the realizability of a DTA related to an AFS debt security in combination with the entity's other DTAs.

How we see it

The new guidance eliminates one method that is currently acceptable for assessing the realizability of DTAs related to AFS debt securities. That is, an entity will no longer be able to consider its intent and ability to hold debt securities with unrealized losses until recovery, which may not be until maturity, akin to a tax planning strategy. Under this method, a valuation allowance currently wouldn't be necessary for DTAs on unrealized losses, even when there is significant negative evidence (e.g., recent cumulative losses) related to the realizability of other DTAs because the specific DTAs are expected to reverse as time passes.

Presentation and disclosure

The new guidance requires entities to present financial assets and financial liabilities separately, grouped by measurement category and form of financial asset in the statement of financial position or in the accompanying notes to the financial statements. Entities that are not PBEs will no longer have to disclose the fair value of financial instruments measured at amortized cost. PBEs will no longer have to disclose the method(s) and significant assumptions they use to estimate the fair value of financial instruments measured at amortized cost. In addition, PBEs will have to use the exit price notion when measuring the fair value of financial instruments measured at amortized cost for disclosure purposes.

Non-PBEs can early adopt a provision that eliminates the fair value disclosures for financial instruments not recognized at fair value.

Transition and effective date

The guidance is effective for PBEs for annual periods beginning after 15 December 2017, and interim periods therein. For all other entities, it is effective for annual periods beginning after 15 December 2018, and interim periods within annual periods beginning after 15 December 2019. Non-PBEs can early adopt the standard as of the effective date for PBEs. All entities can early adopt a provision requiring them to recognize the fair value change from own credit in OCI for financial liabilities measured using the FVO in ASC 825. Non-PBEs can early adopt a provision that eliminates the fair value disclosures for financial instruments not recognized at fair value. Both of these provisions can be early adopted for financial statements of annual or interim periods that have not yet been issued or made available for issuance, including those for periods in 2015.

An entity will record a cumulative-effect adjustment to beginning retained earnings as of the beginning of the first reporting period in which the guidance is adopted, with two exceptions. The amendments related to equity investments without readily determinable fair values (including disclosure requirements) will be effective prospectively. The requirement to use the exit price notion to measure the fair value of financial instruments for disclosure purposes will also be applied prospectively.

Endnote:

[1] Accounting Standards Update 2016-01, *Financial Instruments — Overall — Recognition and Measurement of Financial Assets and Financial Liabilities.*

Appendix: Summary of key presentation and disclosure requirements

Instruments and features affected	Presentation and disclosure requirements
Financial assets and financial liabilities	Entities will separately present financial assets and financial liabilities by measurement category and form of financial asset (i.e., securities or loans and receivables) in the statement of financial position or in the notes to the financial statements.

Financial instruments, with certain exceptions (such as equity method investments, equity investments without readily determinable fair values, receivables and payables due in less than one year and demand deposit liabilities)	A PBE will be required to disclose, either in the body of the financial statements or in the accompanying notes, the fair value of financial instruments and the level of the fair value hierarchy within which the measurements are categorized in their entirety (i.e., Level 1, 2 or 3).
	▸ A PBE won't be required to disclose:
	  ▸ The methods and significant assumptions used to estimate the fair value of financial instruments consistent with the requirements of ASC 820-10-50-2(bbb).
	  ▸ A description of the changes in the methods and significant assumptions used to estimate the fair value of financial instruments, if any, during the period.
	Non-PBEs will no longer be required to disclose the fair value of financial instruments measured at amortized cost.

Fair value measurements only for disclosure purposes	The new guidance eliminates the exception in ASC 825 that allows entities to calculate fair values of certain financial instruments (e.g., loans) using an entry price notion rather than the exit price notion of ASC 820.
Equity investments without readily determinable fair values measured using the new practicability exception	An entity that applies the practicability exception for measuring equity investments without readily determinable fair values will disclose all of the following: ▸ The carrying amount of investments without readily determinable fair values ▸ The amount of impairments and downward adjustments, if any, both annual and cumulative ▸ The amount of upward adjustments, if any, both annual and cumulative ▸ As of the date of the most recent statement of financial position, additional information (in narrative form) that is sufficient to permit financial statement users to understand the quantitative disclosures and the information that the entity considered in reaching the carrying amounts and upward or downward adjustments resulting from observable price changes
Financial liabilities measured under the fair value option	Entities will disclose the following information about the effects of the instrument-specific credit risk and changes in it for financial liabilities measured under the FVO: ▸ The amount of change, during the period and cumulatively, of the fair value of the liability that is attributable to changes in the instrument-specific credit risk ▸ How the unrealized gains and losses attributable to changes in instrument-specific credit risk (and recorded in OCI) were determined ▸ If a liability is settled during the period, the amount, if any, recognized in OCI that was recognized in net income at settlement
Fair value option	In annual periods only, an entity will need to disclose the methods and significant assumptions used to estimate the fair value of items measured under the FVO, consistent with the requirements of ASC 820-10-50-2(bbb), except that an entity is not required to provide the quantitative disclosures about significant unobservable inputs used in measurements categorized in Level 3 of the fair value hierarchy.

FASB — proposed guidance

Preparing for the new credit impairment standard

Now that the FASB has set effective dates for the new credit impairment standard, entities should start planning for implementation.

What you need to know

- The FASB set effective dates for the new credit impairment standard starting in the first quarter of 2019 for calendar-year entities.
- Because implementing the new credit impairment standard will likely require significant effort, entities should begin planning now. The standard would require them to estimate and recognize an allowance for lifetime expected credit losses for loans, trade receivables, held-to-maturity debt securities and certain other financial assets measured at amortized cost.
- Implementing the new credit impairment standard will likely require changes in processes, systems and controls for financial institutions and other entities. Public companies also will need to consider disclosures they would have to make about the new standard and its effects.
- If they haven't yet done so, entities should establish a governance structure for implementation.

Overview

With more than three years before the first effective date of the new credit impairment standard, entities may think they have ample time to implement the standard the Financial Accounting Standards Board (FASB or Board) plans to issue in the first quarter of 2016. But financial institutions and other entities should be taking steps now to prepare for the potentially significant changes they would need to make.

Building a better working world

The first steps for management are developing a governance structure for implementation and performing a preliminary assessment of how much work will be necessary. Implementing the standard will likely require significant adjustments to processes, systems and controls, especially for financial institutions.

Entities should also develop plans to communicate with investors and other stakeholders, including making disclosures about the effects of new standards discussed in Securities and Exchange Commission (SEC) Staff Accounting Bulletin (SAB) Topic 11.M.[1]

Background

The new impairment standard would supersede today's guidance and would apply to all entities that hold financial assets that are not measured at fair value through net income. The guidance would address the recognition and measurement of credit losses on debt securities, trade receivables, loans, net investments in leases, off-balance sheet credit exposures, reinsurance receivables and other financial assets that represent the contractual right to receive cash.

For available-for-sale (AFS) debt securities, the FASB has decided to modify today's other-than-temporary impairment (OTTI) model to no longer require entities to consider certain factors when determining whether a credit loss should be recognized. The FASB also has decided to require entities to recognize credit losses through an allowance for credit impairment (rather than a direct reduction of a security's cost basis), thereby allowing for the reversal of credit impairments in later periods.

Now is the time for preparers to begin developing a plan to implement the credit impairment standard.

For all other affected financial assets, the FASB has decided to replace today's "incurred loss model" with an "expected credit loss model." This change would require entities to make more estimates of future losses, which would require more judgment.

Key considerations

The FASB decided on the following effective dates for the credit impairment standard:

- For public business entities (PBEs) that meet the definition of an SEC filer, the standard would be effective for annual periods beginning after 15 December 2018, and interim periods therein. That means calendar-year SEC filers would begin applying it in the first quarter of 2019.
- For other PBEs, the standard would be effective for annual periods beginning after 15 December 2019, and interim periods therein. That means calendar-year PBEs that are not SEC filers would begin applying it in the first quarter of 2020.
- For all other entities, the standard would be effective for annual periods beginning after 15 December 2019, and interim periods within annual periods beginning after 15 December 2020. That means these entities that have calendar years would begin applying it in their annual financial statements for 2020 and in interim statements in 2021.

All entities would be allowed to adopt the guidance as of the effective date for PBEs that are SEC filers.

In making their decision on effective dates, the FASB discussed the difficulty of implementing several major new standards, including those involving classification and measurement of financial instruments, revenue recognition and accounting for leases, over the next several years.

While the effective dates of the impairment standard may seem distant, entities should take steps to prepare for implementation once it is issued. This graphic depicts the steps an entity might take to meet the first effective date.

Illustration 1: Implementation plan to meet the first effective date

2015	2016		2017 - 2018
Stage 1: Mobilize	**Stage 2: Design**	**Stage 3: Build**	**Stage 4: Test and deploy**
▸ Establish governance structure ▸ Assess current models and data availability ▸ Educate individuals from credit risk management, finance, information technology and the disclosure committee about the new standard	▸ Perform gap analysis and highlight changes required ▸ Design or modify models and allowance methodology ▸ Design or modify data flows, processes and controls ▸ Document proposed accounting policies or changes to existing policies	▸ Implement organizational changes ▸ Build, adjust and calibrate models ▸ Build or enhance data warehouse(s) ▸ Monitor and validate reporting changes	▸ Validate and deploy allowance models ▸ Validate and deploy data flows ▸ Monitor and validate process and control changes ▸ Run old and new systems at the same time and prepare to go live

A good place to start is putting in place a governance structure for implementation that brings together multiple disciplines. For example, a financial institution that expects to be significantly affected may consider a governance structure that includes individuals from accounting policy, credit risk management, information technology, treasury, finance, accounting controllership, investor relations, regulatory reporting, internal control and internal audit.

The next step is typically identifying key actions that need to be taken during the implementation phase. A preliminary assessment of the current state and future state required by the standard can be used to identify key actions that need to be taken to implement the new standard.

For example, entities will need to decide how to change their credit risk models to estimate lifetime expected credit losses. As a result, entities may need to:

- Compile additional historical loss data to transform today's historical loss estimate from an incurred loss to an estimate of lifetime losses
- Identify information (internal or external) that can be used to develop what the FASB is calling a "reasonable and supportable" forecast of the future
- Consider how to adjust their historical lifetime loss statistics for these reasonable and supportable forecasts, including developing the necessary processes and controls.

In addition, entities with trade receivables will need to think about changing their processes and documentation to meet the requirements of the standard, even though in many cases the standard won't significantly change their results.

Entities also will need to start planning for new disclosures because the standard is expected to require significantly more interim and annual disclosures than current US GAAP. Entities will need to assess whether they currently collect the information they will need to satisfy the new requirements or whether they will need to adjust their processes and controls or put new ones in place to gather the information and make sure it is accurate.

Implementing the standard also will be challenging because industry groups, regulators and implementation groups will be addressing questions that arise over time, and an entity's understanding of the new requirements will likely evolve. In addition to industry groups and banking regulators, we expect the staff of the SEC, the American Institute of Certified Public Accountants and the FASB's Transition Resource Group on Credit Impairment to all weigh in.

Questions to consider now

As entities develop their implementation plans, management should consider the following questions:

- What governance structure will be used to oversee and coordinate implementation? How will this effort be communicated and agreed to by the Board of Directors?
- What is the plan for a preliminary assessment of the standard's effect on the entity? When will it be complete?
- If the entity is an SEC registrant, what is the plan for making the disclosures under SAB Topic 11.M about the effect of a new accounting standard?
- What process has the entity put in place to monitor interpretations by the various organizations that are likely to interpret the standard?

FASB Makes Impairment Transition and Disclosure Decisions

At two recent meetings, the FASB reached decisions on transition methods and disclosures for the proposed standard on financial instruments impairment (proposed ASU).[1] The FASB directed its staff to draft the final standard, and plans to discuss the effective date at a later meeting.

Key Facts

- The FASB provided the transition method for purchased-credit impaired (PCI) financial assets and other-than-temporarily impaired (OTTI) debt securities at the adoption date.
- The disclosure requirements for debt securities classified as available-for-sale (AFS) will be retained and updated for the proposed ASU's general credit risk disclosure principles.[2]
- A period-to-period rollforward of the amortized cost for financial assets measured at amortized cost and at fair value through other comprehensive income (FVOCI) will not be required.
- Disclosures of credit quality indicators for financing receivables will be disaggregated by the year of the asset's origination.

Key Impacts

- Entities may need to evaluate the new disclosure requirements, particularly credit quality indicators disaggregated by vintage year, and assess their impact on systems, processes, and controls.
- The transition method for OTTI debt securities and PCI financial assets is likely to be less burdensome for entities to implement than the original proposal.

---

[1] FASB Proposed Accounting Standards Update, Financial Instruments – Credit Losses, December 20, 2012, available at www.fasb.org.

[2] FASB ASC Subtopic 320-10, Investments – Debt and Equity Securities, available at www.fasb.org.

Impairment Project Timeline

- 2010 – Exposure Draft
- December 2012 – Revised Exposure Draft
- April 2013 – Comment Period Ended
- 2013 to Present – Redeliberations
- 2015 – Final Standard Expected

Purchased-Credit Impaired Financial Assets

The Board decided that an entity will account for PCI financial assets upon transition as follows:

- All loans and debt securities acquired with deteriorated credit quality for which an entity applies Subtopic 310-30 (including by analogy) will be classified as PCI financial assets at the date of adoption.[3]
- Entities will not be permitted to perform further assessments at the adoption date to determine whether other previously acquired assets meet the new definition of PCI assets.
- Entities will be required to gross up the allowance for lifetime expected credit losses at the date of adoption with a corresponding adjustment to the carrying value of the assets.
- Interest income will be recognized based on the yield as of the adoption date.

The Board also decided that subsequent increases and decreases in lifetime expected credit losses will be recorded through the allowance for expected credit losses with a corresponding adjustment to the current-period provision for credit losses.

Background. The current PCI definition in Subtopic 310-30 is not the same as the proposed definition. Also, some entities have applied Subtopic 310-30 by analogy to other purchased loans. Respondents questioned whether loans purchased before the effective date of the proposed ASU would need to be reevaluated under the new PCI definition, and if so, whether the determination would be made as of the date of adoption or the date the assets were acquired.

Currently for PCI financial assets, the excess of expected cash flows at acquisition over the acquirer's initial investment in the assets is recognized as interest income on a level-yield basis over the remaining life of the assets. If there is a subsequent significant increase in estimated future cash flows, that change is recognized prospectively by increasing the yield. The Board decided entities will continue to recognize interest income on these assets based on their yield as of the adoption date.

OTTI Debt Securities

The Board decided that entities will adopt the provisions of the ASU related to OTTI debt securities prospectively as of the adoption date.

- Amounts previously recognized in accumulated other comprehensive income (AOCI) as of the date of adoption that relate to significant improvements in cash flows will continue to be accreted to interest income over the remaining life of the debt security on a level-yield basis.
- Any improvements in cash flows due to improving credit after the adoption date will be recorded through the provision for credit losses in the income statement.

---

[3] FASB ASC Subtopic 310-30, Receivables – Loans and Debt Securities Acquired with Deteriorated Credit Quality, available at www.fasb.org.

Background. At a previous meeting, the Board decided that debt securities classified as AFS would be excluded from the scope of the lifetime expected credit-loss model. Instead, the impairment amount would be recognized through an allowance account that would allow reversals of previously recognized credit losses. Under current U.S. GAAP, credit losses on debt securities are recognized in earnings through an adjustment to the amortized cost basis, and the amortized cost basis is not adjusted for improvements.

The proposed ASU would have required a cumulative-effect adjustment to the carrying amount of the debt securities at the adoption date with an offsetting adjustment to the opening balance of retained earnings or other appropriate components of equity. Respondents to the proposal requested additional guidance on transition for OTTI debt securities and specifically highlighted these two issues:

- Hindsight may be required to determine how much of the allowance initially recognized would have been written off.
- Accounting for a debt security that has had a significant improvement in cash flows following the initial impairment. Under current GAAP, subsequent improvements are recognized prospectively as an adjustment to yield.

Disclosures

An entity will be required to disclose a period-to-period rollforward of the allowance for expected credit losses for financial assets measured at amortized cost and at FVOCI. The Board decided not to require the amortized cost rollforward disclosures. However, entities will be required to disaggregate the credit quality indicators for all classes of financing receivables (excluding revolving lines of credit such as credit cards) that are disclosed under current GAAP by the year of the asset's origination (i.e., vintage year).[4] Some of the key requirements are:

- Disaggregation by vintage year will be for a specified minimum number of annual reporting periods, and any financing receivable originated prior to that will be disclosed in an aggregate column;
- Entities will apply current GAAP to determine if a loan refinancing or restructuring is a new loan or a loan modification;[5] and
- Revolving lines of credit will not be subject to the vintage year disclosure, but will still need to be disaggregated by credit quality indicators.

Background and Observations. The proposed ASU would have retained current U.S. GAAP requirements to disclose a rollforward of the allowance for credit losses and introduced an amortized cost rollforward of financial assets measured at amortized cost and FVOCI. Financial statement users generally supported this requirement while preparers believed implementation would be difficult.

---

[4] A financing receivable is a defined as a financing arrangement that: (1) represents a contractual right to receive money either on demand or on fixed or determinable dates, and (2) is recognized as an asset in the entity's statement of financial position. Financing receivables include, but are not limited to, loans, trade accounts receivables, and notes receivable.

[5] ASC Paragraphs 310-20-35-9 through 35-12, available at www.fasb.org.

Transition Disclosures

The Board affirmed the transition disclosure requirements included in the proposed ASU, which are listed below:

(a) The nature of the change in accounting principles, including an explanation of the newly adopted accounting principles.

(b) The method of applying the change.

(c) The effect of the adoption on any line item in the statement of financial position, if material, as of the beginning of the first period for which the guidance is effective. Presentation of the effect on financial statement subtotals is not required.

(d) The cumulative effect of the change on retained earnings or other components of equity in the statement of financial position as of the beginning of the first period for which the guidance is effective.

(e) An entity that issues interim financial statements must provide the disclosures in item (d) in each interim financial statement of the year of change and the annual financial statements of the period of change.

Next Steps

The Board directed the staff to draft the final standard. During the drafting process, the staff will perform outreach with preparers and users on the disclosure requirement to disaggregate credit quality disclosure by vintage year, any remaining issues identified, and the effective date. The Board will meet with the staff to discuss any remaining issues, the cost-benefit and complexity of the decisions reached to date, and the effective date.

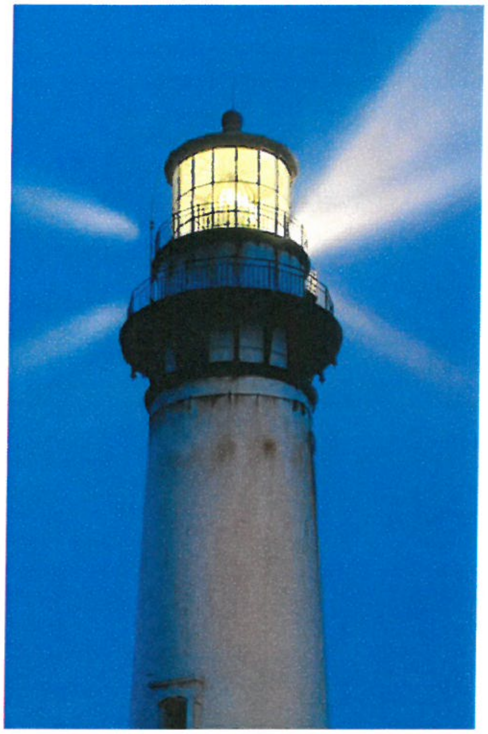
November 2015, No. 15-54



FASB Nears Completion of Financial Instruments Standards

The FASB recently reached decisions on the financial instruments standards related to the accounting for troubled debt restructurings (TDRs), impairment of available-for-sale (AFS) debt securities, and the effective dates for the impairment and classification and measurement standards.[1]

The Board will meet before year end to discuss the remaining impairment issues and cost-benefit considerations, and intends to issue a final impairment standard in the first quarter of 2016. The Board plans to issue a final classification and measurement standard in 2015.

Contents

Key Facts

- Credit losses for loans classified as TDRs would be measured under the current expected credit loss (CECL) model.
- Impairment of debt securities classified as AFS would be limited to the difference between their amortized cost and fair value.
- Public business entities that are SEC filers would apply the ***impairment*** standard for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years.[2]
- Public business entities would apply the ***classification and measurement*** standard for fiscal years beginning after December 15, 2017, including interim periods within those fiscal years.

Key Impacts

- Entities that previously had to segregate TDRs for subsequent measurement may not need to continue this practice.
- The effective dates for the new impairment guidance under U.S. GAAP and IFRS would be different.

---

[1] The FASB met on November 11, 2015. FASB Proposed Accounting Standards Updates, Financial Instruments – Credit Losses, December 20, 2012; and Financial Instruments Overall: Recognition and Measurement of Financial Assets and Liabilities, February 14, 2013, both available at www.fasb.org.

[2] An SEC filer is defined as an entity that is required to file or furnish its financial statements with either (a) the SEC, or (b) with respect to an entity subject to Section 12(i) of the Securities Exchange Act of 1934, the appropriate agency. Financial statements for other non-SEC filers whose financial statements are included with another filer's SEC submission are not included in this definition.

Impairment

External Review Draft

In August 2015, the FASB distributed an external review draft of the financial instruments impairment standard to a select group of stakeholders. The FASB staff received approximately 950 comments; the reviewers identified 147 comments as fatal flaws. The Board will discuss some of these issues in greater detail. For other comments, the staff said it would clarify the language in the final standard.

Effective Date

The Board decided that the impairment standard would be effective for:

- Public business entities that are SEC filers for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years;
- Public business entities that are *not* SEC filers for fiscal years beginning after December 15, 2019, including interim periods within those fiscal years; and
- All other entities for fiscal years beginning after December 15, 2019, and interim periods within fiscal years beginning after December 15, 2020.[3]

Early adoption would be permitted for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years.

KPMG Observations

The 2019 and 2020 effective dates might seem a long way off but already many companies are analyzing the implications of the standards. Entities may need to develop or revise accounting processes and internal controls, which would require applying significant judgments and developing new estimates. IT systems also may need to be modified to capture additional data to support the accounting and disclosure requirements.

Considerations for IFRS Convergence. Both U.S. GAAP and IFRS would have new impairment requirements that, while not converged, generally would result in an increase in the allowance for credit losses when compared with amounts recorded under current guidance. However, the mandatory effective dates of the respective standards are not the same.

For U.S. GAAP, the standard would be applied no earlier than fiscal years beginning after December 15, 2018. In contrast, the impairment guidance in IFRS 9, *Financial Instruments,* is effective for fiscal periods beginning on or after January 1, 2018.

[3] All other entities include not-for-profit entities, and employee benefit plans within the scope of ASC Topics 960, Defined Benefit Pension Plans; 962, Defined Contribution Pension Plans; and 965, Health and Welfare Benefit Plans, all available at www.fasb.org.

Impairment Floor for AFS Debt Securities

The Board decided that the amount of impairment recognized for debt securities classified as AFS would be limited to a fair value floor. The impairment recognized would be the lesser of:

- The difference between the amortized cost basis and the fair value, and
- The credit loss amount.

Applying the Board's Decision on Recognizing Impairment on AFS Debt Securities			
Facts	**Scenario 1**	**Scenario 2**	**Scenario 3**
Amortized Cost	$100	$100	$100
Fair Value	98	92	107
Credit Loss Amount	5	5	5
Impairment Recognized Through Earnings	2	5	0

Background. The Board previously decided that debt securities classified as AFS would continue to use the current other-than-temporary impairment (OTTI) model. However, it decided to make targeted amendments to the model to address concerns about the timely recognition of credit losses.

As part of the external review process, the Board requested feedback from stakeholders about whether incorporating a fair value floor would further simplify the impairment model for AFS debt securities. Generally, stakeholders favored the fair value floor because the cost basis would not be lower than the price at which the entity could sell the debt securities.

KPMG Observations

Incorporating the fair value floor would not change the amount of impairment recognized for debt securities that entities intend to sell or are more likely than not to be required to sell before recovery of the amortized cost basis. In these cases, the impairment recognized in earnings would be equal to the difference between the fair value and the amortized cost basis.

Effect of Fair Value Floor. The Board's decision ensures that entities would not recognize an allowance for credit losses that reduces the carrying amount of a debt security below its fair value. Without the fair value floor, if the allowance for credit losses reduced the carrying amount below fair value, entities would record a simultaneous gain in other comprehensive income for the excess of the fair value over the net carrying amount.

Incorporating a fair value floor into the model for accounting for AFS debt securities would result in noncomparability with the allowance for credit losses recorded for financial instruments measured at amortized cost (e.g., held-to-maturity debt securities).

If the amount initially recognized as an allowance for credit losses was limited to the fair value floor, subsequent changes in fair value would require adjusting the allowance, even if those fair value changes were driven by non-credit factors, e.g., interest rates or liquidity.

Troubled Debt Restructurings

The Board decided that credit losses for loans classified as TDRs would be measured using the CECL model that would apply to all other financial assets measured at amortized cost. Therefore, entities would evaluate impairment of TDRs on a collective (pool) basis together with other loans that have similar risk characteristics. If TDRs do not share similar risk characteristics with other loans, impairment would be evaluated individually.

Consistent with current U.S. GAAP, credit losses would continue to be recognized through earnings using an allowance account that is updated each period.

Background. The Board had previously decided that the amortized cost basis of the asset would have been adjusted when impairment was recognized for TDRs. The new amortized cost basis would have been the present value of the post-modification contractual cash flows (discounted at the asset's original effective interest rate). Stakeholders raised concerns about the cost and complexity of the cost-basis adjustment, including determining the cumulative-effect transition adjustment required at the time of adoption for loans previously classified as TDRs.

KPMG Observations

Allowing TDRs to be measured using the CECL model gives entities more latitude to develop different methods to estimate and measure expected credit losses. The methods must be applied consistently and must reflect the key elements of the CECL model. This represents a change from current U.S. GAAP, which requires TDRs to be measured individually using a discounted cash-flow technique.

Because the same methods could be used to measure expected credit losses for TDRs and non-TDRs, entities that previously had to segregate TDRs for subsequent measurement may not need to continue to do so. However, for loan modifications that also are TDRs, consistent with current U.S. GAAP, creditors would continue to separately disclose both the impairment amounts related to TDRs and the recorded investment in the period in which the entity recognized impairment.[4]

The Board decided to provide more latitude to determine the methods that entities could use to measure impairment for TDRs. However, it is not clear whether the Board intended to permit measurement methods that would not recognize an impairment loss when the lender grants a concession through a reduction of the interest rate charged to the borrower.

Next Steps

The Board will meet again before year end to discuss cost-benefit considerations and an issue related to measuring expected credit losses for purchased assets with more-than-insignificant credit deterioration. The Board expects to issue the final impairment standard during the first quarter of 2016.

The Board decided not to align the effective date of the new classification and measurement standard with the effective date of the new impairment standard. Instead, the Board aligned the effective date of classification and measurement with the effective date of the revenue standard.

Classification and Measurement

External Review Draft

In August 2015, the FASB distributed an external review draft of the classification and measurement standard to a select group of stakeholders. The FASB received approximately 233 comments; the reviewers identified 36 comments as fatal flaws. The staff concluded there were no issues that the Board needed to discuss.

Effective Date

The Board decided the classification and measurement standard would be effective for:

- Public business entities for fiscal years beginning after December 15, 2017, including interim periods within those fiscal years; and
- All other entities for fiscal years beginning after December 15, 2018, and interim periods within fiscal years beginning after December 15, 2019.[5]

Early adoption would be permitted for fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. When the standard is issued, entities could early adopt at the beginning of a fiscal year to separately present in other comprehensive income the portion of the change in fair value of the financial liability (for which the fair value option had been elected) that results from a change in the instrument-specific credit risk.

[5] All other entities includes not-for-profit entities, and employee benefit plans within the scope of ASC Topics 960, Defined Benefit Pension Plans; 962, Defined Contribution Pension Plans; and 965, Health and Welfare Benefit Plans, all available at www.fasb.org.

Next Steps

The Board concluded that the benefits of the new classification and measurement standard would outweigh the costs of application and directed the staff to draft a final standard for vote by written ballot. A final standard is expected to be issued by the end of 2015.

Re: File Reference No. 2012-260, *Financial Instruments – Credit Losses (Subtopic 825-15)*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the Proposed Accounting Standards Update from the Financial Accounting Standards Board (FASB or the Board) on *Financial Instruments – Credit Losses (Subtopic 825-15)* (the Proposal).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate, and finance income-producing real estate, as well as those firms and individuals who advise, study, and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease, and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT U.S. Real Estate Index, which covers both Equity REITs and Mortgage REITs. This Index contained 172 companies representing an equity market capitalization of $603.4 billion at 2012 year end. Of these companies, 139 were Equity REITs representing 90.2% of total U.S. listed

REIT equity market capitalization (amounting to $544.4 billion)[1]. The remainder, as of December 31, 2012, was 33 publicly traded Mortgage REITs with a combined equity market capitalization of $59 billion.

NAREIT's Recommendation

NAREIT concurs with the FASB's goal of developing a financial reporting model that more accurately reflects the timing and degree to which companies sustain credit losses on financial assets. However, with respect to the FASB's proposed current expected credit loss model (CECL), we believe that there are a number of areas that need improvement for the model to become operational for preparers and understandable for users, regulators, and auditors alike. Therefore, NAREIT proposes the following enhancements with regard to the CECL model:

- **Allow the credit loss allowance to be based on management's "best estimate" of expected credit losses – so, for example, an investor in an AA-rated bond or U.S. Treasury bond or Agency security would expect a best estimate of zero**

- **Clarify that the time horizon for the CECL model is based on the expected life (as opposed to the contractual life) of the financial asset**

- **Allow preparers to reverse previously recorded credit losses and require preparers to adjust the effective yield over the remaining life of the financial instrument to the extent that the expected cash flows exceeds the <u>originally</u> anticipated amount**

- **Exclude trade receivables and lease receivables from the scope of the Proposal**

- **Ensure that interim disclosures are not a mere repeat of the annual disclosures unless there is a material change**

Allow the credit loss allowance to be based on management's "best estimate" of expected credit losses – so, for example, an investor in an AA-rated bond or U.S. Treasury bond or Agency security would expect a best estimate of zero

NAREIT understands that the Proposal would require companies to book a credit loss upon execution of the transaction based on multiple possible outcomes. The estimate would be neither a worst-case scenario nor a best-case scenario, but rather would be based on an entity's assessment of current conditions and reasonable and supportable forecasts about the future. As such, the Proposal would expressly prohibit companies from utilizing a "best estimate" or "most likely outcome" approach that may result in recognizing zero credit losses.

NAREIT does not believe that the Proposal, as written, would faithfully present the underlying economics of certain transactions. NAREIT questions the Proposal's outcome when the model is applied to securities that are measured at fair value with changes in value recognized in other comprehensive income. For example, preparers would be required to record an allowance for credit losses immediately upon purchasing an AA-rated bond, a U.S. Treasury bond, or an Agency

[1] http://returns.reit.com/reitwatch/rw1301.pdf at page 20.

mortgage-backed security and thus "expect" credit losses of something other than zero. The vast majority of companies have never incurred a credit loss with respect to these particular investments. Therefore, NAREIT questions why the Board would require management to book an allowance for credit losses for these types of financial instruments, regardless of how small, when management's long-standing history indicates that there has never been a credit loss incurred historically. Further, the purchase price already inherently reflects what little credit risk exists.

The results of the CECL model become further perplexing when considering the fact that a company would record ***no allowance for credit losses*** at the date of purchase if these financial instruments are measured at fair value, with changes in value recognized in net income.

In NAREIT's view, the Board could easily address this accounting anomaly in the Proposal by permitting management to utilize a "best estimate" of expected credit losses. The concept of "best estimates" has conceptual merits in current U.S. GAAP. For example, FASB Concepts Statement No.7, *Using Cash Flow Information and Present Value in Accounting Measures*, defines the term *best estimate* as follows:

> The single most-likely amount in a range of possible estimated amounts; in statistics, the estimated mode. In the past, accounting pronouncements have used the term *best estimate* in a variety of contexts that range in meaning from "unbiased" to "most likely[2]."

NAREIT believes that providing management with the ability to use a "best estimate" approach within the CECL model would more accurately report management's view of the financial position of a company to users of financial statements.

Clarify that the time horizon for the CECL model is based on the expected life (as opposed to the contractual life) of the financial asset

A literal reading of the Proposal suggests that the allowance for credit losses estimate would be based on the cash flows that management does not expect to collect over the *contractual* life of the financial instrument. NAREIT questions whether it was the Board's intention for management to use the entire contractual life in all instances. For example, based on information obtained from the Federal Housing Finance Agency, the historical assumption for the average life of a 30-year residential mortgage loan is approximately 10 years[3]. The shorter life is due to prepayments that result when homeowners either sell their homes to move, decide to refinance due to decreasing interest rates, or default on the mortgage loan. NAREIT does not believe that an allowance for credit losses that is based on the entire 30-year life of the mortgage loan would be an accurate estimate.

NAREIT recommends that the Board discontinue use of the phrase "contractual cash flows" and utilize the term "expected cash flows" in its place. This would permit management to take

[3] http://www.fhfa.gov/webfiles/25006/MIRS_Feb_2013_final.pdf at page 2.

prepayments into consideration when estimating the expected life of a loan. NAREIT believes that making this change would dispel the confusion regarding whether the Board's intention was for preparers to estimate credit losses over the life-time contractual term of financial instruments that surfaced after the Proposal was issued. Subsequently, the Board attempted to address its intention in question 8 of the Proposed Accounting Standards Update, *Financial Instruments—Credit Losses (Subtopic 825-15)* Frequently Asked Questions document.

Allow preparers to reverse previously recorded credit losses and require preparers to adjust the effective yield over the remaining life of the financial instrument to the extent that the expected cash flows exceeds the originally anticipated amount

While we understand the impetus for the development of an expected credit loss model, we are concerned about any model that would only allow preparers to record downward adjustments and not reverse those credit losses in situations where the fair value of investments (*e.g.,* estimates of future cash flows) subsequently increases. With the benefit of hindsight, a preparer could observe whether market downturns later reverse. To the extent that market conditions stabilize, we believe that an accounting model that allows for reversals of previously recorded credit losses would more accurately reflect the financial position of a company. Thus, in that regard, we agree with the Proposal as an improvement over current practices for debt securities.

However, NAREIT believes that preparers should be able to adjust the effective yield over the remaining life of the financial instrument to the extent that the expected cash flows exceed the *originally* anticipated amount, unlike the Proposal that would record an immediate gain. In our view, the accounting model that we recommend would provide the best information to users of financial statements as well as address the uncertainty of estimates in a prudent manner.

Exclude trade receivables and lease receivables from the scope of the Proposal

NAREIT fails to see the benefit of including trade receivable and lease receivables within the scope of the Proposal. NAREIT observes that the Board is inconsistent when it comes to defining whether a lease is a financial asset. For example, lease receivables are excluded from the scope of the project that deals with financial assets (*e.g.,* the Proposed Accounting Standards Update on *Financial Instruments: Recognition and Measurement*), while in projects such as this, the FASB includes lease receivables as financial assets within the scope of the Proposal. Further, we note that trade receivables are generally short term and present few accounting issues under current U.S. GAAP.

To avoid confusion and complexity, NAREIT recommends that the Board exclude these assets from the scope of the Proposal. NAREIT believes that the accounting treatment for credit losses with respect to these asset types is best suited for the chapters in the codification that address these asset types. For example, credit losses for leases should be included within the codification section that is dedicated to leases. In order to ensure that convergence is achieved, the FASB and IASB should include the accounting for credit losses for leases within the scope of the *Leases* Project.

In the event that the Board does not decide to follow our recommendation, NAREIT requests that the Board clearly articulate the types of leases that would be in scope of the Proposal (*e.g.,* both operating and finance lease receivables?). Depending on the Board's anticipated timing for the effective date, this scoping decision should contemplate both leases under current U.S. GAAP and leases that would exist under the proposed *Leases* standard.

Ensure that interim disclosures are not a mere repeat of the annual disclosures unless there is a material change

As NAREIT indicated in its November 30, 2012 submission[4] on the FASB's *Disclosure Framework* discussion paper and in its May 15, 2013 submission[5] on the FASB's *Financial Instruments: Recognition and Measurement* Proposal, NAREIT has observed a growing trend in accounting pronouncements that requires companies to prepare the same types of disclosures at both interim and annual reporting dates. NAREIT questions whether detailed information can continue to be disclosed at interim periods given shorter quarterly SEC financial reporting deadlines (*i.e.*, 40 days for both large accelerated filers and accelerated filers, and 45 days for non-accelerated filers[6]) when compared with annual SEC financial reporting deadlines (*i.e.*, 60 days for large accelerated filers, 75 days for accelerated filers, and 90 days for non-accelerated filers[7]). According to APB 28: *Interim Financial Reporting* (Accounting Standards Codification Topic 270), each interim period is an integral part (as opposed to a discrete part) of the annual reporting period.

NAREIT suggests that the Board consider the approach that the SEC utilizes for changes in financial condition and quantitative and qualitative disclosures of market risks. The SEC requires these disclosures in annual reports. To the extent that there has been a material change since the date of the most recent annual report, the SEC requires disclosures in quarterly filings as well. By taking this approach, the SEC has effectively reduced unnecessary disclosure duplication. NAREIT believes that the FASB would achieve its objective by taking a similar approach.

We urge the FASB and the IASB to work toward a converged solution. As the Boards near the completion of the convergence projects, we implore the FASB and IASB to work together to reduce differences in their respective Financial Instruments models. This will benefit preparers, users, auditors, and regulators alike.

We thank the FASB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 1-202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 1-202-739-9442.

Respectfully submitted,

Re: File Reference No. 2013-220, Financial Instruments – Overall (Subtopic 825-10): *Recognition and Measurement of Financial Assets and Financial Liabilities*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the Proposed Accounting Standards Update (Proposed ASU or the Proposal) from the Financial Accounting Standards Board (FASB or the Board) on Financial Instruments – Overall (Subtopic 825-10): *Recognition and Measurement of Financial Assets and Financial Liabilities*.

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate, and finance income-producing real estate, as well as those firms and individuals who advise, study, and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease, and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT U.S. Real Estate Index, which covers both Equity REITs and Mortgage REITs. This Index contained 172 companies representing an equity market capitalization of $603.4 billion at 2012 year end. Of these companies, 139 were Equity REITs representing 90.2% of total U.S. listed

REIT equity market capitalization (amounting to $544.4 billion)[1]. The remainder, as of December 31, 2012, was 33 publicly traded Mortgage REITs with a combined equity market capitalization of $59 billion.

NAREIT's Recommendation

NAREIT recommends that the FASB continue with its approach in the Proposal to provide companies with the ability to recognize and measure financial assets and financial liabilities based on a business model assessment. NAREIT commends the Board for working with the International Accounting Standards Board (IASB) (collectively, the Boards) in developing a mixed attribute model for the recognition and measurement of financial assets (*i.e.*, amortized cost, fair value through other comprehensive income, and fair value through net income) and financial liabilities (*i.e.*, amortized cost and fair value through net income). NAREIT has supported a mixed attribute model for financial instruments previously. For example, NAREIT recommended that the Board develop a mixed attribute model in its September 30, 2010 submission[2] regarding the FASB's Proposal on Financial Instruments (Topic 825) and Derivatives and Hedging (Topic 815): *Accounting for Financial Instruments and Revisions to the Accounting for Derivative Instruments and Hedging Activities.*

In NAREIT's view, a mixed attribute model would be consistent with the business models of companies that own and operate real estate, as well as companies that finance transactions involving real estate. These companies typically hold or issue financial assets and financial liabilities for collection or payment of contractual cash flows for principal and interest. We believe that the amortized cost method more accurately reflects this business strategy, rather than measuring these financial instruments at fair value implying that the intention is to trade financial instruments. In addition, for companies that hold mortgage backed securities for collection or payment of contractual cash flows for principal and interest or for sale, we believe that the fair value through other comprehensive income method appropriately reflects this business strategy. For financial instruments held for trading purposes, we agree with the Board that fair value through net income is a more appropriate method.

While NAREIT supports the FASB's mixed attribute model, we recommend the following enhancements to the Proposal:

- **Synchronize embedded derivatives guidance for financial assets with financial liabilities**

- **Eliminate the assessment for cash flows based solely on principal and interest**

- **Converge the Proposal's impairment guidance with the FASB and IASB respective Credit Impairment models in allowing for the reversal of previously recorded impairment charges**

[1] http://returns.reit.com/reitwatch/rw1301.pdf at page 20.
[2] http://www.reit.com/~/media/Files/Policy/NAREITFinancialInstrumentsLetter1810-100.ashx

- **Clearly articulate the threshold for sales and the consequence of selling financial assets that are classified in the amortized cost category**

- **Ensure that interim disclosures are not a mere repeat of the annual disclosures unless there is a material change**

Synchronize embedded derivatives guidance for financial assets with financial liabilities

NAREIT contends that the Proposal, as written, creates asymmetry between financial assets and financial liabilities. While financial liabilities would continue to be evaluated for bifurcation of embedded derivatives, the corresponding embedded derivative guidance for financial assets would no longer exist. As a result, the *mere existence* of an embedded derivative in a financial asset, even if of quite limited magnitude, would cause the entire financial instrument to be subject to the cash flow characteristics and business model assessment to determine its classification and measurement. In NAREIT's view, this could result in different accounting treatment for economically similar arrangements.

Common investments amongst NAREIT's membership are debt investments, which may have embedded derivatives designed to remove uncertainty about future cash flows. NAREIT believes that to the extent that an embedded derivative *exists* in debt instruments, these instruments would fail the proposed cash flow characteristics test. Consequently, these investments would be measured at fair value with changes in value recognized in net income. Thus, NAREIT believes that it is not the existence of the derivative, but the function of the derivative that should matter. An instrument with an embedded derivative that is economically similar to an instrument that qualifies for amortized cost should be accounted for at amortized cost (*i.e.*, a single instrument). If an embedded derivative is not clearly and closely related to the host contract, it should be bifurcated and accounted for separately.

NAREIT recommends that the FASB retain existing embedded derivatives guidance for financial assets, which would create symmetry with financial liabilities. NAREIT does not believe that the current embedded derivative guidance for financial assets is broken. Currently, an embedded derivative is bifurcated and accounted for separately if it is not clearly and closely related to the host contract. Preparers account for the host contract separately from the embedded derivative, which is measured at fair value with changes in value recognized in net income. In this manner, changes in fair value are isolated to the embedded derivative only, as opposed to the entire financial asset as required by the Proposal.

Eliminate the assessment for cash flows based solely on principal and interest

NAREIT believes that the criteria to classify financial instruments at amortized cost are too restrictive. For example, many financial instruments that currently are held for the collection of cash flows and are therefore measured at amortized cost would be precluded from such classification under the Proposal. Additionally, financial assets with early redemption features could fail the assessment of cash flows based solely on principal and interest when acquired at a premium or discount. Another example is an investment in subordinated tranches of a mortgage securitization. In NAREIT's view, current U.S. GAAP that requires an embedded derivatives assessment more faithfully presents the underlying economics of the transaction. Therefore, NAREIT recommends that the FASB eliminate the assessment for cash flows based solely on principal and interest from the Proposal, and maintain existing embedded derivatives guidance for financial assets.

NAREIT also notes that the proposed cash flow test would *add* to complexity because the embedded derivative bifurcation rules would still be needed for financial liabilities. And no doubt, the proposed new test would lead to more questions and interpretation.

Converge the Proposal's impairment guidance with the FASB and IASB respective Credit Impairment models that allow for the reversal of previously recorded impairment charges

NAREIT understands that the Proposal would eliminate current impairment guidance on other-than-temporary-impairments (OTTI) for equity investments not measured at fair value through net income. The new impairment model would be based on a qualitative assessment (*i.e.,* more likely than not) as to whether the carrying amount of the investment exceeds fair value.

While we welcome the simplified approach to recording impairment charges, we are concerned that the Proposal would only allow preparers to record downward adjustments and not reverse those losses in situations where the fair value of investments subsequently increases. With the benefit of hindsight, we could observe whether market downturns are sustained. To the extent that markets stabilize, we believe that an accounting model that allows for reversals of previously recorded impairment write-downs would more accurately reflect the financial position of a company. In our view, this symmetric accounting model would provide the best information to users of financial statements.

Further, NAREIT observes that the proposed impairment model is divergent from the models proposed by the FASB and the IASB in their respective Credit Impairment models. NAREIT notes that both the FASB and IASB Credit Impairment proposals allow for the reversal of previously recorded allowance for credit losses. In our view, providing companies with the ability to reverse previously recorded impairment write-downs would serve as an opportunity for the FASB to synthesize impairment guidance within U.S. GAAP with respect to financial instruments and achieve convergence with the IASB at the same time.

Clearly articulate the threshold for sales and the consequence of selling financial assets that are classified in the amortized cost category

NAREIT understands that the Proposal would eliminate the concept of "tainting" from U.S. GAAP that occurs when a company sells financial instruments that are classified as held to maturity. Under the Proposal, the FASB indicates that such sales should be rare and infrequent. However, the Proposal does not articulate how many times such sales could occur. Nor does the Proposal indicate what the consequences are of executing sales from the amortized cost category. In order to reduce the possibility for improper sales from the amortized cost category, and work towards reducing situations whereby some companies might try to "game the system," NAREIT recommends that the FASB clearly articulate a threshold for sales (and the consequence of selling beyond this threshold) of financial assets that are classified in the amortized cost category.

Ensure that interim disclosures are not a mere repeat of the annual disclosures unless there is a material change

As NAREIT indicated in its November 30, 2012 submission[3] on the FASB's *Disclosure Framework* discussion paper, NAREIT has observed a growing trend in accounting pronouncements that requires companies to prepare the same types of disclosures at both interim and annual reporting dates. NAREIT questions whether detailed information can continue to be disclosed at interim periods given shorter quarterly SEC financial reporting deadlines (*i.e.,* 40 days for both large accelerated filers and accelerated filers, and 45 days for non-accelerated filers[4]) when compared with annual SEC financial reporting deadlines (*i.e.,* 60 days for large accelerated filers, 75 days for accelerated filers, and 90 days for non-accelerated filers[5]). According to APB 28: *Interim Financial Reporting*, each interim period is an integral part (as opposed to a discrete part) of the annual reporting period. Therefore, NAREIT suggests that the Board consider the approach that the SEC utilizes for changes in financial condition and quantitative and qualitative disclosures of market risks. The SEC requires these disclosures in annual reports. To the extent that there has been a material change since the date of the most recent annual report, the SEC requires disclosures in quarterly filings as well. By taking this approach, the SEC has effectively reduced unnecessary disclosure duplication. NAREIT believes that the FASB would achieve its objective by taking a similar approach.

Other Comments

NAREIT notes that in the FASB's consequential amendments document, hedge accounting for interest rate risk is not permitted for debt securities measured at amortized cost, but apparently is permitted for loans measured at amortized cost. NAREIT found this difficult to understand given that the Proposal overall treats securities and loans in the same manner. NAREIT believes hedge accounting should be permitted for both loans and securities which would be consistent with good treasury risk management practices (*e.g.,* see paragraph 825-10-55-73 in the Proposal).

NAREIT observes that the proposed held-for-sale criteria for equity method investments may be interpreted very broadly. We are concerned that this may result in certain investments being inappropriately reported at fair value through net income, which may be contrary to the Board's intention. For example, investments reported under the equity method of accounting (*e.g.,* investments in joint ventures, partnerships and limited liability companies) might be considered held-for-sale investments simply because (1) the underlying arrangements may contain explicit or implied end/termination dates or (2) management often considers a wide range of exit plans depending on future developments over a long time horizon. NAREIT does not believe this result would represent the most useful financial reporting and questions whether or not the Board intended this result.

[5] http://www.sec.gov/answers/form10k.htm

In summary, we urge the FASB and the IASB to remain committed on their convergence efforts. As the Boards near the completion of the convergence projects, we implore the FASB and IASB to work together to reduce differences in their respective Financial Instruments models. This will benefit preparers, users, auditors, and regulators alike.

We thank the FASB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 1-202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 1-202-739-9442.

Respectfully submitted,

George Yungmann

Dataline
A look at current financial reporting issues

No. 2013-01
January 16, 2013

What's inside:

Credit losses on financial assets
An overview of the FASB's current expected credit loss model

Overview

At a glance

- Impairment is a major component of the FASB and IASB's (the boards') joint project to revisit most aspects of financial instruments accounting. In the aftermath of the recent financial crisis, the current incurred loss approach has been criticized for delaying the recognition of credit losses. As a result, many constituents believe revisions to the current impairment model are necessary.

- The FASB has completed redeliberations on its proposed impairment model, referred to as the "current expected credit loss" (CECL) model. In December 2012, the FASB issued for public comment its proposed Accounting Standards Update (ASU), *Financial Instruments—Credit Losses (Subtopic 825-15)*. The ASU proposes recognition of the full expected credit loss on financial instruments that fall within its scope. The comment period ends on April 30, 2013.

- The IASB has completed redeliberations on its proposed model, previously referred to as the "three bucket" model and now known as the "credit deterioration" model. The IASB's model differs from the FASB's model in several key areas, which are highlighted throughout this Dataline. The IASB is expected to issue its exposure draft in the first quarter of 2013.

The main details

.1 The development of a revised standard on the impairment of financial assets is one part of the boards' joint priority project to address various aspects of financial instruments accounting. This Dataline focuses only on the developments in impairment accounting. Refer to Dataline 2012-21, *Financial instruments classification and measurement — An update on the FASB's tentative approach to be exposed in Q1 2013*, for information on the classification and measurement portion of the financial instruments project.

.2 Various constituents have expressed the need for the accounting standard setters to address the perceived flaws in the current impairment model. For example:

1) In an April 2009 report reflecting on the causes of the global financial crisis, the Group of 20, consisting of the finance ministers and central bank governors of the major economies, made several recommendations. Among other things, the report recommended that accounting principles related to loan loss provisioning be improved to permit consideration of a "broader range of credit information."

2) The Financial Crisis Advisory Group, formed to advise the FASB and IASB, said in its final July 2009 report that the financial crisis exposed weaknesses in financial reporting that included "the delayed recognition of losses associated with loans, structured credit products, and other financial instruments by banks, insurance companies and other financial institutions." They recommended that the boards explore an approach that uses more forward-looking information, such as an expected loss model or fair value model.

3) The Basel Committee on Banking Supervision stated in an August 2009 report that the IASB's new financial instruments standard should "reflect the need for earlier recognition of loan losses to ensure robust provisions."

.3 Both the FASB's CECL model and the IASB's credit deterioration model seek to improve the decision usefulness of the reporting of credit losses by removing the perceived constraints to timely recognition, and allowing entities to consider a broader information set. Both models move away from the incurred loss model that exists in practice today and consider expected losses when determining the amount of credit losses that should be recognized each reporting period.

PwC observation:

Extensive system and process changes may be needed to apply both models and may require a considerable amount of lead time in order to be designed and implemented. Specifically, entities will need to develop the infrastructure to estimate losses over a longer time horizon. If there are concerns about the operationality and system requirements to implement the proposed model, constituents are encouraged to communicate those concerns through the comment letter process.

.4 This Dataline is focused on the FASB's CECL model but draws comparisons to the credit deterioration model throughout the document. In addition, refer to Appendix I of this Dataline for a side-by-side comparison of the boards' respective impairment approaches.

.5 As both boards move away from an incurred loss model and instead look to expected losses, it is likely that levels of allowance for credit losses will change. This could potentially impact regulatory capital requirements and various key financial metrics.

.6 The FASB has not yet determined an effective date for the proposed model. The FASB will discuss an effective date after considering feedback it receives during the comment period. The FASB has indicated that it will consider multiple potential effective dates, and may consider different effective dates for public versus non-public companies and regulated versus non-regulated entities.

PwC observation:

Given the FASB released its proposed CECL model in December 2012, it is unlikely it will issue a final standard before the later part of 2013. Therefore, an effective date earlier than 2015 appears unlikely.

Key elements of the CECL model

Objective

.7 The objective of recording an allowance for credit losses is to reflect the estimate of the amount of contractual cash flows not expected to be collected. The CECL model provides guidance on how an entity should recognize and measure expected credit losses. The CECL model is intended to simplify current practice by eliminating today's multiple impairment models. It also allows entities to consider a broader information set to determine the amount of credit losses expected to occur.

.8 For debt instruments, there are several different impairment models used today under US GAAP, including the following:

- ASC 310-30, *Receivables — Loans and Securities Acquired with Deteriorated Credit Quality* (formerly SOP 03-3)
- ASC 310-40, *Receivables — Troubled Debt Restructurings by Creditors* (formerly FAS 114)
- ASC 320-10-35, *Investments — Debt and Equity Securities — Recognition of an Other-Than-Temporary Impairment* (formerly FSP FAS 115-2)
- ASC 325-40, *Investments — Beneficial Interests in Securitized Financial Assets* (formerly EITF 99-20)
- ASC 450, *Contingencies* (formerly FAS 5)

The CECL model aims to replace the various impairment models that exist today with a single approach for all debt instruments.

PwC observation:

With respect to interest income recognition, the CECL model only speaks to how to recognize interest income on purchased credit impaired assets, and when to stop accruing interest income altogether. The proposed ASU does not address how a creditor should recognize interest income on the remainder of the portfolio. However, the proposed ASU is intended to supersede ASC 310-30 and ASC 325-40, which currently provide guidance on interest income recognition for certain instruments. We anticipate questions to arise regarding how interest income should be recognized under the CECL model.

Scope

.9 Both the CECL model and the credit deterioration model will apply to financial assets that are subject to losses related to credit risk and are *not* measured at fair value with changes in fair value recognized in net income. Said differently, both models will apply to financial assets that are subject to losses related to credit risk that are carried at amortized cost or fair value with changes in fair value recorded in other comprehensive income (FV-OCI).

.10 The scope of both models includes loans, debt securities, trade receivables, lease receivables, and loan commitments. At this stage, the FASB has also included reinsurance receivables that result from insurance transactions in the scope of its impairment model. The IASB recently made a decision to subject reinsurance receivables to insurance accounting, which under IFRS, results in an expected value measurement. Therefore, the proposed measurement of credit loss associated with a reinsurance receivable will be the same under US GAAP and IFRS despite these arrangements being within the scope of two different areas of the accounting standards.

PwC observation:

Many have questioned whether or not financial guarantees are included in the scope of the FASB's proposed ASU. Many argue that financial guarantee contracts present many of the same credit considerations as loan commitments, which are included in the scope of the proposed guidance. However, others view financial guarantees as insurance contracts and believe they should be accounted for as such.

The FASB has made a tentative decision that the proposed insurance contracts standard should apply to financial guarantee contracts currently accounted for as insurance under existing US GAAP, such as mortgage insurance and financial guarantee contracts sold by insurance enterprises. The FASB has yet to decide whether guarantees issued by banks or other financial institutions will be included in the scope of the insurance standard. In its project on insurance contracts, the FASB has tentatively defined "insurance contracts" broadly. Therefore, absent a specific scope exclusion in the insurance contracts standard, financial guarantee contracts will likely meet the definition of an insurance contract.

The IASB has made a decision to include financial guarantee contracts in the scope of the impairment project. However, if an entity previously asserted explicitly that it regards financial guarantee contracts as insurance contracts and applied insurance accounting, the IASB will permit the entity to elect to continue applying insurance accounting.

Measurement

.11 The CECL model will require an entity to recognize an allowance for all expected credit losses on debt instruments. The FASB defines expected credit losses as "an estimate of all contractual cash flows not expected to be collected from a recognized financial asset (or group of financial assets) or commitment to extend credit." There will be no threshold to meet prior to recognizing a credit loss, and the allowance must reflect the time value of money. Refer to further discussion under "Information set to consider" below regarding consideration of the time value of money in applying the CECL model.

PwC observation:

The CECL model and the credit deterioration model both represent potentially significant changes from current practice, as both models move away from the incurred loss notion and instead focus on expected losses. While both models represent a change from current practice, there are several key differences between the two models.

Perhaps the most significant difference is that the CECL model does not contain a "trigger" to recognizing full expected credit losses, while the credit deterioration model only requires recognition of a full expected credit loss on those assets for which there has been a significant deterioration in credit or there is a probability of loss in the next twelve months.

.12 Both the CECL model and the credit deterioration model require that an entity's estimate of expected credit losses reflect, at a minimum, two possible outcomes: an outcome in which a credit loss results and an outcome in which no credit loss results. An entity will be prohibited from estimating expected credit losses on the basis of the most likely outcome for an individual financial asset.

PwC observation:

Both the CECL model and the credit deterioration model require consideration of more than one possible scenario in estimating the allowance for credit losses. Because one scenario must reflect the possibility that a credit loss results, there will be some amount of allowance for every financial asset.

The CECL model does not contain a threshold to meet prior to recognizing a full expected credit loss. As all loans have some risk of loss, the CECL model will require day one loss recognition for the credit risk associated with newly originated loans. While application of the IASB's credit deterioration model will also result in day one losses, such losses will likely be smaller than under the CECL model. This is due to the fact that the IASB model only contemplates the probability of loss in the next twelve months for newly originated loans that have not experienced significant credit deterioration.

.13 Both the CECL model and the credit deterioration model apply to financial assets measured at amortized cost and FV-OCI. However, the CECL model contains a practical expedient for financial assets measured at FV-OCI. The practical expedient allows entities not to recognize credit losses when both of the following conditions are present:

- The fair value of the individual financial asset is greater than (or equal to) the amortized cost basis of the financial asset; and

- The expected credit losses on the individual financial asset are insignificant, which may be determined by considering the general expectation of the range of expected credit losses given the credit-quality indicator(s) for the asset as of the reporting date.

PwC observation:

Debt securities are expected to be one of the more common types of financial assets carried at FV-OCI. In many cases, entities hold large portfolios of debt securities with high credit quality, including U.S. Treasury and other highly rated securities. Often, credit losses will not be significant on an individual asset basis; therefore, these securities will likely meet the second criterion to qualify for the practical expedient.

However, the fair value of such securities is impacted by a variety of factors, including liquidity, interest rates, and credit. As a result, movement in market interest rates that result in a decrease in fair value could lead to these securities no longer qualifying for the practical expedient. Therefore, recognition of expected credit losses will be required even though there was no change in the credit risk of the securities. Although these credit losses may not be significant on an individual asset basis, they could potentially be significant across an entire portfolio.

.14 Consistent with current practice, the CECL model provides a practical expedient when estimating credit losses on collateral-dependent financial assets. The practical expedient allows entities to compare the fair value of the collateral to the amortized cost basis to determine the allowance for credit losses. If an entity elects to apply the practical expedient and repayment or satisfaction of the asset depends on the sale of the collateral, the fair value of the collateral is required to be adjusted to consider estimated costs to sell. If the repayment or satisfaction of the asset depends on the operation of the collateral, but not the sale, the fair value is not adjusted.

PwC observation:

The FASB expanded the current definition of a collateral-dependent financial asset. Under today's guidance, collateral dependent only applies to loans and is defined as "a loan for which repayment is expected to be provided solely by the underlying collateral."

The new definition of collateral-dependent financial asset is revised to "a financial asset for which repayment is expected to be provided primarily or substantially through the operation (by the lender) or sale of the collateral, based on an entity's assessment as of the reporting date."

Today, there is diversity in how entities apply the definition of a collateral-dependent financial asset. While the FASB expanded the scope and definition to accommodate additional financial instruments, they did not provide a significant amount of additional application guidance on collateral-dependent financial assets. Therefore, we expect that there will continue to be diversity in how entities apply the definition in practice.

.15 For loan commitments not measured at fair value through net income, the CECL model requires entities to estimate credit losses over the full contractual period over which the entity is exposed to credit risk via an unconditional legal obligation to extend credit. The estimate of credit losses on loan commitments will consider the likelihood of funding and the extent of credit losses expected to occur on such funded amounts.

Subsequent measurement

.16 At each reporting period, entities will recognize, as a provision for credit loss, the amount of credit loss (or reversal), required to adjust the allowance to reflect the updated expectation of contractual cash flows not expected to be collected.

.17 An entity will be required to write-off a financial asset (or portion thereof) in the period in which a determination is made that the entity has no reasonable expectation of future recovery.

PwC observation:

The guidance in the proposed ASU on write-offs represents a significant change from current practice. With respect to securities, there will no longer be a "write-down" of the cost basis to reflect other-than-temporary impairment. Rather, entities will record an allowance for credit losses, which could decrease in subsequent periods.

With respect to loans, current practice varies as to when a loan is written-off. Although practice is mixed, a level of consistency has been achieved in certain industries where a common approach has been established by regulators or others. For example, banks typically write-off a loan when it becomes 180 days past due.

The CECL model establishes a single approach to recognizing write-offs. That approach requires write-off when there is no reasonable expectation of recovery. While the CECL model attempts to bring consistency, we anticipate that regulators will continue to express a point of view about how to interpret the guidance, as a "no reasonable expectation of recovery" principle leaves room for interpretation. Additionally, the FASB will require entities to disclose their write-off policy.

Information set to consider

.18 Both the CECL model and the credit deterioration model require estimates of expected credit losses to be based on internally and externally available information considered relevant in making the estimate. This includes information about past events, current conditions, and reasonable and supportable forecasts. Entities will be able to consider both qualitative and quantitative factors specific to borrowers and the economic environment in which the reporting entity operates.

PwC observation:

One of the goals of both the CECL and the credit deterioration models is to allow entities to consider a broader information set when estimating the allowance for credit losses. During the financial crisis of 2008, entities were restricted by the incurred loss model. Despite having information available that suggested further credit losses would eventually occur, entities could only record credit losses when those losses had been incurred. In establishing the information set to consider, both boards were focused on ensuring that entities could consider all relevant information, including forecasts about macroeconomic and borrower-specific conditions.

.19 The CECL model recognizes the inherent judgment involved in estimating credit losses and also recognizes that the most appropriate method to do so will vary depending on the asset and the information available that is relevant to the process. Therefore, the CECL model does not mandate specific approaches or policy elections to determine an expected credit loss. The proposed ASU includes examples of various methodologies that could be used to estimate expected credit losses under the CECL model.

PwC observation:

The FASB has given constituents latitude to determine the most appropriate method to satisfy the principles of estimating an expected credit loss. This will represent a change from today's guidance, which requires entities to use discounted cash flow calculations in certain situations. No such mandates will exist in the CECL model.

.20 Both the CECL and credit deterioration models require the allowance to consider time value of money. However, the CECL model allows for that consideration to be either implicit or explicit. The FASB believes that an example of a method that considers time value of money explicitly is a discounted cash flow calculation, and examples of methods that consider time value of money implicitly are historical loss ratios and probabilities of default.

PwC observation:

The FASB spent considerable time discussing the need for the CECL model to consider time value of money. Constituents had expressed concern about whether incorporating the time value of money effectively required entities to use discounted cash flow calculations. The FASB believes that many commonly used methods for estimating credit losses; including probability of default/loss given default (PD/LGD) and historical loss rates, inherently capture the time value of money.

The FASB's conclusions are based on the premise that the amortized cost recorded on the balance sheet at a point in time reflects the present value of all expected future cash flows, discounted at the effective interest rate. If an entity has historically measured losses against the amortized cost basis, such historical loss information inherently captures the time value of money. Therefore, historical loss rates and loss given default rates that incorporate this information would satisfy the objectives of the model.

.21 The CECL model allows entities to consider how credit enhancements mitigate expected credit losses on financial assets when estimating the allowance for credit losses, provided such credit enhancements are not separate freestanding instruments. As a result, the estimate of expected credit losses on a financial asset should not be offset by a legally detachable and separately exercisable contract that may mitigate expected credit losses on the financial asset.

PwC observation:

The proposed ASU cites a purchased credit default swap as an example of a freestanding contract that cannot be considered when establishing an estimate of expected credit losses. While a credit default swap is clearly a freestanding contract, it is not clear whether other common credit enhancements would be considered freestanding contracts.

For example, standard representations and warranties, while not a "separately exercisable" contract, do not necessarily travel with a loan upon subsequent sale. As a result, it is unclear whether standard representations and warranties will be considered freestanding. Based on the wording in the proposed ASU, we anticipate questions to arise regarding how various types of credit enhancements like representations and warranties should or should not be factored into an entity's estimate of credit losses.

Interest income

.22 The CECL model only addresses two areas related to interest income recognition: (1) interest income recognition on purchased credit-impaired (PCI) financial assets, and (2) when to cease the accrual of interest income on financial assets. Otherwise, the CECL model does not address how a creditor should recognize, measure, or display interest income on financial assets.

.23 The CECL model defines PCI assets as "acquired individual financial assets (or acquired groups of financial assets with shared risk characteristics at the date of acquisition) that have experienced a significant deterioration in credit quality since origination, based on the assessment of the acquirer."

PwC observation:

The definition of purchased credit-impaired financial assets represents a change from current practice. Under ASC 310-30, purchased assets are deemed to be impaired (and therefore in the scope of that section) if there is evidence of credit deterioration since origination and it is probable, at acquisition, that the investor will be unable to collect all contractually required payments receivable.

The definition used in the CECL model eliminates the second criterion in existing guidance. As a result, there may be a change in the scope of assets that qualify as PCI under the proposed model.

.24 For PCI assets, the CECL model requires buyers to assess the discount embedded in the purchase price that is attributable to expected credit losses at the date of acquisition. This amount is not recognized as interest income.

PwC observation:

Under the CECL model, PCI assets will continue to be subject to specific guidance on day one. Upon acquisition, an entity will be required to record an allowance to represent the amount of contractual cash flows not expected to be collected. Each component of the original purchase price will be "grossed up" to reflect the day one allowance.

For example, assume an entity purchases an asset with a par value of $100 for $85. At the acquisition date, the entity estimates it will not collect $10 of the contractual cash flows. The $85 cost basis of the asset will be “grossed up” to $95 to reflect the $10 embedded allowance. The remaining $5 of purchase discount attributed to factors other than credit is accreted in interest income over the remaining life of the asset.

The credit deterioration model differs from the CECL model with respect to PCI assets. Under the credit deterioration model, there is no concept of “grossing up” the basis of the loan to reflect the embedded allowance. The IASB’s model does not require an allowance to be recorded on day one, but instead limits the accrual of interest income to the expected cash flows as opposed to the contractual cash flows. This is consistent with current US GAAP treatment of PCI assets under ASC 310-30.

.25 On day two, the allowance for expected credit losses for PCI assets will follow the same approach as other debt instruments in the scope of the model. Changes in the allowance for expected credit losses will be recognized as an adjustment to the provision for credit losses in the current period.

PwC observation:

The CECL model attempts to address concerns raised about the complexity of today's accounting for purchased credit-impaired assets. Under today's guidance in ASC 310-30, deteriorations in expected cash flows on purchased credit impaired assets are reflected as additional provision expense, while improvements in cash flow expectations are generally reflected as prospective yield adjustments.

Under the CECL model, this "asymmetry" is eliminated. Any changes in expected cash flows, positive or negative, will be reflected through an adjustment of provision expense in the current period. As a result, if credit expectations significantly improve, gains could be recorded on assets for which the initial credit losses were never recorded in income due to the entity purchasing the asset at a discount.

.26 The CECL model requires entities to recognize contractual interest income unless it is not probable that the entity will collect all contractual cash flows. An entity will cease its accrual of interest income when it is not probable it will receive substantially all of the principal or substantially all of the interest.

.27 If it is not probable the entity will receive payment of substantially all of the principal, the entity will recognize all future cash receipts as a reduction in the carrying amount of the asset. When the carrying amount has been reduced to zero, additional payments are recognized as recoveries of amounts previously written off (that is, recorded as an adjustment to the allowance for expected credit losses) with any excess recognized as interest income.

.28 If it is probable the entity will receive payment of substantially all of the principal, but it is not probable the entity will receive substantially all of the interest, the entity will recognize interest income on the debt instrument when cash payments are received. Cash receipts that exceed the amount of interest income that would have been recognized had the asset not been placed on non-accrual status will be applied to reduce the carrying amount of the asset.

PwC observation:

Current practice varies in terms of when entities stop recognizing interest income, although in certain industries a consistent approach has evolved or has been established by regulators or others. For example, in the banking industry, interest is typically no longer recognized for loans that are more than 90 days past due. During its deliberations of this project, the FASB conducted outreach with various constituents, including the banking regulators. The FASB considered the banking regulators' feedback on current "non-accrual" practices in the banking industry when drafting the guidance in the proposed ASU. Therefore, constituents outside of the banking industry may see changes to their current practices.

Modifications

.29 For modifications that are not troubled debt restructurings (TDRs), there is no change to current guidance with respect to evaluating whether the modification results in a new loan or a continuation of the old loan. Creditors will be required to evaluate whether the modification is "more than minor" as outlined in ASC 310-20-35-9 (formerly EITF 01-7). If the modification is deemed more than minor, the loan is accounted for as a new loan and the effective interest rate is based on the terms of the new loan and current market conditions.

.30 The CECL model carries forward the definition of a TDR from current US GAAP. The FASB concluded that that the economic concession granted by the lender to the borrower in a TDR reflects the lender attempting to maximize its recovery of the original contractual cash flows. Therefore, a TDR will be viewed as a continuation of the original debt instrument and the effective interest rate will be the "pre-modification" effective interest rate.

.31 For TDRs, the CECL model will require an adjustment to the cost basis of the modified asset (with a corresponding adjustment to the allowance for expected credit losses) so that the effective interest rate on the modified asset continues to be the original effective interest rate, given the new series of cash flows. The basis adjustment will be calculated as the amortized cost basis before modification less the present value of the new series of contractual cash flows (discounted at the original effective interest rate).

Disclosures

.32 The ASU requires various disclosures. The proposed disclosures are summarized in Appendix II to this Dataline. The disclosures are intended to enable users of the financial statements to understand (1) the credit risk inherent in the portfolio and how management monitors the credit quality of the portfolio, (2) management's estimate of expected credit losses, and (3) changes in the estimate of expected credit losses that have taken place during the period. The ASU includes examples of the required disclosures.

.33 Several of the disclosures require entities to provide information either by portfolio segment or class of financial asset. Portfolio segment is defined in the ASU as "the level at which an entity develops and documents a systematic methodology to determine its allowance for expected credit losses." For example, this may be by type of receivable, industry, or risk. Class of financial asset is defined as "a group of financial assets determined on the basis of all of the following: (1) measurement attribute, (2) risk characteristics of the financial asset, and (3) an entity's method for monitoring and assessing credit risk." For example, this may be by measurement attribute, product, and risk rating.

.34 Entities will be required to determine, in light of their specific facts and circumstances, how much detail they must provide to meet the objectives of the disclosures outlined in the ASU. An entity must strike a balance between obscuring important information as a result of too much aggregation and providing excessive detail that may not be beneficial to financial statement users.

Transition

.35 The FASB has not yet determined an effective date for the new guidance. However, once an effective date is established, the guidance will be effective for fiscal years, and interim periods within those fiscal years, beginning on or after the effective date.

.36 Entities will apply the guidance by recording a cumulative-effect adjustment to the statement of financial position as of the beginning of the first reporting period in which the guidance is effective. For example, for calendar year-end companies with quarterly reporting requirements, if the effective date is determined to be January 1, 2015, a cumulative-effect adjustment will be recorded as of January 1, 2015, and the first reporting period that the guidance will be effective is the quarter ending March 31, 2015. Early adoption will not be permitted.

Questions

.37 PwC clients who have questions about this Dataline should contact their engagement partner. Engagement teams that have questions should contact a member of the Financial Instruments team in the National Professional Services Group (1-973-236-7803).

Appendix I — Comparison between the FASB's and IASB's models

Description	CECL model (FASB)	Credit deterioration model (IASB)
Scope	The CECL model will apply to loans, debt securities, loan commitments, trade receivables, reinsurance receivables, and lease receivables that are not measured at FV-NI.	Generally, the scope of the credit deterioration model is consistent with that of the CECL model. However, there are a few differences: • The credit deterioration model does not apply to reinsurance receivables. • Financial guarantee contracts are included in the scope of the credit deterioration model. If an entity has previously asserted explicitly that it regards financial guarantees contracts as insurance contracts and applied insurance accounting, it can elect to continue applying insurance accounting.
Information considered when estimating credit losses	The CECL model will require entities to consider all internally and externally available information relevant to the estimate. This includes information about past events, current conditions, and reasonable and supportable forecasts and their implications for expected credit losses.	Same
Definition of expected credit losses	The CECL model defines expected credit losses as an estimate of all contractual cash flows not expected to be collected from a recognized financial asset (or group of financial assets) or commitment to extend credit.	Same
Measurement objective for the allowance for credit losses	Under the CECL model, an entity recognizes an allowance for all expected credit losses for all debt instruments at each reporting date.	Under the credit deterioration model, recognition of full expected credit losses is required only when there has been a significant deterioration in credit or there is a probability of loss in the next twelve months.

Description	CECL model (FASB)	Credit deterioration model (IASB)
Recognition of changes in the allowance for credit losses	Under the CECL model, changes in the allowance for credit losses are recognized immediately in net income.	As a result of utilizing a dual measurement approach, the amount recognized through net income also includes (1) the effect of a change in the credit loss measurement objective from “12-months of expected losses” to “lifetime expected losses” for assets that have experienced significant credit deterioration and (2) the effect of a changes in the credit loss measurement objective from “lifetime expected losses” to “12-months of expected losses” for assets that have no longer experienced a significant deterioration in credit.
Purchased credit-impaired financial assets	Under the CECL model, purchased credit-impaired assets are subject to specific guidance on day one. The basis of the asset is "grossed up" to reflect the embedded allowance. The remaining portion of the original purchase discount not attributed to credit is accreted in interest income over the life of the asset.	The credit deterioration model does not have the concept of "grossing up" the basis of the loan to reflect the embedded allowance. Instead, the asset is recorded at its initial fair value and accreted to the level of cash flows expected to be collected.
Principles for measuring expected credit losses	Under the CECL model, the estimate of expected credit losses reflects the time value of money and, at a minimum, reflects both the possibility that a credit loss results and the possibility that no credit loss results. An entity is prohibited from estimating expected credit losses based solely on the most likely outcome.	Same
Principle for writing off financial assets	Under the CECL model, An entity will write-off a financial asset in the period in which it has no reasonable expectation of recovery.	Same

Appendix II – Disclosure requirements

	Required disclosure
Credit quality information	• Quantitative and qualitative information by class of financial asset about the credit quality, including (1) a description of the credit-quality indicator, (2) the amortized cost (by credit-quality indicator), and (3) for each credit-quality indicator, the date or range of dates in which the information was last updated • If an entity disclosures internal risk ratings, qualitative information on how those internal risk ratings relate to the likelihood of loss
Allowance for expected credit losses	• Information that enables financial statement users to understand (1) management's process for developing its allowance for expected credit losses, (2) the information that management has used in developing its current estimate of expected credit losses, and (3) the economic circumstances that caused changes to the allowance for expected credit losses • By portfolio segment, a description of the entity's accounting policies and methodology used to estimate the allowance for expected credit losses, including: (1) a description of how expected loss estimates are developed, (2) a description and discussion of the factors that influenced management's current estimate of expected credit losses, including past events, current conditions, and reasonable and supportable forecasts about the future, (3) a discussion of risk characteristics relevant to each portfolio segment, (4) a discussion of the changes in the factors that influenced management's current estimate of expected credit losses and the reasons for those changes (for example, changes in loss severity, change in portfolio composition, change in volume of assets whether purchased or originated, significant events or conditions that affect the current estimate but were not contemplated during the previous period), (5) identification of any changes to the entity's accounting policies or methodology from the prior period and the entity's rationale for the change, if applicable, (6) a discussion of any significant changes in estimation techniques used and reasons for the changes, if applicable, and (7) reasons for significant changes in the amount of write-offs, if applicable • For assets classified at amortized cost and FV-OCI, a roll forward of activity in the allowance for expected credit losses that includes: beginning balance in the allowance, current period provision for credit losses, write-offs charged against the allowance, recoveries of amounts previously written off, ending balance in the allowance • If an entity has utilized the practical expedient in paragraph 825-15-25-2 not to measure expected credit losses for certain financial assets classified at FV-OCI, the amortized cost balance of those assets at the portfolio segment level
Roll forward for certain debt instruments	• A roll forward, by portfolio segment, for a portfolio of debt instruments measured at FV-OCI or amortized cost that includes beginning amortized cost, originations, purchases, sales, repayments, write-offs, and ending amortized cost • The roll forward disclosures identified above do not apply to the following: (1) receivables that result from revenue transactions within the scope of Topic 605, (2) reinsurance receivables that result from insurance transactions within the scope of Topic 944, and (3) loan commitments that are not measured at fair value with changes in fair value recognized in net income.

	Required disclosure
Reconciliation between fair value and amortized cost for debt instruments classified at FV-OCI	• If not already presented on the balance sheet, a reconciliation of the difference between the fair value and amortized cost for assets measured at FV-OCI, including amortized cost, the allowance for expected credit losses, the accumulated amount needed to reconcile amortized cost less the allowance for expected credit losses to fair value, and fair value
Past due status	• An aging analysis of the amortized cost for debt instruments that are past due as of the reporting date disaggregated at the portfolio segment level, and disclosure of when the entity considers a debt instrument to be past due
Non-accrual status	Disaggregated at the portfolio segment level: • The amortized cost of debt instruments on non-accrual status as of the beginning of the reporting period and the end of the reporting period • The amount of interest income recognized during the period on nonaccrual debt instruments in accordance with paragraph 825-15-25-10 • The amortized cost of debt instruments that are 90 days or more past due, but not on nonaccrual status as of the reporting date • The amortized cost of debt instruments on nonaccrual status for which there are no related expected credit losses as of the reporting date because the debt instrument is a fully collateralized collateral-dependent financial asset
Purchased credit-impaired financial assets	• To the extent an entity purchased credit-impaired financial assets during the period, a reconciliation of the difference between the purchase price of the assets and the par value of the assets, including: (1) the purchase price, (2) discount attributable to expected credit losses based on the buyer's assessment, (3) the discount (or premium) attributable to other factors, and (4) the par value
Collateralized financial assets	• By class of financial asset, a description of the type of collateral and the extent to which collateral secures an entity's financial assets • By class of financial asset, an explanation of significant changes in the extent to which collateral secures an entity's financial assets, whether because of a general deterioration or some other reason
Transition	In the period an entity adopts the ASU: • The nature of the change in accounting principle, including an explanation of the newly adopted accounting principle • The method of applying the change • The effect of the adoption on any line item in the statement of financial position, if material, as of the beginning of the first period for which the guidance is effective. Presentation of the effect on financial statement subtotals is not required. • The cumulative effect of the change on retained earnings or other components of equity in the statement of financial position as of the beginning of the first period for which the guidance is effective An entity that issues interim financial statements will provide the disclosures above in each interim financial statement of the year of change and the annual financial statement of the period of the change.

No. US2016-01
January 7, 2016

Classification and measurement – FASB issues final standard

What happened?

On January 5, 2016, the FASB issued Accounting Standards Update 2016-01, *Financial Instruments–Overall: Recognition and Measurement of Financial Assets and Financial Liabilities* (the ASU). Changes to the current GAAP model primarily affects the accounting for equity investments, financial liabilities under the fair value option, and the presentation and disclosure requirements for financial instruments. In addition, the FASB clarified guidance related to the valuation allowance assessment when recognizing deferred tax assets resulting from unrealized losses on available-for-sale debt securities. The accounting for other financial instruments, such as loans, investments in debt securities, and financial liabilities is largely unchanged. The more significant amendments are summarized below.

At a glance

The FASB has issued the classification and measurement standard. The standard principally affects accounting for equity investments and financial liabilities where the fair value option has been elected.

Equity investments

All equity investments in unconsolidated entities (other than those accounted for using the equity method of accounting) will generally be measured at fair value through earnings. There will no longer be an available-for-sale classification (changes in fair value reported in other comprehensive income) for equity securities with readily determinable fair values.

For equity investments without readily determinable fair values, the cost method is also eliminated. However, entities (other than those following "specialized" accounting models, such as investment companies and broker-dealers) will be able to elect to record equity investments without readily determinable fair values at cost, less impairment, and plus or minus subsequent adjustments for observable price changes. Changes in the basis of these equity investments will be reported in current earnings. This election only applies to equity investments that do not qualify for the NAV practical expedient.

The impairment model for equity investments subject to this election is a single-step model (unlike today's two-step approach). Under the single-step model, an entity is required to perform a qualitative assessment each reporting period to identify impairment. When a qualitative assessment indicates an impairment exists, the entity would estimate the fair value of the investment and recognize in current earnings an impairment loss equal to the difference between the fair value and the carrying amount of the equity investment.

Financial liabilities and the fair value option

When the fair value option has been elected for financial liabilities, changes in fair value due to instrument-specific credit risk will be recognized separately in other comprehensive income. The accumulated gains and losses due to these changes will be reclassified from accumulated other comprehensive income to earnings if the financial liability is settled before maturity.

The ASU will allow, but not require, preparers to measure the change in fair value due to instrument-specific credit risk based on the portion of the total change in fair value that does not result from a change in a base market risk, such as a risk-free rate or a benchmark interest rate.

Disclosure

Entities that are not public business entities will no longer be required to disclose the fair value of financial instruments carried at amortized cost. While public business entities will continue to be required to make this disclosure, the ASU eliminates the requirement to disclose the methods and significant assumptions used to estimate the fair value.

Public business entities will be required to use the exit price when measuring the fair value of financial instruments measured at amortized cost for disclosure purposes. In addition, the new guidance requires financial assets and financial liabilities to be presented separately in the notes to the financial statements, grouped by measurement category (e.g., fair value, amortized cost, lower of cost or market) and form of financial asset (e.g., loans, securities).

Why is this important?

Certain financial institutions, such as retail and commercial banks and insurance companies, are likely to be most affected by the new guidance. Companies with large equity investment portfolios that are not currently being measured at fair value through net income may also be significantly impacted.

What's next?

The classification and measurement guidance will be effective for public business entities in fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. All other entities, including certain not-for-profit entities and employee benefit plans, will have an additional year, or may early adopt coincident with the public business entity effective date.

All entities can early adopt the provision to record fair value changes for financial liabilities under the fair value option resulting from instrument-specific credit risk in other comprehensive income. Entities that are not public business entities can early adopt the provision permitting the omission of fair value disclosures for financial instruments at amortized cost. Early adoption of these provisions can be elected for all financial statements of fiscal years and interim periods that have not yet been issued (for public business entities) or that have not yet been made available for issuance.

The classification and measurement guidance is the first ASU issued under the FASB's financial instruments project. The ASU for the new impairment guidance is expected in the first quarter of 2016. An exposure draft of the new hedging guidance is expected in the first half of 2016.

No. US2015-36
November 18, 2015

FASB finalizes effective date for the proposed impairment standard

What happened?

On November 11, the FASB discussed the effective date for the proposed new impairment standard. Expected to be issued early next year, the impairment standard will be effective for:

- Public business entities (PBEs) that meet the definition of an SEC filer in fiscal years beginning after December 15, 2018 including interim periods within those fiscal years;
- PBEs that do not meet the definition of an SEC filer in fiscal years beginning after December 15, 2019 including interim periods within those fiscal years; and
- Non-PBEs (including certain not-for-profit entities and employee benefit plans) in fiscal years beginning after December 15, 2019 and interim periods within fiscal years beginning after December 15, 2020.

Early application of the guidance will be permitted for fiscal years beginning after December 15, 2018, including interim periods within those fiscal years.

At a glance

The FASB has determined the effective date for the new impairment standard and made decisions on two other aspects: troubled debt restructurings and the available-for-sale credit loss model.

Other provisions

At the same meeting, the FASB also discussed two issues: the accounting for Troubled Debt Restructuring (TDRs) by creditors and one aspect of the available-for-sale (AFS) securities credit loss model.

Troubled debt restructurings

The impairment standard will require use of the current expected credit loss (CECL) model for financial assets measured at amortized cost. The FASB decided that credit losses for TDRs should be measured using the same CECL model that will be applied to other financial assets measured at amortized cost. This would be a change from the current US GAAP model and the previous proposal, which, under certain circumstances, would require use of a discounted cashflow approach.

This represents a significant change from the proposed model and is responsive to feedback the FASB received during the external review process.

Available-for-sale securities

The Board deliberated and decided on the following:

- A fair value floor will be incorporated into the credit loss model for available-for-sale (AFS) debt securities. Specifically, credit losses on AFS debt securities will be limited to the difference between its amortized cost and fair value.
- Consistent with current guidance, an AFS debt security will be written down to fair value if it is more likely than not that an entity will be required to sell it prior to the fair value recovering to or above its amortized cost basis.
- The historical or implied volatility is not a required factor to consider when estimating whether a credit loss exists, however, an entity will not be prohibited from considering it.

Why is this important?

Companies with portfolios of financial assets subject to the scope of the proposed standard are likely to see an increase in credit reserves given the proposed standard's departure from the current US GAAP "incurred loss" concept. The proposed standard will likely require system and process changes to apply the new model and may require a considerable amount of time to implement. Specifically, entities will need to develop the infrastructure to estimate losses over a longer time horizon.

With the expected issuance of the standard in early 2016, companies that are SEC filers will have only three years before they begin reporting under the new guidance. With uncertainty as to the effective date now resolved, preparers can begin to develop a plan for an orderly and smooth transition.

What's next?

Another FASB meeting to discuss impairment is scheduled for November 23, 2015 and a final standard is expected to be issued in the first quarter of 2016.

Questions?

No. US2016-01
January 29, 2016

What's inside:

New guidance on recognition and measurement to impact financial instruments

At a glance

The FASB issued the new recognition and measurement guidance on January 5, 2016. The changes to the current US GAAP financial instruments model primarily affect the accounting for equity investments, financial liabilities under the fair value option, and the presentation and disclosure requirements for financial instruments.

No significant changes were made to the recognition and measurement guidance for investments in loans and debt securities.

The standard is effective for public business entities for annual periods (and interim periods within those annual periods) beginning after December 15, 2017. All other entities will need to apply the standard for annual periods beginning after December 15, 2018, and for interim periods beginning after December 15, 2019.

Background

.1 On January 5, 2016, the FASB issued Accounting Standards Update 2016-01, *Financial Instruments–Overall: Recognition and Measurement of Financial Assets and Financial Liabilities* (the "ASU"). Once effective, the ASU will apply to the recognition and measurement of certain financial instruments for all entities.

.2 The recognition and measurement project started as a joint project with the IASB, with an objective of improving the decision usefulness of financial statements by simplifying and harmonizing the accounting for financial instruments. The recognition and measurement guidance is the first ASU issued under the FASB's financial instruments project. The ASU for the new impairment guidance is expected in the upcoming months. An exposure draft of the new hedging guidance is expected in the first half of 2016.

.3 The most recent exposure draft for the recognition and measurement project (issued in February 2013) proposed significant changes to current US GAAP guidance, including an accounting model that linked the measurement of an entity's financial assets to its cash flow characteristics and the manner in which the entity expected to benefit from the related cash flows. The measurement of financial liabilities also would have taken into account whether the entity expected to pay the contractual cash flows or to settle the liability at its fair value.

.4 The FASB noted that while the current accounting for the subsequent measurement of financial instruments is complex, stakeholders have learned how to navigate that complexity to obtain the information they need. The FASB also noted that the 2013 proposed ASU (which was more consistent with IFRS 9) would simply have replaced the known complexities under current US GAAP with an unknown amount and type of complexity. As a result, the FASB discarded many of the proposals in the 2013 exposure draft and instead decided to make targeted improvements while retaining much of today's recognition and measurement model for financial instruments.

Key provisions

.5 The new guidance will impact the accounting for equity investments, financial liabilities under the fair value option, and the presentation and disclosure requirements for financial instruments. In addition, the FASB clarified the need for a valuation allowance on deferred tax assets resulting from unrealized losses on available-for-sale debt securities. The accounting for other financial instruments, such as loans, investments in debt securities, and financial liabilities not under the fair value option is largely unchanged.

Accounting for equity investments

.6 The ASU makes significant changes to the accounting for equity investments. The ASU's accounting model will apply to all types of equity investments, including equity instruments that meet the definition of a security (as provided under current US GAAP) and those that would not be considered securities (e.g., limited partnership interests). Equity investments included in the scope of the new guidance may include investments in the equity of investment companies that hold nothing but debt securities, as the ASU does not permit an investor to "look through" the investment to determine the appropriate recognition and measurement model.

.7 The guidance also applies to forwards and options to acquire and dispose of ownership interests that are not accounted for as derivative instruments under ASC 815, *Derivatives and Hedging*. For example, the ASU applies to a gross physically-settled forward contract to purchase equity shares that are not deemed to be readily convertible to cash.

Equity investments with readily determinable fair values

.8 All equity investments in unconsolidated entities (other than those accounted for using the equity method of accounting) will generally be measured at fair value through earnings. There will no longer be an available-for-sale classification (changes in fair value reported in other comprehensive income) for equity securities with readily determinable fair values.

.9 Equity securities have no maturity date, and therefore the primary way an entity realizes the value of their investment (aside from dividends) is through sale. As such, the FASB believes that "fair value through earnings" is the most appropriate measurement and recognition method for equity investments in unconsolidated entities not accounted for under the equity method.

PwC observation:

The FASB considered providing an exception to the fair value through earnings measurement model for equity securities deemed to be strategic investments, as entities may be able to realize the value from these types of investments by means other than sale or collecting dividends. Developing a definition of a strategic investment proved difficult, and the FASB concluded that providing an exception would add complexity to the accounting model that would not be worth the perceived benefits.

Equity investments without readily determinable fair values

.10 Under current US GAAP, an unconsolidated investment in an equity security without a readily determinable fair value that is not accounted for by the equity method is measured at cost, less any impairment determined to be other than temporary.

.11 The ASU generally eliminates the cost method for these investments. However, entities (other than those following "specialized" accounting models, such as investment companies and broker-dealers) will be able to elect to record equity investments without readily determinable fair values at cost, less impairment, adjusted for subsequent observable price changes. Entities that elect this measurement alternative will report changes in the carrying value of the equity investments in current earnings.

.12 If this measurement alternative is elected, changes in the carrying value of the equity investment will be required to be made whenever there are observable price changes in orderly transactions for the identical or similar investment of the same issuer. The implementation guidance notes that an entity should make a "reasonable effort" to identify price changes that are known or that can reasonably be known. The implementation guidance also indicates that in determining whether a security issued by the same issuer is similar, an entity should consider differences in the rights and obligations of the securities. Differences in rights and obligations may indicate that the security is not similar (and thus the observable price would not be used to adjust the carrying value of the equity investment held) or may indicate that the observable price should be adjusted to reflect such differences.

.13 The measurement alternative may be elected separately on an investment by investment basis for each equity investment without a readily determinable fair value. Once elected, it should be applied consistently as long as the investment meets the qualifying criteria. The standard requires that the entity reassess whether the investment continues to qualify for the measurement alternative each reporting period. If, for example, the investee subsequently undergoes an initial public offering such that there is now a readily determinable fair value, the measurement alternative would no longer be permitted, and the investment would be prospectively measured at fair value in accordance with ASC 820, *Fair Value Measurement*.

PwC observation:

The application of the measurement alternative will require new processes, controls, and procedures and will require the exercise of significant professional judgment. For example, entities will need to establish procedures to identify observable prices for the same or similar securities and to adopt policies for determining what types of securities would be considered similar for the purposes of determining whether an observable price of a different security should be utilized to adjust the basis of the security owned. Entities will also have to establish internal controls to ensure that each equity investment subject to the measurement alternative is evaluated each reporting period to ensure that it continues to meet the qualifying criteria (i.e., the equity security does not have a readily determinable fair value).

While there is no explicit requirement in the ASU for the preparation of contemporaneous documentation of the election of the measurement alternative, we believe entities should consider establishing procedures to evidence the election at the time an investment is made.

.14 If the election is not made, equity investments without readily determinable fair values should be reported at fair value in accordance with the provisions of ASC 820, with all subsequent changes in fair value recorded in earnings.

PwC observation:

Obtaining the necessary information to support a valuation prepared in accordance with ASC 820 for investments without readily determinable fair values can be time consuming and may require the assistance of third-party valuation professionals. Given the potential amount of time and expense involved with obtaining valuations for each equity investment for each reporting period, entities should carefully evaluate the costs and benefits associated with electing full fair value versus the measurement alternative.

Impairment model for equity investments without readily determinable fair values

.15 The ASU includes a new impairment model for equity investments without readily determinable fair values. The new model is a single-step, unlike today's two-step approach.

.16 Under the single-step model, an entity is required to perform a qualitative assessment each reporting period to identify impairment. When a qualitative assessment indicates that an impairment exists, the entity will need to estimate the fair value of the investment and recognize in current earnings an impairment loss equal to the difference between the fair value and the carrying amount of the equity investment.

.17 The single-step model is intended to reduce subjectivity, improve comparability, and increase representation faithfulness of the financial statements. In addition, the FASB looked to reduce the burden on preparers of financial statements by eliminating the need to forecast whether an equity investment will eventually recover value.

.18 The measurement alternative was established, in part, to provide entities with relief from having to get a valuation prepared each reporting period for equity investments without readily determinable fair values. The use of a qualitative impairment model is consistent with that objective. A quantitative impairment analysis does not need to be prepared, unless the qualitative assessment indicates that the fair value of the investment is less than its carrying value. The ASU provides a representative, but not all inclusive list of impairment indicators, which includes a "significant" deterioration or "significant" adverse change, or "significant" concerns about the investee's ability to continue as a going concern. The significance of these factors should be evaluated relative to the conditions that existed at the time of the investment's acquisition or last adjustment for either an impairment or an observable price. Considerable judgment will need to be applied in determining when an impairment indicator is significant enough to warrant preparation of a full quantitative valuation.

PwC observation:

The ASU does not include a threshold to be met in order for an equity investment to be evaluated for impairment (i.e., the model does not consider whether an impairment is "probable" or "more likely than not"). Rather, the qualitative assessment is used to identify the presence of significant impairment indicators. The presence of one or more indicators does not necessarily mean an equity investment is impaired. However, it does mean the entity is required to perform a valuation to determine whether an impairment exists (i.e., whether fair value is below the carrying value of the equity investment).

Financial liabilities and the fair value option

.19 The impact of changes in instrument-specific credit risk on liabilities for which the fair value option has been elected is reported in current earnings under current US GAAP. This resulted in gains when the entity's credit deteriorated and losses when it improved. While preparers and users understood the theory behind these counterintuitive outcomes, some questioned the value of this reporting given that such impacts may not be realizable. Many entities removed this amount from earnings in non-GAAP measures, because they believed the amount was not useful in analyzing an entity's financial performance.

.20 Under the ASU, when the fair value option has been elected for financial liabilities, changes in fair value due to instrument-specific credit risk will be recognized separately in other comprehensive income (OCI). This provision does not apply to financial liabilities required to be measured at fair value with changes in fair value recognized in current earnings. For example, this guidance would not apply to derivative instruments.

.21 The accumulated gains and losses due to changes in instrument-specific credit risk will be recycled from accumulated other comprehensive income and recognized in earnings if the financial liability is settled before maturity.

.22 In 2014, the FASB provided an alternative measurement for collateralized financing entities (CFEs) that eliminated the measurement difference that may exist when financial assets and financial liabilities of the CFE are measured independently at fair value. A requirement for CFEs to record changes in fair value due to instrument-specific credit risk in OCI would have generated a new measurement difference for these entities, as changes in credit risk related to financial assets would continue to impact earnings. As a result, the final ASU specifies that the guidance related to instrument-specific credit risk does not apply to financial liabilities of a CFE measured using the alternative measurement.

PwC observation:

During its deliberations, the Board also discussed other instances when preparers elected the fair value option on non-recourse liabilities to avoid a mismatch in recognition from the assets that support them. They noted that some entities do not disclose changes in instrument-specific credit risk for nonrecourse liabilities. The Board explains in the basis of conclusion that they did not intend to change how entities were identifying and measuring changes in instrument-specific credit risk from what is currently disclosed under US GAAP. While no guidance was formally included in the codification, we understand that the Board believes that entities can continue their current disclosure practices in this area both with respect to disclosure and what is included in OCI.

.23 The ASU allows, but does not require, preparers to measure the change in instrument-specific credit risk as the portion of the periodic change in fair value that is not due to changes in a base market rate, such as a risk-free interest rate. A reporting entity will be able to use an alternative method if it believes it to be a more faithful measurement of the change in credit risk for the entity. The selected methodology is a policy election and will need to be disclosed and consistently applied to each financial liability from period to period.

.24 No significant changes were made to the recognition and measurement of liabilities for which the fair value option has not been elected.

Loans and debt securities

.25 With the exception of those instruments for which the fair value option has been elected, the ASU does not make significant changes to the recognition and measurement guidance for investments in loans and debt securities.

PwC observation:

The FASB's project on credit losses will have a significant impact on how credit losses will be measured on loans and debt securities. That guidance is expected to be issued in the upcoming months.

Deferred tax assets

.26 Unrealized losses on available-for-sale debt securities are recognized in other comprehensive income and typically give rise to deferred tax assets. A valuation allowance is required to the extent it is more likely than not that a deferred tax asset is not realizable. Historically, entities applied one of two views. The need for a valuation allowance on a deferred tax asset related to available-for-sale securities was assessed either (1) in combination with the entity's other deferred tax assets, or (2) separately from other deferred tax assets and considered to be inherently recoverable so long as the related debt securities were expected to be held until they recovered in value (i.e., maturity, if necessary). The second view was supportable even if a valuation allowance was required on other deferred tax assets of a company.

.27 Although the latter approach was accepted by the SEC, the Board ultimately saw no conceptual basis for separately analyzing deferred tax assets for available-for-sale debt securities.

.28 The ASU requires that these deferred tax assets be evaluated for realizability in combination with other deferred tax assets of an entity. This approach is consistent with IFRS.

Presentation and disclosure

.29 The ASU makes targeted changes to the presentation requirements for financial instruments under current US GAAP. In addition to the change discussed above related to instrument-specific credit risk, the ASU requires separate presentation of financial assets and financial liabilities by measurement category and form of financial asset (e.g., securities or loans and receivables) on the balance sheet or in the accompanying notes to the financial statements.

.30 With regard to disclosure, the ASU eliminates the requirement for entities that are not public business entities (PBEs) to present fair value information for financial assets and liabilities measured at amortized cost. PBEs will continue to be required to present this information either parenthetically on the face of the balance sheet or in the notes to the financial statements. PBEs do not need to provide fair value information for receivables and payables due within one year and demand deposit liabilities. The board concluded that the benefit to financial statement users of disclosing such information did not justify the likely cost for non-PBEs.

.31 PBEs will be required to determine fair value for financial assets and liabilities based on the exit price notion in ASC 820, *Fair Value Measurement*. This may represent a change in practice for some entities that had previously provided fair value information for loans carried at amortized cost using an entry price based on their interpretation of the illustrative examples in ASC 825, *Financial Instruments*.

.32 All entities will be required to disclose financial assets and financial liabilities separately, grouped by measurement category (e.g., fair value, amortized cost, lower of cost or market) and form of financial asset (e.g., loans, securities).

.33 For equity investments without readily determinable fair values measured under the measurement alternative, the ASU requires disclosures of:

- the carrying value of such investments;
- the total amount of adjustments resulting from impairment; and
- the total amount of adjustments for observable prices.

Transition

.34 In general, the new guidance will require modified retrospective application to all outstanding instruments, with a cumulative effect adjustment recorded to opening retained earnings as of the beginning of the first period in which the guidance becomes effective. However, changes to the accounting for equity securities without a readily determinable fair value will be applied prospectively.

PwC observation:

The ASU requires that the changes to the accounting for equity securities without readily determinable fair values to be applied prospectively. The Board made this decision. principally to eliminate the need for preparers to retrospectively identify impairments using the new single-step model and observable price changes for the same or similar instruments that may have occurred in prior periods for entities that elect to apply the measurement alternative.

This means that any impact from the adoption of this ASU on equity securities without readily determinable fair values will not be reported as part of the transition adjustment. Instead, these impacts will be recorded after the transition date and will impact that period's current earnings.

What's next?

.35 The new guidance will be effective for PBEs in fiscal years beginning after December 15, 2017, including interim periods within those fiscal years. All other entities, including certain not-for-profit entities and employee benefit plans, will have an additional year, or may early adopt coincident with the PBE effective date. For these entities, the guidance will be effective in fiscal years beginning after December 15, 2018 and interim periods within fiscal years beginning after December 15, 2019.

.36 All entities can early adopt the provision to record fair value changes for financial liabilities under the fair value option resulting from instrument-specific credit risk in other comprehensive income. Entities that are not PBEs can early adopt the provision permitting the omission of fair value disclosures for financial instruments reported at amortized cost. Early adoption of these provisions can be elected for all financial statements of fiscal years and interim periods that have not yet been issued or that have not yet been made available for issuance.

Questions?

PwC clients who have questions about this *In depth* should contact their engagement partner. Engagement teams who have questions should contact the Financial Instruments team in the National Professional Services Group (1-973-236-7803).

Government Relations Committee Meeting

Wednesday, March 30th
1:15pm – 3:30pm
Marriott Marquis, Washington DC

Co-Chairs:
Jeffrey Clark, SVP-Tax & JV Accounting, Host Hotels & Resorts, Inc.
Rohn Grazer, Managing Director-Tax, Prologis, Inc.
Brian Wood, SVP & CTO, Ventas, Inc.

Panelists:
Julanne Allen, Assistant to Branch Chief-FI&P, IRS
Paul Chambers, Partner-Tax, KPMG LLP
Jeffrey Clark, SVP-Tax & JV Accounting, Host Hotels & Resorts, Inc.
James Finnerty, SVP-Tax, Forest City Realty Trust, Inc.
Andrea Hoffenson, Branch Chief-FI&P, IRS
Joseph Howe, Partner, Arnold & Porter LLP
Richard Lipton, Partner, Baker & McKenzie, LLP
Jack Miller, VP-Tax Planning, Ventas, Inc.
Donald Susswein, Principal, Washington National Tax, RSM US LLP

NATIONAL ASSOCIATION OF REAL ESTATE INVESTMENT TRUSTS®

REITS: BUILDING DIVIDENDS AND DIVERSIFICATION®

GOVERNMENT RELATIONS COMMITTEE MEETING
(Open to all REITWise® Registrants)
Marriott Marquis Washington, DC
Independence E-H
Washington, D.C.
Wednesday March 30, 2016
1:15 p.m. – 3:30 p.m.

Co-Chairs:

Jeffrey Clark, SVP-Tax & JV Accounting, Host Hotels & Resorts, Inc.
Rohn Grazer, Managing Director-Tax, Prologis, Inc.
Brian Wood, SVP & Chief Tax Officer, Ventas, Inc.

NAREIT Staff Liaisons:

Tony Edwards, EVP & General Counsel
Cathy Barre, SVP, Policy & Politics
Dara Bernstein, VP & Senior Tax Counsel

I. PATH Act Recap, Technical Corrections & Regulatory Issues
- FIRPTA
- U.S. REIT Act
- REIT Spin-offs/Built-in Gains

II. Partnership Tax Audits After the 2015 Budget Bill
Donald Susswein, Principal, Washington National Tax, RSM

III. Current Legislative Tax Issues
- Comprehensive Tax Reform
- International Tax Reform
- Mark-to-Market
- Like Kind Exchanges
- Cost Recovery
- Marketplace Fairness

IV. Treasury/IRS Project on Congregate Care Facilities
Joseph Howe, Partner, Arnold & Porter

V. ILM 201606027: "Bad Boy" Guarantees and Partnership Allocations
Richard Lipton, Partner, Baker & McKenzie

VI. IRS Perspectives
Julanne Allen, Assistant to the Branch Chief, FI&P, IRS (invited)
Andrea Hoffenson, Branch Chief, FI&P, IRS (invited)

REITS: BUILDING DIVIDENDS AND DIVERSIFICATION®

VII. Accounting for Income Taxes

- Valuation allowance
- Interim reporting
- Effective tax rate
- REIT and TRS interaction
- Purchase accounting
- Foreign entities and investments
- Uncertain tax positions
- Footnotes

Paul Chambers, Partner-Tax, KPMG
Jeffrey Clark, SVP-Tax & JV Accounting, Host Hotels & Resorts, Inc.
James Finnerty, SVP-Tax, Forest City Realty Trust, Inc.
Jack Miller, VP-Tax Planning, Ventas, Inc.

Note: This meeting may qualify for 2.5 hours of continuing professional education credits, depending on the state. For CLE or CPE credit information, please contact Afia Nyarko at 202-739-9433 or anyarko@nareit.com.

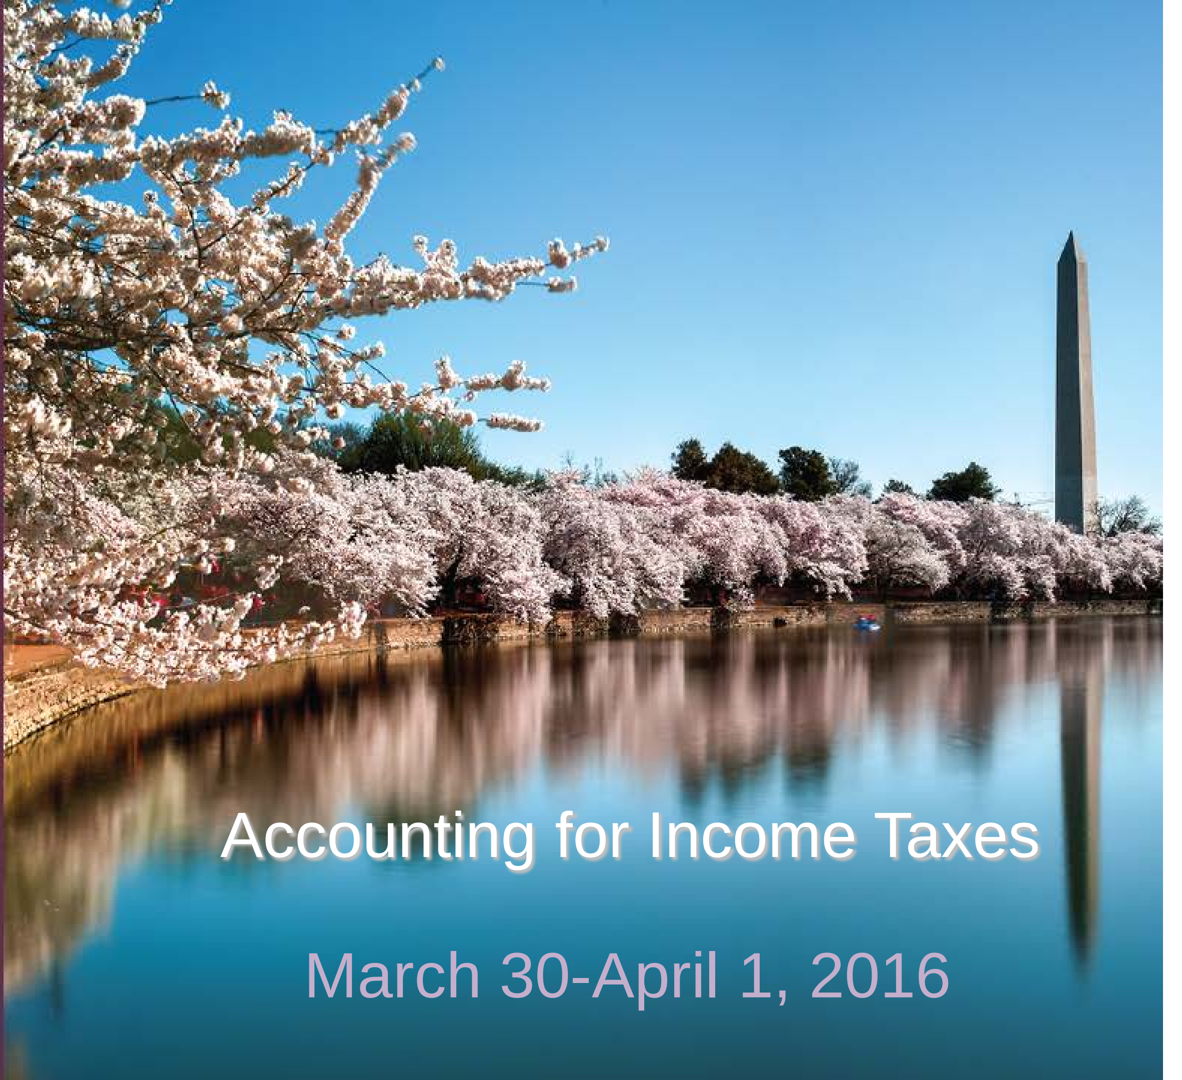
REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1

2016

NAREIT



Accounting for Income Taxes

March 30-April 1, 2016

Speakers

- Paul Chambers, Partner-Tax, KPMG
- Jeffrey Clark, SVP-Tax & JV Accounting, Host Hotels & Resorts, Inc.
- James Finnerty, SVP-Tax, Forest City Realty Trust, Inc.
- Jack Miller, VP-Tax Planning, Ventas, Inc.

Agenda

- Overview
- Special issues
  - Valuation allowance
  - Interim reporting
  - Effective tax rate
  - REIT and TRS interaction
  - Purchase accounting
  - Foreign entities and investments
  - Uncertain tax positions
  - Footnotes

Scope of Income Taxes

- Federal income tax
- State and local income taxes (margin taxes)
- Foreign income tax
- Withholding taxes
- Special taxes
  - Section 857(b)(7)
  - Prohibited transaction
  - Foreclosure property
  - Section 1374

Separate Tax Calculations

- REIT
  - Treatment in calculation of Funds From Operations (“FFO”)
- Taxable subsidiaries
  - TRSs domestic and foreign
  - Foreign entities disregarded for US tax
  - Variable interest entities
  - Partnerships (with TRS or foreign entity as partner)
  - Noncontrolling interests

Basic Elements of Tax Expense or Benefit Calculation

- Annual reporting
  - Provision – Tax expense or benefit
    - Book income
    - Permanent items
    - Temporary differences
    - Valuation allowance adjustments
    - Discrete items
    - Uncertain tax position amounts
    - Tax rates
    - Foreign tax items
  - Balance sheet
    - Current income tax accrual or refund including liability for uncertain tax positions
    - Deferred tax assets (“DTA”) and liabilities (“DTL”) calculation
- Interim reporting
  - Effective tax rate calculation
  - Ordinary income or loss
  - Discrete items
- Auditor approach to documentation

Basic Approach

- Balance sheet or liability approach
- Current liability or refund
- Deferred tax on temporary differences between financial statement and tax basis
- Change in Net DTA or (DTL) for the Reporting Year = Deferred Income Tax Expense or Benefit +

  Change in Current Year Tax Accrual or Receivable (Before Payments and Refunds) =

  Current Year Income Tax Expense or Benefit
- Taxable difference = book over tax basis of asset or tax over book liability
- Deductible difference = tax over book basis of asset or book over tax liability

Primary Objectives related to Accounting for Income Taxes (ASC 740-10-10-1)

- To recognize the amount of taxes payable or refundable for the current year
- To recognize deferred tax liabilities and assets for the future tax consequences of events that have been recognized in an entity's financial statements or tax returns

Incremental Concept (ASC 740-10-10-3)

- A deferred tax liability or asset represents the increase or decrease in taxes payable or refundable in future years as a result of temporary differences and carryforwards at the end of the current year
- The difference between:
  - The amount of taxes that will be payable or refundable in the future years inclusive of reversing temporary differences and carryforwards
  - The amount of taxes that would be payable or refundable in future years exclusive of reversing temporary differences and carryforwards

Recognition (ASC 740-10-25-2)

- A tax liability or asset shall be recognized … for the estimated taxes payable or refundable on the tax returns for the current and prior years
- A deferred tax liability or asset shall be recognized for the estimated future tax effects attributable to temporary differences and carryforwards

Special Issues – Valuation Allowances

- Evaluating the need for a valuation allowance
  - Net operating losses
  - Deferred deductions
  - Other temporary differences
    - Book accruals
    - Reserves
    - Tax over book basis
  - Scheduling

Valuation Allowances - 4 Sources of Taxable Income

1. Future reversal of taxable temporary differences
   - Indefinite-lived assets and carryovers (Example 1)
   - Contingent liabilities and reserves
   - Indefinite-lived declining balance depreciable assets
2. Future taxable income exclusive of reversing temporary differences and carryforwards
   - Consistent with projections used for other purposes
3. Taxable income in carryback years
4. Tax planning strategies
   - Prudent & feasible
   - Would likely be implemented
   - Results in realization of DTA – not an increase in another DTA

Example 1 – Valuation Allowance

Tax Rate 40%	Tax Amount	Book Value
NOL	100	
Trademark (indefinite life)		100
Deferred tax asset (“DTA”)	40	
Deferred tax liability (“DTL”)		(40)

Since trademark has indefinite life and may never reverse, DTA may require a full valuation allowance, resulting in a net DTL.

Special Issues – Valuation Allowances (cont.)

- Negative evidence of need for valuation allowance – cumulative losses – current year and two proceeding years
- Impact on provision
  - Discrete item tax expense if related to deferred tax assets previously benefited
  - Increase in effective tax rate for current year impact or exclusion from calculation
- Release of valuation allowance
  - Period of positive income and gains
  - Current year reduction in effective rate or expense – future years impact discrete

Special Issues – Interim Reporting

- Multiple jurisdictions – consolidated ordinary income/loss and ETR
  - Exceptions
  - Multi-jurisdictional blended effective tax rate
- Exclusion of entities with full valuation allowance for the current year (exception for jurisdictions with tax benefit)
- Limitation on tax benefit in early quarters to full year benefit
- Valuation allowance in early quarters due to reversing taxable differences leaving net unrealizable DTA at year-end (Example 2)
- Use of cutoff or discrete method if ETR unreliable (e.g. unusual circumstances or significant permanent items) (Example 3)
- Unusual or extraordinary items exclusion that distort ETR (e.g. transaction costs)

Example 2 – Valuation Allowance

Tax Rate 40%	12/31/X1		Forecast 12/31/X2	
	Book/Tax Difference	DTA / (DTL)	Book/Tax Difference	DTA / (DTL)
NOL	250	100	250	100
Fixed asset	(250)	(100)	0	0

Fixed asset difference reverses in 12/X2. This may require a full valuation allowance and tax expense for the $100 NOL DTA in Q1 of 12/X2.

Example 3 – Effective Tax Rate

Forecast	Company 1	Company 2	Consolidated
Ordinary income	100	(110)	(10)
Permanent items		100	100
Book taxable income	100	(10)	90
Tax (40%)	40	(4)	36

Effective tax rate (ETR) =36/(10) = (360%)

Q1 ordinary income	50
ETR	(360)%
Q1 tax benefit	(180)

As the ETR is unreliable, discrete (or cut-off) method may be appropriate.

Special Issues – Effective Tax Rate

- Determination of effective tax rates – interim and annual
  - Federal tax rate
  - State tax rates
    - Apportionment and tax rates – prior tax returns
    - Changes due to merger or acquisition – discrete
    - Changes in rate or computation due to tax laws enacted - discrete impact
    - Deferred tax issues (Example 4)
  - Foreign tax rates – changes in law

Example 4 – State Deferred Tax

	Amount	DTA
Federal NOL	1000	400
State X NOL ($400 over Federal)	1400	2
State Y excess tax basis due to bonus disallowance	500	2
Total DTA		404

Federal and blended State rate	40%
State X rate times apportionment	10% * 5% = 0.5%
State Y rate times apportionment	4% * 10% = 0.4%

Special Issues – Effective Tax Rate (cont.)

- Special REIT / TRS Issues
  - Separate entity states
  - Unitary returns
    - Rate applicable to TRS
    - Allocation of NOL carryforwards and benefit
    - Utilization of unitary NOL by REIT
  - Combined TRS returns
    - Exception to overall valuation allowance for certain members of group (Example 5)
  - Tax sharing agreements amount REIT and TRSs

Example 5 – State Tax – Combined Return / Valuation Allowance

Current Year	
TRS A loss – State X	2,000
TRS B loss – State X	1,000
TRS C – deferred tax liability – State X	(50)

State rate * combined apportionment = 8% * 5% = 0.4%

TRS A and TRS B losses are otherwise subject to a full valuation allowance

TRS C has a DTL

Entry - TRS	DR(CR)
DTA (Note 1)	12
Tax benefit	(12)

Note 1: 3000 * 0.4%

Special Issues – REIT and TRS Interaction

- TRS sales or distributions of assets to REIT
  - Deferral of tax expense or benefit – prepaid or accrual (Example 6)
  - Release on ultimate sale to unconsolidated party
  - Valuation allowance issues
- Transfer of assets and liabilities to TRS by contribution to capital or sale
  - Book tax differences – impact on tax expense or benefit and DTAs and DTLs (Example 7)
  - Pursuant to a business combination
- Termination of TRS status by tax liquidation
  - Expense or benefit related to net deferred tax asset or liability (Example 8)
  - Built-in gains and NOL (Section 1374)

Example 6 – Sale by TRS to REIT

Tax Rate 40%	Tax Basis	Book Value	FMV
Asset	50	100	150

TRS sells asset to REIT at FMV

Entry-TRS	DR(CR)
DTL	20
Prepaid tax	20
Tax payable	(40)

Example 7 – Contribution by REIT to TRS / Sale by REIT to TRS

Tax Rate 40%	Tax Basis	Book Value	FMV
Depreciable Asset	50	100	200

REIT contributes asset to TRS as capital

Entry - TRS	DR(CR)
Fixed asset	100
Capital	(100)
DTL (40%)	(20)
Tax expense	20

REIT sells asset to TRS at FMV

Entry*	DR(CR)		
	TRS	REIT	Elim
Fixed asset	200	(100)	(100)
Cash	(200)	200	
Gain		(100)	100

* REIT Tax Rate deemed to be 0%

Example 8 – Voluntary Revocation of TRS Election to QRS

DTA/DTL Schedule (Tax) **Tax Rate 40%**	**Tax Basis**	**Book Value***	**DTA/ (DTL)**
Intangibles	0	100	(40)
Fixed assets	100	200	(40)
Land (to be sold within 5 years)	50	100	(20)
NOL	100	0	40
	250	400	(60)

- TRS terminates TRS status on 12/30/X1
- Deemed liquidation as QRS 100% owned by REIT
- Land DTL and equal amount of NOL DTA at REIT level

*Assume FMV exceeds book value

Entry - TRS	DR(CR)
DTL	80
DTA	(20)
Tax benefit	(60)

Special Issues – Purchase Accounting

- Business combinations involving REIT & TRS
- Impact on valuation allowances – benefit or expense
- Tax over book basis of indefinite-lived assets
- REIT conversions and mergers with non-REITS
  - Elimination of deferred tax assets and liabilities
  - Exceptions – Section 1374 and gains/income recognized within 5 years
  - UTP reserve for dispositions

Special Issues – Purchase Accounting (cont.)

- Goodwill – Tier 1 and Tier 2 deferred tax implications
  - Possible gain if substantial tax basis over book (Example 9)
  - Section 197 assets – Goodwill or other intangibles
- Single asset acquisitions - excess tax basis – simultaneous equation and adjustment to book value
- Noncontrolling interest in investees – book tax differences

Example 9 - Goodwill

	Section 197 Goodwill	Preliminary Book Goodwill	Difference
At acquisition	1000	100	900

GAAP only gain calculation (40% tax)

Initial calculation (40% / 1-40%) * 900 = 600
However, 600 exceeds 100 book value of goodwill

GAAP Gain Calculation
(40% / 1-40%) * X = 100 (Book goodwill)
(40% / 1-40%) * 150 = 100
(900-150) * 0.4 = 300 gain

Entry-TRS	DR/(CR)
DTA	400
Goodwill	(100)
Gain	(300)

Special Issues – Foreign Entities and Investments

- Tax rate changes and asset cost indexation
- APB 23 implications – US and Foreign taxes
  - TRS and REIT differences – foreign tax credit (Example 10)
- Foreign branches and Section 987 (foreign tax credit or deduction)
- Foreign operations with US$ functional currency
  - Historic cost for fixed assets and depreciation
  - Monetary assets and liabilities
- Foreign partnership outside basis differences
- Translation adjustment in OCI – deferred tax implications

Example 10 – APB 23

	Tax Amount	Book Value
Investment in Country X Sub	500	1000

Distribution in liquidation of excess book value is subject to 10% foreign country withholding tax. Subsidiary has history of distributing book earnings.

Entry – REIT	DR(CR)
DTL	(50)
Tax Expense	50

Special Issues – Uncertain Tax Positions

- Determination, recognition, measurement (REIT, TRSs and foreign entities)
- Subsequent adjustment and derecognition
- Tax indemnification agreements – on and after acquisition date
- Interest and penalties – tax expense or other expense
- Discrete items – not in ETR
- Current liability or offset to DTA
  - Utilization of NOL or other deductible differences
- Transfer pricing issues – Section 857
  - Recognition as deducted or reported

General Content of Footnote Disclosure

- Tax treatment of distribution
- Current and deferred income tax expense schedule
- Reconciliation of statutory rate to tax expense or benefit
- Deferred tax asset and liability schedule
- Roll forward of valuation allowances
- Tabular reconciliation of uncertain tax positions
- Other disclosures –
  - Year over year significant changes in accounts
  - Purchase accounting adjustments
  - Net operating loss carryforwards
  - Statute of limitations on examinations
  - Examination activity
  - Reason for tax expense or benefit

This presentation provides general information and does not provide specific accounting or tax advice on any matter. The content and examples shown are only one viewpoint and may not be the only viewpoint on such matters. The information contained in this presentation should not be relied upon as advice on any specific accounting or tax matter. Please consult your accounting, tax, or consulting firm on specific accounting and tax matters.

Comparison of Proposed Solutions to Sales Tax Collection Disparity

	Online Sales Simplification Act (Goodlatte-Eshoo Draft Bill)[1]	S. 698, The Marketplace Fairness Act[2]	H.R. 2775, The Remote Transactions Parity Act[3]
Parity at Point of Purchase (Regardless of Channel)	No - Hybrid Origin Sourcing Model – sellers will apply origin-based sourcing rules for remote sale, but destination-based sourcing rules for nonremote interstate sales.	Yes – Destination Sourcing Model – uniform destination-based sourcing rules are applied to all transactions.	Yes – Destination Sourcing Model - uniform destination-based sourcing rules are applied to all transactions.
Small Seller Exemption	No small seller exemption.	A small seller exemption of $1 million in annual nationwide gross remote sales	A phased-out small seller exemption over three years. The first year is gross annual receipts under $10 million, the second year is gross annual receipts under $5 million and the third year is $1 million. After the third year, the exemption will be zero. Sales made via an online marketplace are not exempted.
Audit Procedures	Remote sellers may be audited by their home state taxing authority. A single audit is only allowed for a NOMAD[4] state if the NOMAD state is not part of the distribution agreement.	One audit per state with the potential for a maximum of 45 audits per year (i.e. 45 states have a sales and use tax system).	Audits are conducted through the certified service provider (CSP). Eliminates state audits and demand letters for remote sellers under $5 million in gross annual receipts unless intentional misrepresentation or fraud. [5]
Software Costs and Integration	No assistance is provided to remote sellers to comply with the additional collection and reporting requirements.	Provides software free of charge for remote sellers and potentially creates multiple state software systems. Integration costs are not included.	Allows remote seller to select its own software, the cost of which is paid for by the state. States' payment of set-up, installation, and maintenance costs is included. Software must work in all states qualified under the Act.
Liability	The remote seller is liable for the tax that is not properly collected.	Relieves remote sellers from liability to the state or locality for incorrect collection, remittance, or noncollection of sales and use taxes if the liability is a result of error or omission made by a certified software provider.	Ensures the certified software provider, not the remote seller, is held liable for all regulation and compliance burdens unless there is reasonable suspicion that the remote seller has engaged in intentional misrepresentation.
Economic Neutrality	Remote sellers would not collect the same tax rate or tax the same products as local sellers. The amount of tax collected from the consumer and taxability of products will differ based on where the seller is located.	All consumers would pay their home state's tax rate and on the same products, regardless of channel. All remote sellers would collect the same tax rate on a taxable item.	All consumers would pay their home state's tax rate and on the same products, regardless of channel. All remote sellers would collect the same tax rate on a taxable item.

---

[4] NOMAD – Five states that do not collect sales and use tax, and they are known as "Nomad States." The list includes: New Hampshire, Oregon, Montana, Alaska and Delaware.

[5] All sellers can be audited where they have a physical presence consistent with existing law.

Economic Impact of Repealing IRC Section 1031
Synopsis of Ernst & Young Study

Background:

Section 1031 of the Internal Revenue Code permits deferral of capital gains and recapture tax on business or investment property that is exchanged for like-kind business or investment property rather than sold for cash. Like-kind exchanges are relied on extensively by small businesses and taxpayers in multiple industries, including real estate, transportation, equipment / vehicle rental and leasing, and construction.

These rules are based on the tax policy that it is unfair to tax a "paper" gain when there is continuity of investment in like-kind property; i.e. there has been no "cashing out" by the taxpayer. Section 1031 encourages transactional activity by making it more cost effective to relocate to larger or more appropriate sites and to exchange assets for those that better meet business needs.

Ernst & Young conducted an analysis of the macroeconomic impact on the U.S. economy of recent tax reform proposals to repeal §1031 like-kind exchanges and documented these findings in a March, 2015 report (revised November, 2015), titled *Economic Impact of Repealing Like-Kind Exchange Rules*.

Major Findings:

- Repeal of §1031 would subject businesses to a higher tax burden on their transactions, resulting in longer holding periods (the "lock-in" effect), greater reliance on debt financing and less-productive deployment of capital in the economy.
- The cost of capital would be increased, discouraging investment, entrepreneurship and risk-taking, and slowing the velocity of investment.
- Repealing like-kind exchange rules would slow economic growth, shrink investment, and ultimately reduce gross domestic product (GDP), even if the revenue savings were used to lower tax rates.
- This negative economic impact would be most concentrated in those industries that rely heavily on like-kind exchanges, such as: real estate, construction, truck transportation, equipment / vehicle rental and leasing.
- The effect of §1031 repeal on economic activity supported by the **ten most impacted industries** would be a **decline in annual GDP of $27.5 billion**. (Table 1 below).
- **The total impact on overall U.S. GDP would be a drop of $8.1 billion each year** (Table 2 below).

Repeal of Section 1031 Does Not Meet the Goals of Tax Reform:

The stated goals of tax reform are economic growth, fairness, efficiency, revenue neutrality, competitiveness, and investment, leading to job creation and a stronger economy. The study concludes that repeal of §1031 would be at cross-purposes with these goals. It would adversely impact the U.S. economy by discouraging investment, causing a reduction in GDP, a contraction in the economy, and would unfairly burden certain industries and taxpayers. Moreover, lower GDP results in lowered tax revenue, thus, repeal of §1031 would not be revenue neutral.

Important Comparison:

- Estimated tax revenue to Treasury over 10 years (repeal score for years 2014-2023 by Joint Committee on Taxation) $40.9 billion
- Estimated **reduction** of overall U.S. GDP over 10 years (EY Study) **($61 - $131 billion)**

Table 1. Long-run effect of repeal on GDP each year of the 10 sub-industries with large proportions of like-kind exchange property as a % of capital stock ($billions)

Industry	Like-kind exchange property as % of sub-industry capital stock	Annual Direct GDP impact	Annual Indirect GDP impact	Annual Induced GDP impact	Annual Total GDP impact
Non-residential real estate	27%	-$6.0	-$1.4	-$1.3	-$8.7
Specialty construction trade contractors	16%	-$2.3	-$2.6	-$2.8	-$7.7
Truck transportation	34%	-$1.5	-$1.5	-$1.7	-$4.7
Heavy and civil engineering construction	19%	-$0.9	-$1.1	-$1.1	-$3.1
Air transportation	14%	-$0.5	-$0.4	-$0.3	-$1.2
Residential real estate	3%	-$0.4	-$0.1	-$0.1	-$0.6
Oil and gas extraction	7%	-$0.4	-$0.1	-$0.2	-$0.6
Commercial and industrial machinery and equipment rental and leasing	14%	-$0.3	-$0.1	-$0.1	-$0.5
Automotive equipment rental and leasing	14%	-$0.2	-$0.1	-$0.1	-$0.3
Pipeline transportation of natural gas	26%	-$0.1	$0.0	-$0.1	-$0.2
Total, 10 selected industries		**-$12.5**	**-$7.3**	**-$7.7**	**-$27.5**

Note: The 10 sub-industries selected for this analysis include sub-industries with like-kind exchange property of at least 3.0% of sub-industry capital stock, and with at least a 0.5% share of economy-wide capital stock. These industries are listed, with their NAICS codes, in Appendix D. Long-run impacts are scaled to the 2013 US economy. Figures may not sum due to rounding. Source: EY analysis.

Table 2. Long-run effect of repeal on GDP each year under revenue-neutral reduction in the corporate income tax rate and alternative policy scenarios

Scenario	Annual GDP change ($billions)	Annual GDP change (%)
Increased revenue used to reduce corporate income tax rate	-$8.1	-0.04%
Increased revenue used to increase government spending	-$13.1	-0.07%
Increased revenue used to reduce business sector taxes	-$6.1	-0.03%

Note: Long-run dollar figures are scaled to the 2013 US economy. Source: EY analysis.

Characteristics of Depreciation in Commercial and Multi-Family Property: An Investment Perspective

Sheharyar Bokhari, *MIT Center for Real Estate*,
David Geltner, *MIT Center for Real Estate*

Abstract:

This paper reports empirical evidence on the nature and magnitude of real depreciation in commercial and multi-family investment properties in the United States. The paper is based on a much larger and more comprehensive database than prior studies of depreciation, and it is based on actual transaction prices rather than appraisal estimates of property or building structure values. The paper puts forth an "investment perspective" on depreciation, which differs from the tax policy perspective that has dominated the previous literature in the U.S. From the perspective of the fundamentals of investment performance, depreciation is measured as a fraction of total property value, not just structure value, and it is oriented toward cash flow and market value metrics of investment performance such as IRR and HPR. Depreciation from this perspective includes all three age-related sources of long-term secular decline in real value: physical, functional, and economic obsolescence of the building structure. The analysis based on 107,805 transaction price observations finds an overall average depreciation rate of 1.5%/year, ranging from 1.82%/year for properties with new buildings to 1.12%/year for properties with 50-year-old buildings. Apartment properties depreciate slightly faster than non-residential commercial properties. Depreciation is caused almost entirely by decline in current real income, only secondarily by increase in the capitalization rate ("cap rate creep"). Depreciation rates vary considerably across metropolitan areas, with areas characterized by space market supply constraints exhibiting notably less depreciation. This is particularly true when the supply constraints are caused by physical land scarcity (as distinct from regulatory constraints). Commercial real estate asset market pricing, as indicated by transaction cap rates, is strongly related to depreciation differences across metro areas.

1 Introduction

This paper reports empirical evidence on the nature and magnitude of real depreciation in commercial and multi-family investment properties in the United States. By the term "real depreciation" (or simply, "depreciation") we are referring to the long-term or secular decline in property value, after netting out inflation, due to the aging and obsolescence of the building structure, apart from temporary cyclical downturns in market values, and even after routine capital maintenance. Such depreciation is measured empirically by an essentially cross-sectional comparison of the transaction prices of properties with building structures of different ages, controlling for other non-age-related differences among the properties and the transactions. In the U.S., most prior studies of depreciation in income-producing structures have been made from the perspective of income tax policy, given that asset value in accrual income accounting in the U.S. is based on historical cost and allows for depreciation to be deducted from taxable income. But considering basic economics, depreciation is important from an investment perspective apart from tax policy, as depreciation is ubiquitous and significantly affects the nature of property investment performance. Though tax policy considerations certainly are important (including from an after-tax investment perspective for taxable investors), we leave such considerations for another paper.

This investments perspective is the major focus of this paper, though we will also make some observations relevant to the tax policy perspective. From the investment perspective depreciation constrains how much capital growth the investor can expect over the long run, and from this perspective depreciation is measured with respect to total property value not just structure value, and is measured on a cash flow and current market value basis rather than a historical cost accrual accounting basis. In this paper we explore how such depreciation varies with several correlates including metropolitan location, building type, structure age, and market conditions. We also explore the role of income versus capitalization as the source of depreciation.

2 Literature Review

Most of the prior literature on structure depreciation has focused on owner-occupied housing, and as noted, most of the U.S. literature that has focused on depreciation in commercial real estate (income property) has done so from the perspective of taxation policy. An early and influential example is Taubman and Rasche (1969), which used limited data on building operating expenses to quantify a theoretical model of profit-maximizing behavior on the part of building owners to estimate the optimal lifetime of structures and the age and value profile of office buildings, assuming rental revenues decline with building age while operating costs remain constant. The result was a model in which the building structure (excluding land) becomes completely worthless (fit for redevelopment) after generally 65 to 85 years of life, with the rate of depreciation growing with the age of the structure.[1] The focus of the analysis was on what sort of depreciation allowances would be fair from an income tax policy perspective.

By the mid-1990s subsequent research led to a consensus that the balance of empirical evidence supported the view that commercial structures tend to decline in value in a somewhat geometric pattern (roughly constant rate over time), averaging about 3 percent per year (of remaining structure value), though there was some evidence for faster depreciation rates in the earlier years of structure life. (See most influentially Hulton & Wyckoff, 1981, 1996.) In the paper that most influenced subsequent tax policy, Hulton & Wyckoff (1981) estimated average depreciation rates of approximately 3 percent per year of remaining structure value. With the 1986 tax reform, income tax policy settled on straight-line depreciation methods (which imply an increasing rate of depreciation for older buildings), with the depreciation rate based on 27.5 years for apartments and 31 (subsequently increased to 39) years for non-residential commercial buildings. This has remained a relatively constant and non-controversial aspect of the income tax code since then.[2]

Gravelle (1999) reviewed the evidence on depreciation rates for the Congressional Research Service and found that rates allowed in current tax law are not too far off from economic reality, if one uses as the benchmark the present value of the allowed depre-

[1] This is where the depreciation rate is measured as a percent per year of the remaining value of the structure alone, excluding the land component of the property value. Of course, any model in which the structure becomes completely worthless at a finite age (such as straight-line depreciation) will necessarily tend to have increasing depreciation rates as the structure ages measured as a fraction of the structure value alone excluding land, at least after some point of age. (For example, in the last year of building life, the depreciation rate is by definition 100% of the remaining structure value.)

[2] Straight-line methods are easy to understand and administer, and can be designed in principle so that the present value of the depreciation is the same as that of an actual geometric profile of declining building value which might better represent the economic reality. By completely exhausting the book value of the structure at a finite point in time (and hence, exhausting the depreciation tax shields), straight-line methods may tend to stimulate sale of older buildings (so as to re-set the depreciable basis and begin generating tax shields again).

ciation (recognizing that the straight-line pattern is only a simplification). An industry white paper produced in 2000 by Deloitte-Touche studied 3144 acquisition prices of properties held by REITs for which data existed on the structure and land value components separately as of the time of acquisition. The Deloitte-Touche study found approximately constant depreciation rates for acquisition prices as a function of structure age, measured as a percent of remaining structure value, ranging from 2.1%/year for industrial buildings to 4.5%/year for retail buildings (with office at 3.5% and apartments at 4%). However, the study was limited to only buildings less than 20 years old. The Deloitte study also separately estimated depreciation rates for gross rental income, finding rates ranging from 1.7% for office to 2.5% for retail (with industrial at 1.9%, and apartments omitted). Note that, as fractions of pre-existing rent, these depreciation rates would be more comparable to rates based on total property value than just on structure value (Like property value, rents reflect land and location value as well as just structure value.). The working consensus apparently persists that, at least for tax policy considerations, commercial structures tend to depreciate in a roughly geometric pattern at typically a rate of 2 to 4 percent of the remaining structure value per year, with apartment structures depreciating slightly faster than commercial.[3]

More recent literature is sparse and primarily focused on new empirical data. Fisher et al (2005) used sales of some 1500 NCREIF apartment properties to examine depreciation in institutional quality multi-family property.[4] They conclude that a constant rate of 2.7% per year of property value including land, or 3.25% of structure value alone, well represents the depreciation profile for NCREIF apartments.[5]

There have also been a number of studies of commercial property depreciation in Europe, particularly in the U.K. Many of these studies focus on the investment perspective rather than the tax policy perspective, and they tend to be very applied, industry sponsored reports that use less sophisticated methodologies. In one of the more academic studies, Baum and McElhinney (1997) studied a sample of 128 office buildings in the City of London and estimated a capital value depreciation rate averaging 2.9%/year as a fraction of total property value (including land), with older buildings (over age 22 years) depreciating

[3]See United States Treasury (2000).

[4]NCREIF properties are owned by tax-exempt investors and tend to be at the upper end of the asset market. The average initial cost in the Fisher et al sample was $17 million.

[5]NCREIF records indicate that on average almost 20% of apartment property net operating income is plowed back into the properties as capital improvement expenditures. The depreciation occurs in spite of such upkeep.

less than new or middle-aged buildings. Their study was based on appraised values. More recently, a 2011 study by the Investment Property Forum (IPF), an industry group, examined 729 buildings in the UK that were held continuously over the period 1993-2009. Office buildings were found to experience the highest rate of rental depreciation at 0.8%/year followed by industrial at 0.5% and retail at 0.3%, all as a fraction of total property value. A comparable IPF (2010) article on office properties in select European cities, estimated depreciation rates that ranged up to almost 5%/year in Frankfurt to no depreciation at all in some cities (such as Stockholm). The IPF studies were based on comparing the rental growth (based on appraisal valuation estimates) of the held properties with that of a benchmark based on a new property held in the same location. However, problems with using valuations and in benchmark selection led Crosby, Devaney & Law (2011) to conclude that these findings are not a good indication of the rates of depreciation in Europe.

3 Investment Perspective on Depreciation

Although tax policy is clearly important, the previous literature's focus on it may have complicated or omitted some considerations that are more important from a before-tax investment perspective. What we are referring to as the investment perspective on depreciation is the perspective that reflects the fundamental economic performance of investments. This perspective is the basis on which capital allocation decisions derive their economic value and opportunity cost. In the investment industry profit or performance is measured by financial return metrics such as (most prominently) the internal rate of return and the total holding period return. These metrics are based on market value and cash flow, not on historical cost accrual accounting principles. From the investment perspective there is less rationale for contriving (inevitably somewhat arbitrarily) to separate structure value from land value in investments in real estate assets. At the most fundamental level, real economic depreciation directly and importantly affects investment returns before, and apart from, income tax effects.[6] Therefore, investors care (or should care) about the granular characteristics and determinants or correlates of property depreciation, in order to make better property investment and management decisions.

[6]It is worth noting, as well, that many major investment institutions are tax-exempt (such as pension and endowment funds). Furthermore, the U.S. is fairly unique in having financial accounting rules based on historical cost asset valuation. In most other countries the type of tax policy considerations that have dominated the U.S. literature on commercial property depreciation are not relevant.

Yet, in practice today it appears that many investors do not think carefully about depreciation in this sense. General inflation masks the existence of real depreciation, and the typical commercial property investment cash flow forecast used in industry (the so-called "pro-forma") almost automatically and complacently projects rent growth equal to a conventionally defined inflation rate (typically 3%). Unless this assumed general inflation rate is below the realistic inflation expectation in the economy (and usually it is not), then the implication is that investors are typically ignoring the existence of real depreciation, at least in their stated pro-formas. (We shall explore this question further in this paper.)

(a) A Conceptual Framework for Analyzing Depreciation

A careful and complete view of depreciation from the investment perspective must consider the causes and correlates of differences in depreciation rates across different types or locations of properties. Such an investment perspective on depreciation must strive in particular to recognize differences and patterns in the urban economic dynamics of locations of commercial properties. The fundamental economic framework from which to view depreciation from the investment perspective is presented in Figure 1.

Figure 1 depicts a single urban site or property parcel over time, with the horizontal axis representing a long period of time, and the vertical axis representing the money value of the property asset on the site.[7] The top (light) line connecting the U values reflects the evolution of the location value of the site as represented by the value of the "highest and best use" (HBU) development of the site whenever it is optimally developed or redeveloped (new structure built), an event that occurs at the points in time labeled R. This location value of the site fundamentally underpins the potential long-run appreciation of the property value and the capital return to the investor in the property asset. But the actual market value of the property over time is traced out by the heavy solid line labeled P, which represents the opportunity cost or price at which the property asset would sell at any given time. P declines relative to U due to the depreciation of the building structure on the site. Based on standard cash flow (opportunity cost) based investment return metrics such as IRR or total HPR, it is the combination of the change in location value (U) and the occurrence of structure depreciation which determines the price path of P and hence the capital return

[7] A very long span of time must be represented, because depreciation is, by definition, a long-term secular phenomenon, reflecting permanent decrease in building value, and buildings are long-lived, transcending medium-term or transient changes in the supply/demand balance in the real estate asset market.

possibility for the investor over the long run.[8]

From an investment perspective one can define the "land value" component of the property value in either of two alternative and mutually exclusive ways as indicated in Figure 1. The more traditional conception of land value is labeled L and may be referred to as the "legalistic" or "appraisal" value of the land. It reflects what the parcel would sell for if it were vacant, that is, with no pre-existing structure on it. The second, newer conception of land value comes from financial and urban economics and views the land (as distinct from the building on it) as consisting of nothing more (or less) than the call option right (without obligation) to develop or redevelop the site by constructing a new building on it.[9] This value, labeled C, generally differs from L. The redevelopment call option is nearly worthless just after a (re)development of the site, because the site now has a new structure on it built to its HBU. But at the time when it is optimal (value maximizing) to tear down the old structure and build a new one, the entire value of the property is just this call option value, the land value. Out-of-the-money call options are highly risky, meaning they have very high opportunity cost of capital (high required investment returns), and the investment returns of options must be achieved entirely by capital appreciation as options themselves pay no dividends. Thus, the call option value of the site tends to grow very rapidly over time between the R points, ultimately catching up with the legalistic or appraisal value of the land.

At the reconstruction points (R) all three measures and components of property value, P, L, and C are the same; the old building is no longer worthwhile to maintain (at least, given the redevelopment opportunity), so the property value entirely equals its land value.[10]

[8]Although it is the total investment return that matters most, including current income (cash flow) plus change in capital value, there is also interest in breaking out the total return into components, one of which is the current income return or yield rate (net cash flow as a fraction of current asset market value). In such breakout, current routine capital improvement expenditures which are financed internally as plow-back of property earnings are a cash outflow from the property owner, netted out of the income return (i.e., not taken out of the capital return component, from a cash flow perspective). Thus, the investment capital return indicated by the change in P between R points reflects the growth in total property value including (after) the effect of such routine capital improvement expenditures. In the figure 1 model, major externally financed capital improvement expenditures would be considered redevelopments associated with the R points on the horizontal axis.

[9]The exercise cost (or "strike price") of the call option consists not only of the construction cost of the new building plus any demolition costs of the old building, but also includes the opportunity cost of the foregone present value of the net income that the old building could still continue to earn (if any). Thus, for it to make sense to exercise the redevelopment option either the old building must be pretty completely obsolete or the new HBU of the site must be considerably greater than the old HBU to which the previous structure was built.

[10]It makes sense for functional and economic obsolescence to detract from the value of the structure, not

At that point new capital (cash infusion) in an amount of K is added to the site, as depicted in Figure 1, and this value of K (construction costs including demolition costs) adds to the site-acquisition cost (the pre-existing property value, Old P = L = C) to create the newly redeveloped property value (the new P value = Old P + K) upon completion of the development. The net present value (NPV) of the redevelopment project investment is: NPV = New P − Old P − K. In an efficient capital market super-normal profits will be competed away and this NPV will equal zero, providing just the opportunity cost of its invested capital as the expected return on the investment.[11]

The investor's capital return is represented by the change in the property value P between the reconstruction points in time. The change in P across a reconstruction point R includes new external capital investment (K), not purely return to pre-existing invested financial capital. By definition, property value, P, is the sum of land value plus building structure value. The path of P between reconstruction points therefore reflects the sum of the change in the building structure value plus the change in the land value. The latter reflects the underlying usage value of the location and site as represented by its HBU as if vacant, the U line at the top in Figure 1. Thus, the land value component does not tend to decline over time in real terms in most urban locations, although there certainly are exceptions to this rule. However, the building structure component of the property value will almost always tend to decline over the long run, at least in real terms (net of inflation), reflecting building depreciation. In any case, the extent to which the property value path falls below the location value of the site (U), causing a reduction in the investors capital return below the trend rate in U, is due largely and ubiquitously to building structure depreciation. This is the fundamental reason why, and manner in which, the investor cares about depreciation.

from the value of the land. "Functional obsolescence" refers to the structure becoming less suited to its intended use or relatively less desirable for its users/tenants compared to newer competing structures, for example due to technological developments or changes in preferences, such as need for fiber-optic instead of copper wiring or need for sustainable energy-efficient design. "Economic obsolescence" refers to the phenomenon of the HBU of the site evolving away from the intended use of the structure, the type and scale of the building becoming no longer the HBU for the site as if it were vacant, as for example if commercial use would be more profitable than the pre-existing residential, or high-rise residential would be more profitable than the pre-existing low-rise.

[11]Note that this zero NPV assumption is consistent with the classical "residual theory of land value", in which any windfall in location value accrues to the pre-existing landowner (thus adding to the "acquisition cost" of the redevelopment site, the value of C or L or Old P at the time of redevelopment). However, if the redevelopment is particularly entrepreneurial or innovative, perhaps there will be some Schumpeterian profits for the new developer.

Note that from this perspective the rate at which the building structure itself declines in value due to depreciation is fundamentally ambiguous. This is because building value equals the total property value minus the land value. But there are two very different yet fundamentally equally valid ways to define and measure land value, the legalistic or appraisal perspective (L) and the economic or functional call option perspective (C). The structure value component (labeled S in Figure 1), can be defined either as P − L or P − C. Thus, the rate of depreciation expressed as a fraction of building structure value is ambiguous from the investment perspective. However, depreciation measured as a fraction of total property value, P, is not ambiguous.[12] Therefore, from the investment perspective (as distinct from the tax policy or accrual accounting perspective), it is more appropriate to focus on depreciation relative to total property value including land value (P) rather than only relative to remaining structure value (S). We will adopt this approach for the remainder of this paper.

Finally, given that land generally does not depreciate, an implication of this framework is that we should expect newer properties to depreciate at a faster rate since land value is a smaller proportion of the total property value of a new building. This also suggests that depreciation rates may vary across metropolitan areas as different cities have different scarcity of land, and therefore, different land value proportions of total property value. We test both these hypotheses in our subsequent empirical analysis.

(b) Source of Depreciation: Income or Capitalization?

It is of interest from an investment perspective to delve deeper into the depreciation phenomenon and explore how much depreciation is due to changes in the current net cash flow the property can generate as it ages versus how much is due to the property asset market's reduction in the present value it is willing to pay for the same current cash flow as the building ages. This latter phenomenon is sometimes referred to as "cap rate creep". Such

[12]It is worth noting that, apart from the conceptual problem, measuring depreciation as a fraction of structure value (S) is also difficult to estimate empirically. This is because, compared to quantifying the total property value, P, it is usually relatively difficult to quantify either L or C for a given property at a given time. While appraisers or assessors sometimes estimate the value of L, such valuations are only estimates, and are often crude and formulaic. In built-up areas there is often little good empirical evidence about the actual transaction prices of comparable land parcels recently sold vacant. And land value estimates can be circular from the perspective of quantifying structure depreciation, as the land value may be backed out from property value minus an estimate of depreciated structure value, meaning that for purposes of empirically estimating structure depreciation we get an estimate of depreciation based on an estimate of depreciation!

an understanding could improve the accuracy of investment return forecasts, and possibly improve the management and operation of investment properties.[13]

By way of clarification and background, consider the fundamental present value model of an income property asset:

$$P_{i,t} = \sum_{s=t+1}^{\infty} \frac{E_t[CF_s]}{(1+r_{i,t})^{s-t}} \tag{3.1}$$

where $P_{i,t}$ is the price of property i at time t; $E_t[CF_s]$ is the expectation as of t of the net cash flow generated by the property in future period s; and $r_{i,t}$ is the property asset market opportunity cost of capital (OCC, the investor's required expected total return) for property i as of time t. With the simplifying assumption that the expected growth rate in the future cash flows is constant (at rate $g_{i,t}$) and the property resale price remains a constant multiple of the current cash flow, (3.1) simplifies to the classic "Gordon Growth Model" of asset value (GGM), which is a widely used valuation model in both the stock market and the property market:[14]

$$P_{i,t} = \frac{E_t[CF_s]}{r_{i,t} - g_{i,t}} \tag{3.2}$$

With the slight further simplification that the net operating income approximately equals the net cash flow ($NOI_{i,t} \approx E_t[CF_s]$),[15] this formula provides the so-called "direct capitalization" model of property value which is widely used in real estate investment:

$$P_{i,t} = \frac{NOI_{i,t}}{k_{i,t}} \tag{3.3}$$

[13]For example, there might be things the investor could do to mitigate the decline in net cash flow, whereas there might be less that can be done to influence caprates.

[14]Clearly the GGM is a simplification of the actual long-term cash flow stream as modeled in Figure 1. But the GGM is widely used and its simplification is relatively benign for our purpose, which is only to explicate the basic roles in property depreciation of the two factors, current net cash flow and asset market capitalization.

[15]The difference between NOI and CF is the routine capital improvement expenditures: $CF_t = NOI_t - CI_t$. Although this difference does not matter for our purpose in this paper, it is of interest to note that among properties in the NCREIF Property Index, the historical average capital expenditure (CI) is over 2% of property value (including land value) per year. Deloitte-Touche (2000) reports that U.S. Census data indicates overall post-construction capital improvement expenditures on buildings is approximately 40% of the cost of new construction. (If the average building is somewhat more than 20 years old, this would be roughly consistent with the NCREIF 2%/year rate.) The Deloitte-Touche study also conducted a survey which suggested that capital expenditures may often exceed 5% of structure value per year. (If structure value is on average halfway between 80% and 0% of total property value, then this too would be roughly consistent with the NCREIF data.) However, the D-T survey was very limited.

where $k_{i,t} = r_{i,t} - g_{i,t}$ is the capitalization rate ("cap rate" for short) for property i as of time t. The property value equals its net operating income divided by its cap rate.

Thus, if the property real value tends to decline over time with depreciation, due to the aging of the building, then such value decline may be (with slight simplification) attributed either to a decline over time in the real NOI that the property can generate, or to an increase over time in the cap rate that the property asset market applies to the property as it ages, or to a combination of these two sources of present value. To the extent depreciation results from an increase in the cap rate with building age ("cap rate creep"), this could result either from an increase in the OCC or from a decrease in the expected future growth rate, $g_{i,t}$, or a combination of those two. In the present paper we will not attempt to parse out this OCC versus growth expectations breakout. We content ourselves with exploring the question of how much of the depreciation in P is due to the NOI and how much is due to k. To answer this question, we will estimate the effects of depreciation on both property value and on cap rates. The difference between the total depreciation and effect of the cap rate creep will be attributable to NOI depreciation. We now turn to outlining our empirical model.

4 The Hedonic Price and Cap Rate Models

In this section, we outline our approach for estimating the effects of depreciation on both total property value and the property cap rate. Following in the tradition of depreciation estimation modeling, the approach known as "used asset price vintage year" analysis is applied to quantify real depreciation. This involves an essentially cross-sectional analysis of the prices at which properties of different ages (defined as the time since the building was constructed) are transacted, controlling for other variables that could affect price either cross-sectionally or longitudinally. This is estimated via the hedonic price model given in equation (4.1)

$$ln(p_{i,t}) = \sum_{h=1}^{H} \beta_A A_{h,i,t} + \sum_{j=1}^{J} \beta_X X_{j,i,t} + \sum_{m=1}^{M} \beta_M M_{m,i,t} + \sum_{s=1}^{T} \beta_T T_{s,i,t} + \epsilon_{i,t} \tag{4.1}$$

where,

- $p_{i,t}$ is the price of property sale transaction i occurring in year t.
- $A_{h,i,t}$ is a vector of H property and location characteristics attributes for property sale transaction i as of year t.
- $X_{j,i,t}$ is a vector of J transaction characteristics attributes for property sale transaction i as of year t.
- $M_{m,i,t}$ is a vector of fixed-effects dummy variables representing M metropolitan markets for property sale transaction i as of year t
- $T_{s,i,t}$ is a vector of s = 1,2,...,T time-dummy variables equaling one if $s = t$ and zero otherwise (for property sale transaction i as of year t).

The A_h property and location characteristics in the model include, most importantly, the property age in years since the building was constructed and age-squared, but also include the natural log of the property size in square feet, dummy variables for property usage type sector (office, industrial, retail, or apartment), and a dummy variable flagging whether the property is in the central business district (CBD) of its metro area. The X_j transaction characteristics include an indicator of seller type, a dummy variable to control whether the sale was in distress, a dummy variable to indicate if the buyer had a loan that was part of a CMBS pool, as well a flag to indicate whether the property had excess land available (was not fully built out).

(a) Censored Sample Bias and Correction

As pointed out by Hulton & Wyckoff (1981), any estimation of the depreciation rate would need to take into account the experience of torn-down buildings in order to avoid introducing a survivorship bias. Since buildings that have been demolished have already depreciated to a point that their structure has no value, omission of such data is likely going to result in an estimate that is smaller than it should be. Hulton & Wyckoff (1981) correct for this censored sample bias by noting that the average price of a building (of a given age) is the price of surviving buildings, multiplied by the survival probability (having survived until that age), plus the zero value of torn-down buildings (of that vintage) times the probability of being torn-down (having not survived by that age). Using this approach, we can re-write the left-hand side of equation (4.1) as

$$ln(P_i * p_{i,t}) = \sum_{h=1}^{H} \beta_A A_{h,i,t} + \sum_{j=1}^{J} \beta_X X_{j,i,t} + \sum_{m=1}^{M} \beta_M M_{m,i,t} + \sum_{s=1}^{T} \beta_T T_{s,i,t} + \epsilon_{i,t} \qquad (4.2)$$

where P_i is the probability of survival until the age of building i.

This expected price formulation of equation (4.2) will be the focal regression for the remainder of this study. In order to estimate a survival probability for our sample properties, we will employ data on demolished buildings (along with surviving buildings) and use the Kaplan-Meier estimator to calculate the survival probability at each building age.

(b) Cap Rate Model

We also estimate a hedonic model of the cap rate that can, similar to the analysis of property price, quantify how the cap rate is a function of the age of the property's building structure (holding other characteristics constant). This cap rate model can then be combined with the hedonic price model to derive how much of the overall depreciation in the property value is due to depreciation in the property net operating income and how much is due to change in the cap rate.

Our hedonic cap rate model is very similar to our hedonic model of property price in (4.1) except that we replace the dependent variable with a normalized construct of the property's cap rate at the time of sale instead of the property price. The normalized cap rate is the difference between the property's cap rate minus the average cap rate prevailing in the property's metropolitan market (for the type of property) during the year of the transaction. This normalization controls for systematic differences in cap rates across metropolitan areas, as well as for cyclical and market effects on the cap rate.[16] The normalized cap rate thus allows the individual property differences in cap rates that could be caused by the age of the buildings to be estimated in the model below:

$$CapRate_{i,t} = \sum_{h=1}^{H} \beta_A A_{h,i,t} + \sum_{j=1}^{J} \beta_X X_{j,i,t} + \sum_{m=1}^{M} \beta_M M_{m,i,t} + \sum_{s=1}^{T} \beta_T T_{s,i,t} + \epsilon_{i,t} \qquad (4.3)$$

[16] Alternatively, cap rates on the left hand side and interacted dummies between MSA and time would also capture the between market variation in cap rate over time. This alternative specification gives nearly identical results, not surprisingly.

5 Data

This study is based on the Real Capital Analytics Inc (RCA) database of commercial property transactions in the U.S.[17] RCA collects all property transactions greater than $2,500,000, and reports a capture rate in excess of 90 percent. Properties smaller than $2.5M are often owner-occupied or effectively out of the main professional real estate investment industry. We believe the data represent a much larger and more comprehensive set of investment property transactions than prior studies of depreciation. The present analysis is limited to the four major core property sectors of office, industrial, retail, and apartment. The study dataset consists of all such transactions in the RCA database from 2001 through the second quarter of 2014 and which pass the data quality control filters and for which there is sufficient hedonic information in the RCA database, 107,805 transactions in all.[18] This includes 80,431 non-residential commercial property sales and 27,374 apartment property sales. A subsample of 81,310 transactions are located in the top 25 metropolitan area markets which are studied separately.[19] 32,481 sales have, in addition to sufficient hedonic data, also reliable information about the cap rate (as defined in section 3). This cap rate subsample will be used in subsequent analysis of the cap rate creep. Table 1 presents the summary statistics for the overall dataset. The average age of the properties in our sample is 32 years and the median age is 25 years. The data are fairly equally distributed across the four core property types. The seller types are broadly categorized as Equity, Institutional, Public, Private, User and CMBS Financed, of which Private constitutes about 69% of the data. Figure 2 shows the number of observations in each of the top 25 RCA Metro Markets. The sample sizes range from 15,380 transactions in Metro Los Angeles down to only 288 in Pittsburgh.

[17] In general from here on, unless specified otherwise or it is clear from the context, we will use the term "commercial" property to refer to all income-producing property including multi-family apartments.

[18] We drop sales that were part of a portfolio sale to avoid an uncertain sale price for a property within the portfolio. We also drop properties for which the sale price was not classified as confirmed by RCA's standards and if they were older than 150 years.

[19] RCA has their own definition of metropolitan areas which differ slightly from the U.S. Census definitions and conform better to actual commercial property markets. We refer to these as "RCA metros" or "Metro Markets."

(a) Torn-Down Building Data, Multiple Imputation of Age-at-Demolition and Survival Probabilities

In addition to the above described data which will serve as the basis of our analysis, we have a stock of 12,903 buildings that were either demolished or acquired with the intention of demolition. Unfortunately, of these, only 2,109 observations have non-missing age information. In order to calculate survival probabilities at each building age, we first need to impute the missing age-at-demolition data. We choose a multiple imputation approach where each missing age is imputed 20 times. The method of imputation outlined by Royston (2007) is particularly suited for imputing censored variables. It's main feature is that the researcher can specify an interval of the normal distribution from which the imputed values will be simulated. In our case, we specified that interval to be between ages 10 and 150 years, the assumption being that buildings with age less than ten years are very unlikely to be demolished. An added advantage of this approach is that our imputed values are always going to be non-negative and within a sensible range. As recommended by the multiple imputation literature, the model for the conditional distribution of Age contains all co-variates, including price and a dummy variable for surviving properties. Upon obtaining 20 imputations of age-at-demolition, we construct 20 separate sets of survival probabilities using the Kaplan-Meier estimator. Figure 3 shows an example survival function using one such imputation. We find that the other 19 sets are very similar in shape. Finally, we construct a single set of survival probabilities (P_i in (4.2)) by taking an average over the 20 sets. The thus obtained survival probabilities are then multiplied by the price of the surviving buildings (107,805 transactions) to create the left-hand side (in logs) of the regression equation (4.2).

6 Empirical Analysis

(a) Depreciation Magnitude and Age Profile

The first set of results is based on the bias-corrected hedonic price model in (4.2), run on the entire 107,805 US transaction sample, and focuses on the overall rate of depreciation and its profile over time. Column (1) in Table 2 presents the regression results. The variables of interest, both Age and Age-squared, are highly significant, with the coefficient on Age being negative and that on Age-squared being positive; a convex quadratic function. Thus, the property value tends to decline in real terms with building age, but at a declining rate. Also shown in column (2) of Table 2 is the regression from equation (4.1), reflecting an estimate that does not correct for censored sample bias caused by torn-down buildings whose structures have already fully depreciated. There are two points worthy of note when comparing the Age and Age-squared coefficients between columns (1) and (2). First, the coefficients are less precise in the bias-corrected estimates of column (1). The standard errors are greater due to the uncertainty introduced by the multiple imputation (of age-at-demolition) step in the estimation of the survival probabilities. Nevertheless, the results are still statistically significant. Second, the biased estimates of column (2) do indeed underestimate the rate of depreciation. This is best seen in Figure 4, where the two quadratic specifications are compared in an implied Age-Price profile (constructed using both Age and Age-squared coefficients). It is clear that while the biased and un-biased profiles mostly agree up until the first 40 years of building age, the biased quadratic specification fails to capture the continued decay in property value much beyond that point. Also shown in Figure 4 is an alternate bias-corrected age dummy specification as a robustness check.[20] We also show a two standard error bound around this specification to depict the noise in these estimates in the range beyond 110 years, a point where the data starts to get thin. The age dummy specification suggests that the bias-corrected quadratic approach is a very good approximation to a more flexible but noisier alternative.

Using the quadratic specification as the more parsimonious model, we model the depreciation rate (using the Age and Age-squared coefficients) for all building ages from 1 to 50 years old. We then take, as our summary measure of average depreciation rate, the equally-weighted average rate across the 50 year horizon. (That is, each of the 50 years' rates counts equally. This average is normally very similar to the depreciation rate of a 25 year old building.[21]) Thus, in effect, this is a summary depreciation metric that holds the age of the building structure constant across comparisons, at the time-weighted average depreciation rate over a 50-year building life horizon.

For the national sample, this gives an average real depreciation rate of 1.5%/year of property value (including land). The depreciation rate declines from 1.82%/year for a property with a new building down to 1.12%/year for a property with a 50-year old building (see Figure 5). At first glance, these depreciation rates appear to be smaller than what was reported in earlier studies in the U.S., such as the Hulton-Wyckoff (1981) and Deloitte-

[20] In this specification, there is a dummy for each age up until age 129, while ages 130 to 150 are lumped together into one final dummy variable.

[21] As noted earlier, the mean building age in our sample is 32 years, with a median age of 25 years.

Touche (2000). But those studies were quoting rates as a fraction of remaining estimated structure value, not total property value which is our focus.

We have noted in Section 3 that from the investment perspective it is less important to attempt to quantify depreciation as a fraction of only structure value. Nevertheless, to compare our results with the previous U.S. depreciation literature, it may be of some interest to make some observations in that regard. Given our bias-corrected empirical model in column (1) of Table 2, we can estimate an implied average structure lifetime by finding the minimum point (over Age) at which there is no further property depreciation. The minimum point of the quadratic $Ln(p) = -0.0185 * Age + 0.00007 * Age^2$ is at age 128 years (see also Figure 4). When a building is no longer depreciating, it is worthless and hence it is time for redevelopment. At that point, the entire property value is land value. As a fraction of value of newly-built property value, this pure land value component can be found by plugging the building lifetime age (i.e., age when structure becomes worthless as indicated by no further depreciation) back into our hedonic price equation [$\exp(-0.0185 * 128 + 0.00007 * (128)^2 = 0.31)$]. Since land value fraction is 31% of newly-built property value, the corresponding structure value fraction would be 69%. Given this initial structure value fraction and our property value depreciation profile, we back out that the rate of structure depreciation (per annum) is 2.7% at the median building age of 25 years. This estimate would be roughly consistent with previous studies' findings.

In Table 3, we run separate regressions for the 4 core property types. We find (consistent with the national aggregate results) signs and significance for the Age and Age-squared variables across all property types. In the case of non-residential commercial real estate, office and retail properties depreciate the fastest at similar rates, while industrial depreciates the slowest (at least until buildings become very old). In Figure 6, we lump all the non-residential commercial property sectors together and break out the analysis separately for apartments and non-residential commercial properties. It is not clear a priori why apartment properties should depreciate at different rates than commercial property, but tax policy has long differentiated them (possibly for political reasons). In fact, we see that apartments do on average depreciate slightly faster than non-residential commercial properties, holding age constant. In our sample, the average apartment building is 10 years older than the average non-residential commercial property (median of 35 years vs 23 years old) and the depreciation rate of the median apartment property is 1.63% vs 1.5% per annum for commercial.

In summary, our aggregate-level findings suggest depreciation rates that average 1.5%

per annum as a fraction of total property value (including land). Compared to the previous literature, our estimates are based on actual transaction prices rather than building structure value estimates, and are based on a much larger and more comprehensive property sample. Given our model's implications for structure depreciation, the rates we find are consistent with the earlier findings. We find clear evidence that properties depreciate slower as buildings age. There is also clear evidence that apartment properties depreciate faster, but only slightly faster, than non-residential commercial properties.

(b) Estimation of Cap Rate and NOI Effects on Total Depreciation

In order to estimate how much property value depreciation would result purely from cap rate creep, and how much from NOI decline, we estimate the (bias-corrected) hedonic price and cap rate models (equations (4.2) and (4.3) respectively) on the same transaction subsample for which we have cap rate data available. These regressions are shown in columns (1) and (2), respectively, of Table 4. We first compute the total depreciation in property value from the age coefficients in the price model (column (1) of Table 4), much as described in the previous section. We next compute how much decline in property value with building age would result purely from the increase in the cap rate due to age as implied by the age coefficients in the cap rate model (column (2) of Table 4), holding the property net operating income constant. The difference between the total depreciation and the pure cap rate creep depreciation presumably is attributable to NOI depreciation.

The result of this analysis is shown in Figure 7. It can be seen that almost all of the property value real depreciation results from the decline in the real NOI and very little from cap rate creep. Using our previously defined average-age metric for the summary depreciation rate, the overall average depreciation rate in the subsample is 1.5%/year, while the average depreciation rate due solely to cap rate creep is only 0.17%/year. The implication is that the NOI source of depreciation accounts for 1.38%/year or 92% of all the depreciation. This implies that the conventional approach in current investment industry practice in commercial property pro-formas of forecasting rent and cash flow growth at a standard 3% rate (presumably equal to inflation but in reality if anything slightly greater than inflation in recent years) is substantially biased on the high side, especially for newer buildings.

Because discounted cash flow (DCF) analyses of such pro-forma cash flow forecasts must of necessity arrive at a present value for the property approximately equal to the current market value of the property, this implies that the discount rate employed in such analyses must be substantially greater than the actual opportunity cost of capital. In other words, the discount rate typically employed in micro-level real estate investment analysis in the industry today is substantially greater than the actual realistic expected total return on the investment.

The dominance of net income and the space market as the fundamental source of property value in real depreciation is interesting in view of the fact that changes in capitalization, in the asset market's opportunity cost of capital or future growth expectations, have been found to play a major and perhaps even dominant role in short to medium-term movements in property value.[22] But depreciation is a very long-term secular phenomenon, and it makes sense that it would largely reflect underlying fundamentals.

(c) Depreciation and Metropolitan Location

We noted previously that real depreciation is a phenomenon of decline in the value of the building structure on the property, as land generally does not depreciate (or not as much or as relentlessly). This probably largely accounts for why the rate of depreciation is greater in properties with newer buildings. This also strongly suggests that property depreciation rates may vary across metropolitan areas, as different cities have different scarcity of land and different land value proportions of total property value. To analyze this issue, we estimated the bias-corrected hedonic price model in (4.2) separately for the top 25 Metro Markets (see again Figure 2 for the sample sizes in each metro).[23]

Figure 8 shows the resulting estimated coefficients on the Age variable in (4.2), in terms of absolute value (higher value is faster depreciation). The Age coefficients are statistically significant in all 25 Metro Markets and Age-squared coefficients are statistically significant for all but 9 Metro Markets. The Figure ranks the metros from greatest (fastest) to lowest (slowest) depreciation (based on the Age coefficient) and shows the 2-standard-deviation confidence bounds around the Age coefficient estimate in each metro. However, recall that the Age coefficient by itself is not the complete story about depreciation, as the effect of the Age-squared coefficient must also be considered, which makes the property depreciation rate a function of building age. Table 5 therefore shows for each metro the implied depreciation rates as a function of building age, as well as the time-weighted

[22] See for example Geltner & Mei (1995), and Plazzi, Torous & Valkanov (2010).

[23] For this analysis, the imputation of the age-at-demolition data was computed separately for each market.

average summary metric for each metro (which effectively compares across metro holding building age constant). Finally, Figure 9 depicts some representative age/value profiles for three major metropolitan areas, providing a visual impression of how both the average depreciation rate and the age profile of the depreciation can vary across select metropolitan areas.[24]

The extent of variation across metropolitan areas is striking. For the age-constant summary metric, the average depreciation rate for all income-producing commercial property ranges from 2.95%/year in Dallas down to 0.42%/year in Los Angeles. The age profile (see Figure 9) also can vary greatly, with NY apparently exhausting the property depreciation just prior to 85 years of building age. This probably does not generally reflect an historic building or "vintage effect" as has been sometimes found for single-family houses.[25] And income-producing properties, essentially capital assets traded in the investments industry, are probably not very susceptible to architectural style vintage year preference effects like houses may be. Rather, the exhaustion of property depreciation probably suggests rapid economic obsolescence in a dynamic metropolitan area where the highest and best use (HBU) of locations has been rapidly changing over the past couple of generations.

On the other hand, metro areas that show little depreciation right from the start, even when buildings are new, may reflect systematically higher land value proportions of total property value, even when the buildings are new. This may reflect land scarcity. Figure 10 explores this issue by regressing the metro areas' depreciation rates onto the Saiz (2010) measure of metro area real estate supply elasticity.[26] The Saiz elasticity measure is based on both regulatory and physical land supply constraints on real estate development, which Saiz (2010) has shown are major determinants of overall real estate development supply elasticity. Thus, the Saiz elasticity measure should be highly correlated (negatively) with land value and the land value fraction of total development costs (and therefore, with the average land value fraction of total property value). Metro Markets with higher Saiz elasticity measures probably tend to have lower land values. Figure 10 indeed reveals a strong positive relationship between depreciation and the Saiz elasticity. Metro areas that tend to have more elastic supply of real estate by the Saiz measure (which probably have

[24] The Age-Price profile is noisy for several metro areas as that level of granularity introduces more noise in the imputation and survival probability estimations.

[25] See Clapp & Giacotto (1998), who document that home buyers may develop preferences for certain vintages of housing construction.

[26] Figures 10, 11, 12 and 13 show results for 24 instead of 25 metro areas because at present there is no elasticity estimate available for Sacramento MSA.

lower land costs resulting in building value being a larger share of total property value) are associated with faster depreciation, especially in the early years of building life.[27] We see the opposite in metros that have the lowest Saiz elasticities.[28]

In Figure 11, we regress MSA depreciation rates against the physical land constraint component of Saiz's elasticity measure. The physical land constraint measure is a sum of various geographical constraints within a 50km radius from the center of an MSA. These constraints include the share of land area that's at more than a 15% slope, or if it is under open water or wetlands, or generally not available for development. The figure shows that depreciation rates are lower in MSAs where there are greater (higher value) physical constraints to development. This again is consistent with the view that land value proportions of total property value would be higher in such MSAs and therefore, depreciation in the structure would be a smaller percentage of total property value.

In Figure 12, we regress MSA depreciation rates against the Wharton Land Regulation Index (WLRI, also a component of Saiz's elasticity measure). In the Figure, higher values reflect greater regulatory constraints and we see a negative relationship between average depreciation rates and the WLRI. However, the relationship between depreciation and regulatory constraints in Figure 12 is weaker than the relationship between depreciation and physical land constraints in Figure 11. Onerous regulations constrain development without adding to land value (they don't cause land scarcity per se but merely an increase in development costs), while physical land constraints should cause land scarcity and higher land costs. In a simple regression of average MSA depreciation rates onto the Saiz physical land constraints measure and the WLRI, we find that the physical land constraints measure has greater explanatory power than the WLRI measure. The physical land constraint measure has a bigger coefficient (-0.71) and higher statistical significance (at 1% level) than WRLI, which has a coefficient of -0.37 and is only statistically significant at the 10% level. Physical land constraints alone can explain over 40% of the variation in average depreciation rates across MSAs while adding WRLI only marginally increases the explained variation to 50%. Thus, low depreciation is more associated with physical land constraint than with regulatory constraints.

[27]As noted, lower depreciation as a fraction of property value in later years (older buildings) in metro areas with rapid initial depreciation rates could reflect exhaustion of building value due to widespread economic obsolescence of structures reflecting very dynamic metropolitan growth. Ex.s. include Dallas, Denver, Phoenix, Atlanta, etc.

[28]Most notably the West Coast metros (LA, SF, SD, Seattle, Portland) and major North Atlantic metros (NY, Bos, DC).

The analysis in Figures 10, 11 & 12 explores a major cause of the cross-section of metropolitan depreciation rates in commercial property. On the other hand, the analysis in Figure 13 explores a major effect of this variation in depreciation rates. Figure 13 regresses the average cap rates of property sale transactions onto the average depreciation rates across the Metro Markets. As noted in our derivation of the direct capitalization formula for property value in Formula (3.2) in Section 3, cap rates can be viewed as reflecting essentially or primarily the current opportunity cost of capital (the investors' expected total return, $r_{i,t}$) minus the long-term expected growth rate in property value (what we labeled $g_{i,t}$, which fundamentally and primarily reflects the long-term growth in property net income). Clearly the long-term growth rate strongly reflects the property depreciation rate that we have been estimating. Therefore, we should expect property transaction prices, as reflected in their cap rates, to be partially and importantly determined by depreciation expectations. Thus, the dispersion in cap rates should be correlated with the dispersion in depreciation rates across Metro Markets. Figure 13 shows that this is exactly what we find. The relationship is strongly positive and statistically significant.

However, the cap rate/depreciation relationship in Figure 13 is less than a one-to-one correspondence (slope is less than 1.00). If cap rates were completely determined by the $r_{i,t} - g_{i,t}$ relationship, and if $g_{i,t}$ were completely determined by depreciation (growth is the negative of depreciation), then we would expect the estimated slope line in Figure 13 to be closer to 1.00. Instead, the slope is just under 0.5. Apparently cap rates are a bit more complicated than $r_{i,t} - g_{i,t}$ and/or the growth that matters to investors is more complicated than just the long-term depreciation that characterizes the metro area.

Nevertheless, Figure 13 suggests that the type of depreciation we are measuring is important for investors, as it should be. This finding suggests some nuance on the point we made previously that in current industry practice the routine cash flow forecasts in individual property investment DCF valuations seem to ignore real depreciation and the differences in depreciation across metro areas. While this is true of the cash flow forecasts in the numerators of the DCF present value analyses, the discount rates applied in the denominators are more flexible and are used to bring those cash flow forecasts in the numerators to a present value that coincides with current asset market valuation which does, apparently, reflect sensitivity to differences in growth and depreciation across metro areas. In other words, the discount rates used by investors must tend to be smaller in metro areas with less depreciation, and larger in those with greater depreciation. An effect which actually, realistically exists in the numerators (cash flows) is instead applied in the denominators (discount rate). As the discount rate is, in principle, the investor's going-in expected return, this suggests a lack of realism in these expected returns, both on average in general, and relatively speaking cross-sectionally, particularly in high depreciation Metro Markets such as many in the South and interior Sun Belt.[29]

7 Conclusion

In this paper we have analyzed the wealth of empirical data about U.S. commercial investment property contained in the RCA transaction price database in order to characterize the nature and magnitude of real depreciation. We introduce and explicate what we call the investment perspective for this analysis, which differs from that of the income tax policy oriented studies that have dominated most of the past literature in the U.S. The investment perspective is based on before-tax cash flow and market value metrics such as the IRR and the holding period total return that are prominent in the financial economics field, instead of on the historical cost accrual accounting perspective that underlies IRS tax policy in the U.S. Given our investment perspective, we focus on depreciation as a fraction of property total value (including land value), although we make some observations about building value fractions in order to place our empirical findings in comparison to results reported in earlier literature.

To briefly summarize our empirical findings about depreciation in income property viewed from the investment perspective, we see first that depreciation is significant. With average rates well over 100 basis-points per year, often over 200 bps in newer properties, depreciation has an important impact on realistic expected returns and property investment values. Furthermore, depreciation varies in interesting ways. It tends to be greater in younger properties (those with more recently constructed buildings). This probably largely reflects the relative share of land value and building structure value in overall property value, as land does not tend to depreciate. Holding building age constant, depreciation tends to be slightly greater in apartment properties than in non-residential commercial properties. Depreciation varies importantly across metropolitan areas. We see that metros

[29]This lack of a realistic correspondence between the implied expected returns and the realistic expected returns does not necessarily imply that asset mispricing exists. Asset prices reflect supply and demand for investment assets, and could rationally reflect risk and return preferences and perceptions. For example, Dallas properties may realistically provide less expected return than is suggested by the discount rates employed in their DCF analyses, but they also may present less risk than would warrant expected returns as high as the discount rates.

with lower development supply elasticity, especially places with physical land constraints such as the large East and West Coast metropolises, have lower depreciation rates. Places with plenty of land and less development constraints (higher supply elasticity) have higher average depreciation (holding building age constant). We also confirm that investment property asset prices do significantly reflect the differences in depreciation rates across metropolitan areas (as they should with rational asset pricing), though depreciation can only explain about half of the cross-sectional differences in cap rates.

Finally, we have seen that real depreciation is largely caused by (or reflects) real depreciation in the net operating income (NOI) that the property can generate, rather than by "cap rate creep" (increasing property cap rate with building age). Depreciation is a long-term secular phenomenon, so it makes sense that it would largely reflect property value fundamentals. This finding, combined with the magnitude of real depreciation that we find, strongly undercuts the realism in the typical prevailing industry practice of automatically forecasting a rental growth rate of 3%/year in most cash flow pro-formas and DCF present value analyses of individual property investments.

The component of total property value (P) attributed to the building structure equals the component not attributed to land value. There are two ways to conceptually define land value: “L” is the legal/appraisal definition (value of comparable vacant lot); “C” is the economic definition (value of the redevelopment call option). In the graph below, S = P-C. But most practical applications use the legal definition of land value, and S = P-L. Depreciation results from any/all of three forms of obsolescence: (i) Physical (wearing out, more expensive maintenance), (ii) Functional (components & design no longer optimal for the intended use), & (iii) Economic (intended use no longer optimal for the site).

NAREIT Alert (December 18, 2015)

NAREIT Alert Important Industry Updates from NAREIT

Dec. 18, 2015

Late on Dec. 15, Congressional leaders announced they had reached agreement on a $650 billion year-end "tax extenders" package named the Protecting Americans from Tax Hikes Act of 2015 (the PATH Act) that they believe lays the groundwork for Congress and the next President to consider comprehensive tax reform. On Dec. 17, the House of Representatives voted 318-109 to approve the measure, the Senate voted 65 to 33 on Dec. 18 to approve it, and President Obama signed the bill into law the same day. The leaders released the PATH Act's statutory language, a section-by-section summary, a detailed summary by the Joint Committee on Taxation and a revenue estimate of all provisions in the bill. Important elements of both FIRPTA and REIT reform are included in the PATH Act, and NAREIT commends the leadership for incorporating both the FIRPTA and the Update and Streamline REIT Act (U.S. REIT Act) changes that were discussed in the Dec. 8 NAREIT Alert.

FIRPTA Reform

Foreign investors of any type will be able to double (5 percent to 10 percent) their investment in publicly traded U.S. REITs and certain other entities held by qualified shareholders that are exempt from the FIRPTA exit tax on gains from sale of stock and from capital gain distributions. The PATH Act also contains a useful presumption for listed REITs that will make it easier for them to be considered domestically controlled so as to be exempt from

FIRPTA, effective on the PATH Act's date of enactment.

Foreign pension and retirement fund investments in U.S. REITs and real estate will no longer be subject to the FIRPTA exit tax on gains from sale of the property or REIT stock and from capital gain distributions. The PATH Act reflects some technical changes made from the Dec. 7 proposal released by Ways & Means Chairman Kevin Brady (R-TX) that clarifies the original intent to exempt foreign pension plans from FIRPTA for both sales of REIT stock as well as REIT capital gains distributions, whether or not that ownership is direct or through a partnership.

Both changes will apply to any disposition on and after the package's date of enactment and for any distribution by a REIT on or after the enactment date for which the REIT receives a dividends paid deduction for its taxable year ending after such date. The PATH Act also includes three revenue raising FIRPTA proposals that were included in the Senate Finance Committee's passage of S. 915 on Feb. 11, 2015 that are described in detail in a Senate Finance Committee Report.

U.S. REIT Act

As described in more detail in the Dec. 8 NAREIT Alert, the PATH Act would include almost all of the provisions in the U.S. REIT Act that was introduced by Representatives Pat Tiberi (R-OH) and Richard Neal (D-MA) in 2012.

These provisions will improve safe harbors from the dealer sales rules; repeal the preferential dividend rules for both listed and public non-listed REITs and provide the IRS with the authority to provide relief to private REITs from these antiquated rules (effective for distributions in taxable years beginning after Dec. 31, 2014); enhance the ability of taxable REIT subsidiaries (TRSs) to provide certain services; eliminate potential double taxation of earnings and profits; enhance the ability of REITs to hold certain debt assets of listed and public non-listed REITs; enhance the ability of REITs to hold certain ancillary personal property; and improve certain REIT hedging abilities. One important change from the Dec. 7 proposal is that another one of the U.S. REIT Act proposals to expand certain services that a timberland REIT TRS can provide was included in the PATH Act.

Other than the preferential dividend changes as described above, the U.S. REIT Act changes will apply to post-2015 taxable years.

REIT Spin-offs

Under the PATH Act, C corporations will no longer be able to spin off REITs in a tax-free transaction, but REITs will be able to spin off REITs and their TRSs held for at least three years on a tax-free basis. The PATH Act includes a technical change that clarifies that a TRS can be spun off on a tax-free basis even if the REIT holds the TRS through a partnership which it controls or if the TRS creates a new TRS to effectuate the spin transaction.

The PATH Act also includes a transition rule permitting a tax-free spin-off for companies which had filed prior to Dec. 7 with the IRS for a private letter ruling related to such a spin-off plan so long as the request has not been withdrawn, issued or denied as of that date.

In addition, beginning in post-2017 taxable years, the permissible size of TRSs will be reduced from 25 percent to 20 percent.

The proposal contained in the Dec. 7 proposal to limit contingent rents discussed in the Dec. 8 NAREIT Alert is not included in the PATH Act.

Other Real Estate Provisions

Finally, the PATH Act: 1) makes permanent: a) the 15-year depreciation period for leasehold improvements for property placed in service after Dec. 31, 2014; and, b) the 5-year (rather than 10-year) holding period for built-in gain tied to the conversion of a C corporation to an S corporation (and by extension to a REIT), effective in taxable years beginning after

Dec. 31, 2014; and, 2) extends for two years the section 179D deduction for energy efficient commercial buildings while updating that section's ASHRAE standards, retroactively for 2015, and then for 2016.

Dear Laurie and Viva:

The National Association of Real Estate Investment Trusts (NAREIT)[1] welcomes the opportunity to provide comments on H.R. 1, *The Tax Reform Act of 2014* (based on the discussion draft proposal, released on February 26, 2014) with respect to provisions to reform the taxation of financial products (the 2014 TRA).[2] NAREIT previously submitted comments on April 25, 2013 (the Initial Comments) regarding the initial financial products discussion draft released by former Ways and Means Committee Chair Dave Camp on January 23, 2013 (the Initial Discussion Draft). [3] A copy of the Initial Comments is attached.

Many of the concerns NAREIT expressed regarding the Initial Discussion Draft were addressed in the 2014 TRA. However, NAREIT continues to believe that aspects of the proposal to require mark-to-market accounting for derivatives and current inclusion of income on market discount bonds, if enacted, would unintentionally present problems for REITs and other investors in real estate and mortgage-related securities.

NAREIT looks forward to working with Congress on these issues.

EXECUTIVE SUMMARY

NAREIT believes that the 2014 TRA's proposal to mark-to-market "derivatives" continues to be too broad and would apply mark-to-market accounting to many common commercial transactions.[4] Accordingly, NAREIT

[1] NAREIT®, the National Association of Real Estate Investment Trusts®, is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate, and finance income-producing real estate, as well as those firms and individuals who advise, study, and service those businesses
[2] http://tax.house.gov/.
[3] http://waysandmeans.house.gov/uploadedfiles/leg_text_fin.pdf and http://waysandmeans.house.gov/uploadedfiles/final_financial_products_discussion_dated_tomorrow.pdf.
[4] President Obama's fiscal year 2016 budget contains a similar proposal to mark certain derivatives to market. Depending upon the specific details of the President's proposal, NAREIT would have similar concerns with that proposal.

believes the 2014 TRA should be amended to:

1) for purposes of the exception from mark-to-market accounting for derivatives with respect to real property, clarify that the definition of "real property" is the same for both investors and dealers (*e.g.*, the definition for investors is not limited to undeveloped land);

2) expand the exception from mark-to-market accounting for derivatives with respect to hedging transactions, which would: a) ensure that the market for "to be announced" (TBA) forward contracts to acquire mortgage-backed securities (MBS) guaranteed by Fannie Mae, Freddie Mac and Ginnie Mae (collectively, the Agencies) would not be disrupted in a way that could increase the interest rates borrowers pay on residential mortgage loans and possibly jeopardize the ability to offer 30-year, fixed rate mortgages to the public; b) allow REITs to continue to use derivatives with respect to Government securities to hedge fluctuations in the value of their investments in MBS and mortgage loans; and, c) clarify that a borrower's "rate-lock" is not a derivative that needs to be marked-to-market, which could affect mortgage lending activity around year-end; and,

3) allow REITs the ability to elect not to include accrued market discount in income currently, which would eliminate the possibility that REITs could have liquidity issues (potentially resulting in the need to incur additional debt or sell assets they otherwise would hold for the long term) as a result of having to distribute or pay corporate income tax on phantom market discount income.

DISCUSSION

A. Background

1. REIT Distribution Requirement

Background on REITs and the various requirements for qualification as a REIT are described in more detail in the Initial Comments. NAREIT concerns with the 2014 TRA generally relate to the distribution requirement required for REIT qualification. [5] A REIT must distribute to its shareholders at least 90% of its REIT taxable income (excluding net capital gain) each year (the 90% Distribution Requirement).[6] Like a mutual fund (called a regulated investment company in the Internal Revenue Code of 1986, as amended (the Code))[7] on which it is patterned, a REIT is allowed a dividends paid deduction in computing its taxable income because the taxable income so distributed is no longer available to the REIT.[8] Thus, if a REIT distributes 100% of its taxable income, it will not pay corporate income tax.

---

[5] I.R.C. § 857(a)(1).
[6] *Id.*
[7] References to "section" in this letter are to sections of the Code. References to "Proposed Section" are to the Code as it would be amended by the TRA 2014.
[8] I.R.C. § 857(b)(2)(B).

A limited exception from the 90% Distribution Requirement is available for certain types of "phantom" or "noncash" income recognized by a REIT.[9] A REIT is not required to distribute "excess noncash income," which is certain noncash income in excess of 5% of the REIT's taxable income (excluding net capital gains).[10] However, a REIT *is* required to distribute noncash income that does not exceed 5% of the REIT's taxable income (the 5% Basket). The potential sources of "excess noncash income" under section 857(e) include, *inter alia*, original issue discount (OID) and cancellation of indebtedness (COD) income.[11] A REIT is required to pay corporate income tax on any "excess noncash income" that it does not distribute to its shareholders.

When a REIT has phantom income that must be distributed to its shareholders, either because the phantom income is included in the 5% Basket or is phantom income that is not subject to the excess noncash income rules, the REIT may incur debt or sell assets it otherwise would hold long-term in order to satisfy the 90% Distribution Requirement. Similarly, a REIT with a corporate tax liability on excess noncash income may also have to incur debt or sell assets to pay the corporate income tax on the phantom income. Neither incurring debt nor selling assets that would otherwise be held long term is typically in the best economic interests of the REIT's shareholders. Incurring debt to satisfy the 90% Distribution Requirement or pay tax on excess noncash income would necessarily increase the REIT's leverage beyond what it otherwise would have been, and that increased leverage may make it more difficult for the REIT to survive an economic downturn.[12]

2. <u>TBA Market</u>

Approximately 90% of residential mortgage loans are currently guaranteed by the Agencies.[13] Agencies guarantee mortgage loans by guaranteeing the payment of principal and interest on,

---

[9] I.R.C. § 857(a)(1)(B).
[10] I.R.C. § 857(e)(1).
[11] I.R.C. § 857(e)(2). Excess noncash income also includes: 1) "excess inclusion income," a type of phantom income recognized by a holder of a residual interest in a real estate mortgage investment conduit (REMIC) or a taxable mortgage pool; 2) gain from certain failed section 1031 "like-kind" exchanges; and, 3) rental income accelerated under section 467 (requiring accrual of rental income on level basis on certain leases with back loaded rent). I.R.C. § 857(e)(2)(A), (B), and (C). In the case of OID, excess inclusion income, and section 467 income, the "excess noncash income" is the amount in excess of the cash actually received on the related investment.
[12] Unlike other real estate owners that use high levels of debt, average debt levels for public equity REITs are around 40%, leading to less volatility in the real estate market and fewer bankruptcies and workouts. Additionally, academics have noted the positive impact REITs have due to the transparency of information about commercial real estate that becomes available to investors, financial institutions, regulators, and private real estate investors. *See, e.g.*, Frank Packer, Timothy Riddiough, and Jimmy Shek, *Securitization and the Supply Cycle: Evidence from the REIT Market*, 39 J. PORTFOLIO MANAGEMENT 134, 135 (2013).
[13] Written Statement of Thomas Hamilton, Managing Director, Barclays Capital, on behalf of The Securities Industry and Financial Markets Association, Hearing before the U.S. Senate Committee on Banking, Housing and Urban Affairs, Subcommittee on Securities, Insurance and Investment, at 2 (Aug. 3, 2011) [hereinafter *SIFMA Testimony*].

which are referred to as Agency MBS, in return for a guarantee fee paid by the borrower. A vital risk management component of the market for Agency MBS, and thus the market for residential mortgage loans, is the TBA market.

Today, most "conforming" mortgage loans are securitized through Agency MBS. A loan originator originates a pool of mortgage loans and then sells the mortgages to the Agencies in return for "pass-through" MBS,[14] which are collateralized by the transferred mortgage loans and carry an Agency guarantee. The loan originator then typically sells the Agency MBS through a forward commitment to market makers and uses the proceeds from the sale of the Agency MBS to originate new mortgage loans. The forward commitment guarantees the price at which the market maker will purchase the MBS, thereby allowing the loan originator to "lock in" mortgage rates for a fixed period of time for homebuyers.

Market makers often dispose of the Agency MBS acquired from loan originators through the TBA market. Under a TBA contract, one party agrees to purchase, and one party agrees to sell, a certain dollar amount of Agency "pass-through" MBS at a fixed price on a fixed settlement date in the future. When the TBA contract is entered into, the specific Agency MBS to be delivered at settlement is not stipulated. Instead, only six parameters are agreed to: issuer, coupon, maturity, price, par amount and settlement date.[15] Only Agency-guaranteed, residential, single-class MBS are eligible to be traded in the TBA market. Settlement dates for TBA transactions are standardized and occur on four specified days each month, with different dates set for different types of MBS.[16] Most TBA trades are executed for settlement within one to three months. However, some trades may extend further forward from time to time. The unique structure of TBAs has created a standardized and liquid market for the forward trading of Agency MBS and the timely and efficient financing of homeownership.

Investors, such as mortgage REITs, may enter into TBAs to lock in prices of Agency MBS. However, rather than taking physical delivery at settlement, an investor may elect to "dollar roll" a TBA. A dollar roll is the combination of one TBA trade with a simultaneous offsetting TBA trade settling on a different (future) date. The ability to dollar roll TBAs allows investors and market makers flexibility in adjusting their positions for economic or operational reasons. For example, an investor who purchased a TBA but faces operational concerns with taking physical delivery on the scheduled settlement date could sell an offsetting TBA on that date and simultaneously buy another TBA due one month later, effectively avoiding the operational issue but retaining much of the economic exposure.[17]

The TBA market is what connects the residential mortgage borrower to the ultimate funders of

---

[14] In a "pass-through" structure, the underlying mortgage principal and interest payments are forwarded to security-holders on a pro rata basis, with no "tranching" or structuring of cash flows.
[15] Federal Reserve Bank of New York, Staff Report No. 468, *TBA Trading and Liquidity in the Agency MBS Market*, at 7 (2010) [hereinafter *Federal Reserve Report*].
[16] *SIFMA Testimony* at 12.
[17] *Federal Reserve Report* at 13.

residential mortgages, the secondary mortgage market. As investors enter into TBA purchase contracts to acquire Agency MBS in the future, loan originators enter into TBA sale contracts to sell loans (through the market makers) to investors. This enables a residential mortgage borrower to "lock in" a mortgage interest rate up to 30, 60 or 90 days in advance. By entering into a TBA sale contract, a loan originator can hedge the risk of its loan origination pipeline and "lock in" a price for the mortgage loans they are currently originating, which, in turn, allows borrowers the ability "lock in" interest rates on their mortgage loans up to 90 days in advance of closing on their home purchase. Although there are other means available, TBAs are a simple and low-cost way for originators to hedge loan production. Indeed, as a recent report from the Federal Reserve Bank of New York concluded, "[w]ithout TBAs, originators would have to engage in sophisticated trading strategies using a variety of derivatives to replicate the effect of a TBA."[18] The report further noted that, without TBAs, it would be more difficult for smaller loan originators to securitize loans through the Agencies.

The TBA market is the mechanism through which the vast majority of Agency MBS trading occurs,[19] and only the market for trading in Treasury securities is larger than the Agency MBS market.[20] According to the Securities Industry and Financial Markets Association, the TBA market is the most liquid and most important secondary market for mortgage loans.[21] Moreover, TBAs are the means through which many newly issued Agency MBS are distributed to investors.

The liquidity of the TBA market reduces risk management costs, thereby raising MBS prices and improving market functioning, which ultimately lowers the interest rates paid by borrowers for residential mortgage loans and enhances the availability and reliability of mortgage credit.[22] This liquidity helps mortgage originators manage risk, as it allows them to "lock in" mortgage rates in the TBA market before originating a mortgage loan.[23] This ability to sell mortgages forward through the TBA market allows loan originators the ability to offer borrowers fixed-rate loan terms well in advance of an actual mortgage closing, and is an important feature of labor market mobility in the United States. This, in turn, greatly facilitates the final negotiations of home purchases and the overall viability of the fixed-rate, 30-year residential mortgage loan.

B. <u>Proposed Sections 485 & 486: Marking-to-Market Derivatives</u>

NAREIT believes that certain provisions of Proposed Sections 485 and 486 would subject common commercial transactions to mark-to-market accounting, which would have significant unintended consequences on the markets for real estate and MBS. In addition, we anticipate that

---

[18] *Id.* at 14.
[19] *Federal Reserve Report* at 2.
[20] *SIFMA Testimony* at 14.
[21] *Id.* at *13*.
[22] *Federal Reserve Report* at 1; *SIFMA Testimony* at 2.
[23] *Federal Reserve Report* at 1; Securities Industry and Financial Markets Association, *TBA Market Fact Sheet* at 1 (2011).

Proposed Sections 485 and 486 could impair the ability of some REITs to satisfy the 90% Distribution Requirement and could create liquidity problems for REITs.

Proposed Section 485 would require taxpayers to mark to market for federal income tax purposes any "derivative" held at the close of a taxable year.[24] All items of income, loss, and deduction from any "derivative" would be treated as ordinary income.[25]

The 2014 TRA, unlike the Initial Discussion Draft, would treat mark-to-market income recognized under Proposed Section 485 as a potential source of excess noncash income.[26] Although treating mark-to-market income as "excess noncash income" is a significant improvement over the Initial Discussion Draft, there may be situations in which a REIT would have to recognize income under Proposed Section 485 and would not have cash from the transaction to satisfy the 90% Distribution Requirement. As noted above, a REIT is excused from distributing only the noncash income that exceeds the 5% Basket. A REIT may have difficulty distributing the mark-to-market income included in the 5% Basket. In addition, a REIT would have to pay corporate income tax on any excess noncash income that it did not distribute, and the 90% Distribution Requirement may leave a REIT with insufficient cash to pay the corporate tax on the mark-to-market income that is treated as excess noncash income. Because of the liquidity issues that Proposed Sections 485 and 486 would create for REITs and the other reasons noted below, NAREIT recommends the following improvements to Proposed Section 485 and 486.

1. <u>The Real Property Exception to the Definition of "Derivative" Should Be Clarified</u>

NAREIT believes that the current exemption in the 2014 TRA from the definition of "derivative" for real property merits clarification. The 2014 TRA did not substantively change the real property exception included in the Initial Discussion Draft. NAREIT believes that common commercial transactions entered into by investors in real estate could be subject to mark-to-market accounting, which could cause some REITs to have difficulty satisfying the 90% Distribution Requirement with respect to noncash income in the 5% Basket and would require REITs to be subject to corporate tax on any undistributed phantom income treated as excess noncash income.

The current exception for real property in Proposed Section 486(b) applies only to: 1) a "tract of real property" as defined in section 1237(c); or, 2) real property that would be property described in section 1221(a)(1) (*i.e.*, property held by a "dealer") if held directly by the taxpayer.[27] The exception for "dealer" property will not apply to REITs and other long-term investors in real

[24] Proposed Section 485(a)(1).
[25] Proposed Section 485(b)(1).
[26] TRA 2014, § 3401(f)(3).
[27] Proposed Section 486(b)(1)(A). Proposed Section 486(b)(1)(B) grants the Secretary the authority to prescribe regulations or other guidance to treat multiple tracts of real property as a single tract.

estate. Indeed, REITs are subject to a 100% prohibited transaction tax on the gain from the sale of "dealer" property. Moreover, the meaning of "tract of real property" as used in Proposed Section 486(b)(1)(A)(i) is not entirely clear. The phrase "tract of real property" is borrowed from section 1237, which generally provides that a taxpayer other than a C corporation will not be treated as a dealer with respect to a "tract of real property" solely because the taxpayer subdivided the tract.[28] One of the requirements of section 1237 is that no improvement that substantially enhances the value of the tract is made by the taxpayer on the tract while held by the taxpayer or is made pursuant to a contract of sale entered into between the taxpayer and the buyer.[29] NAREIT has found no authorities that address solely the definition of "tract of real property" in section 1237(c), and the limited authorities under section 1237 generally address undeveloped land.[30]

Proposed Section 486(b)(1)(A)(i) specifically references only section 1237(c) (which itself does not limit the definition of a "tract of real property" to undeveloped land). Accordingly, NAREIT assumes that the definition of "real property" for purposes of Proposed Section 486(b)(1)(A)(i) and the dealer exception in Proposed Section 486(b)(1)(A)(ii) are the same (*e.g.*, Proposed Section 486(b)(1)(A)(i) is not limited to undeveloped land and would apply to single tracts of land with improvements on them). However, given the importance of this exception, this should be further clarified.

2. The Hedging Exception to the Definition of "Derivative" Should Be Expanded to Cover Common Interest Rate Financial Hedges

NAREIT believes that the exception from mark-to-market accounting in the 2014 TRA for derivatives that are used in hedging transactions is too narrow to cover certain common commercial transactions that mitigate the risk of interest rate fluctuations. Specifically, Proposed Section 485(b) requires ordinary treatment on all items of income or loss with respect to a "derivative." Proposed Section 486(b)(2) excludes from mark-to-market accounting under Proposed Section 485 any "hedging transaction," as defined in Proposed Section 1221(b).[31] The definition of "hedging transaction" under Proposed Section 1221(b) is generally consistent with the current definition of "hedging transaction" in section 1221(b)(2), except Proposed Section

---

[28] I.R.C. § 1237(a).
[29] I.R.C. § 1237(a)(2).
[30] There are some rulings addressing the sale of fee interests in lots in which development occurred on the lots via lease development agreements, pursuant to which a developer leases a tract under long-term leases, develops homes on the tract, and assigns leases to the ultimate tenants of the developed property. *E.g.*, Rev. Rul. 77-338, 1977-2 C.B. 312 (involving sales of fee interest in land to ultimate tenants of houses constructed under lease development agreements; leases allowed the tenants the option of removing the constructed homes at the end of the lease term); P.L.R. 8630712 (June 2, 1986) (same); P.L.R. 8038196 (June 30, 1980) (prior ruling related to P.L.R. 8630712).
[31] The TRA 14 also would repeal several current law Code sections that are applied to determine the character of income and losses from derivatives, on the grounds that these sections would be obsolete for derivatives that are marked to market when the gains and losses are treated as ordinary income and losses. For hedging transactions that are excluded from mark-to-market treatment, these sections remain relevant in determining the character of income and losses from these derivatives, and the Committee should consider retaining these sections for this purpose.

1221(b) includes some helpful changes to the hedge identification requirement and is expanded to include hedges of debt assets held by insurance companies. Under Proposed Section 1221(b)(2) (and section 1221(b)(2)), a hedging transaction includes only transactions entered into in the ordinary course of the taxpayer's trade or business primarily to manage: 1) risk of price changes or currency fluctuations with respect to *ordinary* property which is held or to be held by the taxpayer; or, 2) risk of interest rate or price changes or currency fluctuations with respect to borrowings made or to be made, or ordinary obligations incurred or to be incurred by the taxpayer. A transaction that hedges a capital asset of a taxpayer could not be a "hedging transaction" under Proposed Section 1221(b)(2) (and section 1221(b)(2)), with the exception of debt assets held by insurance companies (under Proposed Section 1221(b)(2)). Accordingly, a hedge of a capital asset generally would be subject to mark-to-market accounting under Proposed Sections 485 and 486.

For hedges that are not treated as "hedging transactions" under Proposed Section 1221(b)(2), the 2014 TRA would require both the hedge (if it is a derivative) and the hedged asset (or other item) to be marked to market, with any built-in gain (but not loss) on the hedged asset being recognized at the time the hedge is acquired.

a. TBA Market and Interest Rate Locks

NAREIT believes that the effect of Proposed Sections 485 and 486 on the TBA market is unwarranted. The definition of "derivatives" would include TBAs, as that phrase includes a "forward contract."[32] As discussed above, the TBA market is vital to the efficiency of the residential mortgage market. Because of the TBA market, loan originators can allow borrowers to lock-in interest rates on a cost-effective basis. The TBA market also provides a means for loan originators to sell new Agency MBS to market makers and for market makers, in turn, to distribute those Agency MBS to investors.

NAREIT believes that requiring mark-to-market accounting of TBAs could disrupt the TBA market. Investors in new Agency MBS may avoid acquiring TBAs near the end of their taxable year so they do not have to recognize ordinary mark-to-market income. Any disruption to the TBA market would ripple through the markets for Agency MBS and residential mortgage loans, likely increasing the interest rate paid by borrowers under standard fixed-rate, 30-year residential mortgage loans. Not only would the avoidance of TBAs have the effect of reducing the availability of mortgage credit over year-end, but it may also force market participants to reduce their prudent interest rate risk management by reducing their TBA hedging activity.

Marking to market TBAs may make it difficult for some mortgage REITs to satisfy the 90% Distribution Requirement. Under current law, a REIT seeking to acquire a new Agency MBS through a TBA would not have an income event as a result of entering into a TBA and taking delivery of the TBA. Under the 2014 TRA, the same REIT would have ordinary income if the

[32] Proposed Section 486(a).

TBA was "in the money" at the end of its taxable year. Although the REIT would have no income from the TBA (indeed, the REIT would have to pay for the Agency MBS subject to the TBA), the REIT would have an increased distribution requirement as a result of having to distribute any mark-to-market income that is included in the 5% Basket. In addition, the REIT could have a significant corporate tax liability on any mark-to-market income treated as excess noncash income. REITs would either have to reduce their participation in the TBA market, which could contribute to difficulties in arranging for home financings, or potentially face difficult issues satisfying the 90% Distribution Requirement and paying the corporate income tax on any excess noncash income.

Finally, NAREIT believes there is a risk that borrowers who have "locked in" a mortgage interest rate prior to closing could be treated as having an "option" to acquire a mortgage loan at a specified interest rate. If interest rates increase after the borrower "locks in" the interest rate and the lock extends over the end of the borrower's taxable year, the borrower would have phantom ordinary income. Clearly, a rate lock is not a speculation on the part of the borrower since an unrealized gain in the value of the rate lock could not be realized by selling or trading it. Nevertheless, borrowers could avoid "locking in" interest rates on residential mortgage loans if they knew they could potentially pay a derivatives tax as the 2014 TRA contemplates in its current form.

NAREIT believes the 2014 TRA should include an expanded exception for hedging transactions that would address the issues discussed above with TBAs and interest rate locks, which are standard commercial real estate transactions and not speculative in nature. Specifically, to ensure that TBAs are not subject to mark-to-market accounting, NAREIT suggests treating Government securities as ordinary property solely for the purpose of determining whether the exception for hedging transactions applies to a derivative that hedges these securities.[33] By treating Government securities as ordinary property, TBAs would satisfy the definition of a "hedging transaction" under Proposed Section 1221(b) for this purpose, and they would not be subject to mark-to-market accounting. A "Government security" would be defined as "any security issued or guaranteed as to principal or interest by the United States, or by a person controlled or supervised by and acting as an instrumentality of the Government of the United States pursuant to any authority granted by the Congress of the United States, or any certificate of deposit for any of the foregoing." This is the same definition of "Government securities" that is used for purposes of the Investment Company Act of 1940, [34] and that is incorporated into the rules for REITs and regulated investment companies.[35] NAREIT believes

---

[33] Alternatively, the Committee should consider addressing this specific issue through a broader reform to the current law section 1221(b)(2) definition of a hedging transaction that generally would permit hedges of capital assets to be treated as hedging transactions for tax purposes. Gains and losses from hedges of capital assets already typically result in capital gains and losses, and concerns regarding the "harvesting" of tax losses presumably would be addressed by the application of regulation section 1.446-4.

[34] Investment Company Act of 1940, 15 U.S.C. § 80a-2(a)(16) (2012).

[35] I.R.C. §§ 851(c)(6) (using the definitions of terms in the Investment Company Act of 1940 for purposes of the rules for regulated investment companies), 856(c)(5)(F) (using the definitions of terms in the Investment Company Act of 1940 for purposes of the REIT rules); G.C.M. 39700 (Mar. 7, 1988) (applying the definition of "Government

treating Government securities as ordinary property for this purpose would ensure that the TBA market is not disrupted by strategies to avoid mark-to-market accounting. In addition, mortgage REITs would be able to use derivatives on Government securities as asset hedging transactions without i) endangering their ability to satisfy the 90% Distribution Requirement (as a result of having to distribute any mark-to-market income that is included in the 5% Basket), and, ii) causing liquidity issues as a result of having a significant corporate tax liability on any mark-to-market income treated as excess noncash income.

With regard to interest rate locks, these transactions already satisfy the "hedging transaction" definition and, therefore, are eligible for the exception for hedging transactions in the 2014 TRA. However, individual borrowers are likely unaware of the identification requirement for securing hedging transaction treatment of their residential mortgage loan interest rate locks. The consequences under current law of failing to satisfy the identification requirement are unlikely to be significant for these borrowers, but could be significant if their interest rate locks were marked to market under the 2014 TRA. Therefore, NAREIT recommends that the identification requirement not apply solely for the purpose of determining whether an interest rate lock on a residential mortgage loan satisfies the definition of a "hedging transaction" under Proposed Section 1221(b) and, in turn, the exception from mark-to-market accounting for hedging transactions.

b. Hedges of Outstanding MBS and Mortgage Loans

NAREIT notes that the 2014 TRA may harm mortgage REITs that use "derivatives" with respect to Government securities to hedge fluctuations in the value of their MBS and mortgage loans caused by interest rate changes. In particular, under the 2014 TRA, both the derivative and the hedged MBS or mortgage loan would be marked to market, and any built-in gain (but not loss) on the hedged MBS or mortgage loan would be recognized upon acquisition of the derivative because the MBS or mortgage loan in the hands of the mortgage REIT is a capital asset and, therefore, does not satisfy the definition of a "hedging transaction" under Proposed Section 1221(b).

In general, mortgage REITs invest primarily in MBS and mortgage loans. In accordance with the requirements for REIT qualification, mortgage REITs typically hold those assets as investors, and their assets, accordingly, are treated as capital assets. The value of MBS and mortgage loans is sensitive to changes in interest rates. In an environment of rising interest rates or widening of the "spread" between interest rates on Treasury debt and other debt instruments, certain MBS and mortgage loans may decrease in value.

Mortgage REITs may enter into hedging transactions using Treasury bonds, Treasury bond futures or TBAs to reduce exposure to the effect of rising interest rates on their investment portfolio. Such transactions may also be used to hedge the interest rate risk on the mortgage

securities" from the Investment Company Act of 1940 for purposes of the rules for regulated investment companies).

REIT's short-term, floating rate borrowing. If the mortgage REIT designates those transactions as "hedging transactions" with respect to its short-term, floating rate borrowing, they are treated as qualified liability hedges, and the income from those transactions is ignored for purposes of the REIT gross income tests.[36]

Some mortgage REITs, however, do not designate all of those types of transactions as "hedging transactions" or may not have sufficient borrowings to be able to designate all of those transactions as "hedging transactions" under the definition of section 1221(b)(2). In those cases, the transactions economically hedge fluctuations in the value of the REIT's assets. We will refer to transactions that hedge asset values as "asset hedging transactions." An asset hedging transaction would not be treated as a "qualified liability hedge," the income from which is ignored for purposes of the REIT gross income tests.[37] However, asset hedging transactions may produce qualifying income for the 95% gross income test applicable to REITs when they give rise to gain from the sale of "securities."[38]

Under current law, the failure of an asset hedging transaction to be treated as a "hedging transaction" under section 1221(b)(2) does not generally affect the ability of a mortgage REIT to satisfy the 90% Distribution Requirement or cause the REIT to incur corporate income taxes. The gain or loss on an asset hedging transaction is capital, as is the gain or loss on the hedged MBS and mortgage loans. Thus, the gains and losses from the asset hedging transaction and the hedged items can offset each other, subject to the limitations on offsetting short-term and long-term gains and losses.

Under Proposed Section 485, however, both the asset hedging transaction and the hedged MBS or mortgage loan would be marked to market (with gains and losses be treated as ordinary), and any built-in gain on the MBS or mortgage loan would be recognized upon acquisition of the asset hedging transaction. While the gains and losses on the asset hedging transaction and the hedged MBS or mortgage loan would be expected to largely offset each other, they will not entirely offset each other in all cases. Any residual gains, as well as the recognition of any built-in gains on the hedged MBS or mortgage loan, may increase a mortgage REIT's distribution requirement, impair its ability to satisfy the 90% Distribution Requirement, and require the REIT to pay the corporate income tax liability on excess noncash income.

NAREIT believes the 2014 TRA should include an additional expansion to the exception for hedging transactions that would address the issues discussed above with hedges of outstanding MBS and mortgage loans which—like TBAs and interest rate locks—are standard commercial real estate transactions and not speculative in nature. Specifically, to ensure that these asset hedging transactions s are not subject to mark-to-market accounting, NAREIT suggests treating MBS and mortgage loans as ordinary property solely for the purpose of determining

[36] I.R.C. § 856(c)(5)(G).
[37] I.R.C. § 856(c)(5)(G).
[38] I.R.C. § 856(c)(2)(D) (treating gain from the sale of "securities" as qualifying income for the 95% gross income test applicable to REITs).

whether the exception for hedging transactions applies to a derivative that hedges these assets.[39] By treating MBS and mortgage loans as ordinary property, the asset hedging transactions would satisfy the definition of a "hedging transaction" under Proposed Section 1221(b) for this purpose, and they would not be subject to mark-to-market accounting.

C. Proposed Section 1278: Current Inclusion of Deemed Interest Component of Market Discount – NAREIT Recommends That Flexibility under Current Law Regarding Recognition of Market Discount Be Retained for REITs

Although it supports generally the Committee's effort to reform the market discount rules, NAREIT notes that the requirement to include market discount in income currently could make it difficult for some REITs to satisfy the 90% Distribution Requirement (as a result of having to distribute any market discount income that is included in the 5% Basket) and could cause some REITs to have liquidity issues as a result of the corporate tax liability on any market discount treated as excess noncash income.

Under the 2014 TRA, REITs would be required to include a portion of the accrued market discount in income even if no cash payment was received in respect of the debt instrument.[40] The 2014 TRA, unlike the Initial Discussion Draft, would treat market discount income as a potential source excess noncash income.[41] Although treating market discount income as excess noncash income is a significant improvement over the Initial Discussion Draft, there may be situations in which a REIT would have to recognize significant market discount income and would not have cash from the transaction to satisfy the 90% Distribution Requirement. As noted above, a REIT is excused from distributing noncash income only to the extent it exceeds the 5% Basket. A REIT may have difficulty distributing the market discount income included in that 5% Basket. Moreover, a REIT may not have sufficient liquidity to pay the corporate income tax on any market discount income treated as excess noncash income.

The proposed treatment of market discount could present problems for mortgage REITs that invest in loans that do not require the borrower to make significant principal payments prior to maturity. For example, commercial mortgage loans typically require a single "bullet" principal payment at maturity. REITs that invest in commercial mortgage loans would be required by the 2014 TRA to include in income market discount, even though they would not receive any cash that could be used to i) satisfy the distribution requirement with respect to the market discount income included in the 5% Basket, or, ii) pay corporate tax on the noncash income that exceeds the 5% Basket.

---

[39] As noted above with regard to TBAs and interest rate locks, the Committee alternatively should consider addressing this specific issue through a broader reform to the current law section 1221(b)(2) definition of a hedging transaction that generally would permit hedges of capital assets to be treated as hedging transactions for tax purposes. Gains and losses from hedges of capital assets already typically result in capital gains and losses, and concerns regarding the "harvesting" of tax losses presumably would be addressed by the application of regulation section 1.446-4.

[40] Proposed Section 1278(a).

[41] 2014 Discussion Draft, § 3401(f)(3).

NAREIT believes this issue could be solved by allowing REITs the ability to elect to: 1) include market discount in income under Proposed Section 1278; or, 2) be subject to the current rules for the recognition of market discount in section 1276. Under current law, unless a taxpayer elects under section 1278(b) to include market discount into income as it accrues, market discount is included in income under section 1276 only if the taxpayer has received a principal payment or disposes of the debt instrument. In those cases, the taxpayer generally has cash from the debt instrument in an amount equal to or in excess of the market discount included in income.[42] As a result, the recognition rules in section 1276 do not generally make it difficult for a REIT to comply with the 90% Distribution Requirement.

NAREIT believes that the flexibility under current law regarding recognition of market discount should be retained for REITs. Otherwise, REITs may be reluctant to acquire debt instruments with market discount, because acquiring those instruments may make it difficult for the REIT to satisfy the 90% Distribution Requirement and pay corporate tax on any market discount income treated as excess noncash income.[43]

If you would like to discuss these issues in greater detail, feel free to contact me at (202) 739-9408 or tedwards@nareit.com or Dara Bernstein, NAREIT's Senior Tax Counsel, at (202) 739-9446 or dbernstein@nareit.com.

Respectfully submitted,

Tony M. Edwards
Executive Vice President & General Counsel
Attachment

[42] I.R.C. § 1276(a).
[43] The government's response to the 2007-2009 credit crisis evidenced the policy goals of: 1) encouraging lenders to modify mortgage loans to avoid foreclosure; and, 2) injecting liquidity into the market for distressed debt, mortgage loans, and mortgage-backed securities. Failure to retain for the flexibility under current law regarding recognition of market discount for REITs would impede the ability of REITs to advance those goals in the event of a similar future crisis.

REITs: BUILDING DIVIDENDS AND DIVERSIFICATION®

March 23, 2016

The Honorable Jacob J. Lew
Secretary of the Treasury
U. S. Department of the Treasury
1500 Pennsylvania Avenue, N.W.
Washington, D.C. 20220

The Honorable John A. Koskinen
Commissioner
Internal Revenue Service
1111 Constitution Avenue N.W.
Washington, DC 20224

Re: Definition of "Congregate Care" for Purposes of Definition of "REIT Health Care Facility"/Notice 2016-26

Dear Secretary Lew and Commissioner Koskinen:

NAREIT appreciates the opportunity to submit these comments in connection with inclusion of a guidance item defining "congregate care facility" for purposes of the definition of a "health care facility" under sections 856(e)(6)(D)(ii) and (l)(4)(B) of the Internal Revenue Code of 1986, as amended (the Code)[1], on the Treasury Department and IRS' 2015-2016 Priority Guidance Plan, [2] as well as in response to Notice 2016-26's request for comments on recommendations for the 2016-17 Priority Guidance Plan.

NAREIT® is the worldwide representative voice for REITs and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate, and finance income-producing real estate, as well as those firms and individuals who advise, study, and service those businesses.

EXECUTIVE SUMMARY

NAREIT commends the IRS and the Treasury Department for its efforts and success in issuing private letter rulings (PLRs) over the past few years in the REIT area that effectuate Congressional intent and are consistent with current market practices in the health care industry. As a result, and, as further discussed below, we do not believe that additional guidance is needed or merits priority attention. Based on the ruling practices of the IRS in several private letter rulings dealing specifically with such facilities, health care REITs have developed a good working understanding that the IRS and the Treasury

[1] Unless otherwise provided, all "section" references herein shall be to a section of the Code.
[2] *See* 2015-16 Priority Guidance Plan, 2d Quarter Update (Feb. 5, 2016)

Department currently interpret the definition of a "congregate care facility" as an age-restricted community, where, in addition to providing communal dining and living quarters, services are provided to advance the health and physical well-being of its residents. These rulings have provided sufficient guidance for health care REITs and advisors to determine whether a facility meets the definition or which additional health and wellness-related services should be provided to bring a facility within the definition.

If the IRS and the Treasury Department issue guidance of general application under this project, NAREIT requests that: 1) the IRS and Treasury be mindful not to expand (or otherwise change) the definition of a "congregate care facility" in a manner that would up-end the market by inadvertently including age-restricted or non-age-restricted apartments, student housing, typical children's summer camps, or other properties generally not considered health care facilities in the definition, 2) the guidance continues to treat independent living facilities similar to those described in PLRs 201147015, 201429017, and 201509019 as "health care facilities," and, 3) the guidance have a prospective effective date so that the new rule would apply only to properties contracted to be acquired after the date the change is effective.

DISCUSSION

I. Background: Health Care REIT Industry

Health care REITs are REITs that own and manage a variety of health care-related properties and collect rent from tenants. Health care REITs' property types include senior living communities, hospitals, life science buildings, medical office buildings and skilled nursing facilities. As of December 31, 2015, there were 17 health care REITs in the FTSE NAREIT All REITs Index,[3] with a combined market capitalization of $90.7 billion.

These REITs owned over 7,000 properties with an estimated value of nearly $90 billion. The number of properties increased 11% over the past year, and has risen 108% and 212% over the past five and 10 years, respectively. Net property investment increased 19% over 2015, and has risen 167% and 565% over the past five and 10 years, respectively.

Total Funds From Operations (FFO) of health care REITs was $4.9 billion in 2015. Net Operating Income (NOI) was $8.5 billion, and total dividends paid were $5.3 billion.

For additional background regarding the history of legislation applicable to Health Care REITs, *see* "Toward a Workable Definition of a REIT Healthcare Facility," by Paul W. Decker, Ameek Ashok Ponda, and Jonathan Stein, *Tax Notes*, December 5, 2011, at p. 1231, available at: http://www.sandw.com/assets/htmldocuments/B1362833.PDF.

II. Definition of Congregate Care Facility for Health Care REITs

The term "health care facility" was added to the Code as part of the REIT Modernization Act of 1999 (RMA)[4] (effective 2001). As further described below, the term was applicable at the time in two specific contexts. First, it was relevant as an expansion of the "foreclosure property" rule to terminations of health care property leases absent a formal default or imminent default. In addition, the RMA referenced the definition of "health care facility" in the context of taxable REIT subsidiaries (TRSs), entities which Congress created to provide non-customary services to REIT tenants, and are able to lease lodging properties directly from an affiliated REIT in exchange for qualifying rental income, but are prohibited from operating health care properties. In 2008, Congress enacted the REIT Investment Diversification and Empowerment Act of 2007 (RIDEA),[5] extending the TRS rule regarding the leasing of lodging facilities to the leasing of health care properties by TRSs.

A. Health Care Facilities and Foreclosure Property Rule

By way of background, qualifying REIT income for purposes of sections 856(c)(2) and (3) is either passive income or specific real estate-related income, including "rents from real property." The term "rents from real property" is a defined term and generally does not include tenant-specific or "non-customary" services. While the above is the general rule, there are cases in which a REIT must foreclose on a lease or a loan, and, as a result, the REIT will come into possession of property that generates otherwise non-qualifying income. In such a case, the Code permits the REIT to operate the property and earn qualifying REIT income for a specified period of time. Such property is termed "foreclosure property."

Income and gain from "foreclosure property" as defined in section 856(e) which would otherwise be nonqualifying REIT income (under sections 856(c)(2) and (3)) is qualifying REIT income under those sections if the REIT makes a foreclosure property election under section 856(e)(5). Section 856(e)(1) generally defines "foreclosure property" as:

> any real property (including interests in real property), and any personal property incident to such real property, acquired by the real estate investment trust as the result of such trust having bid in such property at foreclosure, or having otherwise reduced such property to ownership or possession by agreement or process of law, after there was default (or default was imminent) on a lease of such property or on an indebtedness which such property secured.

While the general definition of foreclosure property requires a default or imminent default, the RMA added section 856(e)(6)(A) to expand the term 'foreclosure property' to include any qualified health care property acquired by a real estate investment trust as the result of the termination of a lease of such property (other than a termination by reason of a default, or the

[4] Sections 541-71 of Pub. L. No. 106-170, the Ticket to Work and Work Incentives Improvement Act of 1999.
[5] P.L. 110-289, §§3031-3071.

imminence of a default, on the lease).” Thus, for example, in the “health care facility” context, the RMA expanded the “foreclosure property” rules to cover normal lease expirations or other non-default situations.

Section 856(e)(6)(D)(i) defines “qualified health care property” as a “health care facility” or property necessary or incidental to the use of a “health care facility.” The term “health care facility” is defined in section 856(e)(6)(D)(ii) as:

> a hospital, nursing facility, assisted living facility, **congregate care facility**, qualified continuing care facility(as defined in section 7872(g)(4)), or other licensed facility which extends medical or nursing or ancillary services to patients, and which was operated by a provider of such services that is eligible for participation in the Medicare program under Title XVII of the Social Security Act [subchapter XVIII of chapter 7 of Title 42 (42 U.S.C.A. § 1395 et seq.)] with respect to the facility.(Emphasis added).

The RMA’s extension of the foreclosure property rules to non-defaulting terminations of health care facility leases was explained in the relevant Senate Finance Committee report:

> The Committee believes that allowing operation of health care facilities directly by a REIT for a limited period of time is appropriate to assure continuous provision of **health care services** where the facilities are acquired by the REIT upon termination of a lease (as upon foreclosure) where there may not be enough time to obtain a new independent provider of such health care services.(Emphasis added).[6]

Thus, in the case of non-health care properties, a REIT can make a foreclosure property election only with respect to property acquired on foreclosure or after imminent default. Congress recognized that requiring such dire circumstances for the tenant or borrower in the context of health care properties could hurt the residents of these facilities. As a result, Congress authorized

[6] S. Rep. No. 201, 106th Cong, 1st Sess. 58 (1999). Available at: https://www.congress.gov/106/crpt/srpt201/CRPT-106srpt201.pdf. A similar provision extending the foreclosure property rule to termination of leases of health care facilities originally was part of H.R. 1150, the Real Estate Investment Trust Simplification Act of 1997 (REITSA). Notably, however, the definition of “health care facility” in H.R. 1150 **did not include a congregate care facility**. Almost all of the REITSA provisions were included in the Taxpayer Relief Act of 1997, signed by then President Clinton on August 5, 1997. However, the extension of foreclosure property rules to lease terminations of health care properties was not included apparently for procedural reasons. In his introductory remarks concerning REITSA, Congressman E. Clay Shaw, Jr. noted the concern with the REIT’s “likely inability to simply close the facility due to **the nature of the facility's inhabitants**.” 143 Cong. Rec. E559, 561 (Daily Ed. March 21, 1997) (remarks of the Honorable E. Clay Shaw, Jr.). (Emphasis added). Thus, it appears that the original concern with respect to this provision in 1997 was a general concern for “the nature of the facility’s inhabitants,” while the concern expressed with respect to this provision in 1999 was to the more specific “to assure continuous provision of **health care services.**”

a REIT to acquire a health care property by terminating a lease with a troubled operator even if not terminating due to default or imminent default.[7]

B. "Congregate Care" Facilities and TRSs: General Background

As noted above, "rents from real properties" under section 856(d) is a defined term and generally does not include tenant-specific or "non-customary" services. In fact, more than a *de minimis* amount of tenant-specific or non-customary services at a particular REIT-owned property will disqualify all of the otherwise qualifying rental income from that property from constituting "rents from real property." Because of the significant amount of services generally provided at health care properties (and similarly, at lodging facilities), income attributable to a REIT's direct ownership and operation of these facilities cannot constitute "rents from a real property."[8] Furthermore, absent a special statutory rule otherwise, REIT could not net lease to a related tenant who operated the property because the term "rents from real property" generally excludes rents from a related party.[9]

While a REIT historically could own and net lease (to an operator or a third party tenant that hired an operator) a lodging or health care facility, this arrangement creates complexity, inefficiencies and potential conflicts of interest. As a result, in 1999 Congress enacted the RMA, which, in addition to the modification of the foreclosure property rules described above, authorized lodging REITs to own and earn qualifying rental income from leases of lodging facilities to TRSs.

Specifically, the RMA exempts from the related party rent exclusion under section 856(d)(2)(B) rents from a TRS for the lease of a lodging facility so long as, among other things, the lodging facility is operated by an independent contractor that actively operates such facilities for unrelated third parties. Further, the RMA specifically excluded from the definition of TRS an entity that operates or manages a health care facility.[10]

The RMA's related party rent exemption that allowed hotel REITs to lease properties to their TRSs was not extended to health care REITs at the time of RMA enactment. However, over time, heath care REITs became more interested in the RMA's TRS structure because, as was the case in the lodging industry, health care property operators preferred not to bear the risks of a lease, and instead preferred to operate properties. In 2008, Congress enacted RIDEA, which, among other things, exempted from the related party tenant rules rent earned for the lease of

[7] For additional background, *see* "Toward a Workable Definition of a REIT Healthcare Facility," *supra* note 3 at 1231, available at: http://www.sandw.com/assets/htmldocuments/B1362833.PDF.
[8] *See* Section 856(d)(7); Rev. Rul. 98-60, 1998-2 C.B. 751.
[9] A related party tenant is a corporation in which the REIT owns shares comprising 10% or more of the total voting power or value of such corporation or an entity other than a corporation in which a REIT owns 10% of the interests or net profits. Section 856(d)(2)(B).
[10] Section 856(l)(3)(A).

"qualified health care property (as defined in section 856](e)(6)(D)(i))," provided that the property is operated by an eligible independent contractor.[11]

Since the time of RMA's enactment and as cross-referenced in RIDEA, section 856(e)(6)(D)(i) has defined qualified health care property to include any real property which is a health care facility. Furthermore, as noted above, one type of a facility specifically included in the "health care facility" as defined in section 856(e)(6)(D)(ii) is a congregate care facility.

C. "Congregate Care Facility" in Section 856(e)(D)(ii) Should Be Read in Context along with the Surrounding Words

"Congregate care facility" as used in the definition of "health care facility" in section 856(e)(6)(D)(ii) is not defined in the Code or the Treasury regulations promulgated thereunder or in the Investment Company Act of 1940, nor does any court decision or revenue ruling provide such a definition. However, as further described below, reading it as part of section 856(e)(6)(D)(ii) in its general historical context, in the context of the IRS ruling parameters, and interpreting the term under general rules of statutory construction, has yielded a manageable definition for the health care REIT industry.

1. Historical Context

At the time of the enactment of section 856(e)(6)(D)(ii) in 1999, the senior housing industry generally defined a congregate care facility as an age-restricted housing facility that provides residents with separate living quarters, but provides central dining facilities (congregate meals), housekeeping, transportation, and social and recreational activities. Subsequently, in 2004 the senior housing industry changed the name of congregate care facilities to independent living facilities.[12] The industry differentiated congregate care facilities from "senior apartments" in defining the latter as age-restricted multifamily residential rental properties that do not have central kitchen facilities and generally do not provide meals to residents, but may offer

[11] Section 856(d)(8)(B). RIDEA was intended to allow REITs to continue to participate in the ownership of congregate care facilities in a changing business environment. "Operators that now lease such facilities would rather have a REIT (through its TRS) assume any leasing risk and instead be hired purely to operate the facilities. Accordingly, this provision would extend the exception made in 1999 for lodging facilities to health care facilities. This change should make it easier for health care facilities to be provided to senior citizens and others in need of such services." 153 *Cong. Rec.* S10931 (introductory remarks by Senator Orrin G. Hatch). For additional background regarding RIDEA, *see* "REITs Empowered," by Tony M. Edwards and Dara F. Bernstein, *Tax Management Real Estate Journal*, at 1, Vol. 24, No. 11, 11/05/2008, available at: https://www.reit.com/sites/default/files/media/Portals/0/PDF/REITSEMPOWERED.pdf.

[12] In 2004, the senior housing industry, in a push for standardized data reporting and improved marketability of the congregate care industry segment, standardized the names and definitions of different senior housing facility types, and "[a]mong the most significant changes in specialized terms [was] the renaming of the property type "congregate care" to "independent living". "NIC and ASHA Announce Standardized Classifications For Seniors Housing Property Types," National Investment Center for the Seniors Housing and Care Industry (Press Release, April 2004).

community rooms, social activities, and other amenities.[13] Many facilities marketed as "independent living facilities" now provide some level of health care-related and wellness services as the health care/senior living industry has evolved. Also, it should be noted that the leading senior housing trade associations work with the health care industry not only in providing services and assistance in marketing independent living facilities, but also assisted living facilities. Indeed, a significant number of REITs' senior housing facilities are combined independent living/assisted living facilities.

The industry and tax practitioners believe that the existing ruling practice has created clarity that is working reasonably well and has addressed a significant number of fact patterns distinguishing between what is and is not a congregate care facility. While the ruling practice does not establish a fixed rule applicable to all fact patterns in a changing and constantly evolving industry, it has allowed the industry and its advisors to structure investments with considerable confidence. Any effort to provide more formal guidance, such as a list of required wellness programs or health care-related services, may create more uncertainty and may result in the need for more PLR requests to clarify different factual situations depending upon the nature of the guidance due to the nature of this evolving sector.

The health care business also is a highly regulated one, and rearranging existing leases, ownership, "business configurations" and contracts as a result of any new guidance may be not only expensive, but extremely disruptive and difficult to do, particularly with complex and various multiple state regulatory agency oversight, in the wake that any new Service guidance may require. Any new guidance therefore should include liberal transition rules due to the numerous potential unintended consequences that might ensue.

2. IRS Ruling Practice

a. *Pre-RIDEA*

Prior to RIDEA's enactment, the IRS ruled in PLR 200813005 that age-restricted residential "independent living facilities" with congregate dining and possible other services such as "exercise and wellness programs, medical alert systems, security services, and daily status checks," but at which the taxpayer expressly represented that there would be "no medical or nursing services, or skilled nursing licensed beds," was *not* a "qualified health care facility" within the meaning of section 856(e)(6)(D)(ii).

b. *"Mixed-Use Facilities"*

More recently, the IRS has issued a series of private letter rulings (PLRs 201104033, 201104023, 201125013 and 201250019) dealing with "mixed use" properties

[13] In the last few years, the REIT industry and its professionals have accepted and embraced the industry definition of congregate care facilities, now known as" independent living" facilities.

that included both "independent living" facilities, as well as "assisted living facilities." In all those cases, the IRS appropriately ruled that the facilities were "health care facilities."

In short, the IRS private letter rulings have, without exception, concluded that a mixed use facility (*i.e.*, one that combines independent living with assisted living) is a health care facility.

c. *Age-Restricted Residential Communities*

Furthermore, there have been several private letter rulings in the last four years that have provided that age-restricted independent living facilities are health care facilities. Specifically, in PLRs 201147015, 201429017, and 201509019, the IRS concluded that age-restricted, unlicensed facilities that provided "congregate care services," wellness-related services, and, in some cases, health care-related services, not commonly offered by a typical multi-family rental property, but limited true medical care *per se*, were "health care facilities."

The facts in those rulings encompassed age-restricted facilities with a) congregate dining facilities; b) "wellness" or similar preventive health care programs; and, c) health care-related services, such as the provision of emergency call assistance and advice and referral services regarding medical care of the residents. Although such "independent living" facilities vary somewhat in the degree to which such services and amenities are provided and by whom provided, the congregate services and amenities provided to tenants are invariably well beyond those provided to tenants in general multi-family housing. The extent to which significant congregate services and amenities are provided to tenants demonstrates that the provision of services to promote the **health and well-being** of the residents of such **age-restricted** facilities clearly distinguishes these facilities from the typical multi-family rental property.

3. **Statutory Construction: "Congregate Care" Should Be Interpreted Consistently with Surrounding Words**

The IRS also ruled in both PLRs 201317001 and 201320007 that correctional and detention facilities are not congregate care facilities because those facilities are not related to a health care facility and the medical care provided by such facilities is not part of the "primary function" of the facilities. In these rulings, the IRS noted that the term "congregate care facility" is not defined in the Code or regulations and that commonly used definitions of congregate care include "the sharing of living space, dining space, transportation, and group activities." However, the IRS stated that the meaning "congregate care facility" must be interpreted in the context of the definition of "health care facility," which describes various facilities that provide health care, not as an auxiliary function, but as part of the primary function (such as a hospital) or in connection with a facility that has the primary function of providing health care (such as assisted living facilities). The "primary focus" requirement is important. Without it, one could, patently contrary to legislative intent, argue that a correctional or detention facility is a "qualified health care facility," a fact that the IRS has rightly recognized in both PLRs 201320007 and 201317001.

The analysis in PLRs 201317001 and 201320007 follows a well-established maxim of statutory interpretation, *noscitur a sociis*, which provides that a word is known by the company it keeps.[14] NAREIT recognizes that the term "congregate care" has been used in non-REIT contexts, and its interpretation in those contexts may differ from its meaning in section 856(e)(6)(D)(ii). For example, the term has been used to describe group homes for foster children.[15] With that said, we believe that the term "congregate care facility" in section 856(e)(6)(D)(ii) should be read in context of the surrounding words in the statutory definition.

As noted above, Congress included the term in the definition of health care facility as part of the foreclosure property rules to ensure the continuous provision of **health care services** to residents in the event that a REIT terminated the lease of a property with respect to which such services were provided. Further, the surrounding words in section 856(e)(6)(D)(ii), hospital, nursing facility, assisted living facility, qualified continuing care facility(as defined in section 7872(g)(4)), or other facility operated by a Medicare-eligible provider, all relate to facilities which also provides for the wellness and/or health of their residents. Thus, it appears that some minimum level of health and wellness programming, beyond that which might be available at typical multi-family properties, was contemplated by Congress in connection with the definition of "health care facility," which includes a congregate care facility.[16]

---

[14] *See Jarecki v. G.D. Searle & Co.*, 367 U.S. 303, 305–07 (1961) *(*"The maxim *noscitur a sociis*, that a word is known by the company it keeps, while not an inescapable rule, is often wisely applied where a word is capable of many meanings in order to avoid the giving of unintended breadth to the Acts of Congress") (which led to interpreting the word "discovery" in the list of items "resulting from exploration, discovery, or prospecting,'" as meaning only discovery of mineral resources, and not including the "development and manufacture of drugs and cameras" at issue in the case).

[15] Section 1103 of the Social Security Act (For purposes of [the relevant statutory provision], the child welfare program improvement policies described in this paragraph are the following: ….(E) The development and implementation of a plan that ensures **congregate care** is used appropriately and reduces the placement of children and youth in such care.")(Emphasis added). *See also* "A National Look at the Use of Congregate Care in Child Welfare," U.S. Department of Health and Human Services, Administration for Children and Families, and the Children's Bureau (March 30, 2015) ("For this analysis, **congregate care** is defined as a placement setting of group home (a licensed or approved home providing 24-hour care in a small group setting of 7-12 children) or institution (a licensed or approved child care facility operated by a public or private agency and providing 24-hour care and/or treatment typically for 1 or more children who require separation from their own homes or a group living experience). These settings may include child care institutions, residential treatment facilities, or maternity homes. Through …. research interviews with states, we found that although all states submit placement data gathered in accordance with Adoption and Foster Care Analysis and Reporting System (AFCARS) definitions, many have developed **their own levels of care within those categories**.") (Emphasis added).

[16] Note that the phrase in section 856(e)(6)(D)(ii) ", or other licensed facility which extends medical or nursing or ancillary services to patients, and which was operated by a provider of such services that is eligible for participation in the Medicare program under Title XVII of the Social Security Act [subchapter XVIII of chapter 7 of Title 42 (42 U.S.C.A. § 1395 et seq.)] with respect to the facility", when read in context and in connection with the punctuation of in section 856(e)(6)(D)(ii), is properly interpreted as applying Medicare participation eligibility only to "other licensed facilities" not otherwise a hospital, nursing facility, assisted living facility, congregate care facility, qualified continuing care facility(as defined in section 7872(g)(4)), for example, a private hospital.

4. Market Practice: Health Care REIT Industry

The development of the IRS ruling policy over the last several years has led industry and tax professionals at health care REITs and their advisors to a consensus view that age-restricted facilities with congregate dining (and possibly also housekeeping, transportation and a services to enhance the health and physical well-being of their residents) are “congregate care facilities” even though the provision of direct medical services at such facilities may be minimal and even though the facility may not be licensed in its state.[17]

Accordingly, the typical health care REIT structure today for a congregate care facility of the type under consideration in PLRs 201147015, 201429017 and 201509019 involves ownership of a specific age-restricted, residential facility by the REIT at which services are offered generally “targeted to monitor and help improve the health and well-being of the senior citizen residents,”[18] the lease of that facility from the REIT to a TRS, and the operation of the facility by an eligible independent contractor.

The current IRS ruling practice with respect to such facilities is a fair summary of how the industry and advisors generally interpret the current rules. Therefore, NAREIT does not believe that additional guidance is needed. However, if codified as regulations or other precedential guidance, these standards should be described in a general (and prospective) manner in order to avoid generating numerous questions regarding their precise meaning and application in a wide variety of highly factual circumstances in an industry which is constantly evolving.[19]

Further while the private letter rulings to date have been limited to age-restricted independent living communities, if the IRS is inclined to provide guidance that such facilities may include other types of residents or populations, we suggest that such guidance be crafted to ensure non-applicability to other communal living arrangements such as student housing or typical (age-restricted or non-age restricted) apartment properties in order to avoid interpretative issues like those which necessitated the requests to confirm that correctional and detention facilities are not congregate care facilities.[20]

Imagine the case, for example, of a REIT-owned university dormitory with a variety of dining facility options and a nurse on campus. Under current IRS ruling practice, most industry professionals would not consider this property a “congregate care facility” (and therefore a

---

[17] While we think that state licensing should clearly mean that a facility is a qualified health care facility, we do not believe that such state licensing is a *sine qua non* given that the Code does not expressly establish such a requirement.
[18] PLR 201429017.
[19] In lieu of regulatory guidance defining a “congregate care facility,” an alternative may be a revenue procedure that summarizes the circumstances under which the IRS will not object to a property’s classification as a “congregate care facility” or “health care facility” if a REIT owns the facility and leases it to a TRS; the TRS retains an eligible independent contractor to manage the facility; and the REIT consistently treats the facility as a health care facility.
[20] *See also supra* note 16 (noting that states have varied definitions of the requisite services for property to be considered “congregate care” in the foster care context).

health care facility) notwithstanding that there are living facilities, some form of explicit or implicit age restriction, communal dining and some "health care" provided. As a result, the REIT owner may use a TRS to provide amenities and services at this property without affecting the TRS' status as a TRS. However, if the ruling practice or guidelines were to be changed, and this property were considered a "congregate care facility", the TRS would be disqualified as such for providing such services and amenities at, with the result that the REIT might own more than 10% of a non-TRS corporation, and/or the result may cause the REIT to fail its 95% gross income test, thereby destroying its REIT status.

On the other hand, a REIT failure could occur if a REIT were to take the incorrect view that this property was in fact a congregate care facility. Thus, the REIT erroneously leases the property to a TRS which then hires an eligible independent contractor to operate the property, all of the rental income from the TRS would be "related party rent," potentially destroying the REIT's tax status.

Finally, if the IRS and the Treasury Department issue precedential guidance under this Priority Guidance Plan item, NAREIT respectfully reiterates that the guidance have a prospective effective date so that the new rule would apply only to properties contracted to be acquired after the date the change is effective. We would be pleased to further discuss these comments if you believe it would be helpful. Re: Comments to the Senate Committee on Finance International Tax Reform Working Group

Dear Chairman Hatch and Ranking Member Wyden:

The National Association of Real Estate Investment Trusts[1] (NAREIT) welcomes the opportunity to provide comments to the Senate Committee on Finance International Tax Reform Working Group (the Working Group). We look forward to working with the Senators and staff who are participating in the Working Group on ways to modernize our outdated international tax system.

EXECUTIVE SUMMARY

NAREIT supports the goals of modifying the U.S. tax system to make U.S. companies more competitive and to encourage job creation and investment in the U.S. while simultaneously limiting inappropriate opportunities for base erosion. As further described below, NAREIT suggests that the Working Group consider the unique nature of the REIT rules in designing any new international tax system because: 1) REITs generally invest overseas for the purpose of generating more current income to distribute to shareholders as they are statutorily mandated to do (contrary to the more prevalent practice of deferring U.S. taxation of retained foreign earnings overseas under our current worldwide international tax system); and, 2) international tax reform could create inadvertent, yet adverse, consequences to REITs if certain design features of a new international tax system were to be enacted.[2]

[1] NAREIT, the National Association of Real Estate Investment Trusts, is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate, and finance income-producing real estate, as well as those firms and individuals who advise, study, and service those businesses.

[2] NAREIT has previously discussed some of these issues in its letter dated May 31, 2013 to the Committee on Ways and Means commenting on the international tax reform discussion draft released on October 26, 2011 by former Chairman Dave Camp (2011 Discussion Draft).

In the event that the Working Group considers a dividend exemption system to replace our current international tax system, similar to the proposal that was included in [H.R. 1, *The Tax Reform Act of 2014*] (or the 2014 TRA, released on February 26, 2014 by former Ways and Means Committee Chair Dave Camp), NAREIT recommends that REITs be treated similarly to pass-through entities so that REITs would continue to apply current law rather than a dividend exemption system.

However, if it is determined that REITs should be included in a dividend exemption system, NAREIT believes that such a system should provide for the following: 1) REITs should be excluded from any "deemed incorporation" of foreign branches, as well as any tax on accumulated foreign earnings requiring immediate inclusion of such earnings; and, 2) the concept of allowing a shareholder to exclude previously taxed subpart F income (PTI) should be retained.

Further, because a number of the potentially adverse tax consequences for REITs under a dividend exemption system would be due to the treatment of a U.S. REIT's foreign rental income earned through subsidiaries as subpart F income, we recommend that the Working Group consider a modification to the definition of foreign personal holding company income so that employees of a related company could be considered as employees of the lessor company. Specifically, the subpart F rules treat rents as passive rents if direct employees of the landlord are not involved in the management and operation of the rental property (disregarding the active role of the employees of any related property manager in such operations). Due to local employment laws and practices, often the individuals who provide property management services are employed by a separate property manager affiliate in the group rather than the real estate holding entity.

Accordingly, NAREIT recommends a modification to the subpart F rules so that the services provided by an affiliate could be allowed to be taken into account for subpart F testing as to whether the rents are active, particularly considering that many businesses outside the U.S. are compelled by local rules to house such employees abroad in an affiliate management company.

DISCUSSION

A. Background

1. REITs Generally

Authorized by Congress over 50 years ago, and modeled after mutual funds, REITs represent the easiest way through which investors can invest in professionally managed portfolios of real estate assets. Stock in stock exchange-traded REITs typically is held by retail investors, either directly or indirectly through mutual funds or exchange traded funds. Investing in a diverse, professionally managed portfolio of real estate assets provides all Americans access to, and the benefits of investing in, large scale income-producing real estate, without the risks and transaction costs associated with investing in individual properties.

Like a mutual fund, a REIT is not subject to entity-level federal income tax on taxable income that it distributes to its shareholders as dividends each year. REIT dividends are taxed at the highest rate applicable to ordinary income. However, to achieve this tax treatment, sections 856 through 860 require a REIT to satisfy several tests related to the nature of the REIT's assets, the sources of its income, its mandatory distributions to its shareholders, and the ownership of its stock.[3] Although REIT income in general is not subject to a corporate-level tax like partnerships and other types of fiscally transparent entities, the REIT income and asset tests, coupled with the mandatory distribution rules, and the fact that REITs may not pass through losses and credits to investors, distinguish REITs from pass-through entities.

2. <u>REIT Gross Income and Asset Tests and the 90% Distribution Requirement</u>

a. <u>Gross Income Tests</u>

To ensure that a REIT derives substantially all of its income from real estate related sources, a REIT is required to derive at least 75% of its gross income each year from, *inter alia*: 1) rents from real property; 2) interest on obligations secured by mortgages on real property or on interests in real property; and, 3) gain from the sale or other disposition of real property, including interests in real property and interest in mortgages on real property, that is not "dealer property" (*i.e.*, property held primarily for sale to customers in the ordinary course of business).[4] (75% Gross Income Test). A REIT also is required to satisfy the 95% gross income test. That test requires that a REIT derive at least 95% of its gross income each year from passive sources, including, *inter alia*, any income that is qualifying for the 75% Gross Income Test, interest, dividends, and gains from the sale or other disposition of stock, securities and real estate that is not "dealer property."[5] (95% Gross Income Test).

b. <u>Asset Tests</u>

Among other things, on a quarterly basis, 1) at least 75% of the value of a REIT's total assets must be from "real estate" sources (including foreign real estate[6]) (75% Asset Test)[7]; 2) a REIT

[3] For further detail regarding the positive effects of REITs on the economy and investors, please see NAREIT's submission to the Ways & Means Committee Real Estate, Energy, International, Pensions/Retirement, Debt, Equity and Capital, Education and Family Benefits, Charitable/Exempt Organizations, Financial Services and Small Business Tax Reform Working Groups dated April 15, 2013, available at http://waysandmeans.house.gov/uploadedfiles/nareit_wg_comments.pdf.

[4] I.R.C. § 856(c)(3).

[5] I.R.C. § 856(c)(2).

[6] Rev. Rul 74-191, 1974-1 C.B. 170.

cannot own more than 10% of the vote or value in a corporation other than another REIT, a "taxable REIT subsidiary" (TRS) or a wholly owned "qualified REIT subsidiary" (QRS)[8] (10% Asset Test); and 3) the value of securities of all TRSs cannot exceed 25% of a REIT's assets (TRS Asset Test). A TRS is a fully taxable corporate subsidiary of a REIT. A REIT and affiliated TRSs must elect jointly for the TRS or TRSs to be treated as TRSs.

c. Distribution Test

A REIT must distribute 90% of its "REIT taxable income" (excluding net capital gain) each year (the 90% Distribution Requirement).[9] Like a mutual fund (called a regulated investment company in the Code), a REIT is allowed a dividends paid deduction in computing its taxable income.[10] Thus, a REIT does not pay an entity-level tax on its distributed taxable income, and most REITs distribute 100% of their taxable income. As with mutual funds, the tax burden from a REIT's activities is borne by the REIT's shareholders. SEC-registered REITs paid out over $47 billion in dividends in 2014, most of which were taxed at the ordinary income rate, not the lower rate applicable to qualified dividends. At the end of February 2015, 223 REITs that are listed on stock exchanges had an equity market capitalization of $953 billion.

A limited exception from the 90% Distribution Requirement is available for certain types of "phantom" or "noncash" income recognized by a REIT.[11] A REIT is not required to distribute "excess noncash income," which is certain noncash income in excess of 5% of the REIT's taxable income (excluding net capital gains).[12] The potential sources of "excess noncash income" under section 857(e) include, *inter alia*, original issue discount (OID) and cancellation of indebtedness (COD) income.[13] A REIT, however, is required to pay corporate income tax on any "excess noncash income" that it does not distribute to its shareholders.

Notwithstanding the limited exception for excess noncash income, REITs generally are required by market forces to distribute all of their taxable income, and, as a result, also their phantom income. In order to raise the cash necessary to distribute phantom income as required by the 90%

---

[7] I.R.C. § 856(c)(4).

[8] Under section 856(i), a QRS is treated as a disregarded entity of its parent REIT.

[9] I.R.C. § 857(a)(1)(A).

[10] I.R.C. § 857(b)(2)(B).

[11] I.R.C. § 857(a)(1)(B).

[12] I.R.C. § 857(e)(1).

[13] I.R.C. § 857(e)(2). Excess noncash income also includes: 1) "excess inclusion income," a type of phantom income recognized by a holder of a residual interest in a real estate mortgage investment conduit (REMIC) or a taxable mortgage pool; 2) gain from certain failed section 1031 "like-kind" exchanges; and, 3) rental income accelerated under section 467 (requiring accrual of rental income on a level basis on certain leases with backloaded rent). I.R.C. § 857(e)(2)(A), (B), and (C). In the case of OID, excess inclusion income, and section 467 income, the "excess noncash income" comprises income in excess of the cash actually received on the related investment.

Distribution Requirement, a REIT may incur debt or sell assets it otherwise would hold on a long-term basis. Neither of these alternatives typically is in the best economic interests of the REIT's shareholders. Incurring debt to satisfy the 90% Distribution Requirement will necessarily increase the REIT's leverage beyond what it otherwise would have been, and that increased leverage may make it more difficult for the REIT to survive an economic downturn.

Ultimately, if the recognition of and the failure to distribute phantom income causes a failure of the 90% Distribution Requirement, the REIT will lose its REIT status. This would cause the REIT to be treated as a C corporation that is subject to regular corporate income tax for the year of the failure and for the following four years**,** unless the REIT obtains the consent of the IRS to maintain its REIT status.[14] The corporate income tax resulting from a failure to satisfy the 90% Distribution Requirement would greatly reduce the distributions the REIT could pay to its shareholders and likely would significantly reduce the value of the REIT's stock. In sum, phantom income can cause significant negative consequences for a REIT and its shareholders.

B. REIT Investment Outside of the U.S.

1. Generally

In Revenue Ruling 74-191, 1974-1 C.B. 170, the IRS concluded that otherwise-qualifying assets do not fail to satisfy section 856(c)(4) merely because the assets are located outside the United States. Several REITs invest in part outside of the U.S. as a way of servicing their tenants, which are global enterprises, teaming with foreign real estate experts and diversifying their asset base.

Of particular concern to REITs when investing outside of the U.S. are the following factors: 1) maximizing the generation of cash for distribution to shareholders, while complying with the 75% Gross Income Test and the 75% Asset Test; 2) complying with the TRS Asset Test; 3) satisfying the 90% Distribution Requirement/shareholder demand for cash, while avoiding phantom income; and, 4) minimizing foreign tax liability, as REITs generally cannot use foreign tax credits.

REITs may invest outside of the U.S. through fiscally transparent entities, including disregarded entities (either limited liability companies or QRSs, partnerships, or foreign entities that "check the box" to be treated as a disregarded entity or as a partnership) or through U.S. or foreign corporate entities.

2. REIT Use of Fiscally Transparent Entities

Specifically, REITs may invest in foreign real estate through a U.S. partnership, limited liability company or disregarded entity or a foreign limited liability entity that "checks the box" to be

[14] I.R.C. § 856(g)(3) (prohibiting an entity that has failed to qualify as a REIT from electing REIT status for the next four taxable years).

treated as a disregarded entity or as a partnership for U.S. tax purposes. (These entities may be regarded, or corporate, entities for foreign income tax purposes.) By doing so, the REIT achieves immediate and ongoing flow-through of foreign income that maximizes distributions to shareholders and complies with the REIT income and asset tests similar to its investments in U.S. real estate.[15]

In many cases, once a top-tier entity is established, regional investments (*e.g.*, investments in the European Union or throughout Asia) are made through subsidiary disregarded entities in order to achieve operational efficiencies, minimize liabilities, and reduce foreign taxes. Reduction of foreign taxes allows for a greater amount of income to flow through to REIT shareholders. As REITs generally do not claim foreign tax credits and cannot pass such credits through to their shareholders, a reduction in foreign taxes results in REITs being able to distribute more income currently to their shareholders. Thus, the REIT's investments are structured using fiscally transparent entities in order to maximize current income and distributions to shareholders, *not to defer U.S. taxes*.

3. REIT Use of Corporate Entities

Although a REIT may prefer to invest overseas through fiscally transparent entities, a REIT may face a number of issues by investing outside of the U.S. through flow-through entities. First, if the foreign entity or the REIT's foreign partner in the foreign entity inadvertently invests in non-qualifying REIT assets or generates non-qualifying REIT income, the REIT's tax status could be jeopardized.

Second, many countries limit the actual cash distributions that can be made to foreign shareholders. Often, this limit will be based on book income (distributable reserves); thus, companies that claim depreciation (that is, non-cash) expense may have book income that is less than its distributable cash flow. Due to typical acquisition structures, book depreciation often exceeds tax depreciation. Although Treasury Regulation § 1.856-3(g) requires a REIT to include its proportionate share of the flow-through entity's income in its taxable income, and the 90% Distribution Test requires the REIT to distribute 90% of such income, the REIT may not have access to the flow-through entity's cash. As a result, the REIT may consider making its overseas investments through entities that are treated as corporations for U.S. tax purposes. Further, some countries require foreign companies like U.S. REITs to invest in real estate located in their countries through entities that are treated as corporations for U.S. tax purposes.

Finally, for those REITs in the hospitality and healthcare industries that lease their real estate to a TRS,[16] the ownership of such real estate by a fiscally transparent entity is somewhat impractical

[15] Under Treas. Reg. § 1.856-3(g), a REIT is deemed to own its proportionate share of the assets and income of a partnership in which it owns an interest.

[16] *See* I.R.C. § 856(d)(8)(B).

as it doubles up on audit, tax and other local country fee-heavy requirements. Thus, these REITs often invest overseas through TRSs, subject to compliance with the TRS Asset Test.

Because a REIT only may own up to 10% of a corporation other than another REIT, a QRS, or a TRS, if a REIT invests in a foreign corporate entity, typically the REIT and the foreign corporate entity will elect for the foreign entity to be a TRS. By investing through a TRS, rather than a flow-through entity, the REIT avoids the risk that a foreign flow-through entity inadvertently may invest in non-qualifying REIT assets or generate non-qualifying REIT income that could jeopardize the REIT's tax status. Additionally, the REIT avoids the issue of foreign entities being legally prevented from distributing all of its available cash to the REIT, when the REIT is required to distribute at least 90% of such taxable income.

Even if a REIT does invest outside of the U.S. through foreign TRSs, the REIT is limited by the TRS Asset Test to the value of securities it can own in TRSs. As noted above, the value of the securities in all of its TRSs cannot exceed 25% of the REIT's total assets. Thus, to the extent the REIT may approach that limit, it would be required to make further investments through flow through entities.

REITs typically do not invest in foreign countries in order to defer the recognition of taxable income. First, in certain cases, rental income earned by the TRSs may be considered subpart F income (if the company earning the rental income is not the same company whose employees are managing the property).[17] Thus, if the REIT is a "U.S. shareholder" of CFCs, the REIT is required by section 951(a)(1)(A)(i) to include in its gross income its pro rata share of the subpart F income, as defined in section 952(a), of any such CFCs. Additionally, as a result of being a U.S. shareholder of CFCs, the REIT is required by section 951(a)(1)(B) to include in its gross income its share of the amount determined under section 956 with respect to each CFC for the relevant tax year (but only to the extent not excluded from gross income under section 959(a)(2)).

If the REIT is not a U.S. shareholder of the CFC, the entity will be considered a passive foreign investment company (PFIC) if it generates sufficient FPHCI. If so, the REIT's tax treatment will

[17] Foreign personal holding company income (FPHCI), one type of subpart F income, is defined to include "…rents, … other than…rents and royalties derived in the active conduct of a trade or business and which are received from a person that is not a related person." Section 954(c)(2)(A); Treas. Reg. § 1.954-2(b)(6).

Further, Treas. Reg. § 1.954-2(c) provides "[e]xcluded rents-(1) Active conduct of a trade or business. Rents will be considered for purposes of paragraph (b)(6) of this section to be derived in the active conduct of a trade or business if such rents are derived by the [CFC] (the lessor) from leasing . . . (ii) Real property with respect to which the lessor, through its own officers or staff or employees, regularly performs active and substantial management and operational functions while the property is leased . . . ."

Notably, the IRS has held in Rev. Rul. 2001-29, 2001-1 C.B. 1348 that, in the context of the section 355 active trade or business requirement: "A REIT can be engaged in the active conduct of a trade or business within the meaning of § 355(b) solely by virtue of functions with respect to rental activity that produces income qualifying as rents from real property.

vary based on whether it has made a qualified electing fund (QEF) election for that PFIC. As a result of being a shareholder in PFICs for which it has made QEF elections, the REIT is required under section 1293(a) to include in its gross income its pro rata share of the ordinary earnings and net capital gain of each such QEF. As a result of being a shareholder in PFICs for which it has not made any QEF elections, a REIT is required to include amounts in income (as ordinary income) pursuant to section 1291.

In either case, the subpart F income will not qualify as 75% Gross Income. However, the IRS has appropriately issued a number of private letter rulings holding that subpart F income inclusions and/or PFIC inclusions qualify as 95% Gross Income.[18]

C. 2014 TRA: International Tax Proposals

As relevant to REITs, the 2014 TRA would have modified current law by generally proposing the following: 1) a dividend exemption system that would exclude 95% of foreign-source dividends from a U.S. parent corporation's taxable income; and, 2) immediate U.S. taxation (with the related tax liability to be paid over eight years if desired) of post 1986-accumulated earnings of foreign subsidiaries.

Unlike the 2011 Discussion Draft, the 2014 TRA did not propose a deemed incorporation rule for foreign branches (the Deemed Incorporation Rule). The Deemed Incorporation Rule would have treated any foreign branch as a separate corporation which is a CFC, and the U.S. corporate shareholder as a "U.S. shareholder" under the CFC rules. A "foreign branch" was defined as "any trade or business of [a] domestic corporation in a foreign country." Although the Deemed Incorporation Rule was eliminated in the 2014 TRA so that branches would continue to be treated as branches, the international tax reforms included in President Obama's fiscal year 2016 budget proposal would treat branches as CFCs. The Deemed Incorporation Rule, along with the proposed dividend exemption system and the tax on accumulated foreign earnings, are discussed below.

D. NAREIT's International Tax Reform Recommendations to the Working Group

1. Current Law, Rather Than a Dividend Exemption System, Should Continue to Apply to REITs

As described above, REITs generally structure their foreign operations in a manner that results in current U.S. taxation of foreign income - either through foreign branches or disregarded entities for U.S. tax purposes, or through subsidiary corporations that qualify as TRSs that often generate subpart F rental income. Even to the extent foreign subsidiaries do not generate subpart F rental income recognized as taxable income currently, the 90% Distribution Requirement and market expectations, as a practical matter, pressure REITs to receive and distribute current income

[18] *See, e.g.*, PLRs 201226004 http://www.irs.gov/pub/irs-wd/1226004.pdf and 201246013 http://www.irs.gov/pub/irs-wd/1246013.pdf .

earned by lower-tier entities located in the U.S. and overseas. Accordingly, REITs do not raise the issues which are intended to be addressed by a territorial taxation regime such as a dividend exemption system, as they generally do not defer U.S. taxation on foreign operations or retain funds from operations in the foreign branches.

Because of the uniqueness of the REIT rules, proposals to adopt a dividend exemption international tax system such as that included in the 2014 TRA, without careful modification to address the interplay with the REIT tax rules or appropriate carve outs, could inadvertently affect in an adverse way REITs with foreign operations. Furthermore, some of these proposals could alter substantially a REIT's compliance with the gross income and asset tests. As a result, we suggest that any dividend exemption proposal considered by the Working Group (including that proposed in the 2014 TRA) not apply to REITs even though REITs would not be entitled to the benefits of an exemption of CFC dividends from U.S. Federal income tax.

The dividend exemption proposal that was included in the 2014 TRA is limited to owners of CFCs that are C corporations and would not apply to partnerships and other pass-through owners of CFCs. While REITs generally are formed as C corporations, their tax treatment is comparable to that of a pass-through entity (in that tax liability is borne by the entity's owners). Therefore, considering the special challenges discussed above that a dividend exemption system poses for REITs, NAREIT recommends that REITs be excluded from any proposed dividend exemption system and continue to be subject to current law.

However, if it is determined that REITs should be included in any dividend exemption system that the Working Group considers, we make the recommendations described below to mitigate the potentially adverse consequences of applying a dividend exemption system to REITs.

2. <u>Any Tax on Accumulated Foreign Earnings Should Not Apply to REITs</u>

Both the 2014 TRA and President Obama's fiscal year 2016 budget proposals include a mandatory tax on accumulated foreign earnings (often referred to as a "transition rule" or "deemed repatriation"). Under this mandatory tax, there would be immediate inclusion in a domestic parent's taxable income of accumulated foreign earnings of CFCs at a specified effective tax rate. Under the 2014 TRA, the rate would be 8.75% on foreign earnings to the extent of the CFC's unrepatriated cash and cash equivalents, while the rate would be 3.5% on the CFC's remaining foreign earnings. Under President Obama's budget, the rate would be 14% on all of the CFC's foreign earnings. At least in the case of the 2014 TRA, previously taxed (subpart F) income and "effectively connected" U.S. source income would be excluded from this income inclusion.

With regard to the 2014 TRA, the split-rate of 8.75% and 3.5% is the result of including accumulated foreign earnings of CFCs in gross income, but allowing a 75% deduction and a 90% deduction, respectively (against the 35% corporate tax rate). President Obama's budget proposal lacks sufficient detail to indicate whether a similar mechanism would be employed to apply the proposal's 14% effective tax rate to accumulated foreign earnings of CFCs.

For those REITs operating outside of the U.S. and generating qualifying 75% Gross Income that is not considered subpart F income, the immediate inclusion in taxable income of previously deferred foreign earnings would subject these earnings to the requirement that the REIT distribute at least 90% of these earnings. To the extent that the REIT retained (or reinvested) up to 10% of these earnings, it would be required to pay corporate income tax on the earnings.[19] Failing to distribute the remaining 90% of these earnings could result in a loss of REIT status. Consequently, many REITs would be forced to sell assets or borrow money to satisfy this distribution requirement, neither of which necessarily would be in the long term best interests of its shareholders. Furthermore, REIT shareholders generally do not pay tax on the distributions of these earnings at the lower tax rate applicable to qualified dividends.

Thus, because of the interplay of the REIT rules with the mandatory tax on accumulated foreign earnings, the mandatory tax inadvertently would create adverse consequences for REITs. Accordingly, NAREIT recommends that any mandatory tax on accumulated foreign earnings not apply to REITs. Alternatively, NAREIT recommends that REITs be treated, for purposes of any mandatory tax, similarly to S corporations in the 2014 TRA, which generally deferred the imposition of the tax as long as the S corporation maintained its status as an S corporation (in recognition of the fact that S corporations are excluded from the dividend exemption system in the 2014 TRA).

3. <u>Any Partial Dividend Exemption System Should Exclude Previously Taxed Income</u>

The 2014 TRA proposed to retain a modified version of the subpart F rules and to create a dividend exemption system that would allow a domestic corporation that is a U. S. shareholder[20] to deduct 95% of its dividends received from a CFC (a dividends received deduction or DRD). In its release of the 2014 TRA, the Ways and Means Committee indicated that a partial dividend exemption system was included in lieu of a full dividend exemption system accompanied by rules requiring the allocation of U.S. expenses to exempt foreign income.

As we understand it, the interaction of the subpart F rules and a partial dividend exemption system would mean that, if a U.S. shareholder, like a REIT, were required to include $100 of subpart F income from a CFC in taxable income in year 1, and the CFC distributed a $100 dividend to the U.S. shareholder in year 2, the U.S. shareholder would have $5 of taxable income in year 2 ($100-(95%)*($100)). The U.S. shareholder also would recognize $100 of taxable

[19] As noted above, I.R.C. § 857(e)(2) allows a REIT to retain a type of phantom income called "excess noncash income." While this type of income is not subject to the 90% Distribution Requirement, the REIT must pay tax thereon. Thus, if a mandatory tax on accumulated foreign earnings did not exclude REITs, at the very least, the foreign earnings that are subject to the tax should be considered excess noncash income.
[20] The 2014 TRA would define a "U.S. shareholder" according to current section 951(b).

income in year 1. The October 26, 2011 discussion draft released by the Ways and Means Committee proposed to repeal current law's exclusion of a CFC's "previously taxed income" (PTI) from taxable income. As discussed below, repealing the exclusion for PTI raises two significant issues for REITs.

First, a partial dividend exemption raises the potential for double taxation for REIT shareholders with CFCs that generate subpart F income.[21] For example, under current law, assume REIT owns 100% of TRS which owns UK property and earns subpart F rental income of $100 in year 1. TRS distributes $100 of cash in Year 2. In year 1, REIT includes $100 in taxable income, distributes $100 and has no corporate income tax liability. In year 2, REIT has no consequences from TRS' distribution of the $100 of previously taxed income under current subpart F rules which exclude PTI from taxable income. REIT shareholders would have $100 of taxable income in year 1.

Applying a 95% partial dividend exemption to the same facts, in year 1, REIT includes $100 in taxable income, distributes $100 and has no corporate income tax liability. REIT shareholders have $100 of income in year 1. In year 2, the REIT would have a $100 dividend, but because of the repeal of the PTI rules, it only could exclude 95% of the foreign source dividend amount. The foreign-source portion of the dividend is determined based on the ratio of the CFC's undistributed foreign earnings to total undistributed earnings. Undistributed earnings are defined as the earnings and profits of the CFC computed under sections 964(a) and 986. Undistributed earnings include earnings previously included by the US shareholder under subpart F. This would result in these earnings being taxed currently and again upon repatriation, subject to the 95% DRD. A non-REIT U.S. shareholder would be subject to an additional tax on subpart F income of 1.25% (assuming a corporate tax rate of 25%).

The REIT could exclude $95 of the $100 dividend, leaving it with $5 of taxable income. If it distributes the $5, it would have no corporate income tax liability, but its shareholders have another $5 of income, $5 more than under current law. Also, unlike non-REIT C corporations, REIT shareholders would not benefit from a lower income tax rate – their top ordinary income tax rate is 39.6% (plus a potential 3.8% surtax on dividend income).

Additionally, if the partial dividend exemption is available only to domestic C corporations, then dividends received by U.S. partnerships would be subject to U.S. tax at the partner level and not eligible for the exemption. Many REITs, particularly listed REITs, own no assets directly other than an interest in an operating partnership that owns and operates all of their assets (these REITs are known as UPREITs). It appears that the potential for double taxation would be even more extreme in this structure.

[21] Some have queried whether REITs would be allowed to claim the DRD. Under current section 243, which provides for a DRD in certain cases, a dividend from a REIT is not considered a "dividend." Presumably, a full or partial dividend exemption would apply to dividends received by a REIT.

Double taxation would result through the combination of repealing the PTI rules and excluding from gross income only 95% (or some other percentage less than 100%) of the CFC's distributions. Accordingly, in order to avoid this double taxation, we recommend that the PTI rules be retained, at least for REITs, in any dividend exemption system that may be considered by the Working Group.

The second issue for REITs with regard to eliminating the PTI rules is that a (full or partial) dividend exemption in the form of a deduction (rather than an exemption) may raise compliance issues for REITs with respect to the 95% Gross Income Test. Thus, income under current law that is excluded from gross income (*e.g.*, PTI) now would be included in income (and may be considered 95% Gross Income), which could skew the REIT's gross income test results, thereby potentially affecting REIT status.

4. Any Dividend Exemption System Should Not Include The Deemed Incorporation Rule

Although the 2014 TRA did not include the Deemed Incorporation Rule, because it was included in the 2011 Discussion Draft, it is possible that this Rule may be considered as part of a Dividend Exemption System. NAREIT urges the Working Group not to include the Deemed Incorporation Rule in any dividend exemption system (or, at the very least, not to apply it to REITs).

While the Deemed Incorporation Rule should have no effect on a REIT's foreign investments currently structured as corporations, it raises a number of issues for REITs that invest in foreign countries through branches and other fiscally transparent arrangements.

First, the Deemed Incorporation Rule may result in a "deemed sale" under section 367(a) with respect to which phantom gain would require to be recognized and distributed.[22] While section 367(a)(3) would exempt from deemed sale treatment those deemed transfers of assets that are used by such a foreign corporation "in the active conduct of a trade or business outside the United States," as noted above, it is likely that, in many cases, the assets of entities currently treated as branches of a REIT would not be considered active for purposes of this rule. Of course, since the entities currently are fiscally transparent, this issue is not relevant under current law.

[22] It is unclear whether section 367 would apply to the deemed incorporation of a branch, and it would be helpful if the Deemed Incorporation Rule (if proposed) would clarify that section 367 treatment would not apply. Specifically, it would be helpful to clarify that the deemed incorporation of a REIT's wholly-owned branch would continue to be treated as a QRS, and section 367 deemed sale treatment did not apply. (Note that this issue is generally not applicable in the umbrella partnership REIT context, when a REIT owns the majority interests in an operating partnership, and the operating partnership owns and operates all of the "REIT's" properties.) For purposes of this discussion, however, this letter describes the presumably inadvertent, but adverse, consequences if section 367 deemed sale treatment did apply.

Second, the Deemed Incorporation Rule could cause the REIT to fail the 10% Asset Test because the REIT would be treated as owning more than 10% of the securities of another corporation.[23] While the REIT could make a TRS election for these entities to be treated as TRSs, the TRS Asset Test may limit the REIT's ability to do so.

Third, the Deemed Incorporation Rule would cause income that currently qualifies for the 75% Gross Income Test to be converted into, at best, income qualifying for the 95% Gross Income Test. As noted above, income of fiscally transparent REIT investments likely consists mostly of rental income that qualifies as 75% Gross Income. If the fiscally transparent entity were a corporation, its rental income may be viewed as subpart F income, and the REIT would have to include in income either its subpart F inclusions or its PFIC inclusions.

Additionally, because the former fiscally transparent entity's income and assets no longer would be flowing through to the REIT for federal tax purposes based on Treasury Regulation § 1.856-3(g), the REIT would have less gross income, which could affect the calculation of both the 75% and 95% Gross Income Tests. Similarly, the disregarded entities' assets that currently are viewed as qualifying assets for purposes of the 75% Asset Test would be converted into non-qualifying assets for such test.

Fourth, currently disregarded loans to foreign disregarded entities would become "regarded" loans that, if unsecured, could result in additional 95% Gross Income to the REIT, again potentially affecting its REIT qualification.[24]

In sum, REITs that invest outside of the U.S. through fiscally transparent entities are doing so in order to maximize current distributions to shareholders and not for the purposes of income deferral. Because of the various issues raised by the Deemed Incorporation Rule, we recommend that any dividend exemption system that the Working Group considers follow the 2014 TRA by continuing to treat foreign branches as branches or, if the Deemed Incorporation Rule is included, excluding REITs from its application.

[23] If the fiscally transparent entity is currently 100% owned by the REIT, presumably the entity would be converted into a QRS, which would not raise an asset test issue for the REIT. If the fiscally transparent entity currently is not 100% owned by the REIT, the REIT and the entity could elect for the entity to be a TRS, but no more than 25% of the REIT's total assets can consist of TRS securities without being disqualified as a REIT.

[24] Another potential issue is whether all of a REIT's foreign branches would be viewed as engaged in a "trade or business" in a foreign country, and, if not, how the Deemed Incorporation Rule would apply. As noted above, not all of a REIT's foreign branches will have employees and/or significant activities on their own, and, therefore, may not be considered engaged in a trade or business. Presumably, such entities would continue to be treated as fiscally transparent entities. It would be helpful to have this issue clarified if the Deemed Incorporation Rule is included in a dividend exemption system.

Thank you for the opportunity to provide these comments. Please contact me at (202) 739-9408 or tedwards@nareit.com or Dara Bernstein, NAREIT's Senior Tax Counsel, at (202) 739-9446 or dbernstein@nareit.com if you would like to discussion this letter in greater detail.

ISSUES

1. If one partner guarantees a partnership's obligation to satisfy a promissory note in the event of, among other events, the partnership admitting in writing that it is insolvent or unable to pay its debts when due, or its voluntary bankruptcy or acquiescence in an involuntary bankruptcy, does this guarantee preclude the promissory note from qualifying as a nonrecourse obligation of the partnership under § 752 of the Internal Revenue Code ("Code") and regulations promulgated thereunder?
2. If the partnership's sole business activity involves acquiring existing hotels, renovating them, installing personal property appropriate to improve the properties' utility as hotels, and holding and maintaining the premises, but does not include the hotels' day-to-day operations, does this business activity qualify as an "activity of holding real property" within the meaning of § 465(b)(6)(A)?
3. If a partner guarantees partnership debt that otherwise had met the requirements of qualified nonrecourse financing within the meaning of § 465(b)(6), are the other non-guarantor partners entitled to treat the obligation as qualified nonrecourse financing within the meaning of § 465(b)(6) and regulations promulgated thereunder or otherwise at risk with respect to the guaranteed obligation?
4. If the partnership operating agreement provides that, in the event that the guaranteeing partner makes a payment under a guarantee, the guaranteeing partner has the right to call for the non-guaranteeing partners to make capital contributions and, if they fail to do so, treat ratable portions of the payment as loans to those partners, adjust their fractional interests in the partnership, or enter into a subsequent allocation agreement under which the risk of the guarantee would be shared among the partners, is this provision sufficient to make the non-guaranteeing partners personally liable with respect to the guaranteed obligation for the purposes of §§ 752 and 465?

CONCLUSIONS

1. If a partner guarantees an obligation of the partnership and the guarantee is sufficient to cause the guaranteeing partner to bear the economic risk of loss for that obligation within the meaning of § 1.752-2(b)(1) of the Income Tax Regulations, the guaranteed debt is properly treated as recourse financing for purposes of applying the basis allocation rules of § 752. For this purpose, certain contingencies such as the partnership admitting in writing that it is insolvent or unable to pay its debts when due, its voluntary bankruptcy, or its acquiescence in an involuntary bankruptcy, after taking into account all the facts and circumstances, are not so remote a possibility that it is unlikely the obligation will ever be discharged within the meaning § 1.752-2(b)(4) that would cause the obligation to be disregarded under § 1.752-2(b)(3).
2. Where the partnership's sole business activity includes acquiring existing hotels, renovating them, installing personal property appropriate to improve the properties' utility as hotels, and holding and maintaining the premises, but does not include the hotels' day-to-day operations, the partnership is engaged in an "activity of holding real property" within the meaning of § 465(b)(6)(A).
3. When an individual partner guarantees a partnership obligation, the amount of the guaranteed debt no longer meets the definition of "qualified nonrecourse financing" under § 465(b)(6)(B), and the amount of the guaranteed debt will no longer be includible in the at-risk amount of the other non-guaranteeing partners, if the guarantee is bona fide and enforceable by creditors of the partnership under local law.
4. To the extent the guaranteeing partner has the right under the partnership operating agreement to call for the non-guaranteeing partners to make capital contributions and, if they fail to do so, treat ratable portions of the payment as loans to those partners, adjust their fractional interests in the partnership, or enter into a subsequent allocation agreement under which the risk of the guarantee would be shared among the partners, this right generally will not be sufficient to make the non-guaranteeing partners personally liable with respect to the guaranteed obligation for the purposes of §§ 752 and 465.

FACTS

X is a limited liability company electing to be taxed as a partnership. Its members are A, an individual who owns n1% of the profits and equity interest in X; B, an individual who owns n2% of X; and C, an individual who owns the remaining n3% of X. A, B and C each owns more than 10% of the profits and equity of X. X directly or indirectly owns a number of corporate subsidiaries (hereinafter "the subsidiaries").

Section 7.5 of the Amended and Restated Operating Agreement of X ("Operating Agreement") contains a number of provisions with respect to additional capital contributions to X.

Section 7.5(a) of the Operating Agreement states that, except as otherwise provided for therein or mutually agreed upon by the Members, no Member shall be obligated to make capital contributions to X.

Section 7.5(b) of the Operating Agreement states that in the event additional capital is needed for X's business, C, or an affiliate (the "Lender") may elect to loan funds to X for its business purposes ("C loans"). Such C loans shall be made on commercially reasonable terms and conditions, and the Members agree that such loans shall bear interest at a rate equal to n4% per annum, compounded annually. Such loans shall be an obligation of X and, at the option of the Lender, may be repaid prior to any distributions to the Members. C or its affiliates shall have no obligation to make C loans to X. If C elects to make C loans to X, A and B shall be given the opportunity to make similar loans in accordance with their respective ownership percentage interests in X. If C makes any C loans to X, C may at any time convert such C loans into additional capital.

Section 7.5(c) of the Operating Agreement states that in the event that C determines in his sole discretion that additional capital is needed for X's operations in addition to the initial capital contributions (as set forth in Section 7.2 of the Operating Agreement) and C loans under section 7.5(b) above, if any, C may elect to make additional capital contributions to X. If C elects to contribute additional capital, A and B shall be given the opportunity to make similar additional capital contributions in accordance with their respective ownership percentages in X. C's additional capital shall not exceed an amount which would cause C's adjusted contribution amount at any point to exceed $n5.

Section 7.5(d) of the Operating Agreement states that in the event C's adjusted contribution amount exceeds $n5 and C determines in his sole discretion that additional capital is needed for X's business in addition to the initial capital contributions, any C loans under section 7.5(b), and C's additional capital contributions under section 7.5(c) (but excluding guarantee contributions, which are subject to section 7.5(e)), the Members shall contribute their ownership percentage interest of the required capital to X within 20 days of receiving notice from C of the amount of required additional capital (the "Demand Notice"). If a Member fails to contribute an amount required pursuant to this section 7.5(d) (a "Defaulting Member") within 20 days of receipt of a Demand Notice from C, then C may elect one or more of the following remedies:

(i) C may elect to loan to X the amount that a Defaulting Member failed to contribute which loan shall be treated as a loan to the Defaulting Member and which shall bear interest at the rate of n6% per annum compounded annually from the date of the advance until the date the loans are paid in full, and shall be payable out of any distributions to the Defaulting Member (which payments will be applied first to accrued interest on the loans and then to the outstanding principal balance of such loans). If C elects to make such a loan, the other non-defaulting members shall be given a similar opportunity to make similar loans in accordance with their respective ownership percentage interests in X; or

(ii) C may elect to adjust the ownership percentage interest of each Defaulting Member by n7% for each $n8 a Defaulting Member failed to contribute, and the ownership percentage interest of the Members who contributed their proportionate share in response to the Demand Notice (the "Contributing Members") shall increase n7% by each $n8 the Defaulting Member failed to contribute, which increase in the ownership percentage interest of the Contributing Members shall be allocated among the Contributing Members based on the existing ownership percentage interests held by the Contributing Members. However, a Defaulting Member shall have the right to negate an adjustment of ownership percentage interests under this section 7.5(d)(ii) pursuant to the provisions of section 7.5(g).

Section 7.5(e) states that in the event any Member makes a Guaranty Contribution, the other Members shall contribute their ownership percentage interest of the Guaranty Contribution to X (and X shall return a portion of the Guaranty Contribution to the Member making such Guaranty Contribution) within 20 days of receiving written notice from the Member making the Guaranty Contribution of the amount of the Guaranty Contribution and the amount due from such Members (the "Guaranty Contribution Demand Notice"). If a Member fails to contribute the amount required pursuant to this section 7.5(e) (a "Guaranty Contribution Defaulting Member") within 20 days of receipt of the Guaranty Contribution Demand Notice, then the Member making the Guaranty Contribution may elect one of the following remedies:

(i) The Member making the Guaranty Contribution may elect to loan to X the amount of the Guaranty Contribution Defaulting Member failed to contribute, which loan shall be treated as a loan to the Guaranty Contribution Defaulting Member and which shall bear interest at the rate of n9% per annum, compounded annually from the date of the Guaranty Contribution until the date the loan is repaid in full, and shall be payable out of any distributions to the Guaranty Contribution Defaulting Member (which payments shall be applied first to accrued interest on the loans, and then to the outstanding principal balance of the loans). If the Member making the Guaranty Contribution elects to make such a loan, the other non-defaulting Members shall be given a similar opportunity to make similar loans in accordance with their ownership percentage interest; or

(ii) The Member making the Guaranty Contribution may elect to adjust the ownership percentage interest of the Guaranty Contribution Defaulting Member by n7% by each $n10 a Guaranty Contribution Defaulting Member failed to contribute, and the ownership percentage interests of the Members who contributed their proportionate share in response to a Guaranty Contribution Demand Notice (the "Guaranty Contribution Contributing Members") shall increase n7% by each $n10 the Guaranty

> Contribution Defaulting Member failed to contribute, which increase in the ownership percentage interest of the Guaranty Contribution Contributing Members shall be allocated among the Guaranty Contribution Contributing Members. However, a Guaranty Contributing Defaulting Member shall have the right to negate an adjustment of ownership percentage interests under this section 7.5(e)(ii) pursuant to the provisions of section 7.5(g).

Section 7.5(f) of the Operating Agreement states that at any time when A or B has an adjusted contribution amount in relation to the combined amount of all Members' adjusted contribution amounts which is less than the ownership percentage interest of A or B, either A or B may make voluntary capital contributions to X, which capital contributions will be used to repay the capital contributions of the Members who have adjusted capital amounts in relation to the combined amount of all Members' adjusted contribution amounts which are greater than such Member's ownership percentage interest. Similarly, at any time C has made a C loan under section 7.5(b) or a default loan under section 7.5(d)(i), the creditor under such loan may repay such loan (with interest) at any time and thus discontinue the interest accrual thereunder. Finally, if the Members receive commissions or other fees generated in connection with the facilitation of a transaction in which X has an interest, and if C has an adjusted contribution amount which is greater than n11% of the combined amount of all Members' adjusted contribution amounts, C can require all Members to contribute the net after-tax proceeds from such commissions and fees to the capital of X (with such net after-tax amount calculated based on all foreign, national, state and local taxes associated with such commissions and fees).

Section 7.5(g) of the Operating Agreement states that a Member may negate the dilution of its ownership percentage interest under section 7.5(d)(ii) or section 7.5(e)(ii) if, within 12 months of the date of the Demand Notice or the Guaranty Contribution Demand Notice, as applicable, the defaulting Member or Guaranty Contribution Defaulting Member contributed to X the amount which would be due under section 7.5(d)(ii) or section 7.5(e)(ii) if the failure of such Member to make a contribution was treated as a loan under such sections. Under such circumstances, the dilution shall be negated, the prior contributions shall be treated as loans in accordance with section 7.5(d)(i) or section 7.5(d)(ii) [sic], as applicable, and such loans shall be repaid from the amounts contributed by the Defaulting Member or Guaranty Contribution Defaulting Member.

Section 7.7 of the Operating Agreement states that in the event any Member shall fail to contribute any cash or property when due hereunder, such Member shall remain liable therefor to X, which may institute proceedings in any court of competent jurisdiction in connection with which such Member shall pay the costs of such collection, including reasonable attorneys' fees. Any compromise or settlement with a Member failing to contribute cash or property due hereunder may be approved by the Manager.

Section 7.9 of the Operating Agreement states that in the event X's financing or other X undertakings whereby any Member of X elects or is required to become personally obligated (including execution of guarantees of indebtedness, non-recourse carve-out guarantees, environmental indemnities, etc.), the Members agree to enter into a contribution agreement pursuant to which all Members agree to allocate the risks of such personal obligations in accordance with their ownership percentage interests in X.[1]

A senior promissory note was executed in Year1 by some (but not all) of the subsidiaries of X as co-borrowers ("the senior promissory note"). The purpose of the funds borrowed under the senior promissory note (and the "mezzanine financing" discussed below) included acquiring and renovating real property used in the activity of Z and financing its operation. The senior promissory note is secured by a security trust agreement under the laws of Country; the security covers property constituting the activity of Z. The activity of Z includes the acquisition and renovation of two hotel properties in Country; the installation of furniture, fixtures, and equipment appropriate to improve the properties' use as hotels; and holding the hotel properties. Another entity (also owned by A, B, and C) is responsible for managing the hotel properties; it hired a hotel management company to conduct the day-to-day operation of the hotels comprising Z. Starting in Year1 and continuing through Year3, X owned the hotel properties used in the activity of Z.

The senior promissory note provides that Y will provide $n12 as of the date of closing, and will provide up to $n13 between the date the loan transaction closes and the date that the obligations under the senior promissory note mature.

C executed three personal guarantees of the senior promissory note, each subject to different terms. The first guarantee, entitled "Guaranty of Recourse Obligations," executed on Date, provides that C "hereby unconditionally, absolutely and irrevocably, as a primary obligor and not merely as a surety, guarantees to Lenders the punctual and complete payment of the entire amount of the Guaranteed Obligations upon demand by [Y, as agent for the Lenders]" (the "First Guarantee"). Section 1(b) of the First Guarantee provides that the term "Guaranteed Obligations" means, among other things, the entire outstanding principal amount of the Loan, together with all interest thereon and all other amounts due and payable under the Loan Documents in the event that:

(1) the co-borrowers fail to obtain the lender's consent before obtaining subordinate financing or transfer of the secured property,

(2) any co-borrower files a voluntary bankruptcy petition,

(3) any person in control of any co-borrower files an involuntary bankruptcy petition against a co-borrower,

[1] The taxpayer has not provided the examining agent with a separate contribution agreement and, for purposes of this analysis, we are assuming that no separate contribution agreement has been entered into pursuant to section 7.9 of X's Operating Agreement.

(4) any person in control of any co-borrower solicits other creditors to file an involuntary bankruptcy petition against a co-borrower,

(5) any co-borrower consents to or otherwise acquiesces or joins in an involuntary bankruptcy or insolvency proceeding,

(6) any person in control of any co-borrower consents to the appointment of a receiver or custodian of assets, or

(7) any co-borrower makes an assignment for the benefit of creditors, or admits in writing or in any legal proceeding that it is insolvent or unable to pay its debts as they come due.

The second guarantee, entitled "Required Amortization Guaranty," provides that C, "as a primary obligor and not merely as a surety," guarantees the punctual and complete payment of all required amortization payments under the promissory note, but in an amount not to exceed $n14. The required amortization payments represent amounts required to be paid as necessary to maintain minimum yields on the underlying obligation.

The third guarantee, a completion guarantee, provides that C will guarantee part of the $n13 "as a primary obligor and not merely as a surety." In addition, the third guarantee provides that C will personally guarantee repayment of any amounts expended to complete the renovation of Z. C's liability under the third guarantee will not be subject to, or limited by, any non-recourse provisions contained in the promissory note.

Also in Year1, some (but not all) of the subsidiaries of X executed two other promissory notes ("the Z mezzanine notes") in addition to the senior promissory note described above. The co-borrowers on the Z mezzanine notes are the same co-borrowers on the senior promissory note. The Z mezzanine notes are secured by security trust agreements under the laws of Country; the security covers property constituting the activity of Z. The Z mezzanine notes provide that Y will provide $n15 and $n16 for the first and second Z mezzanine notes, respectively. Both of the Z mezzanine notes are subject to guarantees ("Guaranty of Recourse Obligations" and "Required Amortization Guaranty") substantially similar to the first and second guarantees of the senior promissory note described above.

In Year2, the parties to the senior promissory note and the Z mezzanine notes amended the terms of the notes, deleting and releasing some co-borrowers from the notes. The loan modification agreements explicitly recites that all of the guarantees in effect with respect to the notes remain in effect. As of the end of Year3, none of the members of X have been called upon to make an additional capital contribution or a Guaranty Contribution to X in accordance with X's Operating Agreement, although C made a loan to X that remains outstanding.

In Year3, A claimed a pass-through loss for the current year as well as a pass-through net operating loss (NOL) deduction from X. A claims that he is entitled to the net operating loss deduction without limitation, because the business activity that generated the loss was funded with "Qualified Non-Recourse Financing" within the meaning of § 465(b)(6), and that C's First Guarantee for this debt should be disregarded for this purpose under § 1.752-2(b)(4) and § 1.465-27(b)(4)(i) because the First Guarantee is a "contingent" liability. There are no other amounts for which A could be considered at-risk with respect to the business activity of X within the meaning of § 465(b). Your request for advice asks whether A's deduction is allowable in Year3 in light of the basis limitations of § 704(d) and the at-risk limitations of § 465.

LAW AND ANALYSIS

Section 752 Basis

Section 704(d) provides that a partner's distributive share of partnership loss (including capital loss) shall be allowed only to the extent of the adjusted basis of such partner's interest in the partnership at the end of the partnership year in which such loss occurred. Any excess of such loss over such basis shall be allowed as a deduction at the end of the partnership year in which such excess is repaid to the partnership.

Section 722 provides that the basis of an interest in a partnership acquired by a contribution of property, including money, to the partnership shall be the amount of such money and the adjusted basis of such property to the contributing partner at the time of the contribution increased by the amount (if any) of gain recognized under § 721(b) to the contributing partner at such time.

Section 752(a) provides that any increase in a partner's share of the liabilities of a partnership, or any increase in a partner's individual liabilities by reason of the assumption by such partner of partnership liabilities, shall be considered as a contribution of money by such partner to the partnership.

Section 1.752-2(a) provides that a partner's share of a recourse partnership liability equals the portion of that liability, if any, for which the partner or related person bears the economic risk of loss. The determination of the extent to which a partner bears the economic risk of loss for a partnership liability is made under the rules in §§ 1.752-2(b) through (k).

Section 1.752-2(b)(1) provides generally that, except as otherwise provided, a partner bears the economic risk of loss for a partnership liability to the extent that, if the partnership constructively liquidated, the partner or related person would be obligated to make a payment to any person (or a contribution to the partnership) because that liability becomes due and payable and the partner or related person would not be entitled to reimbursement from another partner or person that is a related person to another partner. Upon a constructive liquidation, all of the following events are deemed to occur simultaneously --

(i) All of the partnership's liabilities become payable in full;
(ii) With the exception of property contributed to secure a partnership liability (see § 1.752-2(h)(2)), all of the partnership's assets, including cash, have a value of zero;
(iii) The partnership disposes of all of its property in a fully taxable transaction for no consideration (except relief from liabilities for which the creditor's right to repayment is limited solely to one or more assets of the partnership);
(iv) All items of income, gain, loss, or deduction are allocated among the partners; and
(v) The partnership liquidates.

Section 1.752-2(b)(3) provides that the determination of the extent to which a partner or related person has an obligation to make a payment under § 1.752-2(b)(1) is based on the facts and circumstances at the time of the determination. All statutory and contractual obligations relating to the partnership liability are taken into account for these purposes, including (i) contractual obligations outside the partnership agreement such as guarantees, indemnifications, reimbursement agreements, and other obligations running directly to creditors or other partners, or to the partnership; (ii) obligations to the partnership that are imposed by the partnership agreement, including the obligation to make a capital contribution and to restore a deficit capital account upon liquidation of the partnership, and (iii) payment obligations (whether in the form of direct remittances to another partner or a contribution to the partnership) imposed by state law, including the governing state partnership statute. To the extent that the obligation of a partner to make a payment with respect to a partnership liability is not recognized under § 1.752-2(b)(3), § 1.752-2(b) is applied as if the obligation does not exist.

Section 1.752-2(b)(4) provides that a payment obligation is disregarded if, taking into account all the facts and circumstances, the obligation is subject to contingencies that make it unlikely that the obligations will ever be discharged. If a payment obligation would arise at a future time after the occurrence of an event that is not determinable with reasonable certainty, the obligation is ignored until the event occurs.

As a threshold matter, a bona fide guarantee that is enforceable by the lender under local law generally will be sufficient to cause the guaranteeing partner to be treated as bearing the economic risk of loss for the guaranteed partnership liability for purposes of § 1.752-2(a). For purposes of § 1.752-2, we believe it is reasonable to assume that a third-party lender will take all permissible affirmative steps to enforce its rights under a guarantee if the primary obligor defaults or threatens to default on its obligations. In this case, we view the "conditions" listed in section 1(b) of the First Guarantee as circumstances under which the lender may enforce the guarantee to collect the entire outstanding balance on the loan, beyond an actual default by X on its obligations. As such, we do not believe these "conditions" are properly viewed as conditions precedent that must occur before Y is entitled to seek repayment from C under the guarantee.[2] In addition, we believe it is reasonable to assume that one or more of these conditions, more likely than not, would be met upon a constructive liquidation of X under § 1.752-2(b)(1). Accordingly, we believe that these "conditions" do not fall within the definition of "contingencies" as intended by § 1.752-2(b)(4).

For these reasons, we conclude that, for the purposes of §§ 704(d) and 752, and § 1.752-2(a), the promissory notes described above are recourse partnership liabilities allocable to the guaranteeing partner (C), and not to either A or B.

Section 465 At-Risk Amount

Section 465(a)(1) (by reference to § 465(c)(3)(A)) allows losses incurred by an individual engaged in a trade or business activity or an activity for the production of income only to the extent of the amount by which the individual is at risk (within the meaning of § 465(b)) for such activity at the close of the taxable year.

Section 465(b)(1) includes in a taxpayer's amount at risk for an activity (A) the amount of money and the adjusted basis of other property contributed by the taxpayer to the activity, and (B) amounts borrowed with respect to such activity (as determined under § 465(b)(2)).

Section 465(b)(2) includes amounts borrowed for use in an activity in a taxpayer's at-risk amount to the extent that he (A) is personally liable for the repayment of such amounts, or (B) has pledged property, other than property used in such activity, as security for such borrowed amount (to the extent of the net fair market value of the taxpayer's interest in such property). No property shall be taken into account as security if such property is directly or indirectly financed by indebtedness which is secured by property described in § 465(b)(1).

Section 465(b)(4) provides that, notwithstanding any other provision of § 465, a taxpayer shall not be considered at risk with respect to amounts protected against loss through nonrecourse financing, guarantees, stop loss agreements, or other similar arrangements.

Section 465(b)(6)(A) includes in a taxpayer's amount at risk the taxpayer's share of any qualified nonrecourse financing which is secured by real property used in such

---

[2] According to the submission, it appears the taxpayer may assert that the various events listed in section 1(b) of the First Guarantee, upon the occurrence of which the First Guarantee will become immediately due and payable for the entire outstanding balance of the loan, are the only events under which the First Guarantee will become due and payable. It appears to us that a failure of X to repay the loan, by itself, likely would be sufficient to trigger the First Guarantee, as evidenced by the first sentence of section 1 of the First Guarantee. Assuming, arguendo, that the taxpayer's assertion is correct, we nevertheless believe that the likelihood that X or any other co-borrower will ever meet any one of these conditions, in the aggregate, is not so remote a possibility that would cause the obligation to be considered "likely to never be discharged" within the meaning of § 1.752-2(b)(4).

activity. Section 465(b)(6)(B) defines qualified nonrecourse financing as any financing (i) which is borrowed by the taxpayer with respect to the activity of holding real property, (ii) which is borrowed by the taxpayer from a qualified person or represents a loan from any Federal, State, or local government or instrumentality thereof, or is guaranteed by any Federal, State, or local government, (iii) except to the extent provided in regulations, with respect to which no person is personally liable for repayment, and (iv) which is not convertible debt.

Section 465(b)(6)(C) requires, in the case of a partnership, a partner to determine its share of partnership qualified nonrecourse financing on the basis of that partner's share of partnership liabilities incurred in connection with such financing (within the meaning of § 752).

Section 465(e)(1) requires taxpayers to include in gross income the amount by which zero exceeds a taxpayer's amount at risk in any activity at the close of any taxable year. An amount equal to the amount so included in gross income shall be treated as a deduction allocable to such activity for the first succeeding taxable year.

Section 1.465-27(b)(1) defines qualified nonrecourse financing, for purposes of § 465(b)(6), as financing (i) which is borrowed by the taxpayer with respect to the activity of holding real property; (ii) which is borrowed by the taxpayer from a qualified person or represents a loan from any federal, state, or local government or instrumentality thereof, or is guaranteed by any federal, state, or local government; (iii) for which no person is personally liable for repayment, taking into account § 1.465-27(b)(3), (4), and (5); and (iv) which is not convertible debt.

Section 1.465-27(b)(2)(i) provides that, for a taxpayer to be considered at risk under § 465(b)(6), qualified nonrecourse financing must be secured only by real property used in the activity of holding real property. For this purpose, however, property that is incidental to the activity of holding real property will be disregarded. In addition, for this purpose, property that is neither real property used in the activity of holding real property nor incidental property will be disregarded if the aggregate gross fair market value of such property is less than 10 percent of the aggregate gross fair market value of all the property securing the financing.

Section 1.465-27(b)(3) provides that if one or more persons are personally liable for repayment of a portion of a financing, the portion of the financing for which no person is personally liable may qualify as qualified nonrecourse financing.

Section 1.465-27(b)(4) provides that for purposes of § 465(b)(6), the personal liability of any partnership for repayment of a financing is disregarded and, provided the requirements contained in § 1.465-27(b)(1)(i), (ii), and (iv) are satisfied, the financing will be treated as qualified nonrecourse financing secured by real property if (i) the only persons personally liable to repay the financing are partnerships; (ii) each partnership with personal liability holds only property described in § 1.465-27(b)(2)(i) (applying the principles of § 1.465-27(b)(2)(ii) in determining the property held by each partnership); and (iii) in exercising its remedies to collect on the financing in a default or default-like situation, the lender may proceed only against property that is described in § 1.465-27(b)(2)(i) that is held by the partnership or partnerships (applying the principles of § 1.465-27(b)(2)(ii) in determining the property held by the partnership or partnerships).

Generally, a limited partner, in a limited partnership organized under state law, who guarantees partnership debt is not at risk with respect to the guaranteed debt, because the limited partner has a right to seek reimbursement from the partnership and the general partner for any amounts that the limited partner is called upon to pay under the guarantee. The limited partner is "protected against loss" within the meaning of § 465(b)(4) unless or until the limited partner has no remaining rights against the partnership or general partner for reimbursement of any amounts paid by the limited partner. To the extent that a general partner does not have a right of contribution or reimbursement under local law against any other partner for the debts of the partnership, the general partner is at risk for such debts under § 465(b)(2). The general partner's right to subrogation, reimbursement, or indemnification from the partnership's assets (and only the partnership's assets) does not protect the general partner against loss within the meaning of § 465(b)(4).

In the case of an LLC, all members have limited liability with respect to LLC debt. In the absence of any co-guarantors or other similar arrangement, an LLC member who guarantees LLC debt becomes personally liable for the guaranteed debt and more closely resembles a general partner with respect to the guaranteed debt. If called upon to pay under the guarantee, the guaranteeing member may seek recourse only against the LLC's assets, if any. As in the case of a general partner, a right to subrogation, reimbursement, or indemnification from the LLC (and only the LLC) does not protect the guaranteeing LLC member against loss within the meaning of § 465(b)(4). Therefore, in the case of an LLC treated as a partnership or disregarded entity for federal tax purposes, we conclude that an LLC member is at risk with respect to LLC debt guaranteed by such member, but only to the extent that

(1) the guaranteeing member has no right of contribution or reimbursement from other guarantors,

(2) the guaranteeing member is not otherwise protected against loss within the meaning of § 465(b)(4) with respect to the guaranteed amounts, and

(3) the guarantee is bona fide and enforceable by creditors of the LLC under local law.

As a general rule, LLC members may not include liabilities of the LLC in their at-risk amounts unless the members are personally liable for the debt as provided by

§ 465(b)(2)(A). Further, under § 465(b)(4), taxpayers are not at risk with respect to amounts protected against loss through nonrecourse financing. Section 465(b)(6)(A) creates an exception to these rules when a liability meets the definition of qualified nonrecourse financing. Under § 465(b)(6)(B)(iii), a liability is qualified nonrecourse financing only if no person is personally liable for repayment. When a member of an LLC treated as a partnership for federal tax purposes guarantees LLC qualified nonrecourse financing, the member becomes personally liable for that debt because the lender may seek to recover the amount of the debt from the personal assets of the guarantor. Because the guarantor is personally liable for the debt, the debt is no longer qualified nonrecourse financing as defined in § 465(b)(6)(B) and § 1.465-27(b)(1). Further, because the creditor may proceed against the property of the LLC securing the debt, or against any other property of the guarantor member, the debt also fails to satisfy the requirement in § 1.465-27(b)(2)(i) that qualified nonrecourse financing must be secured only by real property used in the activity of holding real property.

It should be noted that this conclusion generally will not be affected by a determination that the guarantee is a “contingent” liability within the meaning of § 1.752-2(b)(4). Instead, the question is simply whether the guarantee is sufficient to cause the guarantor to be considered personally liable for repayment of the debt, based on all the facts and circumstances, within the meaning of § 465(b)(6)(B)(iii). In this case, we believe the First Guarantee is sufficient for this purpose.

When the debt is no longer qualified nonrecourse financing due to a guarantee of that debt, the non-guaranteeing members of the LLC who previously included a portion of the qualified nonrecourse financing in their amount at risk and who have not guaranteed any portion of the debt may no longer include any amount of the debt in determining their amount at risk. Any reduction that causes an LLC member’s at-risk amount to fall below zero will trigger recapture of losses under § 465(e). The at-risk amount of the LLC member that guarantees LLC debt is increased, but only to the extent such debt was not previously taken into account by that member, the guaranteeing member has no right of contribution or reimbursement from other guarantors, the guaranteeing member is not otherwise protected against loss within the meaning of § 465(b)(4) with respect to the guaranteed amounts, and the guarantee is bona fide and enforceable by creditors of the LLC under local law.

In this case, we conclude that, for the purposes of § 465(b)(6)(B)(iii) and § 1.465-27(b)(1)(iii), the First Guarantee described above is sufficient to cause the guaranteeing partner, C, to be considered personally liable for the guaranteed debt obligations of X. Accordingly, the guaranteed debt obligations of X will no longer qualify as “Qualified Non-Recourse Financing” within the meaning of § 465(b)(6)(B) and § 1.465-27. A and B, as non-guaranteeing members of X, will not be considered at-risk with respect to any such amounts as a consequence of the First Guarantee.

Guarantor’s Remedies Under Section 7.5(e) of the Operating Agreement

The taxpayer has presented an alternative argument that, even if the First Guarantee is respected as a full and bona fide guarantee that will cause C to be treated as personally liable for the guaranteed debt of X for purposes of § 1.752-2(a) and § 465(b)(6)(B)(iii), section 7.5(e) of X's Operating Agreement nevertheless operates to cause A and B to be treated as personally liable (i.e., to bear the ultimate economic risk of loss for purposes of § 752, and to be payors of last resort in a worst case scenario for purposes of § 465) with respect to their proportionate share of the guaranteed debt, because A and B are obligated under that provision to reimburse C in proportionate amounts for any payments that C makes under the guarantees. For the reasons discussed below, we disagree with this contention.

Section 1.752-2(b)(4) provides that a payment obligation is disregarded if, taking into account all the facts and circumstances, the obligation is subject to contingencies that make it unlikely that the obligations will ever be discharged. If a payment obligation would arise at a future time after the occurrence of an event that is not determinable with reasonable certainty, the obligation is ignored until the event occurs.

Section 1.752-2(b)(5) provides that a partner's or related person's obligation to make a payment with respect to a partnership liability is reduced to the extent that the partner or related person is entitled to reimbursement from another partner or a person who is a related person to a partner.

Section 1.752-2(b)(6) provides that for purposes of determining the extent to which a partner or related person has a payment obligation and the economic risk of loss, it is assumed that all partners and related persons who have obligations to make payments actually perform those obligations, irrespective of their actual net worth, unless the facts and circumstances indicate a plan to circumvent or avoid the obligation.

Section 1.752-2(j)(1) provides that an obligation of a partner or related person to make a payment may be disregarded or treated as an obligation of another person for purposes of § 1.752-2 if facts and circumstances indicate that a principal purpose of the arrangement between the parties is to eliminate the partner's economic risk of loss with respect to that obligation or create the appearance of the partner or related person bearing the economic risk of loss when, in fact, the substance of the arrangement is otherwise. Circumstances with respect to which a payment obligation may be disregarded include, but are not limited to, the situations described in §§ 1.752-2(j)(2) and (j)(3).

Section 1.752-2(j)(3) provides that an obligation of a partner to make a payment is not recognized if the facts and circumstances evidence a plan to circumvent or avoid the obligation.

Section 465(b)(3)(A) provides that, except as otherwise provided in regulations, for purposes of § 465(b)(1), amounts borrowed shall not be considered at risk with respect to an activity if such amounts are borrowed from any person who has an interest in such an activity or from a related person to a person (other than the taxpayer) having such an interest.

Section 465(b)(4) provides that, notwithstanding any other provision of § 465, a taxpayer shall not be considered at risk with respect to amounts protected against loss through nonrecourse financing, guarantees, stop loss agreements, or other similar arrangements.

With respect to § 465, no temporary or final regulations exist that provide rules for determining when taxpayers will be considered personally liable with respect to partnership debt subject to guarantees, including guarantees that may contain certain reimbursement rights. Nevertheless, the following case law provides helpful guidance in applying § 465.

In Pritchett v. Comm'r, 85. T.C. 581 (1985), rev'd and remanded, 827 F.2d 644 (9th Cir. 1987), the taxpayers were limited partners in an oil and gas drilling operation, and they claimed deductions for losses in excess of their cash contributions to the partnership. The taxpayers argued that under the partnership agreement, they were "at risk" for partnership liabilities held by a drilling company that was responsible for developing the oil and gas fields. Under the contract the creditor would receive a portion of profits from the drilling operation. While general partners were the only parties personally liable, under the partnership agreement the general partners were given the right to call on the limited partners to make a capital contribution if the notes issued by the partnership remained unpaid upon their maturity date. The Service argued that the liability was contingent and that the taxpayers were only at risk once general partners called upon them to make a contribution. The Tax Court agreed with this analysis. Upon appeal, the Ninth Circuit held that the contractual obligations of the limited partners under the partnership agreement made them ultimately responsible for the debt. While the Commissioner argued that the liability was contingent simply because the general partners could elect to not make the cash calls, the Ninth Circuit did not agree. The Ninth Circuit determined that the cash calls were mandatory under the partnership agreements and that "economic reality" dictated that the general partners would make the calls.

In Melvin v. Comm'r, 88 T.C. 63 (1987), aff'd, 894 F.2d 1072 (9th Cir. 1990), the general partnership in which the taxpayer was a partner invested in a limited partnership. In payment for its limited partnership interest, the general partnership paid $35,000 cash and agreed to make additional capital contributions of $70,000. The obligation to make the additional capital contributions was evidenced by a $70,000 recourse promissory note. The taxpayer's share of the note was $50,000. The limited partnership obtained a $3,500,000 recourse loan from a bank and pledged partnership assets to the bank, including the $70,000 note along with other limited partner notes, as security. These notes were subsequently physically transferred to the bank. The court concluded that the taxpayer was at risk on the $3,500,000 loan to the extent of his pro rata share thereof. In reaching it conclusion the court reasoned that "a partner will be regarded as personally liable within the meaning of § 465(b)(2)(A) if he has the ultimate liability to repay the debt obligation of the partnership in the event funds from the partnership's assets are not available for that purpose. The relevant question is who, if anyone, will ultimately be obligated to pay the partnership's recourse obligations if the partnership is unable to do so. It is not relevant that the partnership MAY be able to do so. The scenario that controls is the worst-case scenario, not the best case." Melvin, 88 T.C. at 75 (citations omitted).

We believe that Pritchett and Melvin stand for the proposition that the relevant inquiries when dealing with guarantees of partnership debt, for purposes of § 465, are whether the guarantee causes the guaranteeing partner to become the "payor of last resort in a worst case scenario" for the partnership debt, given the "economic realities" of the particular situation, and whether the guarantor possesses any "mandatory" rights to contribution, reimbursement, or subordination with respect to any other parties, as a result or consequence of paying on the guarantee, that would cause these other parties to be considered the "payors of last resort in a worst case scenario" with respect to that debt.

We do not agree with the taxpayer's interpretation of X's Operating Agreement. We do not believe section 7.5(e) of the Operating Agreement imposes a mandatory payment obligation on A and B to make additional contributions to X if C is called upon to pay on C's personal guarantees. Rather, section 7.5(e) permits C to call for additional capital from A and B, but if A and/or B chooses not to contribute additional capital, C's remedies are limited to the remedies identified in paragraphs (i) and (ii) of that section. As a result, we do not believe the Operating Agreement gives C the right to bring an action against A and B to require them to contribute additional capital to X if they choose not to. Further, because we believe C's remedies are limited to paragraphs (i) and (ii) of section 7.5(e) if C calls for additional capital contributions from A and B if C is required to pay on C's personal guarantee, we believe section 7.7 of the Operating Agreement is not applicable. In addition, because a separate contribution agreement was not entered into by the parties, section 7.9 is also inapplicable. Accordingly, because neither remedy available to C under section 7.5(e) requires A or B to make additional contributions to X if C is called upon to pay on C's personal guarantees, we conclude that A and B do not bear the ultimate economic risk of loss for the guaranteed debt of X for purposes of § 752.

Moreover, for purposes of § 465, we believe the facts of this case are distinguishable from those in Pritchett. Since X's Operating Agreement does not require A and B to make additional capital contributions to X, it does not appear that "economic reality" would dictate that X or C *must* require A and B to make additional contributions to X if C is required to pay on C's personal guarantees. Accordingly, we conclude that A and B are not "payors of last resort in a worst case scenario," as discussed in Pritchett and Melvin, and A and B are not currently at risk with respect to the guaranteed debt of X for purposes of § 465.

It appears that the taxpayer interprets X's Operating Agreement as giving C an enforceable right to require A and B to make additional contributions to X, in addition to the specific remedies provided in paragraphs (i) and (ii) of section 7.5(e) of the Operating Agreement. As noted above, we do not agree with this interpretation of the Operating Agreement. Nevertheless, even if the taxpayer's interpretation of the Operating Agreement is ultimately determined to be correct, we still conclude that the taxpayer is not allocated basis under § 752 and is not at risk under § 465 with respect to the guaranteed debt.

We reach this conclusion because we view the requirement for A and B to make additional capital contributions to X as a contingent liability within the meaning of § 1.752-2(b)(4). Because C may choose alternate remedies that would not cause A or B to be viewed as bearing the ultimate economic risk of loss for the guaranteed debt of X, we believe these alternate remedies are properly viewed as contingencies that make it unlikely that any payment obligations of A or B would ever be discharged. In addition, we believe these remedies may also be viewed as future events that cause the payment obligations of A and B to be "not determinable with reasonable certainty" and cause the obligations to be ignored until A and B are actually required to make payments to X, for purposes of § 1.752-2(b)(4).[3]

In addition, for purposes of § 465, even if we view C as having an enforceable right to require A and B to make additional contributions to X in addition to the other remedies available in section 7.5(e) of X's Operating Agreement, we believe that the facts of this case would continue to be distinguishable from those in Pritchett. In this case, C has been provided with alternate remedies under section 7.5(e) of X's Operating Agreement if A and B choose not to make additional contributions to X under this provision. As a result, it appears that the requirement for A and B to make additional contributions under this provision is not a "mandatory" requirement, since C may elect to use these alternate remedies rather than have X enforce the Operating Agreement under the default provision of section 7.7. Therefore, it does not appear that "economic reality" would dictate that X or C *must* enforce the Operating Agreement under section 7.7 in a court proceeding against A and B in such circumstances. Accordingly, we conclude that A and B are not "payors of last resort in a worst case scenario", as discussed in Pritchett and Melvin, and therefore A and B are not currently at risk with respect to the guaranteed debt of X for purposes of § 465.

We would further note that, to the extent that C may elect to use the remedy described in section 7.5(e)(i) of X's Operating Agreement, in which C may treat the

[3] We believe that one or more arguments may also be made under §1.752-2(j) in this case, depending on further factual development. [redacted]

amount of a Guaranty Contribution that a defaulting member failed to contribute as a loan to the defaulting member, such "loan" would appear to be subject to the related-party rule of § 465(b)(3)(A). Under the remedy of section 7.5(e)(i), A and B would be viewed as borrowing money from C with respect to the activity of X, at a time when C also possesses an ownership interest in the activity. Accordingly, A and B would not be considered at risk with respect to such amounts pursuant to § 465(b)(3)(A) under this scenario.

Of course, if a payment obligation does arise in the future which requires A and B to make a payment to X, A and B would properly be viewed as making contributions to X at that time, for purposes of §§ 722, 704(d) and 465(b)(1)(A).

In conclusion, because A and B do not have a mandatory obligation to make additional capital contributions to the X, regardless of which interpretation of X's Operating Agreement is ultimately determined to be correct, A and B do not bear the ultimate economic risk of loss for purposes of § 752, and A and B are not the payors of last resort in a worst case scenario for purposes of § 465.

pitalization. Accordingly, the collection period expires 10 years after assessment, plus the actual time spent in a combat zone, regardless of the length of the postponement period available for hospitalized taxpayers to comply with their tax obligations.

Effective Date

The provision applies to taxes assessed before, on, or after the date of the enactment (December 18, 2015).

B. Real Estate Investment Trusts

Overview

In general

A real estate investment trust ("REIT") is an entity that otherwise would be taxed as a U.S. corporation but elects to be taxed under a special REIT tax regime. To qualify as a REIT, an entity must meet a number of requirements. At least 90 percent of REIT income (other than net capital gain) must be distributed annually;[848] the REIT must derive most of its income from passive, generally real estate-related, investments; and REIT assets must be primarily real estate-related. In addition, a REIT must have transferable interests and at least 100 shareholders, and no more than 50 percent of the REIT interests may be owned by five or fewer individual shareholders (as determined using specified attribution rules). Other requirements also apply.[849]

If an electing entity meets the requirements for REIT status, the portion of its income that is distributed to its shareholders as a dividend or qualifying liquidating distribution each year is deductible by the REIT (whereas a regular subchapter C corporation cannot deduct such distributions).[850] As a result, the distributed income of the REIT is not taxed at the entity level; instead, it is taxed only at the investor level. Although a REIT is not required to distribute more than the 90 percent of its income described above to retain REIT status, it is taxed at ordinary corporate rates on amounts not distributed or treated as distributed.[851]

A REIT may designate a capital gain distribution to its shareholders, who treat the designated amount as long-term capital gain when distributed. A REIT also may retain net capital gain and pay corporate income tax on the amount retained, while the shareholders include the undistributed capital gain in income, obtain a credit for the corporate tax paid, and step up the basis of their

---

[848] Even if a REIT meets the 90-percent income distribution requirement for REIT qualification, more stringent distribution requirements must be met in order to avoid an excise tax under section 4981.

[849] Secs. 856 and 857.

[850] Liquidating distributions are covered to the extent of earnings and profits, and are defined to include redemptions of stock that are treated by shareholders as a sale of stock under section 302. Secs. 857(b)(2)(B), 561, and 562(b).

[851] An additional four-percent excise tax is imposed to the extent a REIT does not distribute at least 85 percent of REIT ordinary income and 95 percent of REIT capital gain net income within a calendar year period. In addition, to the extent a REIT distributes less than 100 percent of its ordinary income and capital gain net income in a year, the difference between the amount actually distributed and 100 percent is added to the distribution otherwise required in a subsequent year to avoid the excise tax. Sec. 4981.

REIT stock for the amount included in income.[852] In this manner, capital gain also is taxed only once, whether or not distributed, rather than at both the entity and investor levels.

Income tests

A REIT is restricted to earning certain types of generally passive income. Among other requirements, at least 75 percent of the gross income of a REIT in each taxable year must consist of real estate-related income. Such income includes: rents from real property; gain from the sale or other disposition of real property (including interests in real property) that is not stock in trade of the taxpayer, inventory, or other property held by the taxpayer primarily for sale to customers in the ordinary course of its trade or business; interest on mortgages secured by real property or interests in real property; and certain income from foreclosure property (the "75-percent income test").[853] Qualifying rents from real property include rents from interests in real property and charges for services customarily furnished or rendered in connection with the rental of real property,[854] but do not include impermissible tenant service income.[855] Impermissible tenant service income includes amounts for services furnished by the REIT to tenants or for managing or operating the property, other than amounts attributable to services that are provided by an independent contractor or taxable REIT subsidiary, or services that certain tax exempt organizations could perform under the section 512(b)(3) rental exception from unrelated business taxable income.[856] Qualifying rents from real property include rent attributable to personal property which is leased under, or in connection with, a lease of real property, but only if the rent attributable to such personal property for the taxable year does not exceed 15 percent of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, the lease.[857]

In addition, rents received from any entity in which the REIT owns more than 10 percent of the vote or value generally are not qualifying income.[858] However, there is an exception for certain rents received from taxable REIT subsidiaries (described further below), in which a REIT may own more than 10 percent of the vote or value.

In addition, 95 percent of the gross income of a REIT for each taxable year must be from the 75-percent income sources and a sec-

[852] Sec. 857(b)(3).

[853] Secs. 856(c)(3) and 1221(a)(1). Income from sales that are not prohibited transactions solely by virtue of section 857(b)(6) also is qualified REIT income.

[854] Sec. 856(d)(1)(A) and (B).

[855] Sec. 856(d)(2)(C).

[856] Sec. 856(d)(7)(A) and (C). If impermissible tenant service income with respect to any real or personal property is more than one percent of all amounts received or accrued during the taxable year directly or indirectly with respect to such property, then the impermissible tenant service income with respect to such property includes all such amounts. Sec. 856(d)(7)(B). The amount treated as received for any service (or management or operation) shall not be less than 150 percent of the direct cost of the trust in furnishing or rendering the service (or providing the management or operation). Sec. 856(d)(7)(D). For purposes of the 75-percent and 95-percent income tests, impermissible tenant service income is included in gross income of the REIT. Sec. 856(d)(7)(E).

[857] Sec. 856(d)(1)(C).

[858] Sec. 856(d)(2)(B).

ond permitted category of other, generally passive sources such as dividends and interest (the "95-percent income test").[859]

A REIT must be a U.S. domestic entity, but it is permitted to hold foreign real estate or other foreign assets, provided the 75-percent and 95-percent income tests and the other requirements for REIT qualification are met.[860]

Asset tests

At least 75 percent of the value of a REIT's assets must be real estate assets, cash and cash items (including receivables), and Government securities[861] (the "75-percent asset test").[862] Real estate assets are real property (including interests in real property and interests in mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.[863] No more than 25 percent of a REIT's assets may be securities other than such real estate assets.[864]

Except with respect to securities of a taxable REIT subsidiary, not more than five percent of the value of a REIT's assets may be securities of any one issuer, and the REIT may not possess securities representing more than 10 percent of the outstanding value or voting power of any one issuer.[865] In addition, not more than 25 percent of the value of a REIT's assets may be securities of one or more taxable REIT subsidiaries.[866]

The asset tests must be met as of the close of each quarter of a REIT's taxable year. However, a REIT that has met the asset tests as of the close of any quarter does not lose its REIT status solely because of a discrepancy during a subsequent quarter between the value of the REIT's investments and such requirements, unless such discrepancy exists immediately after the acquisition of any security or other property and is wholly or partly the result of such acquisition.[867]

Taxable REIT subsidiaries

A REIT generally cannot own more than 10 percent of the vote or value of a single entity. However, there is an exception for ownership of a taxable REIT subsidiary ("TRS") that is taxed as a corporation, provided that securities of one or more TRSs do not represent more than 25 percent of the value of REIT assets.

A TRS generally can engage in any kind of business activity except that it is not permitted directly or indirectly to operate either a lodging facility or a health care facility, or to provide to any other person (under a franchise, license, or otherwise) rights to any

[859] Sec. 856(c)(2).

[860] See Rev. Rul. 74–191, 1974–1 C.B. 170.

[861] Government securities are defined for this purpose under section 856(c)(5)(F), by reference to the Investment Company Act of 1940. The term includes securities issued or guaranteed by the United States or persons controlled or supervised by and acting as an instrumentality thereof, but does not include securities issued or guaranteed by a foreign, state, or local government entity or instrumentality.

[862] Sec. 856(c)(4)(A).

[863] Temporary investments in certain stock or debt instruments also can qualify if they are temporary investments of new capital, but only for the one-year period beginning on the date the REIT receives such capital. Sec. 856(c)(5)(B).

[864] Sec. 856(c)(4)(B)(i).

[865] Sec. 856(c)(4)(B)(iii).

[866] Sec. 856(c)(4)(B)(ii).

[867] Sec. 856(c)(4). In the case of such an acquisition, the REIT also has a grace period of 30 days after the close of the quarter to eliminate the discrepancy.

brand name under which any lodging facility or health care facility is operated.[868]

However, a TRS may rent a lodging facility or health care facility from its parent REIT and is permitted to hire an independent contractor[869] to operate such facility. Rent paid to the parent REIT by the TRS with respect to hotel, motel, or other transient lodging facility operated by an independent contractor is qualified rent for purposes of the REIT's 75-percent and 95-percent income tests.[870] This lodging facility rental rule is an exception to the general rule that rent paid to a REIT by any corporation (including a TRS) in which the REIT owns 10 percent or more of the vote or value is not qualified rental income for purposes of the 75-percent or 95-percent REIT income tests.[871] There is also an exception to the general rule in the case of a TRS that rents space in a building owned by its parent REIT if at least 90 percent of the space in the building is rented to unrelated parties and the rent paid by the TRS to the REIT is comparable to the rent paid by the unrelated parties.[872]

REITs are subject to a tax equal to 100 percent of redetermined rents, redetermined deductions, and excess interest. These are defined generally as the amounts of specified REIT transactions with a TRS of the REIT, to the extent such amounts differ from an arm's length amount.[873]

Prohibited transactions tax

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions. For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is "stock in trade of a taxpayer or other property which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary course of his trade or business"[874] and is not foreclosure property. The PTT for a REIT does not apply to a sale if the REIT satisfies certain safe harbor requirements in section 857(b)(6)(C) or (D), including an asset holding period of at least two years.[875] If the conditions are met, a REIT may either (1) make no more than seven sales within a taxable year (other than sales of foreclosure property or involuntary conversions under section 1033), or (2) sell either no more than 10 percent of the aggregate bases, or no more than 10

[868] The latter restriction does not apply to rights provided to an independent contractor to operate or manage a lodging or health care facility if such rights are held by the corporation as a franchisee, licensee, or in similar capacity and such lodging facility or health care facility is either owned by such corporation or is leased by such corporation from the REIT. Sec. 856(l)(3).

[869] An independent contractor will not fail to be treated as such for this purpose because the TRS bears the expenses of operation of the facility under the contract, or because the TRS receives the revenues from the operation of the facility, net of expenses for such operation and fees payable to the operator pursuant to the contract, or both. Sec. 856(d)(9)(B).

[870] Sec. 856(d)(8)(B).

[871] Sec. 856(d)(2)(B).

[872] Sec. 856(d)(8)(A).

[873] Sec. 857(b)(7).

[874] This definition is the same as the definition of certain property the sale or other disposition of which would produce ordinary income rather than capital gain under section 1221(a)(1).

[875] Additional requirements for the safe harbor limit the amount of expenditures the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property, require marketing to be done by an independent contractor, and forbid a sales price that is based on the income or profits of any person.

percent of the aggregate fair market value, of all its assets as of the beginning of the taxable year (computed without regard to sales of foreclosure property or involuntary conversions under section 1033), without being subject to the PTT tax.[876]

REIT shareholder tax treatment

Although a REIT typically does not pay corporate level tax due to the deductible distribution of its income, and thus is sometimes compared to a partnership or S corporation, REIT equity holders are not treated as being engaged in the underlying activities of the REIT as are partners or S corporation shareholders, and the activities at the REIT level that characterize its income do not generally flow through to equity owners to characterize the tax treatment of REIT distributions to them. A distribution to REIT shareholders out of REIT earnings and profits is generally treated as an ordinary income REIT dividend and is treated as ordinary income taxed at the shareholder's normal rates on such income.[877] However, a REIT is permitted to designate a "capital gain dividend" to the extent a distribution is made out of its net capital gain.[878] Such a dividend is treated as long-term capital gain to the shareholders.[879]

REIT shareholders are not taxed on REIT income unless the income is distributed to them (except in the case of REIT net capital gain retained by the REIT and designated for inclusion in the shareholder's income as explained in the preceding footnote). However, since a REIT must distribute 90 percent of its ordinary income annually, and typically will distribute or designate its income as capital gain dividends to avoid a tax at the REIT level, REIT income generally is taxed in full at the shareholder level annually.

REIT shareholders are not entitled to any share of REIT losses to offset against other shareholder income. However, if the REIT itself has income, its losses offset its income in determining how much it is required to distribute to meet the distribution requirements. Also, REIT losses that reduce earnings and profits can cause a distribution that exceeds the REIT's earnings and profits to be treated as a nontaxable return of capital to its shareholders.

Tax exempt shareholders

A tax exempt shareholder is exempt from tax on REIT dividends, and is not treated as engaging in any of the activities of the REIT. As one example, if the REIT borrowed money and its income at the REIT level were debt-financed, a tax exempt shareholder would not

---

[876] Sec. 857(b)(6).

[877] Because a REIT dividend is generally paid out of income that was not taxed to the distributing entity, the dividend is not eligible for the dividends received deductions to a corporate shareholder. Sec. 243(d)(3). A REIT dividend is not eligible for the 20 percent qualified dividend rate to an individual shareholder, except to the extent such dividend is attributable to REIT income from nondeductible C corporation dividends, or to certain income of the REIT that was subject to corporate level tax. Sec. 857(c).

[878] Sec. 857(b)(3)(C). Net capital gain is the excess of the net long-term capital gain for the taxable year over the net short-term capital loss for the taxable year. Sec. 1222.

[879] A REIT may also retain its net capital gain without distribution, while designating a capital gain dividend for inclusion in shareholder income. In this case, the REIT pays corporate-level tax on the capital gain, but the shareholder includes the undistributed capital gain in income, receives a credit for the corporate level tax paid, and steps up the basis of the REIT stock for the amount included in income, with the result that the net tax paid is the shareholder-level capital gain tax. Sec. 857(b)(3)(D).

have debt-financed unrelated business income from the REIT dividend.

Foreign shareholders

Except as provided by the Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA"),[880] a REIT shareholder that is a foreign corporation or a nonresident alien individual normally treats its dividends as fixed and determinable annual and periodic income that is subject to withholding under section 1441 but not treated as active business income that is effectively connected with the conduct of a U.S. trade or business, regardless of the level of real estate activity of the REIT in the United States.[881] A number of treaties permit a lower rate of withholding on REIT dividends than the Code would otherwise require.

Although FIRPTA applies in many cases to foreign investment in U.S. real property through a REIT, REITs offer foreign investors some ability to invest in U.S real property interests without subjecting gain on the sale of REIT stock to FIRPTA (for example, if the REIT is domestically controlled).[882] In general, if any class of stock of a corporation is regularly traded on an established securities market, stock of such class is subject to FIRPTA only in the case of a person who, at some time during the testing period, held more than 5 percent of such class of stock.[883] Also, if the REIT stock is publicly traded and the foreign investor does not own more than five percent of such stock, the investor can receive distributions from the sale by the REIT of U.S. real property interests without such distributions being subject to FIRPTA.[884]

1. Restriction on tax-free spinoffs involving REITs (sec. 311 of the Act and secs. 355 and 856 of the Code)

Present Law

A corporation generally is required to recognize gain on the distribution of property (including stock of a subsidiary) to its shareholders as if the corporation had sold such property for its fair market value.[885] In addition, the shareholders receiving the distributed property are ordinarily treated as receiving a dividend equal to the value of the distribution (to the extent of the distributing corporation's earnings and profits),[886] or capital gain in the case of an acquisition of its stock that significantly reduces the shareholder's interest in the parent corporation.[887]

An exception to these rules applies if the distribution of the stock of a controlled corporation satisfies the requirements of section 355.

[880] Pub. L. No. 96–499. FIRPTA treats income of a foreign investor from the sale or disposition of U.S. real property interests as effectively connected with the operation of a trade or business in the United States. Such income is taxed at regular U.S. rates and withholding obligations are imposed on payors of the income. Secs. 897 and 1445.

[881] As noted above, REITs are not permitted to receive income from property that is inventory or that is held for sale to customers in the ordinary course of the REIT's business. However, REITs may engage in certain activities, including acquisition, development, lease, and sale of real property, and may provide "customary services" to tenants.

[882] Sec. 897(h)(2).

[883] Sec. 897(c)(3).

[884] Sec. 897(h)(1).

[885] Sec. 311(b).

[886] Sec. 301(b)(1) and (c)(1).

[887] Sec. 302(a) and (b)(2).

If all the requirements are satisfied, there is no tax to the distributing corporation or to the shareholders on the distribution.

One requirement to qualify for tax-free treatment under section 355 is that both the distributing corporation and the controlled corporation must be engaged immediately after the distribution in the active conduct of a trade or business that has been conducted for at least five years and was not acquired in a taxable transaction during that period (the "active business test").[888]

For this purpose, the active business test is satisfied only if (1) immediately after the distribution, the corporation is engaged in the active conduct of a trade or business, or (2) immediately before the distribution, the corporation had no assets other than stock or securities in the controlled corporations and each of the controlled corporations is engaged immediately after the distribution in the active conduct of a trade or business.[889] For this purpose, the active business test is applied by reference to the relevant affiliated group rather than on a single corporation basis. For the parent distributing corporation, the relevant affiliated group consists of the distributing corporation as the common parent and all corporations affiliated with the distributing corporation through stock ownership described in section 1504(a)(1) (regardless of whether the corporations are otherwise includible corporations under section 1504(b)),[890] immediately after the distribution. The relevant affiliated group for a controlled distributed subsidiary corporation is determined in a similar manner (with the controlled corporation as the common parent).

In determining whether a corporation is directly engaged in an active trade or business that satisfies the requirement, IRS ruling practice formerly required that the value of the gross assets of the trade or business being relied on must ordinarily constitute at least five percent of the total fair market value of the gross assets of the corporation directly conducting the trade or business.[891] The IRS suspended this specific rule in connection with its general administrative practice of moving IRS resources away from advance rulings on factual aspects of section 355 transactions in general.[892]

Section 355 does not apply to an otherwise qualifying distribution if, immediately after the distribution, either the distributing or the controlled corporation is a disqualified investment corporation and any person owns a 50 percent interest in such corporation and did not own such an interest before the distribution. A disqualified investment corporation is a corporation of which two-thirds or more

[888] Sec. 355(b).

[889] Sec. 355(b)(1).

[890] Sec. 355(b)(3).

[891] Rev. Proc. 2003–3, sec. 4.01(30), 2003–1 I.R.B. 113.

[892] Rev. Proc. 2003–48, 2003–29 I.R.B. 86. Since then, the IRS discontinued private rulings on whether a transaction generally qualifies for nonrecognition treatment under section 355. Nonetheless, the IRS may still rule on certain significant issues. See Rev. Proc. 2016–1, 2016–1 I.R.B. 1; Rev. Proc. 2016–3, 2016–1 I.R.B. 126. Recently, the IRS announced that it will not rule in certain situations in which property owned by any distributing or controlled corporation becomes the property of a RIC or a REIT; however, the IRS stated that the policy did not extend to situations in which, immediately after the date of the distribution, both the distributing and controlled corporation will be RICs, or both of such corporations will be REITs, and there is no plan or intention on the date of the distribution for either the distributing or the controlled corporation to cease to be a RIC or a REIT. See Rev. Proc. 2015–43, 2015–40 I.R.B. 467.

of its asset value is comprised of certain passive investment assets. Real estate is not included as such an asset.[893]

The IRS has ruled that a REIT may satisfy the active business requirement through its rental activities.[894] More recently, the IRS has issued a private ruling indicating that a REIT that has a TRS can satisfy the active business requirement by virtue of the active business of its TRS.[895] Thus, a C corporation that owns REIT-qualified assets may create a REIT to hold such assets and spin off that REIT without tax consequences to it or its shareholders (if the newly-formed REIT satisfies the active business requirement through its rental activities or the activities of a TRS). Following the spin-off, income from the assets held in the REIT is no longer subject to corporate level tax (unless there is a disposition of such assets that incurs tax under the built in gain rules).

Explanation of Provision

The provision makes a REIT generally ineligible to participate in a tax-free spin-off as either a distributing or controlled corporation under section 355. There are two exceptions, however. First, the general rule does not apply if, immediately after the distribution, both the distributing and the controlled corporations are REITs.[896] Second, a REIT may spin off a TRS if (1) the distributing corporation has been a REIT at all times during the 3-year period ending on the date of the distribution, (2) the controlled corporation has been a TRS of the REIT at all times during such period, and (3) the REIT has had control (as defined in section 368(c)[897] applied by taking into account stock owned directly or indirectly, including through one or more partnerships, by the REIT) of the TRS at all times during such period. For this purpose, control of a partnership means ownership of at least 80 percent of the profits interest and at least 80 percent of the capital interests.

A controlled corporation will be treated as meeting the control requirements if the stock of such corporation was distributed by a TRS in a transaction to which section 355 (or so much of section 356 as relates to section 355) applies and the assets of such corporation consist solely of the stock or assets held by one or more TRSs of the distributing corporation meeting the control requirements noted above.

If a corporation that is not a REIT was a distributing or controlled corporation with respect to any distribution to which section 355 applied, such corporation (and any successor corporation) shall not be eligible to make a REIT election for any taxable year beginning before the end of the 10-year period beginning on the date of such distribution.

[893] Sec. 355(g).
[894] Rev. Rul. 2001–29, 2001–1 C.B. 1348.
[895] Priv. Ltr. Rul. 201337007. A private ruling may be relied upon only by the taxpayer to which it is issued. However, private rulings provide some indication of administrative practice.
[896] As long as a REIT election for each corporation is effective immediately after the distribution, the elections may be made after that time.
[897] Under section 368(c), the term "control" means the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote and at least 80 percent of the total number of shares of all other classes of stock of the corporation.

Effective Date

The provision generally applies to distributions on or after December 7, 2015,[898] but does not apply to any distribution pursuant to a transaction described in a ruling request initially submitted to the Internal Revenue Service on or before such date, which request has not been withdrawn and with respect to which a ruling has not been issued or denied in its entirety as of such date.

2. Reduction in percentage limitation on assets of REIT which may be taxable REIT subsidiaries (sec. 312 of the Act and sec. 856 of the Code)

Present Law

A REIT generally is not permitted to own securities representing more than 10 percent of the vote or value of any entity, nor is it permitted to own securities of a single issuer comprising more than 5 percent of REIT value.[899] In addition, rents received by a REIT from a corporation of which the REIT directly or indirectly owns more than 10 percent of the vote or value generally are not qualified rents for purposes of the 75-percent and 95-percent income tests.[900]

There is an exception from these rules in the case of a TRS.[901] No more than 25 percent of the value of total REIT assets may consist of securities of one or more TRSs.[902]

Explanation of Provision

The provision reduces to 20 percent the permitted percentage of total REIT assets that may be securities of one or more TRSs.

Effective Date

The provision applies to taxable years beginning after December 31, 2017.

3. Prohibited transaction safe harbors (sec. 313 of the Act and sec. 857 of the Code)

Present Law

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions. For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is "stock in trade of a taxpayer or other property which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary

[898] The provision does not apply to distributions by a corporation pursuant to a plan under which stock constituting control (within the meaning of section 368(c)) of the controlled corporation was distributed before December 7, 2015.
[899] Sec. 856(c)(4)(B)(iii).
[900] Sec. 856(d)(2)(B).
[901] Sec. 856(d)(8).
[902] Sec. 856(c)(4)(B)(ii).

course of his trade or business"[903] and is not foreclosure property. The PTT for a REIT does not apply to a sale if the REIT satisfies certain safe harbor requirements in section 857(b)(6)(C) or (D), including an asset holding period of at least two years.[904] If the conditions are met, a REIT may either (1) make no more than seven sales within a taxable year (other than sales of foreclosure property or involuntary conversions under section 1033), or (2) sell either no more than 10 percent of the aggregate bases, or no more than 10 percent of the aggregate fair market value, of all its assets as of the beginning of the taxable year (computed without regard to sales of foreclosure property or involuntary conversions under section 1033), without being subject to the PTT tax.[905]

The additional requirements for the safe harbor limit the amount of expenditures the REIT or a partner of the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property. Also, if more than seven sales are made during the taxable year, substantially all marketing and development expenditures with respect to the property must have been made through an independent contractor from whom the REIT itself does not derive or receive any income.

Explanation of Provision

The provision expands the amount of property that a REIT may sell in a taxable year within the safe harbor provisions, from 10 percent of the aggregate basis or fair market value, to 20 percent of the aggregate basis or fair market value. However, in any taxable year, the aggregate adjusted bases and the fair market value of property (other than sales of foreclosure property or sales to which section 1033 applies) sold during the three taxable year period ending with such taxable year may not exceed 10 percent of the sum of the aggregate adjusted bases or the sum of the fair market value of all of the assets of the REIT as of the beginning of each of the 3 taxable years that are part of the period.

The provision clarifies that the determination of whether property is described in section 1221(a)(1) is made without regard to whether or not such property qualifies for the safe harbor from the prohibited transactions rules.

Effective Date

The provision generally applies to taxable years beginning after the date of enactment (December 18, 2015). However, the provision clarifying the determination of whether property is described in section 1221(a)(1) has retroactive effect, but does not apply to any sale of property to which section 857(b)(6)(G) applies.

[903] This definition is the same as the definition of certain property the sale or other disposition of which would produce ordinary income rather than capital gain under section 1221(a)(1).

[904] Additional requirements for the safe harbor limit the amount of expenditures the REIT can make during the two-year period prior to the sale that are includible in the adjusted basis of the property, require marketing to be done by an independent contractor, and forbid a sales price that is based on the income or profits of any person.

[905] Sec. 857(b)(6).

4. Repeal of preferential dividend rule for publicly offered REITs; authority for alternative remedies to address certain REIT distribution failures (secs. 314 and 315 of the Act and sec. 562 of the Code)

Present Law

A REIT is allowed a deduction for dividends paid to its shareholders.[906] In order to qualify for the deduction, a dividend must not be a "preferential dividend."[907] For this purpose, a dividend is preferential unless it is distributed pro rata to shareholders, with no preference to any share of stock compared with other shares of the same class, and with no preference to one class as compared with another except to the extent the class is entitled to a preference.

Similar rules apply to regulated investment companies ("RICs").[908] However, the preferential dividend rule does not apply to a publicly offered RIC (as defined in section 67(c)(2)(B)).[909]

Explanation of Provision

The provision repeals the preferential dividend rule for publicly offered REITs. For this purpose, a REIT is publicly offered if it is required to file annual and periodic reports with the Securities and Exchange Commission under the Securities Exchange Act of 1934.

For other REITs, the provision provides the Secretary of the Treasury with authority to provide an appropriate remedy to cure the failure of the REIT to comply with the preferential dividend requirements in lieu of not considering the distribution to be a dividend for purposes of computing the dividends-paid deduction where the Secretary determines the failure to comply is inadvertent or is due to reasonable cause and not due to willful neglect, or the failure is a type of failure identified by the Secretary as being so described.

Effective Date

The provision to repeal the preferential dividend rule for publicly offered REITs applies to distributions in taxable years beginning after December 31, 2014.

The provision granting authority to the Secretary of the Treasury to provide alternative remedies addressing certain REIT distribution failures applies to distributions in taxable years beginning after December 31, 2015.

5. Limitations on designation of dividends by REITs (sec. 316 of the Act and sec. 857 of the Code)

Present Law

A REIT that has a net capital gain for a taxable year may designate dividends that it pays or is treated as paying during the

[906] Sec. 857(b)(2)(B).
[907] Sec. 562(c).
[908] Sec. 852(b)(2)(D).
[909] Sec. 562(c).

year as capital gain dividends.[910] A capital gain dividend is treated by the shareholder as gain from the sale or exchange of a capital asset held more than one year.[911] The amount that may be designated as capital gain dividends for any taxable year may not exceed the REIT's net capital gain for the year.

A REIT may designate dividends that it pays or is treated as paying during the year as qualified dividend income.[912] Qualified dividend income is taxed to individuals at the same tax rate as net capital gain, under rules enacted by the Taxpayer Relief Act of 1997.[913] The amount that may be designated as qualified dividend income for any taxable year is limited to qualified dividend income received by the REIT plus some amounts subject to corporate taxation at the REIT level.

The IRS has ruled that a RIC may designate the maximum amount permitted under each of the provisions allowing a RIC to designate dividends even if the aggregate of all the designated amounts exceeds the total amount of the RIC's dividends distributions.[914]

The IRS also has ruled that if a RIC has two or more classes of stock and it designates the dividends that it pays on one class as consisting of more than that class's proportionate share of a particular type of income, the designations are not effective for federal tax purposes to the extent that they exceed the class's proportionate share of that type of income.[915] The Internal Revenue Service announced that it would provide guidance that RICs and REITs must use in applying the capital gain provision enacted by the Taxpayer Relief Act of 1997.[916] The announcement referred to the designation limitations of Revenue Ruling 89–91.

Explanation of Provision

The provision limits the aggregate amount of dividends designated by a REIT for a taxable year under all of the designation provisions to the amount of dividends paid with respect to the taxable year (including dividends described in section 858 that are paid after the end of the REIT taxable year but treated as paid by the REIT with respect to the taxable year).

The provision provides the Secretary of the Treasury authority to prescribe regulations or other guidance requiring the proportionality of the designation for particular types of dividends (for example, capital gain dividends) among shares or beneficial interests in a REIT.

Effective Date

The provision applies to distributions in taxable years beginning after December 31, 2015.

---

[910] Sec. 857(b)(3)(C).

[911] Sec. 857(b)(3)(B).

[916] Notice 97–64, 1997–2 C.B. 323. Recently, the IRS modified Notice 97–64 and provided certain new rules for RICs; the designation limitations in Revenue Ruling 89–81, however, continue to apply. Notice 2015–41, 2015–24 I.R.B. 1058.

6. Debt instruments of publicly offered REITs and mortgages treated as real estate assets (sec. 317 of the Act and sec. 856 of the Code)

Present Law

At least 75 percent of the value of a REIT's assets must be real estate assets, cash and cash items (including receivables), and Government securities (the "75-percent asset test").[917] Real estate assets are real property (including interests in real property and mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.[918] No more than 25 percent of a REIT's assets may be securities other than such real estate assets.[919]

Except with respect to a TRS, not more than five percent of the value of a REIT's assets may be securities of any one issuer, and the REIT may not possess securities representing more than 10 percent of the outstanding value or voting power of any one issuer.[920] No more than 25 percent of the value of a REIT's assets may be securities of one or more TRSs.[921]

The asset tests must be met as of the close of each quarter of a REIT's taxable year.[922]

At least 75 percent of a REIT's gross income must be from certain real estate related and other items. In addition, at least 95 percent of a REIT's gross income must be from specified sources that include the 75 percent items and also include interest, dividends, and gain from the sale or other disposition of securities (whether or not real estate-related).

Explanation of Provision

Under the provision, debt instruments issued by publicly offered REITs are treated as real estate assets, as are interests in mortgages on interests in real property (for example, an interest in a mortgage on a leasehold interest in real property). Such assets therefore are qualified assets for purposes of meeting the 75-percent asset test, but are subject to special limitations described below.

As under present law, income from debt instruments issued by publicly offered REITs that is interest income or gain from the sale or other disposition of a security is treated as qualified income for purposes of the 95-percent gross income test. Income from debt instruments issued by publicly offered REITs that would not have been treated as real estate assets but for the new provision, however, is not qualified income for purposes of the 75-percent income

[917] Sec. 856(c)(4)(A).

[918] Such term also includes any property (not otherwise a real estate asset) attributable to the temporary investment of new capital, but only if such property is stock or a debt instrument, and only for the one-year period beginning on the date the REIT receives such capital. Sec. 856(c)(5)(B).

[919] Sec. 856(c)(4)(B)(i).

[920] Sec. 856(c)(4)(B)(iii).

[921] Sec. 856(c)(4)(B)(ii).

[922] Sec. 856(c)(4). However, a REIT that has met the asset tests as of the close of any quarter does not lose its REIT status solely because of a discrepancy during a subsequent quarter between the value of the REIT's investments and such requirements, unless such discrepancy exists immediately after the acquisition of any security or other property and is wholly or partly the result of such acquisition. Sec. 856(c)(4).

test, and not more than 25 percent of the value of a REIT's total assets is permitted to be represented by such debt instruments.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

7. Asset and income test clarification regarding ancillary personal property (sec. 318 of the Act and sec. 856 of the Code)

Present Law

75-percent income test

Among other requirements, at least 75 percent of the gross income of a REIT in each taxable year must consist of real estate-related income. Such income includes: rents from real property; income from the sale or exchange of real property (including interests in real property) that is not stock in trade, inventory, or held by the taxpayer primarily for sale to customers in the ordinary course of its trade or business; interest on mortgages secured by real property or interests in real property; and certain income from foreclosure property (the "75-percent income test"). Amounts attributable to most types of services provided to tenants (other than certain "customary services"), or to more than specified amounts of personal property, are not qualifying rents.

The Code definition of rents from real property includes rent attributable to personal property which is leased under, or in connection with, a lease of real property, but only if the rent attributable to such property for the taxable year does not exceed 15 percent of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, such lease.[923]

For purposes of determining whether interest income is from a mortgage secured by real property, Treasury regulations provide that where a mortgage covers both real property and other property, an apportionment of the interest must be made. If the loan value of the real property is equal to or exceeds the amount of the loan, then the entire interest income is apportioned to the real property. However, if the amount of the loan exceeds the loan value of the real property, then the interest income apportioned to the real property is an amount equal to the interest income multiplied by a fraction, the numerator of which is the loan value of the real property and the denominator of which is the amount of the loan.[924] The remainder of the interest income is apportioned to the other property.

The loan value of real property is defined as the fair market value of the property determined as of the date on which the commitment by the REIT to make the loan becomes binding on the REIT. In the case of a loan purchased by a REIT, the loan value

[923] Sec. 856(d)(1)(C).

[924] Treas. Reg. sec. 1.856–5(c)(1). The amount of the loan for this purpose is defined as the hightest principal amount of the loan outstanding during the taxable year. Treas. Reg. sec. 1.856–5(c)(3).

of the real property is the fair market value of the real property determined as of the date on which the commitment of the REIT to purchase the loan becomes binding.[925]

75-percent asset test

At the close of each quarter of the taxable year, at least 75 percent of the value of a REIT's total assets must be represented by real estate assets, cash and cash items, and Government securities.

Real estate assets generally mean real property (including interests in real property and interests in mortgages on real property) and shares (or transferable certificates of beneficial interest) in other REITs.

Neither the Code nor regulations address the allocation of value in cases where real property and personal property may both be present.

Explanation of Provision

The provision allows certain ancillary personal property leased with real property to be treated as real property for purposes of the 75-percent asset test, applying the same threshold that applies under present law for purposes of determining rents from real property under section 856(d)(l)(C) for purposes of the 75-percent income test.

The provision also modifies the present-law rules for determining when an obligation secured by a mortgage is considered secured by a mortgage on real property if the security includes personal property as well. Under the provision, in the case of an obligation secured by a mortgage on both real property and personal property, if the fair market value of such personal property does not exceed 15 percent of the total fair market value of all such property, such personal property is treated as real property for purposes of the 75-percent income and 75-percent asset test computations.[926] In making this determination, the fair market value of all property (both personal and real) is determined at the same time and in the same manner as the fair market value of real property is determined for purposes of apportioning interest income between real property and personal property under the rules for determining whether interest income is from a mortgage secured by real property.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

8. Hedging provisions (sec. 319 of the Act and sec. 857 of the Code)

Present Law

Except as provided by Treasury regulations, income from certain REIT hedging transactions that are clearly identified, including gain from the sale or disposition of such a transaction, is not included as gross income under either the 95-percent income or 75-

[925] Special rules apply to construction loans. Treas. Reg. sec. 1.856–5(c)(2).
[926] Sec. 856(c)(3)(B) and (4)(A).

percent income test. Transactions eligible for this exclusion include transactions that hedge indebtedness incurred or to be incurred by the REIT to acquire or carry real estate assets and transactions entered primarily to manage risk of currency fluctuations with respect to items of income or gain described in section 856(c)(2) or (3).[927]

Explanation of Provision

The provision expands the scope of the present-law exception of certain hedging income from gross income for purposes of the income tests, under section 856(c)(5)(G). Under the provision, if (1) a REIT enters into one or more positions described in clause (i) of section 856(c)(5)(G) with respect to indebtedness described therein or one or more positions described in clause (ii) of section 856(c)(5)(G) with respect to property that generates income or gain described in section 856(c)(2) or (3); (2) any portion of such indebtedness is extinguished or any portion of such property is disposed of; and (3) in connection with such extinguishment or disposition, such REIT enters into one or more transactions which would be hedging transactions described in subparagraph (B) or (C) of section 1221(b)(2) with respect to any position referred to in (1) above, if such position were ordinary property,[928] then any income of such REIT from any position referred to in (1) and from any transaction referred to in (3) (including gain from the termination of any such position or transaction) shall not constitute gross income for purposes of the 75-percent or 95-percent gross income tests, to the extent that such transaction hedges such position.

The provision is intended to extend the current treatment of income from certain REIT hedging transactions as income that is disregarded for purposes of the 75-percent and 95-percent income tests to income from positions that primarily manage risk with respect to a prior hedge that a REIT enters in connection with the extinguishment or disposal (in whole or in part) of the liability or asset (respectively) related to such prior hedge, to the extent the new position qualifies as a section 1221 hedge or would so qualify if the hedged position were ordinary property.

The provision also clarifies that the identification requirement that applies to all hedges under the hedge gross income rules is the requirement described in section 1221(a)(7), determined after taking account of any curative provisions provided under the regulations referred to therein.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

---

[927] Sec. 856(c)(5)(G).

[928] Such definition of a hedging transaction is applied for purposes of this provision without regard to whether or not the position referred to is ordinary property.

9. Modification of REIT earnings and profits calculation to avoid duplicate taxation (sec. 320 of the Act and secs. 562 and 857 of the Code)

Present Law

For purposes of computing earnings and profits of a corporation, the alternative depreciation system, which generally is less accelerated than the system used in determining taxable income, is used in the case of the depreciation of tangible property. Also, certain amounts treated as currently deductible for purposes of computing taxable income are allowed as a deduction ratably over a period of five years for computing earnings and profits. Finally, the installment method is not allowed in computing earnings and profits from the installment sale of property.[929]

In the case of a REIT, the current earnings and profits of a REIT are not reduced by any amount which is not allowable as a deduction in computing its taxable income for the taxable year.[930] In addition, for purposes of computing the deduction for dividends paid by a REIT for a taxable year, earnings and profits are increased by the total amount of gain on the sale or exchange of real property by the trust during the year.[931]

These rules can by illustrated by the following example:

Example.—Assume that a REIT had $100 of taxable income and earnings and profits in each of five consecutive taxable years (determined without regard to any energy efficient commercial building deduction[932] and without regard to any deduction for dividends paid). Assume that in the first of the five years, the REIT had an energy efficient commercial building deduction in computing its taxable income of $10, reducing its pre-dividend taxable income to $90. Assume further that the deduction is allowable at a rate of $2 per year over the five-year period beginning with the first year in computing its earnings and profits.

Under present law, the REIT's earnings and profits in the first year are $98 ($100 less $2). In each of the next four years, the REIT's current earnings and profits are $100 ($98 as computed for the first year plus an additional $2 under section 857(d)(1) for the $2 not deductible in computing taxable income for the year).

Assume the REIT distributes $100 to its shareholders at the close of each of the five years. Under present law, the shareholders have $98 dividend income in the first year and a $2 return of capital and $100 dividend income in each of the following four years, for a total of $498 dividend income, notwithstanding that the REIT had only $490 pre-dividend taxable income over the period. The dividends paid by the REIT reduce its taxable income to zero in each of the taxable years.

Explanation of Provision

Under the provision, the current earnings and profits of a REIT for a taxable year are not reduced by any amount that (1) is not

[929] Sec. 312(k)(3) and (n)(5).

[930] Sec. 857(d)(1). This provision applies to a REIT without regard to whether it meets the requirements of section 857(a) for the taxable year.

[931] Sec. 562(e).

[932] Sec. 179D.

allowable as a deduction in computing its taxable income for the current taxable year and (2) was not so allowable for any prior taxable year. Thus, under the provision, if an amount is allowable as a deduction in computing taxable income in year one and is allowable in computing earnings and profits in year two (determined without regard to present-law section 857(d)(1)), section 857(d)(1) no longer applies and the deduction in computing the year two earnings and profits of the REIT is allowable. Thus, a lesser maximum amount will be a dividend to shareholders in that year. This provision does not change the present-law determination of current earnings and profits for purposes of computing a REIT's deduction for dividends paid.

In addition, the provision provides that the current earnings and profits of a REIT for a taxable year for purposes of computing the deduction for dividends paid are increased by any amount of gain on the sale or exchange of real property taken into account in determining the taxable income of the REIT for the taxable year (to the extent the gain is not otherwise so taken into account). Thus, in the case of an installment sale of real property, current earnings and profits for purposes of the REIT's deduction for dividends paid for a taxable year are increased by the amount of gain taken into account in computing its taxable income for the year and not otherwise taken into account in computing the current earnings and profits.

The following illustrates the application of the provision:

Example.—Assume the same facts as in the above example. Under the provision, as under present law, in the first taxable year, the earnings and profits of the REIT were $98 and the shareholders take into account $98 dividend income and $2 is a return of capital. Under the provision, in each of the next four years, the earnings and profits are $98 (i.e., section 857(d)(1) does not apply) so that the shareholders take into account $98 of dividend income in each year and $2 is a return of capital each year.

For purposes of the REIT's deduction for dividends paid, present law remains unchanged so that the REIT's taxable income will be reduced to zero in each of the taxable years.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

10. Treatment of certain services provided by taxable REIT subsidiaries (sec. 321 of the Act and sec. 857 of the Code)

Present Law

Taxable REIT subsidiaries

A TRS generally can engage in any kind of business activity except that it is not permitted directly or indirectly to operate either a lodging facility or a health care facility, or to provide to any other person (under a franchise, license, or otherwise) rights to any brand name under which any lodging facility or health care facility is operated.

REITs are subject to a tax equal to 100 percent of redetermined rents, redetermined deductions, and excess interest. These are defined generally as the amounts of specified REIT transactions with a TRS of the REIT, to the extent such amounts differ from an arm's length amount.

Prohibited transactions tax

REITs are subject to a prohibited transaction tax ("PTT") of 100 percent of the net income derived from prohibited transactions.[933] For this purpose, a prohibited transaction is a sale or other disposition of property by the REIT that is stock in trade of a taxpayer or other property that would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or property held for sale to customers by the taxpayer in the ordinary course of his trade or business and is not foreclosure property. The PTT for a REIT does not apply to a sale of property which is a real estate asset if the REIT satisfies certain criteria in section 857(b)(6)(C) or (D).

Section 857(b)(6)(C) provides that a prohibited transaction does not include a sale of property which is a real estate asset (as defined in section 856(c)(5)(B)) and which is described in section 1221(a)(1) if (1) the REIT has held the property for not less than two years; (2) aggregate expenditures made by the REIT, or any partner of the REIT, during the two year period preceding the date of sale which are includible in the basis of the property do not exceed 30 percent of the net selling price of the property; (3) either: (A) the REIT does not make more than seven sales of property[934] during the taxable year, or (B) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property[935] sold during the taxable year does not exceed 10 percent of the aggregate bases (as so determined) of all of the assets of the REIT as of the beginning of the taxable year, or (C) the fair market value of property[936] sold during the taxable year does not exceed 10 percent of the aggregate fair market value of all the assets of the REIT as of the beginning of the taxable year; (4) in the case of land or improvements, not acquired through foreclosure (or deed in lieu of foreclosure), or lease termination, the REIT has held the property for not less than two years for production of rental income; and (5) if the requirement of (3)(A) above is not satisfied, substantially all of the marketing and development expenditures with respect to the property were made through an independent contractor (as defined in section 856(d)(3)) from whom the REIT does not derive or receive any income.

Section 857(b)(6)(D) provides that a prohibited transaction does not include a sale of property which is a real estate asset (as defined in section 856(c)(5)(B)) and which is described in section 1221(a)(1) if (1) the REIT has held the property for not less than two years in connection with the trade or business of producing timber; (2) the aggregate expenditures made by the REIT, or any partner of the REIT, during the two year period preceding the date

[933] Sec. 857(b)(6).
[934] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[935] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[936] Sales of foreclosure property or sales to which section 1033 applies are excluded.

of sale which (A) are includible in the basis of the property (other than timberland acquisition expenditures), and (B) are directly related to operation of the property for the production of timber or for the preservation of the property for use as a timberland, do not exceed 30 percent of the net selling price of the property; (3) the aggregate expenditures made by the REIT, or a partner of the REIT, during the two year period preceding the date of sale which (A) are includible in the basis of the property (other than timberland acquisition expenditures), and (B) are not directly related to operation of the property for the production of timber or for the preservation of the property for use as a timberland, do not exceed five percent of the net selling price of the property; (4) either: (A) the REIT does not make more than seven sales of property[937] during the taxable year, or (B) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property[938] sold during the taxable year does not exceed 10 percent of the aggregate bases (as so determined) of all of the assets of the REIT as of the beginning of the taxable year, or (C) the fair market value of property[939] sold during the taxable year does not exceed 10 percent of the aggregate fair market value of all the assets of the REIT as of the beginning of the taxable year; (5) if the requirement of (4)(A) above is not satisfied, substantially all of the marketing expenditures with respect to the property were made through an independent contractor (as defined in section 856(d)(3)) from whom the REIT does not derive or receive any income, or, in the case of a sale on or before the termination date, a TRS; and (6) the sales price of the property sold by the trust is not based in whole or in part on income or profits derived from the sale or operation of such property.

Foreclosure property

Under current law, certain income and gain derived from foreclosure property satisfies the 95-percent and 75-percent REIT income tests.[940] Property will cease to be foreclosure property, however, if used in a trade or business conducted by the REIT, other than through an independent contractor from which the REIT itself does not derive or receive any income, more than 90 days after the day on which the REIT acquired such property.[941]

Explanation of Provision

For purposes of the exclusion from the prohibited transactions excise tax, the provision modifies the requirement of section 857(b)(6)(C)(v), that substantially all of the development expenditures with respect to the property were made through an independent contractor from whom the REIT itself does not derive or receive any income, to allow a TRS to have developed the property.[942]

[937] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[938] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[939] Sales of foreclosure property or sales to which section 1033 applies are excluded.
[940] Sec. 856(c)(2)(F) and (3)(F).
[941] Sec. 856(e)(4)(C).
[942] The requirement limiting the amount of expenditures added to basis that the REIT, or a partner of the REIT, may make within two years prior to the sale, as well as other requirements for the exclusion, are retained.

The provision also allows a TRS to make marketing expenditures with respect to property under section 857(b)(6)(C)(v) or 857(b)(6)(D)(v) without causing property that is otherwise eligible for the prohibited transaction exclusion to lose such qualification.

The provision allows a TRS to operate foreclosure property without causing loss of foreclosure property status, under section 856(e)(4)(C).

The items subject to the 100-percent excise tax on certain non-arm's-length transactions between a TRS and a REIT are expanded to include "redetermined TRS service income." Such income is defined as gross income of a TRS of a REIT attributable to services provided to, or on behalf of, such REIT (less the deductions properly allocable thereto) to the extent the amount of such income (less such deductions) would be increased on distribution, apportionment, or allocation under section 482 (but for the exception from section 482 if the 100-percent excise tax applies). The term does not include gross income attributable to services furnished or rendered to a tenant of the REIT (or deductions properly attributable thereto), since that income is already subject to a separate provision of the 100-percent excise tax rules.

Effective Date

The provision is effective for taxable years beginning after December 31, 2015.

11. Exception from FIRPTA for certain stock of REITs; exception for interests held by foreign retirement and pension funds (secs. 322 and 323 of the Act and secs. 897 and 1445 of the Code)[943]

Present Law

General rules relating to FIRPTA

A foreign person that is not engaged in the conduct of a trade or business in the United States generally is not subject to any U.S. tax on capital gain from U.S. sources, including capital gain from the sale of stock or other capital assets.[944]

However, the Foreign Investment in Real Property Tax Act of 1980 ("FIRPTA")[945] generally treats a foreign person's gain or loss from the disposition of a U.S. real property interest ("USRPI") as income that is effectively connected with the conduct of a U.S. trade or business, and thus taxable at the income tax rates applica-

[943] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 2 of that bill contained a provision similar to section 322 of the Protecting Americans from Tax Hikes Act of 2015 (Division Q of Pub. L. No. 114–113).

[944] Secs. 871(b) and 882(a). Property is treated as held by a person for use in connection with the conduct of a trade or business in the United States, even if not so held at the time of sale, if it was so held within 10 years prior to the sale. Sec. 864(c)(7). Also, all gain from an installment sale is treated as from the sale of property held in connection with the conduct of such a trade or business if the property was so held during the year in which the installment sale was made, even if the recipient of the payments is no longer engaged in the conduct of such trade or business when the payments are received. Sec. 864(c)(6).

[945] Pub. L. No. 96–499. The rules governing the imposition and collection of tax under FIRPTA are contained in a series of provisions enacted in 1980 and subsequently amended. See secs. 897, 1445, 6039C, and 6652(f).

ble to U.S. persons, including the rates for net capital gain.[946] With certain exceptions, if a foreign corporation distributes a USRPI, gain is recognized on the distribution (including a distribution in redemption or liquidation) of a USRPI, in an amount equal to the excess of the fair market value of the USRPI (as of the time of distribution) over its adjusted basis.[947] A foreign person subject to tax on FIRPTA gain is required to file a U.S. tax return under the normal rules relating to receipt of income effectively connected with a U.S. trade or business.[948]

The payor of amounts that FIRPTA treats as effectively connected with a U.S. trade or business ("FIRPTA income") to a foreign person generally is required to withhold U.S. tax from the payment.[949] Withholding generally is 10 percent of the sales price, in the case of a direct sale by the foreign person of a USRPI (but withholding is not required in certain cases, including on any sale of stock that is regularly traded on an established securities market[950]), and 10 percent of the amount realized by the foreign shareholder in the case of certain distributions by a corporation that is or has been a U.S. real property holding corporation ("USRPHC") during the applicable testing period.[951] The withholding is generally 35 percent of the amount of a distribution to a foreign person of net proceeds attributable to the sale of a USRPI from an entity such as a partnership, REIT, or RIC.[952] The foreign person can request a refund with its U.S. tax return, if appropriate, based on that person's total U.S. effectively connected income and deductions (if any) for the taxable year.

USRPHCs and five-percent public shareholder exception

USRPIs include not only interests in real property located in the United States or the U.S. Virgin Islands, but also stock of a USRPHC, generally defined as any domestic corporation, unless the taxpayer establishes that the fair market value of the corporation's USRPIs was less than 50 percent of the combined fair market value of all its real property interests (U.S. and worldwide) and all its assets used or held for use in a trade or business, at all times during a "testing period," which is the shorter of the duration of the taxpayer's ownership of the stock after June 18, 1980, or the five-year period ending on the date of disposition of the stock.[953]

Under an exception, even if a corporation is a USRPHC, a shareholder's shares of a class of stock that is regularly traded on an established securities market are not treated as USRPIs if the shareholder holds (applying attribution rules) no more than five percent

[946] Sec. 897(a).
[947] Sec. 897(d). In addition, such gain may also be subject to the branch profits tax at a 30-percent rate (or lower treaty rate).
[948] In addition, section 6039C authorizes regulations that would require a return reporting foreign direct investments in U.S. real property interests. No such regulations have been issued, however.
[949] Sec. 1445(a).
[950] Sec. 1445(b)(6).
[951] Sec. 1445(e)(3). Withholding at 10 percent of a gross amount may also apply in certain other circumstances under regulations. See sec. 1445(e)(4) and (5).
[952] Sec. 1445(e)(6) and Treasury regulations thereunder. The Treasury Department is authorized to issue regulations that would reduce the 35 percent withholding on distributions to 20 percent during the time that the maximum income tax rate on dividends and capital gains of U.S. persons is 20 percent.
[953] Sec. 897(c)(1) and (2).

of that class of stock at any time during the testing period.[954] Among other things, the relevant attribution rules require attribution between a corporation and a shareholder that owns five percent or more in value of the stock of such corporation.[955] The attribution rules also attribute stock ownership between spouses and between children, grandchildren, parents, and grandparents.

FIRPTA rules for foreign investment through REITs and RICs

Special FIRPTA rules apply to foreign investment through a "qualified investment entity," which includes any REIT and certain RICs that invest largely in USRPIs (including stock of one or more REITs).[956]

Stock of domestically controlled qualified investment entities not a USRPI

If a qualified investment entity is "domestically controlled" (defined to mean that less than 50 percent in value of the qualified investment entity has been owned (directly or indirectly) by foreign persons during the relevant testing period[957]), stock of such entity is not a USRPI and a foreign shareholder can sell the stock of such entity without being subject to tax under FIRPTA, even if the stock would otherwise be stock of a USRPHC. Treasury regulations provide that for purposes of determining whether a REIT is domestically controlled, the actual owner of REIT shares is the "person who is required to include in his return the dividends received on the stock."[958] The IRS has issued a private letter ruling concluding that the term "directly or indirectly" for this purpose does not require looking through corporate entities that, in the facts of the ruling, were represented to be fully taxable domestic corporations for U.S. federal income tax purposes "and not otherwise a REIT, RIC, hybrid entity, conduit, disregarded entity, or other flow-through or look-through entity."[959]

---

[954] Sec. 897(c)(3). The constructive ownership attribution rules are specified in section 897(c)(6)(C).

[955] If a person owns, directly or indirectly, five percent or more in value of the stock in a corporation, such person is considered as owning the stock owned directly or indirectly by or for such corporation, in that proportion which the value of the stock such person so owns bears to the value of all the stock in such corporation. Sec. 318(c)(2)(C) as modified by section 897(c)(6)(C). Also, if five percent or more in value of the stock in a corporation is owned directly or indirectly, by or for any person, such corporation shall be considered as owning the stock owned, directly or indirectly, by or for such person. Sec. 318(c)(3)(C) as modified by section 897(c)(6)(C).

[956] Sec. 897(h)(4)(A)(i). The provision including certain RICs in the definition of qualified investment entity previously expired December 31, 2014. Section 133 of the Protecting Americans from Tax Hikes Act of 2015 (Division Q of Pub. L. No. 114–113) reinstated the provision and made it permanent as of January 1, 2015, as described above in item 22 of Title I.A.

[957] The testing period for this purpose if the shorter of (i) the period beginning on June 19, 1980, and ending on the date of disposition or distribution, as the case may be, (ii) the five-year period ending on the date of the disposition or distribution, as the case may be, or (iii) the period during which the qualified investment entity was in existence. Sec. 897(h)(4)(D).

[958] Treas. Reg. sec. 1.897–1(c)(2)(i) and –8(b).

[959] PLR 200923001. A private letter ruling may be relied upon only by the taxpayer to which it is issued. However, private letter rulings provide some indication of administrative practice.

FIRPTA applies to qualified investment entity (REIT and certain RIC) distributions attributable to gain from sale or exchange of USRPIs, except for distributions to certain five-percent or smaller shareholders

A distribution by a REIT or other qualified investment entity, to the extent attributable to gain from the entity's sale or exchange of USRPIs, is treated as FIRPTA income.[960] The FIRPTA character is retained if the distribution occurs from one qualified investment entity to another, through a tier of REITs or RICs.[961] An IRS notice (Notice 2007–55) states that this rule retaining the FIRPTA income character of distributions attributable to the sale of USRPIs applies to any distributions under sections 301, 302, 331, and 332 (i.e., to dividend distributions, distributions treated as sales or exchanges of stock by the investor, and both nonliquidating and liquidating distributions) and that the IRS will issue regulations to that effect.[962]

There is an exception to this rule in the case of distributions to certain public shareholders. If an investor has owned no more than five percent of a class of stock of a REIT or other qualified investment entity that is regularly traded on an established securities market located in the United States during the one-year period ending on the date of the distribution, then amounts attributable to gain from entity sales or exchanges of USRPIs can be distributed to such a shareholder without being subject to FIRPTA tax.[963] Such distributions that are dividends are treated as dividends from the qualified investment entity,[964] and thus generally would be subject to U.S. dividend withholding tax (as reduced under any applicable treaty), but are not treated as income effectively connected with the conduct of a U.S. trade or business. An IRS Chief Counsel advice memorandum concludes that such distributions which are made in complete liquidation of a REIT are not treated as dividends from the qualified investment entity and thus generally would not be subject to U.S. dividend withholding tax (in addition to not being treated as income effectively connected with the conduct of a U.S. trade or business).[965]

Explanation of Provision

Exception from FIRPTA for certain REIT stock

In the case of REIT stock only, the provision increases from five percent to 10 percent the maximum stock ownership a shareholder may have held, during the testing period, of a class of stock that is publicly traded, to avoid having that stock be treated as a USRPI on disposition.

---

[960] Sec. 897(h)(1).

[961] In 2006, the Tax Increase Prevention and Reconciliation Act of 2005 ("TIPRA"), Pub. L. No. 109–222, sec. 505, specified the retention of this FIRPTA character on a distribution to an upper-tier qualified investment entity, and added statutory withholding requirements.

[962] Notice 2007–55, 2007–2 C.B.13. The Notice also states that in the case of a foreign government investor, because FIRPTA income is treated as effectively connected with the conduct of a U.S. trade or business, proceeds distributed by a qualified investment entity from the sale of USRPIs are not exempt from tax under section 892. The Notice cites and compares existing temporary regulations and indicates that Treasury will apply those regulations as well to certain distributions. See Temp. Treas. Reg. secs. 1.892–3T, 1.897–9T(e), and 1.1445–10T(b).

[963] Sec. 897(h)(1), second sentence.

[964] Secs. 852(b)(3)(E) and 857(b)(3)(F).

[965] AM 2008–003, February 15, 2008.

The provision likewise increases from five percent to 10 percent the percentage ownership threshold that, if not exceeded, results in treating a distribution to holders of publicly traded REIT stock, attributable to gain from sales of exchanges of USRPIs, as a dividend, rather than as FIRPTA gain.

The attribution rules of section 897(c)(6)(C) retain the present-law rule that requires attribution between a shareholder and a corporation if the shareholder owns more than five percent of a class of stock of the corporation. The attribution rules now apply, however, to the determination of whether a person holds more than 10 percent of a class of publicly traded REIT stock.

The provision also provides that REIT stock held by a qualified shareholder, including stock held indirectly through one or more partnerships, is not a U.S real property interest in the hands of such qualified shareholder, except to the extent that an investor in the qualified shareholder (other than an investor that is a qualified shareholder) holds more than 10 percent of that class of stock of the REIT (determined by application of the constructive ownership rules of section 897(c)(6)(C)). Thus, so long as the "more than 10 percent" rule is not exceeded, a qualified shareholder may own and dispose of any amount of stock of a REIT (including stock of a privately-held, non-domestically controlled REIT that is owned by such qualified shareholder) without the application of FIRPTA.

If an investor in the qualified shareholder (other than an investor that is a qualified shareholder) directly, indirectly, or constructively holds more than 10 percent of such class of REIT stock (an "applicable investor"), then a percentage of the REIT stock held by the qualified shareholder equal to the applicable investor's percentage ownership of the qualified shareholder is treated as a USRPI in the hands of the qualified shareholder and is subject to FIRPTA. In that case, an amount equal to such percentage multiplied by the disposition proceeds and REIT distribution proceeds attributable to underlying USRPI gain is treated as FIRPTA gain in the hands of the qualified shareholder.

The provision is intended to override in certain cases one of the conclusions reached in AM 2008–003. Specifically, the provision contains special rules with respect to certain distributions that are treated as a sale or exchange of REIT stock under section 301(c)(3), 302, or 331 with respect to a qualified shareholder. Any such amounts attributable to an applicable investor are ineligible for the FIRPTA exception for qualified shareholders, and thus are subject to FIRPTA. Any such amounts attributable to other investors are treated as a dividend received from a REIT for purposes of U.S. dividend withholding tax and the application of income tax treaties, notwithstanding their general treatment under the Code.

A qualified shareholder is defined as a foreign person that (i) either is eligible for the benefits of a comprehensive income tax treaty which includes an exchange of information program and whose principal class of interests is listed and regularly traded on one or more recognized stock exchanges (as defined in such comprehensive income tax treaty), or is a foreign partnership that is created or organized under foreign law as a limited partnership in a jurisdiction that has an agreement for the exchange of information with respect to taxes with the United States and has a class of limited partnership units representing greater than 50 percent of the value of all the partnership units that is regularly traded on the NYSE or NASDAQ markets, (ii) is a qualified collective investment vehicle (as defined below), and (iii) maintains records on the identity of each person who, at any time during the foreign person's taxable year, is the direct owner of 5 percent or more of the class of interests or units (as applicable) described in (i), above.

A qualified collective investment vehicle is defined as a foreign person that (i) would be eligible for a reduced rate of withholding under the comprehensive income tax treaty described above, even if such entity holds more than 10 percent of the stock of such REIT,[966] (ii) is publicly traded, is treated as a partnership under the Code, is a withholding foreign partnership, and would be treated as a USRPHC if it were a domestic corporation, or (iii) is designated as such by the Secretary of the Treasury and is either (a) fiscally transparent within the meaning of section 894, or (b) required to include dividends in its gross income, but is entitled to a deduction for distributions to its investors.

The provision also contains rules with respect to partnership allocations of USRPI gains to applicable investors. If an applicable investor's proportionate share of USRPI gain for the taxable year exceeds such partner's distributive share of USRPI gain for the taxable year then such partner's distributive share of non-USRPI income or gain is recharacterized as USRPI gain for the taxable year in the amount that the distributive share of USRPI gain exceeds the proportionate share of USRPI gain. For purposes of these partnership allocation rules, USRPI gain is defined to comprise the net of gain recognized on disposition of a USRPI, distributions from a REIT that are treated as USRPI gain, and loss from the disposition of USRPIs. An investor's proportionate share of USRPI gain is determined based on the applicable investor's largest proportionate share of income or gain for the taxable year, and if such proportionate amount may vary during the existence of the partnership, such share is the highest share the applicable investor may receive.

Domestically controlled qualified investment entity

The provision redefines the term "domestically controlled qualified investment entity" to provide a number of new rules and presumptions relating to whether a qualified investment entity is domestically controlled. First, a qualified investment entity shall be permitted to presume that holders of less than five percent of a class of stock regularly traded on an established securities market in the United States are U.S. persons throughout the testing period, except to the extent that the qualified investment entity has actual knowledge that such persons are not U.S. persons. Second, any stock in the qualified investment entity held by another qualified investment entity (I) which has issued any class of stock that is regularly traded on an established stock exchange, or (II) which is a RIC that issues redeemable securities (within the meaning of section 2 of the Investment Company Act of 1940) shall be treated

[966] The qualified collective investment vehicle must be eligible for a reduced rate of withholding under a provision in the dividends article of the relevant treaty dealing specifically with dividends paid by REITs. For example, the U.S. income tax treaties with Australia and the Netherlands provide such a reduced rate of withholding under certain circumstances.

as held by a foreign person unless such other qualified investment entity is domestically controlled (as determined under the new rules) in which case such stock shall be treated as held by a U.S. person. Finally, any stock in a qualified investment entity held by any other qualified investment entity not described in (I) or (II) of the preceding sentence shall only be treated as held by a U.S. person to the extent that the stock of such other qualified investment entity is (or is treated under the new provision as) held by a U.S. person.

Exception for interests held by foreign retirement and pension funds

The provision exempts from the rules of section 897 any USRPI held directly (or indirectly through one or more partnerships) by, or to any distribution received from a real estate investment trust by, a qualified foreign pension fund or by a foreign entity wholly-owned by a qualified foreign pension fund. A qualified foreign pension fund means any trust, corporation, or other organization or arrangement [967] (A) which is created or organized under the law of a country other than the United States, (B) which is established to provide retirement or pension benefits to participants or beneficiaries that are current or former employees (or persons designated by such employees) of one or more employers in consideration for services rendered,[968] (C) which does not have a single participant or beneficiary with a right to more than five percent of its assets or income, (D) which is subject to government regulation and provides annual information reporting about its beneficiaries to the relevant tax authorities in the country in which it is established or operates, and (E) with respect to which, under the laws of the country in which it is established or operates, (i) contributions to such organization or arrangement that would otherwise be subject to tax under such laws are deductible or excluded from the gross income of such entity or taxed at a reduced rate, or (ii) taxation of any investment income of such organization or arrangement is deferred or such income is taxed at a reduced rate.

The provision also makes conforming changes to section 1445 to eliminate withholding on sales by qualified foreign pension funds (and their wholly-owned foreign subsidiaries) of USRPIs.

The Secretary of the Treasury may provide such regulations as are necessary to carry out the purposes of the provision.

Effective Date

The provision to extend exceptions from FIRPTA for certain REIT stock applies to dispositions and distributions on or after the date of enactment (December 18, 2015).

The provision to modify the definition of a domestically controlled qualified investment entity is effective on the date of enactment (December 18, 2015).

---

[967] Foreign pension funds may be structured in a variety of ways, and may comprise one or more separate entities. The word “arrangement” encompasses such alternative structures.

[968] Multi-employer and government-sponsored public pension funds that provide pension and pension-related benefits may satisfy this prong of the definition. For example, such pension funds may be established for one or more companies or professions, or for the general working public of a foreign country.

The exception for interests held by foreign retirement and pension funds generally applies to dispositions and distributions after the date of enactment (December 18, 2015).

12. Increase in rate of withholding of tax on dispositions of United States real property interests (sec. 324 of the Act and sec. 1445 of the Code)[969]

Present Law

A purchaser of a USRPI from any person is obligated to withhold 10 percent of gross purchase price unless certain exceptions apply.[970] The obligation does not apply if the transferor furnishes an affidavit that the transferor is not a foreign person. Even absent such an affidavit, the obligation does not apply to the purchase of publicly traded stock.[971] Also, the obligation does not apply to the purchase of stock of a nonpublicly traded domestic corporation, if the corporation furnishes the transferee with an affidavit stating the corporation is not and has not been a USRPHC during the applicable period (unless the transferee has actual knowledge or receives a notification that the affidavit is false).[972]

Treasury regulations[973] generally provide that a domestic corporation must, within a reasonable period after receipt of a request from a foreign person holding an interest in it, inform that person whether the interest constitutes a USRPI.[974] No particular form is required. The statement must be dated and signed by a responsible corporate officer who must verify under penalties of perjury that the statement is correct to his knowledge and belief. If a foreign investor requests such a statement, then the corporation must provide a notice to the IRS that includes the name and taxpayer identification number of the corporation as well as the investor, and indicates whether the interest in question is a USRPI. However, these requirements do not apply to a domestically controlled REIT or to a corporation that has issued any class of stock which is regularly traded on an established securities market at any time during the calendar year. In such cases a corporation may voluntarily choose to comply with the notice requirements that would otherwise have applied.[975]

In addition to these exceptions that might be determined at the entity level, even if a corporation is a USRPHC, its stock is not a USRPI in the hands of the seller if the stock is of a class that is publicly traded and the foreign shareholder disposing of the stock has not owned (applying attribution rules) more than five percent of such class of stock during the relevant period.

[969] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 3 of that bill contained an identical provision.

[970] Sec. 1445.

[971] Sec. 1445(b)(6).

[972] Sec. 1445(b)(3). Other exceptions also apply. Sec. 1445(b).

[973] Treas. Reg. Sec. 1.897–2(h).

[974] As described previously, stock of a U.S. corporation is not generally a USRPI unless it is stock of a USRPHC. However, all U.S. corporate stock is deemed to be such stock, unless it is shown that the corporation's U.S. real property interests do not amount to the relevant 50 percent or more of the corporation's relevant assets. Also, even if a REIT is a USRPHC, if it is domestically controlled its stock is not a USRPI.

[975] Treas. Reg. sec. 1.897–2(h)(3).

Explanation of Provision

The provision generally increases the rate of withholding of tax on dispositions and certain distributions of URSPIs, from 10 percent to 15 percent. There is an exception to this higher rate of withholding (retaining the 10 percent withholding tax rate under present law) for sales of residences intended for personal use by the acquirer, with respect to which the purchase price does not exceed $1,000,000. Thus, if the present law exception for personal residences (where the purchase price does not exceed $300,000) does not apply, the 10 percent withholding rate is retained so long as the purchase price does not exceed $1,000,000.

Effective Date

The provision applies to dispositions after the date which is 60 days after the date of enactment (December 18, 2015).

13. Interests in RICs and REITs not excluded from definition of United States real property interests (sec. 325 of the Act and sec. 897 of the Code)[976]

Present Law

An interest in a corporation is not a USRPI if (1) as of the date of disposition of such interest, such corporation did not hold any USRPIs and (2) all of the USRPIs held by such corporation during the shorter of (i) the period of time after June 18, 1980, during which the taxpayer held such interest, or (ii) the five-year period ending on the date of disposition of such interest, were either disposed of in transactions in which the full amount of the gain (if any) was recognized, or ceased to be USRPIs by reason of the application of this rule to one or more other corporations (the so-called "cleansing rule").[977]

Explanation of Provision

Under the provision, the cleansing rule applies to stock of a corporation only if neither such corporation nor any predecessor of such corporation was a RIC or a REIT at any time during the shorter of the period after June 18, 1980 during which the taxpayer held such stock, or the five-year period ending on the date of the disposition of such stock.

Effective Date

The provision applies to dispositions on or after the date of enactment (December 18, 2015).

[976] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 6 of that bill contained an identical provision.
[977] Sec. 897(c)(1)(B).

14. Dividends derived from RICs and REITs ineligible for deduction for United States source portion of dividends from certain foreign corporations (sec. 326 of the Act and sec. 245 of the Code)[978]

Present Law

A corporation is generally allowed to deduct a portion of the dividends it receives from another corporation. The deductible amount is a percentage of the dividends received. The percentage depends on the level of ownership that the corporate shareholder has in the corporation paying the dividend. The dividends-received deduction is 70 percent of the dividend if the recipient owns less than 20 percent of the stock of the payor corporation, 80 percent if the recipient owns at least 20 percent but less than 80 percent of the stock of the payor corporation, and 100 percent if the recipient owns 80 percent or more of the stock of the payor corporation.[979]

Dividends from REITs are not eligible for the corporate dividends received deduction.[980] Dividends from a RIC are eligible only to the extent attributable to dividends received by the RIC from certain other corporations, and are treated as dividends from a corporation that is not 20-percent owned.[981]

Dividends received from a foreign corporation are not generally eligible for the dividends-received deduction. However, section 245 provides that if a U.S. corporation is a 10-percent shareholder of a foreign corporation, the U.S. corporation is generally entitled to a dividends-received deduction for the portion of dividends received that are attributable to the post-1986 undistributed U.S. earnings of the foreign corporation. The post-1986 undistributed U.S. earnings are measured by reference to earnings of the foreign corporation effectively connected with the conduct of a trade or business within the United States, or received by the foreign corporation from an 80-percent-owned U.S. corporation.[982] A 2013 IRS chief counsel advice memorandum advised that dividends received by a 10-percent U.S. corporate shareholder from a foreign corporation controlled by the shareholder are not eligible for the dividends-received deduction if the dividends were attributable to interest income of an 80-percent owned RIC.[983] Treasury regulations section 1.246–1 states that the deductions provided in sections "243 . . . 244 . . . and 245 (relating to dividends received from certain foreign corporations)" are not allowable with respect to any dividend received from certain entities, one of which is a REIT.

[978] The Senate Committee on Finance reported S.915 on April 14, 2015 (S. Rep. No. 114–25). Section 7 of that bill contained an identical provision.

[979] Sec. 243.

[980] Secs. 243(d)(3) and 857(c)(1).

[981] Secs. 243(d)(2) and 854(b)(1)(A) and (C).

[982] Sec. 245

[983] IRS CCA 201320014. The situation addressed in the memorandum involved a controlled foreign corporation that had terminated its "CFC" status before year end, through a transfer of stock to a partnership. The advice was internal IRS advice to the Large Business and International Division. Such advice is not to be relied upon or cited as precedent by taxpayers, but may offer some indication of administrative practice.

Explanation of Provision

Under the provision, for purposes of determining whether dividends from a foreign corporation (attributable to dividends from an 80-percent owned domestic corporation) are eligible for a dividends-received deduction under section 245, dividends from RICs and REITs are not treated as dividends from domestic corporations.

Effective Date

The provision applies to dividends received from RICs and REITs on or after the date of enactment (December 18, 2015). No inference is intended with respect to the proper treatment under section 245 of dividends received from RICs or REITs before such date.

C. Additional Provisions

1. Provide special rules concerning charitable contributions to, and public charity status of, agricultural research organizations (sec. 331 of the Act and secs. 170(b) and 501(h) of the Code)[984]

Present Law

Public charities and private foundations

An organization qualifying for tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986, as amended (the "Code") is further classified as either a public charity or a private foundation. An organization may qualify as a public charity in several ways.[985] Certain organizations are classified as public charities per se, regardless of their sources of support. These include churches, certain schools, hospitals and other medical organizations (including medical research organizations), certain organizations providing assistance to colleges and universities, and governmental units.[986] Other organizations qualify as public charities because they are broadly publicly supported or support specific public charities. First, a charity may qualify as publicly supported if at least one-third of its total support is from gifts, grants or other contributions from governmental units or the general public.[987] Alternatively, it may qualify as publicly supported if it receives more than one-third of its total support from a combination of gifts, grants, and contributions from governmental units and the public plus revenue arising from activities related to its exempt purposes (*e.g.*, fee for service income). In addition, this category of public charity must not rely excessively on endowment income as a source of support.[988] A supporting organization, i.e., an organization that

[984] The Senate Committee on Finance reported S. 906 on April 14, 2015 (S. Rep. No. 114–19).

[985] The Code does not expressly define the term "public charity," but rather provides exceptions to those entities that are treated as private foundations.

[986] Sec. 509(a)(1) (referring to sections 170(b)(1)(A)(i) through (iv) for a description of these organizations).

[987] Treas. Reg. sec. 1.170A–9(f)(2). Failing this mechanical test, the organization may qualify as a public charity if it passes a "facts and circumstances" test. Treas. Reg. sec. 1.170A–9(f)(3).

[988] To meet this requirement, the organization must normally receive more than one-third of its support from a combination of (1) gifts, grants, contributions, or membership fees and (2) certain gross receipts from admissions, sales of merchandise, performance of services, and fur-

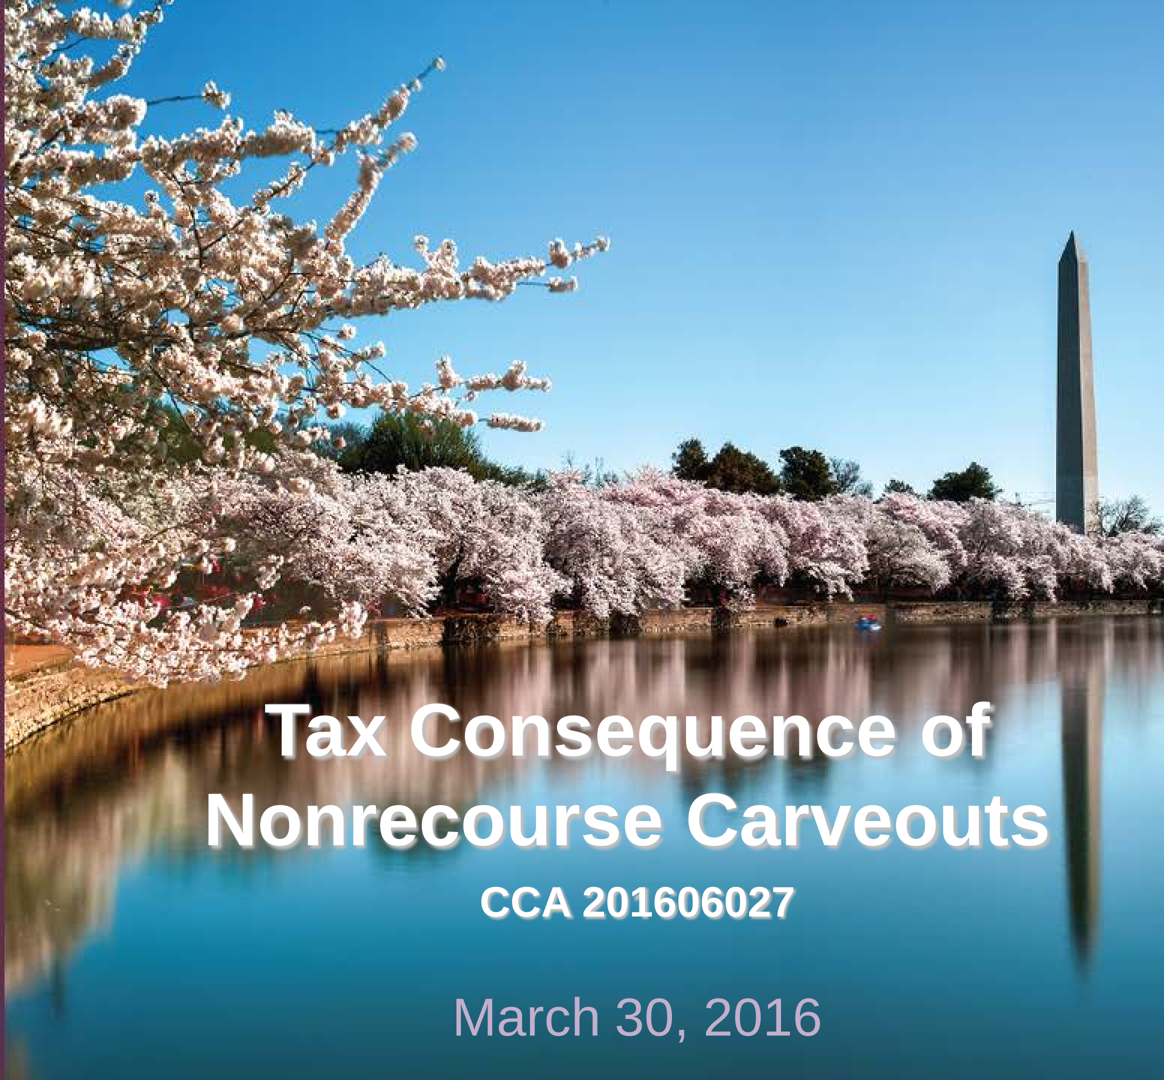
March 30 - April 1
2016



Tax Consequence of Nonrecourse Carveouts

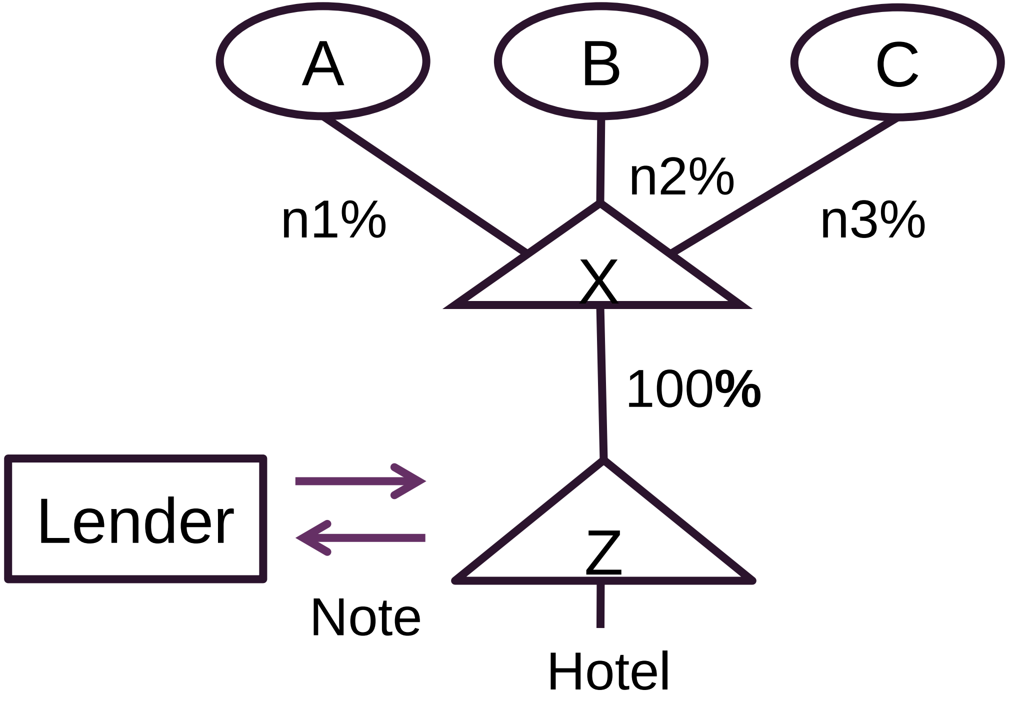
CCA 201606027

March 30, 2016

Presenter:

Richard M. Lipton
Baker & McKenzie, LLP (Chicago)

The Structure



- Note secured by hotel.
- C executed 3 personal guarantees.

The Nonrecourse Carveout

- The entire amount due under the note due and payable if:
  1. the co-borrowers fail to obtain the lender's consent before obtaining subordinate financing or transfer of the secured property,
  2. any co-borrower files a voluntary bankruptcy petition,
  3. any person in control of any co-borrower files an involuntary bankruptcy petition against a co-borrower,
  4. any person in control of any co-borrower solicits other creditors to file an involuntary bankruptcy petition against a co-borrower,

The Nonrecourse Carveout

5. any co-borrower consents to or otherwise acquiesces or joins in an involuntary bankruptcy or insolvency proceeding,
6. any person in control of any co-borrower consents to the appointment of a receiver or custodian of assets, or
7. any co-borrower makes an assignment for the benefit of creditors, or admits in writing or in any legal proceeding that it is insolvent or unable to pay its debts as they come due.

The Regulations

- Treas. Reg. § 1.752-2(b)(4)

Contingent obligations. A payment obligation is disregarded if, taking into account all the facts and circumstances, the obligation is subject to **contingencies** that make it unlikely that the obligation will ever be discharged. If a payment obligation would arise at a future time after the occurrence of an event that is not **determinable with reasonable certainty**, the obligation is ignored until the event occurs.

Conclusions

- IRS concludes that the nonrecourse carveouts cause the note to be recourse to C.
  - “We believe it is reasonable to assume that one or more of these conditions, more likely than not, would be met upon a constructive liquidation of X under § 1.752-2(b)(1). Accordingly, we believe that these ‘conditions’ do not fall within the definition of ‘contingencies’ as intended by § 1.752-2(b)(4).”

Conclusions

- "We nevertheless believe that the likelihood that X or any other co-borrower will ever meet any one of these conditions, in the aggregate, is not so remote a possibility that would cause the obligation to be considered 'likely to never be discharged' within the meaning of § 1.752-2(b)(4)."

Conclusions

- Real world borrowers understand that they do not have recourse liability on a loan with a nonrecourse carveout unless they engage in a voluntary or intentional “bad act.”
- Borrowers would not sign if they thought liability was “more likely than not”.
- If correct, liability (and deductions) would shift to NRCO signatory.
- Tax Returns?

The Economic Impact of Repealing or Limiting Section 1031 Like-Kind Exchanges in Real Estate

David C. Ling and Milena Petrova

July 2015

Presentation Outline

1. Overview of Study Results
2. Evidence on Use of Real Estate (RE) Like-Kind Exchanges
3. Estimated Magnitude of Exchange Tax Benefits
4. Effects of Elimination of Like-Kind Exchanges in RE on Property Values and Required Rents
5. Economic Benefits of 1031 Exchanges – Empirical Evidence
6. Like-Kind Exchanges and Taxes
7. Consequences of Removal of LKEs Based on the Established Micro-economic Effects

The Impact of Repealing Like-Kind Exchanges in Real Estate

1. Overview of Study Results

Overview of Study Results

1. Widespread use of RE like-kind exchanges:
   - 6% (5%) of all commercial RE sales based on $ volume (# of transactions)
   - Use of exchanges in high-tax states varies between 10% & 18% of all sales in their respective market
   - These %s are likely **understated**

2. We estimate the static present value of lost tax revenue to be, on average, $2-$4 billion per year, assuming taxpayers would not delay transactions
   - But…taxpayers would delay transactions, driving revenue gains toward zero
   - Note: JCT's estimated revenue loss, that does factor in investor behavior, **is only 9%** of its corresponding tax expenditure estimate

Overview of Study Results (2)

3. But…elimination would produce many negative consequences
   - Liquidity would be reduced (holding periods would increase)
     - Less efficient allocation of scarce resources
     - Less ability, especially for small investors, to reposition portfolios
   - Prices in most markets would decrease in the short-run; especially in markets where marginal investor expects to use exchanges to dispose of property:
     - Short-run CRE price declines of 8%-17% in markets with moderate taxes; 22%-27% declines in high tax states/markets
     - These declines would
       - reduce the wealth of a large cross-section of households
       - slow or stop construction in many local markets
   - Longer-run rent increases of 8%-20% in moderately taxed markets; 28%-38% required increases in high tax states/markets
     - Such increases would reduce affordability of CRE space for both large & small tenants

Overview of Study Results (3)

4. RE exchanges are associated with increased investment, reduced leverage & shorter holding periods (more liquidity)
   - Replacement like-kind exchanges are associated with an investment that is approximately $305,000 greater (33 percent of value) than “regular” acquisitions by the same investor following a sale of a property.
   - Capital expenditures (specifically building improvements) in replacement exchange properties tend to be higher by about $0.27/sf-$0.40/sf ($0.18/sf-$0.24/sf for building improvements).
   - Investors in like-kind exchanges use less leverage compared to ordinary acquisitions.
   - Holding periods for properties disposed through 1031 exchanges are, on average, shorter.

Overview of Study Results (4)

5. Most exchange replacement properties are subsequently sold in fully taxable sales
   - In 88% of our sample, investors disposed of properties acquired in a 1031 exchange through a fully taxable sale.
   - The estimated taxes paid in an exchange followed by a taxable sale vs. ordinary sale followed by an ordinary sale are on average 19% higher.

But…Elimination Would Produce Many Negative Consequences, cont.

- Less reinvestment in commercial and residential real estate
- Greater use of leverage (with it attendant costs)
- Downward pressure on employment, especially in related sectors
- Decreased tax benefits for local governments

The Impact of Repealing Like-Kind Exchanges in Real Estate

2. Evidence on the Use of Real Estate Like-Kind Exchanges

Evidence from Transaction Data

- CoStar COMPS database includes historical information on CRE transactions in over 878 CBSAs dating back to 1989
- CoStar agents physically inspect the property & record/verify a variety of property characteristics & transaction details
- COMPS database includes 1,609,711 confirmed CRE transactions from 1997 through 2014
  - Total transaction volume = $4.8 trillion (unadjusted for inflation)
- Sales in which CoStar determined that buyer and/or seller were engaged in a like-kind exchange = 81,104
  - 5% of all transactions
  - 6% by sales volume

Table 3: % of CoStar Sales Involving an Exchange by Property Type

	Full sample: 1997-2014		1997-2007		2008-2014	
Property type	Based on number of sales	Based on $ transaction volume	Based on number of sales	Based on $ transaction volume	Based on number of sales	Based on $ transaction volume

Houston-Sugar Land-Baytown, TX	5%	5%
Phoenix-Mesa-Scottsdale, AZ	4%	4%
Austin-Round Rock, TX	4%	3%
Minneapolis-St. Paul-Bloomington, MN-WI	4%	5%
Total US	5%	6%

Again, use of exchanges much higher in Western CBSAs

%s in remaining CBSAs less than 4%

We Believe CoStar is Underreporting Exchanges

- In a prior study using CoStar data (Ling & Petrova, 2008), we found much greater use of exchanges
  - Exchanges represented 27% of sales
- Primary explanation:
  - CoStar has grown significantly since 2007 by acquisitions
    - Acquired firms did not track exchanges as carefully

Evidence from IRS Data: Table 8
(in $billions)

Individuals + Corporations + Partnerships	2011	2010	2009	2008	2007	2003-2011 Sum	2003-2011 Mean
FMV of all like-kind property received (Form 8824, line 17)	$70.8	$78.6	$63.3	$118.4	$199.4	$1,267.8	$140.9
Deferred gain from all industries (From 8824, line 24)	33.7	39.9	33.8	56.1	90.0	577.2	64.1
Deferred gain from RE is 66% of total (based on 2007 data):							
Deferred gain from RE industry	22.2	26.3	22.3	37.0	59.4	381.0	42.3
Estimated deferred tax liability from RE industry *	4.7	5.5	4.7	7.8	12.5	80.0	8.9
Estimated economic loss to Treasury:							
Minimum-9.2% of deferred tax liability	0.4	0.5	0.4	0.7	1.1	7.4	0.8
Average-45.0% of deferred tax liability	2.1	2.5	2.1	3.5	5.6	36.0	4.0
Maximum-64.0% of deferred tax liability	3.0	3.5	3.0	5.0	8.0	51.2	5.7
Deferred gain from RE is 30% of total deferred gain:							
Deferred gain from RE industry	10.1	12.0	10.1	16.8	27.0	173.2	19.2
Estimated deferred tax liability from RE industry *	2.1	2.5	2.1	3.5	5.7	36.4	4.0
Estimated economic loss to Treasury:							
Minimum-9.2% of deferred tax liability	0.2	0.2	0.2	0.3	0.5	3.3	0.4
Average-45.0% of deferred tax liability	1.0	1.1	1.0	1.6	2.6	16.4	1.8
Maximum-64.0% of deferred tax liability	$1.4	$1.6	$1.4	$2.3	$3.6	$23.3	$2.6

- * Estimated deferred tax liability assumes deferred gain would have been taxed at 21%
- But…these estimates of deferred tax liabilities overstate exchange benefits/lost tax revenue

The Impact of Repealing Like-Kind Exchanges in Real Estate

3. Estimated Magnitude of Exchange Tax Benefits

Incremental Value of Exchange
Relative to Fully Taxable Sale

- $INCNPV_t$ = PV of net cash flows if taxpayer **exchanges** into replacement property
  - PV of net CFs if taxpayer **sell**s relinquish property & **purchases** replacement property

Incremental Value of Exchange
Relative to Fully Taxable Sale

- $INCNPV_t$ = PV of net cash flows if taxpayer **exchanges** into replacement property
  - PV of net CFs if taxpayer **sell**s relinquish property & **purchases** replacement property

$$INCNPV_t = [SC_t^1 - EC_t + TDS_t^1 - B_t] - \sum_{i=1}^{n} \frac{\tau_o (DEP_i^{2,s} - DEP_i^{2,e})}{(1+k)^i} - \frac{\tau_{dr} (RECAP_{t+n}^{2,e} - RECAP_{t+n}^{2,s})}{(1+k)^n} - \frac{\tau_{cg} (CG_{t+n}^{2,e} - CG_{t+n}^{2,s})}{(1+k)^n}.$$

deferred tax liability in year *t*

increased depreciation recapture tax on taxable sale of replacement property

reduced PV of annual depreciation deductions *t*

increased capital gain tax on taxable sale of replacement property

- Note: CFs from operations and sale do not affect $INCNPV_t$
- $INCNPV_t$ is fully developed in an appendix

Base-Case Model Parametrization

- Price of relinquished = price of replacement property
- Mortgage debt: same for relinquished & replacement property
- Selling cost in fully taxable sale: 3% of relinquished property's sale price
- Exchange costs: equal to selling costs of a fully taxable sale
- Ordinary income tax rate: 39.6%
- Depreciation recapture tax rate: 25%
- Capital gain tax rate: 23.8%
- After-tax discount rate: 6%
- Non-depreciable land portion of relinquished & replacement property's original tax basis: 20%(no personal property)
- Relinquished & replacement property are both non-residential real property
- **Other key assumptions**: # of years since acquisition of relinquished property ($HOLD^1$), annualized rate of nominal price appreciation since acquisition of relinquished property (π^1), expected holding period of replacement property ($HOLD^2$).

Figure 2: Incremental NPV as a % of Property Value

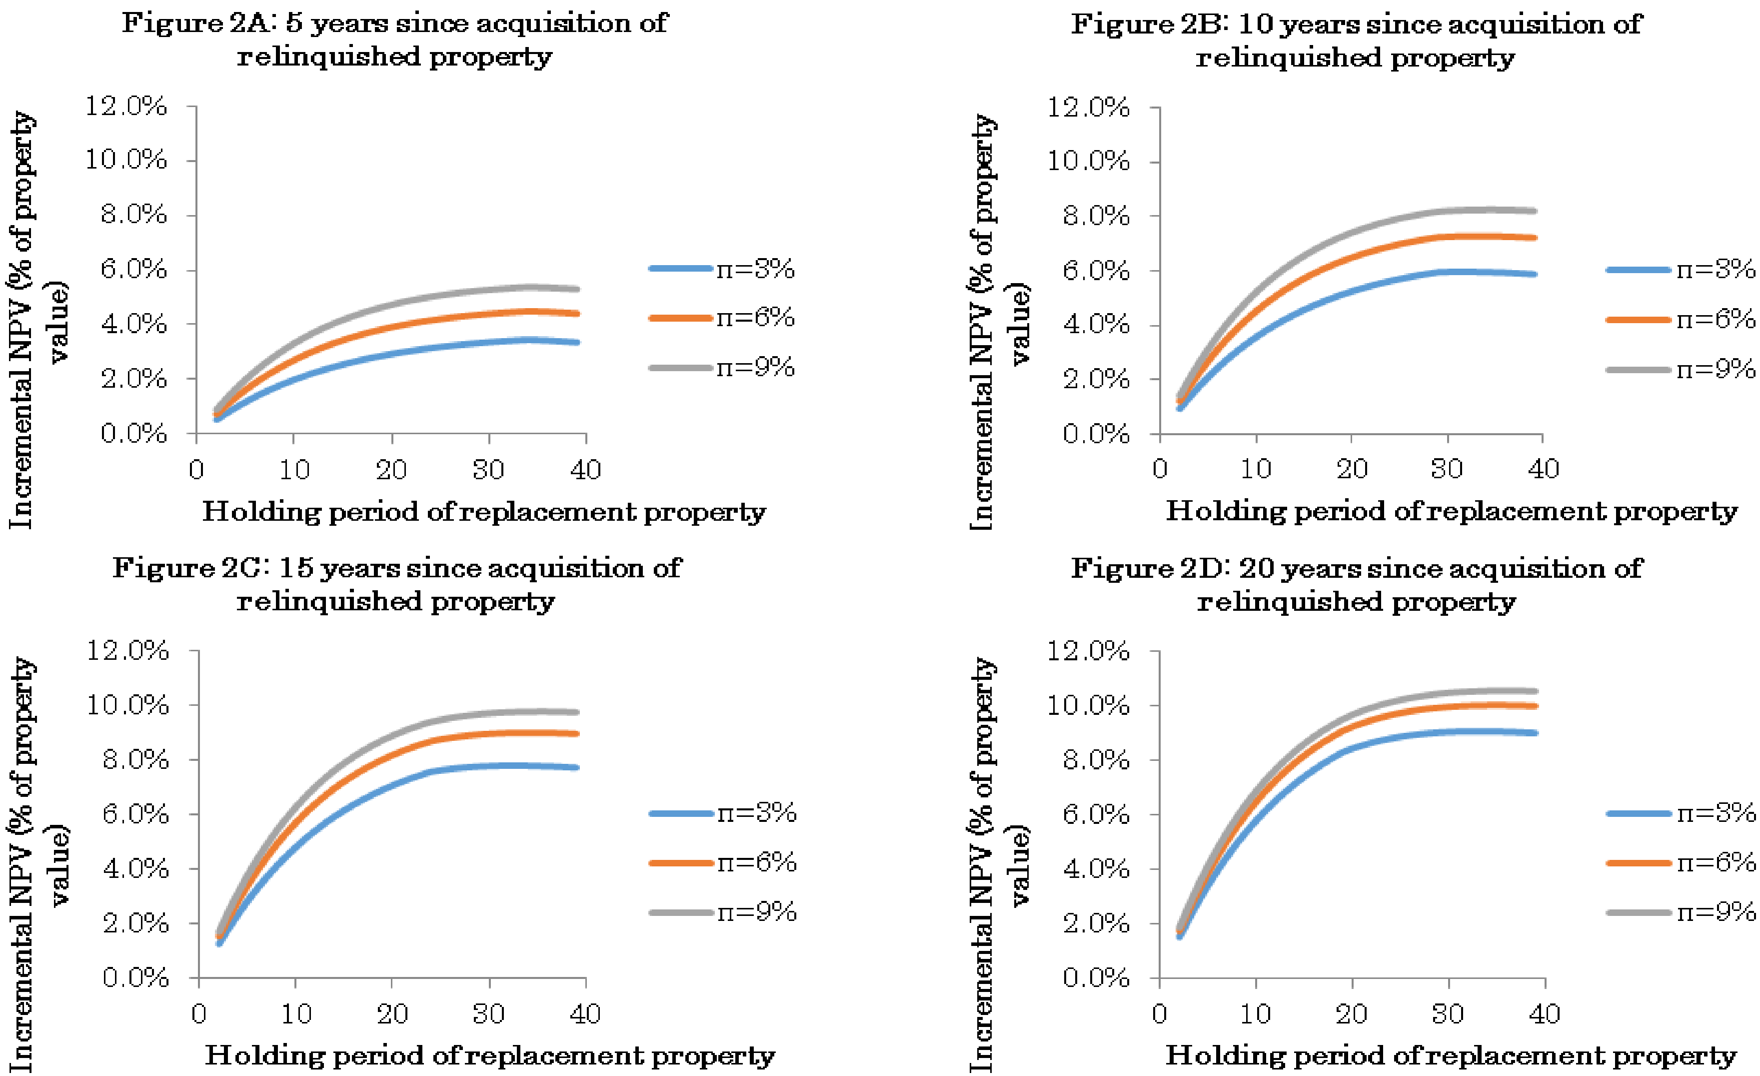

Figure 3: Incremental NPV as a % of Deferred Gain

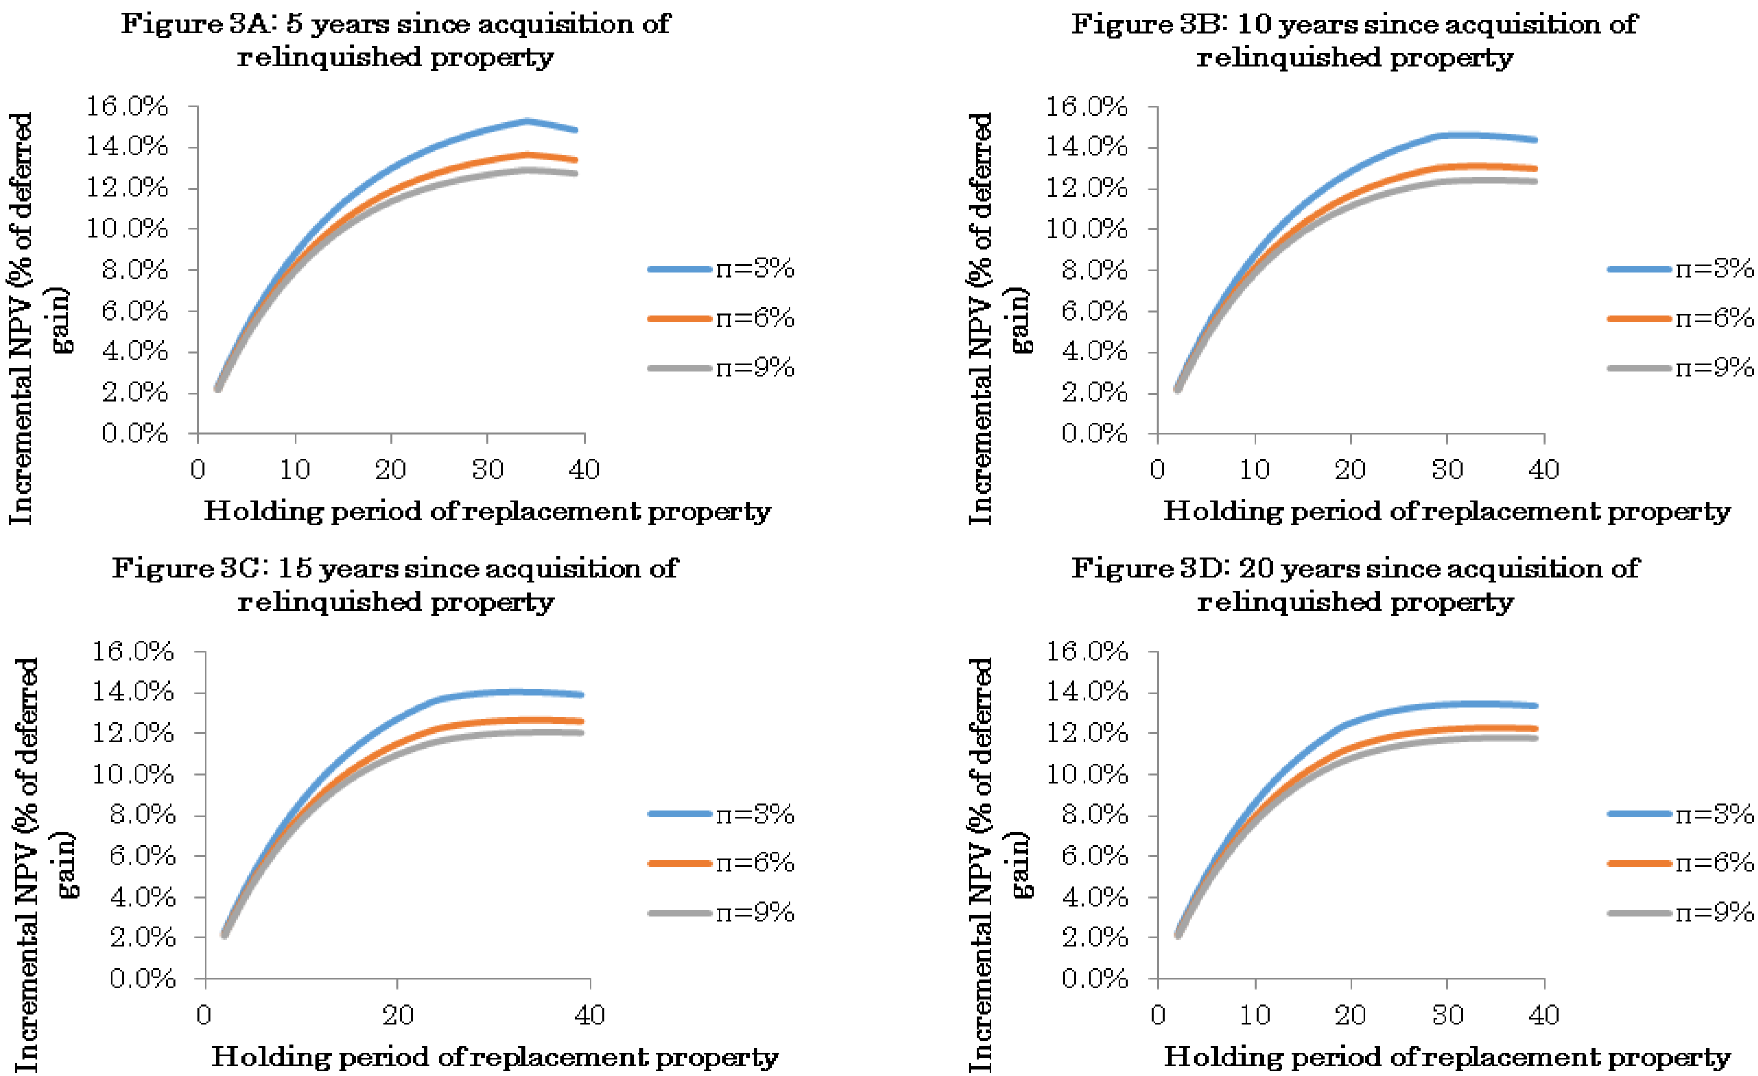

Figure 4: Incremental NPV as a % of Deferred Taxes

Figure 4A: 5 years since acquisition of relinquished property

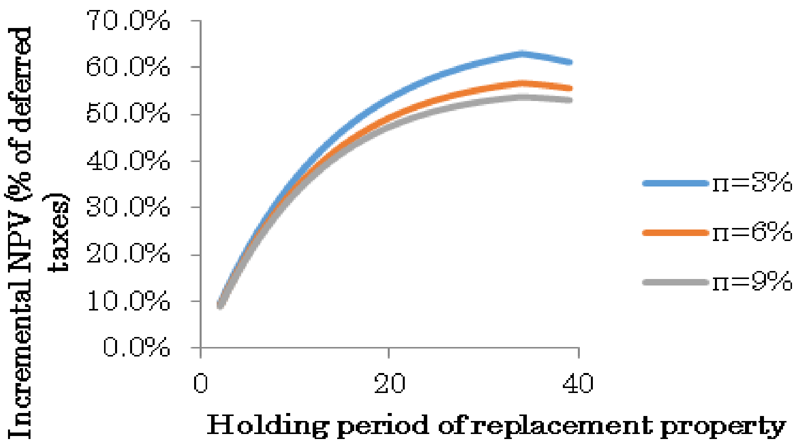

Figure 4B: 10 years since acquisition of relinquished property

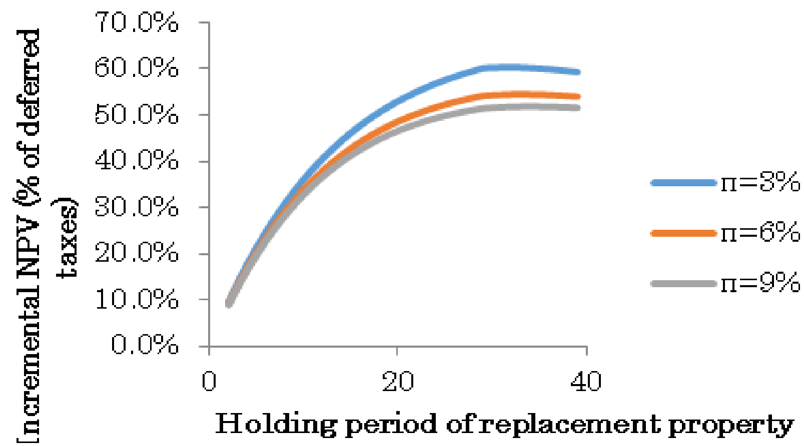

Figure 4C: 15 years since acquisition of relinquished property

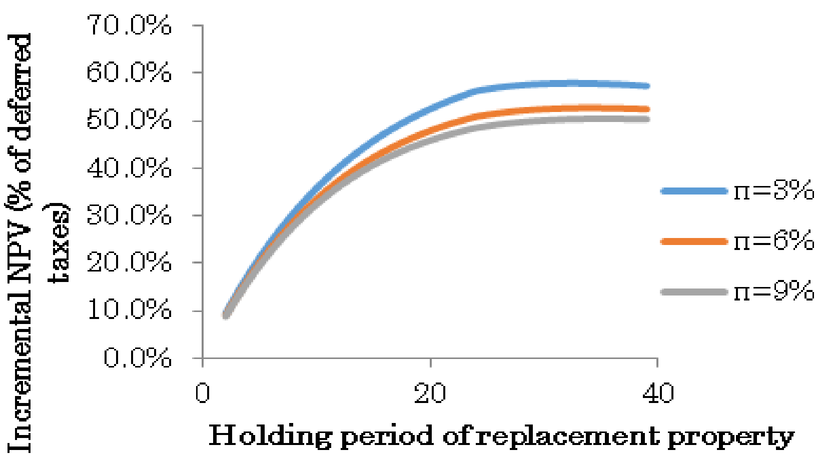

Figure 4D: 20 years since acquisition of relinquished property

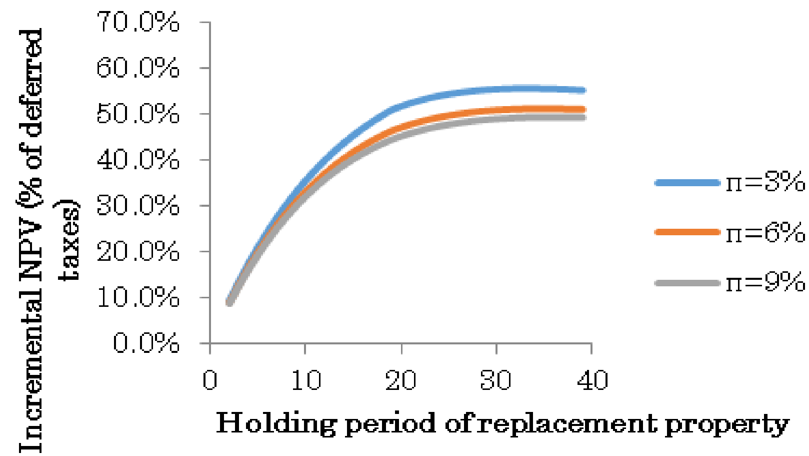

Figure 5: Sensitivity to Assumed Discount Rate

- Tax deferral benefit produced by exchange is immediate
- But…foregone depreciation deductions & increased future capital gain & depreciation tax liabilities occur **in subsequent years**
- Thus, incremental NPV of an exchange to the taxpayer is:
  - increased by a higher discount rate
  - decreased by a lower discount rate

Figure 6: Residential (Apartments) v. Nonresidential

- More rapid depreciation of residential increases immediate benefit of tax deferral
  - More depreciation recapture income to defer
- But…increased deferral benefit is offset by reduced depreciation deductions due to carry-forward of basis & deductions
- Net result?
  - Generally lower incremental NPV from exchange for apartments

Revised Look at Net Benefit/Lost Tax Revenue: Table 8 (in $billions)

Individuals + Corporations + Partnerships	2011	2010	2009	2008	2007	2003-2011 Sum	2003-2011 Mean
FMV of all like-kind property received (Form 8824, line 17)	$70.8	$78.6	$63.3	$118.4	$199.4	$1,267.8	$140.9
Deferred gain from all industries (From 8824, line 24)	33.7	39.9	33.8	56.1	90.0	577.2	64.1
Deferred gain from RE is 66% of total (based on 2007 data):							
Deferred gain from RE industry	22.2	26.3	22.3	37.0	59.4	381.0	42.3
Estimated deferred tax liability from RE industry	4.7	5.5	4.7	7.8	12.5	80.0	8.9

Average-45.0% of deferred tax liability	2.1	2.5	2.1	3.5	5.6	36.0	4.0
Maximum-64.0% of deferred tax liability	3.0	3.5	3.0	5.0	8.0	51.2	5.7
Deferred gain from RE is 30% of total deferred gain:							
Deferred gain from RE industry	10.1	12.0	10.1	16.8	27.0	173.2	19.2
Estimated deferred tax liability from RE industry	2.1	2.5	2.1	3.5	5.7	36.4	4.0
Estimated economic loss to Treasury:							
Minimum-9.2% of deferred tax liability	0.2	0.2	0.2	0.3	0.5	3.3	0.4
Average-45.0% of deferred tax liability	1.0	1.1	1.0	1.6	2.6	16.4	1.8
Maximum-64.0% of deferred tax liability	$1.4	$1.6	$1.4	$2.3	$3.6	$23.3	$2.6

- Calculations assume taxpayers would have disposed of their properties in fully taxable sales in the absence of ability to exchange
- Thus, these estimates still overstate exchange benefits/lost tax revenue
  - JCT's "dynamic" revenue estimate (for all exchanges-2015-2019) is < 10% of its tax expenditure estimate
- Treasury's discount rate?

The Impact of Repealing Like-Kind Exchanges in Real Estate

4. Effects of Elimination of Like-Kind Exchanges on Property Values & Rents

Analysis Tool: User Cost of Capital Model

- Discrete-time, partial equilibrium model that measures & values cash flows to equity investor(s) after all operating, finance, and tax expenses (savings) have been paid
- In our application, the model solves for price that equates marginal investor's expected NPV to zero under old tax law parameters
- **Short-run effect** of tax law change on prices is estimated as % reduction in the marginal investor's maximum bid price (value)
- Effects can be calculated holding all other assumptions constant; alternatively, expected GE effects, such as changes in the level of economy-wide interest rates, can also be included
- Full model: see equations (2) and (3)

Short-Run v. Long-Run Effects

- The model [equation (2)] can also be used to solve for the long-run increase in 1st year rents necessary to offset negative tax law change
  - Analogous to calculating change in the user cost of capital (rent/price ratio) induced by the tax change
- Estimated impact of tax law change: compare equilibrium level of rent under current law to rent required after elimination of exchanges
  - Assuming all-in construction costs don't change

- Parameter assumptions based on 2014 4th quarter data

Figure 10: Required Price Decrease After Elimination—Nonresidential

Figure10A: $\tau_{OI} = 39.6\%, \tau_{CG} = 23.8\%, \tau_{DR} = 25\%$

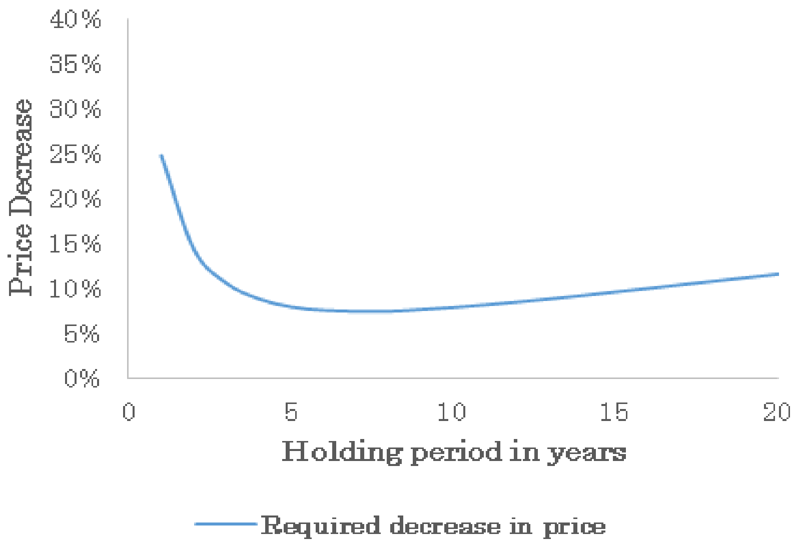

Figure10B: $\tau_{OI} = 52.9\%, \tau_{CG} = 33\%, \tau_{DR} = 38\%$

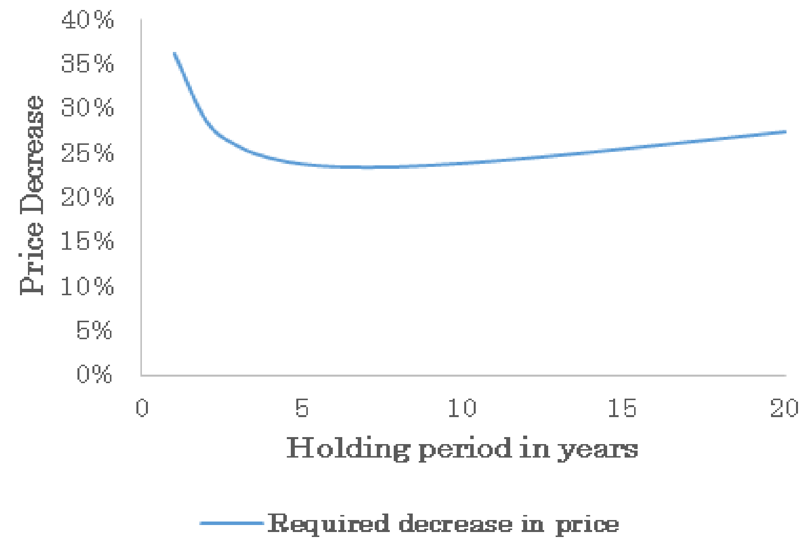

- Price declines of 8%-12% over holding periods of 3-20 years; 10%-17% for apartments
- Price declines of 23%-27% over holding periods of 3-20 years; 22%-27% for apartments

Such declines would reduce wealth of a large cross-section of households & slow or stop construction in many local markets, thereby putting **downward pressure** on employment & state & local tax receipts

Figure 11: Required Increase in Rents After Elimination—Nonresidential

Figure11A: $\tau_{OI} = 39.6\%, \tau_{CG} = 23.8\%, \tau_{DR} = 25\%$

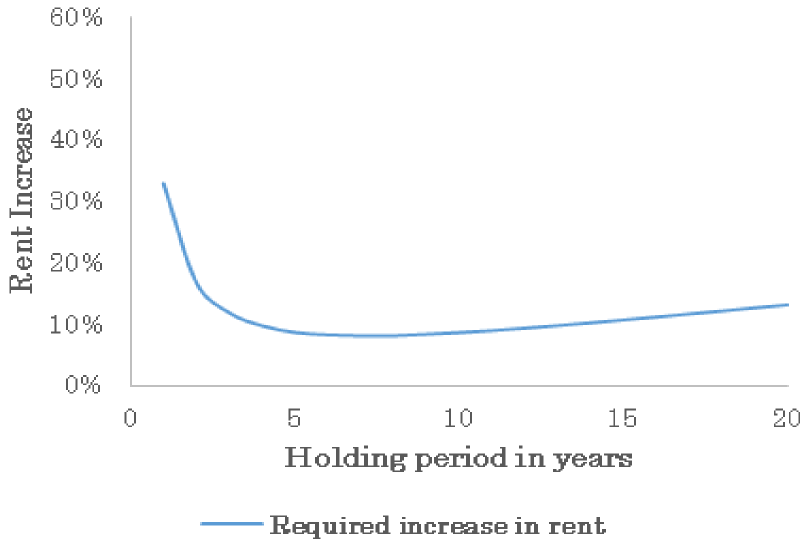

Figure11B: $\tau_{OI} = 52.9\%, \tau_{CG} = 33\%, \tau_{DR} = 38\%$

- Rent increases of 8%-13% over holding periods of 3-20 years; 11%-20% for apartments
- Rent increases of 29%-37% over holding periods of 3-20 years; 28%-38% for apartments

Such increases would reduce the affordability of CRE space for both large & small tenants

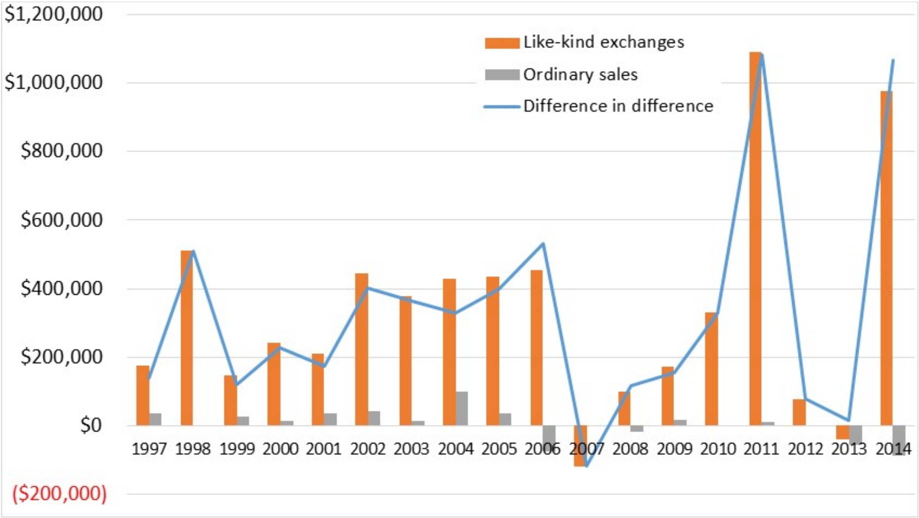
The Impact of Repealing Like-Kind Exchanges in Real Estate

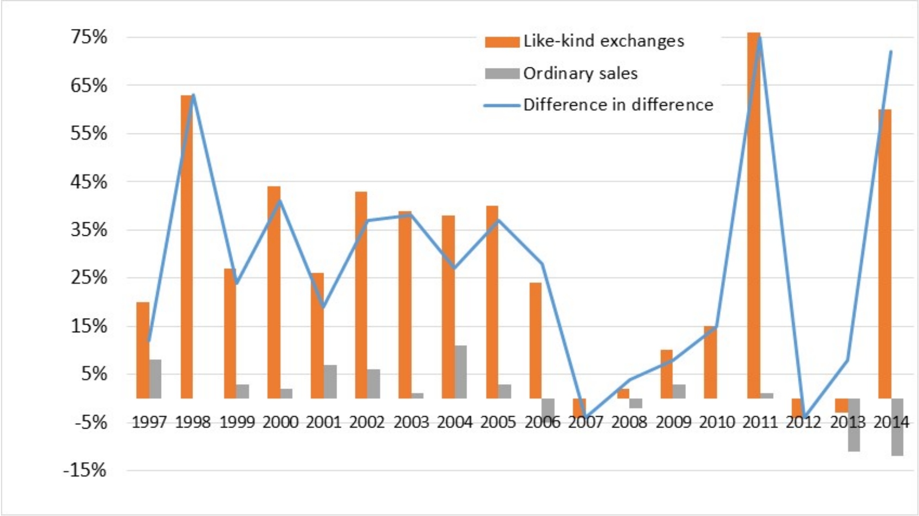
5. Economic Benefits of 1031 Exchanges – Empirical Evidence

Exchanges Are Associated with Higher Investment

- Price difference (replacement – relinquished) is positive in 66% of the matched like-kind exchanges; 51% of the time in ordinary sales
- Difference in replacement and relinquished property price:
  - On average: $305,000, or 33% of value of the relinquished property
  - When $P_{replacement}$-$P_{relinquished}$>0 is $187,500 (-8% of value)
  - When $P_{replacement}$-$P_{relinquished}$<0 is $12,933 (10% of value)

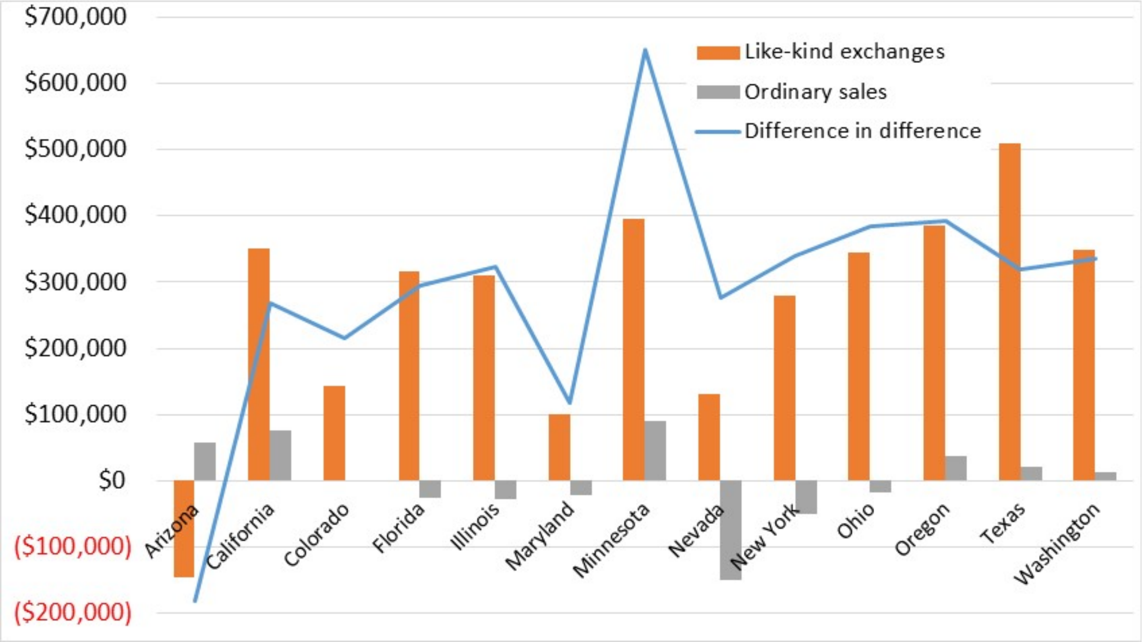
(Replacement – Relinquished) Prices for Exchanges & Ordinary Sales

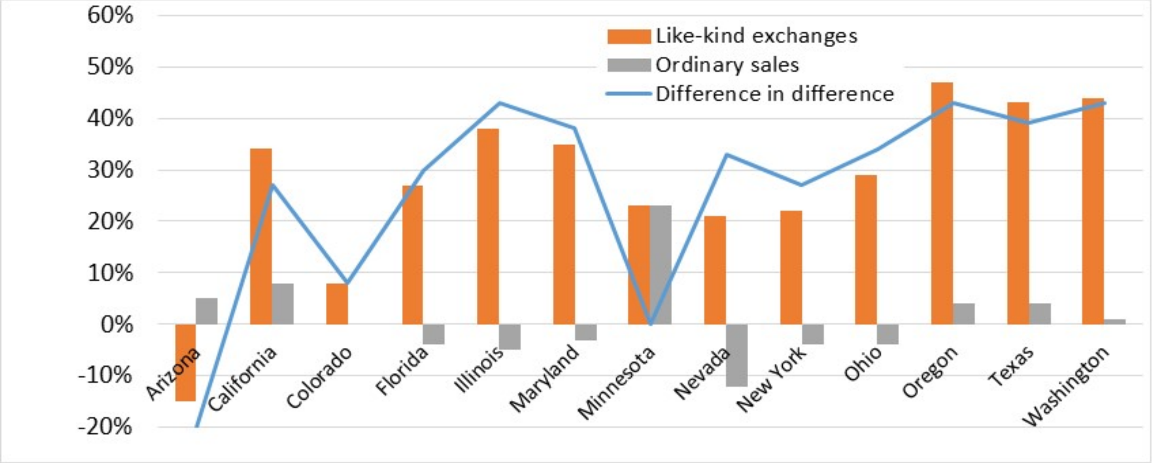




By year

(Replacement – Relinquished) Prices for Exchanges & Ordinary Sales



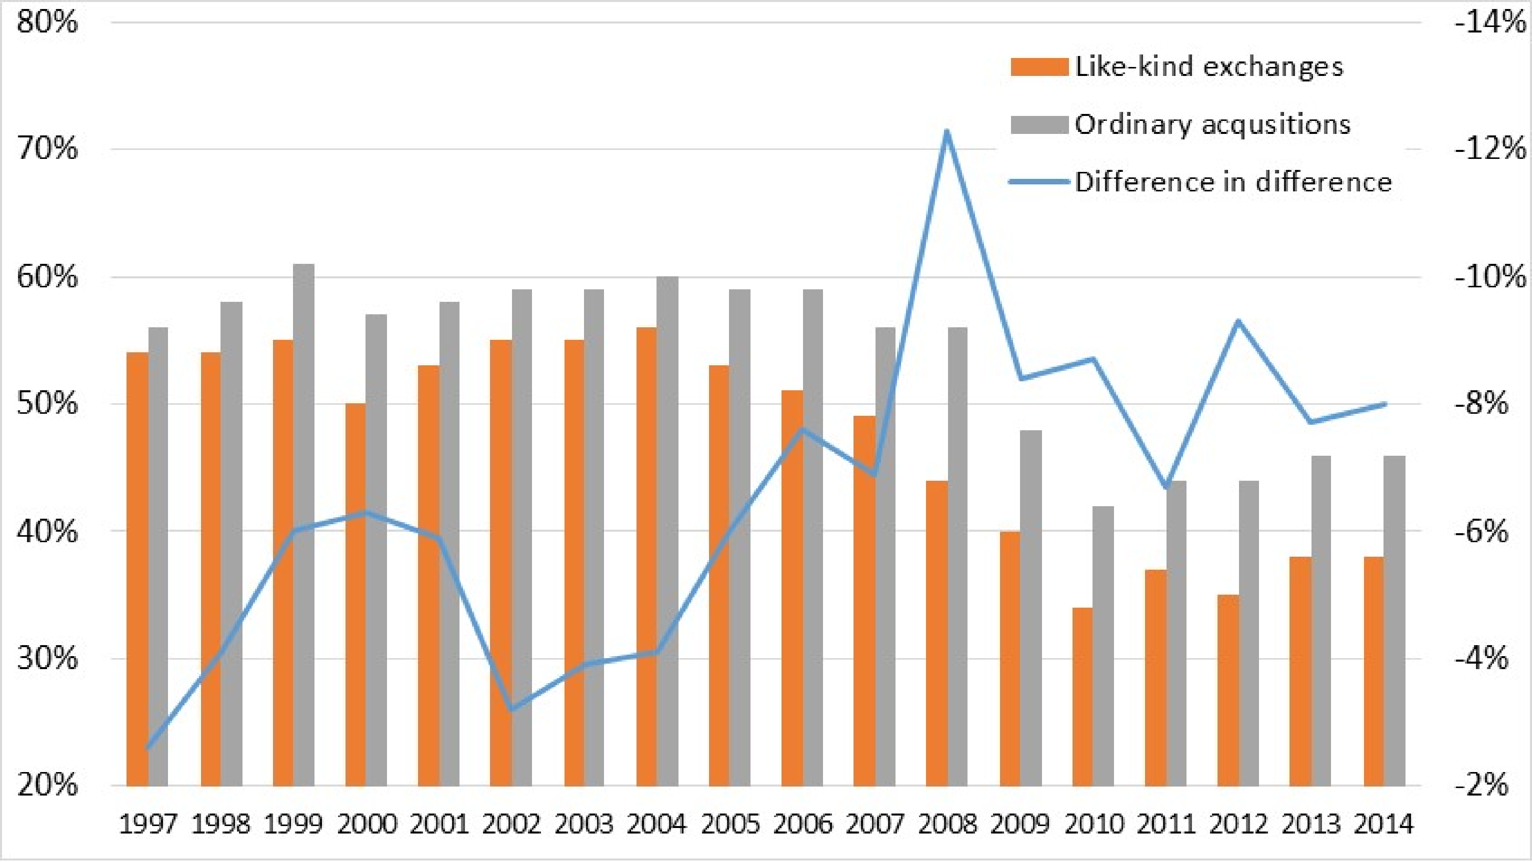


By state

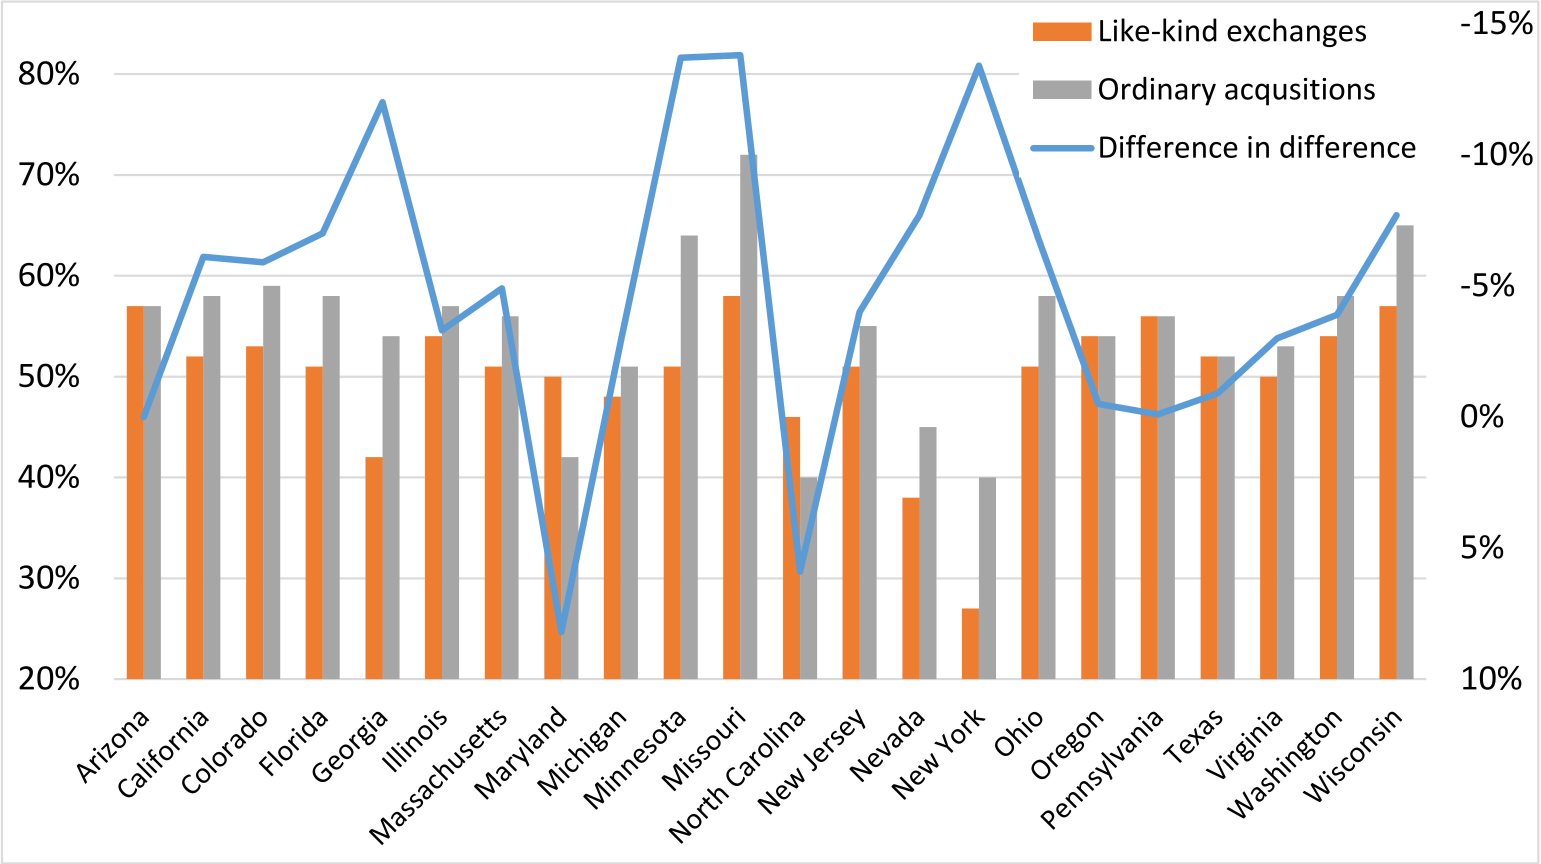
Exchanges Are Associated with Lower Leverage

- Initial leverage used by investors in like-kind exchanges vs. ordinary sales
  - Unbalanced sample: 61% in LKEs vs. 64% in ordinary acquisitions
    - 62% in LKEs vs. 66% in ordinary acquisitions in acquisitions without sales conditions
  - One-on-one (like-kind exchange – sale) matched sample using propensity-score matching: 63% in LKEs vs. 70% in ordinary acquisitions
    - 64% in LKEs vs. 70% in ordinary acquisitions in acquisitions without sales conditions

Lower Leverage in Exchanges Is Robust by Year



Lower Leverage in Exchanges is Robust by State



Replacement Properties in Exchanges Are Associated with Higher CAPX

	Replacement exchange acquisitions		Ordinary acquisitions			
Panel A: Annualized capital expenditures per square foot (all properties)						
	Mean	Std. dev.	Mean	Std. dev.	Dif.	Significance
Capex/sf (excl. LC)	1.53	1.97	1.26	2.18	0.27	P(T>t)=0.22
Tenant improvement/sf	0.55	0.89	0.64	1.03	-0.09	
Building improvements/sf	0.57	0.80	0.39	0.78	0.18	P(T>t)=0.07
Building expansion/sf	0.002	0.016	0.004	0.046	-0.002	
Other capex/sf	0.15	0.49	0.13	0.61	0.02	
Panel B: Annualized capital expenditures per square foot (similar properties)						
Capex/sf (excl. LC)	1.78	2.15	1.38	1.34	0.40	P(T>t)=0.20
Tenant improvement/sf	0.65	0.96	0.77	0.98	-0.13	
Building improvements/sf	0.64	0.87	0.41	0.60	0.24	
Building expansion/sf	0.003	0.018	0.008	0.041	-0.004	
Other capex/sf	0.18	0.56	0.13	0.19	0.05	P(T>t)=0.11

Holding Periods Are Shorter for Investors in Exchanges

Panel A: All properties				
Holding period	Mean	Std. dev.	Min	Max
All sales	6.63	5.09	0.00	17.94
Panel B: Repeat sales				
Holding period	Mean	Std. dev.	Min	Max

2012	2.7%	0.0%
2013	2.5%	0.0%
2014	2.4%	0.1%

6. Like-kind Exchanges and Taxes

The Estimated Taxes Paid in LKE Followed by a Taxable Sale vs. Ordinary Sale Followed by an Ordinary Sale Are on Average 19% Higher

	Exchange rolled into an exchange	Exchange followed by an ordinary sale	Ordinary sale followed by an ordinary sale (CG taxes liability >0)
Panel A: Capital gain and depreciation recapture tax liability over the holding period			
Capital gain tax paid	0.0%	19.3%	16.5%
Capital gain tax deferred	24.9%	0.0%	0.0%
Depreciation recapture tax paid	0.0%	3.2%	2.4%
Depreciation recapture tax deferred	8.2%	0.0%	0.0%
Panel B: Annualized capital gain and depreciation recapture tax liability over the holding period			
Annualized capital gain tax paid	0.0%	7.9%	5.5%
Annualized capital gain tax deferred	6.8%	0.0%	0.0%
Annualized depreciation recapture tax paid	0.0%	1.1%	0.5%
Annualized depreciation recapture tax deferred	2.2%	0.0%	0.0%

The Impact of Repealing Like-Kind Exchanges in Real Estate

7. Consequences of Removal of Exchanges Based on Established Micro-economic Effects

Consequences of Removal of Exchanges: Micro Effects

- Our empirical analysis suggest removal of exchanges will lead to:
  - Decrease in investment
  - Increase in holding periods
  - Increase in amount of leverage used to acquire properties
- Our theoretical analysis suggests that repeal of like-kind exchanges would lead to decrease in prices in short-run and an increase in rental rates in the longer run

Consequences of Removal of Exchanges: Macro Effects

- Reduction in growth in CRE markets, resulting from lower investment & decreases in prices, will lead to slower employment growth in sectors closely tied to exchanges, such as construction and financial services

- Removal of like-kind exchanges will increase marginal tax rates for many investors
  - General equilibrium models link the increase (decrease) of marginal tax rates to contraction (expansion) of the economy
  - Impact will be more pronounced in high tax states & in industries that make greater use of exchanges, such as CRE , transportation, and warehousing.
  - In addition to having direct economic effects through increases in the marginal tax rates and the cost of capital, secondary effects will include decreased employment in RE and related sectors.

Conclusions

- Document widespread use of RE like-kind exchanges
- Results of our user cost models and empirical analyses suggest the costs of like-kind exchanges may be overestimated, while their benefits overlooked.
- Elimination of RE exchanges will likely lead to
  - decrease in prices (SR)
  - increase in rents (LR)
  - decrease in RE investment
  - increase in investment holding periods, and
  - increase in use of leverage

The Economic Impact of Repealing or Limiting Section 1031 Like-Kind Exchanges in Real Estate

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1
2016

Cyber Insurance- Where Are We? What Lies Ahead?

March 30-April 1, 2016

Cyber Insurance Market Overview

- Coverage first offered in the late 1990's
- Industry Gross Written Premium of approximately $2.5B annually
- Approximately 50 insurers offer some form of cyber insurance
- Rate environment is mixed depending upon the industry
- Average cost per breach of $3.79M in 2014

What does Cyber Insurance Cover?

- 3rd party liability resulting from a privacy violation or a network breach
- 1st party costs for responding to a privacy violation or a network breach including:

-Legal Counsel

-Computer Forensics

-Notification to affected individuals

-Credit Monitoring for affected individuals

- Coverage can also include lost income from a business interruption caused by a network breach

How do Insurers underwrite Cyber Insurance?

- Size of organization and Industry
- Amount and types of confidential information
- Review of internal network controls as provided in the application with specific focus on:
- Perimeter protections
- Incident Response
- Patch Management
- Encryption
- History of Prior Incidents

What information do REITS have that are exposed Cyber Perils?

- Personally Identifiable Information from tenants and employees (e.g. SSN)
- Payment Card Information
- Protected Health Information
- Confidential Corporate Information

How Can REITS protect themselves?

- Employee training and awareness
- Evaluate internal controls to determine if they are appropriate for the amount and types of information your organization has in its possession
- Buy Insurance

Questions?

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1 2016

NAREIT

D&O Liability Insurance Program

March 30, 2016

D&O Liability Insurance Program

Agenda

- NAREIT Program Participation Update
- REIT Claims Update
- REIT D&O Underwriting Concerns
- Selecting Your Primary D&O Carrier
- Q&A

D&O Liability Insurance Program

NAREIT Membership Participation Update

- Program Growth
- Strengthening Relationships
- Enhancements in Coverage

REIT Claims Update

- Securities Class Actions up 11% from 2014 to 2015

- Average 4 REITs SCAs/year over past 4 years
  - 2015: 4 SCAs
  - IPO/roll-up, financial/accounting, amending by-laws, self-dealing around M&A

- Increase in non-SCA REIT Claims
  - Since 2010, average 18 claims/year in NAREIT program (0 SCAs)
  - 2015: 29 claims in NAREIT program (0 SCAs)
  - Broader Coverage + REIT Growth + Active Plaintiffs Bar = Increased Claims Frequency & Greater Variety of Claims

REIT D&O Underwriting Concerns

- Mergers & Acquisitions
  - Approx. 9 of 10 deals over $100 million attract litigation
  - Allegations: “Bump-Up” (Target) and “Aiding & Abetting” (Acquirer)
  - Historical Settlements: Non-monetary + Defense Costs + Plaintiff Counsel Fees
  - NAREIT D&O Policy: Removed plaintiffs counsel fee exclusion for Bump-Up
  - End to Disclosure Only Settlements?
    - Delaware & New York have recently rejected
    - Too early to tell whether Maryland will adopt a similar stance
    - If so, could deter frivolous M&A suits (lower frequency), BUT severity/costs could increase as cases drawn out and no quick non-monetary settlements
  - Questions: Rationale for Deal, Consideration, Feedback/Market Reaction, Compensation
  - Best Practices: Evaluate Options/Conduct Fair Process; Documentation

REIT D&O Underwriting Concerns

- Corp. Governance & Shareholder Communication
  - Cyber Security/Data Integrity/Social Engineering
  - FCPA and similar anti-corruption statues
  - Questions: Controls/Practices/Procedures; How any Incidents were Handled

  - Maryland Unsolicited Takeover Act (MUTA)
  - Shareholder Interaction and Communication
    - Activist Investors/Hedge Funds?
  - Questions: Transparency; Shareholder Feedback

REIT D&O Underwriting Concerns

- Joint Venture/Limited Partners
  - Claims: Unwinding JV partnership; alleged mismanagement of venture
  - Insuring Agreement D; Definition of Controlled Entity
  - Questions: Strategy/Goals; JV partners & history
- Regulatory/Investigations
  - Accounting practices compliance
  - Financial metrics and disclosure
  - Inquiry coverage; Investigation of the entity by an investigating authority
  - Questions: Interaction/relationship with regulators

Why the NAREIT D&O Program works for You

- ✓ Financial Strength
- ✓ Commitment to REIT Industry
- ✓ Deep understanding of REIT structure
- ✓ Consistent Underwriting Approach
- ✓ Policy Language protecting YOUR Board
- ✓ Integrated Claims Model
  - ➢ Underwriting and Claims work closely together
  - ➢ Experience handling a wide variety of REIT claims, not just SCAs
- ✓ Focus on Value-Added Service

OPEN CARRY BY U.S. JURISDICTION

Jurisdiction	Permissive	Licensed	Anomalous/ Rural	Non-Permissive	Comments
Alabama	✓				
Alaska	✓				
American Samoa				✓	Open carry prohibited.
Arizona	✓				
Arkansas	✓				
California			✓		Open carry permitted in rural counties where local ordinances authorize open carry (some with and some without a license requirement).
Colorado	✓				Open carry without a license permitted, except in City and County of Denver (where open carry prohibited by local ordinance pre-dating preemption law).
Connecticut		✓			Handgun open carry with license permitted (licenses granted on Shall-Issue, with Limited Discretion basis). Long gun open carry varies based on local ordinances.
Delaware	✓				
District of Columbia				✓	Open carry prohibited.
Florida				✓	Constitutionality on ban on open carry currently being challenged.
Georgia		✓			Open carry with license permitted (licenses granted on Shall Issue basis).
Guam		✓			FOID card required (Firearm Owner's Identification card).
Hawaii		✓		Actual practice	Licenses rarely issued to ordinary citizens and are valid in the issuing county only.
Idaho	✓				
Illinois				✓	
Indiana		✓			Open carry with license permitted (licenses granted on Shall Issue basis) and recognition of all other states' carry licenses.
Iowa		✓			
Kansas	✓				
Kentucky	✓				
Louisiana	✓				

OPEN CARRY BY U.S. JURISDICTION (cont'd…)

Maine	✓				
Maryland		✓		Actual practice	Handgun licenses rarely issued to ordinary citizens. Long gun open carry without license permitted.
Massachusetts		✓		Actual practice	Handgun open carry with license permitted (licenses issued on May-Issue statewide basis), but issuance varies between localities. In practice, open carry is discouraged and one may be charged with Disorderly Conduct or Breach of Peace if open carry causes public alarm. Long gun open carry prohibited.
Michigan	✓				Open carry without license permitted unless in a vehicle and then a CHL (Concealed Handgun License) is required (CHL granted on Shall-Issue basis).
Minnesota		✓			Open carry with license permitted (licenses granted on Shall Issue basis).
Mississippi	✓				
Missouri		✓			
Montana	✓				
Nebraska		✓			
Nevada	✓				Open carry without license permitted, subject to local ordinances.
New Hampshire	✓				Open carry without license permitted unless in a vehicle and then a CHL is required.
New Jersey		✓		Actual practice	Licenses rarely issued to ordinary citizens. Long gun open carry prohibited.
New Mexico	✓				Statewide open carry does not preempt tribal laws on Native American reservations, except when on a state-owned highway. Some tribes prohibit open carry and others require a tribal permit.
New York				✓	Handgun open carry prohibited unless hunting or at a gun range. Long gun open carry prohibited unless seasonal hunting in designated game reserves.
North Carolina	✓				
North Dakota		✓			
Northern Mariana Islands				✓	

OPEN CARRY BY U.S. JURISDICTION (cont'd…)

Ohio	✓				**Open carry without license permitted unless in a vehicle and then a CHL is required.**
Oklahoma		✓			Open carry without license permitted and recognition of other states' right to carry without license with valid ID from home state.
Oregon			✓		Open carry without license permitted, subject to local ordinances, except that any person with CHL is exempt from local restrictions.
Pennsylvania			✓		
Puerto Rico	✓				
Rhode Island		✓			Open carry of handguns permitted with issuance of license by Attorney General's Office. Long gun open carry without license permitted.
South Carolina				✓	
Tennessee		✓			
Texas		✓			Open carry of handguns permitted with issuance of license. Long gun open carry without license permitted.
U.S. Virgin Islands				✓	
Utah		✓			Open carry without license permitted if firearm is unloaded and exposed; license required to open carry loaded firearm (e.g., a live round of ammunition in the firing chamber of the weapon).
Vermont	✓				
Virginia	✓				Open carry without license permitted, subject to local ordinances prohibiting firearms with more than 7 rounds without license, except that any person with CHL is exempt from local restrictions.
Washington	✓				Open carry without license permitted unless in a vehicle and loaded and then a CHL is required.
West Virginia	✓				
Wisconsin	✓				Open carry without license is permitted, but if do not hold a state CHL or qualifying out of state license, firearm in vehicle must be visible.
Wyoming	✓				

OPEN CARRY BY U.S. JURISDICTION (cont'd…)

Key Terms:

Open carry
The act of publicly carrying a firearm in plain sight.

Preemption
Legislatively enacted state laws limiting or eliminating the ability of local governments to regulate the possession or carrying of firearms.

Prohibited persons
Persons who are prohibited by law from carrying a firearm, *e.g.,* felons, convicts of misdemeanor domestic violence, drug or alcohol addicts, involuntarily committed mental patients.

Permissive
A *Permissive* state has passed full preemption of all firearms laws, with few exceptions. Open carry without a license is permitted for all non-prohibited persons. Such open carry is lawful on foot and in a vehicle. Any person openly carrying a firearm may be detained and cited by law enforcement officials for disorderly conduct or disturbing the peace in certain locations and in circumstances where open carry causes public alarm.

Licensed
A *Licensed* state has passed full preemption of all firearms laws, with few exceptions. Open carry with a license is permitted for all non-prohibited persons. Such open carry is lawful on foot and in a vehicle. In practice however, some of these states have *May-Issue* licensing laws (not *Shall-Issue*) and can be regarded as *Non-Permissive* for open carry, since licensing authorities rarely or never grant licenses to ordinary citizens.

Anomalous
The legality of open carry varies within each such *Anomalous* state, based on local policies. In such states, some local jurisdictions may permit open carry while others may impose varying degrees of restrictions or prohibit open carry entirely.

Rural
In *Rural* states, open carry is generally prohibited, except in unincorporated areas of counties where population densities are below statutorily-defined thresholds. In such rural areas, local authorities have enacted ordinances permitting open carry in such areas (*i.e.,* California). These states are also regarded as *Anomalous* open carry states.

Non-permissive
In *Non-permissive* states, open carry of a handgun is not lawful, or is only lawful under such a limited set of circumstances (*e.g.,* while hunting, while on one's own property/for lawful self-defense) that open carry is effectively prohibited. Some states with *May-Issue* licensing laws are *Non-Permissive* in practice since those authorities are highly restrictive in the issuance of open carry licenses.

Texas: A Case Study of Licensed Open Carry
HB 910 – OPEN CARRY LEGISLATION EFFECTIVE Jan. 1, 2016

> Allows individuals licensed to carry a handgun under Subchapter H, Chapter 411, Government Code, to openly carry the gun, provided it is holstered.

> Subchapter H, Chapter 411, was previously the concealed carry statute.

> Amended Chapter 30, Penal Code to add new Sec. 30.07 in addition to 30.06 to regulate trespass by a license holder with a handgun.

> In essence, the legislature struck the word "concealed" wherever it appeared before the word "handgun" and added new trespass provisions to also apply to open carry.

Texas: A Case Study of Licensed Open Carry

HB 910 - Prohibited Places

> Handguns prohibited in the following locations:

- K-12 school and school bus
- High school, collegiate or professional sporting event
- Polling place
- Court
- Racetrack
- Secured area of an airport
- Bar
- Correctional facility
- Hospital or nursing facility
- Amusement park
- Church
- Any meeting of governmental entity
- While intoxicated

Texas: A Case Study of Licensed Open Carry

HB 910 - Can Prohibit Handguns on Private Property

> Private property owners may continue to prohibit handguns on their premises if they provide proper notification (oral or written).

> Owner *or someone with apparent authority to act for the owner* must provide oral or written communication that carrying a concealed or holstered handgun on the property is forbidden.

> Property manager or other authorized individual acting on behalf of owner may provide the proper notification.

Texas: A Case Study of Licensed Open Carry

HB 910 - Can Prohibit Handguns on Private Property

> HB 910 creates a new type of written notice to make carrying a handgun on a premise illegal trespass:

- 30.06 Notice – Required to prohibit concealed carry - some modifications made in the text of the notice;
- 30.07 Notice – Required to prohibit open carry; and
- If want to prohibit both concealed and open carry, you must post *both* 30.06 and 30.07 Notice.

Texas: A Case Study of Licensed Open Carry

HB 910 - Trespass by Holder of Handgun License

> A party who trespasses in violation of a posted notice is subject to a Class C misdemeanor charge punishable by a fine not to exceed $200.

> If license holder is personally given the notice by oral communication and commits trespass by refusing to leave is subject to a Class A misdemeanor charge, punishable by up to a year in the county jail and/or a $4,000 fine.

GT GreenbergTraurig

Texas: A Case Study of Licensed Open Carry

HB 910 - Written Communication Requirements

- May be a card, document and/or a posted sign.
- Must say:
  - "Pursuant to Section 30.06, Penal Code (trespass by license holder with a concealed handgun), a person licensed under Subchapter H, Chapter 441, Government Code (handgun licensing law), may not enter this property with a concealed handgun.
  - "Pursuant to Section 30.07, Penal Code (trespass by license holder with an openly carried handgun), a person licensed under Subchapter H, Chapter 441, Government Code (handgun licensing law), may not enter this property with a handgun that is carried openly.
- Any sign must additionally:
  - appear in contrasting colors with block letters at least one inch in height;
  - be printed in both English and Spanish; and
  - be displayed in a "conspicuous manner" at each entry to the property.

Texas: A Case Study of Licensed Open Carry

HB 910 – Employer/Employee

- Employer may prohibit employees from carrying firearms on the premises.
- "Premises" means a building or a portion of a building. The term does not include any public or private driveway, street, sidewalk or walkway, parking lot, parking garage, or other parking area, so law only applies to building itself.
- If employee has a license to carry a handgun, or otherwise lawfully possesses a firearm or ammunition, employer <u>cannot</u> prohibit an employee from keeping the employee's firearm or ammunition in a locked privately owned motor vehicle in any parking lot, parking garage or other employer-provided parking area.

Texas: A Case Study of Licensed Open Carry

HB 910 – Analysis (cont'd…)

> Scenario 1 -- Building owner prohibits handguns on the premises

- Determine if prohibiting both concealed and holstered (openly carried) handguns.
- Post the statutory notices at ALL entrances to the building.
- Determine protocol for when someone enters the premises with a visible handgun or displays a concealed handgun if prohibited, *i.e.,* management asks individual to leave versus calling police.
- In this Scenario, owner should proactively enforce the posted prohibition - failure to do so could result in liability.
- Add lease provisions reiterating prohibition.

GT GreenbergTraurig

Texas: A Case Study of Licensed Open Carry

HB 910 – Analysis (cont'd…)

> Scenario 2 -- Building owner does not prohibit handguns on the premises, but leaves it up to the tenants to prohibit handguns in their leased premises.

> In this Scenario, there is no prohibition for the building owner to enforce, but tenants may be less comfortable in the building.

Texas: A Case Study of Licensed Open Carry

HB 910 – Analysis (cont'd…)

> Licensed gun rights advocates may openly carry holstered handguns into many buildings to test law or otherwise compile evidence of who is posting signs, how certain situations are being handled by business owners, etc.; *see e.g.,* www.Texas3006.com

> This will taper off in a few months after novelty has worn off.

> If used, posted signage or other written communication needs to be in strict compliance with statute.

> Building managers, security personnel, human resources and other relevant personnel must be briefed on the law.

Texas: A Case Study of Licensed Open Carry

HB 910 – Standing Down or Enforcing Security Measures

- Consider leaving issue to tenants to determine if they want to bar handguns (open and/or concealed) from the leased space.
- Significant omission from the new law is no employer immunity from civil actions resulting from an occurrence involving the employee and his or her openly carried firearm, except in cases of gross negligence.
- Likewise, there is no safe harbor for property managers if:
  - An injury occurs and there is a reasonable presumption that a licensed carrier could have prevented the injury by using the handgun.
  - The opposite is true if someone was injured by a licensed handgun carrier and the owner did not properly bar them from the premises.
- Is the safest position to stand down and not usurp the law?
- Preserves argument that no rights were granted and no one stood in the way of the exercise of open or concealed carry rights.

GT GreenbergTraurig

Texas: A Case Study of Licensed Open Carry

HB 910 – Standing Down or Enforcing Security Measures (cont'd…)

- General tort law principles have held that a landowner that voluntarily undertakes to provide building security measures for the benefit of its patrons must do so with reasonable care.
- There is the potential for increased liability if landowner voluntarily undertakes security procedures and is negligent in enforcing and carrying out those security procedures.
- This is the case with all security measures, not just those concerning firearms.
- To the extent that any commercial owner opts to prohibit firearms on premises, the owner must adopt a clear policy regarding enforcement of the firearm prohibition – even if that policy is to call the police in the event of trespass – and ensure that any security measures put into place are consistently followed.

Final Thoughts on Open Carry: Insurance

- What actions, if any, by the insured are being encouraged/required? Stand Down v. Prohibit
- Do policies/rates differ depending on the security measures taken (or not taken) as to open and/or concealed carry?
- What effect do different state laws have on insurance requirements/underwriting standards? Permissive v. Licensed v. Anomalous/Rural v. Non-permissive?
- Thoughts and discussion welcomed on these issues.

REIT Wise®

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1 2016

National Flood Insurance Program (NFIP)
NAREIT Insurance Committee Update

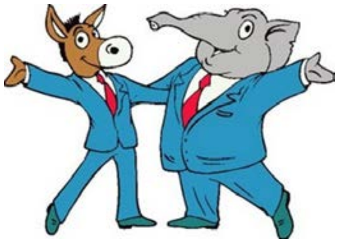
March 30-April 1, 2016

National Flood Insurance Program (NFIP) 2016 Issues

- NFIP Must be Reauthorized in 2017; expires September 30, 2017
- *The Flood Insurance Market Parity and Modernization Act* (H.R. 2901) unanimously passed the House Financial Services Committee on March 2, 2016
- Greater Concern in Scientific Community about Rising Sea Levels and their Implications

The Flood Insurance Market Parity and Modernization Act (HR 2901)

- Its Bipartisan! Passed the House Financial Services Committee on March 2, 2016 by a 53-0 vote



- Sponsored by Reps. Dennis Ross (R-Fla) and Patrick Murphy (D-Fl) with full backing of Committee Chair Jeb Hensarling (R-TX) and Ranking Member Maxine Waters (D-CA)

The Flood Insurance Market Parity and Modernization Act (HR 2901)

- Intended to help facilitate the development of a private and competitive insurance market for flood insurance

- Strongly supported by insurance, banking, mortgage banking , property and financial services stakeholders, including *American Insurance Association, American Bankers Association, Mortgage Bankers Association, NAIC, Financial Services Roundtable, Property Casualty Insurance Association of America, National Association of Home Builders*

- Senate Companion Bill (S. 1679) has been introduced by Senator Dean Heller (R-NV).

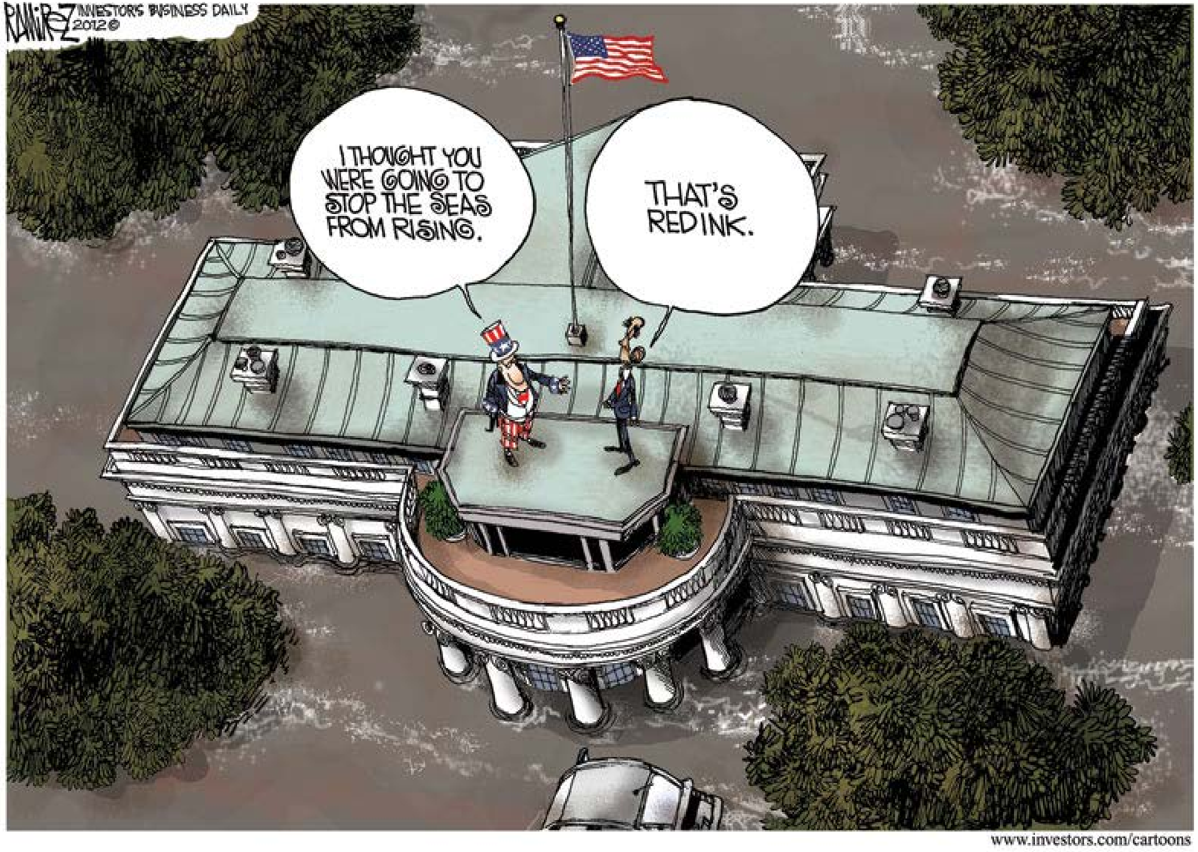
The Flood Insurance Market Parity and Modernization Act (HR 2901)

What does it do?

- Clarifies that flood insurance offered by a private carrier outside of the NFIP can satisfy the Flood Disaster Protection Act's mandatory purchase requirement

- Defines acceptable private flood insurance as a policy providing flood insurance coverage issued by an insurance company that is licensed, admitted, or otherwise approved to engage in the business of insurance in the state or jurisdiction in which the insured property is located.

NFIP 2017 Reauthorization



NFIP 2017 Reauthorization: Issues

- NFIP is INSOLVENT: FEMA Owes Treasury More that $20 billion!
- Flood Risks Are Increasing!
- Everyone Agrees Reforms Are Needed; Everyone Does not Agree WHICH REFORMS are needed!
- Conflicting Goals: Cost Containment and Program Expansion

Flood Risks Are Increasing

Increasing Flood Risks
Agreement that Sea Levels are Rising
Disagreement on Rate of Change

- Intergovernmental Panel on Climate Change: More than three feet by the end of this century;
- United States Army Corps of Engineers: 5 feet by end of century;
- National Oceanic and Atmospheric Administration: Up to 6 ½ feet by end of century.

NFIP 2017 Reauthorization
Program Issues

- Increasing Affordability and Reducing Subsidies: Difficult to do both!
- Improve FEMA Management and Prioritization: Easier said than done!
- Improve Prognostication and Communication of Risk
- Improve Flood Map Accuracy
- Expand Federal Risk Mitigation Programs
- Expand Property Owner Risk Mitigation Incentives

- Expand NFIP Coverage, e.g., business Interruption coverage, etc.
- Expand Commercial Property Owner Access to Federal Funding and Programs!!

NFIP 2017 Reauthorization
Capital Market Options

- Promote Greater Private Reinsurance Market Activity?
- Promote Catastrophe Bond Market Activity?

The Future of the NFIP?

Stay Tuned

State and Local Tax Subcommittee Committee Meeting

Wednesday, March 30th
4:30pm – 6pm
Marriott Marquis, Washington DC

Moderator:
Lisa Schmaltz, Director-Tax Accounting & REIT Compliance, Welltower, Inc.

Panelists:
Sean Kanousis, Principal, PwC
Scott Smith, Partner, BDO USA, LLP
Andrew VandenBrul, Partner-State & Local Tax, KPMG LLP

STATE & LOCAL SUBCOMMITTEE MEETING
(Open to all REITWise® Participants)
Marriott Marquis Washington, DC
Independence E-H
Wednesday March 30th, 2016
4:30 p.m. – 6:00 p.m.

Co-Chairs:

Joseph Gurney, Director-Multistate Tax, Deloitte LLP
Tracy Swearingen, SVP-Taxation, Duke Realty Corporation

Panelists:

Sean Kanousis, Principal, PwC
Lisa Schmaltz, Director-Tax Accounting & REIT Compliance, Welltower, Inc.
Scott Smith, Senior Director, BDO USA, LLP
Andrew VandenBrul, Managing Director-State & Local Tax, KPMG

NAREIT Staff Liaison:

Dara F. Bernstein, VP & Senior Tax Counsel

I. Overview of Legislative Developments (State Implications of PATH Act)

II. Proposed State Tax Legislation: California, Hawaii, PA, and Other States

III. Other Indirect Tax Issues

IV. Audit Activity: What are we seeing?

Note: This meeting may qualify for 1.5 hours of continuing professional education credits, depending on the state. For CLE or CPE credit information, please contact Afia Nyarko at 202-739-9433 or anyarko@nareit.com.

NAREIT's Law, Accounting & Finance Conference

March 30 - April 1

2016

SALT Subcommittee

March 30, 2016

Panelists

Lisa Schmaltz (Welltower), Moderator

Scott Smith (BDO)

Drew VandenBrul (KPMG)

Sean Kanousis (PwC)

SALT Subcommittee Co-Chairs

Tracy Swearingen (Duke Realty)

Joe Gurney (Deloitte)

AGENDA

I. Overview of Legislative Developments

II. Proposed California Tax Legislation: Political View and Technical Analysis: Repeal of Prop. 13 for Commercial Properties?

III. Other Indirect Tax Issues

IV. Audit Activity: What are we seeing?

I. Overview of Legislative Developments

A. The PATH ACT and State Tax Conformity

1. Built in Gains Tax – 5 Years

a. Where do the states stand?
b. Rolling (IL, NY); Adoption (CA, FL) and Non-Conformity.
c. REIT Specific Provisions

2. Bonus Depreciation

a. Where do the states stand?
b. Rolling (IL, NY); Adoption (CA, FL) and Non-Conformity.
c. REIT Specific Provisions

3. FIRPTA Qualified Foreign Pension Funds

a. Where do the states stand?
b. Conformity with IRC 897 in general
c. IRC 897(l)

B. State FIRPTA

1. Timing
   a. Different than "at-source" withholding
   b. When should we address?
   c. When is it usually addressed?
   d. Best Practices
2. Who is a Nonresident?
   a. Different for different jurisdictions
   b. Organization vs. Qualification
3. Exemptions
   a. Principal place of business
   b. Continue in business exemption
   c. <u>Examples</u>: California, Georgia, Oregon, Maryland

Tennessee – Revenue Modernization Act of 2015

- Adopts "Factor presence nexus" for taxable years beginning after December 31, 2015
  - *J.C. Penney National Bank v. Johnson*
  - Revenue Ruling 06-27
  - Tenn. AG Op. No. 15-37
- Market sourcing effective for taxable years beginning on or after July 1, 2016
- Cloud computing sales/use tax (eff. July 1, 2015): deemed delivery of cloud software
- Overhaul of administrative rules to implement the RMA
  - Proposed rules filed February 25, 2016; comments due/hearing on April 26, 2016
  - Market sourcing rules – modeled after MTC, DC, MA
  - New entity classification rules

Mortgage REITs: Financial Institution classification and special apportionment rules continue to expand

1. Physical Nexus

2. Economic Nexus

3. SINAA
   a. Solicitation
   b. Investigation
   c. Negotiation
   d. Administration
   e. Approval

4. Financial Org/Institution Rules

5. Sourcing of income: Whole loans (sale or interest), securitizations, CMBS

Illinois – H.B. 3086

- Amends definition of "Captive REIT"
  - Effective retroactively to taxable years ending after August 16, 2007
  - Voting power or value of a beneficial interest or shares held in a REIT that are held in a "segregated asset account" of a life insurance company for the benefit of persons or entities that are immune or exempt from federal income tax are <u>not</u> taken into account for purposes of determining if a REIT is a "captive REIT"

Virginia – H.B. 95

- Similar amendment to definition of "Captive REIT" and stock held in segregated accounts of a life insurance company
  - Effective for taxable years beginning on or after January 1, 2016

Nevada – S.B. 483

- Imposes a new "Commerce Tax"
  - Effective July 1, 2015
  - "Nevada gross revenue" of $4 million or more
  - Uses market sourcing approach
  - Tax rates vary based on NAICS classification
  - Proposed rules (issued February 17, 2016) address nexus, "taxable entity," filing requirements, sourcing, and other details

New York State and City Tax Reform

- Economic Nexus enacted for Corps with $1M or greater of New York receipts (NYS)

- Bank Tax eliminated (NYS & NYC)

- NYS corp tax rate reduced to 6.5% but MTA Surcharge increased to 28%, thus overall tax rate if 8.32% (Slight tax increase)

- Capital Tax increased to $5M but will be phased out – 0% by 2021 (NYS)

- Qualified Financial Instruments - 8% rule. In determining New York receipts and net gains from “qualified financial instruments” (generally financial instruments marked to market under IRC § 475 or 1256 (excluding loans secured by real property)), taxpayers may make an annual and irrevocable election to use a fixed percentage method. Under this method, 8% of all net income from qualified financial instruments is included in the apportionment factor numerator. If a taxpayer does not elect the fixed percentage method, receipts and net gains are sourced via a customer based sourcing method (using an individual’s billing address or the commercial domicile of a business).

New York State and City Tax Reform

- Market Sourcing Rules for Services
- Interest sourced to location of real property
- Net Operating Loss – Creates a New York NOL and no longer conforms to IRC 172
- PNOL – For taxable years prior to 2015, NOLs are converted to PNOLs
- Unitary Combined Reporting – (Applies only to Captive REITs and Captive RICs but could require combined reporting for multiple TRSs)
- Partnership nexus creates corporate partner nexus – does it?

New York State and City Tax Reform

- The legislation adopts 'effectively connected' income as the starting point for the corporate tax base calculation for non-US corporations (subject to adjustments).

- For foreign corporations, the legislation disallows exclusions, deductions or credits for (1) income from dividends or interest in stock, securities, or indebtedness but only if such income is treated as effectively connected with the conduct of a US trade or business (IRC § 864); (2) any income exempt from federal taxable income under any treaty, but only if such income is treated as effectively connected in absence of such exemption, provided that the treaty does not prohibit the state’s taxation of such income; and (3) any income that would be treated as effectively connected if such income were not otherwise excluded from gross income under IRC § 103.

New York State and City Tax Reform

Under the legislation, a combined report must be filed by any taxpayer:
1. that owns or controls, directly or indirectly, more than 50% of the capital stock of one or more other corporations or

2. more than 50% of the capital stock of which is owned or controlled either directly or indirectly by one or more other corporations or

3. more than 50% of the capital stock of which, and the capital stock of one or more other corporations, is owned or controlled, directly or indirectly, by the same interests *and*

4. that is engaged in a unitary business with those corporations.

Combined returns include:
1. a captive REIT or a captive RIC that is not required to be included in a combined insurance tax report under Article 33.

2. an alien corporation that satisfies the state ownership and unitary thresholds and that is treated as a domestic corporation under IRC Sec. 7701 or has effectively connected income for the taxable year.

Investment Income

- The legislation redefines investment income to mean income, including capital gains in excess of capital losses, from investment capital (as redefined), to the extent included in computing entire net income, less, in the discretion of the commissioner of finance, any interest deductions allowable in computing entire net income that are directly or indirectly attributable to or investment income. Investment income cannot exceed entire net income.

- The legislation further provides that if investment income, determined without regard to subtracted interest deductions, comprises more than 8% of the taxpayer's entire net income, investment income determined without regard to these deductions cannot exceed 8% of the taxpayer's entire net income. If the amount of interest deductions subtracted exceeds investment income, the excess of such amount over investment income is added back to entire net income.

- In lieu of subtracting from investment income the amount of those interest deductions, a taxpayer may elect to reduce its total investment income by 40%. Investment income does not include any amount treated as dividends under IRC § 78.

Pennsylvania – Capital Stock/Foreign Franchise Tax Phase-Out

- Fully phased-out for tax years beginning after December 31, 2015
- REITs often structured property-holding entities as disregarded partnerships rather than SMLLCs to minimize this tax
- Consider structuring alternatives following phase-out

Missouri – Franchise Tax Phase-Out

- Fully phased-out for tax years 2016 and thereafter

Pennsylvania – Local Gross Receipts Tax Litigation

- *Fish v. Township of Lower Merion*
- PA Supreme Court overturned Commonwealth Court decision on 12/21/15
- Gross receipts from rentals allowed to be subject to local business privilege tax under the Local Tax Enabling Act

Massachusetts – Voluntary Disclosure Program for the Settlement of Uncertain Tax Issues

- Eligibility: "uncertain tax liability" of $100,000 or more
- Anonymous contact with DOR permitted; DOR will notify within 30 days if eligible; taxpayer then has 45 days to accept by filing application and disclosing identity
- April 1, 2016 – May 31, 2016

California – Chief Counsel Ruling 2015-02

- Services provided to a business customer that uses the service to provide a service to its customers
- Treated as a "non-marketing service" and sourced to business customer's location
- "Look-through rule" not applied

District of Columbia – Act 21-307

- Latest in a series of "emergency legislation" that temporarily repeals the "blacklist" of foreign jurisdictions treated as tax havens for combined reporting purposes (this emergency legislation expires May 17, 2016)

Federal Partnership Audit Rules – Overview

- Federal partnership audit rules effective for tax years beginning after December 31, 2017 [Bipartisan Budget Act of 2015]
- Procedural rules for partnership audits and adjustments
- Repeals Tax Equity and Fiscal Responsibility Act (TEFRA)
- Applies to all partnerships, although some partnerships with fewer than 100 partners may be able to opt out
- According to IRS, fewer than half a percent of partnership returns are audited
- Under new rules, partnership will pay the tax, interest and penalties on underpayments with tax calculated by multiplying the net of adjustments times the highest statutory or individual rate
- As an alternative to paying tax, partnerships can issue adjusted K-1's to the partners who then must report the adjustment in the year made
- No amended partnership returns will be filed
- Statute of limitations will be determined based on when the partnership return was filed and considers extensions between the partnership and Treasury
- Partnerships are represented by a "partnership representative" — does not need to be a partner

Federal Partnership Audit Rules – State Considerations

- Generally, state conformity is either rolling or as of a certain date
- Conformity is normally limited to substantive rules and does not extend to administrative provisions
- As a result, state conformity to the new federal partnership audit rules will vary widely
- At its meeting in Salt Lake City on March 2, 2016, the Multistate Tax Commission (MTC) addressed the new federal partnership audit rules as an emerging issue
- Federal adjustments can be small on a per partner basis, especially after allocation or apportionment
- May have a more immediate impact in states with mandatory withholding and composite returns
- If states do not address conformity, there is a question of whether partners will receive sufficient information to prepare an amended return at the state level
- States may not be able to audit partnerships, unless they are “taxpayers”
- Significant questions of the statutes of limitations – partnership’s vs. partners’

Pennsylvania – Intercompany Expense Addback

- Act 52 of 2013, 72 P.S. § 7401(3)1.(t) provides an addback for certain intercompany intangible (and related interest) expenses
- PA DOR Issued Information Notice Corporation Taxes 2016-1 on February 19, 2016, providing the DOR's positions on:
  - Applicable intangible assets
  - Direct or indirect attribution on expenses and costs
  - Embedded intangibles
  - Interest expenses are presumed "directly related" to an intangible expense if engaged in any intangible transaction with an affiliate
  - Exceptions – principal purpose, arm's-length, foreign treaty and conduit
  - Add-back credit – "subject to tax" credit

Other Developments

- Crowdfunding

- California Proposed Dividend sourcing

- Hawaii: Two Proposals to eliminate DPD

- Louisiana: *Bridges v. Polychim USA, Inc.* No. 2014 CA 0307 (La. Ct. App. 4/24/15)

California Proposition 13

- Constitutional Amendment
- Prop 13 reform
- Full vs Partial attribution method

Other Indirect Tax Issues

A. New York Transfer Tax Litigation

(1) *In re GKK 2 Herald LLC*, New York City Tax Appeals Tribunal, No. TAT(H) 13-25(RP)
(2) *In the Matter of the Petition of Jonis Realty/E. 29th Street, LLC*, New York City Tax Appeals Tribunal, No. TAT(H) 09-9R(RP)

B. Property Tax changes in Ownership in Florida and Michigan

(1) *Florida – Form DR-430*

(2) *Michigan – Form L-4260*

C. Sales and Use Tax Issues

Pennsylvania & Philadelphia Realty Transfer Tax Issues

- Taxes imposed on "acquired real estate companies"
  - Transfer of 90% or more of the capital and profits interests in a real estate company within 3 years
  - Interest in a lower-tier real estate company are considered real estate – prevents indirect transfer of a real estate company without taxation
- Combination of transfers of less than 90% direct ownership in a real estate company, along with indirect transfers of the remaining owner(s) may minimize the tax
  - Philadelphia Law Department recently stated that such indirect transfers may be viewed in conjunction with the direct transfers, resulting in imposition of the tax
  - Pennsylvania DOR position appears to differ
- Tax rates are significant
  - Philadelphia – 3% of computed value
  - Pennsylvania – 1% of computed value, plus county tax outside of Philadelphia (generally an additional 1%)

IV. Audit Activity: What are we seeing?

Concurrent Session: City of the Future

Commercial real estate redefined

How the nexus of technology advancements and consumer behavior will disrupt the industry

Deloitte Center for Financial Services

Foreword

Dear colleagues,

In previous editions of our outlooks, we examined the marketplace to offer guidance on what might be of greatest importance to industry leaders in the coming year. But many of these day-to-day challenges and opportunities don't change that much from one year to the next. With that said, we are seeing our clients become increasingly concerned by the potential disruptions they may be facing not just next year, but over the next several years. Industry leaders are increasingly thinking about longer-term strategic issues and how they can stay ahead of the impacts, and so we felt it was necessary to similarly take a longer-term view in our outlooks.

We are delighted to share with you our views on commercial real estate (CRE) industry trends and priorities over the next few years, based on the perspectives and first-hand experience of many of Deloitte's leading practitioners, supplemented by original research from the Deloitte Center for Financial Services.

Making predictions is an inexact science at best, but we are seeing the emergence of a number of dynamics that have great potential to fundamentally change the CRE business over the next decade. Technology developments—mobility, cloud computing, analytics and the Internet of Things, as examples—will have great influence on how properties are constructed, managed, sold, and leased. Several consumer trends, like urbanization and the sharing economy, are already coming together to shape how people live, work, and play. These trends also have changed the way that office space is used, for example, which will continue to evolve over time. And the convergence of additive manufacturing, electronic commerce, and innovative delivery methods will greatly change the "last mile" problem of getting goods to market, with consequent impacts on both retail and warehouse properties.

This outlook is organized to provide the reader with an overview of a few disruptive trends that we find are generating the most energy in client discussions at the moment. We have traced the development of each trend, with some pertinent examples that show how the industry is already, or will be impacted over the next decade. A series of bold predictions, in the form of a "CRE forecast," are offered that are based on our experience and analysis, and each section wraps up with actionable takeaways and strategies executives can consider to seize opportunities through these potentially disruptive clouds. We hope you find this report insightful and informative as you consider your company's strategic priorities for the coming years. Please share your feedback or questions with us. We would value the opportunity to discuss the report directly with you and your team.

A nexus of technology advancements and consumer behavior changes

Disruption is not a new phenomenon, yet it is a hot topic of discussion in every boardroom today. Many of these discussions center around the potential impact of technology on their business, and while this trend is also not new, nearly every traditional business is feeling the heat more than ever.

The convergence of one or more technologies, such as advanced cloud computing, mobile, social media, and analytics, is leading to fast-paced, big-bang disruptions in many industries. For example, this convergence is enabling high-quality Internet enabled services such as advanced payment systems, Internet of Things, and geolocation services globally. Furthermore, small and large technology companies are leading the charge by constantly experimenting with product innovation.[1] These companies use hackathons and other approaches to innovate products and services that unintentionally obliterate existing businesses.[2] As a result, traditional value chains are being transformed with transfer of power to the consumer. The technology advancements are increasing global interconnectedness, data ubiquity and transparency, and speed of information access and exchange. As a result, disruption in one part of the ecosystem is rapidly spreading to the broader world.

Other evolving trends are rising urbanization and changing global consumption patterns. Urban population is expected to grow to 66 percent of the global population by 2050, as compared to 54 percent and 30 percent in 2014 and 1950, respectively.[3] This rising urbanization is redefining how and where people live, work, and play. Consumption patterns are tilting toward more customized goods and services. Some consumers are increasingly environmentally conscious, preferring to reuse and share goods rather than own and acquire new ones.

We believe the nexus of technology advancements and consumer behavior changes has the potential to redefine urban planning and fundamentally change the CRE demand-supply dynamics and business model, including real estate usage, site location, development, design, valuations, leasing, and financing. That said, as the disruptive trends evolve, regulators will likely have to develop policies and regulations to strike a balance between protecting public interest and enabling innovation.[4] We believe CRE organizations will have to be increasingly cautious about cybersecurity and the appropriate use of data.

In our inaugural longer-term outlook, we have identified four themes that we believe will result in significant disruption for the CRE industry over the next decade:

- Collaborative economy
- Disintermediation of brokerage and leasing
- War for talent
- The last mile

While there is no certainty about the extent of disruption in each of these trends, we firmly believe that CRE companies will have to be agile and flexible in embracing technological innovations to keep pace with their new competitors and maintain their edge. Mark Fields, president and CEO, Ford Motor Company, said "For me, it was exciting to have the opportunity to join a company that simultaneously built one of the world's most complex industrial products and the most interesting consumer products. Fast-forward 26 years, we now make one of the world's ultimate technology products as well."[5] This is one example demonstrating how traditional automotive companies are tackling both current technology-driven innovations, like electric vehicles, as well as emerging disruptions—like driverless cars. Could the CRE industry see similar innovation and disruption in their business?

Collaborative economy

Reshaping CRE demand and use

The collaborative, or sharing economy is a digitized format of the age-old bartering system. Essentially, consumers serve each other directly rather than being served by companies, and pay for the use or access of goods and services rather than own them. Based on the premise of "on demand," technology advancements, consumption and lifestyle patterns, along with societal factors are driving the rapid growth of the collaborative economy. Companies such as Uber and Lyft are leveraging technology to offer on-demand taxi services, while Zipcar provides on-demand car rentals. Combined, these services have reduced the need for car ownership. This trend can be equally applied to CRE, as collaborative space usage is gaining prominence in places where one lives, works, and shops.

Airbnb is an online marketplace for renting accommodations. With over 1.5 million global listings across more than 190 countries and in over 34,000 cities, the company is catering to more than 40 million guests and has revolutionized the concept of renting a wide variety of accommodations for business and leisure travelers.[6] Many consumers believe that it's more convenient to use such a service rather than reserve hotel rooms, and at the same time enjoy the unique customized lodging experience they are able to create for themselves.

In the office sub-sector, WeWork leases large office spaces and sub-leases them on demand. In another variant, companies like LiquidSpace,[7] Regus,[8] and Desks Near Me[9] are online marketplaces for a wide variety of short-term rentals of office space, ranging from day offices, hourly use of office space or meeting rooms, to virtual offices and other uses. In the retail space, online marketplaces such as Storefront offer a platform to brands, designers, and artists to find physical retail space for short duration.[10]

Going forward, we expect driverless cars to take car sharing to the next level. Likewise, real estate space sharing will expand to other property types: For example, WeWork is expanding the sharing concept to residences with WeLive. One of their properties in Crystal City in Arlington, Virginia, will include two floors of cosharing office, apartment, retail, and other shareable spaces.[11]

The success of a collaborative economy could be stymied by regulatory intervention, as many new services are perceived either to affect public interest or to potentially violate existing regulations.[12] Although state and federal governments have yet to develop policies to respond to the growth in the collaborative economy, companies such as Uber, Airbnb, and others are coming under significant regulatory scrutiny in various jurisdictions. For example, in the October 2014 report, "Airbnb in the City," the New York State Attorney General estimated that as many as 72 percent of the units rented through Airbnb were in violation of state zoning regulations or other laws.[13]

How will the collaborative economy impact CRE?

The growth in the collaborative economy will likely create opportunities for incumbents to optimize rates on short-term space, creating more value while allowing tenants to obtain space that more closely meets their demand-based needs.

However, it can also impact the demand for existing real estate. For example, studies suggest that revenues of lower-end hotels are impacted by nearly 8-10 percent in areas with high Airbnb listings.[14] Separately, certain property types such as parking lots may not be required at their existing locations, as driverless cars become operational. (For more details, read our blog, "Commercial real estate sector: Get set to be disrupted by driverless cars.")

Incumbents will find it challenging to manage the use of existing real estate under current leasing and tenant approaches, because they may not have the flexibility to accommodate tenants' varying demand for, and use of space. Companies like LiquidSpace offer large open office spaces that can be adapted to each tenant's unique need by allowing the latter to scale their space requirements up or down based on short- or intermediate-term demand, rather than locking themselves into longer-term leases for more space than they need most of the time (or too little space during periods of rapid growth or project-related demand).

Corporations may reassess the need for long-term leasing of large office spaces as on-demand space availability fits in perfectly with the growing preference for flexi-work of many of their employees. There could potentially be an evolution of multi-tier leases, wherein a cluster of tenants such as WeWork lease large office spaces and subsequently sublease them. This would spur a broader subleasing phenomenon.

Beyond those possibilities, traditional CRE companies will face increased competition from individual real estate owners who are using online marketplaces like Airbnb to rent their physical real estate space.

Our CRE forecast

The growth of the collaborative economy will have far reaching implications for traditional CRE players:

Seizing opportunities through the clouds

Clearly, many existing hotel, office, retail, and health care spaces will likely lose utility as new players in the sharing economy redefine space usage. CRE owners need to rethink their approach to designing, developing, and redeveloping both new and existing spaces to accommodate the need for dynamically configurable spaces by the end tenant. Along with fluid spaces, companies should consider new ways to enhance tenant experience and optimize the value of space to tenants.

Traditional CRE owners may need to change business processes to meet the evolving demand, a daunting challenge to navigate. They can, for example, consider partnering with the coworking startups, as the latter have innovative value propositions and insights. Vornado Realty Trust, for one, is redeveloping existing spaces to make them leasable to WeWork.[15] In another example, W Hotels has partnered with Desks Near Me to provide guests access to premium workspaces.[16] Such collaboration will allow incumbents to use the unused and underutilized spaces more efficiently and maximize the value of their real estate assets.

Many CRE owners may have to adapt to a hybrid approach, as tenants are likely to prefer a mix of long-term lease agreements for core space needs and short-term flexible leases to manage peaks and valleys of workforce and project-related needs. As a result, incumbents will have to reinvent their leasing approach and lease administration processes as their traditional approaches become increasingly irrelevant. They will also have to adapt to a dynamic revenue model because the short-term leasing phenomenon will provide opportunities to drive better demand-based pricing on rental rates, but reduce predictability in their revenue streams.

Disintermediation of brokerage and leasing

Brokerage companies will transform into technology firms

Technological advancements are increasingly automating brokerage and leasing tasks and activities, bringing down barriers between potential tenants and real estate owners. Developments in cloud computing combined with mobile and social media are resulting in cost-effective and real-time availability of property information and are enabling many leasing activities online. This has reduced entry barriers for niche and smaller companies. For example, property listing websites provide several services ranging from basic aggregation of leasable space to offering an online marketplace for CRE owners and prospective tenants. Companies like Hubble[17] and 42Floors[18] provide office space listings in the United Kingdom and USA, respectively. Some also complete lease deals—startups such as Rofo are online marketplaces for property listings and potential tenants that also enable lease deals without broker intervention.[19] Additional relevant information, such as CRE lease comparables (comps), is increasingly accessible, which was available only privately in the past. Companies such as CompStak[20] and DealX[21] use technology to crowdsource lease comps and offer it for public consumption, including information such as tenant name, rent, lease duration, and landlord concessions. In other examples, companies such as Real Massive and VTS have even broader platforms, offering property listings as well as market and other related information to owners, tenants, and brokers. Such online marketplaces are empowering tenants to make more informed decisions without broker intervention.

Indeed, technology enhancements can further disrupt the traditional brokerage model that already obviates the need for human touch by revolutionizing data ubiquity and transparency, and by providing even more information to tenants.

For example, geospatial technologies aid and automate several activities with respect to site analysis, sales, and marketing. They also provide additional information that can allow more informed location-related decision-making for both CRE owners and tenants. In contrast to physical maps, online demography maps and reports for a particular area allow CRE owners to understand the purchasing behavior and socioeconomic status of the end consumers of their existing and potential tenants.[22] These technologies also allow tenants to make efficient and customized analyses that could combine details about a specific property, with market and competitor data. Companies such as eLocations, a global online marketplace, provide detailed location-based information to retail property owners, prospective tenants, and investors on an absolute and comparative basis.[23] The website allows tenants to choose their desired area and match it to a broker listing instantaneously.

Technology enhancements can further disrupt the traditional brokerage model that already obviates the need for human touch by revolutionizing data ubiquity and transparency, and by providing even more information to tenants.

Artificial intelligence and cognitive technologies will allow automation of many tasks that before only humans could do.[24] BrokerSavant's Property Index uses deep learning to scan property flyers, analyze the data, and provide the most relevant property information to the market.[25] DigitalGenius uses its proprietary natural language processing framework to offer scalable and automated human-like conversations, which facilitate communication with online leads and minimize the need for an agent.[26] Online property sites are also using virtual reality technology to offer property tours anytime, anywhere, including showing virtual space design possibilities to meet a prospective tenant's specific needs and tastes. For example, using a remote-control robot called Robot View, Brazilian real estate website VivaReal offers virtual access to model apartments.[27]

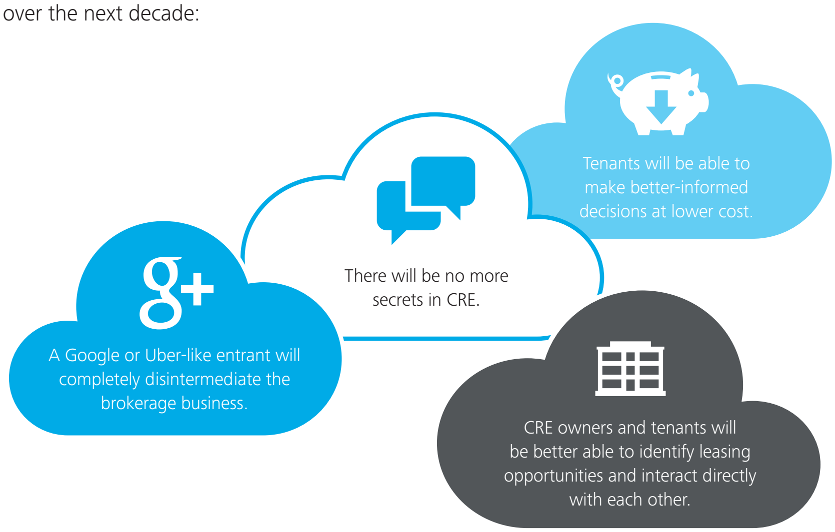
How will disintermediation in brokerage and leasing impact CRE?

The onslaught of technology in the brokerage and leasing business will have a two-fold impact on traditional brokers. On one hand, it enables usage of unproductive CRE by meeting demand and supply gaps in real-time. On the other hand, the rapid automation is making the traditional model for selling and aggregating CRE information inefficient and irrelevant. Armed with technology, new entrants are using innovative client acquisition and servicing strategies, which minimize the need for a broker to complete a CRE lease transaction.

Incumbents will also lose their edge on proprietary data as new entrants aggressively promote data ubiquity and transparency that offers more decision-making ammunition to clients. These factors have the potential to squeeze topline growth and margins from the traditional brokerage business. That said, the technology advancements create an opportunity for incumbents to extract inefficiencies from the current model. We may see a spike in global consolidation as traditional players acquire companies to achieve additional capabilities and scale, or as smaller firms find it unviable to remain in business. (For more on startups and their impact on CRE, read our blog, "Commercial real estate startups: Catalysts for disruption?")

Our CRE forecast

There is every possibility that the current brokerage model will undergo a metamorphosis over the next decade:



Seizing opportunities through the clouds

We believe traditional brokers should consider diversifying their core business focus, from largely brokerage to consultative opportunities in space need and location advisory, as well as property and facility management. Similar to consulting firms, they should redirect their service delivery model toward central client relationship management, rather than regional. Further, incumbents use technology to offer innovative services to clients. To enable this, they should capitalize on their prior experience and client relationships. For instance, companies can combine the rich bank of tenant data with geospatial and cognitive technologies to generate superior insights on future choices.

Alternately, incumbents can consider investing in or collaborating with startups, as this would allow them to combine their client relations with the tools and technologies of the startups. As an example, JLL's HiRise venture is an online marketplace for renting office space, covering all aspects of leasing, including documentation.[28] This trend will be particularly beneficial for smaller companies that not only may lack the capital and infrastructure to enhance their capabilities and scale their operations to accommodate changing tenant expectations, but would also be likely to lose business faster than the larger brokerage firms.

War for talent

Revolutionize demand for office and mixed-use properties

Multiple forces in the employment marketplace are expected to result in a significant war for talent over the next 10 years. Slower US population growth combined with a significant number of soon-retiring baby boomers will potentially slow labor force participation.[29] Separately, employment patterns are likely to change, as health care, community services, and science, technology, engineering, and math (STEM) jobs are likely to be the fastest-growing occupational clusters.[30] Furthermore, cognitive technology-driven automation will eliminate or redesign some existing jobs, and create new kinds of roles.[31] These changes will result in a higher demand for knowledge workers with a minimum of postsecondary education and specialized skills. One estimate suggests that 60 percent of millennials will need to have some form of postsecondary education to fuel economic growth, which means 62 million new degree holders by 2025.[32] Unfortunately, at the current rate, only 39 million Americans will obtain that higher education by 2025, leaving a gap of 23 million.[33]

Can immigration fill the talent gap? We believe the current US immigration laws do not allow for the necessary and continuous flow of international talent with STEM skills to fill the widening gap. The current laws either serve other goals such as enhancing diversity,[34] or there are huge backlogs in immigration categories, where the wait for entry can stretch over decades. There are backlogs in certain categories in which annual caps are reached quickly, and regular surpluses in still other categories are also being observed.[35] Further, the time delays involved in the temporary categories frustrate employers who need to match workers with jobs within tight time constraints.[36] The United States will have to make significant changes to its immigration policies if it hopes to use this population to help bridge the talent gap and remain competitive.

Another transformative trend is the influx of a large proportion of millennials to the workforce, a group that generally demands a different employment experience. Having grown up in a technology-enabled world, Millennials, who will comprise 75 percent of the workforce by 2030, prefer an open and flexible work culture that allows them to work anywhere, anytime.[37] They expect employers to be less hierarchical and to encourage emotional and physical well-being. Globalization, the collaborative economy, and technology are also promoting the virtual work environment, which doesn't necessarily require people to come to their workplaces. Many millennials favor part-time, contract, or freelance employment.[38] An estimated 40 percent of the workforce will be freelancers, temps, independent contractors, and solopreneurs by 2020.[39]

How will the war for talent impact CRE? The talent gap and evolution in the talent marketplace will have a significant impact on where CRE is located and the way it is designed and used. There will be greater demand for integrated urban-lifestyle centers that cater to the live, work, play mantra.

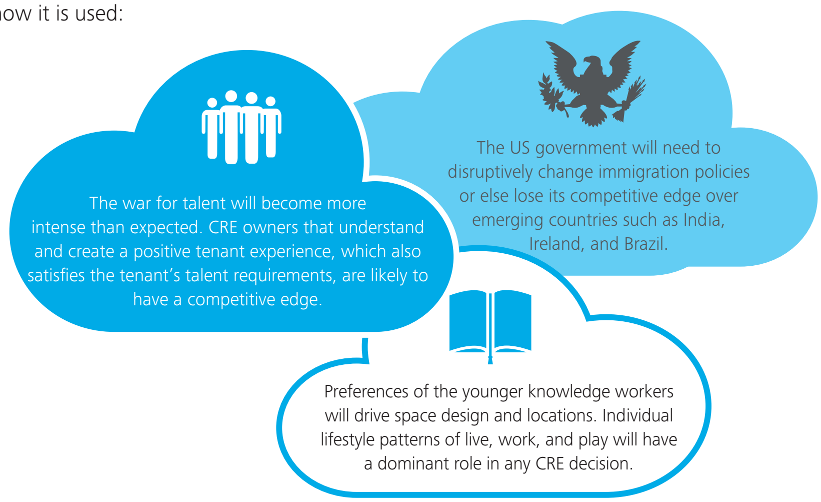
Because of this trend, mixed-use spaces that include office, residence, and recreation options will be favored over stand-alone properties. For example, Chicago's West Loop, which was once packed with large industrial buildings and warehouses, is undergoing this kind of transformation. Offices for large technology firms, retail spaces, and luxury condos are replacing many old industrial buildings.[40] Corporations too would prefer to have workplaces closer to where knowledge workers reside to reduce the latter's commute time.

In essence, office-space demand will tilt in favor of open, flexible, cosharing spaces, a trend made evident by companies such as Google, Facebook, and Hewlett Packard.[41] And the per-employee office space requirement is likely to shrink. According to a Deloitte Canada report, the average office space per employee is projected to decline from 250 square feet in 2000, to 150 square feet in 2017, and companies that have nimble workplaces would see a further decline to 90–100 square feet.[42] Offices could morph into an office-as-a-service model, acting as physical meeting points rather than daily workplaces. Further, the increase in contract workers, or talent preference for flexible work locations, will result in knowledge workers preferring to work from home, with many tenants demanding small offices in their apartments.

Millennials, who will comprise 75 percent of the workforce by 2030, prefer an open and flexible work culture that allows them to work anywhere, anytime.

Our CRE forecast

We believe the war for talent will have a significant impact on where CRE is developed and how it is used:



Seizing opportunities through the clouds

CRE companies should consider a broader set of parameters for any location and design decisions on future development and redevelopment. As the war for talent intensifies, talent dynamics should be an integral factor in location-based decisions, especially for office property owners. Companies should estimate the future workforce using existing employment data, and evaluate areas where knowledge workers are likely to live, work, and play, which in turn would be closer to the regions where they study and grow. Such neighborhoods are likely to see a significant rise in rents. Further, CRE companies should evaluate areas where STEM talent growth will outpace the impact of retiring workers, as these regions will likely see an increase in business investments.[43] A Deloitte study identifies Texas, Florida, Nevada, Arizona, and Utah as the five states that are likely to see such growth by 2030.[44]

CRE companies must also strategize their redevelopment of existing property, tailoring it to the changing talent dynamics. One option could be to refurbish existing buildings. In such cases, property design will play a critical role in meeting the changing needs of the workforce. Companies may need to revamp their design and development teams, to build expertise for mixed-use and flexible properties. Alternately, owners of different property types could consider collaborating with one another to share both their expertise and the nuances of each property type.

Another option could be to dispose of a few existing properties, and acquire and develop new ones. For example, Kilroy Realty has sold nonstrategic office and industrial properties totaling $850 million over the last several years and reinvested the proceeds in both new developments and existing assets that will suit the needs of millennials.[45]

The last mile

Blurring lines between retail and industrial properties

Retailers continue to evaluate and implement innovative solutions to enhance consumer experience by adapting to their changing preferences. Currently, a large part of experiential retailing is being driven by increased competition from the exponential growth (CAGR of approximately 15.5 percent for 2004–2014)[46] in online retailing, a trend that continues to lower entry barriers and fragment the industry. Online retailers are also fulfilling on-demand as well as tailored orders for individual consumers. Another evolving competitive factor likely to challenge retailers is the growth in 3D printing. 3D printing will not only enable small-sized, customized, and on-demand production, but its lower costs may even result in reshoring manufacturing activities. (To learn more about the impact of 3D printing on manufacturing, read our reports on dupress.com.) This essentially means that manufacturers will have the option to move to a build-to-order model rather than build-to-stock, which will allow them to connect, customize, and sell directly to consumers.

Retailers and some retail real estate owners are using different and flexible delivery options such as same-day or next-day delivery to create differentiation at the last mile. For example, Deliv, Amazon Prime, and Google Express are offering same-day delivery.[47] Sidecar Deliveries and UberRUSH are leveraging their driver networks for same-day delivery and instant pick-up and delivery within individual city limits, respectively.[48]

A large part of experiential retailing is being driven by increased competition from the exponential growth in online retailing, a trend that continues to lower entry barriers and fragment the industry.

Indeed, same-day delivery competition is on the rise, as it is an important consideration in consumer purchase decisions. A recent survey suggests that one-in-four shoppers are open to abandoning an online shopping cart in the absence of same-day delivery.[49] It's no surprise that retailers are constantly experimenting with new concepts to improve last-mile delivery. For example, Tower 24, a Germany-based company, and Amazon Locker are offering automated electronic lockers, which can be accessed with a security code to retrieve packages.[50]

We believe the use of drones for last-mile connectivity can result in ground-breaking changes in delivery options. Amazon.com, Inc. with its "Amazon PrimeAir"[51] and Google with its "Wing"[52] are working on enabling package deliveries through the aerial route by using unmanned drones. However, according to industry leaders, the Federal Aviation Administration (FAA) has been slow in developing rules and regulations for commercial use of drones, although it recently allowed Amazon Inc. to test drone delivery.[53] That said, if successful, drones would take the last-mile competition to the next level from same-day to even less-than-an-hour delivery.

How will the last mile impact CRE?

We believe disruption in manufacturing and retail and consequently last mile connectivity will significantly impact retail and industrial properties.

Brick and mortar stores will still remain integral to creating customer experience, but primarily for products that require 'touch and feel' or have significant service components. The store-in-store concept where one retailer provides dedicated space to another retailer in its own store, will also continue to find favor, although there may be less demand for stand-alone stores. As a result, there will be less demand for large stores and weak overall demand for traditional stores. Further out, analysts expect 50 percent of American malls to close by 2030.[54] We believe retail properties will instead be utilized in different ways. They could double up as fulfilment centers, especially for commoditized products that do not necessarily require touch and feel for purchase decisions. Many neighborhood mom-and-pop stores could end up being package pick-up and drop-off points.

On-demand retailing and manufacturing will reduce inventory holding, and potentially the demand for large warehouse spaces. In addition, traditional CRE owners will be challenged by new and innovative on-demand storage space providers such as Lockitron, Boxbee, Roost, and Swapbox.[55] Existing distribution centers developed on a regional basis to serve on the logistical chain between global manufacturers and large box retailers will increasingly be disrupted by smaller, local distribution and fulfillment centers promising efficient, same-day or next-day delivery to the ultimate consumer. As such, there will be fragmentation of warehouse space, with higher demand for smaller warehouses and distribution or fulfillment centers spread out at frequent intervals within city limits.

The upshot is that physical real estate spaces that support last-mile delivery are being preferred by institutional investors over traditional industrial and retail space, which may not bode well for incumbents from a pricing and valuation perspective.[56]

Our CRE forecast

We believe technological developments and consumer demand for speedy delivery will significantly impact last-mile connectivity as well as the demand for both industrial and retail real estate:

Seizing opportunities through the clouds

Retail property owners should continue to try different store formats, tailored spaces, and innovative techniques to enhance end-consumer experience. This would require incumbents to embrace sophisticated technologies. For example, a few large retail property owners have made strategic investments in Deliv to enable same-day delivery for their tenants.[57] Retail property owners can also consider offering tag-reading robots that would use radio frequency identification (RFID) technology to help their tenants optimize in-store inventory.[58] They should continuously evaluate the number, location, and optimal size of stores, based on the need for "touch and feel of products" and consider revamping the nonstrategic stores into fulfillment centers. Ultimately there may be opportunities for retail property owners to become distribution infrastructure providers by using their nonstrategic assets or repurposing vacant space in cities as local distribution hubs for smaller and fragmented retailers.

Distribution and fulfillment centers should be a prominent part of industrial real estate owners' property portfolios. As incumbents plan new development, they will likely benefit from acquiring and developing smaller and flexible spaces within city limits that meet the demands for rapid delivery to end consumers. Alternately, they can partner with the new on-demand storage space providers to offer a mix of long- and short-term leases and extend their tenant-servicing capabilities. Industrial real estate owners will be well served to evaluate both the evolving needs and business strategies of their tenants, as well as the changing requirements of their tenants' end consumers, as these will likely be impacted significantly by technology and new logistical strategies. Accordingly, it will be important for incumbents to evaluate and reposition existing warehouse space, particularly the larger ones, to improve their utility. They can consider multi-tenant solutions to reduce costs and enhance capabilities for manufacturers preferring to sell directly to end consumers. Further, the use of advanced RFID technology, geotagging, and Internet of Things would enable smart, intelligent, and efficient use of space and enhanced services to tenants.

The location of retail stores and distribution centers will be more important than ever. Companies should use geospatial technologies and predictive analytics to identify strategic retail and warehouse locations. They will also need to understand the nuances of managing and operating both industrial and retail properties given the likely overlap in their use.

Disrupt or get disrupted?

The writing is on the wall: CRE usage will undergo a metamorphosis over the next decade

Deeply rooted in the convergence of technology and evolving consumer behavior, the physical and digital worlds are blurring fast. While the collaborative economy will redefine the use of every kind of property, the war for talent will promote demand for mixed-use space. Disintermediation in brokerage and leasing will disrupt and significantly transform the age-old brokerage business. And retailers' and manufacturers' rush to meet ever-increasing consumer demand for speed through last-mile delivery will blur the lines between retail and industrial properties. These disruptive forces have the potential to redefine the current property market segmentation of primary, secondary, and tertiary, and consequently, valuation. Incumbents will have to be smart about their location strategy as property location will be more important than ever. They will have to focus significantly on designing or redesigning flexible physical space that can be customized to tenant and ultimately consumer needs in order to remain relevant.

Incumbents' traditional business models are unlikely to work. They will need to have dynamic strategies and respond with dexterity to the rapid changes in the business landscape. Interestingly, the technology that is disrupting their businesses is the one that will help them meet these new challenges as well. Of course, appropriate cybersecurity measures will be equally critical. Companies will have to re-engineer operations and figure out optimal ways to organize and access talent. As incumbents combat this disruption, intangibles such as tenant relations will be their biggest assets.[59]

We firmly believe that it's a myth that traditional players will remain insulated from these disruptive forces. They will have to make a choice between proactive responses to the evolving business landscape or be disrupted by the new entrants and lose their competitive edge.

This report explores how forward-looking leaders and organizations can thrive in a world of business ecosystems.

A CHANGING WORLD

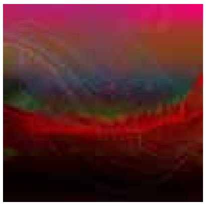
Business ecosystems come of age

Businesses are moving beyond traditional industry silos and coalescing into richly networked ecosystems, creating new opportunities for innovation alongside new challenges for many incumbent enterprises.

Blurring boundaries, uncharted frontiers

Long-standing boundaries and constraints that have traditionally determined the evolution of business are dissolving, allowing new ecosystem possibilities to flourish.

LIBERATING POTENTIALS



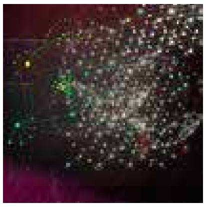
Wicked opportunities

"Wicked problems"—ranging from malaria to dwindling water supplies—are being reframed as "wicked opportunities" and tackled by networks of nongovernmental organizations, social entrepreneurs, governments, and big businesses.

Regulating ecosystems

As ecosystems enable more rapid, cross-cutting innovation, regulators are challenged to create policies and solutions that protect the public's interests and are also dynamic enough to keep pace with innovation.

EVOLVING ENTERPRISE STRATEGIES



Supply chains and value webs

Supply chains are increasingly becoming value webs that span and connect whole ecosystems of suppliers and collaborators; properly activated, they can play a critical role in reshaping business strategy and delivering superior results.

The new calculus of corporate portfolios

The rise of business ecosystems is compelling strategists to value assets according to an additional calculus, often generating different conclusions about what should be owned.

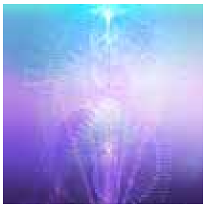
The power of platforms

Properly designed business platforms can help create and capture new economic value and scale the potential for learning across entire ecosystems.

CRITICAL CAPABILITIES

Minimum viable transformation

Leaders are taking lessons from the startup playbook on "minimum viable products" to launch minimum viable transformations—lightweight and readily adaptable versions of potential new business models.



Beyond design thinking

Ecosystems are dynamic and co-evolving communities of diverse actors who create new value through increasingly productive and sophisticated models of both collaboration and competition.

Preface

WELCOME to Deloitte's latest *Business Trends* report.

The purpose of these reports is straightforward: to provide business leaders with fresh and well-informed perspectives on important dynamics that are disrupting "business as usual." While change is nothing new, the speed, scale, and impact of a variety of fundamental shifts—in globalization, technology, and societal expectations—are undeniably transforming the business landscape today. We conduct and share this research as part of our commitment to serve as **guides and "wayfinders"** to our clients as they navigate their new terrain and shape the future.

In periods of disruption, uncertainty and challenge are inevitable. However, these times often also uncover new opportunities. Addressing both risks and potential rewards takes **confidence**, in decisions and actions alike, and in the solid analysis that should precede them. Uncertainty should not be denied or ignored—instead, it should be mastered, and grounded in both a deep understanding of the changes afoot and their potential consequences.

In this report, we focus on a critically important transition that has considerable implications for society, the economy, and businesses everywhere: **the continued rise of "business ecosystems."** Driven particularly by digitization, connectivity, and new modes of collaboration, important core structures of the industrial economy are quickly and dramatically reshaping, as many long-standing boundaries blur and dissolve. The "art of the possible" is expanding—enabling new approaches to serious societal challenges, and new, often platform-based, business models.

In *Business ecosystems come of age* we explore in detail what lies behind these changes, where they might take us, the new options—and threats—they present to many incumbents, and the strategic and operational shifts they enable and demand. We sincerely hope that these perspectives are helpful as you undertake your journey into a fast-changing future.

Blurring boundaries, uncharted frontiers

By Eamonn Kelly

Ecosystems are dynamic and co-evolving communities of diverse actors who create new value through increasingly productive and sophisticated models of both collaboration and competition.

Read more about our view of business ecosystems in the Introduction.

Long-standing boundaries and constraints that have traditionally determined the evolution of business are dissolving, allowing new ecosystem possibilities to flourish.

Overview

THE business environment has never been static, simple, or certain: Profound change, sometimes abrupt, sometimes gradual, has been reshaping the world for centuries. As recently as 1900, European empires straddled the globe, and the British empire alone contained 400 million people—25 percent of the world's population.[1] Only a tiny minority had ever stepped foot on foreign lands, or even travelled more than 50 miles from their place of birth. Well over 80 percent still lived on farms or rural communities.[2] In the United States, already the world's wealthiest country, life expectancy at birth was 47 years; about 7 percent of students completed high school; 1 percent of citizens held investments in public companies or mutual funds;[3] only 19 percent of women worked for pay;[4] just 3 percent of households were lit by electricity, and less than a third had running water.[5] While scientific knowledge and technological capabilities had progressed greatly since the Enlightenment, they remained almost primitive by today's standards.

But history was in motion. Between 1900 and 1905, Kodak would launch the Brownie—the first mass market camera; Marconi would transmit and receive transatlantic radio signals; the first narrative movie would be watched by millions around the United States in the first "nickelodeons"; the Wright brothers would take flight at Kitty Hawk; Hubert Booth would invent the first modern vacuum cleaner; a young Japanese playing card company, Nintendo, would start trading internationally; Henry Ford would incorporate his eponymous automobile firm; John A. Fleming would create the first practical vacuum tubes; Rutherford and Soddy would introduce their general theory of radioactivity; and the 26-year-old Albert Einstein would propose his theory of relativity and postulate the existence of photons. All of these—and many more events in that one brief historic window—were either enablers or manifestations of a rapidly expanding universe of new knowledge, capabilities, and potential.

Disruptive change is hardly a new phenomenon: Preceding generations have enjoyed and endured rapid shifts arguably even more transformative to their lives and work than those we experience today. And yet, it does appear inevitable that change will continue to accelerate. Knowledge begets knowledge; today's technologies fuel and catalyze each other's development; fast-spreading tertiary education opportunities around the globe are creating tens of millions of new actors in multiple fields of expertise; and massively enhanced connectivity combines, melds, and disseminates this increasingly rich mixture to accelerate learning and innovation.

> Few would dispute the central importance of technology, especially digital technology, as the key source of change in recent decades.

The story of change in our time, however, is not only a story of speed. Even more disruptively, long-standing boundaries and constraints that have powerfully determined the evolution of business, the economy, and society are now blurring and even dissolving. As a result, a new era of extraordinary possibility and potential is unfolding. Unprecedented opportunities are inspiring entrepreneurs and innovators. But these are also challenging incumbent leaders and businesses to adapt and act with confidence in order to thrive in the future.

What's behind this trend?

Many factors are together driving the transformation of the business environment. The global economy has changed beyond recognition. Newly powerful nations and organizations are growing, consuming, and helping to set new rules. Sustainability challenges, demographic shifts, and the needs of a new global "middle class" are increasingly important sources of innovation. Social and cultural shifts occur everywhere, empowered by an increasingly influential generation of entrepreneurial and impact-oriented "digital natives." New ways of collaborating and interacting are creating new organizational forms, business models, and approaches to talent engagement. Evolving societal expectations and scrutiny of businesses are reshaping the regulatory environment and challenging the "license to operate" and "license to grow" for multiple industries.

Fueling all of these, however, is rapid technological advancement. Few would dispute the central importance of technology, especially digital technology, as the key source of change in recent decades. Nor would they deny that it will continue to play an absolutely critical role. As writer Stewart Brand has observed, computing is not like previous technologies—it is "autocatalytic," or self-accelerating, as each development allows the next one to come about faster.[6] Seymour Cray, when told that Apple Inc. had bought one of his Cray supercomputers to help design the next Macintosh computer, declared: "I just bought a Mac to help me design the next Cray!"[7] Computers have also catalyzed rapid advances in other fields, including engineering, materials science, nanotechnology, and biotechnology.

Moore's Law—which defines the remarkable exponential growth in computing power and decline in cost—has held for 50 years, despite recurring concerns it would hit technological limitations.[8] It appears likely to endure longer; yet even if the pace should slow, the stage is already set for continuing digital disruption. After all, the process is still relatively new. The Internet only started entering the mainstream economy less than 20 years ago. Broadband access only overtook far slower dial-up modems about 10 years ago. Mobile devices designed for a digital economy—notably smartphones and tablets—arrived about seven years ago, and cloud computing and storage became truly effective shortly afterward. Even more recently we have witnessed the growing reach and power of software "applications," already altering the worlds of individuals and enterprises alike. Today the "Internet of Things" (connecting objects just as the Internet has connected people) is poised for takeoff. And the ability to analyze and interpret massive amounts of new data will grow, as machine intelligence continues to evolve, generating powerful new insights and predictive capabilities.

Digitization of the economy has already had tremendous impact, but we are only beginning to witness the sheer scale and scope of its transformative power.

The trend

Increasingly, businesses operate in complex, dynamic, and adaptive ecosystems. A variety of phenomena—including feedback loops, stocks and flows, scaling and network effects, power laws, and so on—must be understood to properly appreciate and anticipate how systems behave and might evolve. But one major change is already underway. *The fundamental boundaries that have specified the relationships, interactions, and possibilities of most businesses are rapidly blurring and dissolving*. Historically, when boundaries have moved—geographic, scientific, technological, institutional, or cultural—the results have been momentous. When multiple boundaries shift simultaneously—as happened during the Enlightenment and the Industrial Revolution—truly extraordinary breakthroughs and great strides in human progress occur, through the creation of new connections, possibilities, and ideas.

Many long-standing boundaries have been blurring in recent decades. Industries and sectors have been converging, reducing the clear lines of demarcation originally defined and codified almost 80 years ago.[9] Boundaries between and within firms have been weakening. Old distinctions between products and services are breaking down as businesses traditionally specializing in one seek to integrate the other, to create fuller "solutions" and more compelling experiences that serve customers' growing expectations. The historically profound gaps between the capabilities and influence of large and small organizations are steadily declining. For many individuals, the boundary between paid work and passionate pursuit of interests and hobbies is falling.

Even the respective roles and contributions of the private, civic, and public sectors are blurring. Businesses were historically driven by market values, and the civic sector by moral and social values; governments set the rules and provided public goods. Today, they are merging and becoming increasingly interdependent through new partnerships and collaborations—often in pursuit of shared goals in light of another blurring, as externalities become internalized within market-based solutions. The liberalization of trade policies following the demise of the Soviet Union has served both to soften borders between countries, and also greatly diminish the vast dividing line between the "developed" and "emerging" economies. Cross-fertilization and increasing collaboration across scientific and technological domains are dissolving multiple knowledge boundaries.

These are all crucial changes and are already impacting every sector and almost every business today. But three key types of blurring are poised to have growing and ubiquitous impact.

The human-machine boundary

From the advent of the most basic tools, technologies have always replaced and expanded upon human endeavor. The Industrial Revolution brought widespread mechanization of *routine manual* labor—a process continued ever since through multiple manufacturing innovations. The advent of office machines, especially computers, expanded automation into the *cognitive* domain—again, mainly in routine areas, as software algorithms captured well-codified and rule-based procedures and expertise, enabling faster, cheaper, and more reliable business operations. Meanwhile, since General Motors introduced the first industrial robots in the 1960s, machinery has been steadily extending its reach into *nonroutine* manual work.[10] Recently, for example, the US Navy tested a prototype bipedal firefighting robot equipped with multiple sensing and actuation capabilities.[11] General Electric is designing robots that can, for example, climb and maintain wind turbines.[12]

There will be further machine encroachments into manual work and routine cognitive fields, but the new and transformative blurring boundary today is occurring in the *nonroutine cognitive* domain, which has historically largely defied automation. Artificial Intelligence (AI), including machine learning, natural language processing, knowledge representation, machine-to-machine communication, and automated reasoning, is evolving fast.[13] Investment here has exceeded $17 billion since 2009, with private investment growing around 62 percent a year.[14] The extraordinary consequences are already becoming manifest. Apple's Siri voice recognition software applies natural language recognition to interpret and act upon spoken words. Google Translate has over 500 million active users every month, and now features a "conversation mode" that enables real-time bilingual conversations.[15] Self-driving vehicles have been road tested for millions of miles.[16] Symantec's Clearwell software, designed to address the explosion of "e-discovery" efforts in legal matters, uses language analysis to review and sort hundreds of thousands of documents in just hours.[17] IBM's Watson, having won *Jeopardy!*, is now detecting and diagnosing medical conditions and outlining patient-care plans.[18] Financial services firms such as Betterment and Wealthfront provide automated, customized investment advice. The Associated Press (AP) is implementing a system to automate the writing of corporate earnings reports, allowing reporters to concentrate on tasks that require more ingenuity and add more value—"more journalism and less data processing" in the words of the AP's Lou Ferrera.[19]

Looking ahead, the implications of increasingly autonomous non-human intelligence are profound, though still uncertain. Many, including scientist Stephen Hawking and entrepreneur Elon Musk, have voiced serious, perhaps existential, concerns regarding the potential consequences.[20] More immediately, however, we need only look backward at the transformative impacts of automation on manual and routine cognitive work—growth, productivity, and prosperity, alongside challenging social disruptions—to get a sense of the sheer scale of what likely lies just around the corner.

The producer-consumer boundary

Another clearly drawn line quickly losing resolution is the distinction between producers and consumers. In the first half of the twentieth century, powerful producers forged and dominated the new industrial era; consumers were the passive recipients of their output, far from active participants. In recent decades, increased choice enhanced consumers' power in the marketplace, but they were engaged rarely and weakly, through mechanisms like focus groups. Persuasion prevailed over participation. Even today, many businesses declare themselves "customer-centric," but still strategize around "value chains" that relegate consumers to the far end of increasingly complex production arrangements.

Such approaches are becoming increasingly inadequate as the old boundaries between producers and consumers blur in a variety of ways. Consider YouTube, where millions of users create and share 300 hours of content *every minute*.[21] Today, we also see people contributing real value to many communities of shared interests and needs—related to, for example, particular medical conditions or hobbies—and to blogs, citizen journalism, and other knowledge- and opinion-sharing portals. Five of the ten most popular web content sites worldwide are primarily user-generated.[22]

But consumers have also become deeply engaged in the production of physical products. In some cases, ecosystems of "makers" empowered by newly accessible and affordable technologies, are actually leading the evolution of products—for example, drones.[23] More commonly, consumers help design, improve, and prioritize within existing categories, on powerful platforms established by many firms explicitly for "co-creation." UK-based startup MakieLab, for example, allows customers to create one-of-a-kind 3D-printed dolls using its FabLab app. A similar concept underpins the successful fashion company Threadless, which gets all the graphics for its T-shirts as submitted designs and allows visitors to its site to vote for the ones Threadless should produce. Such approaches are being further spread through the increased deployment of prizes and competitions, and the growing success of crowdsourcing businesses such as Applause, the world's largest open community dedicated to professional testers of software.[24]

Now, the physical and digital worlds are converging rapidly in the form of increasingly "smart" objects.

More recently, peer-to-peer networks have proliferated, enabling individuals to "share" their assets, skills, and time. Businesses like Airbnb, Uber, and SoMoLend, for example, are creating radically different and fast-scaling options in hospitality, mobility, and finance, respectively. In some instances these are making previously "idle" assets productive, thereby benefitting society; but as such networks spread to other parts of the economy, they will threaten the existing business models of many incumbents.[25]

Consumers are also prolific producers of arguably the most valuable commercial resource today—massive volumes of data. Consider the data exhaust captured by Google's aggregation and prioritization of our searches. Or Amazon's "collaborative filtering" which captures our preferences to promote suggestions to like-minded people. And, as companies increasingly enable their customers to customize their own products, services, and experiences, they will accumulate ever more prodigious amounts of individual and collective data. As more of our lives move into the digital arena, almost every action and choice will create and transmit dynamic data with latent value—posing both new opportunities, and new dilemmas.

The physical-digital boundary

Digitization began influencing the physical economy 50 years ago, with information technology automating many business processes. The advent of the Internet increased the pace, scope, and scale of that process, with some commentators initially distinguishing between an "old" physical and "new" digital economy: "E-commerce" was different from "commerce," "bricks and mortar" separate from "online."[26] That boundary, however, quickly blurred, with terms such as "clicks and mortar" and "omni-channel" emerging in retail, for example, to describe a much more blended and integrated reality.

Now, the physical and digital worlds are converging rapidly in the form of increasingly "smart" objects. The Internet of Things (IoT) is enabled by many factors, including increasing capabilities and falling costs of sensors, actuating devices, and wireless connectivity, and the massive expansion of the Internet Protocol registration regime, IPv6. By connecting far-flung devices, objects, and infrastructure, the IoT enables not only remote real-time awareness, but autonomous adjustment and control to optimize performance, while creating yet more data. For example, the Nest Learning Thermostat senses your presence or absence at home, tracks your heating preferences over time, and adjusts temperatures accordingly. By aggregating what it learns from your and every

other household, it continuously improves its algorithms based on large-scale patterns.[27]

The IoT is spreading across the economy. Gartner has estimated about 26 billion connected objects (excluding smartphones and tablets) by 2020;[28] Cisco predicts 50 billion;[29] and Morgan Stanley 75 billion.[30] Every sector, from health care to security, will be altered. But this is not the only technology blurring the boundaries of the physical and digital worlds. 3D printing enables production of an expanding range of physical goods from digital files, from OwnFone's simple yet customizable made-to-order mobile phones to NASA-designed tools that can be printed in space.[31] With significant innovation broadening the array of "printable" materials, this will only accelerate. For example, Organovo is today printing scaled-down human livers,[32] which it sells to pharmaceutical companies for drug-testing purposes, while researchers in Australia have figured out how to print stem cells,[33] a step toward lab-grown hearts and brains. In another interesting twist, AutoDesk has recently offered as a free public beta its Memento software, which enables non-experts to turn digital images (scans or photos) of physical objects back into 3D models that can then be physically printed![34]

Looking ahead, there is perhaps an even more profound blurring of the physical and digital worlds, as advances in virtual reality technology enable increasingly lifelike "alternate" digital worlds. While virtual reality is today deployed primarily in the gaming space, Facebook's recent $2 billion acquisition of Oculus VR perhaps hints at a future of fully immersive connections for maintaining social relationships and sharing information, weaving even more digital threads through the physical fabric of our lives.

Implications

Boundaries typically produce constraints, limiting choices and actions and reducing efficiency. As they diminish, wonderful new opportunities flourish. So, too, does upheaval. The old boundaries and constraints were limiting, but also clarifying. They provided definition and focus, framed what was possible, pointed clearly to sources of advantage, and informed the key elements of business strategy and operations for many decades. Therefore, blurring boundaries are creating extraordinary new potential for the economy and broader society, and enabling remarkable innovation and entrepreneurship; and at the same time, they are also creating new challenges, especially for incumbents who have been masters of the previous game. Successful leaders will have to address increasingly urgent issues regarding cybersecurity and the "fair usage" of data; figure out optimal ways to organize and to access talent; and adopt more dynamic approaches to strategy with far greater built-in optionality.

Cybersecurity and data

The blurring boundary between the physical and digital worlds is a fundamental driver of transformation, creating connections, data, and capabilities that are reshaping almost every part of our lives. But it also presents two substantial and unresolved challenges. First, maintaining a secure, global, open Internet; and second, determining the appropriate use of the mushrooming data we are all generating every day in myriad ways.

Of the various threats to the Internet, the greatest is arguably "hacking"—for fun, for illegal profit, for access to confidential information, for malicious disruption and damage, and for various ideological reasons. The number of detected cyber-attacks increased by nearly 50 percent in 2014 (reaching some 120,000 per day), while identity theft (up 70 percent) and cybersecurity (up 61 percent) were the top two security concerns for American citizens.[35] President Obama's urgent call in his 2015 State of the Union address for more collaboration between government and business on this front raises the prospect of greater collective prioritization—and innovation—for years to come.[36]

Similar collaboration and innovation will also be occurring in the domain of data—their capture, ownership, distribution, and monetization. An order of magnitude more data will be produced in the years ahead, analytics will continue to get far smarter and more predictive, and opportunities to create value will proliferate. Yet critical issues regarding privacy, ethical questions posed by the ability of data to be used in discriminatory ways, and tensions over ownership of and value extraction from data produced through the activities of citizens are all rising.[37] There have been substantial breaches of trust in the past—some occurring because data was not adequately protected from theft or hacking and others because the data was inappropriately exploited by those stewarding it—and there will be more in the future. The resulting erosions in public trust are becoming more costly and are rapidly rising on the corporate agenda as businesses increasingly view the data they are co-creating with customers as one of their more valuable assets.

Evolving organization designs and talent models

Few organizations today bear much resemblance to their counterparts of 30 years ago. As the changing business environment has heightened the imperatives of innovation, agility, and resilience, organization design has changed dramatically. Multiple layers of "command and control" hierarchies have been reduced. Many isolated internal siloes have been connected and integrated. Core competences have been prioritized, the rest assigned to sophisticated supply chains or otherwise outsourced or "virtualized." Key business processes have been automated. Digital technology and connectivity have enabled these developments, which have been transformative. But this journey is far from over. As value creation across ecosystems continues to grow in importance, organizations will continue to be further optimized for effective networking, collaboration, and fluidity.[38]

Recently, talent models in particular have evolved. Long-term employment has been eroding while contracting talent only "as needed" becomes more common. An Intuit report estimates that over 60 million Americans will be "contingent" workers by 2020;[39] 87 percent of executives leading global human resource functions have altered or are considering changes to their talent sourcing strategy;[40] and 70 percent of Millennials expect to spend part of their career working independently.[41] An enabling infrastructure of crowdsourcing and competitions has been growing fast. Specific tasks can increasingly be allocated through TaskRabbit or Amazon Mechanical Turk; entire projects can be planned and responsibilities distributed using, for example, Elance and oDesk; invention ideas can be crowdsourced, designed, and commercialized through Quirky; and marketing needs can be addressed by Tongal's platforms of tens of thousands of creatives. Talent models will be changed further by increased automation of some types of knowledge work. Companies such as HCL Technologies and Wipro are already talking about the "hourglass" structures that will replace existing "pyramids" as artificial intelligence extends deeper into software testing and IT support functions.[42]

Dynamic strategy

More than anything, business leaders will have to adopt new approaches to strategy. Successful business strategy will remain anchored on setting clear aspirations, making well-informed and integrated choices regarding where to play and how to win, and developing the essential capabilities to support these ambitions. However as boundaries blur, the universe of options for creating value is increasing substantially; "winning" increasingly requires collaboration as well as competition with others; essential capabilities need not necessarily be owned or directly controlled; capturing value is becoming more challenging, often requiring the creation of new business models; and the need for enhanced agility means our strategies must be increasingly capable of rapid flex and adaptation.

Approaches to strategy are likely to evolve as a consequence, in a variety of ways that are already becoming evident. More emphasis will be placed on designing and renewing business models that take fuller account of the importance of relationships outside the firm.

More than anything, business leaders will have to adopt new approaches to strategy.

New models for profit capture will proliferate including, for example, subscription-based pricing, "freemium" services, micropayments, and other newly possible tools. Shared, cross-firm approaches to strategy formulation, often built on opening up hitherto closely guarded and proprietary data, is also increasing—notably between large retailers and their suppliers. The use of scenarios that paint alternative futures, first pioneered 45 years ago by Royal Dutch Shell, is likely to become increasingly common. And the smart analysis of increasingly abundant data to detect early signals of directional changes and enable dynamic adjustment of strategies will only rise in importance, with big data and analytics already being the top investment priority among CIOs given additional budget.[43]

What's next?

The significant erosion of long-standing boundaries will likely result in two very different outcomes: **New possibilities** will be discovered and deployed that will have transformative impact; and some **new boundaries** will surely also arise to present different challenges. Writer William Gibson has suggested that "The future is already here—it's just not evenly distributed yet." We have already seen powerful cross-cutting ecosystems transform the once-separate sectors of computing, telecommunications, and media. As digitization spreads everywhere, we must expect similar blending and dynamism across the economy. Just as we have seen the growing phenomenon of temporary "pop-up" restaurants and even retail outlets, might the future hold "pop-up firms"? After all, as writer Clay Shirky has noted, it is becoming increasingly possible to "organize without organizations."[44] Just as automation has started to make serious inroads into non-routine cognitive work domains, might AI move next into the world of creativity? Software programs are, after all, already producing distinctive gallery exhibited drawings and composing music.[45]

New boundaries are already visible as well. Geopolitical tensions that were relieved following the collapse of the Soviet Union appear once more to be rising. Fundamentalist belief systems—an obviously divisive force in human affairs—are proving tragically consequential. While the gap between "rich" and "poor" globally is on some measures declining, the divide between the extraordinary wealth of those at the top (the 10 wealthiest individuals own around half a trillion dollars)[46]—and the vast majority of the rest is of growing concern. Our dynamic economy greatly rewards restless entrepreneurship. Might new fault lines evolve between those well equipped for such a world and those more suited to a steadier and less frenetic world of employment? Inevitably, as old boundaries and frictions disappear, new ones will appear.

Yet if we can figure out how to live together on our shared planet, the future prize is extraordinary. The new art of the possible—from far more effective deployment of assets and resources to collaborative integration of expertise and passion—can help smarten and strengthen Adam Smith's "invisible hand" to create a more sustainable, global, and prosperous civilization. Today, that prize is within our reach, but not yet—not quite—within our grasp. That will perhaps be the greatest challenge ahead, shared by the leaders of today, and tomorrow.

My take

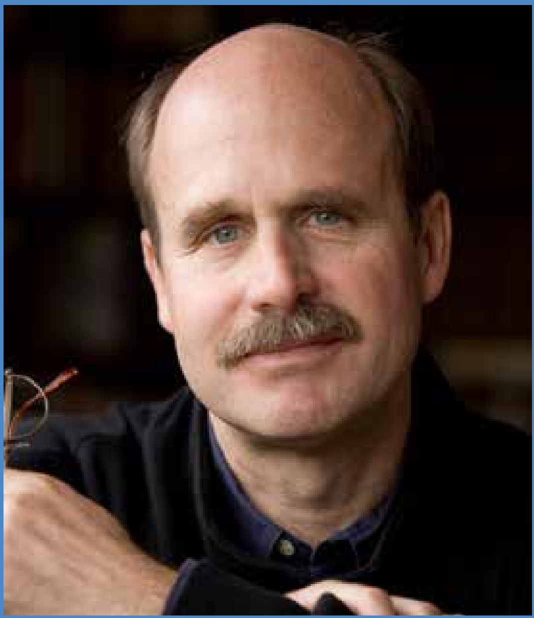
By Paul Saffo

Paul Saffo is a technology forecaster based in Silicon Valley, where he teaches at Stanford University and chairs the Future Studies and Forecasting track at Singularity University. Saffo's essays on the future of technology have been featured in publications such as *Harvard Business Review*, the *New York Times*, *Fortune*, and *Foreign Policy*.

Let's consider the grand sweep of this story. Once upon a time there was just the physical, analog domain. We then started creating and linking digital machines. The resulting bubble of cyberspace was initially small, but it has been growing rapidly since. As it expands, it encroaches on the analog, not in a science fiction kind of way, but in a very real kind of way. Now, even the basic notion of a boundary between digital and the analog is increasingly passé. The world has become more permeable, with much of the most interesting innovation coming from economic "edges" rather than from the historic centers.

"Interfacing" is what once happened through screens, keyboards, and other operating panels that separated humans and machines while still allowing them to connect. Today, we no longer interface with machines—so much as we interact with them. The distinction is subtle, but important because today's more intimate human-machine mingling allows for practically instantaneous and transparent two-way communication enabled by sensors, monitoring, and environmental feedback. Leading firms today are often forced to acknowledge that some of their most important employees are actually machines.

Increasingly, no hard border needs to be crossed in order for insight to exchange "hands" from a person to a thing. Planes, trains, and subways, for example, may still have human operators, but none of them could successfully complete their assigned tasks without guidance, and even fundamental coaching, from machines. The drivers don't need to ask for advice, because the supporting technology is smart enough to simply reach in and offer it. These transactions can be so seamless, and effective, that some organizations are now putting measures in place to guard against human overreliance on technology. For example, next-generation autopilot design now includes machine-generated prompts reminding pilots to remain engaged.



We tend to structure our organizations to reflect our dominant communications systems. In the age of telephony and mainframe computing, organizations were more hierarchical and centralized. As networked communications have evolved, we have increasingly drawn upon organizational designs that are decentralized and even more organic. If I could offer one piece of advice to today's leaders, it would be to read more broadly in ecology and biology. Key ideas like symbiosis and co-evolution are central in that literature and businesses will increasingly need to master them to thrive. Many leaders can also borrow important biological lessons about sharing resources and cross-pollinating ideas in the "intertidal zones" that increasingly link businesses and turn out to be fantastically rich places to innovate.

About the authors

Mike Armstrong | mikearmstrong@deloitte.com

Mike Armstrong is a principal with Deloitte Consulting LLP in the US Strategy service line Monitor Deloitte. Prior to joining the firm, he was a partner in the Monitor Group and chief executive of Monitor's M&A Advisory practice. He has worked on a variety of corporate strategy projects and inorganic growth mandates across a range of industries including heavy industry, specialty chemicals, life sciences, and consumer durables. Armstrong had previous careers as a lawyer and investment banker. As a banker he worked on a variety of M&A mandates including acquisitions, hostile takeovers, private company divestitures, portfolio analysis, and private placements. Client industries ranged from mining to consumer goods to high-tech. He began his career as a corporate attorney with a large national law firm, focusing on M&A, securities law and financial restructurings. He received his BA and law degree (JD) from the University of Toronto and an MBA from INSEAD in Fontainebleau, France.

Jacob Bruun-Jensen | jbruunjensen@deloitte.com

Jacob Bruun-Jensen is a principal with Deloitte Consulting LLP in the US Strategy service line, Monitor Deloitte, with a focus on strategy and innovation. He works with leading companies in the Consumer Product and Retail sectors to make sense of the converging forces of customer desires, technologies, and business ecosystems to rethink business models and innovation. Bruun-Jensen is currently completing his PhD in Business Model Innovation at Rotman School of Management in Toronto, and holds two master's degrees in management from Henley Business School and ESCP Europe Business School.

Bruce Chew | brchew@deloitte.com

Bruce Chew is a director with Deloitte Consulting LLP in the US Strategy service line Monitor Deloitte. For more than 20 years, his work has focused on strategy development, implementation, and the building of organizational capabilities. Chew has worked with the federal government, universities, and companies across a broad range of industries. He holds an MBA from Harvard Business School and a PhD from Harvard University after graduating from the University of Michigan.

Don Derosby | ddrosby@deloitte.com

Don Derosby is a specialist master with Deloitte Consulting LLP in the US strategy service line Monitor Deloitte. Derosby has nearly 20 years of experience in strategy, scenario planning, risk assessment, problem framing, system dynamics, and in the creation of learning laboratories for executives. His work has been equally distributed between the corporate and public sectors with an emphasis on health and wellness, information security, globalization, innovation, and economic development.

William D. Eggers | weggers@deloitte.com

William D. Eggers is responsible for research and thought leadership for Deloitte's Public Sector industry practice and has advised governments around the world. He is an internationally recognized authority on government reform, a columnist, and author of eight books. His books have won numerous awards and his commentary has appeared in dozens of major media outlets including the *New York Times*, *Wall Street Journal*, *Washington Post*, *Guardian*, and the *Chicago Tribune*.

William Engelbrecht | wiengelbrecht@deloitte.com

Will Engelbrecht is a principal with Deloitte Consulting LLP and leads its M&A Strategy and Strategic Diligence practice. He has more than 15 years of experience serving clients, with a focus on creating value through M&A, and assists clients across the deal life cycle from strategy development to post-merger integration. Engelbrecht serves both strategic and private equity clients on the buy and sell side across a variety of deal structures including foreign inbound, MOEs, LBOs, carve-out, and multinational transactions.

John Hagel | jhagel@deloitte.com

John Hagel is co-chairman for Deloitte LLP's Center for the Edge and has nearly 30 years of experience as a management consultant, author, speaker, and entrepreneur. He has served as senior vice president of strategy at Atari, Inc., and is the founder of two Silicon Valley startups. Author of *The Power of Pull, Net Gain, Net Worth, Out of the Box*, and *The Only Sustainable Edge*, Hagel holds a BA from Wesleyan University, a B.Phil from Oxford University, and a JD and MBA from Harvard University.

Larry Keeley | lkeeley@deloitte.com

Larry Keeley has worked for over three decades to develop more effective innovation methods. He is co-founder of innovation firm Doblin, which is now a unit of Deloitte Consulting LLP, where he serves as a director. Keeley has been identified by *BusinessWeek* as one of seven leading global innovation gurus, and separately as one of 27 leading global designers. He teaches innovation at both IIT's Institute of Design, where he is also a board member, and at the Kellogg Graduate School of Management, where he has been recently appointed as a senior fellow.

Eamonn Kelly | eakelly@deloitte.com

Eamonn Kelly is a director with Deloitte Consulting LLP and chief marketing officer (CMO) of the Strategy and Operations practice. He has, for more than two decades, advised senior leadership at leading corporations across multiple industry sectors, key global and national public agencies, and major philanthropic foundations. Prior to joining Deloitte, Kelly held a wide range of leadership positions. He was a Monitor Group partner and, as CMO, a member of its global executive team responsible for marketing, thought leadership, network strategy, and client experience. He also served as CEO of Global Business Network (GBN), the pioneering scenario planning consultancy and futures think tank, where he led GBN's thought leadership about the future, writing two books and numerous articles and delivering insights and new methodologies for mastering change and uncertainty.

Kelly Marchese | kmarchese@deloitte.com

Kelly Marchese is a principal with Deloitte Consulting LLP and leader of the Supply Chain Strategy practice. She has over 20 years of experience leading projects in complex manufacturing industry sectors. Marchese also leads the Global Supply Chain Risk service offering. She is a master black belt in Lean/Six Sigma and is a thought leader in supply chain innovation and engineering effectiveness.

Bill Miracky | wmiracky@deloitte.com

Bill Miracky is a director with Deloitte Consulting LLP in the US strategy service line Monitor Deloitte. He advises senior government officials and corporate executives on a range of strategic and operational issues associated with institutional performance, competitiveness, economic development, and security. His client engagements have addressed a number of management issues, including corporate portfolio strategy, business unit strategy, cost management, and organization strategy and transformation. Prior to joining Deloitte, Bill was a partner at Monitor Group where he managed the firm's National Economic Development and Security practice and co-founded its High-Performance Bureaucracy practice. He began his career in government at the Federal Reserve Board in Washington, D.C.

Anna Muoio | amuoio@deloitte.com

Anna is a specialist leader with Monitor Institute, part of Deloitte Consulting LLP's Social Impact service line. Anna has worked at the intersection of business, innovation, and social change for the past 15 years. She believes deeply in the power of cross-sector collaborations to move the needle on tough social problems. She focuses her practice on how to drive large-scale social change through galvanizing networks around a shared agenda. She has led Aligned Action efforts for organizations such as New Profit, Skoll Foundation, and Venture Philanthropy Partners—designing network strategies and launching large-scale coalitions that work to drive new solutions to old problems.

Acknowledgements

Many people collaborated in the creation of this report. The authors of each chapter, and the truly remarkable "My take" contributors, have already been named.

Many other Deloitte colleagues were generous with their time, energy, and insight—including **Andrew Blau**, **Kyle Freebairn**, **Andrew Harris**, **Steve Jennings**, **Duleesha Kulasooriya**, **Tamara Samoylova**, and **Jeffery Weirens**. From the Federal Strategy & Operations practice—**Jitinder Kohli**, **Jessica Kosmowski**, **John Manahan**, and **Edward Van Buren**. From the Social Impact practice—**Katherine Fulton**, **Amy Silverstein**, **Jerry O'Dwyer**, **Will Sarni**, **Sally Stansfield**, **Tony Siesfeld**, **John Mennel**, and **Kurt Dassel**. And from the Supply Chain and Manufacturing Operations practice—**Rafa Calderon**, **Joe Fitzgerald**, **Ryan Flynn**, **Doug Gish**, **Jim Harms**, **Matthew Humphreys**, **Tom Phillips**, **Stavros Stefanis**, and **Brian Umbenhauer**.

Externally, **Steve Weber**, **Michael Schrage**, **Peter Schwartz**, **James Moore,** and **James Surowiecki** all helped immensely, each in his own inimitable—and greatly appreciated—way. **Nicholas Davis**, **Brent Lonteen**, **Marjorie Paloma**, **Matt Rodrigue**, **Emmett Thomas**, **Michelle Toth,** and **Lai-Ki Wong** also provided significant and important assistance.

Deloitte's Strategy and Operations marketing and public relations team—**Henna Verburg**, **Ryan Nangle**, and **Jessica Heine**—provided, as always, indispensable support and guidance throughout. Their dedication, professionalism, and enthusiasm are truly inspiring. **Matt Lennert**, **Junko Kaji**, and **Sonya Vasilieff** once again demonstrated the outstanding qualities of creativity and editorial experience that have helped establish Deloitte University Press as a powerful communication platform in recent years.

And in every ambitious endeavor there is invariably a core team that, day in and day out, carries the weight, holds the dream, and goes above and beyond the call of duty. Here, that team was Deloitte's Strategy and Operations Eminence Center. **Don Derosby**, **Debbie Chou**, **Jonathan Star**, **Julia Kirby**, **Christian Keil**, **Yiting Zhang,** and **Lisa Li**—thank you! You were, individually and collectively, magnificent and unwavering over many months of research, writing, editing, interviewing, designing, combining, reframing, and iterating . . . and iterating . . . and iterating! This report is a testament to your passion and your talent. I hope it helps serve as a springboard for your ongoing success, as you each make your own important impact on the world.

About Deloitte University Press
Deloitte University Press publishes original articles, reports and periodicals that provide insights for businesses, the public sector and NGOs. Our goal is to draw upon research and experience from throughout our professional services organization, and that of coauthors in academia and business, to advance the conversation on a broad spectrum of topics of interest to executives and government leaders.

Deloitte University Press is an imprint of Deloitte Development LLC.

The future of mobility

How transportation technology and social trends are creating a new business ecosystem

Deloitte University Press

The Future of Mobility is a publication from Deloitte LLP. Deloitte provides industry-leading audit, consulting, tax, and advisory services to many of the world's most admired brands, including 80 percent of the Fortune 500. Our people work across more than 20 industry sectors with one purpose: to deliver measurable, lasting results. Clients count on Deloitte to help them transform uncertainty into possibility and rapid change into lasting progress. Our people know how to anticipate, collaborate, and innovate, and create opportunity from even the unforeseen obstacle.

About the authors

Scott Corwin is a director in Deloitte Consulting LLP's Strategy and Business Transformation practices. He brings over 25 years of experience working closely with corporate leaders to develop and implement strategy-based transformations, specifically around globalization, advanced R&D/ technology innovation, and new business models. Corwin works with clients across a wide range of industries, including automotive, technology, industrial, media, consumer products, retail, health-care, telecommunications, public sector, and not-for-profits. He serves as the leader of Deloitte's Future of Mobility initiative and lead consulting partner for a number of the firm's key accounts, including a global leading automotive OEM.

Joe Vitale is the global automotive industry leader for Deloitte Touche Tomatsu Limited and serves as the global lead client service partner for one of the largest automotive OEMs. He is responsible for delivering Deloitte's multidisciplinary solutions, including consulting, enterprise risk management, tax, and financial advisory services to automotive companies worldwide. Vitale specializes in corporate strategy, mergers and acquisitions, supply chain optimization, and new product development.

Eamonn Kelly is a director with Deloitte Consulting LLP and chief marketing officer of the Strategy and Operations practice. He has, for more than two decades, advised senior leadership at leading corporations across multiple industry sectors, key global and national public agencies, and major philanthropic foundations. Prior to joining Deloitte, he was a Monitor Group partner and also served as CEO of the think tank Global Business Network, where he led thought leadership about the future, writing two books and numerous articles and delivering insights and new methodologies for mastering change and uncertainty.

Elizabeth Cathles is a manager in Deloitte Consulting LLP's Strategy & Operations practice. She has over 10 years of experience in strategy and innovation, specializing in growth strategy, marketing and customer strategy, organizational management, R&D, and product-launch strategy. Her experience includes building and implementing new processes and structure for product development, developing growth and launch strategies for products across multiple geographies, helping to design organizational training systems to challenge global leaders, and implementing innovative approaches to customer experience.

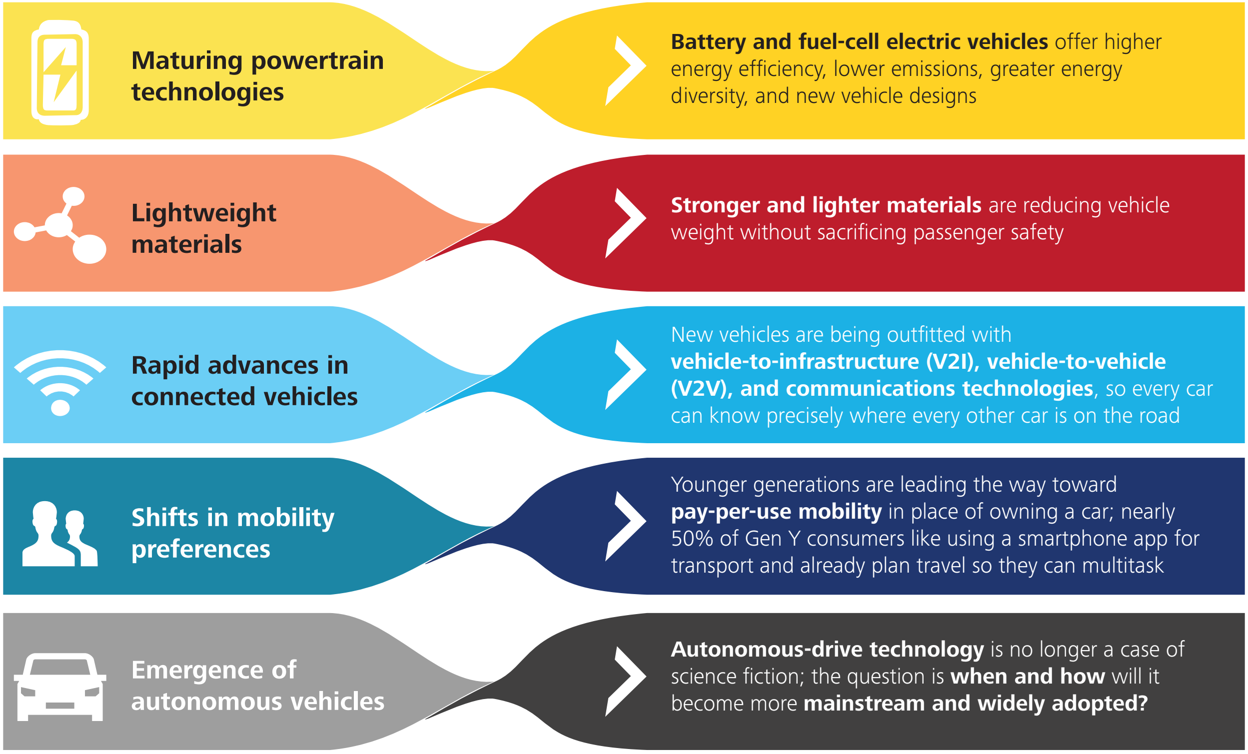
Contents

Introduction

THERE is a critically important dialogue going on across the extended global automotive industry about the future evolution of transportation and mobility. This debate is driven by the convergence of a series of industry-changing forces and mega-trends (see figure 1).

Innovative technologies are changing how companies develop and build vehicles. Electric and fuel-cell powertrains tend to offer greater propulsion for lower energy investment at lower emission levels.[1] New, lightweight materials enable automakers to reduce vehicle weight without sacrificing passenger safety.[2]

Figure 1. Converging forces transforming the future evolution of automotive transportation and mobility



Graphic: Deloitte University Press | DUPress.com

Further breakthroughs are advancing the introduction of autonomous vehicles; increasingly, daily news reports suggest that driverless cars will soon become a commercial reality.[3] We have already seen rapid advances in the "connected car"—innovations that integrate communications technologies and the Internet of Things to provide valuable services to drivers.[4] Vehicles outfitted with electronic control modules and sensors that enable vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communications can proactively suggest re-routings to avoid road hazards and call for assistance in the event of an accident.[5] Soon, cars will routinely gain precise-enough awareness of where they are in relation to other vehicles and potential hazards to take preemptive action to avoid accidents.[6]

Simultaneously, young adults, along with urbanites, are gravitating toward a model of personal mobility consumption based on pay-per-use rather than upfront purchase of a capital asset, which fundamentally challenges today's consumption model centered on personal ownership of cars.[7]

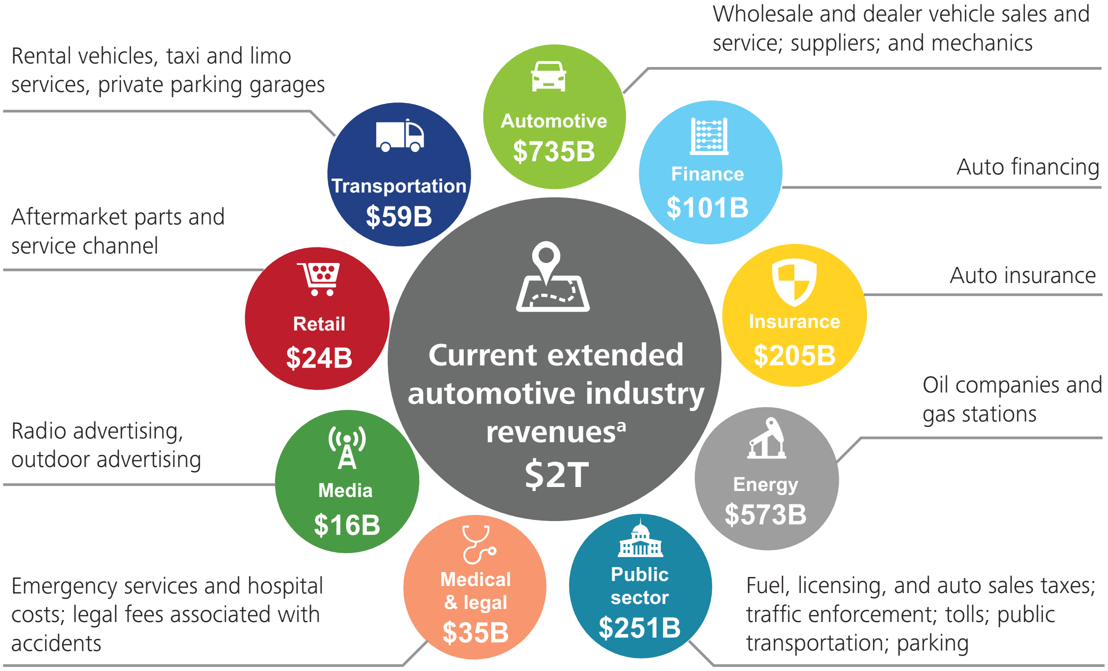
All told, a system that has been well established for a century is on the verge of a major transformation that could result in the emergence of a new ecosystem[8] of personal mobility.

Today's debate centers on whether the extended automotive industry will evolve incrementally toward some future mobility ecosystem or whether change will occur at a more radical pace and in a highly disruptive manner. No one knows the full scope and magnitude of the changes that are to come, what they entail, or how they will evolve, yet these forces have the potential to alter current industry structures, business models, competitive dynamics, value creation, and customer value propositions. We may be on the threshold of change as great as any the industry has ever seen.

The importance of the automotive industry

THERE'S no mystery about why we pay such close attention to the ups and downs of the auto industry—its extended value chain is an essential engine of global economic growth. In the United States, the sector generated $2 trillion of annual revenue in 2014 (see figure 2)—11.5 percent of US GDP[9]—from auto manufacturers, suppliers, dealers, financial services companies, oil companies, fuel retailers, aftermarket services and parts, insurance, public and private parking, public-sector taxes, tolling and traffic enforcement, medical care, and others.

Figure 2. 2014 extended automotive industry revenue



Source: Deloitte analysis based on IBISWorld Industry Reports, IHS, DOT, US Census, EIA, Auto News, TechCrunch. Current revenue represents 2014 figures (or earlier if 2014 data not available) in the United States.
[a]Total revenue is $1.99T.

Graphic: Deloitte University Press | DUPress.com

At Deloitte, we've been engaged in a deep and broadly ranging study of the extended auto industry, the economics of alternative future states, and the potential impact of each on related industries.[10] We have concluded that change will happen systematically—a rising tide, not a tsunami. At no point will the world be presented with a Manichean choice and collectively decide to plunge all-in to a system of driverless, pay-per-use travel—or else to change nothing at all. Rather, the new personal mobility ecosystem will likely emerge unevenly across geographic, demographic, and other dimensions, and evolve in phases over time.

Two divergent visions

THERE are two profoundly different visions of the future of mobility. Fundamental differences center around whether today's system of private ownership of driver-controlled vehicles remains relatively unchanged or whether we eventually migrate to a driverless system of predominantly shared mobility. There is also a critical difference about the pathway forward.

The "insider" view believes that today's system can progress in an orderly, linear fashion, in which the current industry assets and fundamental structure remain essentially intact. The "disrupter" view envisions a tipping-point approach to a very different future, one that offers great promise and potential societal benefits (see figure 3).

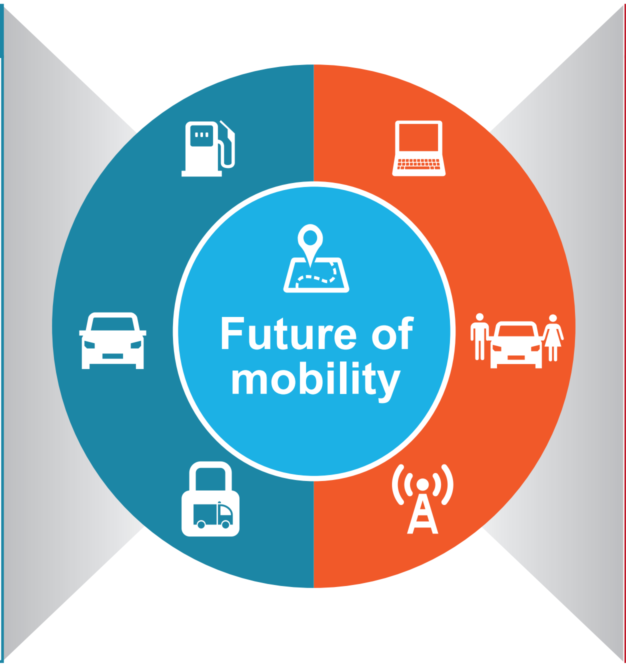
Figure 3. "Insider" and "disrupter" views of the future of mobility

Insider view

The industry will **evolve naturally** and **incrementally** toward a future mobility system that **retains its roots** in what exists today

The key players, major assets, and overall structure of the **current ecosystem can remain intact** while change progresses in an **orderly, linear fashion**

The incumbent mindset appears **dually focused** on sustaining the current model while **testing change in small ways**



Disrupter view

A **whole new age** is dawning featuring **fully autonomous** cars accessible on demand

Before long, a **tipping point** will occur, after which the **momentum of change will become unstoppable**

New entrants, notably Google, Uber, and Apple, **are catalysts** for transformation

Unlike the stakeholders in today's system, they **do not have vested stakes** to protect

Source: Deloitte analysis, based on publicly available information and company websites.

Graphic: Deloitte University Press | DUPress.com

Within the high-tech community, companies are working to arrive at something radically different than today's system of personally owned driver-driven passenger automobiles. According to this perspective, which we label the disrupter view, a new age is dawning, featuring fully autonomous cars accessible on demand. Progress toward it might be measured at first, but before long, a tipping point will occur, after which the momentum of change could gather speed. Imagine a world where the following statements are all true:

- Vehicles hardly ever crash. Autonomous operation removes the cause of almost all accidents: human error.[11]

- Traffic jams are rarities, thanks to sensors allowing for less space between vehicles and guidance systems with real-time awareness of congestion.

- Energy demand drops, since smaller mass and weight allow cars to be propelled by more compact, efficient, and environmentally friendly powertrains.

- Trip costs plummet, with average cost per passenger mile dipping from today's ~$1 per mile to approximately 30¢ per mile, thanks to dramatically higher rates of asset utilization.

- Infrastructure is funded by charges for actual usage, since connected-car technology allows systems to precisely calculate personal road use.

- Parking lots disappear, as the rise of autonomous-drive and carsharing models diminish need.

- Law enforcement ceases to concern itself with traffic, since autonomous vehicles are programmed not to exceed speed limits or otherwise violate traffic laws.

- Speed of deliveries quickens and costs decrease through the rise of fully autonomous networks of long-haul trucks that can operate for more extended time periods and cover longer distances with lower labor costs.

- Seamless multimodal transportation becomes the new norm, as greater system interoperability enables consumers to get from point A to point B via multiple, connected modes of transportation on a single fixed price charged on a single payment system.

Much of the technology already exists to turn this vision into reality, and disrupters are working toward implementing it, catalyzing the transformation. Google's driverless cars have already driven more than 1 million miles in autonomous mode, and the company is running pilot and testing programs with small fleets of fully autonomous vehicles in Mountain View, CA, and Austin, TX.[12] Less technologically dazzling but equally disruptive—and far more mature—are carsharing and ridesharing: The movement that started with Zipcar has more recently spawned the ridesharing concepts of Uber and Lyft; Uber alone delivers 1 million trips per day worldwide[13] and is growing rapidly.

Still, these industry-changing technologies may fail to reach transformational scale—or at least fail to do so within a strategically relevant time frame. Insiders, heavily invested in the current auto industry, see change evolving slowly toward a future that retains its roots in what exists today.

We see the major auto companies pursuing strategies that address the converging forces incrementally, creating future option value while preserving flexibility. These industry players' efforts and investments are yielding a steady stream of benefits for customers. For example, in introducing connected-car technology, manufacturers offer drivers many of the benefits associated with autonomous drive without fundamentally altering how humans currently interact with vehicles.

Automakers are experimenting and inventing, and have passionate voices within their ranks describing much-altered futures. Most have set up offices in Silicon Valley to gain greater proximity to technology development and early-stage funding. Among the noteworthy examples of forward-thinking initiatives are Ford's 25 mobility projects,[14] BMW iVentures,[15] Daimler's engineering advances in intelligent driving,[16] and Cadillac's "super cruise" functionality.[17] In addition, public-private partnerships such as the recently opened Mcity in Ann Arbor, MI, provide a platform to enable more efficient and effective automated vehicle (and feature) testing.[18]

This approach is consistent with historic norms, in which automakers invest in new technologies—e.g., antilock brakes, electronic stability control, backup cameras, and telematics—across higher-end vehicle lines and then move down market as scale economics take hold.[19] In our ongoing conversations with auto-industry leaders, they repeatedly and collectively argue that outsiders simply do not appreciate the sheer complexity of developing a vehicle today, the challenge of introducing new advanced technologies into a vehicle's architecture, or the rigor and inertia of the regulatory environment. All of this encourages incumbents to believe that they can be at the center of actively managing the timing and pace of these converging forces.

But the interplay of the converging forces of change may be less predictable and lead to faster upheaval than they think. Automakers might be overestimating how much power they have to manage the course of future events.

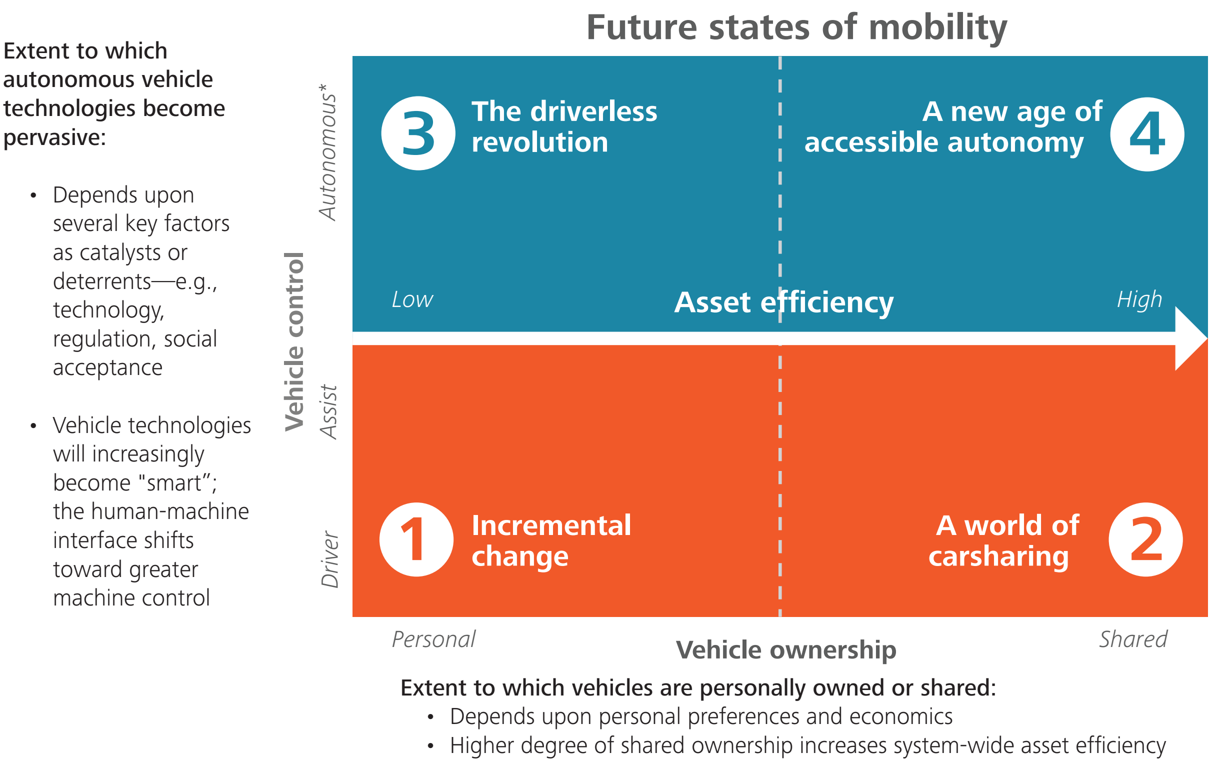
Four futures will coexist

GIVEN the disparate forces shaping the landscape, we envision four different personal mobility futures emerging from the intersection of two critical trends (see figure 4):

- Vehicle control (driver versus autonomous)
- Vehicle ownership (private versus shared)

Our analysis concludes that change will happen unevenly around the world, with different populations requiring different modes of transportation—which means that the four future states may well exist *simultaneously*. In

Figure 4. Four potential future states



Note: Fully autonomous drive means that the vehicle's central processing unit has full responsibility for controlling its operation and is inherently different from the most advanced form of driver assist. It is demarcated in the figure above with a clear dividing line (an "equator").

Graphic: Deloitte University Press | DUPress.com

other words, business leaders will need to prepare their organizations to be capable of operating in four different futures, with distinct sets of customers—beginning in as little as 5–15 years. Here we offer a high-level description of each future state and the conditions that promote its eventual emergence.

Future state 1: Incremental change

This most conservative vision of the future puts heavy weight on the massive assets tied up in today's system, assuming that these assets' owners will neither willingly abandon them nor eagerly transfer capital into new enterprises with uncertain returns. It sees private ownership remaining the norm, with consumers opting for the particular forms of privacy, flexibility, security, and convenience that come with owning vehicles. Importantly, while incorporating driver-assist technologies, this vision assumes that fully autonomous drive won't become widely available anytime soon.

With so little change envisioned, this future state reinforces automakers' reliance on a business model that emphasizes unit sales. They continue to invest in the development and introduction of new vehicle lines with advanced technologies, and dealers retain responsibility for the customer experience. Other industry players are similarly incented to rely on the practices and structures that have been well established for decades.

Future state 2: A world of carsharing

The second future state anticipates continued growth of shared access to vehicles.[20] In this state, economic scale and increased competition drive the expansion of shared vehicle services into new geographic territories and more specialized customer segments. Here, passengers more heavily value the convenience of point-to-point transportation created through ridesharing and carsharing, saving them the hassle of navigating traffic and finding parking spaces. Plus, the system offers options for non-drivers such as seniors, low-income families, and minors without licenses.

In this future state, as the cost per mile decreases, some come to view ridesharing as a more economical, convenient, and sustainable way to get around, particularly for short point-to-point movements (see below for our analysis of the economics of mobility). As shared mobility serves a greater proportion of local transportation needs, multivehicle households can begin reducing the number of cars they own while others may abandon ownership altogether, reducing future demand.

Future state 3: The driverless revolution

The third state is one in which autonomous-drive technology proves to be viable, safe, convenient, and economical, yet private ownership continues to prevail. Collaboration between leading academics, regulatory agencies, and businesses accelerates progress toward this future.[21] Both technology and automotive firms continue investing heavily to increase "V2X" (V2V and V2I) capabilities; in parallel, driverless technology matures, with the success of early pilots fostering quick adoption.

Given that this future state assumes most drivers still prefer owning their own vehicles, individuals seek the driverless functionality for its safety and other potential benefits but continue to own cars for many of the same reasons they did before the advent of autonomous drive. They might even invest more in their vehicles as a new era of customization dawns and it becomes appealing to use vehicles tailored for specific occasions and circumstances.[22] That said, the features in which owners are willing to invest, and the design of the vehicles themselves, may change; this new segment of the market may offer lighter, more technically advanced vehicles that embrace design principles counter to today's four-door, driver-in-front-on-left, gripping-the-steering-wheel reality.

Future state 4: A new age of accessible autonomy

The fourth future state anticipates a convergence of both the autonomous and vehicle-sharing trends. In this future, mobility management companies offer a range of passenger experiences to meet widely varied needs at differentiated price points.[23] The earliest, most avid adopters seem likely to be urban commuters, given the potential for faster trips thanks to reduced distances between highly automated vehicles, and routes enhanced by real-time awareness of conditions. Over time, as smart infrastructure expands and driver usage nears a tipping point, fleets of autonomous shared vehicles could spread from urban centers to densely populated suburbs and beyond.

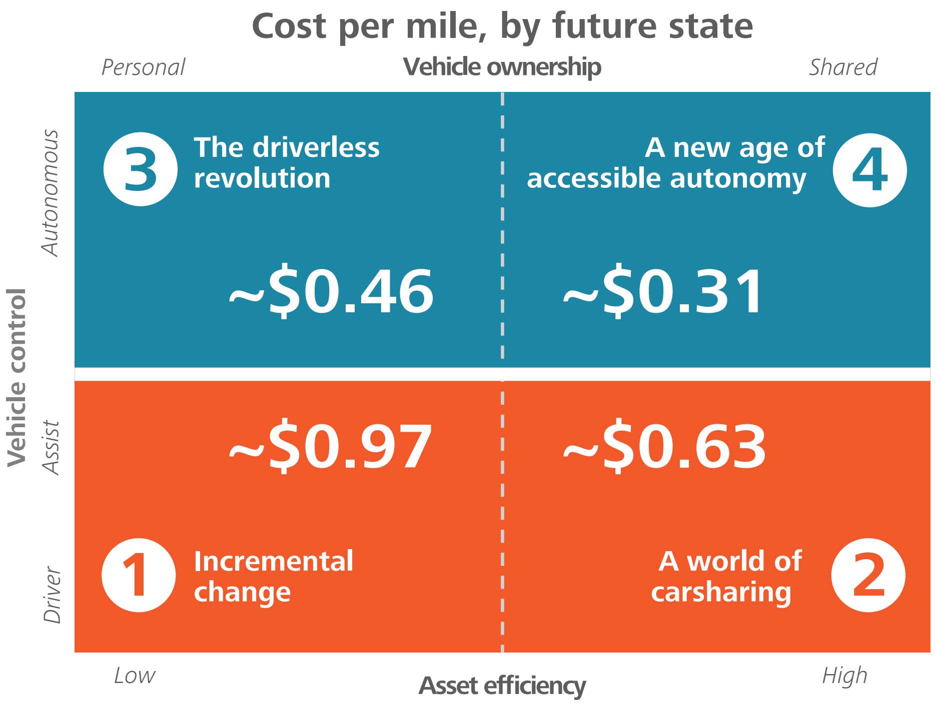
Advanced communications technologies coordinate the customer's point-to-point mobility experience: Intuitive interfaces enable users to order a vehicle pickup within minutes and travel from point A to point B efficiently, safely, and cost-effectively. Vehicle and traffic network systems operators, in-vehicle content-experience providers (e.g., software and infotainment firms), and data owners (e.g., telecoms) could have further opportunities to monetize the value of passengers' attention in transit as well as additional metadata pertaining to system use.

How much per mile?

WE conducted an analysis to calculate the average cost per mile under each of these future states; this analysis shows that consumers could benefit from lower per-mile travel costs in future states 2, 3, and 4 (see figure 5 for a summary of these costs by future state, and figure 6 for a more detailed breakdown of associated costs).

According to our calculations, personally owned vehicles today impose costs of approximately $0.97 per mile. This includes vehicle depreciation, financing, insurance, and fuel, as well as the value of the individual driver's time. By adjusting these key variables for each future state, we have developed high-level directional

Figure 5. Per-mile summary cost calculations for each future state



Source: Deloitte analysis, based on publicly available information (US DOT, AAA, etc.).
Note: Fully autonomous drive means that the vehicle's central processing unit has full responsibility for controlling its operation and is inherently different from the most advanced form of driver assist. It is demarcated in the figure above with a clear dividing line (an "equator").

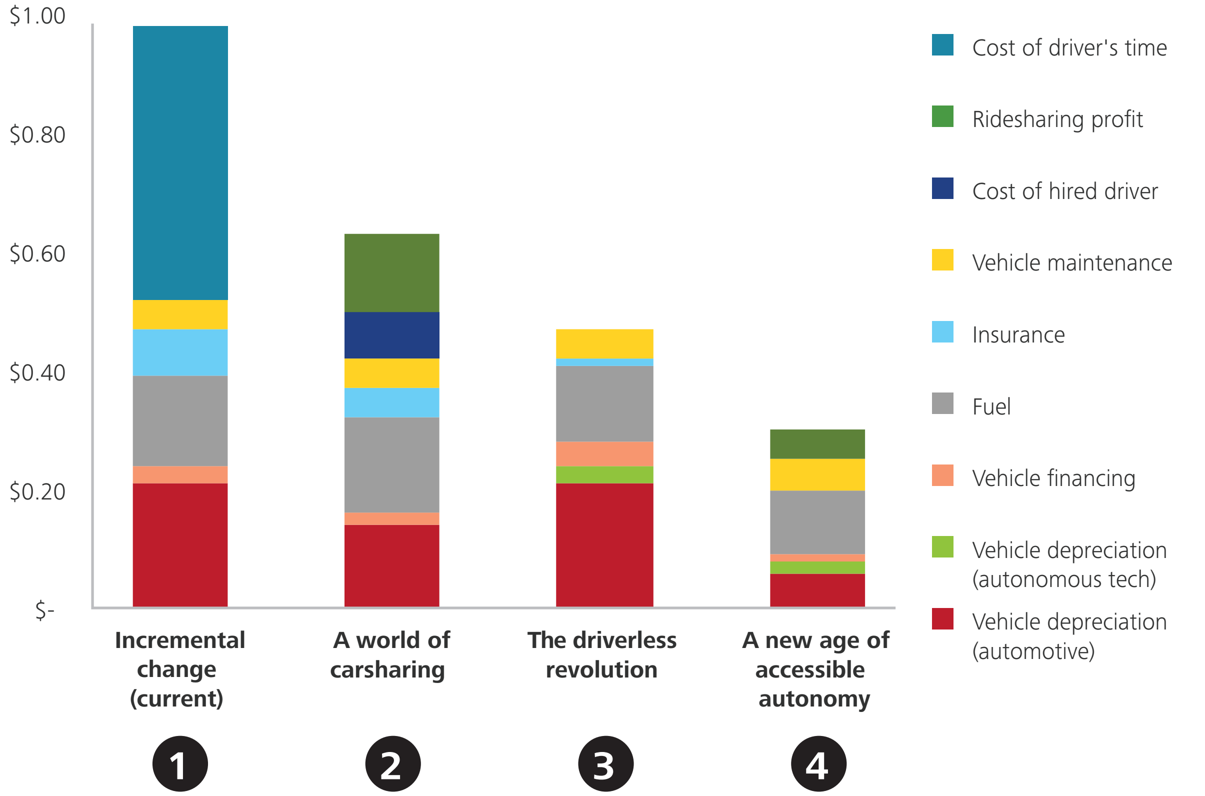
Figure 6. Cost per mile breakdown for each future state



Graphic: Deloitte University Press | DUPress.com

estimates of per-mile costs for each future state at maturity.

Our projections indicate that in future state 2 of shared mobility, the economics become more favorable compared to private vehicle ownership, due to greater asset utilization and reduced consumer time spent driving. Over time, the efficiencies of greater asset utilization offset the higher costs associated with employing a driver. Our analysis suggests that a fully scaled shared-service model would cost approximately $0.63 per mile.

If personally owned autonomous-drive vehicles become widely adopted (future state 3), projecting the cost per mile becomes trickier, since calculations depend on the assumptions made for the value of reallocating the driver’s time and productivity. Based on conservative estimates of this time value, future state 3 would cost approximately $0.46 per mile.[24]

And in a world of autonomous shared vehicles (future state 4), our analysis finds the economics to be highly favorable: Cost per mile could drop as low as $0.31 for single-person trips—in other words, lower by roughly two-thirds than the cost of driving today. Savings partly result from key assumptions around the availability of lighter-weight vehicles (for example, two-person pods for as little as $10,000) reducing capital costs, high rates of asset utilization (*much* higher than today’s 4 percent), and the value placed on freeing up driver time for more productive purposes.

The course of change

IN our view, moves from the current state of mobility will likely occur fastest in the direction of shared access, in turn catalyzing the (upward) adoption of autonomous drive. We see this progression occurring in a number of steps, as illustrated in figure 7.

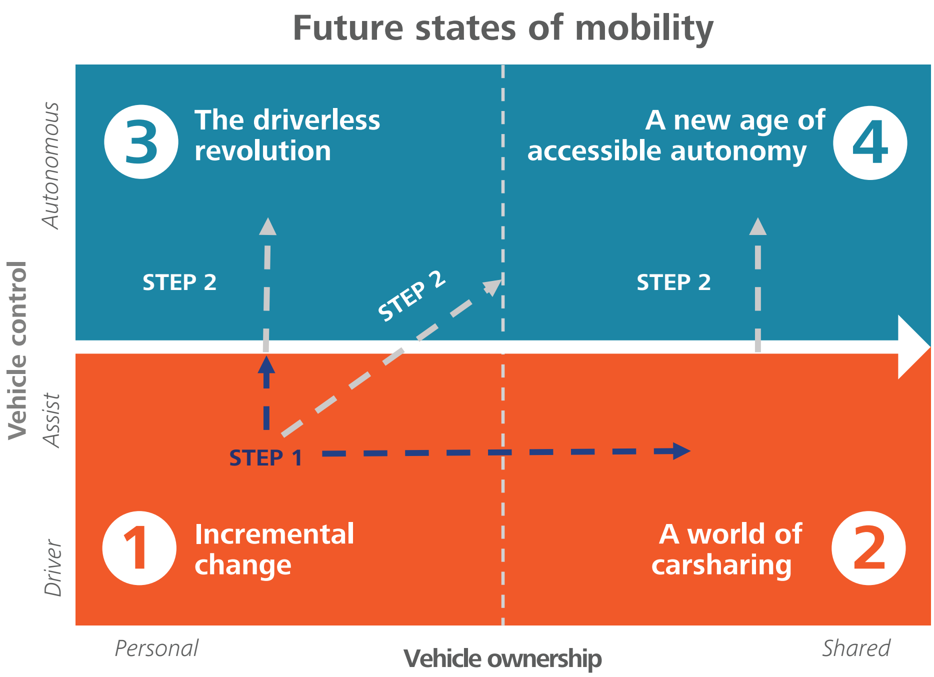
Step 1: Gradual adoption of shared access

The move from pure personal ownership of vehicles to a system more reliant on shared access (i.e., from quadrant 1 to quadrant 2 of

Figure 7. The course of change

Extent to which autonomous vehicle technologies become pervasive:

- Depends upon several key factors as catalysts or deterrents—e.g., technology, regulation, social acceptance
- Vehicle technologies will increasingly become "smart"; the human-machine interface shifts toward greater machine control



Extent to which vehicles are personally owned or shared:

- Depends upon personal preferences and economics
- Higher degree of shared ownership increases system-wide asset efficiency

Note: Fully autonomous drive means that the vehicle's central processing unit has full responsibility for controlling its operation and is inherently different from the most advanced form of driver assist. It is demarcated in the figure above with a clear dividing line (an "equator").

Graphic: Deloitte University Press | DUPress.com

figure 7), is already under way in some parts of the United States. For example, carsharing services, such as Zipcar, have roughly doubled their customer base in the last six years,[25] while ridesharing services, such as Uber, have been adding 50,000 drivers per month and completed 140 million rides worldwide in 2014 alone.[26] The software and hardware systems these services employ to match drivers with riders are evolving rapidly, incorporating information about observed behaviors to improve rider and driver experiences.[27] Furthermore, intense competition offers the prospect of reducing market prices as improved economics related to increased asset utilization take hold.

Step 2: Tipping-point shift to driverless

Currently, wide acceptance of autonomous operation seems much further away than a broad carsharing/ridesharing culture.[28] Sources of delay include the need to address existing technological limitations, such as sensor functioning in all weather and the wide availability of 3D mapping, as well as concerns over cyber security and liability.[29] How quickly these and other issues are addressed will be a key determinant of the pace of adoption for autonomous drive.

Automakers—both in partnership and competition with tech firms—are sequentially and systematically pursuing a shift of control from *driver-only* to *driver-assist* to *autonomous drive*. If driverless technology were the only vector of change, uptake might gradually gain steam, following the pattern of adoption that has become classic to the automotive industry. In our view, this is the pathway from quadrant 1 to quadrant 3, *incremental change* to *driverless revolution*, which is well under way.

However, we also see change progressing along a second, parallel northward vector—from a *world of carsharing* toward a *new age of accessible autonomy*. Along this path, a powerful, additional boost toward driverless adoption is also under way. Uber recently partnered with both Carnegie Mellon University and the University of Arizona to open an Advanced Technologies Center in Pittsburgh and test driverless cars and optics for mapping technologies.[30] Ridesharing services have economic incentives to accelerate the adoption of autonomous vehicles, since it could reduce one of the biggest operational costs in this system: the driver. These companies could capture a significant share of the consumer surplus value generated by reducing this cost. If autonomous drive becomes viable for ridesharing services, it could dramatically accelerate broad adoption, as consumers have greater opportunity to experience the technology while simultaneously realizing significant reductions in the cost of personal mobility.

Finally, other high-tech players are forging a third path to autonomous drive. For example, Google's self-driving car program is testing cars that do not rely on driver-assist progression but, rather, immediately jump to fully autonomous; Google has stated publicly that "taking the driver out of the loop" is the safest path.[31] And in the long term, it is still unclear whether Google intends to choose between supporting shared autonomous mobility, personal ownership, or both.

Rather than following the historical pattern for technological innovation, autonomous driving, when it arrives, could constitute a step-change. And the ensuing changes to the personal mobility ecosystem could unfold much more quickly than many companies can imagine. (See "Forces of delay—or acceleration.")

FORCES OF DELAY—OR ACCELERATION

The inertial forces slowing down the process that Joseph Schumpeter called "creative destruction"[32] in the realm of personal mobility are not to be underestimated. The table below summarizes the key drivers that could either significantly delay or accelerate the adoption of new technologies.

Forces of delay or acceleration	Changes in and/or impacts
Regulation and government	• Global, federal, state, and local—legislation and regulation • Taxation and revenue • Laws governing capture, usage, storage, and transfer of data
Social attitudes	• Perceptions about role of human and machine interface, longstanding notions around vehicle ownership and usage, etc. • Safety • Continued growth of shared economy
Technology development	• Results from early experiments and pilot programs • Emergence of innovation or technology breakthroughs
Privacy and security	• Cyber-security and communication standards and protocols • Protection of personal identification information
Wall Street	• Corporate valuations • Investment capital availability • Level of investment (technology, market introduction, etc.)
Impacts to key stakeholders	• Potential changes to current employment models, including dislocation effects, costs, and change management • Future employment growth opportunities (nature and size) • Stakeholder reactions and next steps (e.g., workers, unions, dealers, employers, government, etc.)

The future for the extended automotive industry

DELOITTE'S recent *Business Trends* report "Business ecosystems come of age"[33] describes a broad pattern by which many of the industries that make up the global economy are undergoing a kind of metamorphosis. What we inherited from the 20th century, the paper states, were "narrowly defined industries built around large, vertically integrated and mainly 'self-contained' corporations"—but in recent years, thanks largely to digital technologies, those monoliths have been fracturing into independent, tightly focused, highly interconnected businesses, many of which perform their specialized functions across former industry lines. We argue, "The fundamental boundaries that have specified the relationships, interactions, and possibilities of most businesses are rapidly blurring and dissolving."[34] The basic human needs that industries were built to serve remain, but serving them is now the work of much more fluid ecosystems. In the future mobility system, the mobility needs that today's industries were built to serve remain, but much more fluid ecosystems will likely emerge to serve them. And this portends significant change to current business models—and partnerships (e.g., between insiders and disrupters) will be critical to deliver new mobility.

Complementary analysis from Deloitte's Center for the Edge argues that a new mobility ecosystem could spark a "virtual" value chain in which the ability to capture, aggregate, and analyze mobility-related data becomes a tremendous source of value. In this vision, value will accrete to those who:

1. Provide end-to-end seamless mobility

2. Manage the mobility network operating system

3. Holistically create and manage the in-vehicle experience

Rewards could be great for players that are able to capture, analyze, and (securely) monetize the awareness of where people travel to, the routes they take to get there, and what they do along the way. While third parties will no doubt pay for access to this information, perhaps the greatest value will be realized by new entrants who emerge as "trusted advisers" to help all of us navigate the new ecosystem and increase our "return on mobility." These companies may also enable the ecosystem to monetize new services and ownership models.

The future mobility system will also need firms to develop and manage the vehicle-operating and traffic network information system that helps direct and control the movement of autonomous vehicles and shared mobility fleets. Technology companies already have access to passenger data and seek to capture this value, but they will likely face challenges from entrants with new business models.[35] Vehicle manufacturers could design and develop vehicles not to accommodate drivers but, rather, to emphasize passenger experience, potentially giving rise to new vehicle structures and forms.

In the meantime, it is reasonable to anticipate a healthy tension between automakers, heavily invested in today's product-centered system, and technological innovators looking to realize a more virtually dependent world of mobility options.[36] And in this case, since shared driverless cars could decrease total auto sales, it's no wonder why carmakers might be reluctant to embrace such a vision.

But there's little question that some version, perhaps multiple versions, of a new ecosystem—one based on shared access and autonomous driving—will indeed eventually emerge. Where and when it does, the change could be profound: lower cost per mile, improved safety, reduced need for parking lots and traffic enforcement, dramatically lower overall environmental impact, and more. Questions revolve around what will happen to today's automotive sector and how these will affect auto OEMs, suppliers, dealers, oil companies, fuel retailers, aftermarket service and parts companies, insurance companies, public and private parking, public-sector traffic enforcement, and others. However the forces of change unfold, every company may need to determine, in Roger Martin's succinct phrasing, "where to play and how to win."[37]

What follows is an initial overview of the enormous scope of change that could affect the key stakeholders in the current system as well as in the new mobility ecosystem.

Global automotive manufacturers (OEMs) face momentous and difficult decisions. The auto industry currently struggles with the fundamental economics of an intensely competitive business with enormous capital requirements; operating margins and return on invested capital remain low.[38] The industry operates with sizeable excess production capacity: Globally, it is possible to produce 113 million vehicles annually, while sales hover around 70 million.[39] In addition, regulatory requirements (such as CAFE, zero-emission vehicles, and safety standards) are becoming ever more stringent and costly.[40] And consumers relentlessly demand that automakers integrate the latest technologies.

OEMs will need to determine if they should evolve from a (relatively) fixed capital production, first-transaction, product-sale business into one centered on being an end-to-end mobility services provider. This would represent a profound business-model change and the development of entirely new capabilities to be competitively and sustainably viable.

At a minimum, they will need to weigh how to meet the needs of a changing landscape as consumers increasingly use shared mobility and become interested in highly tailored, customized, personally owned autonomous-drive vehicles.[41] This could require transforming product-development and innovation capabilities and reconfiguring supply chains and production operating systems to be even more lean, flexible, and "smart customization"-enabled. At the same time, consumers could begin demanding *shared* autonomous vehicles for different kinds of trips, which could spur the creation of more varied vehicle forms. This could drive the development of high-speed, low-cost vehicle assembly operations to create and produce vehicles with lightweight frames, custom experience-focused software, and highly customized, design-focused interiors. Light autonomous-drive vehicles can be made to be highly energy-efficient and, with a longer driving range, might make electric vehicles more viable and help automakers meet stringent regulatory standards.

Automotive suppliers will have to adjust as OEMs transform. As sales of autonomous-drive vehicles grow, suppliers will need lean, agile operations to serve the highly varying needs of the personally owned segment. While most of the core powertrain, chassis, brake systems, and electronic wiring components on such vehicles may be standard, giving suppliers some benefits of operational scale, the packaging for personally owned vehicles will likely be tailored and customized. Building the more standardized vehicles needed for shared mobility solutions could offer large volumes, and the demand will likely be for less complex and lower-value-added products; therefore, the economics in this new marketplace will strongly favor the lowest-cost producers.

Technology firms are driving much of the change under way. Earlier we referred to these firms as the disrupters; their strategic vision is that toppling longstanding institutional structures and frameworks can generate massive value. Unlike the manufacturers and asset holders in today's system, they have few vested stakes in the current automotive ecosystem, and they view the market for mobility as a new frontier. They share a conviction that the system's dominant source of value could be in creating and managing the operating system and in-transit experience as well as mining the data generated.

These companies have shown to be adept at building large, complex information networks and operating systems, introducing artificial intelligence to help minimize human error and randomness, creating compelling environments that drive consumer behavior, and creating digital communities. They view the vehicle as another platform in a multidevice world. Vehicle sensors and personal devices could generate ever-greater amounts of data, with insights producing personalized customer experiences and delivering targeted advertising and services.[42] Integrated information systems can enable effective intermodal transportation. And mobile, wireless, location-based systems can create new opportunities for dynamic-pricing, single-payment, and consumption-based models to become much more prevalent. Technology leaders in general, relative to traditional auto-industry leaders, are in highly advantaged positions to capture this information and virtual-based value.

Cargo delivery and long-haul trucking currently face significant challenges that the future mobility ecosystem could alleviate. In the most ambitious version of the future, cargo transportation and delivery systems could become predominantly driverless through daisy chains or remote operation—an appealing scenario, considering the US trucking industry's growing labor shortages, with as many as 30,000 driver positions unfilled and an annual turnover rate of 92 percent.[43] Autonomous vehicles offer a way to overcome restrictions on hours driven and increase capital utilization. Given long-haul cargo transportation's $700 billion in annual revenues,[44] major fleets such as UPS and USPS have a sizeable economic incentive to actively explore how to operate for more extended time periods, cover longer distances without stops, and reduce the cost of drivers (accounting for 26 percent of operating costs).[45] With such compelling economics, this sector could become an early test bed for driverless technologies.

Insurers face a complex set of strategic questions in how they will continue to grow their business and serve various segments, geographies, and demographic groups depending on which future states of mobility take hold. With $205 billion in premiums for personal liability, collision, and umbrella insurance in play, the stakes are high. Insurers today largely insure the vehicle and not the individual driver; they are currently unable to accurately assess risk associated with new forms of mobility and safety—ridesharing in the short term, and driverless cars and inter-modal transportation in the long term. Insurers need an operating model that fosters innovation and allows them to adapt to a rapidly changing market: As shared mobility continues to become more popular, insurers will need to evolve their business model to be more driver-centric, as there will be fewer vehicles to insure and more drivers using each one. With the emergence of autonomous drive, insurers will have to continue supporting vehicle and driver-centric models while developing new forms of transportation for the more technical, systemic failure risk associated with a driverless vehicle. This new system faces clearly significant issues associated with assigning liabilities: Risk pools morphing will likely force dramatic changes in insurers' cost structure. The flood of new information provided by greater connectivity provides ways to offset these costs through more accurate ways to assign risk.

The US public sector will likely have to figure out how to offset anticipated declines in the $251 billion annually generated from fuel taxes, public-transportation fees, tolls, vehicle sales taxes, municipal parking, and registration and licensing fees. All these revenues are tied to today's reality of individually owned and operated vehicles—for instance, the need for parking diminishes with the rise of autonomous-drive shared mobility. Agencies may need to evaluate alternatives—e.g., taxing "movement" versus ownership. Monetization for road usage in the future could transition to a much more dynamic model based on time of day, market demand, routes traveled, distance, and vehicle form, aligning the use of public assets more directly to usage than today's system. On the other hand, as vehicle volumes decline, municipalities might experience reduced wear and tear on infrastructure and have the opportunity to reallocate parking and other space to more value-adding purposes. Government costs (such as the DMV) could decline significantly and potentially offset some of the public-sector revenue decline.

The value shifts for these and other industries could have a tremendous impact on revenues across the ecosystem. Figure 8 summarizes some of the potential effects of the shift to the future mobility ecosystem. The graphic also includes potential societal benefits expected as a result of autonomous drive and shared mobility technological advances. The analysis does not yet account for new business models that could evolve within the future ecosystem; it is meant to illustrate the potential effects/directional impact that autonomous cars and shared mobility may have on *today's* ecosystem.

Conclusions

IN the four futures of the mobility ecosystem, sources of value shift profoundly. With this evolution toward a new ecosystem still taking shape, we want to share some reflections on the strategic and operational implications for legacy incumbents, extended industry participants, and disrupters as they weigh their future direction. Specifically:

1. **Industries rise and fall.** Cycles take long periods to play out, but eventually change occurs.

2. **The potential system benefits and fundamental economics of the disrupter vision are compelling.**

3. **There is a pathway for the existing extended auto industry to lead the transition to the future of personal mobility, but it will require fundamental and expeditious business-model change.** Competing effectively in the future mobility ecosystem requires building new and different capabilities. Everyone in today's extended automotive sector needs to reassess how they will operate and create value while the four states coexist and in the longer term, when autonomous and shared mobility become more mainstream.

4. **The insiders and disrupters need each other.** Unquestionably, fierce competition will characterize the commercial environment around personal mobility. Yet, despite their wariness and differing outlooks and perspectives, automotive incumbents and challenging new entrants will together make up a new ecosystem with high levels of interdependency, mutualism, and symbiosis.

5. **Profound disruption will extend far past the automotive industry.** Every aspect of the modern economy based on the assumption of human-driven, personally owned vehicles will be challenged. Each company in this new ecosystem will have to determine where to play and how to win. As in any time of large-scale transformation, we can expect to see new players, with differentiated capabilities, emerge and change the fundamental dynamics of where and how value is created. Ultimately, the market, in its relentless quest for higher performance at lower cost, will decide who wins and who loses.

Deloitte will continue to periodically share insights about this evolution as part of an ongoing series. We aim to contribute to the dialogue as we all collectively wrestle with the impact and implications of the future of mobility. Our objective is to help to build a bridge between a highly uncertain futuristic vision, the realities of today's industries, and potential pathways to alternative future realities.

10. The goal of the analysis is to estimate the cost per mile as well as capture the potential gains, losses, or shifts in value for each industry across each of the four future states described in the paper. Deloitte first analyzed the total cost per mile for road passengers today to evaluate consumers' cost of mobility. The components of cost per mile include depreciation, fuel, insurance, cost of driver time, maintenance, etc.
    Since the cost-per-mile calculation does not capture all of the changes' implications for each industry affected by the transformation to the future mobility ecosystem, we developed a baseline of the revenue generated by each sector in today's extended US auto industry. We then analyzed the impact of the future mobility ecosystem based on industry-specific hypotheses and macroeconomic analysis. We estimated the change in value from the current industry baseline across the four future states by understanding changes to components of cost per mile today and mapping each cost to the industry that collects the corresponding revenue. We conducted further analysis to estimate a future "steady state" that incorporates adoption rates across all future states. The value shifts are summarized at a sector level to illustrate the potential directional impact that autonomous cars and shared mobility could have on today's extended auto industry. Factoring in availability of data and the scope of the analysis, all data and figures used are from the United States as of 2015 (using 2014 dollars). The analysis does not assume a specific timeline or adoption curve. Rather, it is a blended model of four potential future states intended to provide directional insights about the future at maturity. Forthcoming installments of the Future of Mobility series will include a more detailed explanation of the analysis Deloitte conducted as well as the results.

Acknowledgements

The authors would like to issue special thanks to the following advisers and contributors whose insight and expertise were invaluable for the creation of this paper: **Andrew Adams, Andrew Blau, Matthew Budman, Jonathan Copulsky, Mark Cotteleer, Craig Giffi, John Hagel, Tim Hanley, Julia Kirby, Michelle Drew Rodriguez,** and **Steve Schmith**.

Externally, **Lawrence Burns**, professor of engineering practice at the University of Michigan, an adviser to Google's self-driving car project and the former corporate VP of R&D and planning at General Motors, and **Ron Goldsberry**, retired Deloitte director and Ford executive, provided significant guidance and deep knowledge in their respective areas of expertise.

In addition, many Deloitte colleagues contributed with their time and industry-specific insight. Key additional contributors include: **Bruce Brown, Andrew Dinsdale, Masa Hasegawa, Joseph Kwederis, Sean Peasley**, and **Thomas Schiller** from the automotive sector; **Christian Grant, Kevin Matthews**, and **James Hendrickson** from the energy sector; **Joe Guastella, Neal Baumann, Cindy MacFarlane, Bill Mullaney, Sandeep Puri**, and **Malika Gandhi** from the insurance sector; **Gerald Belson** from the media sector; **William Eggers, Tiffany Fishman, Felix Martinez, Jim Templeton**, and **Peter Viechnicki** from the public sector; **Dan Haynes** and **Joann Michalik** from the manufacturing sector; **Steve Atkins, David Couture, Atin Gupta, Simon Ninan, Andy Daecher, Arun Perinkolam**, and **Irfan Saif** from the technology sector; **Jack Fritz, Nitin Jain**, and **Phil Wilson** from telecommunications; and **Karen Bowman** and **Scott Rosenberger** from the transportation sector.

We appreciate the strong support and endorsement from Deloitte leadership, including **Sam Balaji, Michael Canning, Ambar Chowdhury, Amy Feirn, Jason Girzadas, Tom Marriott, Jim Moffatt,** and **Rich Penkoski**.

Last but not least, the authors would like to thank the core team that dealt with the day-to-day activities and was instrumental to the development and delivery of this paper. The team included **Jacob Darby, Elizabeth Kong, John Krentz, John McGlynn, Katerina Petraki, Veronica Saron, Zach Shore, Andy Sussman,** and **Philipp Willigmann**.

Infrastructure2014

SHAPING THE COMPETITIVE CITY

Hong Kong's investment in high-quality transit has allowed the city to achieve remarkable densities, a superior quality of life, and protection of environmentally sensitive land areas.

HOW DO REAL ESTATE DEVELOPERS AND INVESTORS—who could pursue opportunities regionally, nationally, or internationally—think about infrastructure? How do city leaders use infrastructure investments to position their cities for real estate investment and economic development? What role does infrastructure play relative to other economic development strategies? And are public and private perceptions and priorities aligned—or do they diverge, and in what ways?

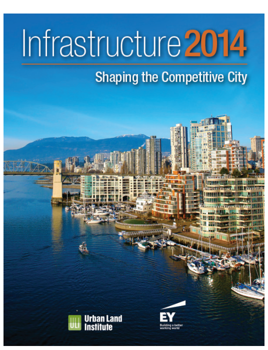
These were the central questions for *Infrastructure 2014: Shaping the Competitive City*, the eighth in an annual series of reports examining infrastructure trends and issues by ULI and EY.

To provide answers, researchers for *Infrastructure 2014* crafted a series of survey questions and asked high-level public officials and private real estate leaders to weigh in. Nearly 250 public sector leaders in local and regional government and over 200 senior-level private developers, investors, and real estate advisers responded to the survey. About 86 percent of survey respondents were based in the United States, with the balance located in countries across the globe.

Nearly every city aspires to grow, and high-quality infrastructure—infrastructure that is well maintained, reliable, safe, resilient, and customer friendly—contributes to well-functioning, growth-primed cities—cities that attract new residents and retain existing ones.

Infrastructure—the physical facilities and systems that support economic activity—is often seen as a driver of real estate and development, especially by those who are in the business of providing it. But do the people actually building and investing in real estate agree? The *Infrastructure 2014* survey tells us "yes"—and a number of other interesting things as well.

On many of the questions asked, there was strong convergence between the public and private sector respondents, and between U.S. and global ones. The survey provides a means for mutual learning and dialogue that can help advance the conversation about the role that infrastructure plays in shaping and promoting growth, infrastructure priorities, and opportunities to improve current practice.



This is a summary of key findings. We invite you to learn more about the *Infrastructure 2014* survey online and read the full report at www.uli.org/infrastructurereport and www.ey.com/realestate.

Due Diligence: Taking Care of Business

March 30-April 1, 2016

Panelists

Steven M. Moore
KPMG LLP

Managing Director, Head of US Real Estate Deal Advisory

- Leads a team focused on real estate transaction services
- 20 years of corporate finance and transaction experience
- Advised on over $100 billion of RE financing and $30 billon of RE transactions

Michael J. Rusche
EPR Properties

Director – Asset Management

- Manages the entertainment and retail assets of EPR
- Portfolio over 10 million sf of retail, restaurants, movie theatres and other venues
- Graduate of the University of Kansas with over [XXX] year of real estate experience

Michael McGillis
Tetra Tech, Inc.

Facility Assessor

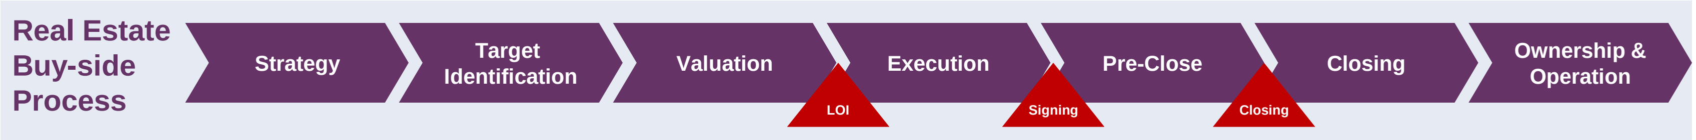
- Specializes in developing and implementing full lifecycle real estate asset management programs
- Over 23 years of experience
- Extensive experience with acquisitions, design, renovation, and restoration

Baris H. Ipeker
Federal Realty Investment Trust

Vice President Investments, Legal Counsel

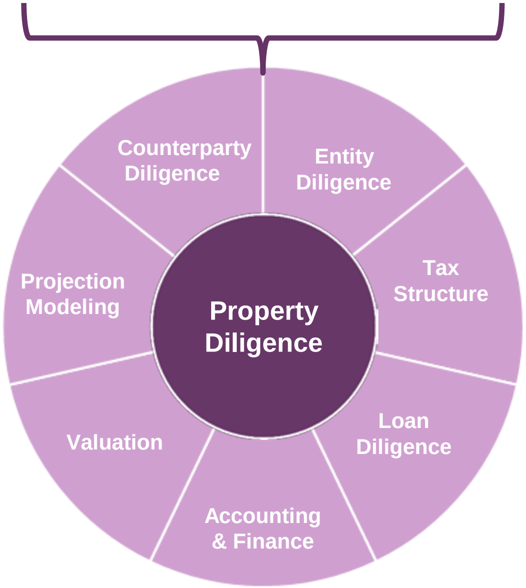
- Responsible for structuring, negotiating and closing acquisitions, dispositions and property secured financings
- Past experience in real estate transactions at Venable LLP
- Alumnus of University of Virginia and JD from Emory

Introduction

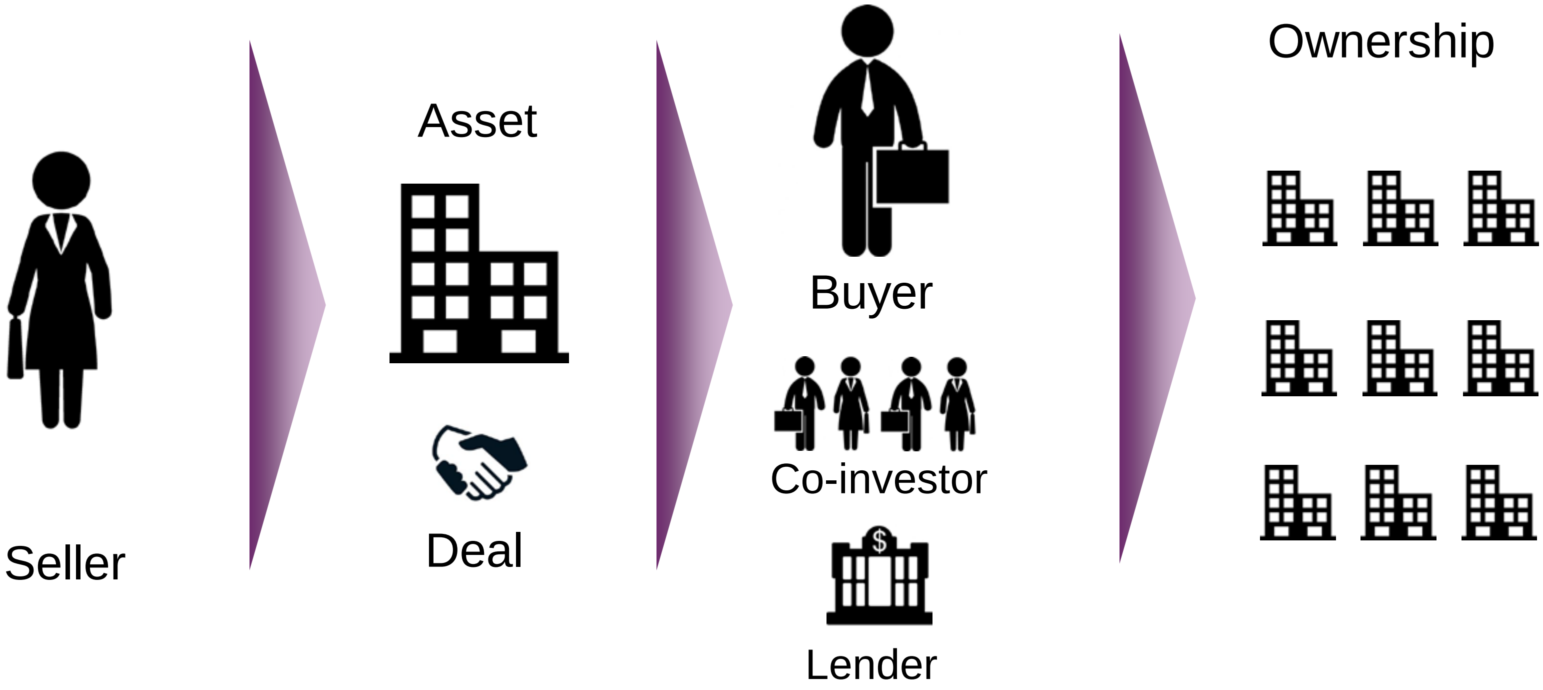


Property Diligence

- Title and Survey
- Zoning for in-place and proposed use
- Environmental considerations and potential pitfalls
- Physical assessment and property condition
- Lease abstracting; Validation of rent rolls, revenues and Argus models
- Tenants analysis with consideration of credit, lease structure and expense allocation
- Analysis of NOI and cash flows
- Market analysis and competitive property comps



Diligence in the Transaction Process



Title & Survey

- Does Seller own the Property?
- Restrictions in deeds or easements?
  - Covenants, Conditions and Restrictions (CCRs) are a detailed list of operating rules and restrictions for the property
  - Does anyone other than the Property owner benefit from the restrictions
  - Does the Property meet all of the requirements
  - Do the restrictions prevent future plans?
- Are there any liens or encumbrances on the Property?
- Is the Property where you think it is?
- Do all of the improvements fit within the boundaries of the Property?
- Do you have setbacks and are your improvements within them?
- Do you have buildings sitting on top of easements?
- Do you have access to public roads?

Zoning

- Is the use of the Property by right?
- Do all of the buildings conform?
- Does the signage comply?
- Does the parking ratio and landscaped area conform?
- What is the zoning process to obtain variances or special permits?
- How long will it take to change zoning if it is not by right?
  - Entitlements
  - Rezoning
  - Costs

Environmental

- Are there any environmental issues at the property? Understand property use (including past use) and onsite operations (Dry Cleaners, Treatment Facilities, Tanks……)
- Phase I & II Environmental Assessment Study – Identify Risks
- Typical Hazards Encountered: materials in soil, in ground water, vapor in buildings, asbestos, mold, tanks, lead, etc.
- If there is an environmental issue, is it:
  - Insurable
  - Quantifiable
  - Within a state clean-up program
  - Easily remediated

Case Study - Environmental

Prior to purchasing the facility, the perspective buyer researched claims that the existing sanitary ponds were not properly sized: Through an evaluation of the ponds, permits, and system it was found that the ponds were properly sized for the facility use, but the amount of ground water infiltration into the system caused to ponds to be inadequately sized to store effluent during months when discharge was limited

PHYSICAL PROPERTY ASSESSMENT

- What's the Typical Size ($) of Each Transaction?
- What's the Typical Size (SF) of Each Transaction?
- How Much do You Spend on Pre-Acquisition Assessments?
- How Much do You Spend on Repairs Following Purchase?
- Where are Your Liabilities?
- Are the Assessments Useful?

PHYSICAL PROPERTY ASSESSMENT

- Collected Information Should be Used for Negotiations and Development of Terms
- Assessments Should be Modified to Cover Item of Greatest Liability
- Information Gathered Should be Adequate to Develop Capital Plans
- Implementation of Asset Management Programs Should be Considered

Case Study - Physical

Case Study - Physical

EIFS replacement	(vert. surfaces)	40,150 sf @ $14/sf	$562,100
	(horiz. surfaces)	760 sf @ $30/sf	$22,800
Ceramic tile replacement		5,600 sf @ $75/sf	$420,000
Clay brick masonry repairs		allowance	$42,000
Roofing repairs	(horiz. surfaces)	allowance	$500,000
	(copings)	5,200 lf @ $22/lf	$114,400
Roofing replacement	(large areas)	192,000 sf @ $8/sf	$1,536,000
	(small areas)	1,800 sf @ $12/sf	$21,600
	(copings)	5,200 lf @ $22/lf	$114,400

With 10% Contingency and 10% GC, Total Estimate - $4,033,300
Report Date: March 2005

Total Spent on Repairs $

OBSERVATIONS AND FINDINGS

The ceramic tile and EIFS facade materials were observed and evaluated for adhesion and method of attachment on selected portions of each of the major faces of the building. The following observations were made:

1. North third of the west wall: Approximately 60% of the EIFS system has delaminated from the wall. Supplemental plates and fasteners were installed to laterally support a portion of the ceramic tile facing that had apparently become delaminated.

2. North third of the east wall: Approximately 40% of the EIFS system has delaminated from the wall. A portion of the ceramic tile and mortar bed was missing and was reported to have fallen off of the wall.

3. West third on the south wall: Approximately 5% of the EIFS system has delaminated from the wall. Supplemental plates and fasteners were installed to laterally support a portion of the ceramic tile cladding that had apparently become delaminated.

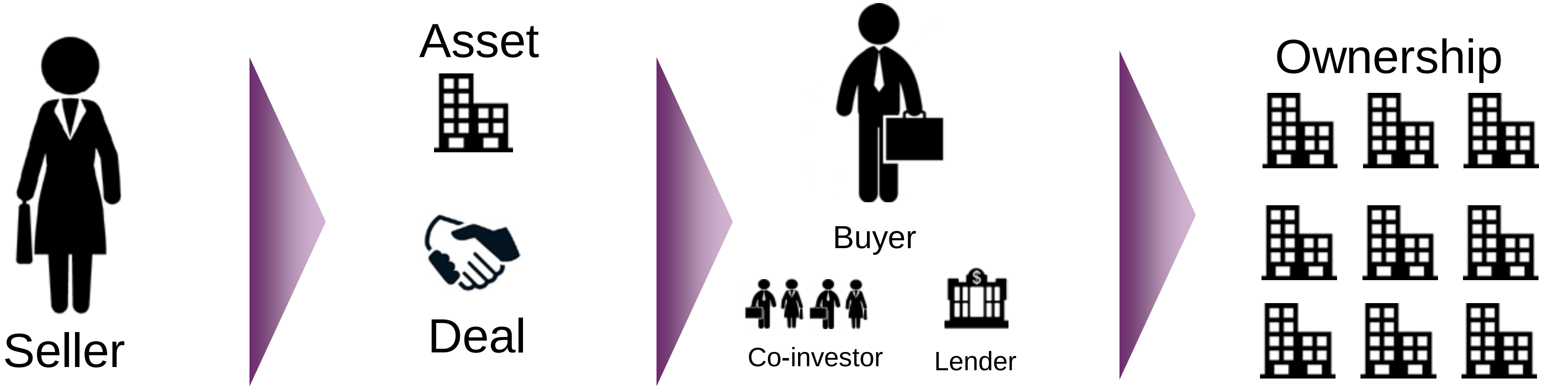
Lease Review

- Confirm the rents in the rent roll
- Uncustomary expenses for the Landlord in leases
- CAM and Taxes
- Confirm that tenants do not have unilateral rights to terminate the lease
- Rights that affect your future development
- Impact on future plans to lease the property
- Rights of first refusal or purchase options

Financial

- Analysis of in-place NOI and cash flows
- Market analysis and competitive property comps
- Property / Argus and Transaction model
- Quality of earnings analysis
- Evaluation of operating platform, controls and reporting functions
- Balance sheet and debt review
- Prorations
- Identification of state and local tax exposures
- Investigation in potential transfer and other taxes
- Tax structuring

Strategic Diligence



- Speed of execution
- Maintain control
- Preposition issues
- Enhance terms

- Facilitate the process
- Identify key issues
- Align perceptions
- Agreement / contracts

- Validate investment
- Assurance / protection
- Process requirement
- Enhance terms

- Foundation of operations
- Identify issues and opportunities

Questions & Answers

Thank You

Additional Information

Steven M. Moore - KPMG LLP

Managing Director, Head of US Real Estate Deal Advisory

1350 Ave of the Americas
New York, NY 10019

Tel: 212-954-4292
smmoore@kpmg.com

Background

- As part of KPMG International's global real estate practice, and working through a coordinated team of more than 1,500 professionals in the U.S. and more than 3,000 professionals in 77 countries worldwide, Steve seeks to provide superior service and solutions to KPMG's clients that beneficially integrate financial and strategic advisory, accounting and tax expertise.

- Steve leads the U.S. Real Estate Deal Advisory practice for KPMG and focuses on real estate advisory, restructuring, company mergers and acquisitions, capital raising and distressed situations.

- In his capacity, Steve serves and expands long-standing relationships with real estate clients across the multi-family, industrial, retail, office, healthcare, lodging and technology infrastructure sub-sectors.

- Steve focuses on transactions, advisory services, equity and debt capital raising for clients including: private equity funds, family offices, institutional investors and management teams of publicly-traded and privately-owned companies, as well as their board members.

Professional and Industry Experience

- Steve has advised on the financing of nearly $100 billion in real estate assets, consummated sale or acquisition transactions representing more than $30 billion in asset or portfolio value and participated extensively in both in-court and out-of-court real estate restructurings.

- Prior to joining KPMG, Steve was a Senior Vice President at Moelis & Company in the Real Estate Investment Banking Group.   Previously, he held investment banking roles at Citigroup, JPMorgan and Houlihan Lokey and he began his professional career in the Strategic Planning Group of the Walt Disney Company.

Michael J. Rusche - EPR Properties

Director – Asset Management

909 Walnut St., Suite 200
Kansas City, MO 64106

Tel: 816-472-1700
miker@eprkc.com

Background

- Michael J. Rusche is Director - Asset Management for EPR Properties (NYSE: EPR) where he manages the entertainment and retail assets of the company, including more than 10 million square feet of retail centers, restaurants ,movie theatres and other entertainment venues. The portfolio has consistently been more than 99% occupied and includes many of the top performing movie theatres and entertainment based destinations in North America.

- Mike is a graduate of the University of Kansas and began his career in real estate with EPR in 2005. He has engaged in Acquisitions, Asset Management, Development, Redevelopment and Disposition for the company and, over the last ten years, has developed deep relationships within the movie theatre industry while gaining significant insight into the performance of both entertainment based and recreational destinations.

- Mike and his wife Holly are residents of Parkville, MO and together they enjoy many wonderful days, sleepless nights and countless adventures with their daughter Adelaide.

Michael McGillis, P.E. - Tetra Tech, Inc.

Facility Assessor

123 Brighton Lake Rd
Suite 203
Brighton, MI 48116

Tel: 810-225-8436
mike.mcgillis@tetratech.com

Background

- Working at Tetra Tech, Inc.: worked with buildings, building systems, and utility systems for over 23 years.
- Graduated from Penn State University with a Bachelor of Architectural Engineering and holds professional licenses in PA and MI.
- Worked with the design, renovation, and restoration of buildings throughout entire career.
- In addition to building design and restoration, Mr. McGillis developed and worked on asset management programs for military, retail, medical, and utility clients.
- Programs encompass the entire lifecycle of assets starting at plan conception, through design & construction, commissioning, turn-over, into maintenance / sustainment, and culminating in divestment.

Baris H. Ipeker - Federal Realty

Vice President - Investments, Legal Counsel

1626 East Jefferson Street
Rockville, MD 20852

Tel: 301-998-8189
bipeker@federalrealty.com

Background

- Baris Ipeker is Vice President - Investments, Legal Counsel of Federal Realty Investment Trust. In that capacity, Mr. Ipeker is responsible for structuring, negotiating and closing acquisitions, dispositions and property secured financings for the Trust's real estate portfolio.

- Mr. Ipeker is also responsible for managing the Trust's trademark assets.

- Mr. Ipeker joined Federal Realty Investment Trust in 2003 as Senior Real Estate Counsel, was promoted to Director, Legal Counsel in 2006 and Senior Director - Investments, Legal Counsel in 2010. Recently in 2016, Mr. Ipeker was promoted to Vice President - Investments, Legal Counsel.

- Prior to joining Federal Realty Investment Trust, Mr. Ipeker specialized in real estate transactional work at Venable LLP.

- Mr. Ipeker received a Bachelor of Science in Finance from the McIntire School of Commerce at the University of Virginia and holds a Juris Doctorate from Emory University School of Law.

Real Estate Spotlight

A Walk-Through of the FASB's New Leases Standard

In This Issue:

The Bottom Line

- On February 25, 2016, the FASB issued its new leases standard, ASU 2016-02.[1] The standard marks the end of the Board's nearly decade-long deliberations with the IASB to address concerns about the current lease accounting requirements.
- The new standard introduces a model that brings most leases onto a lessee's balance sheet. This could significantly change the accounting by real estate lessees, whose leases are typically not included on the balance sheet because they are classified as operating leases under current U.S. GAAP. The new standard retains much of the current lessor model but aligns certain of its underlying principles with those of the new revenue recognition standard (ASC 606[2]).
- The new leases standard will significantly affect lessees and lessors in the real estate industry, including their considerations related to nonlease components, nonlevel rents, initial direct costs, and accounting for sale-leaseback transactions. In addition, real estate lessors will need to understand the ASU's broader implementation implications for lessees as well as the potential for changes in tenant behaviors.
- The new guidance is effective for public business entities for annual periods beginning after December 15, 2018 (i.e., calendar periods beginning after January 1, 2019), and interim periods therein. For all other entities, the ASU is effective for annual periods beginning after December 15, 2019 (i.e., calendar periods beginning on January 1, 2020), and interim periods thereafter. Early adoption is permitted for all entities irrespective of whether such entities elect to early adopt the new revenue standard.

[1] FASB Accounting Standards Update No. 2016-02, *Leases.*
[2] FASB Accounting Standards Codification Topic 606, *Revenue From Contracts With Customers.*

Beyond the Bottom Line

This *Real Estate Spotlight* provides insight into aspects of the new leases standard that are particularly relevant to lessees and lessors in the real estate industry. For a comprehensive overview of the new leases standard, see Deloitte's March 1, 2016, *Heads Up*.

Lessee Accounting

The new standard requires lessees to adopt a right-of-use (ROU) asset approach that brings substantially all leases, with the exception of short-term leases (i.e., those with a lease term of less than 12 months), onto the balance sheet. Under this approach, a lessee records an ROU asset representing its right to use the underlying property during the lease term and a corresponding lease liability (in a manner similar to the current approach for capital leases) regardless of the lease classification. The subsequent accounting for the ROU asset depends on the classification of the lease as either a finance lease or an operating lease (referred to as the "dual-model approach").

A lessee will determine the classification of a lease by using classification criteria that are similar to those under IAS 17.[3] For leases that are considered finance leases, the lessee recognizes interest expense and amortization of the ROU asset in a manner similar to a financed purchase arrangement, which will typically result in greater total expense during the early years of the lease. For leases that are considered operating leases, the lessee will also recognize an ROU asset and lease liability, but will recognize total lease expense on a straight-line basis.

The IASB decided on a different approach for a lessee's subsequent accounting of the ROU asset. Under the IASB's approach, all leases are accounted for as a financed purchase arrangement in a manner consistent with the FASB's guidance on finance leases.

Editor's Note: Under the FASB's dual-model approach, a lease is classified as a finance lease if any of the following criteria are met at the commencement of the lease:

- "The lease transfers ownership of the underlying asset to the lessee by the end of the lease term."
- "The lease grants the lessee an option to purchase the underlying asset that the lessee is reasonably certain to exercise."
- "The lease term is for the major part of the remaining economic life of the underlying asset."[4]
- "The present value of the sum of the lease payments and any residual value guaranteed by the lessee . . . equals or exceeds substantially all of the fair value of the underlying asset."
- "The underlying asset is of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term."

Although the classification criteria are similar to those under current U.S. GAAP, there are some differences that will apply to the real estate industry. First, the ASU requires entities to account for land and other elements separately unless the effects of not doing so are immaterial. Under current U.S. GAAP, the lease classification of land is evaluated separately from the building if its fair value at lease inception is 25 percent or more of the fair value of the leased property and the lease does not meet either the criterion related to transfer of ownership or the bargain purchase option criterion. This change may result in more bifurcation of real estate leases into separate land and building elements that are required to be evaluated separately for lease classification purposes and accounted for separately.

[3] International Accounting Standard 17, *Leases*.

[4] The ASU provides an exception to this lease classification criterion for leases that commence "at or near the end" of the underlying asset's economic life. The ASU indicates that a lease that commences in the final 25 percent of an asset's economic life is "at or near the end" of the underlying asset's economic life.

Editor's Note (continued): Second, the ASU eliminates the bright-line rules under the ASC 840[5] lease classification requirements — namely, whether the lease term is for 75 percent or more of the economic life of the asset or whether the present value of the lease payments (including any guaranteed residual value) is at least 90 percent of the fair value of the leased asset. While removal of the bright-line test could reduce structuring opportunities, the ASU's implementation guidance indicates that entities may use thresholds similar to those they use today in determining lease classification. Therefore, practice may not be significantly altered as a result of this change.

Lessor Accounting

Although initially the boards contemplated overhauling lessor accounting, they agreed to largely retain the current lessor accounting model. The ASU modifies the current U.S. GAAP lease classification criteria and aligns certain of the underlying principles in the lessor model with the new revenue recognition standard. Specifically, to qualify as a sales-type lease (in which a lessor recognizes profit up front), the arrangement must meet the requirements of a sale under the new revenue recognition guidance. On the other hand, if the transaction does not qualify as a sales-type lease, the transaction would be accounted for (1) as a direct financing lease with any profit deferred and recognized as interest income over the lease term or (2) an operating lease.

Editor's Note: The inability to recognize profit up front on a transaction because the arrangement would not be a sale under the new revenue recognition guidance will probably not significantly affect real estate lessors since such lessors typically do not enter into sales-type leases.

The ASU requires the lessor to account for rental income from operating leases on a straight-line basis unless another systematic basis would be more appropriate. However, to the extent that step rents are used to reflect or compensate the lessor for anticipated market rentals or market conditions, the lessor is required to recognize rental income on a systematic basis other than straight-line.

Editor's Note: Under the ASU, a lessor is only required to recognize rental income on a straight-line basis when payments are uneven for reasons other than to reflect or compensate for market rentals or market conditions (e.g., when there is significant front loading or back loading of payments or when there are rent-free periods in a lease). This may have a significant effect on a lessor's recognition of revenue for operating leases related to real estate since many such leases contain step rents that are intended to reflect expected increases in market rents over the lease term.

Lease and Nonlease Components

Lessees and lessors are required to separate lease components and nonlease components (e.g., any services provided) in an arrangement and allocate the total transaction price to the individual components. Lessors would perform the allocation in accordance with the guidance in the new revenue recognition standard, and lessees would do so on a relative stand-alone-price basis (by using observable stand-alone prices or, if the prices are not observable, estimated stand-alone prices). However, lessees are permitted to elect, as an accounting policy by class of underlying asset, not to separate lease components from nonlease components and instead account for the entire contract as a single lease component.

[5] FASB Accounting Standards Codification Topic 840, *Leases*.

Editor's Note: When evaluating whether an activity should be considered part of a lease component or a separate nonlease component, an entity should consider whether the activity transfers a separate good or service to the lessee. For example, maintenance services (including common-area maintenance services) and utilities paid for by the lessor but consumed by the lessee would be separate nonlease components because the tenant would have been required to otherwise contract for these services separately. However, payments for property taxes or insurance would most likely be considered part of the lease component because they do not transfer a separate good or service to the tenant. This treatment could have the effect of increasing a lessee's lease liability since it would include amounts that are currently considered executory costs. From a practical standpoint, however, such amounts are frequently variable and therefore would not be included in the measurement of the lease liability, as discussed below. See Example 12 in ASC 842-10-55-141 through 55-145[6] for three cases that illustrate the evaluation of whether such costs are considered a lease component.

Variable Lease Payments

In its initial measurement of the lease liability and ROU asset (lessee) or the net investment in the lease (lessor), an entity would only include variable lease payments if such payments are tied to an index or a rate. However, the entity would not include variable lease payments that are based on usage or performance of the asset. A lessee would recognize any variable payments not included in the original lease obligation as an expense in the period the obligation is incurred.[7] A lessor would recognize variable lease payments not included in the original net investment in the lease in the period a change occurs in the facts and circumstances on which the variable lease payments are based (e.g., "when the lessee's sales on which the amount of the variable payment depends occur"). Even if a variable lease payment is virtually certain (e.g., contingent upon a retail store's achievement of a nominal sales volume), the payment would not be included in the calculation of a lessee's lease obligation and ROU asset or a lessor's net investment in the lease.

Example — Variable Lease Payments

On January 1, 20Y1, Company A leased a building for five years, payable in annual lease payments of $100,000 at the beginning of each year. The lease is classified as an operating lease and contains a provision that on December 31 of each year, the lease payments will be adjusted by the change in the CPI for the preceding 12 months. At lease commencement, the CPI is 112. The implicit rate in the lease is not known, and A's incremental borrowing rate is 7 percent. Any initial direct costs and lease incentives are ignored in this example.

Determining the Lease Payments

At lease commencement, A makes its first annual payment of $100,000. In addition, A records a lease liability of $338,721 (the present value of the total remaining lease payments discounted at the incremental borrowing rate) and an ROU asset of $438,721 (the total of the lease liability plus the prepaid rent of $100,000). In measuring these amounts, A did not take into consideration the CPI in effect at lease commencement because the rent increase is based on a change in an index as opposed to the index itself.

On December 31, 20Y1 (the lease payment reset date), the CPI has changed to 126, representing a 12.5 percent increase (i.e., calculated as [(126 – 112) ÷ 112]). Accordingly, A's lease payment in year 2 would be $112,500, comprising the fixed amount of $100,000 and the variable amount of $12,500 (calculated as the change in CPI multiplied by the fixed amount). Further, because A was not required to remeasure its lease liability for any other reason (e.g., a modification), there would be no adjustment to the liability to reflect changes in the CPI. That is, incremental amounts that will be paid in the future because of changes in the CPI would also be recognized as variable lease payments in the period the amounts are paid.

Had the rental increases been based on an index (as opposed to a change in an index), the current — or spot — value of the index would have been used to measure the initial lease liability and ROU asset. Changes in the index over the lease term would result in variable lease payments and would not require revision of the lease liability or ROU asset unless the lease is reassessed for other reasons.

[6] FASB Accounting Standards Codification Topic 842, *Leases*, was added by ASU 2016-02.

[7] The period in which the obligation is "incurred" refers to the period when it becomes probable that the specified target that triggers the variable lease payments will be achieved.

Initial Direct Costs

Under the new standard, a lessee includes initial direct costs in the initial measurement of the ROU asset. A lessor's accounting for initial direct costs is similar to that under current U.S. GAAP. That is, for direct financing leases, a lessor defers all initial direct costs and includes them in the initial measurement of the lease receivable. Similarly, for operating leases, a lessor defers the initial direct costs and amortizes them as expenses over the lease term. For sales-type leases, initial direct costs are expensed up front unless the transaction does not result in a profit or loss.

However, the new standard has changed the definition of initial direct costs to align with the definition of incremental cost in the new revenue recognition guidance. Initial direct costs for both lessees and lessors now include only those costs that are incremental to the arrangement and would not have been incurred if the lease had not been obtained.

Editor's Note: The change in the definition of initial direct costs will affect many real estate entities. Costs such as commissions (whether paid to employees or third-party brokers) and payments made to existing tenants to obtain the lease will continue to be considered initial direct costs. By contrast, costs such as allocated internal costs and costs to negotiate and arrange the lease agreement (e.g., professional fees such as those paid for legal and tax advice) are excluded from this definition. This is likely to result in changes in practice for many real estate lessors, which currently capitalize such costs.

Sale-Leaseback Accounting

The FASB also aligned sale-leaseback accounting with the underlying principles in the new revenue recognition standard. Under the new leases guidance, the seller-lessee in a sale-leaseback transaction must evaluate the transfer of the underlying asset (sale) in accordance with ASC 606 to determine whether the transfer qualifies as a sale (i.e., whether control has been transferred to the buyer). The existence of a leaseback by itself would not indicate that control has not been transferred (i.e., it would not preclude the transaction from qualifying as a sale) unless the leaseback is classified as a finance lease. In addition, if the arrangement includes an option for the seller-lessee to repurchase the asset, the transaction would not qualify as a sale unless (1) the option is priced at the fair value of the asset on the date of exercise and (2) alternative assets exist that are substantially the same as the transferred asset and are readily available in the marketplace.

If the transaction does not qualify as a sale, the seller-lessee and buyer-lessor would account for it as a financing arrangement (i.e., the buyer-lessor would account for its payment as a financial asset and the seller-lessee would record a financial liability).

Editor's Note: Sale-leaseback transactions involving real estate that include a purchase option are not expected to meet the criteria to qualify as a sale, regardless of whether the purchase option is at fair value. Each real estate property is unique and not readily available in the marketplace because of various factors such as location and specified use; therefore, the existence of a purchase option on the real estate, whether it is at fair value or not, is evidence that the real estate is not readily available in the marketplace. Accordingly, in a manner similar to current U.S. GAAP, any purchase options on real estate will preclude sale-leaseback accounting for the seller-lessee.

The new standard will also affect the evaluation of sale-leaseback transactions by the buyer-lessor. Under current U.S. GAAP, the buyer-lessor accounts for its purchase and subsequent lease without regard to the seller-lessee's accounting for the transaction. Under the ASU, the buyer-lessor's and seller-lessee's accounting must be symmetrical. Accordingly, the buyer-lessor must assess whether the seller-lessee has achieved a sale under ASC 606 before it can determine its accounting for the purchase of the real estate assets.

Business Impact and Implementation Considerations

The new lease accounting requirements could change how real estate entities do business and could affect tenant behaviors. For example:

- Since the ASU will result in increased leverage on the balance sheet, tenants may want to negotiate shorter-term leases or leases that include more variable lease payments. Such negotiations could result in increased operating costs for both lessees and lessors.
- An increase in shorter-term leases could also result in higher rental rates and, therefore, additional operating costs. This could also affect (1) the lessor's ability to obtain financing, (2) the financing costs on the property, (3) and the fair value of the lessor's property.
- Because most leases will be on the tenants' balance sheets, tenants may be more motivated to consider whether to lease or purchase a property, particularly those that currently enter into long-term, triple-net leases.
- Bringing leases onto the balance sheet will result in increased leverage and affects an entity's key metrics. Real estate entities that are also lessees under lease agreements (e.g., a land lease for one of the real estate entity's properties) should consider whether the increased leverage could result in debt covenant violations or potentially affect lending decisions.
- The new guidance may complicate a tenant's internal approval of new leases or lease modifications since different individuals may need to closely consider the effects on the financial statements. Under current U.S. GAAP, a tenant's decision to enter into an operating lease may not necessarily receive much opposition or challenge from management. However, operating leases potentially will now be scrutinized as much as out-right purchases because of their effect on the balance sheet. In addition, in its decisions related to leases, an entity may need to involve personnel from a number of departments, such as accounting, corporate reporting, treasury, legal, operations, tax, and information technology.

For a discussion of additional implementation considerations, including those related to the application of judgment and estimation, data management, changes to information technology systems, changes to internal controls and the business process environment, debt covenants, and income taxes, see Appendix F in Deloitte's March 1, 2016, *Heads Up*.

Don't miss an issue! Register to receive Spotlight and other Deloitte publications by going to www.deloitte.com/us/subscriptions. Publications pertaining to your selected industry (or industries), along with any other Deloitte publications or webcast invitations you choose, will be sent to you by e-mail.

Dbriefs for Financial Executives

We invite you to participate in *Dbriefs*, Deloitte's webcast series that delivers practical strategies you need to stay on top of important issues. Gain access to valuable ideas and critical information from webcasts in the "Financial Executives" series on the following topics:

- Business strategy and tax.
- Driving enterprise value.
- Financial reporting.
- Financial reporting for taxes.
- Governance, risk, and compliance.
- Technology.
- Transactions and business events.

Dbriefs also provides a convenient and flexible way to earn CPE credit — right at your desk. Join *Dbriefs* to receive notifications about future webcasts at www.deloitte.com/us/dbriefs.

Technical Library and US GAAP Plus

Deloitte makes available, on a subscription basis, access to its online library of accounting and financial disclosure literature. Called Technical Library: The Deloitte Accounting Research Tool, the library includes material from the FASB, EITF, AICPA, PCAOB, IASB, and SEC, in addition to Deloitte's own accounting and SEC manuals and other interpretive accounting and SEC guidance.

Updated every business day, Technical Library has an intuitive design and navigation system that, together with its powerful search features, enable users to quickly locate information anytime, from any computer. Technical Library subscribers also receive *Technically Speaking*, the weekly publication that highlights recent additions to the library. For more information, including subscription details and an online demonstration, visit www.deloitte.com/us/techlibrary.

In addition, be sure to visit US GAAP Plus, our free Web site that features accounting news, information, and publications with a U.S. GAAP focus. It contains articles on FASB activities and updates to the *FASB Accounting Standards Codification*™ as well as developments of other U.S. and international standard setters and regulators, such as the PCAOB, AICPA, SEC, IASB, and IFRS Interpretations Committee. Check it out today!

FASB Proposes Amendments to Clarify the Definition of a Business

by Lauren Pesa and Stefanie Tamulis, Deloitte & Touche LLP

On November 23, 2015, the FASB issued a proposed ASU[1] that would clarify the definition of a business in ASC 805[2] and provide a framework that an entity can use to determine whether a set of activities and assets (collectively, a "set") constitutes a business.

The FASB issued the proposed ASU in response to stakeholder feedback indicating that the definition of a business in ASC 805 is too broad and that too many transactions are qualifying as business combinations even though many of these transactions may more closely resemble asset acquisitions. Because the current definition has been interpreted broadly, it can be inefficient and costly to analyze transactions and entities may not be able to use "reasonable judgment." The proposed amendments would make application of the guidance more consistent and cost-efficient.

Editor's Note: Concerns about the definition of a business were among the primary issues raised in connection with the FAF's post-implementation review report on FASB Statement No. 141(R), *Business Combinations* (codified in ASC 805).

Significance of the Proposal

An entity uses the definition of a business in ASC 805 in determining whether to account for a transaction as an asset acquisition or a business combination. This distinction is important because the accounting for an asset acquisition significantly differs from the accounting for a business combination. For example, the acquirer's transaction costs are capitalized in an asset acquisition but are expensed in a business combination. Another difference is that in a business combination, the assets acquired are recognized at fair value and goodwill is recognized; in an asset acquisition, however, the cost of the acquisition is allocated to the assets acquired on a relative fair value basis and no goodwill is recognized.

The FASB considered addressing the concern about the definition of a business more directly by attempting to reduce or eliminate differences between the accounting for business combinations and that for asset acquisitions. However, to respond to stakeholder concerns in a timely fashion, the FASB decided to begin this project by clarifying the definition of a business.

[1] FASB Proposed Accounting Standards Update, *Clarifying the Definition of a Business*.
[2] For titles of *FASB Accounting Standards Codification* (ASC) references, see Deloitte's "Titles of Topics and Subtopics in the *FASB Accounting Standards Codification*."

Editor's Note: The definition of a business in ASC 805 also affects other aspects of accounting such as disposal transactions, determining reporting units, and the business scope exception in ASC 810. The proposed amendments would cause fewer sets of assets (and liabilities) to be identified as businesses.

Challenges Related to Applying the Current Definition of a Business

The definition of a business would remain unchanged under the proposed ASU. ASC 805 defines a business as:

> An integrated set of activities and assets that is capable of being conducted and managed for the purpose of providing a return in the form of dividends, lower costs, or other economic benefits directly to investors or other owners, members, or participants.

The current implementation guidance in ASC 805-10-55-4 states that a "business consists of inputs and processes applied to those inputs that have the ability to create outputs." A business has three elements — inputs, processes, and outputs. All businesses have inputs and processes, and most have outputs, but outputs are not required for a set to be a business. Further, ASC 805-10-55-5 states that "all of the inputs or processes that the seller used" in operating the set do not need to be part of the transaction "if market participants are capable of acquiring the [set] and continuing to produce outputs, for example, by integrating the [acquired set] with their own inputs and processes."

The current implementation guidance does not specify the minimum inputs and processes required for a set to meet the definition of a business, which has led some to interpret the definition of a business broadly. Some have said that a set may qualify as a business even if no processes are acquired when revenue-generating activities continue after an acquisition or if a market participant would be capable of integrating the acquired set with its own processes. For example, some believe that the acquisition of real estate with an in-place lease meets the definition of a business because a market participant is capable of acquiring an input (a building with a lease) and combining it with its own processes (processes to collect rent and maintain the building) to continue generating outputs (rental income). Others have said that the presence of any process can give rise to a business, regardless of the significance of that process.

In addition, ASC 805-10-55-4(c) refers to an output as having "the *ability* to provide a return in the form of dividends, lower costs, or other economic benefits directly to investors or other owners, members, or participants" (emphasis added). Many transactions can provide a return in some form (e.g., the acquisition of a new machine might lower costs). Thus, the definition of outputs has further contributed to broad interpretations of the definition of a business.

Main Provisions of the Proposal

The proposed ASU's Basis for Conclusions indicates that the amendments would "narrow the definition of a business and provide a framework that gives entities a basis for making reasonable judgements about whether a transaction involves an asset or a business." In addition, the proposal provides examples illustrating the application of the amendments to the determination of whether a set is a business.

Single or Similar Asset Threshold

The proposed ASU "would provide a practical way to determine when a [set] is not a business." That is, "when substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets," the set would not be considered a business. When this threshold is met, an entity would not need to evaluate the rest of the implementation guidance. The Basis for Conclusions notes that the assessment may be either qualitative or quantitative. In some cases, an entity may be able to qualitatively determine that all of the fair value of the acquisition would be assigned to a single asset or a group of similar assets. An entity may also be able to qualitatively determine that the fair value of the acquisition would be assigned to multiple dissimilar assets, in which case the threshold would not be met. In other cases, an entity may need to perform a quantitative assessment.

In addition, the FASB "decided that the threshold could be met if the fair value is concentrated in a group of similar identifiable assets" (e.g., when "an entity acquires, for example, multiple versions of substantially the same asset type instead of . . . one asset"). The Board further notes that although it intended "to make the analysis practical, the criteria are intended to weigh the need for practicality with the risk that too many items are grouped together to avoid being considered a business."

To avoid inappropriate groupings of assets, the FASB is adding ASC 805-10-55-9C to the proposed ASU. This paragraph indicates that an entity should not combine the following assets into a single asset (or consider them to be similar assets):

a. Tangible and intangible assets (for example, real estate and in-place lease intangibles)
b. Identifiable intangible assets in different major intangible asset classes (for example, customer-related intangibles, trademarks, and in-process research and development), except for groups of identifiable intangible assets that are recognized and measured as a single identifiable asset in accordance with this Topic (for example, complementary intangible assets that have similar useful lives . . .)
c. Financial and nonfinancial assets
d. Different major classes of financial assets (for example, cash, accounts receivable, and marketable securities)
e. Different major classes of tangible nonfinancial assets (for example, inventory, manufacturing equipment, and automobiles).

The following example (reprinted from the proposed ASU) illustrates how to apply the threshold:

Case A: Acquisition of Single-Family Homes

ABC acquires, renovates, leases, sells, and manages single-family residential homes. ABC acquires a portfolio of 10 single-family homes that each have at-market in-place leases. The only elements included in the acquired set are the 10 single-family homes and the 10 in-place leases. Each single-family home includes the land, building, and property improvements. Each home has a different floor plan, square footage, lot, and interior design.

ABC first considers the guidance in paragraph 805-10-55-9A and analyzes whether substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets. ABC must first determine whether each single-family home would be considered a single asset for purposes of this analysis. ABC concludes that the land, building, and property improvements can be considered a single asset in accordance with paragraph 805-10-55-9B. That is, the building and property improvements are attached to the land and cannot be removed without incurring significant cost. However, the in-place lease is an intangible asset and cannot be combined with the tangible real estate in accordance with paragraph 805-10-55-9C.

ABC then considers whether the 10 tangible assets (the combined land, building, and property improvements) are similar. Each home is different; however, the nature of the assets (all single-family homes) are similar. As such, ABC concludes that the group of 10 single-family homes is a group of similar assets.

Next, ABC compares the fair value of the group of similar tangible assets with the fair value of the total gross assets acquired (the combined tangible assets plus the 10 in-place lease assets) and concludes that substantially all of the fair value of the gross assets acquired is concentrated in the group of similar tangible assets. That is, the in-place leases in this Example do not have significant fair value. As such, the set is not a business.

Substantive Process

The proposed amendments would clarify that to be "a business, a transaction must include, at a minimum, an input and a *substantive* process" (emphasis added). Further, the Board points out that "the existence of a process (or processes) is what distinguishes a business from an asset because all asset acquisitions have inputs, and, therefore, providing additional guidance related to processes should help differentiate between [groups of] assets and businesses."

The proposed amendments would not change the definition of process, but they would add two different sets of criteria for entities to consider in determining whether a set has a substantive process; these criteria depend on whether a set has outputs.

A Set With No Outputs

When outputs are not present, an entity would need to apply more stringent criteria when determining whether a set has a substantive process (e.g., an early-stage company that has not generated revenues). The proposal points out that "[b]ecause outputs are a key element of a business and [because] a business usually has outputs, . . . when that key element is missing, the other elements should be more significant." Therefore, to qualify as a business, a set that does not have outputs would need to have both an input and a substantive process. The set would include a substantive process "if it includes an organized workforce that has the necessary skills, knowledge, or experience to perform an acquired process (or group of processes) that, when applied to another acquired input or inputs, is critical to the ability to develop or convert that acquired input or inputs into outputs." The existence of any employee does not mean that a set without outputs should be considered a business. The proposal notes that in the evaluation of whether an acquired workforce is performing a substantive process, the following factors should be considered:

a. A process (or group of processes) is not critical if, for example, it is considered ancillary or minor in the context of all the processes required to create outputs.

b. Inputs that the organized workforce could develop (or is developing) or convert into outputs could include the following:

    1. Intellectual property that could be used to develop a good or service

    2. Resources that could be developed to create outputs

    3. Access to necessary materials or rights that enable the creation of future outputs.

    Examples could include technology, mineral interests, real estate, or in-process research and development.

The following example (reprinted from the proposed ASU) illustrates the assessment an entity would perform when a set has no outputs:

Case E: Acquisition of Biotech

Pharma Co. buys all of the outstanding shares of Target Biotech. Target Biotech's operations include research and development activities on several preclinical compounds that it is developing (in-process research and development projects). The set includes the scientists that have the necessary skills, knowledge, or experience to perform research and development activities. In addition, Target Biotech has long-lived tangible assets such as a corporate headquarters, a research lab, and testing equipment. Target Biotech does not yet have a marketable product and, therefore, has not generated revenues.

Pharma Co. first considers the guidance in paragraph 805-10-55-9A and analyzes whether substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets. The identifiable assets in the set include multiple in-process research and development projects and tangible assets (the corporate headquarters, the research lab, and the lab equipment). In addition, Pharma Co. concludes that there is fair value associated with the acquired workforce. Pharma Co. also concludes that substantially all of the fair value of the gross assets acquired is not concentrated in a single identifiable asset or group of similar identifiable assets. Furthermore, because of the significant amount of fair value associated with both the tangible assets and the acquired workforce, Pharma Co. does not assess whether the in-process research and development projects are similar (because even if those projects were similar, the threshold would not be met).

Because the set does not have outputs, Pharma Co. evaluates the criteria in paragraph 805-10-55-5A to determine whether the set has both an input and a substantive process. Big Pharma concludes that the criteria in paragraph 805-10-55-5A are met because the scientists make up an organized workforce that has the necessary skills, knowledge, or experience to perform processes that, when applied to the in-process research and development inputs, is critical to the ability to develop those inputs into a good that can be provided to a customer. The presence of a more than insignificant amount of goodwill is another indicator that the workforce is performing a critical process. Thus, the set includes both inputs and substantive processes and is a business.

A Set With Outputs

The Basis for Conclusions indicates that when a set has outputs (i.e., there is a continuation of revenues before and after the transaction), "it is more likely that the set includes both an input and a substantive process when compared with a set that is not generating outputs." Therefore, the criteria for determining whether a set with outputs has a substantive process are less stringent. ASC 805-10-55-5B (added by the proposed ASU) indicates that the set would include a substantive process if any of the following criteria are met:

a. An organized workforce that has the necessary skills, knowledge, or experience to perform an acquired process (or group of processes) that when applied to an acquired input or inputs, is critical to the ability to continue producing outputs. A process (or group of processes) is not critical if, for example, it is considered ancillary or minor in the context of all of the processes required to continue producing outputs.
b. The acquired process (or group of processes), when applied to an acquired input or inputs, contributes to the ability to continue producing outputs and cannot be replaced without significant cost, effort, or delay in the ability to continue producing outputs.
c. The acquired process (or group of processes), when applied to an acquired input or inputs, contributes to the ability to continue producing outputs and is considered unique or scarce.

An organized workforce may signify the existence of a substantive process but would not be required if outputs are present. The Basis for Conclusions states, for example, that "an organized workforce might not be required if the set includes automated processes (for example, through acquired technology, infrastructure, or specialized equipment) or other significant processes that contribute to the ability to continue producing outputs."

Further, ASC 805-10-55-5C (added by the proposed ASU) states, in part:

If a set has outputs, a continuation of revenues does not, on its own, indicate that both an input and a substantive process have been acquired. Accordingly, assumed contractual arrangements that provide for the continuation of revenues (for example, customer contracts, customer lists, and leases [when the set is the lessor]) should be excluded from the analysis . . . of whether a [substantive] process has been acquired.

The following example (reprinted from the proposed ASU) illustrates the assessment an entity would perform when a set has outputs:

Case F: License of Distribution Rights

Company A is a global producer of food and beverages. Company A enters into an agreement to license the Latin American distribution rights of Yogurt Brand F to Company B whereby Company B will be the exclusive distributor of Yogurt Brand F in Latin America. As part of the agreement, Company A transfers the existing customer contracts in Latin America to Company B. Companies A and B also enter into an at-market supply contract in which Company B will purchase all of Yogurt Brand F from Company A. Company A retains all of its manufacturing and distribution capabilities. That is, Company B does not acquire manufacturing inputs and processes or distribution inputs and processes (and does not have any of the intellectual property related to those processes or to direct Company A's processes in any way) but only will purchase finished goods from Company A that it will sell and distribute to end customers in Latin America.

Company B first considers the guidance in paragraph 805-10-55-9A and analyzes whether substantially all of the fair value of the gross assets acquired is concentrated in a single identifiable asset or group of similar identifiable assets. The identifiable assets that could be recognized in a business combination include the license to distribute Yogurt Brand F, customer contracts, and the supply agreement. Company B concludes that only the license and customer contracts would have fair value assigned to them and that neither asset represents substantially all of the fair value of the gross assets. Company B then considers whether the license and customer contracts are a group of similar intangible assets. Because the license and customer contracts are in different major classes of identifiable intangible assets, they would not be considered similar assets. Therefore, substantially all of the fair value of the gross assets acquired is not concentrated in a single identifiable asset or group of similar identifiable assets, and Company B must evaluate whether the set has both an input and a substantive process.

The set has outputs through the continuation of revenues with customers in Latin America. As such, Company B must evaluate the criteria in paragraph 805-10-55-5B to determine whether the set includes an input and a substantive process that together contribute to the ability to create outputs. Because the customer contracts are excluded from the determination of whether a process is present in accordance with paragraph 805-10-55-5C, the only elements in the set to evaluate to determine whether a substantive process is present are the license and supply agreement, both of which are inputs. That is, Company B did not obtain any process that could be applied to an acquired input to produce or distribute Yogurt Brand F but, rather, only a right to distribute and the access to purchase Yogurt Brand F. Because the set does not include an organized workforce and there are no acquired processes that could meet the criteria in paragraph 805-10-55-5B(b) through (c), the set is not a business because it does not include both an input and a substantive process.

Definition of Outputs

The proposed amendments would change the definition of outputs to "[t]he result of inputs and processes applied to those inputs that provide goods or services to customers, other revenues, or investment income, such as dividends or interest." The definition of outputs would be narrowed to be consistent with ASC 606, which "describes goods or services that are an output of the entity's ordinary activities." However, not every entity has revenues within the scope of ASC 606. Therefore, the Board decided to incorporate into the definition of outputs other types of revenues. For example, the reference to investment income in the definition of outputs in the proposed amendments was included to ensure that the purchase of an investment company could still qualify as a business combination.

Next Steps

Comments on the proposed ASU are due by January 22, 2016. An entity would apply the proposed amendments prospectively to any transaction that occurs on or after the effective date and would not be required to provide any disclosures at transition. The proposal notes that the FASB "will determine the effective date and whether the proposed amendments may be applied before the effective date after it considers stakeholder feedback on the proposed amendments."

At a later date, the Board will discuss clarifying the guidance on partial sales or transfers of assets that are within the scope of ASC 610-20 as well as the corresponding accounting for the retained interests. The FASB also plans to discuss aligning the accounting for acquisitions of assets with that for businesses.

Convergence With IFRSs

The definition of a business in ASC 805 is currently identical to that in IFRS 3.[3] Nevertheless, the interpretation and application of this term in jurisdictions that apply U.S. GAAP do not appear consistent with those in jurisdictions that apply IFRSs (i.e., the definition of a business in IFRS jurisdictions is not applied as broadly). Although the proposed ASU would add implementation guidance to U.S. GAAP that is not found in IFRSs, the FASB intends to more closely align practice under U.S. GAAP with that under IFRSs by narrowing application of the U.S. GAAP definition. Further, the IASB has added a project on the definition of a business to its agenda and is considering making amendments similar to those in the proposed ASU.

Dbriefs for Financial Executives

We invite you to participate in *Dbriefs*, Deloitte's webcast series that delivers practical strategies you need to stay on top of important issues. Gain access to valuable ideas and critical information from webcasts in the "Financial Executives" series on the following topics:

- Business strategy and tax.
- Driving enterprise value.
- Financial reporting.
- Financial reporting for taxes.
- Governance, risk, and compliance.
- Technology.
- Transactions and business events.

Dbriefs also provides a convenient and flexible way to earn CPE credit — right at your desk. Subscribe to *Dbriefs* to receive notifications about future webcasts at www.deloitte.com/us/dbriefs.

Technical Library and US GAAP Plus

Deloitte makes available, on a subscription basis, access to its online library of accounting and financial disclosure literature. Called Technical Library: The Deloitte Accounting Research Tool, the library includes material from the FASB, EITF, AICPA, PCAOB, IASB, and SEC, in addition to Deloitte's own accounting and SEC manuals and other interpretive accounting and SEC guidance.

Updated every business day, Technical Library has an intuitive design and navigation system that, together with its powerful search features, enable users to quickly locate information anytime, from any computer. Technical Library subscribers also receive Technically Speaking, the weekly publication that highlights recent additions to the library. For more information, including subscription details and an online demonstration, visit www.deloitte.com/us/techlibrary.

In addition, be sure to visit US GAAP Plus, our free Web site that features accounting news, information, and publications with a U.S. GAAP focus. It contains articles on FASB activities and updates to the *FASB Accounting Standards Codification*™ as well as developments of other U.S. and international standard setters and regulators, such as the PCAOB, AICPA, SEC, IASB, and IFRS Interpretations Committee. Check it out today!

Bring It On!
FASB's New Standard Brings Most Leases Onto the Balance Sheet

by James Barker, Trevor Farber, Stephen McKinney, and Tim Kolber, Deloitte & Touche LLP

After working for almost a decade, the FASB has finally issued its new standard on accounting for leases, ASU 2016-02.[1] The IASB issued its own version, IFRS 16,[2] in January, and although the project was a convergence effort and the boards conducted joint deliberations, there are several notable differences between the two standards. We have highlighted those in the table below.

The primary objective of the leases project was to address the off-balance-sheet financing concerns related to lessees' operating leases. However, developing an approach that requires all operating leases to be recorded on the balance sheet proved to be no small task. During the process, the boards had to grapple with questions such as (1) whether an arrangement is a service or a lease, (2) what amounts should be initially recorded on the lessee's balance sheet for the arrangement, (3) how to reflect the effects of leases in the statement of comprehensive income of a lessee (a point on which the FASB and IASB were unable to converge), and (4) how to apply the resulting accounting in a cost-effective manner.

Accordingly, the FASB's new standard introduces a lessee model that brings most leases on the balance sheet. The standard also aligns certain of the underlying principles of the new lessor model with those in ASC 606, the FASB's new revenue recognition standard (e.g., evaluating how collectibility should be considered and determining when profit can be recognized). Furthermore, the ASU addresses other concerns related to the current almost-40-year-old leases model. For example, it eliminates the required use of bright-line tests in current U.S. GAAP for determining lease classification. It also requires lessors to provide additional transparency into the exposure to the changes in value of their residual assets and how they manage that exposure.

The new standard, which is effective for calendar periods beginning on January 1, 2019, for public business entities and January 1, 2020, for all other entities (see the Effective Date section for more information), represents a wholesale change to lease accounting, and as a result, entities will face significant implementation challenges during the transition period and beyond, such as those related to:

- Applying judgment and making estimates.
- Managing the complexities of data collection, storage, and maintenance.
- Enhancing information technology systems to ensure their ability to perform the calculations necessary for compliance with reporting requirements.

[1] FASB Accounting Standards Update No. 2016-02, *Leases*. The ASU supersedes FASB Accounting Standards Codification (ASC) Topic 840, *Leases*, and creates ASC 842, *Leases*. For titles of additional ASC references, see Deloitte's "Titles of Topics and Subtopics in the *FASB Accounting Standards Codification*."

[2] IFRS 16, *Leases*. For more information on the IASB's standard, see Deloitte's January 13, 2016, *IFRS in Focus*.

- Refining internal controls and other business processes related to leases.
- Determining whether debt covenants are likely to be affected and, if so, working with lenders to avoid violations.
- Addressing any income tax implications.

See Appendix F of the *Heads Up* for more information about an entity's implementation considerations.

This *Heads Up* provides a comprehensive overview of the FASB's new leases accounting model under ASU 2016-02 and highlights a number of implementation considerations. The *Heads Up* also contains the following appendixes, which expand on certain key aspects of the standard:

- Appendix A — Evaluating Whether an Arrangement Is or Contains a Lease.
- Appendix B — Other Significant Provisions. (Topics discussed include lease modifications, separating lease and nonlease components, and accounting for sale-and-leaseback transactions.)
- Appendix C — Presentation Requirements.
- Appendix D — Disclosure Requirements.
- Appendix E — Transition.
- Appendix F — Implementation Considerations.

A Snapshot of the New Guidance

The table below highlights the key provisions of the new leases accounting model under ASU 2016-02 and IFRS 16.

Key Provision	ASU 2016-02	IFRS 16
Scope	Scope includes leases of all property, plant, and equipment (PP&E) and excludes: • Leases of intangible assets. • Leases to explore for or use nonregenerative resources. • Leases of biological assets. • Leases of inventory. • Leases of assets under construction.	Scope includes leases of all assets (not limited to PP&E). Exceptions are similar to those in ASU 2016-02. Also, lessees can elect to apply the guidance to leases of intangible assets.
Short-term lease	A lessee may recognize the payments on a short-term lease on a straight-line basis over the lease term (in a manner similar to its recognition of an operating lease today). These leases would not be reflected on the lessee's balance sheet. A short-term lease is defined as a lease that has a lease term of 12 months or less and does not include a purchase option that the lessee is reasonably certain to exercise.	A lessee may recognize the payments on a short-term lease on a straight-line basis over the lease term (in a manner similar to its recognition of an operating lease today). These leases would not be reflected on the lessee's balance sheet. A short-term lease is defined as a lease that has a lease term of 12 months or less and does not include a purchase option.

<table>
<tr><th>Key Provision</th><th>ASU 2016-02</th><th>IFRS 16</th></tr>
<tr><td rowspan="2">Definition of a lease</td><td>A lease is defined as a "contract, or part of a contract, that conveys the right to control the use of identified property, plant, or equipmen t (an identified asset) for a period of time in exchange for consideration."</td><td>A lease is defined as a "contract, or part of a contract, that conveys the right to use an asset (the underlying asset) for a period of time in exchange for consideration."</td></tr>
<tr><td colspan="2">• A leased asset must be specifically identifiable either explicitly (e.g., by a serial number) or implicitly (e.g., the only asset available to satisfy the lease contract).
◦ Substantive substitution rights will need to be considered.
◦ A physically distinct portion of a larger asset could represent a specified asset (e.g., one floor of a building).
◦ A capacity portion of a larger asset will generally not represent a specified asset (e.g., percentage of a storage tank).
• A lease contract conveys the right to control the use of the identified asset for a specified period of time. A customer controls an identified asset when the customer:
◦ Has the right to obtain substantially all of the economic benefits from its use.
◦ Has the right to direct its use.</td></tr>
<tr><td>Leases of low-value assets</td><td>No exemption under U.S. GAAP. However, the FASB believes that an entity will be able to adopt a reasonable capitalization policy under which the entity will not recognize certain lease assets and liabilities that are below a certain threshold.</td><td>A lessee may recognize the payments on a lease of low-value assets on a straight-line basis over the lease term (in a manner similar to its recognition of an operating lease today). These leases would not be reflected on the lessee's balance sheet. IFRS 16 does not define "low value"; however, when the IASB was discussing the exception during deliberations, the Board referred to assets that were less than $5,000.
In addition, an entity will be able to adopt a reasonable capitalization policy under which the entity will not recognize certain lease assets and liabilities that are below a certain threshold.</td></tr>
<tr><td rowspan="2">Lessee accounting</td><td colspan="2">As of the lease commencement date, a lessee recognizes:
• A liability for its lease obligation (initially measured at the present value of the future lease payments not yet paid over the lease term).
• An asset for its right to use the underlying asset (i.e., the right-of-use (ROU) asset) equal to the lease liability, adjusted for lease payments made at or before lease commencement, lease incentives, and any initial direct costs.</td></tr>
<tr><td>The lessee will use the effective interest rate method to subsequently account for the lease liability.
Two approaches are used for subsequently amortizing the ROU asset: (1) the finance lease approach and (2) the operating lease approach.
Under the finance lease approach, the ROU asset is generally amortized on a straight-line basis. This amortization, when combined with the interest on the lease liability, results in a front-loaded expense profile in which interest and amortization are presented separately in the income statement. By contrast, the operating lease approach generally results in a straight-line expense profile that is presented as a single line item in the income statement.
The determination of which approach to apply is based on lease classification criteria that are similar to the current requirements in IAS 17.[3]</td><td>The lessee will use the effective interest rate method to subsequently account for the lease liability.
A single approach (similar to the FASB's finance lease approach) is used to subsequently amortize the ROU asset.</td></tr>
</table>

[3] IAS 17, *Leases*.

<table>
<thead>
<tr><th>Key Provision</th><th>ASU 2016-02</th><th>IFRS 16</th></tr>
</thead>
<tbody>
<tr><td>Lessor accounting</td><td>Retains the current lessor accounting approach for operating and capital (direct financing and sales-type) leases.

However, the lease classification criteria will change, and the treatment of dealer's profit, if any, will be affected:
• A dealer's profit would be recognized up front if the arrangement is a sales-type lease (i.e., the transaction qualifies as a sale under ASC 606).
• A dealer's profit resulting from a direct financing lease, if any, would be deferred and recognized as interest income over the lease term.

Eliminates leveraged lease accounting going forward (existing leveraged leases are grandfathered).</td><td>Retains the current lessor accounting approach for operating and finance leases. A dealer's profit for a finance lease is recognized up front without regard to the revenue guidance in IFRS 15.[4]</td></tr>
<tr><td>Lease term</td><td>Lease term is the noncancelable period in which the lessee has the right to use an underlying asset together with optional periods for which it is reasonably certain that the lessee will exercise the renewal option or not exercise the termination option or in which the exercise of those options is controlled by the lessor. Lessees will be required to reassess the lease term after lease inception if (1) there is a significant event or change in circumstances that is directly attributable to the actions of the lessee, (2) a contract term obliges the lessee to exercise (or not exercise) an option to extend or terminate the lease, or (3) the lessee elects to exercise (or not exercise) an option to renew or terminate the contract that it had previously determined was not reasonably certain to be exercised.

A lessor is not required to reassess the lease term unless the lease is modified and the modified lease is a separate contract.</td><td>Lease term is the noncancelable period in which the lessee has the right to use an underlying asset together with optional periods for which it is reasonably certain that the lessee will exercise the renewal option or not exercise the termination option. Lessees will be required to reassess the lease term after lease inception if (1) there is a significant event or change in circumstances that is directly attributable to the actions of the lessee or (2) the lessee elects to exercise (or not exercise) an option to renew or terminate the contract that it had previously determined was not reasonably certain to be exercised.

A lessor is not required to reassess the lease term unless the lease is modified and the modified lease is a separate contract.</td></tr>
<tr><td rowspan="2">Lease payments</td><td colspan="2">Lease payments include:
• Fixed payments (including in-substance fixed lease payments).
• Variable payments that are based on an index or rate (e.g., LIBOR or the consumer price index (CPI)) calculated by using the index or rate that exists on the lease commencement date (i.e., the spot rate).
• Amounts that it is probable will be owed under residual value guarantees (for lessees), and amounts at which residual assets are guaranteed by a lessee or by a third party (for lessors).
• Payments related to renewal or termination options that the lessee is reasonably certain to exercise.

Lease payments do not include variable lease payments that are based on the usage or performance of the underlying asset (e.g., a percentage of revenues).</td></tr>
<tr><td>Variable payments based on an index or rate would only be reassessed when the lease obligation is reassessed for other reasons (e.g., change in the lease term, modification).</td><td>Variable payments based on an index or rate would be reassessed whenever there is a change in contractual cash flows (e.g., the lease payments are adjusted for a change in the CPI).</td></tr>
<tr><td rowspan="2">Discount rate</td><td colspan="2">• Lessees use the rate charged by the lessor if the rate is readily determinable. If the rate is not readily determinable, lessees will use their incremental borrowing rate as of the date of lease commencement.
• Lessors use the rate they charge the lessee.</td></tr>
<tr><td>Private-company lessees can elect to use a risk-free rate.</td><td>No exemptions provided for private-company lessees.</td></tr>
</tbody>
</table>

4 IFRS 15, *Revenue From Contracts With Customers*.

<table>
<tr><th>Key Provision</th><th>ASU 2016-02</th><th>IFRS 16</th></tr>
<tr><td>Lease modifications</td><td colspan="2">A lease modification is any change to the contractual terms and conditions of a lease.
• A lessee/lessor would account for a lease modification as a separate contract (i.e., separate from the original lease) when the modification (1) grants the lessee an additional ROU asset and (2) the price of the additional ROU asset is commensurate with its stand-alone price.
• Lessees would account for a lease modification that is not a separate contract by using the discount rate as of the modification effective date to adjust the lease liability and ROU asset for the change in the lease payments. The modification may result in a gain or loss if the modification results in a full or partial termination of an existing lease.
• Lessors would account for a lease modification in a manner generally consistent with the modification guidance in ASC 606 or IFRS 15.
• See Appendix B for more information.</td></tr>
<tr><td>Sublease</td><td>The intermediate lessor would classify a sublease by using the underlying asset of the head lease.</td><td>The intermediate lessor would classify a sublease by using the ROU asset of the head lease.</td></tr>
<tr><td>Sale-and-leaseback arrangements</td><td>The transaction would not be considered a sale if (1) it does not qualify as a sale under ASC 606 or (2) the leaseback is a finance lease.
• A repurchase option would result in a failed sale unless (1) the exercise price of the option is at fair value and (2) there are alternative assets readily available in the marketplace.
• If the transaction qualifies as a sale, the entire gain on the transaction would be recognized.</td><td>The transaction would not be considered a sale if it does not qualify as a sale under IFRS 15.
• A repurchase option would always result in a failed sale.
• For transactions that qualify as a sale, the gain would be limited to the amount related to the residual portion of the asset sold. The amount of the gain related to the underlying asset leased back to the lessee would be offset against the lessee's ROU asset.</td></tr>
</table>

Scope

Like the scope under current requirements, the scope of the new guidance is limited to leases of PP&E. The scope excludes (1) leases of intangible assets; (2) leases to explore for or use minerals, oil, natural gas, and similar nonregenerative resources; (3) leases of biological assets; (4) leases of inventory; and (5) leases of assets under construction.

Editor's Note: Under the proposal issued by the boards in May 2013, the scope of the lease accounting guidance would have included inventory (e.g., spare parts and supplies) and construction work in progress (CWIP). However, constituents expressed concerns that if the guidance applied to CWIP, build-to-suit transactions (in which the customer is involved with the construction activity) may be accounted for as leases. In response, the FASB revisited the scope of the guidance in late 2015 and decided to limit it to PP&E. However, it also decided to include guidance on a lessee's control of an underlying asset that is being constructed before lease commencement and related considerations. See Build-to-Suit Arrangements in Appendix B for additional information.

Short-Term Leases

Under the ASU, a lessee can elect (by asset class) not to record on the balance sheet a lease whose term is 12 months or less and does not include a purchase option that the lessee is reasonably certain to exercise (i.e., treat the lease like an operating lease under current U.S. GAAP). When determining whether the lease qualifies for this election, the lessee would include renewal options only if they are considered part of the lease term (i.e., those options the lessee is reasonably certain to exercise — see the Lease Term section below).

A lessee electing this option would recognize lease payments as an expense over the lease term on a straight-line basis. The lessee would also be required to disclose certain information about the short-term lease. If the lease term increases to more than 12 months, or if it is reasonably certain that the lessee will exercise an option to purchase the underlying asset, the lessee would no longer be able to apply the short-term lease exception and would account for the lease as it would other leases.

Example 1 — Short-Term Leases

Scenario 1 — Short-Term Lease Criteria Met

Company A (lessee) enters into an arrangement to lease a crane for a six-month period, with the option to extend the term for up to nine additional months (in three-month increments). After considering the nature of the project, A determines that it expects to use the crane for only nine months and is therefore reasonably certain that it will exercise only one of the three renewal options. Since the lease term is not more than 12 months (in this case 9 months), A would be able to elect the short-term lease exception.

Scenario 2 — Short-Term Lease Criteria Not Met

Company A (lessee) enters into an arrangement to lease a crane for a six-month period, with the option to extend the term for up to nine additional months (in three month increments). The project for which the crane is being used is expected to take 15 months to complete.

After considering the nature of the project, A determines that it expects to use the crane for 15 months and is therefore reasonably certain that it will exercise all three renewal options. Because the expected lease term is greater than 12 months, A would not be able to apply the short-term lease exception; rather, it would be required to record on the balance sheet an ROU asset and corresponding lease liability.

Definition of a Lease

A contract is, or contains, a lease if the contract gives a customer the right to control the use of the identified PP&E (an identified asset) for a period of time in exchange for consideration. Control is considered to exist if the customer has both of the following:

- The "right to obtain substantially all of the economic benefits from use of [an identified] asset."
- The "right to direct the use of that asset."

An entity is required at inception to identify whether a contract is, or contains, a lease. The entity will only reassess whether the contract is or contains a lease in the event of a modification to the terms and conditions of the contract. The inception of a lease is the earlier of the date of an executed lease agreement or the date of commitment by the parties to the principal terms and conditions of the lease.

In many cases, the assessment of whether a contract is or contains a lease will be straightforward. However, the evaluation will be more complicated when an arrangement involves both a service component and a leasing component or when both the customer and the supplier make decisions about the use of the underlying asset. Accordingly, the ASU contains a number of examples of an entity's evaluation of whether a contract is or contains a lease (see ASC 842-10-55-41 through 55-130 in the ASU).

The table below summarizes each key concept related to the definition of a lease. (See Appendix A for more information about the definition of a lease.)

Concept	Requirement[5]	Observation
Use of an identified asset	An asset is typically identified if it is explicitly specified in a contract or implicitly specified at the time the asset is made available for use by the customer. However, if the supplier has substantive rights to substitute the asset throughout the period of use, the asset is not considered "identified."	This requirement is similar to the guidance in ASC 840-10-15 (formerly EITF Issue 01-8[6]). An entity does not need to be able to identify the particular asset (e.g., by serial number) but must instead determine whether an identified asset is needed to fulfil the contract. An entity will need to use significant judgment in distinguishing between a lease and a capacity contract. The standard clarifies that a capacity portion of an asset is an identified asset if it is physically distinct (e.g., a floor of a building). On the other hand, a capacity portion of a larger asset that is not physically distinct (e.g., a percentage of a pipeline) is not an identified asset unless the portion represents substantially all of the asset's capacity.
Substantive substitution rights	A supplier's right to substitute an asset is substantive only if both of the following conditions apply: (1) the supplier has the practical ability to substitute alternative assets throughout the period of use and (2) the supplier would benefit economically from the exercise of its right to substitute the asset.	The FASB established this requirement because it reasoned that if a supplier has a substantive right to substitute the asset throughout the period of use, then the supplier — not the customer — controls the use of the asset. A contract to use a specified type of rail car to transport goods is an example of economic benefit from substitution rights. The supplier benefits from exercise of its right to substitute because it can use its pool of available rolling stock in the most efficient manner.
Right to obtain economic benefits from use of the identified asset	To control the use of an identified asset, a customer must have the right to obtain substantially all of the economic benefits from use of the asset throughout the period of use.	The economic benefits from use of an asset include the primary output and by-products of the asset as well as other economic benefits from using the asset that could be realized from a commercial transaction with a third party.
Right to direct the use of the identified asset	A customer has the right to direct the use of an identified asset throughout the period of use if either (1) the customer has the right to direct how and for what purpose the asset is used throughout the period of use or (2) the relevant decisions about how and for what purpose the asset is used are predetermined and (a) the customer has the right to operate (or direct others to operate) the asset throughout the period of use and the supplier does not have the right to change the operating instructions or (b) the customer designed the asset in a way that predetermines how and for what purpose the asset will be used.	The relevant rights to be considered are those that affect the economic benefits derived from the use of the asset. Some examples of customers' rights that meet the definition are (1) rights to change the type of output produced by the asset, (2) rights to change when the output is produced, and (3) rights to change where the output is produced. On the other hand, rights that are limited to maintaining or operating the asset do not grant a right to direct how and for what purpose the asset is used. The standard illustrates the concept of directing use through design of the asset in an example of a contract to purchase all of the output of a solar farm. In the example, the FASB concludes that although the customer makes no decisions during the life of the farm, it has the right to direct its use as a result of having designed the asset before it was constructed.

[5] Text is adapted from the ASU.

[6] EITF Issue No. 01-8, "Determining Whether an Arrangement Contains a Lease" (codified in FASB Accounting Standards Codification Topic 840, *Leases*).

Lease Classification

An entity is required to determine the classification of a lease as of the lease commencement date.[7] The ASU's classification criteria apply to both lessees (U.S. GAAP only)[8] and lessors (U.S. GAAP and IFRSs). The evaluation focuses on whether control of the underlying asset is effectively transferred to the lessee (e.g., substantially all of the risks and rewards related to ownership of the underlying asset are transferred to the lessee). Therefore, a lease would be classified as a finance lease (from the standpoint of a lessee) or a sales-type lease (from the standpoint of a lessor) if any of the following criteria are met:

- "The lease transfers ownership of the underlying asset to the lessee by the end of the lease term."
- "The lease grants the lessee an option to purchase the underlying asset that the lessee is reasonably certain to exercise."
- "The lease term is for the major part of the remaining economic life of the underlying asset."[9]
- "The present value of the sum of the lease payments and any residual value guaranteed by the lessee . . . equals or exceeds substantially all of the fair value of the underlying asset."
- "The underlying asset is of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term."

Leases that do not meet any of these criteria (i.e., a lease in which the lessee does not effectively obtain control of the underlying asset) would be classified as operating leases by the lessee and as either operating leases or direct financing leases by the lessor.

Editor's Note: Under the ASU's classification criteria, an arrangement that historically was classified by a lessor as a sales-type lease because the lessor transferred a portion of the risks and rewards of the underlying asset to the lessee and a portion to a third party through a residual value guarantee (e.g., residual value insurance) may no longer qualify as a sales-type lease. In the evaluation of whether a lease qualifies as a sales-type lease, the FASB decided to align the definition of control with its new revenue recognition requirements. Accordingly, the evaluation of whether a lease qualifies as a sales-type lease focuses on whether the *lessee effectively obtains control* of the underlying asset rather than whether the *lessor has relinquished control*.

If a lease does not meet any of the criteria for classification as a sales-type lease, the lessor would still need to assess whether it has relinquished control of the underlying asset to the lessee and other parties involved in the transaction. Accordingly, the lessor would classify a lease that does not meet any of the criteria for a sales-type lease as a direct financing lease if (1) the present value of the lease payments and any residual value guarantee (which could be provided entirely by a third party or could consist of a guarantee provided by the lessee along with a third party guarantee)[10] "equals or exceeds substantially all of the fair value of the underlying asset" and (2) it is probable that the lessor will collect the lease payments and any amounts related to the residual value guarantee(s).

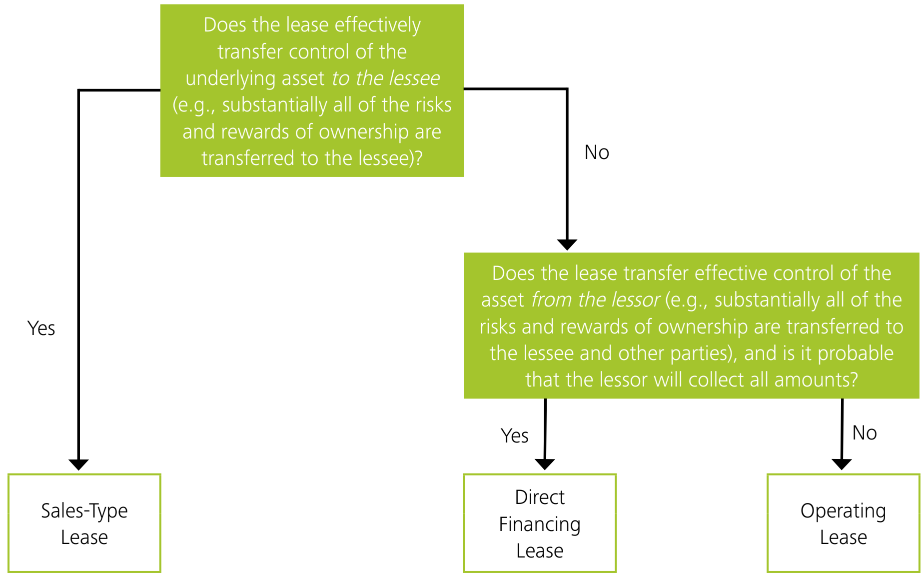
[7] Lease commencement is defined as the date a lessor makes the underlying asset available to a lessee.

[8] A lessee is not required to determine the classification of a lease if the lease is accounted for in accordance with the short-term scope exception. See Appendix B for further details.

[9] The ASU provides an exception to this lease classification criteria for leases that commence "at or near the end" of the underlying asset's economic life. The ASU indicates that a lease that commences in the final 25 percent of an asset's economic life is "at or near the end" of the underlying asset's economic life.

[10] If the present value of lease payments plus a lessee-provided residual value guarantee represents substantially all of the fair value of the underlying asset, the lessor would classify the lease as a sales-type lease.

The following flowchart illustrates the classification of a lease by a lessor:



A lessee is not required to reassess its classification of a lease unless (1) the lease is subsequently modified and the modification is not accounted for as a separate contract or (2) there is a change in the lease term (e.g., there is a change in the assessment of whether the lessee is reasonably certain to exercise a renewal option) or a change in the assessment of the exercise of a purchase option. A lessor would only reassess its lease classification if the lease is subsequently modified and the modification is not accounted for as a separate contract. The accounting underlying each type of lease is discussed in greater detail below in the Lessee Accounting and Lessor Accounting sections.

Editor's Note: While the ASU's classification criteria are similar to those in IAS 17, they are different from the current requirements in U.S. GAAP. As a result, a lease that would have been classified as an operating lease may be classified as a finance lease under the ASU. In addition, as a reasonable approach to assessing significance, an entity is permitted to use the bright-line thresholds that exist under ASC 840 when determining whether a lease would be classified as a finance lease.[11]

In addition, an entity would assess land and other elements in a real estate lease as separate lease components unless the accounting result of doing so would be insignificant. This approach is consistent with the historical approach under IFRSs, but represents a change from current U.S. GAAP guidance, which requires a lessee to account for land and buildings separately only when (1) the lease meets either the transfer-of-ownership or bargain-purchase-price classification criteria or (2) the fair value of the land is 25 percent or more of the total fair value of the leased property at lease inception. This change may result in more bifurcation of real estate leases into separate lease elements.

Lease Term

Under the ASU, the lease term, as determined at lease commencement, is the noncancelable lease period and any optional periods if (1) it is *reasonably certain*[12] that the lessee will exercise a renewal option or not exercise a termination option or (2) the exercise of those options is controlled by the lessor.

[11] Under ASC 840, a lease would be classified as a finance lease if the lease term is 75 percent or more than the remaining economic life of an underlying asset or if the sum of the present value of the lease payments and the present value of any residual value guarantees amounts to 90 percent or more than the fair value of the underlying asset.

[12] The FASB has indicated that "reasonably certain" is substantially the same as the "reasonably assured" threshold under current U.S. GAAP.

When assessing the likelihood of a lessee's exercise of an option, the lessor and lessee would consider the following:

- *Contract-based factors* — The terms of the lease agreement (e.g., a bargain renewal option, a contractual requirement for the lessee to incur substantial costs to restore the asset before returning it to the lessor).
- *Asset-based factors* — Specific characteristics of the underlying asset (e.g., the lessee has installed significant leasehold improvements that would still have economic value when the option becomes exercisable or the facility is in a geographically desirable location with no other viable locations).
- *Entity-specific factors* — The historical practice of the entity, management's intent, and common industry practice.
- *Market-based factors* — Market rentals for comparable assets.

Lessees are required to reassess the lease term when:

- A significant event or change in circumstances occurs that is directly attributable to and clearly within the control of the lessee, and the event or change in circumstances will affect whether the lessee would be reasonably certain to exercise an option to extend the lease, purchase the underlying asset, or terminate the lease.
- A contract term obliges the lessee to exercise (or not exercise) an option to extend or terminate the lease.
- The lessee elects to (1) exercise an option to renew that it had previously determined was not reasonably certain to be exercised or (2) not exercise an option to terminate the contract that it had previously determined was reasonably certain to be exercised.

Lessors would not be required to reassess the lease term unless the lease is modified and the modified lease is a separate contract.

See Appendix B for more information about lease modifications.

Example 2 — Lessee Reassessment of Lease Term

On June 15, 20Y1, Company A leased a building to be used as a storage and distribution warehouse for a 10-year term, with two 5-year renewal options. Company A initially determined that on the lease commencement date it was not reasonably certain that it would exercise either of the renewal options and therefore concluded that the lease term was 10 years.

Scenario 1 — Term Reassessment Would Not Be Required

On January 15, 20Y5, the city in which the warehouse is located significantly improved its highway system, thereby making the warehouse location more desirable for A's distribution needs. This by itself would not result in the need for A to reassess whether it will exercise any remaining renewal options since the significant event or change in circumstances was outside of A's control.

Scenario 2 — Term Reassessment Would Be Required

On January 15, 20Y5, A installed leasehold improvements with a 10-year estimated useful life. The cost of the improvements was significant, and A is now reasonably certain to exercise at least one of its renewal options to avoid losing the value associated with the improvements. In this case, since the change in circumstances is directly attributable to A's actions, reassessment would be required.

Lease Payments

In the calculation of a lessee's lease obligation and ROU asset or a lessor's net investment in the lease, the lease payments are measured as the total of (1) fixed payments, including in-substance fixed payments; (2) variable payments based on an index or a rate; (3) amounts that it is probable a lessee will owe under a residual value guarantee (lessee) or the amount of the residual value guarantee (lessor); and (4) payments related to purchase or termination options that the lessee is reasonably certain to exercise. In addition, in measuring the ROU asset, the lessee would adjust its lease payments for any lease incentives that are paid or payable.

Fixed Payments, Including In-Substance Fixed Payments

Fixed payments are payments that are specified in the lease agreement and fixed over the lease term. Fixed payments also include variable lease payments that are considered in-substance fixed payments (e.g., a variable payment that includes a floor or a minimum amount).

Editor's Note: Even if a variable lease payment is virtually certain (e.g., a variable payment for highly predictable output from a solar farm or a variable payment if a retail store meets a nominal sales volume), such a payment would not be considered an in-substance fixed payment. Therefore, it would not be included in the determination of a lessee's lease obligation and ROU asset or a lessor's net investment in the lease.

Variable Lease Payments

An entity would include variable lease payments that depend on an index or a rate in the initial measurement of the lease liability and ROU asset (lessee) or the net investment in the lease (lessor) by using the spot index or rate at lease commencement. By contrast, the entity would *not* include variable lease payments based on usage or performance of the asset. A lessee would recognize any variable payments not included in the original lease obligation as an expense in the period the obligation is incurred.[13] A lessor would recognize variable lease payments not included in the original net investment in the lease in the period a change occurs in the facts and circumstances on which the variable lease payments are based (e.g., "when the lessee's sales on which the amount of the variable payment depends occur").

A lessee is required to reassess variable lease payments when the lease liability is remeasured as a result of the following:

- The lease is modified and the modification is not treated as a separate contract.
- A contingency upon which a variable lease payment that is excluded from the measurement of lease payments becomes resolved such that the variable payment will now be included in the measurement of the lease payments (e.g., a variable lease payment that is based on a sales target subsequently converts to a fixed lease payment).
- There is a change in:
  - The lease term.
  - The assessment of whether the lessee will exercise a purchase option.
  - The amount that it is probable the lessee will owe under a residual value guarantee.

Any changes related to future periods would result in an adjustment to the lease obligation and ROU asset. A lessor is not required to reassess variable lease payments unless the lease is modified and the modification is not accounted for as a separate contract.

[13] The period in which the obligation is "incurred" refers to the period when it becomes *probable* that the specified target that triggers the variable lease payments will be achieved.

Editor's Note: While the FASB aligned many of the lessor accounting requirements with the new revenue guidance in ASC 606, the treatment of variable consideration under the two models differs significantly. Under ASC 606, variable revenues are estimated and included in the transaction price subject to a constraint, whereas under the leases standard, variable lease payments would generally be excluded from the determination of a lessor's lease receivable. Accordingly, there is a possibility that direct financing leases or sales-type leases that have a significant variable component may result in inception losses for the lessor if the lease receivable plus the unguaranteed residual asset is less than the net carrying value of the underlying asset being leased. This could occur if payments on a lease of, for example, a solar farm are based entirely on the production of electricity (i.e., 100 percent variable). Since many feel that this outcome does not faithfully represent the economics of these transactions, we are considering other possible approaches to applying the new standard to such contracts, including the use of a negative discount rate, which would avoid the inception loss. Lessors that are affected by this issue should consult with their professional advisers and monitor developments during the implementation phase of the ASU.

Example 3 — Variable Lease Payments

On January 1, 20Y1, Company A leased a building for five years, payable in annual lease payments of $100,000 at the beginning of each year. The lease is classified as an operating lease and contains a provision that on December 31 of each year, the lease payments will be adjusted by the change in the CPI for the preceding 12 months. At lease commencement, the CPI is 112. The implicit rate in the lease is not known, and A's incremental borrowing rate is 7 percent. Any initial direct costs and lease incentives are ignored in this example.

Determining the Lease Payments

At lease commencement, A makes its first annual payment of $100,000. In addition, A records a lease liability of $338,721 (the present value of the total remaining lease payments discounted at the incremental borrowing rate) and an ROU asset of $438,721 (the total of the lease liability plus the prepaid rent of $100,000). In measuring these amounts, A did not take into consideration the CPI in effect at lease commencement because the rent increase is based on a change in an index as opposed to the index itself.

On December 31, 20Y1 (the lease payment reset date), the CPI has changed to 126, representing a 12.5 percent increase (i.e., calculated as [(126 − 112) ÷ 112]). Accordingly, A's lease payment in year 2 would be $112,500, comprising the fixed amount of $100,000 and the variable amount of $12,500 (calculated as the change in CPI multiplied by the fixed amount). Further, because A was not required to remeasure its lease liability for any other reason (e.g., a modification), there would be no adjustment to the liability to reflect changes in the CPI. That is, incremental amounts that will be paid in the future because of changes in the CPI would also be recognized as variable lease payments in the period the amounts are paid.

Had the rental increases been based on an index (as opposed to a change in an index), the current — or spot — value of the index would have been used to measure the initial lease liability and ROU asset. Changes in the index over the lease term would result in variable lease payments and would not require revision of the lease liability or ROU asset unless the lease is reassessed for other reasons.

Residual Value Guarantees

The ASU defines a residual value guarantee as a "guarantee made to a lessor that the value of an underlying asset returned to the lessor at the end of a lease will be at least a specified amount." Under current U.S. GAAP, a lessee includes in its minimum lease payments the entire amount of the residual value guarantee, whereas under the ASU, a lessee only includes those amounts that it is probable will be owed under the residual value guarantee at the end of the lease term. A lessee is required to remeasure lease payments when there is a change in the amount that it is probable will be owed by the lessee under a residual value guarantee. Revised lease payments would reflect changes in the amounts that it is probable will be owed by the lessee under residual value guarantees and would be recognized as an adjustment to the lease liability and the ROU asset.

A lessor would include in its lease receivable the full amount at which the residual asset is guaranteed by the lessee or a third party. Unlike a lessee, the lessor would not reflect any changes in the residual value in its lease receivable. However, changes in the unguaranteed residual value would be considered in the overall assessment of whether the net investment in the lease is impaired.

Example 4 — Residual Value Guarantee

A lessor leases equipment to a lessee for five years at $10,000 per year. The lessee guarantees that the equipment will have a residual value of at least $9,000 at the end of the lease. The expected residual value at the end of the lease term is $20,000.

Lessee Accounting

In its lease payment calculation, the lessee would only include the amount that it is probable it will owe under the residual value guarantee at the end of the lease term. Accordingly, the lessee would not include any amount in the initial measurement of the lease liability and ROU asset, because the expected residual value is greater than the guaranteed amount. However, if the expected residual value of the asset subsequently decreased (e.g., to $4,000) and, accordingly, the lessee now believes that it is probable that it will make a payment under the residual value guarantee, the lessee would need to adjust the lease liability and the ROU asset to reflect the present value of the $5,000 expected to be owed.

Lessor Accounting

In the calculation of its lease receivable, the lessor would include the portion of the residual asset that is guaranteed by the lessee (or any other party). Accordingly, in addition to the present value of the five annual lease payments of $10,000, the lessor would include the present value of the $9,000 guaranteed amount in its calculation of the lease receivable. The lessor's net investment in the lease would consist of the total receivable (including the residual value guarantee) and the present value of the unguaranteed residual asset of $11,000. The lessor would not make any subsequent adjustments to its net investment in the lease for changes in the guaranteed residual value. However, changes in the unguaranteed residual value would be considered in the overall assessment of whether the net investment in the lease is impaired.

Editor's Note: As discussed above, under the new standard a lessee would include in its lease payments only those amounts related to a residual value guarantee that it is probable the lessee will owe at the end of the lease term. Lease arrangements (such as a synthetic lease arrangement) in which a significant portion of the lease payments are structured as a residual value guarantee could therefore result in ROU assets and lease liabilities that are significantly lower than those in arrangements in which more of the lessee's obligation takes the form of rents. For example, since many real estate assets are expected to hold their value over the lease term, amounts that it is probable the lessee will owe under residual value guarantees may be nominal. Accordingly, while these arrangements will be brought onto the balance sheet, synthetic leases and other lease arrangements in which a significant portion of lease payments are structured as a residual value guarantee may continue to yield favorable accounting results (e.g., reduced leverage) under the new leasing guidance.

Discount Rate

Under the ASU, the discount rate used by a lessee and a lessor is based on the information available as of the lease commencement date. A lessee should use the rate that the lessor charges in the lease (i.e., the rate implicit in the lease) if that rate is readily determinable. If the rate is not readily determinable, which is generally expected, the lessee should use its incremental borrowing rate as of the date of lease commencement. Lessors should use the rate they charge the lessee (i.e., the rate implicit in the lease) and are not required to reassess the discount rate used when there is a change in lease term. The discount rate must be updated by the lessee if there is a remeasurement of the lease liability unless the remeasurement results from changes in one of the following:

- The lease term or the assessment of whether a purchase option will be exercised, and the discount rate already reflects the lessee's option to extend or terminate the lease or purchase the asset.

- Amounts that it is probable the lessee will owe under a residual value guarantee.
- Lease payments resulting from the resolution of a contingency upon which some or all of the variable lease payments are based.

When there is a modification that does not result in a separate contract, a lessee and lessor would, in certain instances, be required to reassess the discount rate used when accounting for the modified lease. See the Lease Modifications section in Appendix B.

When measuring their lease liabilities, nonpublic business entities are permitted to make an accounting policy election to use the risk-free discount rate for all leases in lieu of their incremental borrowing rate. Using the risk-free rate would result in a larger lease liability and ROU asset.

Lessee Accounting

Initial Measurement

The initial measurement of a lease is based on an ROU asset approach. Accordingly, **all** leases (finance and operating leases) other than those that qualify for the short-term scope exception must be recognized as of the lease commencement date on the lessee's balance sheet. A lessee will recognize a liability for its lease obligation, measured at the present value of lease payments not yet paid (excluding variable payments) and a corresponding asset representing its right to use the underlying asset over the lease term. The initial measurement of the ROU asset would also include (1) initial direct costs (e.g., legal fees, consultant fees, commissions paid) that are directly attributable to negotiating and arranging the lease that would not have been incurred had the lease not been executed and (2) any lease payments made to the lessor before or at the commencement of the lease. The ROU asset would be reduced for any lease incentives received by the lessee (i.e., consideration received from the lessor would reduce the ROU asset).

Subsequent Measurement

Although the FASB and IASB agreed on the lessee's initial measurement of a lease, they differed on the lessee's subsequent measurement of the ROU asset as follows:

- *Dual-model approach (FASB)* — Lessees classify a lease as either a finance lease or an operating lease (see the Lease Classification discussion above).
- *Single-model approach (IASB)* — Lease classification is eliminated, and all leases are accounted for in a manner consistent with the accounting for finance leases under the FASB's approach.

Editor's Note: The FASB adopted a dual-model approach because it believes that all leases are not created equal; that is, some leases are akin to a financing arrangement for the purchase of an asset, while others are simply rental of the underlying property. By contrast, the IASB believes that the single-model approach (i.e., one that eliminates lease classification) has greater conceptual merit and reduces complexity.

Finance Leases

For finance leases, the lessee will use the effective interest rate method to subsequently account for the lease liability. The lessee will amortize the ROU asset in a manner similar to that used for other nonfinancial assets; that is, the lessee would generally depreciate the ROU asset on a straight-line basis unless another systematic method would be appropriate. Together, these expense components would result in a front-loaded expense profile similar to that of a capital lease arrangement under current U.S. GAAP. Entities would separately present the interest and amortization expenses in the income statement.

Operating Leases

For operating leases, the lessee will also use the effective interest rate method to subsequently account for the lease liability. However, the subsequent measurement of the ROU asset would be linked to the amount recognized as the lease liability (unless the ROU asset is impaired). Accordingly, the ROU asset would be measured as the lease liability adjusted by (1) any accrued or prepaid rents, (2) unamortized initial direct costs and lease incentives, and (3) impairments of the ROU asset. As a result, the total lease payments made over the lease term would be recognized as lease expense (presented as a single line item) on a straight-line basis unless another systematic method is more appropriate.

Editor’s Note: While the ASU discusses subsequent measurement of the ROU asset arising from an operating lease primarily from a balance sheet perspective, a simpler way to describe it would be from the viewpoint of the income statement. Essentially, the goal of operating lease accounting is to achieve a straight-line expense pattern over the term of the lease. Accordingly, an entity effectively takes into account the interest on the liability (i.e., the lease obligation consistently reflects the lessee’s obligation on a discounted basis) and adjusts the amortization of the ROU asset to arrive at a constant expense amount. To achieve this, the entity first calculates the interest on the liability by using the discount rate for the lease and then deducts this amount from the required straight-line expense amount for the period (determined by taking total payments over the life of the lease, net of any lessor incentives, plus initial direct costs, divided by the lease term). This difference is simply “plugged” as amortization of the ROU asset to result in a straight-line expense for the period. By using this method, the entity recognizes a single operating lease expense rather than separate interest and amortization charges, although the effect on the lease liability and ROU asset in the balance sheet reflects a bifurcated view of the expense. Note, however, that the periodic lease cost cannot be less than the calculated interest on the lease liability (i.e. the amortization of the ROU asset, or “plug” amount, cannot be negative).

Impairment

Regardless of the lease classification, a lessee would subject the ROU asset to impairment testing in a manner consistent with other long-lived assets. If the ROU asset for a lease classified as an operating lease is impaired, the lessee would amortize the remaining ROU asset under the subsequent measurement requirements for a finance lease — evenly over the remaining lease term unless another systematic method would be appropriate. In addition, in periods after the impairment, a lessee would continue to present the ROU asset amortization and interest expense as a single line item.

Example 5 — Lessee Expense Recognition: Differences Between Subsequent-Measurement Models

A lessee enters into a three-year lease and agrees to make the following annual payments at the end of each year: $10,000 in year 1, $15,000 in year 2, and $20,000 in year 3. The initial measurement of the ROU asset and liability to make lease payments is $38,000 at a discount rate of 8 percent.

The following table highlights the differences in accounting for the lease under the finance lease and operating lease approaches:

	Both Methods	Finance Lease Approach				Operating Lease Approach		
Year	Lease Liability[a]	Interest Expense <X>	Amortization Expense <Y>[b]	Total Lease Expense <X + Y>	ROU Asset	Lease Expense <Z>	Reduction in ROU Asset <Z − X> [c]	ROU Asset
0	$ 38,000				$ 38,000			$38,000
1	31,038	$ 3,038	$ 12,666	$ 15,704	25,334	$ 15,000	$ 11,962	26,038
2	18,520	2,481	12,667	15,148	12,667	15,000	12,519	13,519
3	—	1,481	12,667	14,148	—	15,000	13,519	—
Total		$ 7,000	$ 38,000	$ 45,000		$ 45,000	$ 38,000	

(a) The effective-interest method is used to calculate the lease liability, regardless of the type of lease.

(b) Under the finance lease approach, the ROU asset would be amortized in the same manner as other nonfinancial assets (i.e., typically straight-line).

(c) Under the operating lease approach, amortization expense is calculated as the difference between lease expense and interest expense.

Lessor Accounting

After proposing multiple different amendments to lessor accounting, the FASB ultimately decided to make only minor modifications to the current lessor model. The most significant changes align the profit recognition requirements under the lessor model with those under the FASB's new revenue recognition requirements and amend the lease classification criteria to be consistent with those for a lessee. Accordingly, the ASU requires a lessor to use the classification criteria discussed above to classify a lease, at its commencement, as a sales-type lease, direct financing lease, or operating lease:

- *Sales-type lease* — The lessee effectively gains control of the underlying asset. The lessor would derecognize the underlying asset and recognize a net investment in the lease (which consists of the lease receivable and unguaranteed residual asset). Any resulting selling profit or loss would be recognized at lease commencement. Initial direct costs would be recognized as an expense at lease commencement unless there is no selling profit or loss. If there is no selling profit or loss, the initial direct costs would be deferred and recognized over the lease term. In addition, the lessor would recognize interest income from the lease receivable over the lease term.

  In a manner consistent with ASC 606, if collectibility of the lease payments plus the residual value guarantee is not probable, the lessor would not record a sale. That is, the lessor would not derecognize the underlying asset and would account for lease payments received as a deposit liability until (1) collectibility of those amounts becomes probable or (2) the contract has been terminated or the lessor has repossessed the underlying asset. Once collectibility of those amounts becomes probable, the lessor would derecognize the underlying asset and recognize a net investment in the lease. If the contract has been terminated or the lessor has repossessed the underlying asset, the lessor would recognize the deposit liability and recognize a corresponding amount of lease income.

- *Direct financing lease* — The lessee does not effectively obtain control of the asset, but the lessor relinquishes control. This would occur if (1) the present value of the lease payments and any residual value guarantee (which could be provided entirely by a third party or consist of a lessee guarantee coupled with a third-party guarantee)[14] represents substantially all of the fair value of the underlying asset and (2) it is probable that the lessor would collect the lease payments and any amounts related to the residual value guarantee(s). The lessor would derecognize the underlying asset and recognize a net investment in the lease (which consists of the lease receivable and unguaranteed residual asset). The lessor's profit and initial direct costs would be deferred and amortized into income over the lease term.
- *Operating lease* — All other leases are operating leases. In a manner similar to current U.S. GAAP, the underlying asset remains on the lessor's balance sheet and is depreciated consistently with other owned assets. Income from an operating lease would be recognized on a straight-line basis unless another systematic basis would be more appropriate. That is, a lessor would recognize uneven fixed lease payments (step payments) on a straight-line basis only when the payments are uneven for reasons other than to reflect or compensate for market rentals or market conditions (e.g., when there is significant front-loading or back-loading of payments or when there are rent-free periods in a lease). This may have a significant effect on a lessor's recognition of revenue for operating leases, particularly those related to real estate. Any initial direct costs (i.e., those that are incremental to the arrangement and would not have been incurred if the lease had not been obtained) would be deferred and expensed over the lease term in a manner consistent with the way lease income is recognized.

Editor's Note: Under the FASB's model, the immediate recognition of any profit in the income statement is precluded if control of the asset has not been transferred to the customer in accordance with ASC 606 (i.e., control would not have transferred for direct financing and operating leases). Profit can exist in a direct financing lease, though it would be deferred and recognized over the lease term rather than recognized immediately. In contrast, under IFRS 16, a lessor is not required to evaluate whether the arrangement would qualify as a sale under IFRS 15 in determining whether it can recognize a profit at lease commencement.

Example 6 — Lessor Profit Recognition

A lessor leases equipment to a lessee. The leased asset has a carrying amount of $20,000 and a fair value of $25,000 at lease commencement. The terms of the lease are as follows:

Terms	
Lease term	8 years
Annual lease payments	$3,500 due at the end of each year
Estimated useful life of the underlying asset	12 years
Rate the lessor charges the lessee (implicit rate in the lease)	6.98%
Estimated residual value at the end of the lease term	$7,000

Ownership of the underlying asset does not transfer by the end of the lease, and there is no bargain purchase option. In addition, the leased asset is not specialized, and it is probable that the lessor will collect the lease payments and any amounts related to the residual value guarantee.

[14] If the present value of lease payments plus a lessee-provided residual value guarantee represents substantially all of the fair of the underlying asset, the lessor would classify the lease as a sales-type lease.

Example 6 — Lessor Profit Recognition (continued)

Scenario 1 — Lessee Residual Value Guarantee (Sales-Type Lease)

As part of the lease contract, the lessee guarantees the full residual value of the underlying asset that is expected at the end of the lease.

Analysis

In this scenario, the lessor would conclude that the lease represents a sales-type lease. The lessee effectively gains control of the underlying asset because the present value of the lease payments and the residual value guarantee provided by the lessee represent all of the fair value of the underlying asset, which satisfies one of the five classification criteria for a sales-type lease (i.e., the present value of the lease payments and the residual value guarantee represent substantially all of the asset's fair value). Since control of the underlying asset has effectively transferred to the lessee, the lessor would be permitted to recognize the profit at lease commencement.

Scenario 2 — Third-Party Residual Value Guarantee (Direct Financing Lease)

As part of its risk management program, the lessor obtains a third-party guarantee that the residual value of the underlying asset at the end of the lease will be equal to $7,000.

Analysis

In this scenario, the lessor would conclude that the lease represents a direct financing lease because the lessee **does not** effectively obtain control of the underlying asset. This is because the present value of the lease payments made by the lessee does not represent substantially all of the fair value of the underlying asset (i.e., the present value of the lease payments represents only 84 percent of the fair value of the asset). However, since the present value of the lease payments and the third-party residual value guarantee represent all of the fair value of the underlying asset, and it is probable that the lessor will collect the lease payments and any amounts related to the residual value guarantee, the lease is considered a direct financing lease. Because control of the underlying asset has not effectively transferred to the lessee, the lessor **would not** be permitted to recognize the profit at lease commencement.

Accordingly, although the lessor would derecognize the underlying asset, it would be required to defer the profit and recognize the profit at a constant periodic rate (as part of interest income) over the term of the lease.

Comparison of Sales-Type Lease and Direct Financing Lease

The following table illustrates the accounting for the lease under the sales-type and direct financing approaches:

	Sales-Type Lease			Direct Financing Lease	
Year	Net Investment in Lease (Balance Sheet)	Interest Income	Selling Profit	Net Investment in Lease (Balance Sheet)	Interest Income
0	$ 25,000		$ 5,000	$ 20,000	
1	23,244	$ 1,744		18,953	$ 2,453*
2	21,366	1,622		17,778	2,326
3	19,356	1,491		16,459	2,181
4	17,207	1,350		14,978	2,019
5	12,447	1,200		13,315	1,837
6	14,907	1,040		11,448	1,633
7	9,815	868		9,353	1,404
8	7,000	685		7,000	1,147
Total		$ 10,000	$ 5,000		$ 15,000

* Under the direct financing lease model, the lessor would not recognize the selling profit at lease commencement because the lease does not transfer control of the underlying asset to the lessee. Instead, the lessor would recognize the selling profit through higher interest income over the term of the lease.

Effective Date

The new guidance is effective for public business entities for annual periods beginning after December 15, 2018 (i.e., calendar periods beginning on January 1, 2019), and interim periods therein. For all other entities, the ASU is effective for annual periods beginning after December 15, 2019 (i.e., calendar periods beginning on January 1, 2020), and interim periods thereafter. Early adoption is permitted for all entities. Further, an entity's ability to early adopt the new guidance would not be linked to its adoption of ASC 606.[15]

Editor's Note: Since early adoption is permitted, an entity could conceivably adopt the new standard for its year ended December 31, 2015, if its financial statements have not yet been issued or been made available for issuance. While an entity may believe that there are certain benefits to early adopting (e.g., the ability to derecognize assets and liabilities that resulted from deemed ownership under existing build-to-suit accounting guidance), it should carefully consider the implications of doing so. For example, it will need to ensure that it has systems, processes, and controls in place to appropriately implement the new guidance (see Appendix F for more information). Further, if an entity adopts the ASU before the issuance of any formal implementation guidance, its accounting for lease transactions may differ from that of its peers and thus the risk of regulatory scrutiny may increase.

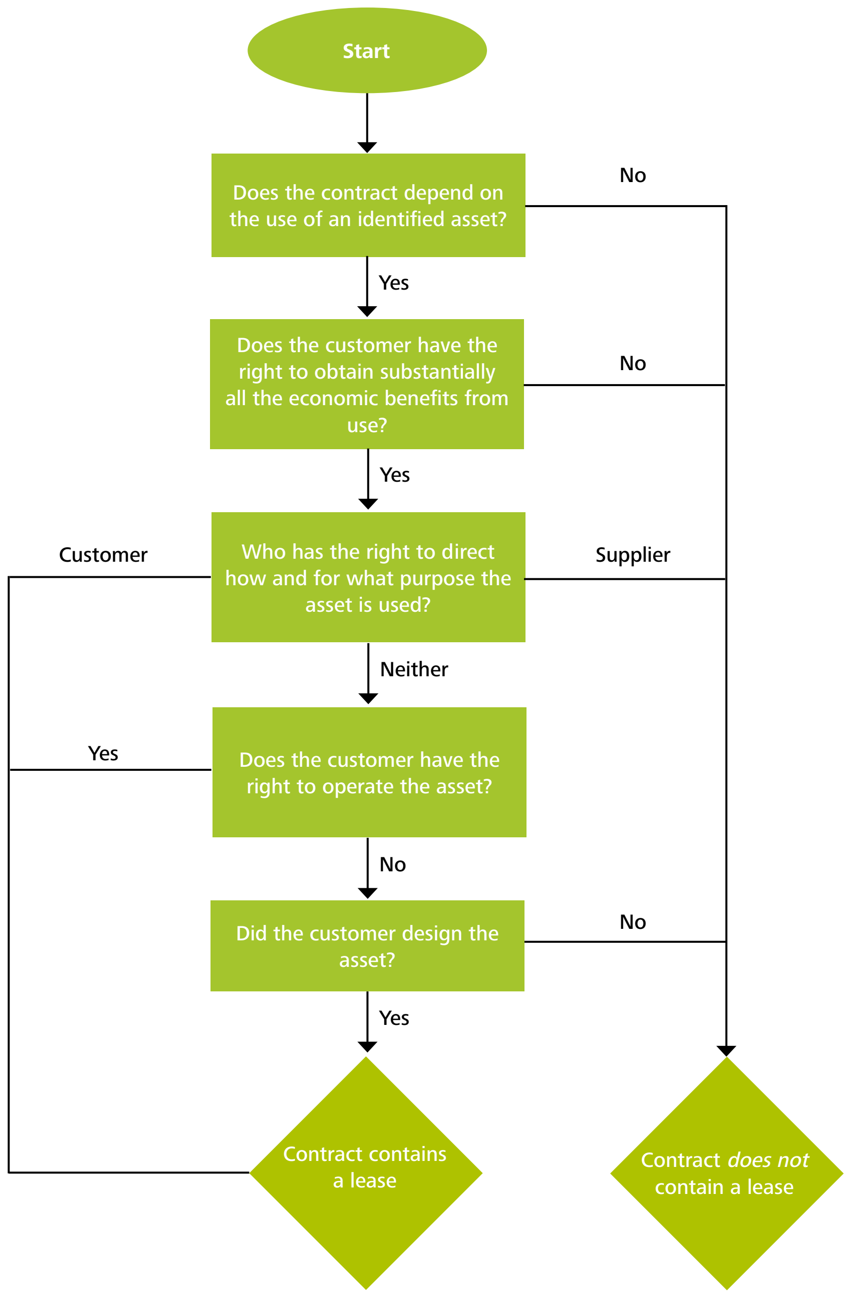
In addition, entities applying U.S. GAAP may adopt the new leases standard before they adopt the new revenue guidance (even though the new revenue standard has an earlier mandatory effective date). On the basis of discussions with the FASB staff, it is our understanding that such early adopters would be expected to apply the relevant guidance in the new revenue standard to the extent that it affects their lease accounting. They would wait to apply all other aspects of the new revenue standard until their full adoption of that standard.

[15] The effective date of IFRS 16 (the IASB's new leases standard) is similar to the FASB's effective date for public business entities. However, the IASB decided that an entity would only be allowed to early adopt IFRS 16 to the extent that the entity has also adopted IFRS 15 (the IASB's new revenue standard).

Appendix A — Evaluating Whether an Arrangement Is or Contains a Lease

The determination of whether an arrangement is or contains a lease is critical under the new requirements. If a lessee concludes that a contract is a service arrangement and not a lease, the lessee is not required to reflect the contract on its balance sheet. However, the lessee's balance sheet will need to reflect any lease arrangement that is not considered to be a short-term lease.

The following flowchart illustrates how to evaluate whether an arrangement is or contains a lease:



ASC 842-10-15-3 states that "[a] contract is or contains a lease if the contract conveys the right to control the use of identified [PP&E] (an identified asset) for a period of time in exchange for consideration." At the inception[16] of a contract, an entity should assess whether a contract is or contains lease. ASC 842-10-15-4 specifies that in determining whether the customer has the right to control the use of the identified asset, an entity would need to evaluate whether the customer has both:

- "The right to obtain substantially all of the economic benefits from use of the identified asset."
- "The right to direct the use of the identified asset."

[16] Lease inception is defined as the "date of the lease agreement or commitment, if earlier."

Use of an Identified Asset

Like current U.S. GAAP, the ASU requires a leased asset to be identifiable either explicitly (e.g., by a serial number) or implicitly (e.g., the only asset available to satisfy the contract). A distinct portion of a larger asset may be the subject of a lease (e.g., a floor of a building). However, a capacity portion of an asset would generally not meet the definition of a lease (e.g., 50 percent of an oil pipeline) unless the arrangement is for substantially all of the capacity of the asset. In addition, the ASU states that "[i]f the customer has the right to control the use of an identified asset for only a portion of the term of the contract," then only that portion of the term of the contract would be considered a lease.

Example A1 — Identified Asset

Scenario 1 — Contract Does Not Contain an Identified Asset

A company enters into a contract with a warehouse operator to store up to 1,000 pallets of spare parts inventory at one of the operator's warehouse locations for a three-year period. The operator's warehouse has capacity to store up to 10,000 pallets of inventory. During the contract period, the warehouse operator can use the remaining space in its warehouse for other storage needs. In addition, the warehouse operator can relocate the customer's pallets within the warehouse any time without incurring significant costs.

Because the customer does not have exclusive use of a specified portion of the warehouse, and the portion being used is not substantially all of the warehouse capacity, there is no identified asset. Although the contract specifies the amount of spare parts inventory that will be held, the warehouse operator can change the inventory's location within its warehouse at any time.

Scenario 2 — Contract Contains an Identified Asset

Assume the same facts as those above, except the 1,000 pallets represent substantially all of the capacity of the operator's warehouse, and the operator cannot relocate the inventory to a different facility.

Since the customer's storage requirement accounts for substantially all of the capacity of the operator's warehouse (more than 90 percent), the arrangement contains an identified asset.

Substitution Rights

An entity must also evaluate whether the supplier has the right to substitute the underlying asset with an alternative asset. If the supplier has substantive substitution rights, the asset in the arrangement would not be identified, and the arrangement would not be considered a lease. For a substitution right to be considered substantive, the following two conditions must be met:

- The supplier must have the "practical ability" to substitute the identified asset. The customer cannot prevent the supplier from substituting the asset, and alternative assets must be readily available to, or readily obtainable by, the supplier. A supplier's right (or obligation) to substitute alternative assets only if the asset is not operating properly would not meet this condition.
- The supplier must economically benefit from the substitution.

An entity should evaluate a substitution right by considering the facts and circumstances at the inception of the contract and would exclude from its assessment circumstances that are not likely to occur over the contract term. The entity should also consider the physical location of the asset. For example, it is more likely that the supplier will benefit from the substitution right if the identified asset is located at the supplier's rather than the customer's premises.

It may be difficult for a customer to determine whether the supplier's substitution right is substantive. For example, the customer may not know whether the substitution right gives the supplier an economic benefit. A customer would presume that a substitution right is not substantive if it is impractical to prove otherwise; accordingly, they must exercise significant judgment in making the determination.

Editor's Note: The requirement that a substitution right be economically beneficial to a supplier is a higher threshold than the requirements in current U.S. GAAP. Accordingly, we expect more arrangements to be subject to lease accounting under the new guidance.

Example A2 — Substantive Substitution Rights: Contract Does Not Contain a Substantive Substitution Right

Company A enters into an arrangement with Supplier B under which B will provide a customized Model 5000 copier to A for two years. Supplier B only has one customized Model 5000 copier. The arrangement allows B to replace the copier at will. However, if a replacement copier were needed, B would need several months to manufacture it. Since B only has one asset that can be used to satisfy the agreement with A and does not have the practical ability to substitute it, B's substitution right is not substantive.

Right to Control the Use of the Identified Asset

A lease differs from a service arrangement because in a lease, the customer effectively obtains control of the identified asset during the lease term. A customer has the right to control an asset if it has the right to do both of the following:

- Obtain substantially all of the economic benefits from the use of the identified asset.
- Direct the use of the identified asset.

Editor's Note: The notion of control under the new standard is closely aligned with that under the FASB's new revenue standard, which states that control is "the ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset." However, the definition differs from the concept of control in consolidation guidance, under which design decisions are secondary to ongoing activities (e.g., those activities related to operations and maintenance). Design decisions and those related to operations and maintenance responsibilities have equal weight under the new leases standard.

Obtain Substantially All of the Economic Benefits From the Use of the Identified Asset

To control the use of an identified asset, the customer must have the right to obtain substantially all of the economic benefits from the use of the asset during the contract period. Economic benefits consist of direct or indirect benefits from the use of the asset (e.g., using, holding, or subleasing the asset) and include its primary output and its by-products (e.g., renewable energy credits from using the asset). Because a lease conveys only the right to use (and not ownership of) the underlying asset, benefits related to ownership of an asset (e.g., tax benefits) should not be included in the assessment of whether an arrangement contains a lease. Rather, this evaluation should be limited to those economic benefits resulting from the use of the asset during the contract period that can be realized from a commercial transaction with a third party.

Direct the Use of the Identified Asset

The evaluation of whether a customer has the right to direct the use of an identified asset should focus on the customer's ability to direct the activities that determine "how and for what purpose" the asset is used during the term of the contract. Factors to consider include whether the customer has the right to change (1) the type of output produced by the asset, (2) when the output is produced, (3) where the output is produced and (4) whether the output is produced. However, a requirement that protects the supplier's interest in the asset or related assets, or ensures that the customer complies with laws or regulations (e.g., a contract that specifies the maximum use of an asset or requires prudent operating practices), would not by itself prevent the customer from directing the use of the identified asset.

In situations in which neither the customer nor the supplier has the ability to determine "how and for what purpose" the asset is used during the contract period, the customer should consider whether the relevant decisions are predetermined by the contract or are based on the design of the underlying asset. If the relevant decisions are predetermined and the customer has the right to operate the asset or direct others to operate the asset — and the supplier cannot change the operating instructions — during the period of use, it is presumed that the customer has the ability to direct the use of the asset over the lease term. Similarly, if the customer's involvement in the design of the asset results in the predetermination of the most relevant decisions about "how and for what purpose" the asset is used over the contract term, then it is presumed that the customer controls the use of the asset.

Editor's Note: We anticipate that for certain industries the evaluation of control will require the use of significant judgment under the new standard, especially when the activities associated with the asset are predetermined. Although an entity may not have trouble determining whether the customer or supplier has control over the operating decisions related to the asset, the assessment of whether the customer designed the asset will often be more difficult given the different levels of influence a customer may have over the design decisions (e.g., siting, determining the technology to be used). Accordingly, an entity will need to use judgment when performing this evaluation.

For example, in a solar farm arrangement between a supplier and a utility company, the relevant decisions about how and for what purpose the assets are used are predetermined on the basis of the nature of the asset. Accordingly, the control evaluation would focus on whether the customer (the utility company) (1) has control over the operating decisions related to the asset (typically the operation and management will be performed by the asset owner (the supplier)) or (2) was involved in the decisions about the asset's design before contract inception.

Example A3 — Control of the Use of an Identified Asset

Scenario 1 — Customer Controls the Use of an Identified Asset

Customer A enters into a contract with Supplier B for the use of a specific ship for a four-year period. Supplier B is not permitted to substitute the ship. Customer A decides whether and what cargo will be transported and when and to which ports the ship will sail throughout the contract period, subject to certain restrictions. The restrictions prevent A from sailing the ship in waters where there is a high risk of piracy or from carrying hazardous materials as cargo. During the contract period, B operates and maintains the ship and is responsible for the safe passage of the cargo onboard the ship. Customer A is prohibited from hiring another operator for the ship during the term of the contract or operating the ship itself.

In this scenario, A has the right to control the use of the ship throughout the four-year contract period. That is, A has the right to obtain substantially all of the economic benefits from the use of the ship during the contract period through its exclusive use of the ship. Further, A has the right to direct activities related to the use of the ship because it decides where and when the ship will travel, what cargo it will carry, or whether it will be transporting cargo at any given time. While there are contractual restrictions about where the ship can sail and the nature of the cargo to be transported, these are protective rights and do not prevent A from having the right to direct the use of the asset.

Scenario 2 — Customer Does Not Control the Use of an Identified Asset

Customer A enters into a contract with Supplier B for the transportation of cargo from Greece to New York on a specified ship. The contract identifies the cargo to be transported on the ship as well as the route to be followed. During the contract term, B is responsible for the safe passage of the cargo and B's crew is responsible for operating and maintaining the ship (e.g., A cannot replace the crew under any circumstances).

Customer A **does not** have the right to control the use of the ship because it does not have the right to direct its use. That is, the activities related to the use of the ship during its trip from Greece to New York are predetermined in the contract. In addition, A does not have any decision-making rights about the operation of the ship during the period of use, nor was A involved in the ship's design.

Appendix B — Other Significant Provisions

Lease Modifications

Any change to the contractual terms and conditions of a lease that lead to a change in the scope of or consideration for the lease would be considered a lease modification. When assessing the changes, an entity should first evaluate whether the lease modification is to be accounted for as a separate contract (i.e., separately from the original lease). A lessee or lessor would account for a lease modification as a separate contract when, as a result of the modification, (1) the lessee is granted an additional ROU asset (physically distinct from the original ROU asset) and (2) the price of the additional ROU asset is commensurate with its stand-alone price (in the context of that particular contract). If the modification is considered a separate contract, the lessee or lessor would apply the new requirements to the separate contract.

Example B1 — Modification Resulting in a Separate Contract

Company A (lessee) enters into an arrangement to lease 15,000 square feet of retail space in a shopping mall for 20 years. At the beginning of year 10, A and the lessor agree to amend the original lease to include an additional 5,000 square feet of space adjacent to the existing space currently being leased when the current tenant vacates the property in 18 months. The increase in lease consideration as a result of the amendment is commensurate with the expected market rate for the additional 5,000 square feet of space in the shopping mall. Company A would account for this modification (i.e., the lease of the additional 5,000 square feet) as a separate contract because the modification provides A with a new ROU asset at a price that reflects its stand-alone price. While A would be required to disclose certain information about the lease modification, it would **not** be required to separately record any amounts in its statement of financial position until the separate lease's commencement date (i.e., 18 months from entering into the modification).

If the lease modification is **not a separate contract**, both the lessee and lessor would reassess the lease classification of the modified lease (by using the modified lease terms, including the discount rate as of the effective date of the modification). The lessee would account for the modification as follows:

Modification	Lessee's Accounting
Grants the lessee an additional ROU, changes the lease term (other than through the exercise of a contractual option), or results in a change to the lease consideration.	The lessee would use the updated lease payments and discount rate to revise the lease liability and would recognize any difference between the new lease liability and the old lease liability as an adjustment to the ROU asset.
Modification that reduces the scope of the original lease contract.	The lessee would adjust the lease liability by using the revised lease payments and an updated discount rate, derecognize a proportionate amount of the ROU asset, and recognize any difference as a gain/loss through earnings.

A lessee would subsequently account for the modified lease under the subsequent measurement guidance in the ASU (see discussion in the Subsequent Measurement section).

Example B2 — Modification Not Resulting in a Separate Contract

Company A (lessee) enters into an arrangement to lease 15,000 square feet in a shopping mall for 20 years. At the beginning of year 10, A and the lessor agree to amend the original lease by reducing the annual rental payments from $60,000 to $50,000 for the remaining 10 years of the agreement. Because the modification results in a change only to the lease consideration (i.e., the modification does not result in an additional ROU asset), A would remeasure its lease liability to reflect (1) a 10-year lease term, (2) annual lease payments of $50,000, and (3) A's incremental borrowing rate (or the rate the lessor charges the lessee if such rate is readily determinable) as of the modification's effective date. Company A would recognize the difference between the new and old lease liabilities as an adjustment to the ROU asset.

A lessor would account for a lease modification that is **not a separate contract** as follows:

Original Lease Classification	Lease Classification After the Modification	Lessor's Accounting
Operating lease	Operating lease	Any prepaid or accrued lease rentals are treated as a lease payment on the modified lease.
	Direct financing or sales-type lease	Any deferred rent liability or accrued rent asset is derecognized, and the selling profit or loss is adjusted accordingly (see the Lessor Accounting section for a discussion of the treatment of selling profit or loss for each type of lease).
Direct financing lease	Direct financing lease	The modification is accounted for prospectively by adjusting the discount rate.
	Sales-type lease	The profit or loss on the modification is the difference between the fair value of the underlying asset and the carrying value of the net investment in the lease immediately before the effective date of the modification.
	Operating lease	The modification is accounted for prospectively as an operating lease. The net investment in the lease is reclassified as the initial carrying value of the underlying leased asset.
Sales-type lease	Sales-type or direct financing lease	The modification is accounted for prospectively by adjusting the discount rate.
	Operating lease	The modification is accounted for prospectively as an operating lease. The net investment in the lease is reclassified as the initial carrying value of the underlying leased asset.

Contracts That Contain Multiple Components

An entity is required to identify the lease and nonlease components of a contract that contains a lease. A contract may also contain multiple lease components. The right to use an underlying asset is considered a separate lease component if (1) a lessee can benefit from the use of the underlying asset either on its own or with other resources that are readily available **and** (2) the underlying asset is not highly dependent on or highly interrelated[17] with other assets in the arrangement. Accordingly, a contract may include multiple lease components for different underlying assets.

Notwithstanding its requirement related to identifying lease components, an entity must account for the right to use land and other assets separately unless the effect of doing so would be insignificant to the overall accounting for the transaction (e.g., if a lease includes both land and a building component, and the entity concludes that each component would be classified as an operating lease, accounting for the two lease components together would be reasonable since the overall impact of accounting for the components together would be insignificant).

Editor's Note: When evaluating whether an activity should be considered a separate nonlease component, an entity should consider whether the activity transfers a separate good or service to the lessee. A component includes only those items or activities that transfer a good or service to the lessee. For example, in a real estate lease, maintenance services (including common-area maintenance services or CAM) and utilities paid for by the lessor but consumed by the lessee would be separate nonlease components because the lessee would have been required to otherwise contract for these services separately. However, payments for property taxes or insurance would most likely be considered part of the lease component because they do not transfer a separate good or service to the lessee. Such treatment could have the effect of inflating the lease liability since it would include amounts that are currently considered executory costs. From a practical standpoint, however, such amounts are frequently variable and therefore would not be included in the measurement of the lease liability.

[17] The ASU states that "[a] lessee's right to use an underlying asset is highly dependent on or highly interrelated with another right to use an underlying asset if each right of use significantly affects the other."

When a contract includes both lease and nonlease components, an entity is required to allocate the consideration in the contract to the various elements (except when a lessee is applying the practical expedient discussed below). The ASU provides separate guidance on how lessees and lessors should allocate these amounts.

Allocation by Lessees

Lessees need to first consider whether the stand-alone prices of the various components are observable. If each component has an observable stand-alone price, the lessee would base its allocation on the relative stand-alone price of each component. If only certain components have observable stand-alone prices, the lessee is permitted to estimate stand-alone prices by maximizing observable information for those items that do not have an observable stand-alone price. In addition, a lessee would allocate initial direct costs to the various components in a manner similar to its allocation of lease payments to each component.

Lessees are permitted to elect, as an accounting policy by class of underlying asset, not to separate lease components from nonlease components and instead account for the entire contract as a single lease component. However, when applying this election, a lessee would not be permitted to combine multiple lease components.

Allocation by Lessors

A lessor must consider the allocation guidance in ASC 606 to determine how to allocate the payments between the lease and nonlease components. That guidance allows a lessor to use an estimated selling price when no observable price exists. In addition, a lessor would allocate any capitalized costs, such as initial direct costs, to the components to which the costs are related.

Reallocation

Both lessees and lessors are required to reallocate the consideration in a contract when the contract is modified and the modification is not considered a separate contract. Lessees are also required to reallocate the consideration in the contract upon a reassessment of the lease term or a change in the likelihood that a purchase option will be exercised.

Contract Combinations

An entity is required to combine two or more contracts entered into at or near the same time with the same counterparty if any of the following criteria are met:

- The contracts are negotiated as a package with a single commercial objective.
- The amount of consideration to be paid in one contract depends on the price or performance of the other contract.
- The rights or some of the rights to use underlying assets conveyed in the contracts are a single lease component.

This guidance is generally consistent with the contract combination guidance in ASC 606.

Initial Direct Costs

In a manner consistent with the guidance in ASC 606, initial direct costs for both lessees and lessors would include only those costs that are incremental to the arrangement and would not have been incurred if the lease had not been obtained. This definition is considerably more restrictive than that under current requirements. For example, commissions paid and payments made to existing tenants to obtain the lease are considered initial direct costs, whereas allocated internal costs and costs to negotiate and arrange the lease agreement that would have been incurred regardless of lease execution (e.g., professional fees such as those paid for legal and tax advice) are not.

For sales-type leases, initial direct costs are recognized as an expense at lease commencement unless there is no selling profit or loss on the transaction. If there is no selling profit or loss, the initial direct costs are deferred and recognized over the lease term. For direct financing leases, a lessor would defer and include all initial direct costs in the initial measurement of the lease receivable. For operating leases, a lessor would defer the initial direct costs and amortize them as expenses over the term of the lease.

A lessee would include all initial direct costs in its initial measurement of the ROU asset.

Sale-and-Leaseback Transactions

The seller-lessee in a sale-and-leaseback transaction must evaluate the transfer of the underlying asset (sale) under the requirements in ASC 606 to determine whether the transfer qualifies as a sale (i.e., whether control has been transferred to the customer). The existence of a leaseback by itself would not indicate that control has not been transferred (i.e., it would not preclude the transaction from qualifying as a sale) unless the leaseback is classified as a finance lease. In addition, if the arrangement includes an option for the seller-lessee to repurchase the asset, the transaction would not qualify as a sale unless (1) the option is priced at the fair value of the asset on the date of exercise and (2) alternative assets exist that are substantially the same as the transferred asset and are readily available in the marketplace.

If the transaction does not qualify as a sale, the seller-lessee and buyer-lessor would account for the transaction as a financing arrangement (i.e., the buyer-lessor would account for its payment as a financial asset and the seller-lessee would record a financial liability).

Editor's Note: The ASU will significantly affect equipment sale-and-leaseback arrangements that include purchase options. Under current U.S. GAAP, a sale-and-leaseback transaction of equipment that includes a repurchase option may not result in a failed sale if there are no economic penalties reasonably ensuring that the repurchase option will be exercised. By contrast, under the ASU, any arrangement that includes a substantive repurchase option (e.g., a fixed-price purchase option) would be considered a failed sale because control of the underlying asset is not transferred to the purchaser.

Leaseback Accounting

If the transaction qualifies as a sale, the leaseback is accounted for in the same manner as all other leases (i.e., the seller-lessee and buyer-lessor would account for the leaseback under the new lessee and lessor accounting guidance, respectively).

Gain or Loss Recognition

If a transaction is based on "market" terms, the seller-lessee would immediately recognize the full amount of any gain or loss resulting from the sale (in a manner consistent with the treatment of sales of nonfinancial assets that do not involve a leaseback).[18] However, a transaction based on "off-market" terms would affect the calculation of the gain or loss. Specifically, the ASU requires a seller-lessee and a buyer-lessor to recognize off-market adjustments if there is a difference between (1) the sales price and fair value of the asset sold or (2) the present value of the contractual lease payments and the present value of the lease payments at fair market value. The seller-lessee would account for any difference either as an adjustment to the ROU asset or additional financing from the buyer-lessor that is separate from the lease liability. The buyer-lessor would recognize any difference as a prepayment of rent or additional financing to the seller-lessee that is separate from the lease receivable.

Accounting for Related-Party Leases

Lessees and lessors are required to account for related-party leasing arrangements on the basis of the legally enforceable terms and conditions of the lease rather than the substance of the arrangement. This is a significant change from current U.S. GAAP, under which a lessee and lessor would consider the substance of the contract as well as its legal form. The ASU requires a related-party lease to be accounted for in a manner similar to a lease between unrelated parties. Lessors and lessees are also required to disclose the information required by ASC 850 for all related-party lease arrangements.

Sublease Accounting

When the original lessee subleases the leased asset to an unrelated third party, the lessee becomes the intermediate lessor in the sublease arrangement. As the intermediate lessor of a leased asset, the entity would determine the classification of the sublease independently from its determination of the classification of the original lease (i.e., the head lease). Under the ASU, the intermediate lessor would classify the sublease on the basis of the underlying asset[19] (i.e., it would assess the term of the sublease

[18] By contrast, a seller-lessee applying IFRSs would only recognize gains resulting from the sale to the extent of the amount associated with the residual asset.

[19] The accounting for subleases under the new U.S. GAAP model differs significantly from that under IFRSs, which require the classification to be based on the remaining economic life of the ROU asset.

relative to the remaining economic life of the underlying asset). When evaluating lease classification and measuring the net investment in a sublease classified as a sales-type or direct financing lease, the original lessee (as a sublessor) should use the rate implicit in the lease if it is determinable. If the implicit rate is not determinable, the original lessee would use the discount rate that it used to determine the classification of the original lease.

In addition, offsetting is generally prohibited on the balance sheet and income statement unless the arrangement meets the offsetting requirements of ASC 210-20.

Example B3 — Accounting for a Sublease Under ASC 842

Company A, as lessee, entered into a building lease with a 30-year term. The building has a depreciable life of 40 years. At the end of year 5, A entered into an agreement with Company B under which B would sublease the building for 20 years.

As lessor, A would account for the lease to B (the sublease) as an operating lease because the term of the sublease is not for a major part of the remaining life of the *underlying asset* of the sublease (i.e., the sublease term of 20 years represents only 57 percent of the remaining 35-year life of the building), and A has concluded that no other classification criteria would result in the transfer of control of the underlying asset.

Build-to-Suit Arrangements

The ASU does not carry forward the requirements in current U.S. GAAP on lessee involvement in asset construction or "build-to-suit" leases. That guidance has long been criticized for being difficult to apply and punitive in nature. However, the new standard stipulates that an asset controlled[20] by a lessee during the construction period would be subject to sale-and-leaseback accounting upon completion of construction (i.e., the asset is effectively owned by the lessee during the construction period and is effectively sold — to the legal owner — and leased back upon completion of construction). The ASU provides guidance on how to account for certain costs incurred by the lessee related to the construction or design of the underlying asset if the lessee does not control the asset under construction. Costs incurred for goods or services provided to the lessee as well as other construction-related outflows or inflows for items such as loans, guarantees, and sales of component parts would be accounted for in accordance with other ASC topics.

Editor's Note: The ASU's Basis for Conclusions notes that (1) a lessee can be, and thus should assess whether it is, the owner of an asset under construction before lease commencement and (2) the assessment should be based on control (i.e., when the lessee controls the asset under construction). This is a departure from the requirements under current U.S. GAAP, which focus on construction risk assumed by a lessee, and is another example of the Board's effort to align the guidance on leases and revenue when appropriate. ASC 842-40 provides indicators of a lessee's control of an underlying asset that is under construction. Two of those indicators closely mirror those used by suppliers under ASC 606 to determine whether customers gain control of their work as they perform (i.e., as construction progresses). Under ASC 606, when a supplier's "performance creates or enhances an asset (for example, work in process) that the customer controls as the asset is created or enhanced," the supplier is satisfying its performance obligation over time. A lessee that controls an asset as it is created or enhanced by the supplier's performance owns the asset throughout the work in process and should therefore apply the sale-and-leaseback accounting guidance in ASC 842-40 upon lease commencement. ASC 842-40 also provides indicators of legal ownership of the asset under construction as well as control, through lease or ownership, of the underlying land.

However, it is important to differentiate control of an asset during construction from control of *the right to use an asset* during construction. The latter reflects the lease of an asset under construction, an arrangement that is specifically excluded from the scope of ASC 842.

Leasehold Improvements

In a manner consistent with current U.S. GAAP, a lessee would generally capitalize a leasehold improvement as a separate asset and amortize it over the shorter of its useful life and the remaining lease term. However, a lessee would amortize a leasehold improvement over its useful life (even if such life is longer than the lease term) if (1) the lease transfers ownership of the underlying

[20] ASC 842-40-55-5 provides indicators for lessees to consider when determining whether the lessee controls the underlying asset being constructed.

asset to the lessee at the end of the lease term or (2) it is reasonably certain that the lessee will exercise an option to purchase the underlying asset.

A leasehold improvement acquired in a business combination will be amortized over the shorter of its useful life or remaining lease term as of the acquisition date.

Accounting for Leases at a Portfolio Level

Lessees and lessors are permitted to apply the new lease guidance at a portfolio level if the resulting accounting would not be significantly different from that achieved when they apply the guidance on an individual-lease basis. This would apply to transition accounting as well as on a go-forward basis and is expected to be particularly useful for companies with a significant number of leases with similar economic characteristics. Applying the lease guidance at a portfolio level may facilitate the accounting when judgments or estimates are required under the model (e.g., using a single discount rate for an entire portfolio of leases may be appropriate if the resulting accounting would not be materially different from that resulting from the application of a unique discount rate to each individual lease).

Leveraged Lease Accounting

On the effective date of the new standard, leases previously classified as leveraged leases under ASC 840 would be subject to the guidance in ASC 842-50. This approach is generally consistent with the legacy accounting requirements for leveraged leases and effectively grandfathers that guidance. If a leveraged lease is modified after the ASU's effective date, it would be accounted for as a new lease under the standard's lessee and lessor models. Entities would not be permitted to account for any new lease arrangements as leveraged leases after the ASU's effective date.

Business Combinations

The ASU requires the acquiring entity in a business combination to retain the acquiree's previous lease classification. However, if the business combination results in changes to the contractual terms and conditions of the lease (i.e., a modification) and the modification is not accounted for as a separate contract, the acquirer would classify the lease on the basis of the modified terms. The initial measurement would be as follows:

- *Acquiree is a lessee* — In a manner similar to the short-term lease scope exception, an acquiring entity may, as an accounting policy election by asset class, choose not to recognize assets or liabilities related to acquired leases that have a remaining lease term of 12 months or less as of the acquisition date. For all other leases, the acquiring entity must initially measure (1) the lease liability at the present value of the remaining lease payments (as if the acquired lease were a new lease of the acquiring entity as of the acquisition date) and (2) an ROU asset at the same amount, adjusted to reflect favorable or unfavorable terms of the lease relative to market terms.
- *Acquiree is a lessor* — The initial measurement is based on the classification of the acquired lease:
    - *Operating lease* — The acquiring entity will recognize (separately from the underlying leased asset) (1) an intangible asset if the terms of the acquired lease are favorable relative to market terms and (2) a liability if the terms are unfavorable relative to market terms.
    - *Sales-type or direct financing leases* — The acquiring entity will measure its net investment in the lease (total lease receivable and unguaranteed residual asset) at the fair value of the underlying asset as of the acquisition date. The terms of the lease (favorable or unfavorable) relative to market terms should be considered in the calculation of the underlying asset's acquisition-date fair value.

Appendix C — Presentation Requirements

ASU 2016-02 contains presentation requirements for lessees and lessors that are based on the classification of the lease agreement.

Lessee Presentation Requirements

Statement of Financial Position

An entity is required to present in the statement of financial position, or disclose in its notes to the financial statements, ROU assets and liabilities resulting from finance leases and operating leases. These assets and liabilities should be presented or disclosed separately from each other and from other assets and liabilities. Further, the lessee is required to separately present the current and noncurrent portions of the ROU asset and lease liability.

> **Editor's Note:** The ASU's separate presentation requirement for finance and operating leases may be viewed favorably by preparers because it may reduce an entity's exposure to potential debt covenant violations that could have resulted if all lease liabilities were required to be characterized as debt. See Appendix F for more information.

Statement of Comprehensive Income

Lessees would present the expense related to their lease arrangements as follows:

- *Finance leases* — Interest expense on the lease liability and amortization of the ROU asset would be presented in a manner consistent with the lessee's presentation of interest expense related to its other liabilities and depreciation or amortization of similar assets, respectively. Variable lease payments would be included as an expense in the lessee's income from continuing operations.
- *Operating leases* — Lease expense is included in the lessee's income from continuing operations as a single lease expense amount.

> **Editor's Note:** Entities will need to consider the effect of their lease classification on certain financial statement metrics and non-GAAP measures, such as earnings before interest, taxes, depreciation, and amortization (EBITDA). The interest and amortization expense resulting from a finance lease would typically be excluded from an entity's calculation of EBITDA. By contrast, the entity's EBITDA calculation would include its expense resulting from an operating lease (which is classified as an operating expense in the statement of comprehensive income). Entities should also consider the effects of these changes on other business arrangements such as, for example, employee compensation plans tied to earnings metrics.

Statement of Cash Flows

The presentation of cash flows generally depends on whether the lease is a finance lease or an operating lease:

- *Finance leases* — Payments of principal and interest are presented as cash outflows from financing and operating activities, respectively.
- *Operating leases* — Operating lease payments are presented as cash outflows from operating activities.

However, irrespective of lease classification, both variable lease payments that are not included in the lease liability and payments on short-term leases are presented as cash outflows from operating activities. Further, any cash flows resulting from lease payments used to bring another asset to its intended location for its intended use would be classified in investing activities.

Lessor Presentation Requirements

Statement of Financial Position

A lessor's presentation of a lease agreement depends on whether the lease is a sales-type lease, direct financing lease, or an operating lease:

- *Sales-type and direct financing leases* — The net investment in a lease is separately presented in the statement of financial position.
- *Operating leases* — The underlying asset subject to an operating lease is presented in accordance with other ASC topics (e.g., ASC 360).

Statement of Comprehensive Income

All income resulting from a lease is separately presented in the statement of comprehensive income or disclosed in the notes. An entity that does not separately present lease income in the statement must disclose where in the statement it is included. In addition, any profit or loss resulting from a lease should be recognized at lease commencement in a manner consistent with the lessor's business model (e.g., gross revenue and cost of goods as opposed to profit and loss in a single line item).

Editor's Note: Because the ASU allows a lessor to present profit or loss resulting from a lease in a manner consistent with its business model, the lessor may present such amounts on a gross or net basis. This presentation flexibility is designed to reflect institutions' various business models. For example, a manufacturing entity may enter into a leasing arrangement as opposed to selling directly to customers, whereas a financial institution may enter into a leasing arrangement as a means of providing financing. The standard also acknowledges that a lessor with multiple business models could present profit or loss resulting from leases on a gross or net basis depending on the particular model the lease is related to.

Statement of Cash Flows

Regardless of lease classification, cash inflows related to a lease are presented as cash inflows from operating activities.

Appendix D — Disclosure Requirements

The objective of ASU 2016-02's disclosure requirements is to help financial statement users understand the amounts, timing, and uncertainties of cash flows related to a lease. An entity is required to disclose certain qualitative and quantitative information about its leases, judgments used in applying the leasing guidance, and the related amounts recognized in the financial statements.

Lessee Disclosures

Qualitative Disclosures

A lessee should disclose:

- Information about the nature of its leases and subleases (general description of the lease, variable lease payments, renewal or termination options, residual value guarantees, and restrictions imposed by the lease).
- Leases that have not yet commenced but give the lessee significant rights or impose significant obligations, including the nature of any involvement in the design or construction of the underlying asset.
- Significant assumptions and judgments used in applying the leases standard.
- Main terms and conditions of any sale-and-leaseback transactions.
- Lease transactions with related parties.
- Accounting policy regarding short-term leases.
- Accounting policy election of the practical expedient not to separate lease and nonlease components.

Quantitative Disclosures

A lessee should disclose the following amounts for each period presented (regardless of whether the amounts are capitalized as part of another asset):

- Finance lease costs (i.e., amortization of the ROU asset and interest on the lease liability).
- Operating lease costs.
- Short-term lease costs (except for leases with a term of one month or less).
- Variable lease costs.
- Sublease income, disclosed on a gross basis.
- Gain or loss resulting from sale-and-leaseback transactions.

A lessee should disclose the following amounts separately for its operating and finance leases:

- Separate maturity analyses of its operating lease liabilities and finance lease liabilities (undiscounted cash flows for each of the next five years and a total of the amounts for the remaining years, reconciled to the amounts presented in the statement of financial position).
- Cash paid for amounts included in its determination of lease liabilities (segregated between operating and financing cash flows).
- Supplemental noncash information on lease liabilities arising from obtaining ROU assets.
- Weighted-average remaining lease term.
- Weighted-average discount rate.

For a complete list of the disclosure requirements for lessees, see ASC 842-20-50 and ASC 842-40-50 in the ASU.

Lessor Disclosures

Qualitative and Quantitative Disclosures

A lessor is required to disclose certain qualitative and quantitative information, including:

- Information about the nature of its leases (general description of the lease, variable lease payments, renewal, purchase or termination options).
- Significant assumptions and judgments used in the application of leases guidance.
- Lease transactions with related parties.
- A tabular disclosure of lease-related income, including:
  - Profit and loss recognized at lease commencement for sales-type and direct financing leases.
  - Interest income.
  - Income from variable lease payments not included in the lease receivable.
- The components of the net investment in sales-type and direct financing leases, including the carrying amount of the lease receivable, the unguaranteed residual asset, and any deferred profit on direct financing leases.
- Information about how the entity manages its exposure to risk associated with the residual value of its leased assets.
- A maturity analysis for operating lease payments and a separate maturity analysis for the lease receivable (sales-type and direct financing leases). The maturity analysis should show the undiscounted cash flows to be received in each of the next five years after the reporting date, and a total of the amounts for the years thereafter. The maturity analysis of the lease receivable should be reconciled to the lease receivable balance.
- The information required by ASC 360 for all assets that are subject to an operating lease, presented separately from similar owned assets.

For a complete list of the disclosure requirements for lessors, see ASC 842-30-50 and ASC 842-50-50 (on leveraged lea"eses) in the ASU.

Appendix E — Transition

Transition Requirements

Lessees and lessors[21] are required to use a modified retrospective transition method for existing leases. Accordingly, they would apply the new accounting model for the earliest year presented in the financial statements. The application of this approach is directly linked to the current lease classification under ASC 840 and the new lease classification under ASC 842.

Lessee Requirements

The following table summarizes ASU 2016-02's modified retrospective transition requirements for lessees:

		Current U.S. GAAP (ASC 840)	
		Operating Lease	Capital Lease
New Model (ASC 842)	Operating lease	• Recognize an ROU asset and lease liability at the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. • Measure a lease liability as the present value of the remaining lease payments and expected residual value guarantee discounted by using a rate determined at the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. • Measure an ROU asset equal to the lease liability, adjusted for prepaid/accrued rent, unamortized initial direct costs, impairment of the ROU asset, and the carrying amount of any liability recognized under ASC 420 (i.e., related to exit or disposal cost obligations). • Write off as an adjustment to equity any unamortized initial direct costs that do not meet the ASU's definition of initial direct costs.	• Derecognize the capital lease asset and lease obligation at the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. Any difference between the amounts derecognized would be accounted for similarly to prepaid or accrued rent. • Recognize an ROU asset and lease liability by using (1) the ASU's initial measurement guidance for leases entered into after the beginning of the earliest period presented or (2) the ASU's subsequent measurement guidance that applies to leases entered into before the beginning of the earliest year presented. • Write off as an adjustment to equity any unamortized initial direct costs that do not meet the ASU's definition of initial direct costs.
	Finance lease	• Recognize an ROU asset and lease liability at the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. • Measure a lease liability as the present value of the remaining lease payments and expected residual value guarantee discounted by using a rate determined at the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. • Measure an ROU asset equal to a proportion of the lease liability as of the commencement date, adjusted for the carrying amount of previously recognized prepaid or accrued lease payments and the carrying amount of liabilities recognized under ASC 420. The proportionate amount is based on the remaining lease term (as of the beginning of the earliest period presented) relative to the total lease term. • Write off as an adjustment to equity any unamortized initial direct costs that do not meet the ASU's definition of initial direct costs.	• Recharacterize the capital lease asset as an ROU asset as of the later of (1) the beginning of the earliest year presented or (2) the lease commencement date. • Include in the ROU asset established at transition any unamortized initial direct costs that meet the ASU's definition of initial direct costs. • Write off as an adjustment to equity any unamortized initial direct costs that do not meet the definition of such costs in ASC 842 and are not included in the measurement of the capital lease asset under ASC 840.

Note that there are additional considerations under ASC 842-10-65-1 for modifications of a lease that occur on or after the standard's effective date and do not result in a separate contract.

[21] Lessors must account for leveraged leases under the requirements in ASC 842-50, which are similar to the current requirements in ASC 840 for leveraged leases. However, if the leveraged lease is modified, it would be accounted for as a new lease.

Example E1 — Lessee Transition

A lease with the following terms was accounted for as an operating lease under current U.S. GAAP:

Lease term:	10 years (January 1, 2013, through December 31, 2022).
Adoption date:	January 1, 2019 (beginning of year 7 (4 years remaining)).
Lease payments:	$100 in years 1 through 5; $120 in years 6 through 10 (payments occur at the end of the year).
Discount rate:	4 percent (January 1, 2017).

The table below illustrates the adjustments made to the financial statements as a result of the adoption of the ASU if (1) the lease continues to be classified as an operating lease and (2) the lease is classified as a finance lease.

	Operating Lease				Finance Lease			
	Lease Liability	ROU Asset	Reversal of Straight-Line Accrual	Retained Earnings/ Net Income	Lease Liability	ROU Asset	Reversal of Straight-Line Accrual	Retained Earnings/ Net Income
Adjustment on 1/1/2017 (earliest period presented)	$ 610[(a)]	$ 570[(b)]	$ 40[(g)]	$ 0	$ 610[(a)]	$ 490[(c)]	$ 40[(g)]	$ 80
12/31/2017	534[(d)]	484[(e)]		110	534[(d)]	408[(f)]		106
12/31/2018	436[(d)]	396[(e)]		110	436[(d)]	326[(f)]		103

(a) The lease liability is calculated as the present value of the remaining lease payments ($120 for 5 years and one year at $100 discounted at 4 percent).

(b) The ROU asset under the operating lease model is calculated at the initial amount of the lease liability adjusted for the previously recorded straight-line accrual of $40 (i.e., $570 = $610 – $40).

(c) The ROU asset under the financing approach is calculated in proportion (6 of 10 years remaining) to the lease liability as of the commencement date (present value of all lease payments or $884), reduced by the straight-line accrual of $40 (i.e., $490 = [($884 × 6 ÷ 10) – $40)].

(d) The lease liability is subsequently calculated by using the effective interest method.

(e) The ROU asset is subsequently measured at an amount equal to the lease liability, adjusted for the accrued lease expense of $50 on 12/31/2017 and $40 at 12/31/2018. This results in a straight-line expense of $110 per year.

(f) The ROU asset is subsequently amortized on a straight-line basis ($490 over 6 years or $82 per year).

(g) This amount represents the straight-line lease accrual that results from recording a straight-line annual lease expense of $110 per year for the four years from 2013 to 2016 compared to lease payments totaling $400 during that period.

Lessor Requirements

The following table summarizes the ASU's modified retrospective transition requirements for lessors:

<table>
<tr><th></th><th></th><th colspan="2">Current U.S. GAAP (ASC 840)</th></tr>
<tr><th></th><th></th><th>Operating Lease</th><th>Direct Financing or Sales-Type Lease</th></tr>
<tr><td rowspan="2">New Model (ASC 842)</td><td>Operating lease</td><td>• Continue to recognize the carrying amount of the underlying asset and any lease assets or liabilities at the later of (1) the initial application date or (2) the lease commencement date.
• Write off as an adjustment to equity any unamortized initial direct costs that do not meet the ASU's definition of initial direct costs.</td><td>As of the later of (1) the beginning of the earliest period presented or (2) the lease commencement date:
• Recognize an underlying asset at the carrying amount that would have existed had the lease been classified as an operating lease under ASC 840.
• Derecognize the carrying amount of the net investment in the lease.
• Recognize as an adjustment to equity the difference between the newly recognized asset and the derecognized net investment.</td></tr>
<tr><td>Direct financing or sales-type lease</td><td>As of the later of (1) the beginning of the earliest period presented or (2) the lease commencement date:
• Derecognize the carrying amount of the underlying asset.
• Recognize a net investment in the lease as if the lease had been accounted for as a direct financing lease or sales-type lease since lease commencement.
• Recognize as an adjustment to equity the difference between the newly recognized net investment and the derecognized asset.</td><td>• Continue to recognize a net investment in the lease, at the later of (1) the beginning of the earliest period presented or (2) the lease commencement date, at the carrying amount at that date.
• Before the effective date of the new guidance, the lease should be accounted for under ASC 840.
• Beginning on the effective date, the lease should be accounted for under the ASU.</td></tr>
<tr><td colspan="4">Note that there are additional considerations under ASC 842-10-65-1 for modifications of a lease that occur on or after the standard's effective date and do not result in a separate contract.</td></tr>
</table>

Transition Relief

The ASU offers relief from implementing the standard's transition provisions by permitting an entity (lessee or lessor) to elect not to reassess:

- Whether any expired or existing contract is a lease or contains a lease.
- The lease classification of any expired or existing leases.
- Initial direct costs for any existing leases.

An entity that elects transition relief is required to adopt all three relief provisions and is prohibited from applying the relief on a lease-by-lease basis. In addition, the entity must disclose that it has elected the transition relief package. Separately, the entity is also allowed to use hindsight in its evaluation of the lease term (e.g., renewal, termination, and purchase options for existing leases).

Editor's Note: Electing the transition relief may significantly reduce the burden of adopting the new standard since entities would not be required to revisit old lease contracts and related documentation to reevaluate whether such arrangements meet the new definition of a lease or how to classify them under the ASU. Such an election does not, however, relieve an entity from its obligation to address any errors that may have resulted from the misapplication of past accounting (e.g., improperly accounting for an arrangement as a service rather than a lease or inappropriately classifying a lease as an operating lease rather than a capital lease).

Sale-and-Leaseback Transactions

An entity is required to reassess its conclusion that a sale that was part of a failed sale-and-leaseback transaction continues to be disqualified from the application of sale accounting under ASC 606 upon transition as long as the transaction is still considered to be a failed sale as of the effective date of the new lease accounting guidance. In addition:

- The seller in a sale-and-capital-leaseback transaction is required to recognize any deferred gain or loss that exists as of the later of (1) the earliest period presented or (2) the date of the sale of the underlying asset as follows:
    - If the underlying asset is land only, on a straight-line basis over the remaining lease term.
    - If the underlying asset is not land only and the leaseback is a finance lease, in proportion to the amortization of the ROU asset.
    - If the underlying asset is not land only and the leaseback is an operating lease, in proportion to the total lease cost.
- The seller in a sale-and-operating-leaseback transaction is required to recognize any deferred gain or loss resulting from off-market terms as an adjustment to the leaseback ROU asset (loss) or lease liability (gain) as of the date of initial application. The seller is required to recognize any deferred gain or loss not resulting from off-market terms as a cumulative-effect adjustment to opening equity (if the transaction occurred before the earliest year presented) or earnings in the comparative period (if the transaction occurred within one of the comparative periods presented).

Build-to-Suit Lease Arrangements

The ASU supersedes current guidance on build-to-suit arrangements. A lessee must apply the modified retrospective transition approach to such arrangements. Accordingly, it should derecognize assets and liabilities from build-to-suit transactions under ASC 840 (those assets and liabilities that arose because the lessee was deemed the owner during construction and could not be derecognized under the legacy sale-and-leaseback requirements) as of the later of (1) the earliest financial statement period presented or (2) the date on which the entity was deemed the accounting owner. Any differences between the assets and liabilities derecognized would be recorded as an adjustment to equity on that date. Further, if the construction period ended before the earliest comparative period presented, and the transaction subsequently qualified for and was accounted for as a sale-and-leaseback transaction, the entity should consider the general lessee transition requirements.

Business Combinations

On the effective date of the new guidance, any assets and liabilities related to favorable or unfavorable terms of an operating lease that resulted from prior business combinations would be derecognized upon transition (except for those arising from operating leases under which the entity is a lessor). A lessee would adjust the carrying amount of the ROU asset by a corresponding amount. By contrast, a lessor would make a corresponding adjustment to equity at the beginning of the earliest comparative period presented for its leases that are classified as sales-type or direct financing under ASC 840.

Appendix F — Implementation Considerations

Application of Judgment and Estimation

Entities must apply judgment and make estimates under a number of the new (as well as current) leases requirements. Judgment is often required in the assessment of a lease's term, which would affect whether the lease qualifies for the short-term exemption and therefore for off-balance-sheet treatment. In addition, since almost all leases will be recognized on the balance sheet, an entity's judgment in distinguishing between leases and services becomes more critical under the new guidance.

Editor's Note: In particular, upon transition, entities will need to recognize ROU assets and lease obligations by using an appropriate discount rate on the date of transition (see Appendix E for additional considerations). Compliance with this requirement may be difficult for entities with a significant number of leases since they will need to identify the appropriate incremental borrowing rate for each lease on the basis of factors associated with the underlying lease terms (e.g., lease tenor, asset type, residual value guarantees). In other words, entities would not be permitted to use the same discount rate for all of their leases unless the leased assets and related terms are similar in nature.

Data Management

Entities may have numerous lease agreements at multiple decentralized locations and may, in many instances, maintain their lease data in spreadsheets or physical documents. Consequently, collecting and abstracting the data may be time-consuming and resource-intensive. Further, even if entities already have such information in an electronic format, it may reside in disparate systems or need to be enhanced to ensure that it complies with ASU 2016-02's accounting and disclosure requirements.

In addition, entities may need to gather information required by the ASU that may not be contained in lease agreements. For example, entities may need to acquire information about (1) the fair value of an asset, (2) the asset's estimated useful life, (3) the incremental borrowing rate, and (4) certain judgments related to lease options. Acquiring this data may be particularly challenging for multinational entities whose lease documentation may be prepared in a foreign language and could also vary as a result of local business practices.

As entities identify and collect the data they need for compliance with the ASU's requirements, they should also consider the challenges of ongoing data maintenance. Data gathering and abstraction efforts may take many months to complete, during which time new leases will be executed, renewed, modified, or terminated. Accordingly, management will need to establish an approach to data maintenance and controls during the implementation period and beyond.

Given the relationship between lease maturity disclosures under current guidance and lease liabilities that will be recognized upon adoption of the ASU (and will be subject to modified retrospective transition, which will affect 2017 financial reporting), we believe that in preparing their December 31, 2016, financial statements, entities should strive to ensure that they have identified a complete population of leases.

Information Technology Systems

As a result of implementing the ASU's requirements, entities will most likely need to enhance their existing information technology systems. The extent of such enhancements will be based on the size and complexity of an entity's lease portfolio and its existing leasing systems. As with any change to existing systems, an entity will need to consider the business ramifications (i.e., the potential impact on existing processes, systems, and controls) and the requirements of system users (e.g., the entity's legal, tax, financial planning and analysis, real estate, treasury, and financial reporting functions).

Also, management may need to consider system changes that will enable the entity to estimate, before adoption, the ASU's effect on key performance indicators and metrics, tax filings, debt covenants, or other filings. In addition, to the extent that an entity prepares IFRS statutory reports for foreign subsidiaries, its systems will need to distinguish between the ASU and IFRS 16 and be equipped to handle the differences between the two standards.

Internal Controls and Business Process Environment

To a significant extent, current lease data systems are used for operational purposes and thus some aspects of the related internal controls may be outside of the scope of the internal control requirements of the Sarbanes-Oxley Act of 2002. Given the increased relevance of leasing data to the financial statements as a result of the ASU, entities may face additional scrutiny from auditors and regulators regarding the design and effectiveness of associated controls. Accordingly, entities will need to examine their internal controls related to their processes for capturing, calculating, and accounting for their leases. If additional internal controls or processes are needed, entities may also need to issue organizational communications and establish change management and employee training programs.

In addition, during their implementation of the standard, entities may identify opportunities for potential enhancements to their current processes to achieve future operational efficiencies. For example, entities may seek to automate manually intensive processes or consider organizational changes such as a shared services model.

Debt Covenants

Given the requirement to bring most leases on the balance sheet, many entities will reflect additional liabilities in their balance sheets after adopting the ASU. Such entities should determine whether the increased leverage will negatively affect any key metrics or potentially cause debt covenant violations. This may depend in part on how various debt agreements define and limit indebtedness as well as on whether the debt agreements use "frozen GAAP" covenants. The ASU requires entities to present operating lease liabilities outside of traditional debt, which may provide relief to some entities. Nevertheless, we believe that it will be critical for all entities to determine the ASU's potential effects on debt covenants and begin discussions with lenders early if they believe that violations are likely to occur as a result of adopting the ASU.

Income Taxes

A lease's classification for accounting purposes does not affect its classification for tax purposes. An entity will therefore continue to be required to determine the tax classification of a lease under the applicable tax laws. While the classification may be similar for either purpose, the differences in tax and accounting principles and guidance often result in book/tax differences. Thus, once an entity implements the new standard, it will need to establish a process to account for these differences.

The ASU's requirement for entities to reevaluate their leases under the new guidance presents an opportunity for them also to reassess the tax treatment of such leases as well as their data collection and processes. Since the IRS considers a taxpayer's tax treatment of leases to be a method of accounting, any changes to existing methods may require IRS consent.

Entities should also consider the potential state tax issues that may arise as a result of the new guidance, including how the classification of the ROU asset may affect the apportionment formula in the determination of state taxable income and how the significant increase in recorded lease assets could affect the determination of franchise tax payable.

> **Editor's Note:** Since the potential tax implications are many and varied, it is essential for a company's tax department to be involved in the evaluation of the lease standard as well as in discussions related to policy adoption and system modifications.

Getting Started

Entities should develop a robust plan and establish a cross-functional implementation team to ensure an efficient and timely approach to implementation. In developing such a plan, they should consider doing the following:

- Performing a current-state assessment of their lease portfolio, including lease volume and types, availability of electronic lease data and data gaps, and any potential challenges related to accounting, taxes, or processes.
- Establishing a project plan for managing the implementation effort for multiple functions, business units, and countries, as necessary.

- Developing an approach to, and resources to perform, the abstraction of lease data.
- Determining their specific system requirements and developing a plan for enhancing system capabilities to satisfy the new storage, calculation, and reporting requirements while keeping in mind the associated internal control implications.
- Assessing the effect of the ASU on their key metrics and debt covenants.

By planning properly, entities can help ensure that their transition to the new leases standard is smooth and successful.

Subscriptions

Dbriefs for Financial Executives

We invite you to participate in *Dbriefs*, Deloitte's webcast series that delivers practical strategies you need to stay on top of important issues. Gain access to valuable ideas and critical information from webcasts in the "Financial Executives" series on the following topics:

- Business strategy and tax.
- Driving enterprise value.
- Financial reporting.
- Financial reporting for taxes.
- Governance, risk, and compliance.
- Technology.
- Transactions and business events.

Dbriefs also provides a convenient and flexible way to earn CPE credit — right at your desk. Subscribe to *Dbriefs* to receive notifications about future webcasts at www.deloitte.com/us/dbriefs.

Technical Library and US GAAP Plus

Deloitte makes available, on a subscription basis, access to its online library of accounting and financial disclosure literature. Called Technical Library: The Deloitte Accounting Research Tool, the library includes material from the FASB, EITF, AICPA, PCAOB, IASB, and SEC, in addition to Deloitte's own accounting and SEC manuals and other interpretive accounting and SEC guidance.

Updated every business day, Technical Library has an intuitive design and navigation system that, together with its powerful search features, enable users to quickly locate information anytime, from any computer. Technical Library subscribers also receive Technically Speaking, the weekly publication that highlights recent additions to the library. For more information, including subscription details and an online demonstration, visit www.deloitte.com/us/techlibrary.

In addition, be sure to visit US GAAP Plus, our free Web site that features accounting news, information, and publications with a U.S. GAAP focus. It contains articles on FASB activities and updates to the *FASB Accounting Standards Codification*™ as well as developments of other U.S. and international standard setters and regulators, such as the PCAOB, AICPA, SEC, IASB, and IFRS Interpretations Committee. Check it out today!

What you need to know

- Entities will apply the new revenue recognition standard to revenues from sales of real estate to customers.
- When it issued the new standard, the FASB amended other parts of the ASC to address the accounting for the sale of certain nonfinancial assets, including real estate, to noncustomers.
- Entities will need to apply the recognition and measurement principles in the new standard (including estimating variable consideration) to account for gains or losses resulting from the sale of real estate to noncustomers.
- Entities that sell real estate will generally recognize a gain or loss when they transfer control of a property. They will no longer have to apply the prescriptive real estate sales criteria, including evaluation of the buyer's initial and continuing investments and the seller's continuing involvement with the property.

Overview

As part of Accounting Standards Update (ASU) 2014-09, *Revenue from Contracts with Customers*, the Financial Accounting Standards Board (FASB) issued consequential amendments to other sections of the Accounting Standards Codification (ASC or Codification) that will require entities to change how they account for sales of real estate. These amendments include the elimination of existing guidance in ASC 360-20, *Real Estate Sales*, and the addition of ASC 610-20, *Other Income — Gains and Losses from the Derecognition of Nonfinancial Assets*.

Building a better working world

Revenues from sales of real estate to customers (i.e., sales that are part of the seller's ordinary activities) will be recognized using the guidance in ASC 606, *Revenue from Contracts with Customers*. However, entities that sell real estate assets to noncustomers[1] will generally account for these transactions using the guidance in ASC 610-20, which directs entities to apply certain control and measurement principles of ASC 606. These new standards will only be applied by sellers of real estate; purchasers will continue to use existing guidance (e.g., ASC 360-10, *Property, Plant, and Equipment* or ASC 805, *Business Combinations)*.

The elimination of today's guidance for sales of real estate in ASC 360-20 will be a major change for all real estate entities. ASC 360-20 is a complex, rules-based standard that requires entities to evaluate both the form and economic substance of a transaction. For some transactions, the application of ASC 360-20 results in the deferral of sale and/or profit recognition when certain criteria are not met.

The new guidance in ASC 606 and ASC 610-20 replaces the prescriptive literature in ASC 360-20 with a principles-based approach that will require entities to make a number of judgments and estimates. Under the new guidance, entities will generally recognize the sale, and any associated gain or loss, of a real estate property when control of the property transfers.

This publication discusses the implications of applying the recognition and measurement principles of ASC 606 and ASC 610-20 to sales of real estate. Throughout this publication, we compare the accounting for several common real estate sale transactions under the new guidance with the accounting under today's guidance in ASC 360-20.

In our discussion and in many of our examples, we use terminology from ASC 360-20 because the new standard does not describe specific real estate sales transactions. Our use of these terms is intended to help you compare the new guidance with today's guidance. By using these terms, we are not suggesting that entities should continue to use the guidance in ASC 360-20 or analogize to it to account for the sale of real estate once the new standard is effective.

In addition, any conclusions we reached in our examples are based on the facts we described and are subject to change. All arrangements will need to be carefully evaluated under the new guidance, based on the facts and circumstances.

This publication supplements our general Technical Line publication on the new standard and the other real estate industry Technical Line publications we have released. It should be read in conjunction with the following materials:

- *A closer look at the new revenue recognition standard* (SCORE No. BB2771)
- *The new revenue recognition standard — real estate* (SCORE No. BB2811)
- *Gains and losses from the derecognition of nonfinancial assets* (SCORE No. BB3021)

Summary of the new guidance

The new guidance in ASC 606 and ASC 610-20 outlines the principles an entity must apply to measure and recognize revenue and the related cash flows. The core principle is that an entity will recognize revenue at an amount that reflects the consideration it expects to be entitled to in exchange for transferring goods or services to a customer.

The new revenue standard (ASC 606) will be applied using the following five-step model:

Step 1: Identify the contract(s) with a customer

An entity must first identify the contract, or contracts, to provide goods and services to customers. These contracts may be written, oral or implied by the entity's customary business practice but must be legally enforceable and meet specified criteria. That is, the contract must be approved by all parties, and they must be committed to performing their respective obligations, the entity must be able to identify each party's rights regarding goods and services to be transferred and the associated payment terms, the contract must have commercial substance, and the entity needs to conclude it is probable that it will collect the consideration to which it will be entitled for transferring the goods or services to the customer.

Entities will need to consider the laws of their respective jurisdictions (e.g., United States Uniform Commercial Code, state and local real property laws) when determining whether a contract is legally enforceable. In the US, in nearly all real estate arrangements, a signed, written contract specifies the asset to be transferred or management services to be provided in exchange for a defined payment. This generally will result in a straightforward assessment of most of the contract criteria in the standard. The assessment may be different when evaluating transactions that occur in countries outside of the US.

The prescriptive guidance in ASC 360-20 for evaluating a buyer's initial and continuing investment has been replaced with a collectibility assessment in ASC 606.

However, the collectibility criterion may require careful consideration. When assessing collectibility, an entity must conclude that it is probable that it will collect the transaction price. The transaction price is the amount to which the entity expects to be entitled in exchange for the goods or services that will be transferred to the customer, which may be different from the stated contract price.

The transaction price may be less than the stated contract price if an entity concludes that it has offered or is willing to accept a price concession or other discount. Such concessions or discounts are forms of variable consideration (see Step 3: Determine the transaction price section below for further discussion) that an entity would estimate at contract inception and reduce from the contract price to derive the transaction price. The estimated transaction price would then be evaluated for collectibility. The following table illustrates these concepts:

Stated contract price	$ 2,000,000
Price concession - amount entity estimates it will offer (explicitly) or accept (implicitly) as a reduction to the contract price, unrelated to credit risk	($200,000)
Transaction price (assessed for collectibility)	$ 1,800,000

In assessing collectibility, the term "probable" is defined as when "the future event or events are likely to occur." This is consistent with the existing definition in US GAAP. An entity should consider the buyer's intent and ability to pay the amount of consideration when it is due in evaluating whether collectibility of the transaction price is probable.

In many circumstances, an entity may not be willing to accept less than the contract price (i.e., offer a price concession) but is willing to accept the risk of default by the customer of contractually agreed-upon consideration (i.e., credit risk). In these circumstances, the transaction price would not differ from the contract price, and this amount would be evaluated to determine if collection is probable.

How we see it

Entities that sell real estate and provide financing to the buyer may find that more judgment is required to evaluate the collectibility of the transaction price. These entities may be used to applying the strict quantitative criteria in ASC 360-20 for determining whether a buyer's initial and continuing investment is sufficient to allow for sale and profit recognition. This guidance will be eliminated, and there is little guidance in the new standard to help entities evaluate collectibility.[2] Therefore, this assessment may be difficult and necessitate that entities develop new processes and controls to evaluate some arrangements, including those in which the seller provides financing to the buyer.

When seller financing is provided, we believe that entities will need to consider a variety of factors when evaluating collectibility of the transaction price. Those factors may include analysis of commercially available lending terms for similar transactions, down payment sufficiency, projected cash flows of the property, borrower creditworthiness, experience and expertise of the buyer's management team and historical experience of the seller in similar transactions.

Step 2: Identify the performance obligations in the contract

The new revenue standard requires an entity to identify at contract inception all promised goods and services and determine which of these promised goods or services (or bundle of goods and services) represent performance obligations. Promised goods and services represent a performance obligation if (1) the goods or services are distinct (by themselves or as part of a bundle of goods and services) or (2) if the goods or services are part of a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer. A promised good or service that is not distinct is combined with other goods or services until a distinct bundle is formed.

A good or service (or bundle of goods and services) is distinct when both of the following criteria are met:

- The customer can benefit from the good or service either on its own or together with other resources that are readily available to the customer (i.e., the good or service is capable of being distinct).
- The entity's promise to transfer the good or service to the customer is separately identifiable from other promises in the contract (i.e., the good or service is distinct within the context of the contract).

Goods or services that are part of a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer are required to be combined into one performance obligation. To meet the same pattern of transfer criterion, each distinct good or service in the series must be considered a performance obligation satisfied over time (discussed in Step 5), and an entity must use the same method to measure the progress of transferring each distinct good or service (e.g., time elapsed). Examples include repetitive services provided on an hourly or daily basis.

Step 3: Determine the transaction price

The transaction price is the amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to the customer and includes:

- An estimate of any variable consideration (e.g., amounts that vary due to discounts or bonuses) using either a probability-weighted expected value or the most likely amount, whichever better predicts the amount of consideration to which the entity will be entitled

- The effect of the time value of money, if there is a financing component that is significant to the contract
- The fair value of any noncash consideration
- The effect of any consideration payable to the customer, such as vouchers and coupons

The transaction price may be constrained because of variable consideration. That is, the standard limits the amount of variable consideration an entity can include in the transaction price to the amount for which it is probable that a significant revenue reversal will not occur when the related uncertainties are resolved. A significant reversal occurs when a change in the estimate results in a significant downward adjustment in the amount of cumulative revenue recognized from the contract with the customer. The transaction price is not adjusted for credit risk.

Step 4: Allocate the transaction price to performance obligations in a contract

An entity must allocate the transaction price to each performance obligation on a relative standalone selling price basis, with limited exceptions. One exception in the standard requires an entity to allocate a variable amount of consideration, together with any subsequent changes in that variable consideration, to one or more performance obligations or one or more (but not all) distinct goods or services promised in a series of goods or services that forms part of a single performance obligation, if specified criteria are met (i.e., terms of the variable payment relate specifically to the entity's efforts to satisfy the performance obligation or transfer the distinct good or service and the allocation of variable consideration is consistent with the objective of allocating the transaction price in an amount the entity expects to be entitled in exchange for transferring the promised goods or services to the customer).

When determining standalone selling prices, an entity must use observable information, if it is available. If standalone selling prices are not directly observable, an entity will need to use estimates based on reasonably available information. Example estimation approaches include an adjusted market assessment approach or an expected cost plus a margin approach.

Step 5: Recognize revenue when (or as) the entity satisfies a performance obligation

Under the new revenue standard, an entity has to determine at contract inception whether it will transfer control of a promised good or service over time. An entity transfers control of a good or service over time (rather than at a point in time) when any of the following criteria are met:

- The customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs.
- The entity's performance creates or enhances an asset (e.g., work in process) that the customer controls as the asset is created or enhanced.
- The entity's performance does not create an asset with an alternative use to the entity, and the entity has an enforceable right to payment for performance completed to date.

Customer simultaneously receives and consumes benefits as the entity performs

In developing their new revenue standards, the FASB and International Accounting Standards Board (IASB, together the Boards) intended for this criterion to address repetitive service contracts (e.g., cleaning services, transaction processing), therefore it is unlikely to be applied when a real estate asset is sold.

However, this criterion may be applicable to a management contract that is retained by the seller of a real estate property. Real estate entities that provide property management and other services will need to carefully evaluate their contracts to determine whether the services performed are simultaneously received and consumed by the customer (i.e., real estate owner). For further discussion of these and other topics affecting the real estate industry, refer to our Technical Line publication, *The new revenue recognition standard — real estate*.

Customer controls asset as it is created or enhanced

The Boards said[3] they believe the customer's control over the asset as it is being created or enhanced indicates that the entity's performance transfers goods or services to a customer over time. For example, in a construction contract in which an entity is building an asset on the customer's land, the customer generally controls any work in process resulting from the entity's performance.

For discussion of the application of this criterion to construction contracts, refer to our Technical Line publication, *The new revenue recognition standard — engineering and construction*.

Asset with no alternative use and right to payment

The Boards acknowledged[4] that the application of the first two criteria could be challenging in certain circumstances. For example, a developer may construct an asset but transfer title of the land and/or building to the customer only upon completion. As a result, a third criterion was added that, if both of the following requirements are met, will require entities to recognize revenue for a performance obligation over time:

- The entity's performance does not create an asset with alternative use to the entity.
- The entity has an enforceable right to payment for performance completed to date.

For further discussion of this criterion and its application to sales of real estate, refer to the section "Sales of real estate by real estate developers" below.

Control transferred at a point in time

Control is transferred at a point in time if none of the criteria for a good or service to be transferred over time is met. For sales of existing real estate properties, transfer of control will generally occur at a point in time.

The Boards included five indicators in ASC 606 for entities to consider when determining whether control of a promised asset has been transferred at a point in time. These indicators include consideration of whether the seller has a present right to payment for the property and whether title to, and physical possession of, the property has been transferred to the buyer.

Scope

ASC 606 applies to all contracts with customers (i.e., parties that have contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities), except for contracts that are specifically excluded from the scope, which include:

- Lease contracts within the scope of ASC 840, *Leases*
- Financial instruments and other contractual rights or obligations (e.g., receivables, debt and equity securities, derivatives)[5]
- Guarantees (other than product or service warranties) within the scope of ASC 460, *Guarantees*

- Nonmonetary exchanges between entities in the same line of business to facilitate sales to customers other than the parties to the exchange within the scope of ASC 845, *Nonmonetary Transactions*

Entities may enter into transactions that are partially within the scope of the new revenue guidance and partially within the scope of other guidance. In these situations, the new guidance requires an entity to first apply any separation and/or measurement principles in the other guidance before applying the revenue standard.

For example, in certain transactions, the seller of a real estate property may agree to support the operations of the property for a period of time or provide a guarantee of the buyer's return on investment. Under today's guidance, because these guarantees either prevent the guarantor from being able to account for the transaction as a sale or recognize in earnings the profit from the sale, these "seller support" guarantees are excluded from the scope of ASC 460 and are instead accounted for using ASC 360-20.

Under the new standard, the presence of a guarantee does not, on its own, affect whether an entity can recognize a sale and the associated profit from the transfer of the property. Instead, the fair value of the guarantee will first be separated from the transaction price and recorded as a liability in accordance with ASC 460.[6] The remainder of the estimated arrangement consideration is allocated among the other elements in the arrangement (e.g., other performance obligations, including the transfer of the asset). The entity then evaluates whether the other performance obligations have been satisfied without considering the guarantee.

Sales of nonfinancial assets

The sale of real estate (i.e., a nonfinancial asset or in substance nonfinancial asset) could be within the scope of ASC 606, if the sale is to a customer, or ASC 610-20, if the sale is to a noncustomer. The new revenue guidance defines a customer as "a party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration." The standard does not define the term "ordinary activities" because it was derived from existing guidance. CON 6[7] refers to ordinary activities as an entity's "ongoing major or central operations."

Nonfinancial assets, including real estate properties, are often sold in transactions that would not represent a contract with a customer because the sale of the asset is not an output of the entity's ordinary activities (e.g., the sale by an entity of its corporate headquarters building). If an entity sells a nonfinancial asset to a party that is a customer in other transactions (i.e., the party is purchasing goods or services from the entity that are the output of the entity's ordinary activities), the purchasing party will be considered a customer for the transactions involving the goods or services but not for the sale of the nonfinancial asset.

The FASB amended ASC 360-10 to help entities apply the appropriate guidance when derecognizing a nonfinancial asset (e.g., real estate) sold to a noncustomer. The amended guidance states that sales of nonfinancial assets, including in substance nonfinancial assets, should be accounted for using new guidance in ASC 610-20, unless the contract is with a customer. However, ASC 610-20 does not contain incremental guidance to ASC 606 but rather instructs entities to apply certain control and measurement guidance from ASC 606, including guidance related to:

- Evaluating the existence of a contract
- Measuring the consideration (i.e., determining the transaction price) in the contract
- Determining when control of the nonfinancial asset has transferred (i.e., when a performance obligation is satisfied)

Accounting for contracts that include the sale of a nonfinancial asset to a noncustomer or a customer generally will be consistent, except for financial statement presentation and disclosure. The Boards noted in the Basis for Conclusions[8] in the new standard that there is economically little difference between the sale of real estate that is, or is not, an output of the entity's ordinary activities and that the only difference in the accounting for these transactions should be the presentation in the statement of comprehensive income (i.e., revenue and expense when the sale is to a customer or gain or loss when the sale is to a noncustomer). Entities that sell nonfinancial assets to noncustomers will follow guidance in ASC 360-10 for presenting a gain or loss on the sale of a long-lived asset.

In certain circumstances, neither ASC 606 nor ASC 610-20 will be applied when derecognizing a nonfinancial asset. Instead, the sale of nonfinancial assets in a subsidiary or group of assets that meets all of the following requirements will be accounted for in accordance with the derecognition guidance in ASC 810, *Consolidation*:[9]

- The nonfinancial assets are not being sold to a customer (i.e., they are not outputs of the entity's ordinary activities).
- The nonfinancial assets in a subsidiary or group of assets meet the definition of a business.
- The nonfinancial assets in a subsidiary or group of assets are not in substance nonfinancial assets (e.g., because the group of assets or subsidiary also contains significant financial assets).
- No other scope exceptions in ASC 810-10 apply.

The following table summarizes the appropriate derecognition guidance to apply to common transactions involving real estate:

ASC topic	When applied?	Possible transactions
ASC 606, *Revenue from Contracts with Customers*	Sales to customers of real estate (i.e., nonfinancial assets or in substance nonfinancial assets, regardless of whether they also meet the definition of a "business")	Sales of residences by homebuilders and real estate developers
ASC 610-20, *Other Income - Gains and Losses from the Derecognition of Nonfinancial Assets*	Sales to noncustomers of real estate (i.e., nonfinancial assets or in substance nonfinancial assets, regardless of whether they also meet the definition of a "business")	Sales of commercial properties (e.g., office buildings, hotels, manufacturing facilities) by REITs, real estate funds with historical cost reporting and non-real estate entities
ASC 810-10, *Consolidation - Overall*	Sale (deconsolidation) to noncustomers of real estate in a subsidiary or group of assets that constitutes a "business" that is not, in substance, a nonfinancial asset (e.g., group of assets comprised of both financial and nonfinancial assets)	Sales by any entity of an asset group including real estate that together are a "business" and are not considered in substance nonfinancial assets

How we see it

The FASB did not define an "in substance nonfinancial asset" in the consequential amendments. An entity that derecognizes a subsidiary or group of assets that meet the definition of a business will need to exercise significant judgment to determine whether the transaction also constitutes the transfer of an in substance nonfinancial asset that will be subject to the guidance in ASC 610-20 rather than ASC 810-10.

The FASB has a project[10] on its agenda to clarify the definition of a business. In subsequent phases of this project, the FASB also plans to clarify the accounting for the acquisition or disposal of in substance nonfinancial assets and provide guidance for partial sales. It's not clear whether or when the FASB will issue additional guidance.

Sale and leaseback transactions

While the FASB made it clear that ASC 360-20 should no longer be applied to sales and transfers of real estate, the guidance was retained on sale and leaseback transactions involving real estate that are within the scope of ASC 840-40, *Sale-Leaseback Transactions*. ASU 2014-09 included a number of consequential amendments that narrowed the scope of ASC 360-20, and the FASB stated[11] that entities should not analogize to the retained guidance when evaluating any transaction that is not a sale-leaseback.

Sales of real estate that qualify for full accrual profit recognition under ASC 360-20 will generally continue to meet the criteria for sale and associated profit recognition under the new guidance.

The FASB plans to issue new guidance on leases later this year, including new guidance for sale-leaseback transactions that will eventually replace the guidance in ASC 360-20 and ASC 840-40. Under the proposal, a seller-lessee would use the definition of a sale in ASC 606 to determine whether a sale has occurred in a sale and leaseback transaction (e.g., whether the buyer-lessor has gained control of the underlying asset). In addition, the new leases standard would eliminate existing guidance for sale and leaseback transactions specifically involving real estate. For further information about the forthcoming leases standard, refer to our Technical Line publication, *Final standard on leases is taking shape* (SCORE No. BB2952).

Nonmonetary transactions

The new revenue standard provides guidance for contracts with customers involving the exchange of nonmonetary consideration. As a result, the FASB excluded contracts that fall within the guidance of ASC 606 and ASC 610-20 from the scope of ASC 845. However, the FASB clarified that the exchange of a nonfinancial asset (including an in substance nonfinancial asset) for a noncontrolling ownership interest in the receiving entity will remain within the scope of ASC 845. In addition, the specific guidance in ASC 845 for exchanges of real estate involving monetary consideration will be eliminated.

Sales previously recognized using the full accrual method

ASC 360-20 provides the general principles that full profit on a real estate sale can be recognized if the profit is determinable and the earnings process is virtually complete. ASC 360-20 includes a number of criteria that describe how to determine whether these general principles are satisfied and the appropriate accounting to apply in circumstances in which the criteria are not met. These criteria in ASC 360-20 generally require an assessment of whether:

- The sale has been consummated.
- The buyer's initial and continuing investments demonstrate a commitment to pay for the property.
- The seller's receivable is not subject to future subordination.

- The seller has transferred to the buyer the usual risks and rewards of ownership in a transaction that is in substance a sale and does not have a substantial continuing involvement with the property sold.

Recognition of the full profit when these criteria are satisfied is referred to as the "full accrual method." Many sales of real estate meet the criteria for full accrual profit recognition at the date of sale. For example, the criteria for full accrual recognition are generally satisfied if, upon the closing of a transaction, the buyer pays the full purchase price in cash, obtains title and possession of the property (including the risks and rewards of ownership), and the seller has no further involvement or obligation associated with the property. Even if the full purchase price is not paid in cash (e.g., the sale includes some form of non-subordinated seller financing) or the seller retains a non-prohibited form of continuing involvement, the full accrual criteria could be met if the sale has been consummated and the buyer's initial and continuing investments are sufficient.

It is likely that the timing of sale (and associated profit) recognition for transactions that qualify for full accrual profit recognition under ASC 360-20 will be consistent with the timing of sale (and associated profit) recognition for the same transactions under the new guidance. The new guidance provides that sales of nonfinancial assets (e.g., real estate) will be recognized when control of the asset transfers to the buyer, which will occur when the buyer has the ability to direct the use of, or obtain substantially all of the remaining benefits from, the asset. This will generally occur at the closing of the transaction. The following illustration compares full accrual profit recognition under ASC 360-20 to revenue/gain recognition under ASC 606/610-20.

Illustration 1: Sale recognized using full accrual method in ASC 360-20

An office building is sold for $1 million, and Seller A receives $1 million in cash ($150,000 directly from the buyer and $850,000 of proceeds from a secured first mortgage the buyer entered into with a third-party lender). Seller A is not contingently liable for the mortgage nor does it have any other risks related to the buyer's financing. Seller A transferred title and physical possession of the property to the buyer on the closing date of the transaction and has no continuing involvement with the property.

Future GAAP analysis (ASC 606/610-20):

Seller A determines that control of the building transfers at a point in time (rather than over time) and considers the indicators of control transfer, as well as any other relevant information. Seller A determines that the criteria to recognize revenue (i.e., gain on sale) have been met at closing because title and physical possession of the property were transferred to the buyer, and the contract specifies Seller A's right to payment (which has already been received in this transaction).

Current GAAP analysis (ASC 360-20):

Seller A received the full sales value of the property in cash, without any contingent liability on the debt incurred by the buyer or any other risk related to the buyer's financing. Therefore, the initial and continuing investment requirements are not applicable, and full profit recognition is appropriate assuming all other criteria for recognizing profit under the full accrual method (e.g., Seller A has no prohibited forms of continuing involvement) were satisfied.

Recognition when control of the property has not transferred

If an entity evaluates the indicators described above and concludes that control of the property has not transferred under ASC 606 or ASC 610-20, as applicable, a sale has not occurred and the asset is not derecognized. The entity records any consideration received as a contract liability (e.g., deposit liability), not as revenue/gain, until it concludes that the buyer has obtained control of the property. This accounting will be similar to the "deposit method" in today's guidance, which is applied when there is no consummation of a sale.

Sales for which initial or continuing investment criteria in ASC 360-20 are not met

Under ASC 360-20, collectibility of the sales price is demonstrated by the buyer's commitment to pay for the property. ASC 360-20 includes detailed guidance on evaluating whether the composition and size of the buyer's initial and continuing investments are adequate to demonstrate the buyer's commitment to pay for the property. When the initial or continuing investment tests are not met, the seller is required to defer profit at the sale date and recognize it in later periods using one of the alternative methods provided in ASC 360-20. In certain cases, a seller may determine that the buyer's investment is insufficient to recognize a sale and may instead apply the deposit method.

The new guidance eliminates all of the prescriptive requirements in ASC 360-20 for evaluating the buyer's initial and continuing investment and introduces new judgments that must be made regarding collectibility. The removal of the initial and continuing investment criteria may result in immediate recognition (i.e., gain on sale) for transactions for which gain deferral has been required under ASC 360-20.

Under the new guidance, however, a seller will still have to evaluate, at contract inception, whether it is probable that it will collect the consideration to which it expects to be entitled. The standard also says that entities should assess both the customer's intent and ability (i.e., capacity) to pay the amount to which the entity will be entitled. In some circumstances, the amount of consideration to which an entity will be entitled may be less than the price stated in the contract because the entity might provide a price concession to the customer. Such concessions or discounts are forms of variable consideration that an entity would estimate at contract inception and deduct from the contract price to determine the transaction price. Significant judgment will be required to determine whether an entity's expectation that it will receive less than the stated contract price indicates that the contract amount is not probable of collection or represents a price concession. Refer above to "Summary of the new guidance" section for further discussion of price concessions.

If it is not probable that the entity will collect the transaction price, the arrangement would not be considered a contract under the new guidance until the concerns about collectibility are resolved (i.e., becomes probable the transaction price will be collected). If the entity subsequently determines that the transaction price is probable of collection, the arrangement will then be recognized under the new guidance. Entities will apply similar judgments to those at contract inception (e.g., all parties have approved the contract, payment terms have been identified) when subsequently determining that the transaction price is probable of collection.

The new guidance addresses situations in which an arrangement does not meet the contract criteria (e.g., an entity determines that it is not probable that it will collect the transaction price). In certain circumstances, an entity may receive consideration from a customer (e.g., a down payment) before the contract criteria have been satisfied. When an arrangement doesn't meet the criteria to be accounted for as a contract, any consideration received from the customer is initially accounted for as a liability (not revenue/gain on sale), and assets transferred to the customer are not derecognized. This accounting is required even if the "deposit" exceeds the seller's carrying value of the property (unless one of the criteria noted below is met). The liability is measured at the amount of consideration received from the customer. This approach is similar to the deposit method prescribed in ASC 360-20.

An entity may only recognize consideration received as revenue/gain on sale when it subsequently determines that the agreement meets the criteria of a contract under the new guidance or when either of the following occurs:

- The entity has no remaining obligations to transfer goods or services to the customer, and all, or substantially all, of the consideration promised by the customer has been received by the entity and is nonrefundable.
- The contract has been terminated, and the consideration received from the customer is nonrefundable.

The following illustrates a transaction accounted for under the new standard for which the seller determines at sale closing that the transaction price is not collectible (Illustration 2). Based on changes in the borrower's ability to pay, the seller determines that collectibility is probable in a later period (Illustration 3). In addition, Illustration 2 reflects considerations for determining whether a contract is in the scope of ASC 606 or ASC 610-20.

Illustration 2: Seller financing with collectibility concerns at sale closing

Seller R owns and leases commercial real estate and, on occasion, will dispose of a property that no longer fits its operating or capital strategy. Seller R decides to sell an office building with a carrying value of $800,000 through the sale of its interest in a wholly owned subsidiary. The office building is the sole asset of the subsidiary. Seller R agrees to sell its 100% interest in the legal entity to another real estate operator, Buyer W, for $1,000,000, consisting of $50,000 of cash (paid up front and nonrefundable) and a 10-year nonrecourse first mortgage from Buyer W for $950,000. Substantially all of the office building is leased at acquisition.

Because the seller provided nonrecourse financing, cash flows from operation of the property will be primarily relied upon to service the mortgage. The leases of the largest two tenants in the building expire within the next two years and there is significant uncertainty regarding Buyer W's ability to replace them with new tenants willing to pay comparable rents; therefore, there is uncertainty whether the property will continue to generate the cash flows necessary to service the mortgage. However, Seller R has attempted to dispose of this office building for several years and is willing to accept the risk of this contract since it has the ability to repossess the property, if necessary.

The terms of the contract include required principal payments of $100,000 per year beginning in the second year of the contract, a $150,000 balloon payment at the end of the contract, and interest at a rate of 12% (which reflects the current market conditions and credit characteristics of Buyer W). For purposes of this example, we have ignored the accounting for the interest component.

Analysis: Seller R determines that the transaction is not with a customer because the sale is not part of Seller R's normal business activities of operating and leasing commercial real estate. Therefore, the transaction is outside the scope of ASC 606.

Seller R determines that it should apply ASC 610-20 because it has sold an in substance nonfinancial asset to a noncustomer (i.e., it transferred to Buyer W its 100% interest in a legal entity that held substantially only nonfinancial assets (i.e., an office building)). While the presence of in-place leases would likely have resulted in a conclusion by Seller R that the building was also a business, ASC 610-20 is applied to all sales of in substance nonfinancial assets, regardless of whether the asset sold also constitutes a business.

As a result of the uncertainty about whether the property will generate the cash flow necessary to service the mortgage, Seller R determines at contract inception that collection of the transaction price is not probable. Therefore, the remaining applicable aspects of ASC 606 (i.e., the measurement and derecognition principles) cannot be applied to the arrangement until Seller R is able to conclude that collectibility of the transaction price is probable. Seller R must account for the receipt of the $50,000 non-refundable down payment as a liability and does not derecognize the office building or record a mortgage receivable. Seller R also continues to recognize depreciation of the asset (assumed to be $25,000 per year for purposes of the example).

Dr. Cash	$	50,000		
Cr. Deposit liability			$	50,000
Dr. Depreciation expense	$	25,000		
Cr. Accumulated depreciation			$	25,000

Illustration 3: Subsequent evaluation of collectibility

Following Illustration 2, Seller R continues to assess the contract to determine whether the transaction price is probable of collection. In the second year of the arrangement, Seller R receives a principal payment of $100,000 but continues to believe that collectibility of the remaining balance is not probable because Buyer W has yet to execute new leases for the space that will become available in the near term. As a result, Seller R records the $100,000 payment received as a deposit liability and continues to recognize depreciation of the asset. For purposes of this example, we have again ignored the accounting for the interest component.

In the third year of the arrangement, Seller R receives a $100,000 principal payment and Buyer W has recently entered into new long-term leases with the two largest tenants in the office building.

Analysis: Based on the change in Buyer W's circumstances, in Year 3, Seller R determines that Buyer W has the intent and ability to pay the full amount due and that it is now probable that it will collect the unpaid portion of the transaction price (i.e., the outstanding mortgage receivable). Seller R also determines that control transferred at a point in time (e.g., title to the asset previously transferred when the ownership of the entity owning the real estate was transferred and the buyer has physical possession). Seller R therefore derecognizes the property and recognizes gain on sale and a mortgage receivable for cash consideration that remains outstanding.

Dr. Cash	$	100,000		
Dr. Mortgage receivable	$	750,000		
Dr. Deposit liability	$	150,000		
Cr. Building, net			$	750,000
Cr. Gain on Sale			$	250,000

Note: The mortgage receivable of $750,000 is calculated by subtracting cash payments received from the total selling price ($1,000,000 less the down payment of $50,000 and two subsequent payments of $100,000 each). The gain on sale of $250,000 is calculated by subtracting the carrying value of the asset transferred from the total sales price ($1,000,000 less carrying amount of $750,000, which is comprised of the initial carrying value of $800,000 net of two years of depreciation of $25,000 each).

Accounting under current GAAP (ASC 360-20)

The transaction in these illustrations would not have initially met the initial investment criteria in ASC 360-20. Assuming the sale was consummated, the down payment was not in substance an option, recovery of the cost of the property was reasonably assured and the seller retained no form of prohibited continuing involvement, a sale would have been recognized on the closing date. However, profit would have been recognized using the installment or cost recovery method until the initial and continuing investment criteria were satisfied.

Sales with forms of continuing involvement

Under ASC 360-20, a seller generally cannot recognize profit on the sale of real estate under the full accrual method if it retains continuing involvement in the property without transferring substantially all of the risks and rewards of ownership. ASC 360-20 provides detailed guidance on how to consider the various forms of continuing involvement a seller may have with a property after it has been sold and requires the use of alternative accounting methods (e.g., financing, leasing, performance-of-services, profit-sharing methods) in certain circumstances, based on the nature and extent of the continuing involvement.

The concept of continuing involvement is not a specific consideration in the new guidance. Under the new guidance, a seller focuses on the transfer of control of the property to determine when the performance obligation is satisfied and associated revenue (i.e., gain on sale) or loss is recognized. In addition, an entity will assess whether any aspects of a contract (including those that result in continuing involvement under today's guidance) either represent a separate performance obligation or affect whether control of the real estate has transferred to the buyer. However, activities that were considered continuing involvement under ASC 360-20 may affect whether control transfers or whether an additional distinct promised good or service is present other than the sale of real estate.

Unlike today's guidance, future consideration from a real estate sale may be recognized when control of the property transfers.

The following sections describe a few of the common forms of continuing involvement under ASC 360-20 and compare today's accounting for these transactions to the accounting under the new model in ASC 606 and ASC 610-20.

Seller participates in future profit

In some real estate sales arrangements, the seller participates in future profits (e.g., from the property's operating profits or residual values) without further obligation or risk of loss, in addition to receiving fixed consideration from the sale of the property.

Under today's guidance, a seller may recognize profit from the fixed consideration if all other criteria for full accrual profit recognition in ASC 360-20 have been met. However, any future profit participation is recognized only when those amounts are realized.

Under the new guidance, amounts from future profit participation will represent variable consideration that a seller will need to estimate at contract inception and include in the transaction price when it is "probable" that a significant revenue reversal will not occur when the uncertainties related to the variability are resolved. An entity is required to estimate variable consideration using either the "expected value" approach (i.e., the sum of probability-weighted amounts) or the "most likely amount" approach (i.e., the single most likely outcome), whichever better predicts the amount of consideration to which it will be entitled. That is, the method selected is not meant to be a "free choice." The entity should apply the selected method consistently throughout the contract and update the estimated transaction price at each reporting date.

The Boards indicated[12] that the "most likely amount" approach may be the better predictor when the entity expects to be entitled to only one of two possible amounts (e.g., a contract in which an entity is entitled to receive all or none of a specified performance bonus but not a portion of that bonus). The following provides an illustration of how a real estate entity would estimate variable consideration resulting from future profit participation from a sale of real estate under the new standard.

Illustration 4: Estimating variable consideration

Developer D sells a newly constructed commercial property with a cost basis of $1.9 million for $2.0 million, plus a right to receive 5% of future operating profit from the property for the first year. Developer D has no additional ongoing performance obligations. Developer D determines there are a number of possible outcomes of consideration to be received based on the performance of the property (e.g., the buyer's ability to effectively secure tenants for the entire property at favorable rental rates). The buyer currently has executed leases or letters of intent from prospective tenants for 50% of the property.

Analysis: Developer D determines that the "expected value" approach is the better predictor of the variable consideration since multiple outcomes are possible.

Based on the buyer's current pre-leasing, Developer D estimates the following future profit participation:

Future profit	Probability
$ 50,000	10%
$ 25,000	70%
$ 0	20%

Assume for purposes of this illustration that the constraint, discussed further below, does not limit the amount that can be included in the transaction price at contract inception (i.e., assume it is probable that a significant revenue reversal will not occur). Using a probability-weighted estimate, Developer D would include $22,500 [($50,000 x 10%) + ($25,000 x 70%) + ($0 x 20%)] in the transaction price associated with this variable consideration. That is, the transaction price would be $2,022,500.

Developer D updates its estimate of the transaction price at the next reporting date, and after considering that the buyer now has letters of intent or executed leases for 75% of the property, determines it is now 75% likely to receive future profit participation of $50,000 and 25% likely to receive $25,000. As a result, Developer D's estimate of variable consideration is updated to $43,750 [($50,000 x 75%) + ($25,000 x 25%)] and additional revenue (i.e., gain on sale) of $21,250 ($2,043,750 — $2,022,500) is recognized.

To include variable consideration in the estimated transaction price, the entity has to first conclude that it is "probable" that a significant revenue reversal will not occur when the uncertainties related to the variability are resolved. For purposes of this analysis, "probable" is defined as "the future event or events are likely to occur," consistent with the existing definition in US GAAP. The Boards provided factors that may indicate that revenue is subject to a significant reversal:

- The amount of consideration is highly susceptible to factors outside the entity's influence (e.g., market volatility, judgment or actions of third parties, weather conditions).
- The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.

- The entity's experience (or other evidence) with similar types of contracts is limited or that experience (or other evidence) has limited predictive value.
- The entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar contracts in similar circumstances.
- The contract has a large number and broad range of possible consideration amounts.

The indicators provided by the Boards are not meant to be an all-inclusive list, and entities may note additional factors that are relevant in their evaluations. In addition, the presence of any one of these indicators does not necessarily mean that it is probable that a change in the estimate of variable consideration will result in a significant revenue reversal.

When an entity is unable to conclude that it is probable that a change in the estimate of variable consideration that *would* result in a significant revenue reversal will not occur, the amount of variable consideration is limited. In addition, when an arrangement includes variable consideration, an entity should update both its estimate of the transaction price and its evaluation of the constraint throughout the term of the contract to depict conditions that exist at each reporting date.

The following provides an illustration of how an entity would apply the constraint in estimating variable consideration under the new standard:

Illustration 5: Evaluating the constraint
Assume the same facts as in Illustration 4 except that the buyer of the property has just begun negotiations with prospective tenants and has not signed lease agreements for a significant amount of space. *Analysis:* Developer D uses the "expected value" approach and estimates it is 25% likely to receive future profit participation of $50,000, 50% likely to receive $25,000 and 25% likely to receive none. Using a probability-weighted estimate (prior to considering the constraint), Developer D would include $25,000 [($50,000 x 25%) + ($25,000 x 50%) + ($0 x 25%)] in the transaction price associated with this variable consideration. That is, the transaction price would be $2,025,000. In this illustration, Developer D concludes that the constraint would be set at $25,000 (i.e., the amount for which it's probable that a significant reversal will not occur), therefore the full $25,000 would be included in the transaction price.

Seller provides management or development services to a buyer

A seller of real estate may agree to provide management services for the buyer for a period of time or commit to develop the property in the future (e.g., construct facilities on the land, provide improvements or amenities, such as roads, sewer lines or parks).

If the real estate property in the transaction is sold to a noncustomer, the sale is within the scope of ASC 610-20, which does not include guidance or refer to ASC 606, for identifying performance obligations and allocating consideration. If providing management or development services would generally be considered part of a real estate entity's ordinary activities, these services would be in the scope of ASC 606. Because the arrangement is partially in the scope of ASC 606 and partially outside, the guidance provided in ASC 606 for identifying performance obligations and allocating consideration will be applied to the entire arrangement since ASC 610-20 does not provide such direction.

To determine the performance obligations in the arrangement, a seller evaluates whether the management or development services are (1) capable of being distinct and (2) distinct within the context of the contract. If an entity concludes that more than one performance obligation is present in the contract, the transaction price is allocated to each based on their relative standalone selling prices. For further discussion, refer to Section 2 and 4 of our Technical Line publication, *The new revenue recognition standard — real estate.*

Development services

ASC 360-20 allows a seller that commits to develop the property sold to recognize profit using the percentage-of-completion method if (1) the seller can reliably estimate the future costs of development and the total profit that will be realized in the arrangement and (2) all other criteria for recognizing profit under the full accrual method have been satisfied.

Under ASC 360-20, if future costs of development can be reasonably estimated (i.e., the transaction would qualify to be accounted for using the percentage-of-completion method) but the transaction is otherwise required to be accounted for using the installment, cost recovery or reduced-profit method because the criteria for using the full accrual method have not been satisfied, both the percentage-of-completion method and the other applicable reduced profit method should be considered in determining the amount of profit to recognize. If a seller cannot reasonably estimate the future costs of development, no profit is recognized until costs can be reliably estimated or development is complete.

Under the new revenue standard, if an entity determines that the property and development services represent separate performance obligations in a contract with a customer, the transaction price is estimated (considering the constraint on any variable consideration) and allocated on a relative basis to each performance obligation based on their standalone selling prices. Revenue is then recognized when (or as) control is transferred. As discussed above, we anticipate that this guidance will also generally be applied when entities enter into these contracts with noncustomers because the transaction is partially in the scope of ASC 606 and partially in the scope of ASC 610-20. The guidance provided in ASC 606 for identifying performance obligations and allocating consideration will be applied to the entire arrangement since ASC 610-20 does not provide such direction.

Illustration 6: Sale of land with development contract

Developer D sells land with a carrying amount of $400,000 to Homebuilder V and agrees to build access roads and develop a recreation facility on the land for total consideration of $1,500,000. The estimated cost to complete the development (i.e., access roads and recreation facility) is $400,000, which is based on Developer D's experience and is considered reliable. Developer D incurs $160,000 in development costs in year 1 and $240,000 in costs in year 2. The standalone selling price of the land is $1,000,000, and the standalone selling price for the development services is $600,000.

Future GAAP analysis (ASC 606/610-20):

The sale of land and corresponding performance of development services are both part of Developer D's ordinary activities, so the entire transaction is within the scope of ASC 606. In contrast, if the sale of land was not part of Developer D's ordinary activities (e.g., if Developer D generally only performed development services and rarely sold raw, undeveloped land), the transaction would be partially in the scope of ASC 610-20 (i.e., sale of land to noncustomer) and partially in the scope of ASC 606 (i.e., performance of development services). In these circumstances where the transaction is partially in the scope of both standards, the guidance in ASC 606 for identifying performance obligations and allocating the transaction price will be applied to the overall arrangement since ASC 610-20 does not include such guidance. The measurement and recognition for the land would be the same under either ASC 606 or ASC 610-20 because ASC 610-20 relies on the concepts of ASC 606.

Developer D evaluates the arrangement and determines that the land and development services are each capable of being distinct and are distinct within the context of the contract, thus representing separate performance obligations under the new revenue standard.

Developer D must allocate the $1,500,000 transaction price based on the relative standalone selling prices of the land and development services. On a relative standalone selling price basis, the land represents 62.5% of the transaction price, or $937,500, and the management services represent 37.5% of the transaction price, or $562,500.

When control of the land transfers, Developer D recognizes revenue (and corresponding profit) based on the amount of the transaction price allocated to the land. The remaining transaction price allocated to the development services is recognized when (or as) control of the improvements is transferred to Homebuilder V.

For example, if Developer D determines that Homebuilder V controls the improvements as they are created, recognition of revenue over time, based on Developer D's selected measure of progress (e.g., cost incurred), may be appropriate. Profit from the total arrangement would be recognized as follows:

Profit recognized at sale closing: $537,500

$937,500 transaction price of land − $400,000 carrying value of land

Profit recognized in Year 1: $65,000

[$562,500 transaction price of development services x ($160,000 costs incurred/$400,000 total development costs)] − $160,000 costs incurred

Profit recognized in Year 2: $97,500

[$562,500 transaction price of development services x ($240,000 costs incurred/$400,000 total development costs)] − $240,000 costs incurred

Current GAAP analysis (ASC 360-20):

If all other criteria for recognizing revenue under the full accrual method in ASC 360-20 have been satisfied, Developer D should account for the arrangement using the percentage-of-completion method as follows:

Projected profit:

Sales value	$ 1,500,000
Costs	
Land	400,000
Development	400,000
	800,000
Total projected profit	$ 700,000

Profit recognized at sale closing: $350,000

($400,000 costs incurred/$800,000 total costs) x $700,000 projected profit

Profit recognized in Year 1: $140,000

($160,000 costs incurred/$800,000 total costs) x $700,000 projected profit

Profit recognized in Year 2: $210,000

($240,000 costs incurred/$800,000 total costs) x $700,000 projected profit

While the total profit recognized in this illustration is the same under either standard, $187,500 of additional profit is recognized at sale closing when the new revenue standard is applied to this transaction.

Management services

Under ASC 360-20, if a seller agrees to provide management services to the buyer of a property, the compensation for those services is excluded from the sales value of the property and recognized separately over the period of the management contract. If the services are provided "free of charge" or at a reduced rate, the seller must impute compensation for the management services (i.e., reduce the sales value of the property by the present value of the market rate of the services).

ASC 606 instead requires the seller to separately estimate the standalone selling prices of the real estate asset and the management services and allocate the transaction price (including any estimates of variable consideration that are not constrained) on a relative basis, assuming the entity determines the contract has two performance obligations. The following illustration compares the potential differences in the recognition of profit for these arrangements under ASC 360-20 and the new standard:

Illustration 7: Sale of land with management contract

Hotel Company M sells a hotel with a carrying value of $1,500,000 for $2,000,000 and agrees to manage the property for three years at no additional cost to Buyer R. The standalone selling price of the hotel is $1,800,000, and the standalone selling price for the management services is $100,000 per year. The current market rate of interest that reflects the credit characteristics of the buyer is 10%.

Future GAAP analysis (ASC 606/610-20):

The sale of a hotel is not part of Hotel Company M's ordinary activities (e.g., Hotel Company M ordinarily operates hotels under management agreements or provides licenses to franchisees and generally does not own and sell hotel properties), so the transaction is partially in the scope of ASC 610-20 (i.e., sale of the hotel to a noncustomer) and partially in the scope of ASC 606 (i.e., performance of management services). In these circumstances, the guidance in ASC 606 for identifying performance obligations and allocating the transaction price will be applied to the overall arrangement since ASC 610-20 does not include such guidance. The measurement and recognition for the hotel would be the same under either ASC 606 or ASC 610-20 because ASC 610-20 relies on the concepts of ASC 606.

Hotel Company M evaluates the arrangement and determines that the hotel and management services are each capable of being distinct and distinct within the context of the contract, thus representing separate performance obligations.

Hotel Company M must allocate the $2,000,000 transaction price based on the relative standalone selling prices of the hotel ($1,800,000) and management services ($100,000 x three years, or $300,000). On a relative basis, the transaction price is allocated as follows: the hotel property 85.7% ($1,800,000/$2,100,000), or $1,714,286, and the management services 14.3% ($300,000/$2,100,000), or $285,714.

Hotel Company M recognizes profit of $214,286 ($1,714,286 — $1,500,000) when control of the property transfers. The $285,714 of transaction price allocated to the management services is recognized over the remaining term of the contract based on Hotel Company M's selected measure of progress (e.g., time elapsed).

Current GAAP analysis (ASC 360-20):

Hotel Company M imputes compensation for the management services to be performed and recognizes that amount over the term of the management contract. The present value of $100,000 per year for three years, discounted at 10%, is $248,695.

If all other criteria for recognizing profit under the full accrual method are satisfied (including the initial and continuing investment tests after reducing the sales value by the consideration imputed for the management services), Hotel Company M recognizes profit of $251,305 ($2,000,000 sales price — $1,500,000 carrying amount — $248,695 discounted management fee) at the time of sale.

While the total profit recognized in this illustration is the same under either standard, $37,029 less is recognized at sale closing when the new standard is applied to this transaction.

Consideration of a significant financing component

Under the new standard, a significant financing component may be present in a contract if the timing of payments explicitly or implicitly provides the customer or the entity (i.e., the seller) with a significant benefit of financing the transfer of goods or services. The standard doesn't provide guidance on evaluating whether a financing component is significant, so entities will have to use judgment when making this determination.

For simplicity, illustrations 6 and 7 don't address the timing of payments in the arrangement (i.e., whether all consideration is paid at closing or a portion is paid as the services are provided). A significant financing component could be in the form of prepayment or a delayed payment. For example, if a contract contains "prepayments" for goods or services that will not be transferred for more than a year, an entity has to evaluate whether the timing of payments indicates that the arrangement contains a significant financing component.

If an entity concludes that the contract contains a significant financing component, the expected consideration is adjusted to reflect the cash selling price of the goods or services. When a contract has more than one performance obligation, such as those illustrated above, entities will need to use judgment when determining whether and how to allocate the financing to each performance obligation. The FASB-IASB Transition Resource Group for Revenue Recognition (TRG) recently discussed this issue and members of the TRG generally agreed that it may be reasonable for entities to apply other guidance in the standard that requires variable consideration and/or discounts to be allocated to one or more (but not all) performance obligations, if certain criteria for applying that guidance are met.[13]

How we see it

There likely will be significant judgment involved in determining whether a significant financing component exists when there is more than one year between the transfer of goods or services and the receipt of arrangement consideration. Entities will need to make sure that they have sufficiently documented their analyses to support their conclusions.

Guarantees of return on investment and seller support of operations

In certain real estate sales contracts, the seller may guarantee the return on, or of, the buyer's investment, while other arrangements may require that the seller initiate or support the property's operations. These two types of arrangements often may be confused, but the distinction is important under ASC 360-20.[14] An obligation to support the property's operations only guarantees that the buyer will recover funds from the seller related to the operating costs of the property for a period of time and does not guarantee that the buyer will receive a return on, or of, its investment.

Under ASC 360-20, if the seller guarantees a return of, or on, the buyer's investment, or agrees to support operations of the transferred real estate, sale accounting may be prohibited or profit may be reduced depending on several factors (e.g., duration and amount of the guarantees or support obligations). Depending on the terms, if the seller is not eligible for the full accrual method, the seller might account for the transaction under the deposit, financing, leasing or profit-sharing methods.

Under the new standard, guarantees included in a real estate sales arrangement are separated and accounted for using the guidance in ASC 460.

Unlike ASC 360-20, the new standard doesn't specify the accounting treatment for guarantees of return/investment or support obligations in contracts with customers. Instead, the seller determines whether these contract elements represent guarantees that are within the scope of ASC 460 (and not within the scope of ASC 606). If so, the seller recognizes a liability for the guarantee based on the estimated fair value and accounts for the guarantee as a separate element in the arrangement (i.e., the sale of real estate and sale of a guarantee). Although this is not explicit in ASC 610-20, entities that enter into these contracts with noncustomers will need to evaluate whether there are elements in the contract other than nonfinancial assets (or in substance nonfinancial assets) and account for those elements in accordance with the applicable literature (e.g., apply ASC 460 to guarantees provided in the contract).

Once the fair value of the guarantee has been determined, the remainder of the estimated arrangement consideration is allocated among the other elements in the arrangement (e.g., the sale of property, management arrangements, development services) in accordance with the revenue recognition standard. An entity recognizes a sale and associated profit when control of the property transfers, an assessment that is not affected by the presence of the guarantee.

The following illustration compares the accounting for an arrangement where the seller guarantees a return on the buyer's investment under ASC 360-20 and under the new revenue standard.

Illustration 8: Guarantee of return on buyer's investment

On 31 December 2018, Developer N sells a newly constructed apartment building with a cost of $1,200,000 to Buyer B for $2,000,000. Developer N guarantees that Buyer B will earn a minimum annual 10% profit in each of the next three years. Developer N's incremental borrowing rate is 5%.

Based on its experience with similar properties, Developer N forecasts that the property's operating results will be as follows:

	2019	2020	2021
Revenues	$ 300,000	$ 380,000	$ 400,000
Operating expenses	350,000	355,000	360,000
Profit (deficit)	(50,000)	25,000	40,000
10% profit	30,000	38,000	40,000
Guarantee requirement	80,000	13,000	N/A

Developer N transfers title to the building, and Buyer B takes possession of the property at the closing date. The sale also meets all of the other criteria for recognizing profit under the full accrual method in ASC 360-20, and Developer N has no other continuing involvement in the property.

Future GAAP analysis (ASC 606):

Developer N's ordinary activities include the construction and sale of real estate properties, thus the sale of the apartment building to Buyer B is a transaction with a customer within the scope of ASC 606.

Developer N concludes that it has provided a financial guarantee to Buyer B that is within the scope of ASC 460. ASC 606 states that Developer N must allocate a portion of the transaction price to the guarantee obligation in accordance with the measurement principles of ASC 460.

Assume that Developer N determines a guarantee obligation of $93,000 in accordance with ASC 460[15] and allocates that amount of consideration to the guarantee and records a liability. The remaining transaction price of $1,907,000 is allocated to the performance obligation representing the sale of the property. Developer N concludes that control of the property has transferred to Buyer B and records profit of $707,000 ($2,000,000 sale price — $93,000 guarantee liability — $1,200,000 cost basis) on the closing date.

Future GAAP analysis (ASC 610-20):

If the transaction illustrated above is with a noncustomer (e.g., the seller is a REIT that ordinarily owns and operates multifamily properties), ASC 610-20 would be applied to the sale of the building. ASC 610-20 does not include guidance similar to ASC 606 regarding the separation of units of accounting and allocation of transaction price to elements within a contract that are outside the scope of ASC 606 (e.g., guarantees). However, entities may have the same accounting result as a transaction with a customer under ASC 606 because the guidance in ASC 460 for guarantees would be applied.

Current GAAP analysis (ASC 360-20):

Because Developer N has guaranteed a return on Buyer B's investment, the deposit method should be applied to this transaction.

Repurchase agreements

Certain agreements for the sale of real estate may include provisions that require, or give an option to, the seller to repurchase the property. These provisions are generally structured in one of three ways:

- Forward option — An entity is obligated to repurchase the property
- Call option — An entity has the right to repurchase the property
- Put option — An entity is obligated to repurchase the property at the buyer's request

ASC 606 addresses the accounting for each of these repurchase provisions. ASC 610-20 does not explicitly refer to the repurchases guidance in ASC 606, but it does reference the transfer of control indicators in ASC 606-10-25-30, which incorporate the repurchases guidance. Therefore, repurchase agreements with customers and noncustomers should be evaluated using the repurchases guidance in ASC 606.

Forward or call option held by the entity

When an entity has the unconditional obligation or right to repurchase a property (i.e., a forward or call option), ASC 606 specifies that the buyer has not obtained control of the property even if the option is at fair value. Instead, the standard requires that an entity account for a transaction that includes a forward or a call option based on the relationship between the repurchase price and the original selling price.

If the entity has the right or obligation to repurchase the property at a price less than the original sales price (considering the effects of the time value of money), the entity would account for the transaction as a lease in accordance with ASC 840.

If the transaction is a sale-leaseback, the guidance in ASC 840-40 (including the guidance in ASC 360-20, which is retained only for sale-leaseback transactions until the Boards' project on lease accounting is finalized), would be applied.

In contrast, if the entity has the right or obligation to repurchase the property at a price equal to or greater than the original sales price (considering the effects of the time value of money), the entity would account for the arrangement as a financing arrangement. If a transaction is considered a financing arrangement, the selling entity would continue to recognize the property and record a financial liability for the consideration received from the customer. The difference between the consideration received from the customer and the consideration subsequently paid to the customer upon repurchase would represent the interest and holding costs, as applicable, that would be recognized over the term of the financing arrangement. If the option lapses unexercised, the entity derecognizes the property and financing liability and recognizes revenue at that time.

The concept of accounting for a forward or call option as a lease or financing arrangement is similar to existing guidance in ASC 360-20. However, under ASC 360-20, an entity can also apply the profit-sharing method if certain criteria are met. The new standard only allows a sale with a corresponding forward or call option to be treated as a lease or a financing arrangement and the likelihood of exercise is not contemplated in the accounting.

Illustration 9: Seller retains call option for amount greater than purchase price

Real Estate Fund E sells an office building to Buyer L on 1 January 2019 for $2.0 million. The contract includes a call option that gives Real Estate Fund E the right to repurchase the asset for $2.2 million on or before 31 December 2020. For simplicity, the time value of money is ignored in this example.

Future GAAP analysis (ASC 606/610-20):

Control of the asset does not transfer to Buyer L on 1 January 2019 because Real Estate Fund E has a right to repurchase the office building. Buyer L is therefore limited in its ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset.

As a result, Real Estate Fund E accounts for the transaction as a financing arrangement because the exercise price is more than the original selling price. Real Estate Fund E does not derecognize the office building and instead recognizes the cash received as a financial liability. Real Estate Fund E also accretes the liability and recognizes interest expense over the two-year period for the difference between the exercise price ($2.2 million) and the cash received ($2.0 million).

If the option subsequently lapses unexercised, the Real Estate Fund E derecognizes the office building and recognizes proceeds of $2.2 million.

Current GAAP analysis (ASC 360-20):

The repurchase option represents continuing involvement that prevents Real Estate Fund E from recognizing a sale or profit under the full accrual method at 1 January 2019. Real Estate Fund E evaluates the likelihood that it will exercise the option to determine whether to account for the transaction as a financing or profit-sharing arrangement.

Written put option held by the buyer

A real estate sales contract may give a buyer the ability to require the seller to repurchase the property at a previously agreed-upon price (i.e., a put option). Under ASC 606, a seller accounts for a contract that includes a put option using one of three methods (i.e., lease, sale with a right of return or financing arrangement) depending on the relationship of the exercise price to the original selling price of the property and whether the buyer has a significant economic incentive to exercise its right.

The determination of whether an entity has a significant economic incentive to exercise its right influences whether the buyer truly has control of the property. A seller has to consider many factors to determine whether a buyer has a significant economic incentive to exercise the put option, including the relationship of the repurchase price to the expected market value of the property at the date of repurchase and the amount of time until the option expires. The standard notes that if the repurchase price is expected to significantly exceed the market value of the property, the buyer has a significant economic incentive to exercise the put option.

How we see it

The new revenue standard does not provide guidance on determining whether the buyer has "a significant economic incentive" to exercise a put option. We believe entities that sell a property subject to a put option will need to estimate the future market price of the property and evaluate other facts and circumstances to determine whether the buyer has a significant economic incentive to exercise the option. This determination will require significant judgment.

A seller will account for a transaction that includes a buyer's put option as either a lease, a sale with a right of return or a financing arrangement.

- *Lease* — If the repurchase price is less than the original selling price and the buyer has a significant economic incentive to exercise the put option, the seller should account for the agreement as a lease because the buyer is effectively paying for the right to use the property for a period of time.
- *Sale with a right of return* — If the repurchase price is less than the original selling price and the buyer does not have a significant economic incentive to exercise its right, the seller should account for the agreement in a manner similar to a sale with a right of return. A repurchase price that is equal to or greater than the original selling price, but less than or equal to its expected market value, should also be accounted for as a sale of a product with a right of return if the customer does not have a significant economic incentive to exercise its right. Refer to Section 5.2.2 of our Technical Line publication, *A closer look at the new revenue recognition standard*, for a discussion of the accounting for the sale of a product with a right of return.
- *Financing arrangement* — If the buyer has the ability to require the seller to repurchase the property at a price that is equal to or greater than the original selling price and greater than the expected market value of the property, the contract is in effect a financing.

Illustration 10: Buyer holds put option with exercise price less than market value

Real Estate Fund E sells an office building to Buyer L on 1 January 2019 for $2.0 million. The contract includes a put option that obligates Real Estate Fund E to repurchase the building at Buyer L's request for $1.9 million on or before 31 December 2020. The market value of the office building is expected to be $1.8 million on 31 December 2020.

Future GAAP analysis (ASC 606/610-20):

At contract inception, Real Estate Fund E assesses whether Buyer L has a significant economic incentive to exercise the put option to determine whether the arrangement should be accounted for as a lease in accordance with ASC 840 or a sale with a right of return. Real Estate Fund E considers all relevant factors and concludes that Buyer L has a significant economic incentive to exercise the put option because the $1.9 million repurchase price significantly exceeds the expected market value of $1.8 million at the date of repurchase.

Real Estate Fund E concludes that control of the building does not transfer to Buyer L because the significant economic incentive to exercise the put option limits Buyer L's ability to direct the use of, and obtain substantially all of the remaining benefits from, the asset. Consequently, Real Estate Fund E accounts for the arrangement as a lease in accordance with ASC 840[16] on leases.

Current GAAP analysis (ASC 360-20):

The put option represents continuing involvement that prevents Real Estate Fund E from recognizing a sale or profit under the full accrual method at 1 January 2019. Real Estate Fund E determined that the leasing method described in ASC 360-20 was appropriate for this transaction. Any cash received from Buyer L equal to the repurchase price should be recorded as a liability with the difference between the cash received and the repurchase price representing deferred rental income that should be recognized ratably over the rental period.

Sales of real estate by real estate developers

Under the new standard, there is no special condominium accounting guidance. Instead, any developer may be able to recognize revenue over time (i.e., similar to the percentage-of-completion method) if it can determine that the asset (e.g., building, land parcel, residential unit) under construction has no alternative use and the developer has an enforceable right (throughout the contract) to payment from the customer for performance completed to date.

Real estate developers generally own the land and/or asset until title is transferred at completion of construction. Therefore, they must evaluate whether the asset has no alternative use and a present right to payment from the customer exists. In contrast, a construction contractor builds an asset on the customer's land and the customer owns the work-in-process, generally allowing the contractor to conclude that the customer controls the asset as it is created or enhanced.

Alternative use

An asset created by an entity has no alternative use if the entity is either restricted contractually or practically from readily directing the asset for another use (e.g., selling to a different customer). An entity has to make this assessment at contract inception and does not update its assessment unless the parties to the contract approve a contract modification that substantively changes the performance obligation.

The Boards specified[17] that a contractual restriction on an entity's ability to direct an asset for another use must be substantive (i.e., a buyer could enforce its rights to the promised asset if the entity sought to sell the unit to a different buyer). In contrast, a contractual restriction may not be substantive if the entity could instead sell a different asset to the buyer without breaching the contract or incurring significant costs.

Further, the Boards believe a practical limitation exists if an entity would incur significant economic losses to direct the asset for another use. A significant economic loss may arise when significant costs are incurred to redesign or modify an asset, or when the asset is sold at a significantly reduced price.

A developer may be able to determine that an asset has no alternative use because its characteristics (e.g., location, design, technical specifications, materials) would generally result in a contractual and/or practical limitation to redirect its use to another buyer.

Enforceable right to payment for performance completed to date

An entity has an enforceable right to payment for performance completed to date if, at any time during the contract term, the entity would be entitled to an amount that at least compensates it for work already performed. This enforceable right to payment must exist, even if the buyer can terminate the contract for reasons other than the entity's failure to perform as promised.

The laws or legal precedent of a jurisdiction may affect an entity's conclusion of whether a right to payment is enforceable.

To satisfy this criterion, the amount to which an entity is entitled must approximate the selling price of the goods or services transferred to date, including a reasonable profit margin. Compensation for a reasonable profit margin doesn't have to equal the profit margin expected for complete fulfillment of the contract but must at least reflect either of the following:

- A proportion of the expected profit margin in the contract that reasonably reflects the extent of the entity's performance under the contract before termination by the customer (or another party)
- A reasonable return on the entity's cost of capital for similar contracts (or the entity's typical operating margin for similar contracts) if the contract-specific margin is higher than the return the entity usually generates from similar contracts

Entities are required to consider any laws, legislation or legal precedent that could supplement or override contractual terms. These may vary by country. In addition, the standard clarifies that including a payment schedule in a contract does not, by itself, indicate that the entity has the right to payment for performance completed to date. For example, progress billings collected from a customer may not reflect a reasonable profit margin on work completed to date. The entity has to examine information that may contradict the payment schedule and may represent the entity's actual enforceable right to payment for performance completed to date (e.g., an entity's legal right to continue to perform and enforce payment by the buyer if a contract is terminated without cause).

Measuring progress

When a performance obligation is satisfied over time, the standard allows the use of one of two methods for measuring progress under the contract: an input method or an output method. While the standard requires an entity to update its estimates related to the measure of progress selected, it does not allow a change in methods. A performance obligation is accounted for under the method the entity selects (i.e., either an input or output method) until it has been fully satisfied.

Under an input method, revenue is recognized "on the basis of the entity's efforts or inputs to satisfy the performance obligation … relative to the total expected inputs to the satisfaction of that performance obligation." The standard includes resources consumed, labor hours expended, costs incurred and time elapsed as possible input methods. The standard also notes it may be appropriate to recognize evenly expended inputs on a straight-line basis.

Under an output method, revenue is recognized "on the basis of direct measurements of the value to the customer of the goods or services transferred to date relative to the remaining goods or services promised under the contract." Measurements of output may include surveys of performance completed to date, appraisals of results achieved, milestones reached and time elapsed.

The standard does not say either type of method is preferable, but it says an entity should apply the method it selects to similar arrangements in similar circumstances. If an entity does not have a reasonable basis to measure its progress, the Boards decided that too much uncertainty would exist and, therefore, revenue should not be recognized until progress can be measured. However, if an entity cannot reasonably measure its progress, but expects it will not incur a loss, the new standard requires revenue to be recognized to the extent that costs are incurred until the entity is able to reasonably measure its progress.

The accounting for partial sales of real estate is not specifically addressed in the new standard.

How we see it

Many developers of residential condominium units currently recognize revenue using the percentage-of-completion method that is permitted in ASC 360-20 when certain criteria are met (e.g., construction is beyond a preliminary stage, buyer is unable to require a refund, sales price is collectible). This accounting treatment in ASC 360-20 is not available to other developers of real estate assets that are sold upon completion (e.g., build-to-suit commercial builders and land developers).

Under the new revenue standard, it may be difficult for developers of residential condominiums to conclude that their arrangements meet the criteria for revenue recognition over time. In many jurisdictions (e.g., the US) the developer receives an initial deposit from the buyer but is not entitled to further consideration until the sale of the unit closes. As a result, the developer may be unable to assert that it has an enforceable right to payment for performance completed to date at any point in the contract term.

Partial sales of real estate

Under ASC 360-20, a seller has made a partial sale of real estate if the seller has an equity interest in the buyer or retains an equity interest in the property. The nature of a partial sale of real estate indicates continuing involvement (i.e., retained ownership) in the property by the seller. However, ASC 360-20 allows a seller to recognize profit on the partial sale of real estate at the date of a sale if all other requirements for recognizing profit under the full accrual method have been satisfied. In addition, the seller must be independent of the buyer, and the seller cannot be required to support the operations of the property or its related obligations to an extent greater than its proportionate retained interest.

A partial sale of real estate may also occur if an entity contributes a property to a venture and withdraws cash from the venture that was contributed by another partner. For example, Investor X enters into a transaction with Investor Y in which Investor X contributes real estate with a fair value of $5,000 and Investor Y contributes $2,500 in cash, which Investor X immediately withdraws. The only asset in this venture is the real estate, and after the contributions and withdrawals, each investor has a 50% interest in the venture. Assuming Investor X is not committed to reinvest the $2,500 in the venture, the substance of this transaction is a sale of a one-half interest in the real estate by Investor X for $2,500 in cash.

The new guidance does not specifically address partial sales of real estate. It is unclear whether these transactions are in the scope of ASC 610-20, and thus generally follow the model in ASC 606, or whether existing guidance in another ASC topic (e.g., ASC 810, ASC 323, *Investments — Equity Method and Joint Ventures*) should be applied. If these transactions are within the scope of ASC 610-20, neither ASC 610-20 nor ASC 606 specifies how an entity would view a partial sale of real estate in the context of its evaluation of the indicators of control transfer. For example, absent a clarification by the FASB, some entities may evaluate whether they continue to control the *property* after the partial sale, while others may look to whether control of the *ownership interest* specified in the contract has transferred.

How we see it

The frequency of partial sales of real estate and the lack of clarity in the new guidance could lead to substantial diversity in practice when accounting for these transactions. The FASB has indicated that it may provide further guidance on this issue as part of its project on clarifying the definition of a business.

Contributions of real estate that are not in substance sales

Contributions of real estate by an investor to a real estate venture that are not in substance sales (as described above) will continue to be accounted for under existing guidance in ASC 970-323, *Real Estate — General*, *Investments — Equity Method and Joint Ventures*. This guidance states that an investor that contributes real estate to the capital of a real estate venture should generally record its investment at the book value of the real estate contributed and not recognize a profit on the transaction (i.e., the economic substance of the transaction is a contribution of capital and not a sale of real estate).

Surrender of real estate in satisfaction of an entity's obligation

ASU 2011-10, *Derecognition of in Substance Real Estate — a Scope Clarification,* clarified that the guidance in ASC 360-20 (rather than the derecognition provisions of ASC 810) should be applied to a parent that ceases to have a controlling financial interest in a subsidiary that is in substance real estate as a result of default on the subsidiary's nonrecourse debt.

The FASB's consequential amendments in ASU 2014-09 did not change the exclusion of these transactions from the derecognition provisions of ASC 810. However, entities will now apply the guidance in ASC 610-20 (and therefore the indicators of control transfer in ASC 606-10-25-30) when derecognizing all nonfinancial assets, including real estate, that are transferred in satisfaction of a subsidiary's default on nonrecourse debt.

Under ASC 360-20, derecognition of the in substance real estate by an entity is not appropriate before the date that the reporting entity's interest in the real estate is conveyed to the lender or a third-party purchaser and the subsidiary is released from its debt obligation. The indicators of transfer of control in the new standard include consideration of whether title to the property has transferred and the buyer or lender has obtained the significant risks and rewards of ownership. However, the standard does not specifically address whether the subsidiary must be legally released from its debt obligation in order to derecognize the property.

How we see it

The new revenue standard states that an entity's assessment of whether control of a property has transferred includes, but is not limited to, the five indicators in ASC 606-10-25-30. While we believe that the legal release of the debt obligation is an important factor in determining whether control of a property has transferred, diversity in practice could develop in this area because the standard does not specifically require that this condition be satisfied. Further, timing of transfer of control under ASC 606 may not coincide with the borrower's derecognition of the debt obligation in accordance with relevant debt extinguishment guidance.

Transition and effective date

The new standard is effective for public entities for fiscal years beginning after 15 December 2016 and for interim periods therein. It is effective for nonpublic entities for fiscal years beginning after 15 December 2017 and interim periods within fiscal years beginning after 15 December 2018, and they may elect to adopt the guidance as early as the public entity effective date. Under US GAAP, early adoption is prohibited for public entities.

The FASB voted to defer the effective date of the new standard for both public and nonpublic entities reporting under US GAAP for one year. As proposed, both public and nonpublic entities would be permitted to adopt the standard as early as the original public entity effective date. Early adoption prior to that date would not be permitted.

The IASB, which developed its new revenue standard jointly with the FASB, also voted to adopt a one-year deferral, which would keep the new standards' effective dates converged under IFRS and US GAAP.

All entities will be required to apply the standard retrospectively, either using a full retrospective or a modified retrospective approach. The Boards provided certain practical expedients to make it easier for entities to use a full retrospective approach.

Under the modified retrospective approach, financial statements will be prepared for the year of adoption using the new standard, but prior periods won't be adjusted. Instead, an entity will recognize a cumulative catch-up adjustment to the opening balance of retained earnings (or other appropriate component of equity or net assets) at the date of initial application for contracts that still require performance by the entity (i.e., contracts that are not completed). Entities will need to provide certain disclosures in the year of adoption, (e.g., entities using the modified retrospective approach must disclose the amount by which each financial statement line item is affected as a result of applying the new standard).

How we see it

Entities with deferred revenue balances or failed sales from real estate sales that predate their adoption of the new standard may experience "lost revenue." That's because the deferred amounts or previously unrecognized sales will be reflected in the recasted prior periods (under the full retrospective approach) or as part of the cumulative effect adjustment upon adoption (under the modified retrospective approach), but never reported as revenue in a current period within the financial statements.

The illustration below compares the application of the two transition approaches to a real estate sale for which profit was previously deferred under the installment method. Real estate entities that have previously deferred profit from a sale under another method in ASC 360-20 will need to consider specific transition issues that may arise from each respective method (e.g., interest expense and/or continued depreciation of the property under any of the financing, leasing, profit-sharing or deposit methods).

Illustration 11: Comparison of transition approaches

Developer A, a public entity with a 31 December fiscal year-end, sold a real estate property with a carrying value of $6 million for net proceeds of $11 million. The sale closed on 31 December 2015 but did not qualify for full accrual profit recognition because the terms of the four-year note receivable (i.e., seller financing) provided by Developer A did not meet the initial and continuing investment criteria in ASC 360-20. Under ASC 360-20, Developer A applied the installment method and determined that $1 million of profit should be recognized at the sale date, $1 million in 2016, $1 million in 2017 and $2 million in 2018 when the initial and continuing investment criteria were expected to be satisfied. Developer A will also recognize interest income from the note as it is received.

The illustration assumes that the new revenue standard is effective for Developer A for interim and annual periods beginning 1 January 2018. Management evaluates the new revenue standard and concludes that the terms of the seller financing would not have precluded the recognition of the $5 million of profit at the date of sale (i.e., the transaction price is probable of collection, control of the property has transferred).

Full retrospective approach

Developer A presents three years of comparative financial information in its 2018 annual filings with the Securities and Exchange Commission (SEC). In accordance with ASC 250,[18] the full $5 million of profit from the sale that occurred on 31 December 2015 would be recorded as a cumulative catch-up to retained earnings as of 1 January 2016 in the recasted financial information. Deferred profit of $1 million that was previously recognized in both 2016 and 2017 would no longer be included in the income statements of each respective period.

Quarterly SEC filings of Developer A will also reflect this presentation beginning 31 March 2018.

Modified retrospective approach

The sale of the property by Developer A constitutes a completed contract as defined in the new standard[19] because the property was transferred on 31 December 2015, before the date of initial application by the entity. Under the modified retrospective approach, the new standard is only applied to contracts that are in progress at the date of initial application (i.e., 1 January 2018). Therefore, Developer A would recognize the remaining $2 million of deferred revenue at 1 January 2018 as a cumulative catch-up to retained earnings at the beginning of the period. In contrast to the results under the full retrospective approach, the $1 million of deferred revenue recognized in both 2016 and 2017 continues to be reflected in each respective comparative period.

Developer A also must disclose the $2 million of profit that would have been recognized in 2018 had ASC 360-20 remained in effect.

The new standard defines a completed contract as one in which the entity has fully transferred all of the identified goods and services in accordance with today's revenue guidance before the date of initial application. However, some have questioned whether the Boards actually intended for a contract for which revenue is not yet fully recognized (e.g., a sale of real estate accounted for under one of the alternative methods in ASC 360-20) at the date of transition to be considered a completed contract. The TRG has discussed this issue and the Boards' staffs are working to summarize and clarify the Boards' intent. The answer to what constitutes a completed contract may change the accounting described in Illustration 11. Entities that are currently accounting for the sale of real estate using one of the alternative methods in ASC 360-20 should monitor the activities of the TRG and Boards.

Next steps

It is important for entities to continue to focus on their implementation plans. They should not postpone plans because the FASB has voted for a one-year deferral. Many entities are finding it more difficult to apply the new standard than they initially expected.

Entities should also continue to monitor the discussions of the Boards, SEC staff, the TRG, and hospitality and time-shares industry task forces formed by the AICPA to discuss interpretations and application of the new standard to common transactions. These groups may address issues that affect all real estate entities. In addition, the Board's project to clarify the definition of a business may also result in changes in the accounting for sales of real estate.

Endnotes:

1 The term customer is defined in ASC 606 as "a party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration." Throughout this paper, the term "customer" may be used in reference to a transaction under ASC 610-20 in which the counterparty is a "buyer" and not a customer as contemplated in ASC 606. The use of "customer" in such instances is because ASC 610-20 refers to the guidance in ASC 606 and the discussion is focused on the requirements of ASC 606.

2 In March 2015, the FASB voted to propose amending its standard to refine the guidance in the Step 1 collectibility threshold and/or add or amend examples to clarify how the threshold should be applied. The FASB staff is in the process of drafting an Exposure Draft to reflect these tentative conclusions.

The new lease accounting standard

How did we get here, anyway?

Flawed from the start

Basis for Conclusions, SFAS 13 (1976):

"Some members of the Board who support this Statement hold the view that, regardless of whether substantially all the benefits and risks of ownership are transferred, a lease, in transferring for its term the right to use property, gives rise to the acquisition of an asset and the incurrence of an obligation by the lessee which should be reflected in his financial statements."

Note-all lessees were male in 1976.

SEC Report – June 15, 2005

“Report and Recommendations Pursuant to Section 401(c) of the Sarbanes-Oxley Act of 2002 on Arrangements with Off-Balance Sheet Implications, Special Purpose Entities, and Transparency of Filings by Issuers”

~$1.25 trillion in future lease obligations currently not recognized by lessees; recommends “reconsideration” of lease accounting

The Neverending Story

Original Exposure Draft (ED)

Issued in August 2010	Comment period ended December 2010	786 comment letters received

Revised ED

Issued in May 2013	Comment period ended September 13, 2013	656 comment letters received

Final Standard

Issued on February 25, 2016

Effective Date

2019 for publics, 2020 for private entities

Why did this take so long?

"Nobody wants us to rush through this process only to end up with a standard that needs to be amended and deferred. We want to maximize the likelihood that we have a smooth implementation of these new important standards when we feel that we have completed the process to our satisfaction."

Leslie Seidman, FASB Chairman

Lease classification

CLASSIFICATION CRITERIA
Lessor and lessee would account for a lease as a financing lease when: ✓ *Transfers ownership* by the end of the lease term ✓ Includes a purchase option that the lessee is *reasonably certain* to exercise ✓ Term is for the *major part* of the remaining economic life of the underlying asset ✓ Present value of lease payments and the present value of any residual value guarantees amounts to *substantially all* of the fair value of the underlying asset ✓ The asset is of such specialized nature that it would have no alternative use to the lessor at the end of the lease term

The required bright-line rules in current U.S. GAAP are eliminated, but…
842-10-55-2: "When determining lease classification, one reasonable approach to assessing the criteria…would be to conclude both the following:

1) 75% or more of the remaining economic life of the underlying asset is a major part of the remaining economic life of the underlying asset.
2) 90% or more of the fair value of the underlying asset amounts to substantially all of the fair value of the underlying asset."

Lessee accounting models

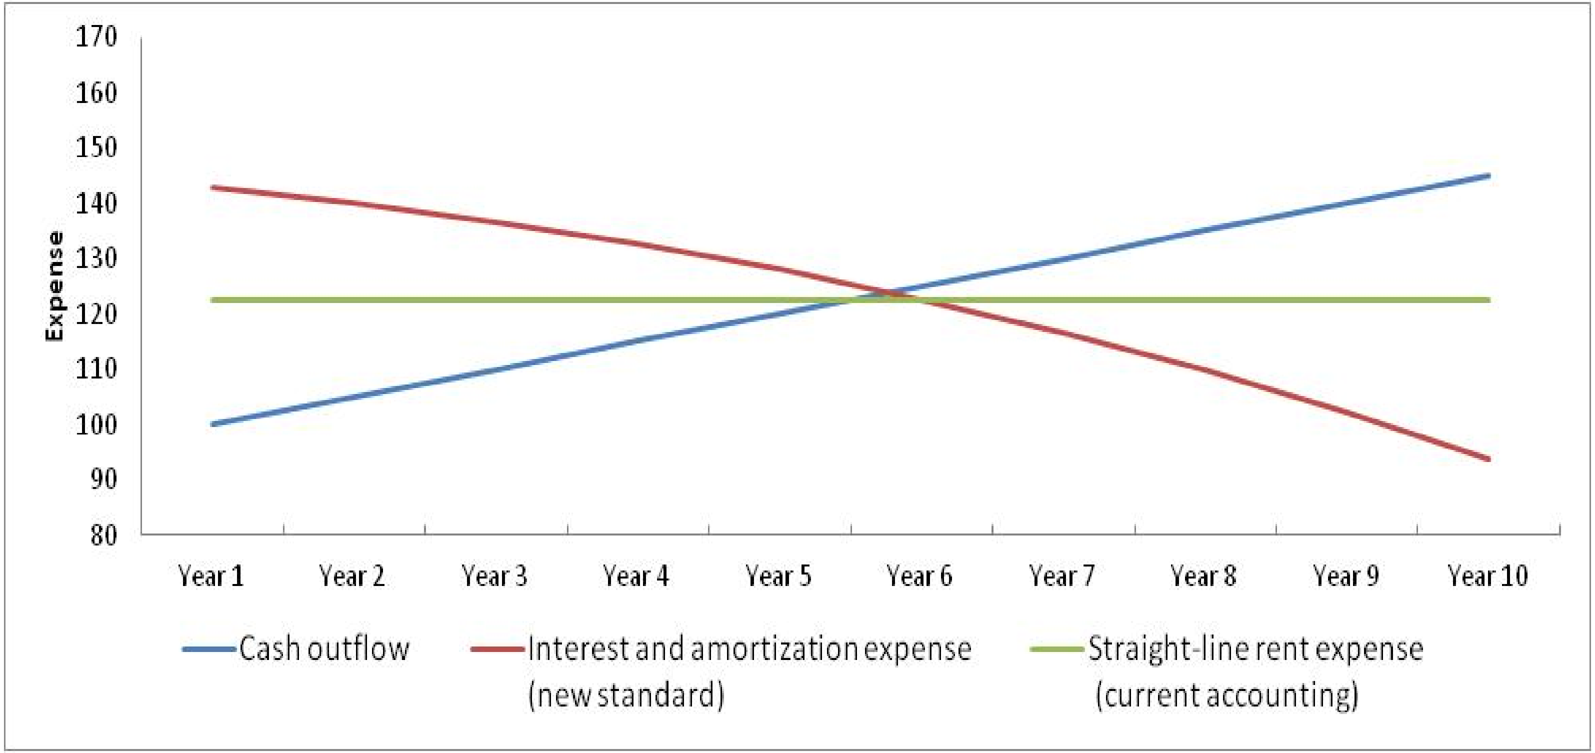
A lessee enters into a three-year lease and agrees to make the following annual payments at the end of each year: $10,000 in year 1, $15,000 in year 2, and $20,000 in year 3. The initial measurement of the right-of-use asset and liability to make lease payments is $38,000 at a discount rate of 8%.

This table highlights the differences in accounting for the lease under the financing approach and straight-line expense approach:

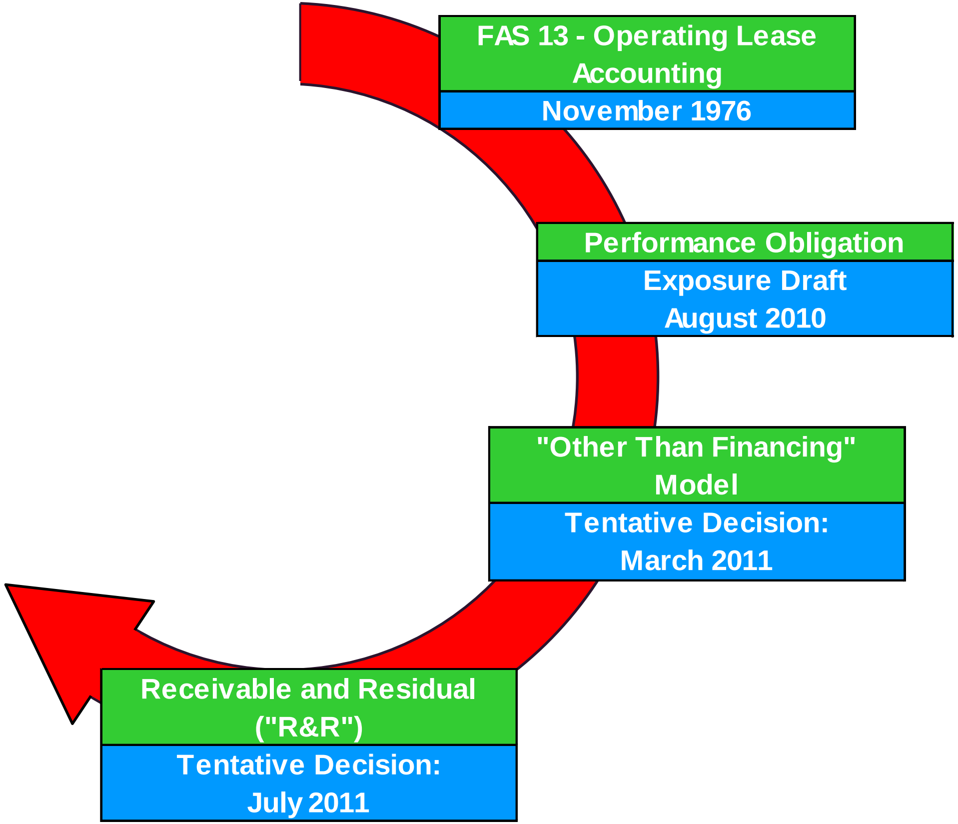
	Both Methods	Financing Approach				Straight-Line Expense Approach		
Year	Lease Liability	Interest Expense <X>	Amortization Expense <Y>	Total Lease Expense <X + Y>	Right-of-Use Asset	Lease Expense <Z>	Reduction in Right-of-Use Asset <Z – X>	Right-of-Use Asset
0	$ 38,000				$ 38,000			$ 38,000
1	31,038	$ 3,038	$ 12,666	$ 15,704	25,334	$ 15,000	$ 11,962	26,038
2	18,520	2,481	12,667	15,148	12,667	15,000	12,519	13,519
3	–	1,481	12,667	14,148	–	15,000	13,519	–
Total		$ 7,000	$ 38,000	$ 45,000		$ 45,000	$ 38,000	

Lessee accounting

Finance lease income statement effect

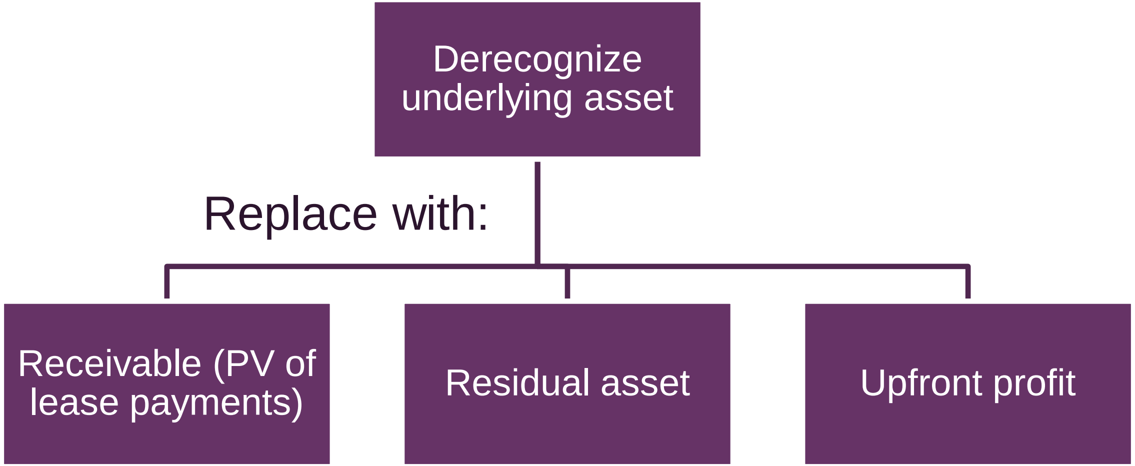


Lessor accounting…



The Receivable and Residual model

- The lessor derecognizes the underlying asset and recognizes
  - A lease receivable measured as the present value of the lease payments, and
  - A residual asset measured on an allocated-cost basis
- Any day-one profit would be recognized



Receivable and residual model-simple calculation?

Calculations necessary for a seven tenant property over a five year period of time

Calculations - Receivable & Residual

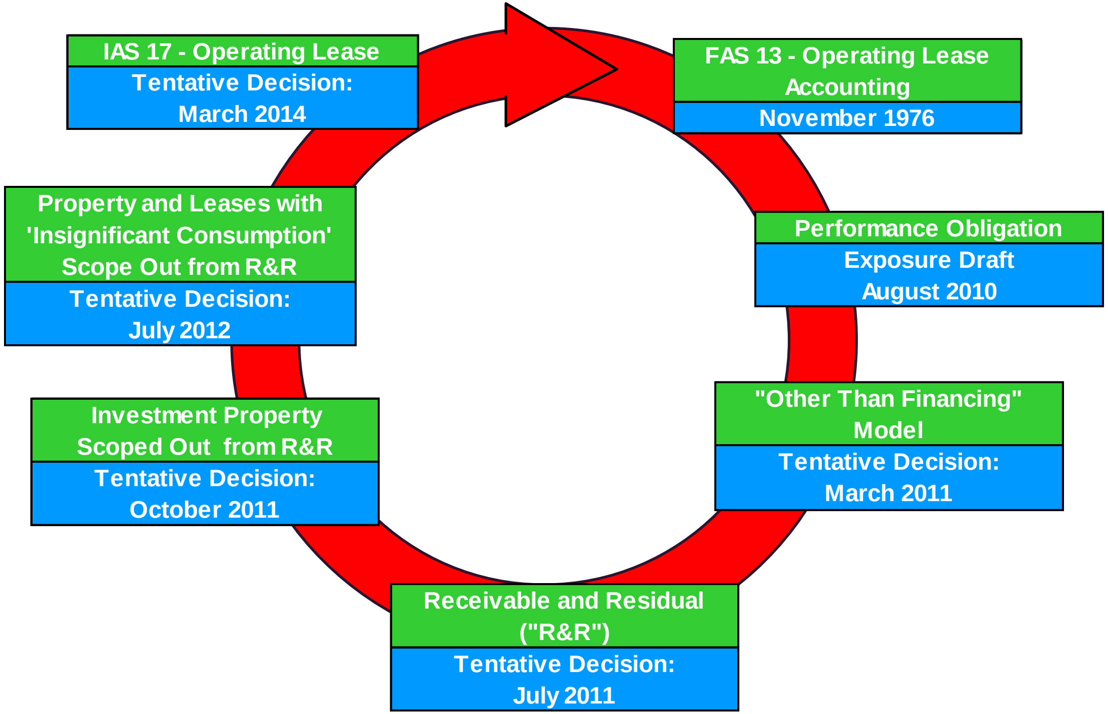
NAREIT spoke, the FASB listened

From the final standard, Basis for Conclusions:

"It would be extremely complicated to apply the approach to leases of portions of a larger asset (that is, when a lessor leases portions of a single asset to multiple parties concurrently, such as one floor of a building)."

Lessor accounting…

“And where I did begin, there I shall end” - Shakespeare



Leases project

Initial direct costs

The Boards decided that only incremental costs would qualify for capitalization.
Costs would be incremental if they would not have been incurred absent the lease being obtained.

Incremental:

- Commissions paid upon execution of a lease (internal or external)
- Payments to existing tenant to incentivize them to terminate their lease

Not incremental:

- Leasing department overhead, unsuccessful efforts
- Advertising, soliciting potential lessees, servicing existing leases
- Costs incurred before lease is obtained, such as legal or tax advice, negotiating the lease, due diligence on potential tenants

This will likely be a change in practice for our industry.

Leases project

Straight-line rent? Not necessarily!

Straight line rent for operating leases

- During redeliberations the FASB and IASB Boards decided that a lessor would recognize rental income on a systematic basis that is not straight line if that basis was more representative of the pattern in which income is earned from the underlying asset
- A lessor would be expected to recognize uneven fixed lease payments on a straight-line basis when the payments are uneven for reasons other than to reflect or compensate for market rentals or market conditions (for example, when there is significant front loading or back loading of payments or when rent-free periods exist in a lease)
- If rent steps are only intended to reflect market rent increases (inflation), can we avoid straight lining?

Leases project

Other interesting items

Sale leaseback transactions

- If the transfer of the asset is determined not to be a sale, the seller-lessee shall not derecognize the transferred asset (accounted for as a financing liability) and the buyer-lessor shall not recognize the transferred asset (accounted for as a receivable)
- Required consistency between seller-lessee and buyer-lessor accounting does not exist in current GAAP-asset can be on both parties' books

Lessee ground lease capitalization

- Existing GAAP allows payments for ground leases to be capitalized during the construction period if the project will be sold or rented
- 842-10-55-21: "…guidance does not address whether a lessee that accounts for the sale or rental of real estate projects under Topic 970 should capitalize rental costs associated with ground and building leases."
- Most ground leases will be "finance leases" on the balance sheet, so will produce interest expense, which will be capitalizable.

Leases project

What about CAM

Standard requires separate accounting for lease and non-lease (services) components of a contract

- Payments by tenant to landlord for taxes and insurance are generally considered part of the lease revenue
- Payments by tenant to landlord for common area maintenance are not part of the lease and should be recognized under the revenue standard

But

BC153: "…it similarly would be reasonable for lessors to account for multiple components of a contract as a single component if the outcome from doing so would be the same as accounting for the components separately (for example, a lessor may be able to conclude that accounting for an operating lease and a related service element as a single component results in the same accounting as treating those two elements as separate components)."

FASB *Revenue from Contracts with Customers* Standard

EY Building a better working world

Revenue recognition

ASU 2014-09

Replaces existing revenue guidance for virtually all industries and arrangements

- ASC 360-20, *Real estate sales,* is superseded

Delayed effective date (ASU 2015-14)

- Public entities – annual periods beginning after 15 December 2017
- Nonpublic entities – additional optional one-year deferral
  - Early adoption allowed for all US GAAP entities as of original public entity effective date (15 December 2016)
  - Early adoption allowed for IFRS entities upon initial issuance of standard

Transition

- Full retrospective – all periods presented using new guidance
- Modified retrospective – new guidance applied only to existing and new contracts in most current period presented; cumulative catch-up recognized at beginning of most current period presented
- SEC Staff provided relief on selected financial data table

Revenue recognition

Summary of the model

Core principle: Recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services

Step 1:	Identify the contract(s) with the customer
Step 2:	Identify the performance obligations in the contract
Step 3:	Determine the transaction price
Step 4:	Allocate the transaction price to the performance obligations
Step 5:	Recognize revenue when (or as) each performance obligation is satisfied

Revenue recognition

Real estate sales summary

Transaction: Real estate sales	Considerations
Scope	➢ May be in the scope of ASC 606, ASC 610-20, or ASC 810 ➢ Customer vs. noncustomer; business and/or in substance nonfinancial asset
Seller financing	➢ Initial and continuing investment criteria in ASC 360-20 removed ➢ Evaluation based on buyer's intent and ability to pay transaction price
Support obligations	➢ Continuing involvement criteria in ASC 360-20 removed ➢ Guarantees 'carved-out' and accounted for under ASC 460
Additional services	➢ May represent separate performance obligation and generally would not limit recognition of gain on sale of real estate
Partial sales	➢ Limited guidance in new standard ➢ FASB addressing as part of Definition of a Business project
Developers	➢ May be able to recognize revenue over time if "no alternative use / right to present payment" criteria are satisfied ➢ Criteria difficult to satisfy for most contracts in the US

Revenue recognition

Real estate sales - example

Developer P sells a hotel with a carrying value of $8m to Buyer Q. Developer P receives $1m of cash and provides seller financing of $9m in the form of a five-year amortizing note receivable.

ASC 360-20	ASC 606 / 610-20
➢ Assuming a sale has been consummated, Developer P evaluates Buyer Q's initial investment (10%) and determines that it is not sufficient to qualify for full accrual profit recognition (ASC 360-20 requires 15% investment for hotels) ➢ Developer P therefore recognizes profit using the cost recovery or installment method, depending on whether the cost of the property is reasonably assured ➢ Assuming all other criteria have been satisfied, Developer P may use the full accrual method in the future when payments received from Buyer Q satisfy both the initial and continuing investment tests	➢ Developer P assesses whether it is probable that it will collect the consideration to which it will be entitled (i.e., the transaction price is collectible). *See following slide.* ➢ If Developer P concludes the consideration is collectible, the sale and associated profit of $2m are recognized when control of the property transfers to Buyer Q ➢ When determining whether control has transferred, Developer P considers whether it has a present right to payment for the asset, as well as whether Buyer Q has legal title and physical possession of the property and has the risks and rewards of ownership

Revenue recognition

Real estate sales – example (continued)

- The transaction price (i.e., amount assessed for collectibility) may be different than the stated contract price if an entity concludes it has offered or is willing to accept a price concession
  - Such concessions or discounts are forms of variable consideration that an entity would estimate at contract inception and reduce from the contract price to derive the transaction price

Stated contract price	**$ 10,000,000**
Price concession - amount entity estimates it will offer (explicitly) or accept (implicitly) as a reduction to the contract price, unrelated to credit risk	**$ (2,000,000)**
Transaction price assessed for collectibility	**$ 8,000,000**

  - When an entity is not willing to accept less than the contract price, but is willing to accept the risk of default by the customer of contractually agreed-upon consideration (i.e., credit risk), the transaction price would not differ from the contract price. This amount would be assessed for collectibility

Revenue recognition

Real estate services and “other” summary

Transaction: Real estate services and “other”	Considerations
Property management services	➢ Evaluate whether services represent a “series of distinct services that are substantially the same and have same pattern of transfer to customer” ➢ Variable consideration related to distinct service within series is allocated to the distinct service ➢ Fixed fees or incentive fees may be recognized differently
Leasing services	➢ Unclear whether services are single performance obligation or indeterminate number of separate performance obligations ➢ Pattern of recognition may be the same for either conclusion
Development services	➢ Considerations similar to those described in “property management services” above
Costs incurred to sell real estate projects	➢ Current guidance in ASC 970 removed ➢ New guidance in ASC 340-40 for costs incurred to obtain a contract

Revenue recognition

Real estate services and “other” summary

Transaction: Real estate leases	Considerations
Lease payments	➢ Not within scope of revenue standard – refer to leases project
Common Area Maintenance (CAM)	➢ Additional service to the lessee and would therefore represent a “non-lease component” that is accounted for under the revenue standard ➢ Pro-rata CAM may meet the criteria for recognizing variable consideration related to a “series of services” ➢ Fixed CAM arrangements would likely require over time recognition using a measure of progress
Real estate taxes and insurance	➢ Real estate taxes and insurance are lease components and not within scope of revenue standard
Sale-leaseback transactions	➢ ASC 360-20 will temporarily remain in codification for purposes of evaluating sale-leaseback transactions involving real estate ➢ A seller-lessee and a buyer-lessor use the new revenue guidance and other criteria to determine whether a sale has occurred. If control of an underlying asset passes to the buyer-lessor, the transaction is accounted for as a sale and a lease by both parties. If not, the transaction is accounted for as a financing by both parties

FASB *Clarifying the Definition of a Business* Project

Clarifying the Definition of a Business

Background

- Current definition of a business too broad
- Cost/effort of evaluation
- Interpretation differences with IFRS
- Impacts on
  - Acquisition accounting – record at fair value vs. relative fair value, treatment of acquisition costs
  - Sale accounting

Clarifying the Definition of a Business

Current Definition

- Business = set of acquired activities and assets that must include inputs and one or more substantive processes that together contribute to the ability to create outputs
- Outputs – not required
- Full set of inputs and processes are not required if can be acquired by market participant
- No minimum input and/or process set required

Clarifying the Definition of a Business

ED Proposed Changes/Clarifications

- Eliminate evaluation of market replacement of any missing elements
- Provide “substantially all” threshold for fair value of gross assets acquired
- Narrow the definition of outputs
- Clarify that existence of continuing revenues (i.e., an in-place lease) is not indicative of substantive process being acquired

Clarifying the Definition of a Business

Challenges

- No defined bright line for “substantially all” screen
- Cannot group tangible and intangible assets (i.e., in-place or above/below market lease intangibles)
- Cannot group mixed use acquisitions
- Does not address difference in acquisition costs between asset and business
- Reference Case H and I in ED

Clarifying the Definition of a Business

NAREIT Comment Letter

- Align business combination guidance with existing asset acquisition guidance
- Amend the significance criteria to include a comparison of assets acquired to existing portfolio
- Add guidance that the acquisition of multiple properties in various stages of development would be considered similar assets

FASB *Consolidation* Standard

EY Building a better working world

Recently completed projects

Consolidation (ASU 2015-02)

New guidance makes targeted changes to ASC 810, *Consolidation*

- Effective for public entities in periods beginning after 15 December 2015
- Early adoption permitted; one year deferral for private entities

Focus of project is rescinding FAS 167 deferral for investment companies, but amendments apply to all

Key amendments include:

- Modification of criteria for determining whether fees paid to a decision maker represent a variable interest (focus on whether fees are at market)
- When assessing whether a partnership (or similar entity) is a VIE:
  - No longer consider substance of a general partner’s investment
  - Focus on whether a simple majority of limited partners have kick-out rights or substantive participating rights

Recently completed projects (cont.)

Consolidation (ASU 2015-02)

- Determination of primary beneficiary
  - Benefits criteria exclude fees at market and commensurate with services provided
  - Consider direct and indirect interests held through related parties
- Voting model for partnerships (and similar entities)
  - Eliminates presumption that general partner controls a limited partnership

Consolidation

VIE determination

Scope | Variable Interest | **Variable Interest Entity** | Primary Beneficiary

Amendments are focused on limited partnerships (LPs) and similar entities (e.g., LLCs)

Changes impact determination of whether equity holders lack the power to direct the activities that most significantly impact the entity's economic performance

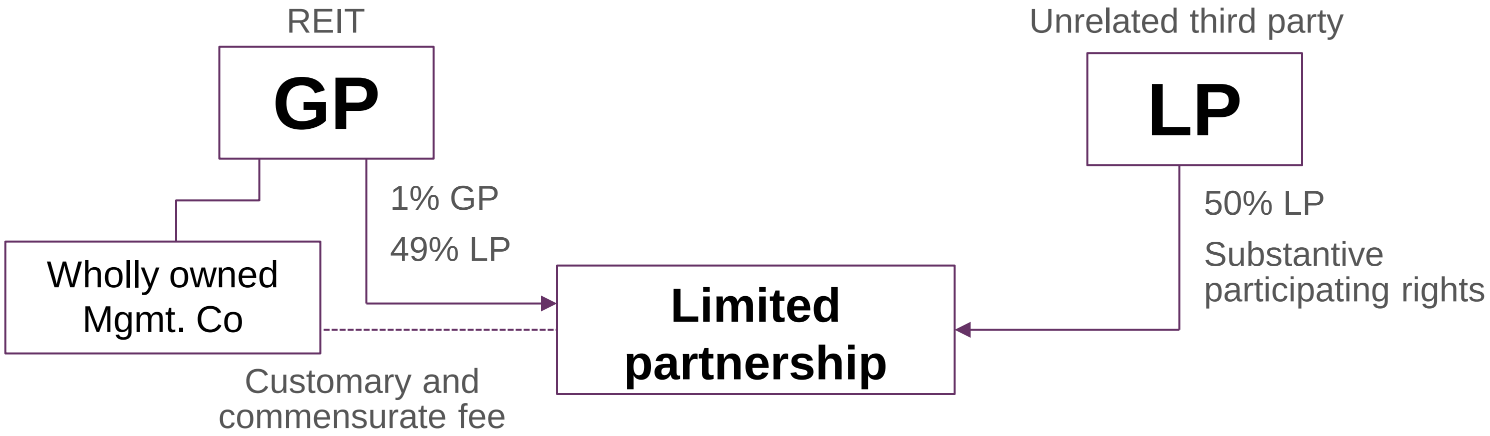
- Evaluation previously focused on whether general partner's at-risk equity investment was substantive

Analysis now based on existence of ***substantive kick-out rights*** or ***substantive participating rights*** held by the limited partners

- Rights are substantive if held by a single limited partner or a simple majority (or lower threshold) of limited partners
- Previously these rights must have been held by a single limited partner

VIE determination

Real estate – example 1

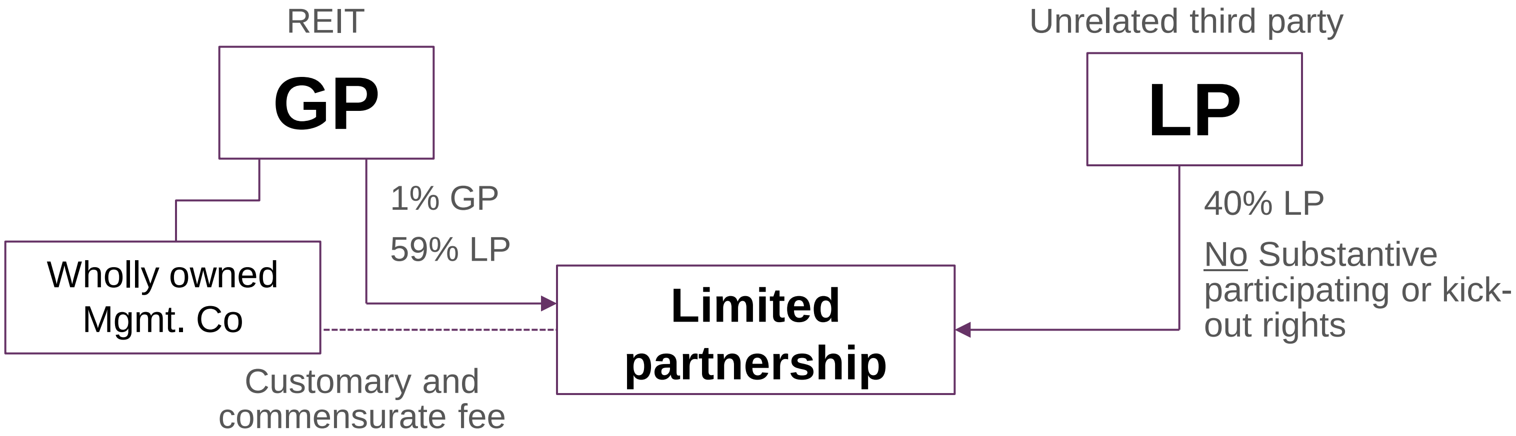


FAS 167: Limited partnership is <u>not</u> a VIE because an at-risk equity holder makes significant decisions. Applying the ASC 810-20 voting model, no party would consolidate

ASU 2015-02: Limited partnership is <u>not</u> a VIE. Applying the amended voting model, no party would consolidate

VIE determination

Real estate – example 2



FAS 167: Limited partnership is not a VIE because an at-risk equity holder makes significant decisions. Applying the ASC 810-20 voting model, REIT would consolidate.

ASU 2015-02: Limited partnership is a VIE because LP's have no susbtantive kick-out or participating rights. REIT would consolidate as Primary Beneficiary.

Questions?

No. 2015-02
Updated 28 July 2015

Technical Line

FASB — proposed guidance

Final standard on leases is taking shape

The new standard could affect companies' decisions about whether to lease or buy assets.

What you need to know

- The FASB and the IASB have substantially completed redeliberations on new leases standards that would require lessees to recognize assets and liabilities for most leases.
- Lessees and lessors applying US GAAP would classify most leases using a principle generally consistent with that of IAS 17, which is similar to current US GAAP but without the bright lines.
- The Boards have made different decisions about lease classification and the recognition, measurement and presentation of leases for lessees and lessors. In some cases, these differences would result in similar transactions being accounted for differently under US GAAP and IFRS.
- The Boards will set effective dates before issuing the new standards. We expect the Boards to issue the standards in the fourth quarter of 2015.

Overview

The Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB) (collectively, the Boards) have substantially completed redeliberations on new standards that would significantly change the accounting for leases and could have far-reaching implications for a company's finances and operations. This Technical Line is based on the FASB's decisions in redeliberations and supersedes the Technical Line with the same title that we issued on 25 March 2015.

Building a better working world

The standards the FASB and the IASB plan to issue would require lessees to recognize most leases on their balance sheets as lease liabilities with corresponding right-of-use assets. While many aspects of lessor accounting would remain the same, the standard that the FASB plans to issue (the new standard) would eliminate today's real estate-specific guidance and change today's additional lessor classification criteria.[1] It also would change what would be considered initial direct costs. The new standards would incorporate feedback the Boards received from constituents on their 2013 exposure draft[2] (2013 ED).

Like today's guidance in Accounting Standards Codification (ASC) 840, *Leases*, the new standard would require lessees to classify most leases. Leases would be classified as either Type A leases (generally today's capital leases) or Type B leases (generally today's operating leases). As discussed later in this publication, the IASB has decided that lessees would apply a single model for all recognized leases and would have the option not to recognize and measure leases of small assets.

The new standard would require lessors to classify all leases as either Type A leases or Type B leases (generally today's operating leases). There would be three categories of Type A leases for lessors: (1) those with selling profit that is recognized or deferred (generally today's sales-type leases), (2) those with no selling profit (generally today's direct financing leases), and (3) certain leases where collectibility of lease payments is not probable. Leases in the latter category would be recognized and measured in accordance with the new revenue recognition standard (i.e., ASC 606, *Revenue from Contracts with Customers)*. As discussed later in this publication, the IASB also has decided that lessors would apply a dual classification model for all leases.

Leases would be classified using a principle generally consistent with that of International Accounting Standards (IAS) 17, *Leases*, which is similar to US GAAP but without today's bright lines (i.e., the "75% of economic life" and "90% of fair value" tests in ASC 840). The new standard would eliminate today's real estate-specific guidance and would change today's additional lessor classification criteria. Lease classification would be important in determining how and when a lessee and a lessor would recognize lease expense and revenue, respectively, and what assets a lessor would record.

For lessees, the income statement recognition pattern for Type A leases would be similar to that of today's capital leases. The income statement recognition pattern for Type A leases for lessors would be similar to that of today's sales-type or direct financing leases. However, lessors would also evaluate whether a Type A lease, in effect, transfers control of the underlying asset to the lessee when determining whether to recognize or defer recognition of any profit. In addition, for some Type A leases, the recognition and measurement provisions of ASC 606 would apply.

Lessees' and lessors' income statement recognition patterns for Type B leases would be similar to today's patterns for operating leases.

For lessees, recognizing lease-related assets and liabilities could have significant financial reporting and business implications, such as:

- Key balance sheet metrics could change.
- Debt covenants and borrowing capacity might be affected.
- Decisions about whether to lease or buy significant assets might change.

As discussed in Appendix B to this publication, the new standard would eliminate the following lease and lease-related accounting guidance:

- Lessee involvement in asset construction ("build-to-suit" transactions)
- Separate requirements for leases involving real estate
- Leveraged leases that are not grandfathered upon transition

Before issuing a final standard, the FASB plans to revisit interpretive guidance in ASC 840 to determine whether to carry forward guidance it did not include in its 2013 ED. This could result in certain guidance being carried forward to the new standard, such as the following:

- Sale of assets subject to a lease or intended to be leased by the purchaser to a third party
- Lessee maintenance deposits
- The sale of tax benefits associated with a leased asset
- Accounting for a loss on a sublease

The FASB has not yet discussed an effective date but plans to address it before issuing a final standard. Given the current timeline, an effective date of 1 January 2018 or later is likely.

The new standard's transition provisions would be applied using a modified retrospective approach at the beginning of the earliest comparative period presented in the financial statements. For example, if the standard is effective for 2018 for calendar-year companies, a company that presents three years of financial statements would have an effective date of 1 January 2018 and would apply the transition provisions to periods beginning 1 January 2016. Full retrospective application would be prohibited.

This publication discusses how the FASB's standard would be applied and is intended to help companies consider the effects of adopting it. Please note that our publication is based on available information regarding the FASB's decisions in redeliberations. Until a final standard is issued, these decisions are tentative. The FASB may also clarify its decisions in the final standard. The discussions and illustrations in this publication represent our preliminary thoughts.

Contents

Identifying a lease

Scope and scope exclusions (updated July 2015)

The scope of the new standard would be broader than the scope of ASC 840 and would not be limited to leases of property, plant and equipment. The new standard would apply to leases of all assets, except for the following:

- Leases of intangible assets
- Leases to explore for or use natural resources (e.g., minerals, oil, natural gas, similar non-regenerative resources)
- Leases of biological assets, including timber

How we see it

We believe that service concession arrangements[3] within the scope of ASC 853, *Service Concession Arrangements,* would be outside the scope of the new standard because they are currently excluded from the scope of today's guidance on leases. The FASB did not address them in the 2013 ED (and did not discuss them in redeliberations) because ASC 853 was codified after the FASB issued the ED.

A lease conveys the right to control the use of an identified asset.

Key differences between US GAAP and IFRS

Under the IASB's new standard, lessees of intangible assets could, as a policy election, apply the new lease standard, but they would not be required to. However, the IASB's new standard would specifically exclude lessors' leases of intangible assets from its scope.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

The requirement in ASC 350-40, *Intangibles — Goodwill and Other — Internal-Use Software,* that required licensees to analogize to ASC 840 for purposes of determining the accounting for a software licensing arrangement was eliminated by Accounting Standards Update (ASU) 2015-05.[4] Instead, customers will account for software licenses that are in the scope of ASC 350-40 in the same manner as licenses of other intangible assets.

Definition of a lease

A lease would be defined as a contract (i.e., an agreement between two or more parties that creates enforceable rights and obligations) that conveys the right to use an asset (i.e., the underlying asset) for a period of time in exchange for consideration. To be a lease, a contract would have to meet both of the following criteria:

- Fulfillment of the contract depends on the use of an identified asset.
- The contract conveys the right to control the use of the identified asset.

Identified asset

The FASB indicated that a contract's dependence on an identified asset is fundamental to the definition of a lease. This concept is generally consistent with the "specified asset" concept in ASC 840. Under the new standard, an identified asset could be either implicitly or explicitly specified in a contract and could be a physically distinct portion of a larger asset (e.g., a floor of a building). However, a capacity portion of an asset that is less than substantially all of that asset's capacity (e.g., 60% of a pipeline's capacity) would not be an identified asset because it is not physically distinct from the remaining capacity of the asset.

Illustration 1 — Identified asset

Scenario A

Assume that Customer X enters into a 12-year contract for the right to use a specified capacity of a supplier's data transmission within a fiber optic cable between New York and London. The contract identifies 3 of the cable's 20 fibers. The 3 fibers are dedicated solely to Customer X's data for the duration of the contract term.

Analysis: The 3 fibers would be identified assets because they are specified in the contract and are physically distinct from the other 17 fibers in the cable.

Scenario B

Assume the same facts as in Scenario A, except that the supplier is free to use any of the cable's 20 fibers, at any time during the contract term, to transmit any of its customers' data, including Customer X's data.

Analysis: The fibers are not identified assets because the contract allows the supplier to use any of the cable's 20 fibers to fulfill its obligations to Customer X, whose portion of the cable's capacity is not physically distinct from the cable's remaining capacity.

A contract would not involve the use of an identified asset if a supplier has the substantive right to substitute the asset used to fulfill the contract. A substitution right would be substantive if both of the following conditions are met:

- The supplier has the practical ability to substitute the asset.
- The supplier can benefit from exercising the right to substitute the asset.

A customer would presume that fulfillment of a contract depends on the use of an identified asset when it is impractical for the customer to evaluate either of these conditions. No presumption for suppliers is necessary because they generally have sufficient information to make such a determination.

Contract terms that allow or require a supplier to substitute other assets only when the underlying asset is not operating properly (e.g., a normal warranty provision) or when a technical upgrade becomes available would not create a substantive substitution right.

The FASB intends for the conditions above to mitigate the risk that customers and/or suppliers would structure arrangements with non-substantive substitution clauses to avoid applying lease accounting.

Illustration 2 — Substitution rights

Scenario A

Assume that an electronic data storage provider (supplier) provides services, through a centralized data center, that involve the use of a specified server (Server No. 9). The supplier maintains many identical servers in a single, accessible location and is permitted to and can easily substitute another server without the customer's consent. Further, the supplier would benefit from substituting an alternative asset, because it allows the supplier flexibility to optimize the performance of its network while incurring only nominal cost.

Analysis: Fulfillment of this contract would not depend on the use of an identified asset. Specifically, the supplier has the practical ability to substitute the asset and would benefit from such a substitution.

Scenario B

Assume the same facts as in Scenario A except that Server No. 9 is customized, and the supplier would not have the practical ability to substitute the customized asset. Additionally, the supplier would not obtain any benefits from sourcing a similar alternative asset. For example, the server may contain the customer's confidential information, requiring the destruction of the asset's primary components (e.g., hardware, software) adding significant costs to the supplier without benefiting the supplier, if substituted.

Analysis: Because it is not practical for the supplier to substitute the asset and the supplier would not benefit from substituting the asset, the substitution right would be non-substantive, and Server No. 9 would be an identified asset. In this scenario, neither of the conditions is met, but it is important to note that both conditions must be met for the supplier to have a substantive substitution right.

How we see it

The requirement that a substitution right must benefit the supplier in order to be substantive is a new concept that could disqualify substitution rights from being considered substantive.

Determining when a customer has the right to direct the use of the identified asset may require judgment.

Right to control the use of the identified asset

A contract would convey the right to control the use of an identified asset if, throughout the contract term, the customer has the right to both:

- Direct the use of the identified asset
- Obtain substantially all of the potential economic benefits from directing the use of the identified asset

Requiring a customer to have the right to direct the use of an identified asset would be a change from ASC 840. A contract may meet ASC 840's control criterion if, for example, the customer obtains substantially all of the output of an underlying asset. Under the new standard, these arrangements would no longer be considered leases unless the customer also has the right to direct the use of the identified asset.

Right to direct the use of the identified asset

A customer has the right to direct the use of an identified asset whenever it has the right to direct how and for what purpose the asset is used, including the right to change how and for what purpose the asset is used, throughout the period of use.

The determination of whether a customer has the right to direct how and for what purpose an asset is used should focus on whether the customer has the right to make the decisions that most significantly affect the economic benefits that can be derived from the use of the underlying asset. This right may include directing how, when, whether and where the asset is used and what it is used for throughout the contract term. Importantly, this right would permit the customer to change its decisions throughout the contract term without approval from the supplier. The customer would not necessarily need the right to operate the underlying asset to have the right to direct its use. That is, the customer may direct the use of an asset that is operated by the supplier's personnel.

If neither the customer nor the supplier directs how and for what purpose the asset is used throughout the period of use (e.g., when the contract specifies how and for what purpose the asset is used or when decisions are made jointly throughout the period of use), the customer would have the right to direct the use of the identified asset in either of the following circumstances:

- The customer has the right to operate the asset or direct others to operate the asset in a manner that it determines (with the supplier having no right to change those operating instructions).
- The customer designed the asset, or caused it to be designed, in a way that predetermines how and for what purpose the asset will be used or how the asset will be operated.

A supplier's protective rights, in isolation, would not prevent the customer from having the right to direct the use of an identified asset. The FASB believes that protective rights typically define the scope of the customer's use of the asset without removing the customer's right to direct the use of the asset. Protective rights are intended to protect a supplier's interests (e.g., interests in the asset, its personnel, compliance with laws and regulations) and might take the form of a specified maximum amount of asset use or a requirement to follow specific operating instructions.

How we see it

- We understand that the FASB does not intend for the assessment of whether a customer has the right to direct "how" and "for what purpose" an asset is used to be two separate determinations. Instead, the assessment would be holistic, encompassing how, when, whether and where an asset is used and what it is used for (including the right to change these decisions) throughout the period of its use.
- We still have questions about how the definition would be applied to certain arrangements. For example, in contracts that include significant services, we believe that determining whether the contract conveys the right to direct the use of an identified asset may be challenging.

Illustration 3 — Right to direct the use of an asset

Customer enters into a contract with Supplier to use Automobile A for a three-year period. Automobile A is specified in the contract. Supplier cannot substitute another vehicle unless Automobile A is not operational (e.g., it breaks down).

Under the contract, Customer operates Automobile A (i.e., drives the vehicle) or directs others to operate Automobile A (e.g., hires a driver). Customer decides how to use the vehicle (within contractual limitations, discussed below). In addition, Customer decides where Automobile A goes as well as when or whether it is used, and what it is used for, throughout the period of use. Customer can also change its decisions throughout the period of use.

Under the contract, Supplier provides scheduled maintenance services and specifies that Customer can use Automobile A for a maximum of 12,000 miles per year without a substantive penalty. In addition, Supplier prohibits certain uses of Automobile A (e.g., moving it overseas) and modifications of Automobile A to protect its interest in the asset.

Analysis: Customer has the right to direct the use of Automobile A. Customer has the right to direct how the vehicle is used, when or whether the vehicle is used, where the vehicle goes and what the vehicle is used for. Customer also has the right to change the aforementioned decisions.

Supplier's limits on annual mileage and certain uses for the vehicle are considered protective rights that define the scope of Customer's use of the asset but do not affect the assessment of whether Customer directs the use of the asset.

Right to obtain substantially all of the potential economic benefits from directing the use of the identified asset

A customer's right to control the use of an identified asset also depends on its right to obtain substantially all of the potential economic benefits from directing the use of the asset during the contract term. The customer can obtain economic benefits either directly or indirectly through the asset's primary outputs (i.e., goods or services) and any byproducts (e.g., renewable energy credits). However, other tax benefits, such as those related to the ownership of the asset (e.g., excess tax depreciation benefits), would not be considered potential economic benefits of use.

How we see it

The term "substantially all" was not defined in the 2013 ED and was not addressed during redeliberations. However, entities might consider the term to mean more than 90%, based on how it is defined in ASC 840 in the context of sale and leaseback transactions. That definition states that "if the present value of a reasonable amount of rental for the leaseback represents 10 percent or less of the fair value of the asset sold, the seller-lessee would be presumed to have transferred to the purchaser-lessor the right to substantially all of the remaining use of the property sold."

The FASB decided against including an additional requirement that, for a contract to contain a lease, a customer must have the ability to derive benefits from directing the use of an identified asset on its own or together with other resources (e.g., goods or services) that are either sold separately (by the supplier or any other supplier) or can be sourced in a reasonable period of time. Some members of the FASB indicated that such a requirement would have made applying the definition more complex, and the costs would have outweighed the benefits. They also noted that the FASB's staff was unable to identify arrangements in which the conclusion would change as a result of the additional requirement.

Cancelable leases

The new standard would apply to contracts that are referred to as "cancelable," "month-to-month," "at will," "evergreen," "perpetual" or "rolling" if they create enforceable rights and obligations. Any noncancelable periods in contracts meeting the definition of a lease would be considered part of the lease term. See the lease term section below.

For example, consider an agreement with an initial noncancelable period of one year and an extension for an additional year if both parties agree. The initial one-year noncancelable period would meet the definition of a contract because it creates enforceable rights and obligations. However, the one-year extension period would not be a contract because either party could unilaterally elect to not extend the arrangement without incurring a substantive penalty.

Short-term leases

Lessees could make an accounting policy election (by class of underlying asset) to apply a method similar to current operating lease accounting to leases with a lease term of 12 months or less (short-term leases). To evaluate whether a lease qualifies for this accounting, the lease term would be determined in a manner consistent with the lease term of all other leases. For example, the lease term would only include periods covered by lease renewal options that a lessee is reasonably certain to exercise and would also include periods covered by lease termination options that a lessee is reasonably certain not to exercise. See the lease term section below.

Illustration 4 — Short-term lease
Scenario A A lessee enters into a lease with a nine-month noncancelable term with an option to extend the lease for four months. At the lease commencement date, the lessee concludes that it is reasonably certain to exercise the extension option because the monthly lease payments during the extension period are significantly below market rates. *Analysis*: The lease term is greater than 12 months (i.e., 13 months). Therefore, the lessee may not account for the lease similar to operating lease accounting under ASC 840 today. Scenario B A lessee enters into a lease with a nine-month noncancelable term with an option to extend the lease for four months. At the lease commencement date, the lessee concludes that it is not reasonably certain to exercise the extension option because the monthly lease payments during the optional extension period are at market rates and there are no other factors that would make exercise of the renewal option reasonably certain. *Analysis*: The lease term is 12 months or less (i.e., nine months). Therefore, the lessee may (subject to its accounting policy, by class of underlying asset) account for the lease in a manner similar to an operating lease under ASC 840 today.

The short-term lease accounting policy election is intended to reduce the cost and complexity of applying the new standard. Lessees making the election would recognize lease expense on a straight-line basis over the lease term. Although such leases would not be recognized on the balance sheet, they would still meet the definition of a lease. As such, certain quantitative and qualitative disclosures would be required for short-term leases if a lessee makes such a policy election.

How we see it

- In its 2013 ED, the FASB proposed making the short-term lease accounting policy election available to lessees and lessors. However, given the FASB's decisions on lessor accounting, we believe the election will not be available to lessors in the final standard.
- The 2013 ED also said that any lease that contains a purchase option would not be considered a short-term lease. Because the FASB did not discuss this provision during redeliberations, it appears that such leases would not be short-term leases under the new standard.

Leases of small assets (IFRS-only)

Key differences between US GAAP and IFRS
The IASB's new standard would include an exemption from its recognition and measurement provisions for leases of small assets for lessees. The IASB's new standard would specify that the exemption only applies to leases of assets that are not dependent on, or highly interrelated with, other leased assets. The Basis for Conclusions to the IASB's new standard would include a discussion of the quantitative threshold that the IASB considers appropriate in applying the exemption. In its redeliberations, the IASB discussed a threshold of $5,000. This was intended to help preparers determine what is meant by "small" and would be expressed in terms of the value of the underlying asset when new. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Identifying and separating lease and non-lease components and allocating contract consideration

Identifying and separating lease from non-lease components of contracts

Many contracts contain a lease coupled with an agreement to purchase or sell other goods or services (non-lease components). For these contracts, the non-lease components would be identified and accounted for separately from the lease component (except when a lessee applies the practical expedient as discussed below). The non-lease components may be accounted for as executory arrangements by lessees (customers) or as contracts subject to the new revenue recognition standard (i.e., ASC 606, *Revenue from Contracts with Customers*) by lessors (suppliers).

How we see it

Identifying non-lease components of contracts may change practice for some lessees. Today, entities may not focus on identifying lease and non-lease components because their accounting treatment (e.g., the accounting for an operating lease and a service contract) is often the same. However, because most leases would be recognized on the balance sheet under the new standard, lessees may need to put more robust processes in place to identify the lease and non-lease components of contracts.

Lessees could make a policy election to account for a lease and non-lease components as a single lease component.

Activities or lessor costs in a contract that do not provide the lessee with an additional good or service would not be considered lease or non-lease components, and lessees and lessors would not allocate contract consideration (discussed below) to these activities or costs. An example would be administrative costs a lessor charges a lessee. However, activities or lessor costs such as a lessor providing services (e.g., maintenance, supply of utilities) or operating the underlying asset (e.g., vessel charter, aircraft wet lease) would generally represent non-lease components.

Under current US GAAP, lease-related executory costs (e.g., insurance, maintenance, taxes) are considered part of lease components (or lease elements) for the purpose of separating lease and non-lease elements. However, under the new standard, certain lease-related executory costs, such as maintenance activities, would be non-lease components. Additionally, arrangements that include payments for other items such as taxes and insurance would have to be evaluated to determine whether an additional good or service is being provided to the lessee and whether those items should be considered lease or non-lease components.

Practical expedient — lessees

The new standard would provide a practical expedient that would permit lessees to make an accounting policy election (by class of underlying asset) to account for the lease and non-lease components of a contract as a single lease component. The FASB expects the practical expedient to most often be used when the non-lease components of a contract are not significant when compared with the lease components of a contract.

Lessees that make the policy election to account for the lease and non-lease components of contracts as a single lease component would allocate all of the contract consideration to the lease. Therefore, the initial and subsequent measurement of the lease liability and right-of-use asset would be higher than if the policy election were not applied. See the lessee accounting section below for a discussion of measurement of lease liabilities and right-of-use assets.

Identifying and separating lease components

For contracts that contain the rights to use multiple assets (e.g., a building and equipment), the right to use each asset would be considered a separate lease component if both of the following criteria are met:

- The lessee can benefit from the use of the asset either on its own or together with other readily available resources (i.e., goods or services that are sold or leased separately, by the lessor or other suppliers, or that the lessee has already obtained from the lessor or in other transactions or events).
- The underlying asset is neither dependent on, nor highly interrelated with, the other underlying assets in the contract.

If one or both of these criteria are not met, the right to use multiple assets would be considered a single lease component.

Illustration 5 — Identifying and separating lease components

Scenario A

Assume that a lessee enters into a lease of a warehouse and the surrounding parking lot that is used for deliveries and truck parking. The lessee is a local trucking company that intends to use the warehouse as the hub for its shipping operations.

Analysis: The contract contains one lease component. The lessee would be unable to benefit from the use of the warehouse without also using the parking lot. Therefore, the warehouse space is dependent upon the parking lot.

Scenario B

Assume the same facts as in Scenario A, except that the contract also conveys the right to use an additional plot of land that is adjacent to the parking lot. This plot of land could be developed by the lessee for other uses (e.g., to construct a truck maintenance facility).

Analysis: The contract contains two lease components: a lease of the warehouse (together with the parking lot) and a lease of the adjacent plot of land. Because the adjacent land could be developed for other uses independent of the warehouse and parking lot, the lessee can benefit from the adjacent plot of land on its own or together with other readily available resources. The lessee can also benefit from the use of the warehouse and parking lot on its own or together with other readily available resources.

Allocating contract consideration

Lessees that do not make an accounting policy election to use the practical expedient to account for a lease and non-lease components of a contract as a single lease component would allocate contract consideration to the lease and non-lease components on a relative standalone price basis. Lessees would use observable standalone prices (i.e., prices that the lessor or a similar supplier would charge separately for a similar lease, good or service component of a contract) when available. If observable standalone prices are not available, lessees would be permitted to estimate standalone prices. In doing so, lessees would be required to maximize the use of observable information and to apply estimation methods in a consistent manner. This would be similar to how lessees allocate contract consideration under current US GAAP.

Lessors would be required to apply the new revenue recognition standard (i.e., ASC 606) to allocate contract consideration between the lease and non-lease components of a contract.

Allocating contract consideration — reassessment

Lessees would be required to reallocate consideration upon either:

- A contract modification that is not accounted for as a separate, new lease
- A reassessment of the lease term or a lessee's purchase option (i.e., whether the lessee is reasonably certain to exercise the option)

How we see it

Although the FASB decided to require lessees to reallocate contract consideration upon the reassessment of the lease term or a lessee's purchase option, we believe the FASB intended for lessees to reallocate contract consideration only when a reassessment results in a change to either the lease term or to the lessee's conclusion about whether it is reasonably certain that the lessee will exercise a purchase option.

Lessors would be required to reallocate contract consideration upon a modification that is not accounted for as a separate, new lease.

Modifications resulting in a separate, new lease for lessors and lessees would require consideration to be allocated to the lease and non-lease components (as applicable), as with any new lease. See the lease modifications section below.

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

Lease modifications (updated July 2015)

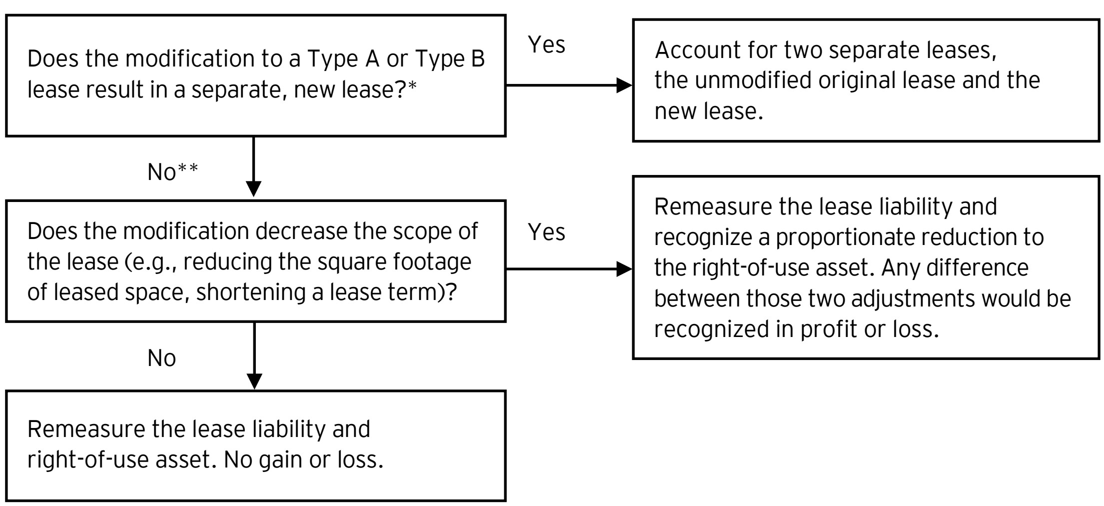
The new standard would define a lease modification as any change to the contractual terms and conditions of a lease that was not part of the original terms and conditions of the lease.

Lessees and lessors would account for a lease modification as a separate, new lease when both of the following conditions are met:

- The modification grants the lessee an additional right-of-use (e.g., an additional underlying asset, the same underlying asset for an additional period of time not contemplated by a renewal option) not included in the original lease.
- The additional right-of-use is priced commensurate with its standalone price.

This type of modification would result in a lessee and lessor accounting for two separate leases, the unmodified original lease and the new lease.

The following decision tree summarizes how lessees would evaluate and account for a lease modification under the new standard:



* Guidance for evaluating whether a modification results in a separate, new lease is discussed above.

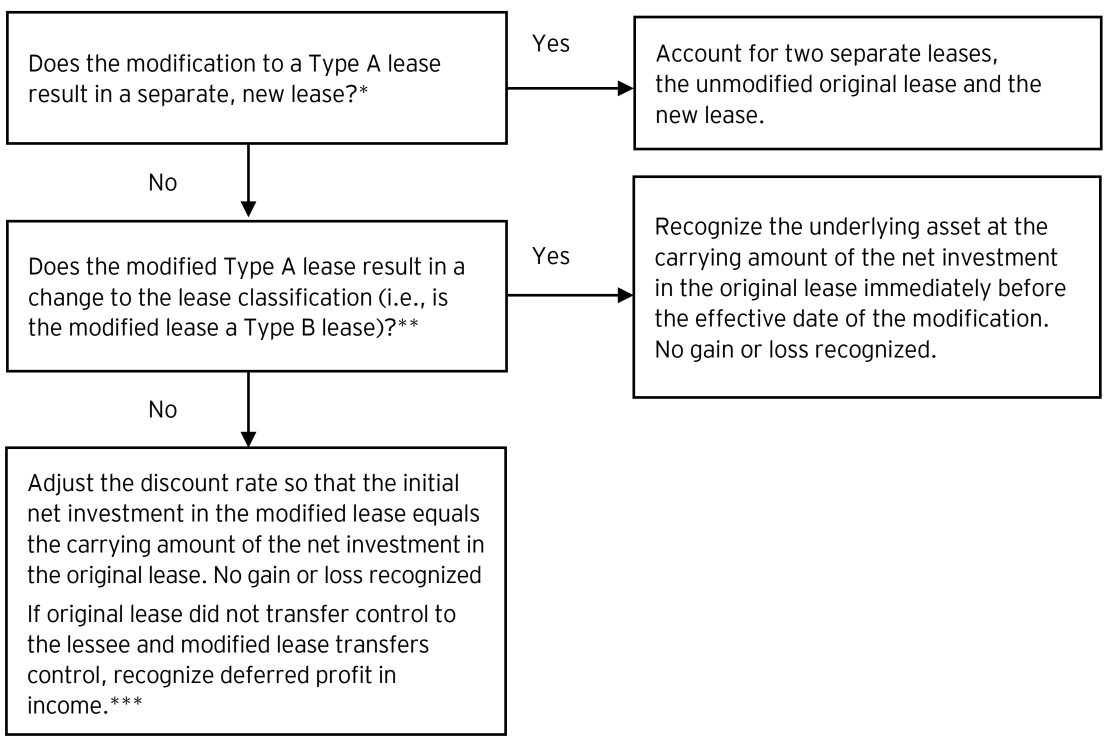
** It is unclear whether the final standard would require lessees to reassess lease classification upon a modification to a Type A or a Type B lease that does not result in a separate, new lease.

As indicated on the decision tree above, for a lease modification that does not result in a separate, new lease, lessees would generally remeasure the existing lease liability and right-of-use asset without affecting profit or loss. However, for a modification that decreases the scope of a lease (e.g., reducing the square footage of leased space, shortening a lease term), lessees would remeasure the lease liability and recognize a proportionate reduction (e.g., the proportion of the change in the lease liability to the pre-modification lease liability) to the right-of-use asset. Any difference between those adjustments would be recognized in profit or loss.

For lessors, a modification that does not result in a separate, new lease (as noted above) would be accounted for as follows:

- A modification to a Type B lease would be, in effect, a new Type B lease. The lease payments would be equal to the remaining lease payments of the modified lease, adjusted for any prepaid or accrued rent from the original lease.
- The accounting for a modification to a Type A lease would depend on whether lease classification changes. That is, lessors would reassess lease classification upon a modification to a Type A lease that does not result in a separate, new lease (as noted above).

The following decision tree summarizes how lessors would evaluate and account for a modification to a Type A lease under the new standard:



* Guidance for evaluating whether a modification results in a separate, new lease is discussed above.

** It is unclear how lessors would reassess classification. For example, the assessment could be made as of the original lease inception date (using modified terms) or at the effective date of the modification.

*** See lessor accounting – determining whether to defer or recognize selling profit section below.

Modification to a Type A lease that does not result in a separate, new lease — no change in lease classification

As indicated in the decision tree above, a lessor would adjust the discount rate used to measure the modified lease so that its initial net investment in the modified lease equals the carrying amount of its net investment in the original lease immediately before the effective date of the modification. No gain or loss would be recognized from such a modification, absent an impairment of the net investment in the lease (i.e., the lease receivable and any unguaranteed residual asset).

However, if the original Type A lease did not, in effect, transfer control of the underlying asset to the lessee (i.e., any initial selling profit was deferred, as discussed in the lessor accounting section), but the modified Type A lease would transfer control, a lessor would adjust the discount rate used to measure the modified lease so that its initial net investment in the modified lease would equal the carrying amount of its net investment in the original lease, exclusive of any deferred selling profit, immediately before the effective date of the modification. That is, lessors would recognize any previously deferred selling profit in income upon such a modification.

Modification of a Type A lease that does not result in a separate, new lease — change in lease classification to a Type B lease

As indicated in the decision tree above, a lessor would recognize the underlying asset at the carrying amount of its net investment in the original lease immediately before the effective date of the modification. No gain or loss would be recognized from such a modification, absent an impairment of the underlying asset.

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

How we see it

- It is unclear whether the FASB intends to require lessors to reassess lease classification upon a modification to a Type B lease that does not result in a separate, new lease.
- It is also unclear whether the final standard would require lessees to reassess lease classification upon a modification to a Type A or a Type B lease that does not result in a separate, new lease.

Key differences between US GAAP and IFRS
The IASB decided that lessors would account for a modification to a Type A lease that does not result in a separate, new lease in accordance with IFRS 9, *Financial Instruments*. Refer to Appendix C for a summary of key differences.

Contract combinations

The new standard would require that two or more contracts entered into at or near the same time with the same counterparty (or related party) be considered a single transaction if either of the following is met:

- The contracts are negotiated as a package with a single commercial objective.
- The amount of consideration to be paid in one contract depends on the price or performance of the other contract.

These criteria are intended to address the FASB's concern that separately accounting for multiple contracts may not result in a faithful representation of the combined transaction.

Portfolio approach

Many constituents had expressed concerns that the cost of applying the 2013 ED would exceed the benefits for leases involving a large number of assets that have similar characteristics (e.g., leases of a fleet of similar cars). In response, the FASB acknowledged that lessees and lessors would be able to use a portfolio approach (rather than a lease-by-lease approach) when they reasonably expect that doing so would not result in a material difference from accounting for the leases on an individual basis. The new standard would not define "reasonably expect" and "material." Instead, the FASB decided to include a discussion of the portfolio approach in the Basis for Conclusions of the new standard rather than in the text that will appear in the Codification.

Key differences between US GAAP and IFRS

The IASB decided to state explicitly in the authoritative paragraphs of its new standard that lessees and lessors also would be permitted to use a portfolio approach (rather than a lease-by-lease approach) when they reasonably expect that doing so would not result in a material difference from accounting for the leases on an individual basis.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

How we see it

The FASB's decision to discuss the portfolio approach in the Basis for Conclusions in its new standard (rather than in the text that will be codified) suggests that the approach would be applied as an accounting convention. That is, a decision to use the portfolio approach would be similar to a decision some entities make today to expense, rather than capitalize, certain assets when the accounting difference is and would continue to be immaterial to the financial statements.

Key concepts

Lessees and lessors would generally apply the same key concepts when they identify, classify, recognize and measure lease contracts, and both lessees and lessors would apply the concepts consistently.

Lease commencement and inception date

The lease commencement date would be the date on which the lessor makes an underlying asset available for use by the lessee. Lessees (except lessees applying the short-term lease exemption) and lessors (for most Type A leases) would initially recognize and measure lease-related assets and liabilities on the commencement date. Entities would consider other standards to determine how to account for and disclose the existence of other rights or obligations created between the lease inception date (i.e., the date on which the principal terms of the lease are agreed to) and the commencement date.

Lease term

Determining the lease term

The lease term would be determined at the lease commencement date based on the noncancelable term of the lease, together with both of the following:

- The periods covered by an option to extend the lease if the lessee is reasonably certain to exercise that option
- The periods after the exercise date of an option to terminate the lease if the lessee is reasonably certain **not** to exercise that option

The FASB decided that the phrase "reasonably certain," which is used in IAS 17 and is generally interpreted as a high threshold, has the same meaning as the phrase "reasonably assured" that is currently used in ASC 840. Therefore, the FASB does not anticipate a significant change in practice.

Purchase options would be assessed in the same way as options to extend the lease term or terminate the lease. The FASB reasoned that purchasing an underlying asset is economically similar to extending the lease term for the remaining economic life of the underlying asset. When a lease contains a purchase option and the lessee is reasonably certain to exercise that option, the lease would be classified as a Type A lease by a lessee. Lessors would be required to also evaluate an additional criterion related to the collectibility of lease payments to determine lease classification when a purchase option is present and it is reasonably certain the lessee will exercise it. See the lease classification section below.

Evaluating lease renewal, termination and purchase options

When initially evaluating the lease term and lease payments (discussed below), the new standard would require lessees and lessors to consider any factors associated with exercising lease renewal, termination and purchase options. The evaluation of whether it is reasonably certain that those options will be exercised would consider all contract-, asset-, entity- and market-based factors, including:

- The existence of a purchase option or lease renewal option and its pricing (e.g., fixed rates, discounted rates, "bargain" rates)
- The existence of a termination option and the amount of payments for termination or nonrenewal
- Contingent amounts due under residual value guarantees
- Costs of returning the asset in a contractually specified condition or to a contractually specified location
- Significant customization (e.g., leasehold improvements), installation costs or relocation costs
- The importance of the leased asset to the lessee's operations
- A sublease term that extends beyond the noncancelable period of the head lease (e.g., a head lease that has a noncancelable term of five years with a two-year renewal option, and the sublease term is for seven years)

Illustration 6 — Determining the lease term

Scenario A

Assume that Entity P enters into a lease for equipment that includes a noncancelable term of four years and a two-year market-priced renewal option. There are no termination penalties or other factors indicating that Entity P is reasonably certain to exercise the renewal option.

Analysis: At the lease commencement date, the lease term would be four years.

Scenario B

Assume that Entity Q enters into a lease for a building that includes a noncancelable term of four years and a two-year, market-priced renewal option. Before it takes possession of the building, Entity Q pays for leasehold improvements. The leasehold improvements are expected to have significant value at the end of four years, and that value can only be realized through continued occupancy of the leased property.

Analysis: At lease commencement, Entity Q determines that it is reasonably certain to exercise the renewal option because it would suffer a significant economic penalty if it abandoned the leasehold improvements at the end of the initial noncancelable period. At lease commencement, Entity Q would conclude that the lease term is six years.

Reassessment of the lease term

After lease commencement, lessees would monitor leases for significant changes that could trigger a change in the lease term. Lessees would be required to reassess the lease term upon the occurrence of significant events or significant changes in circumstances that are within the lessee's control (i.e., market-based events or changes wouldn't trigger a reassessment). The FASB expects that such events, and the related reassessment, would occur infrequently.

If the lease term changes, a lessee would remeasure the lease liability, using revised inputs (e.g., discount rate, allocation of contract consideration) at the reassessment date, and would adjust the right-of-use asset. However, if the right-of-use asset is reduced to zero, a lessee would recognize any remaining amount in profit or loss.

Lessors would not be required to reassess the lease term after lease commencement.

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

Lease payments

Lease payments would be payments, made by a lessee to a lessor, relating to the right to use an underlying asset during the lease term. The present value of the lease payments (excluding lease incentives received by the lessee) would be recognized as a lease liability by lessees or as part of the net investment in the lease by lessors in Type A leases.

Variable lease payments that depend on an index or a rate would be included in lease payments, but other variable lease payments would not be.

Lease payments would include:

- Fixed lease payments, less any lease incentives received or receivable from the lessor
- Variable lease payments that depend on an index or a rate
- In-substance fixed lease payments structured as variable payments
- The exercise price of a purchase option if the lessee is reasonably certain to exercise that purchase option
- Payments for penalties for terminating a lease, if the lease term reflects the lessee exercising an option to terminate the lease
- Amounts expected to be payable under residual value guarantees (lessee only)
- Fixed payments structured as residual value guarantees (lessor only)

Lease payments would not include payments allocated to the non-lease components of a contract, except when the lessee makes an accounting policy election to account for the lease and non-lease components as a single lease component (as described in the identifying and separating lease from non-lease components of contracts section above).

Variable lease payments that depend on an index or rate

Variable lease payments that depend on an index or a rate would be included in the lease payments using the prevailing index or rate at the measurement date (e.g., lease commencement date for initial measurement). The FASB reasoned that despite the measurement uncertainty associated with changes to index- or rate-based payments, the payments meet the definition of an asset (lessor) and a liability (lessee) because they are unavoidable. These types of variable lease payments are treated differently from other contingent lease payments that do not depend on an index or rate (e.g., lease payments based on usage) because contingent lease payments that do not depend on an index or rate are generally avoidable. See the section on variable lease payments that do not depend on an index or rate below.

Under the new standard, lessees would be required to reassess variable lease payments that depend on an index or rate only when the lease liability is remeasured for other reasons (e.g., due to a change in the lease term). Otherwise, lessees would recognize changes to index- and rate-based variable lease payments in profit or loss in the period of the change (i.e., similar to other variable lease payments).

If a reassessment results in a remeasurement of the lease liability, a lessee would use revised inputs at the reassessment date and would adjust the right-of-use asset, except that:

- The amount of the remeasurement arising from a change in an index or a rate that is attributable to the current period would be recognized in profit or loss.
- If the right-of-use asset is reduced to zero, a lessee would recognize any remaining amount in profit or loss.

Lessors would not be required to reassess variable lease payments that depend on an index or rate.

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

Key differences between US GAAP and IFRS

Under the IASB's new standard, lessees would reassess variable lease payments that depend on an index or rate when the lease liability is remeasured for other reasons (e.g., due to a change in the lease term) and upon a change in the cash flows resulting from a change in the reference index or rate (i.e., when an adjustment to the lease payments takes effect).

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

In-substance fixed lease payments structured as variable payments

Some lease agreements include payments that are described as variable but are in-substance fixed payments because the contract terms ensure that the payment of a fixed amount is unavoidable. Such payments would be included in the lease payments at lease commencement and thus used to measure entities' lease assets and lease liabilities.

The exercise price of a purchase option

Entities would consider the exercise price of asset purchase options included in lease contracts consistently with the evaluation of lease renewal and termination options (discussed above). That is, if the lessee is reasonably certain to exercise a purchase option, the exercise price would be included as a lease payment.

Payments for penalties for terminating a lease

The determination of whether to include lease termination penalties as lease payments would be similar to the evaluation of lease renewal options. If it is reasonably certain that the lessee will not terminate a lease, the lease term would be determined assuming that the termination option would not be exercised, and any termination penalty would be excluded from the lease payments. Otherwise, the lease termination penalty would be included as a lease payment.

Amounts expected to be payable under residual value guarantees — lessees only

The new standard would require lessees to include the amounts they expect to pay to the lessor under residual value guarantees as lease payments.

A lessee may provide a guarantee to the lessor that the value of the underlying asset it returns to the lessor at the end of the lease will be at least a specified amount. Such guarantees represent enforceable obligations that the lessee has assumed by entering into the lease. Uncertainty related to a lessee's guarantee of a lessor's residual value affects the measurement of the obligation rather than the existence of an obligation.

Illustration 7 — Residual value guarantee included in lease payments

Entity R (lessee) enters into a lease and guarantees that the lessor will realize $15,000 from selling the asset to another party at the end of the lease. At lease commencement, Entity P estimates that the underlying asset will have a value of $9,000 at the end of the lease.

Analysis: Entity R expects to pay the lessor $6,000 under the residual value guarantee and would include that amount as a lease payment.

How we see it

We expect the FASB to include in the final standard a provision of the 2013 ED that would require the remeasurement of a lessee's lease liability and adjustment of the right-of-use asset if the amounts expected to be payable under residual value guarantees change during the lease term. If the right-of-use asset is reduced to zero, the provision would require the remaining adjustment to be recognized in profit or loss. The FASB did not discuss this provision in redeliberations.

The residual value guarantee reassessment provision would not apply to lessors.

Residual value guarantees — lessors only

Lessors' lease payments would generally exclude amounts receivable under residual value guarantees (from either the lessee or a third party). However, fixed lease payments structured as residual value guarantees (typically from the lessee but possibly from another party) would be included as lease payments.

For example, assume a lessor obtains a guarantee for the entire residual value of the underlying asset from the lessee, also the contract states that the lessor will pay to the lessee, or the lessee can retain, any difference between the selling price of the underlying asset and the residual value guarantee specified in the contract. In these cases, the lessee is exposed to all of the upside and downside risk of changes in the value of the asset, and the lessor would receive a fixed amount (i.e., the guarantee specified in the contract) at the end of the lease. The amount the lessor would receive is economically similar to a fixed balloon lease payment at the end of the lease. Consequently, such amounts would be included as lease payments.

Variable lease payments that do not depend on an index or rate

Variable payments that do not depend on an index or rate, such as those based on performance (e.g., a percentage of sales) or usage of the underlying asset (e.g., the number of hours flown, the number of units produced), would not be included as lease payments. These payments would be recognized in profit or loss when they are incurred (lessee) or earned (lessor), in a manner similar to today's accounting. For example, a variable payment based on the annual sales of a leased store would not be included in the lessee's right-of-use asset or lease liability. Instead, the variable payment would be recognized as an expense (by the lessee) and as income (by the lessor) as the sales at the store occur and an obligation for the lessee to make the contingent payment is created.

Discount rate

Discount rates would be used to determine the present value of the lease payments, which are used to determine lease classification (refer to the lease classification section below) and to measure a lessor's recognized net investment in the lease and the lessee's lease liability. Under the new standard, the rate the lessor charges the lessee would be defined as "the rate implicit in the lease." The rate implicit in the lease would reflect the nature and specific terms of the lease and would be similar to the current definition in US GAAP.

Lessors

Lessors would use the rate implicit in the lease that causes the sum of the following two items:

- The present value of lease payments made by the lessee for the right to use the underlying asset
- The present value of the amount the lessor expects to derive from the underlying asset at the end of the lease (excluding any amount included in lease payments)

To equal the sum of these two items:

- The fair value of the underlying asset
- The lessor's initial direct costs (in the case of Type A leases without recognized selling profit)

A lessor's initial direct costs for Type A leases with recognized selling profit would be expensed at lease commencement, and therefore, would be excluded from the calculation of the rate implicit in the lease for those leases. See the lessor accounting section below.

How we see it

The FASB's decision to define the discount rate as the "rate implicit in the lease" would result in two key changes in practice for lessors. The calculation of the rate implicit in the lease would include the lessor's initial direct costs for Type A leases without recognized selling profit and would exclude investment tax credits that the lessor retains and expects to realize.

Lessees

Lessees would also use the rate implicit in the lease as described above if that rate can be readily determined. When the lessee cannot determine that rate, the lessee would use its incremental borrowing rate. The lessee's incremental borrowing rate would be the rate of interest that the lessee would have to pay to borrow the funds necessary to obtain an asset of a similar value to the right-of-use asset, with similar payment terms (i.e., consistent with the lease term) and security (i.e., collateral) in a similar economic environment. This definition would be generally consistent with the definition in ASC 840.

Under the new standard, lessees that are not public business entities (PBEs)[5] would be permitted to make an accounting policy election to use the risk-free rate for the initial and subsequent measurement of lease liabilities. The risk-free rate would be determined using a period comparable with the lease term. The accounting policy election would be applied to all leases and disclosed in the notes to the financial statements.

Key differences between US GAAP and IFRS
The IASB's new standard would not provide an accounting policy election for lessees to use the risk-free rate for the initial and subsequent measurement of lease liabilities. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

How we see it

- The rate implicit in the lease would not necessarily be the rate stated in the contract and could reflect the lessor's initial direct costs and estimates of residual value. Therefore, lessees may find it difficult to determine the rate implicit in the lease.
- While using a risk-free rate might reduce complexity for lessees applying the new standard, it would increase the likelihood that the present value of the lease payments and any residual value guaranteed by the lessee would amount to substantially all of the fair value of the leased asset, potentially resulting in a Type A lease. This might dissuade some non-PBE lessees from making a policy election to use a risk-free rate.

Reassessment of the discount rate (updated July 2015)

Lessees would reassess the discount rate only upon a lease modification, a change to the lease term or a change in whether the lessee is reasonably certain to exercise an option to purchase the underlying asset.

If a reassessment results in a change to the discount rate, lessees would remeasure the lease liability using a revised discount rate at the reassessment date and would adjust the right-of-use asset. However, if the right-of-use asset is reduced to zero, a lessee would recognize any remaining amount in profit or loss.

Lessors would be required to reassess the discount rate upon a contract modification to a Type A lease that does not result in a separate, new lease when the modified lease remains a Type A lease (i.e., when lease classification does not change).

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

Key differences between US GAAP and IFRS

Under the IASB's new standard, lessors would not be required to reassess the discount rate after lease commencement.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Initial direct costs

Initial direct costs would be costs such as commissions that would not have been incurred if a lease had not been executed. Lessees and lessors would apply the same definition of initial direct costs. From the lessor's perspective, initial direct costs would be consistent with the concept of incremental costs in the new revenue recognition standard (i.e., ASC 606).

The new lease standard would require lessors to include initial direct costs in the initial measurement of their net investments in Type A leases. However, initial direct costs related to Type A leases that include recognized selling profit would be expensed at lease commencement. Lessors would recognize initial direct costs associated with Type B leases over the lease term on the same basis as lease income.

The new lease standard would require lessees to include their initial direct costs in their initial measurement of the right–of-use asset. Costs that a lessee incurs in a lease modification that meet the definition of initial direct costs would be included in the measurement of the new right-of-use asset (i.e., for a modification that results in a separate, new lease) or the adjustment to the right-of-use asset (i.e., for a modification that does not result in a separate, new lease).

How we see it

The FASB's clarification that only costs that wouldn't be incurred if a lease hadn't been executed would qualify as initial direct costs would result in two key changes in practice. Lessors' initial direct costs would exclude allocated costs (e.g., salaries) and costs incurred before the lease is executed (e.g., legal advice).

Economic life

The new standard would define the economic life of an asset as either:

- The period over which an asset is expected to be economically usable by one or more users
- The number of production or similar units expected to be obtained from the asset by one or more users

This definition of economic life, while not the same as the definition in current US GAAP, is not expected to significantly change economic life estimates.

Fair value of the underlying asset

Under today's accounting, the fair value of leased property is defined as the price for which the property could be sold in an arm's length transaction between unrelated parties. ASC 820, *Fair Value Measurement*, which provides a framework for measuring fair value, defines fair value within that framework and establishes fair value measurement disclosure requirements. Importantly, the definition of fair value in ASC 820 does not apply to fair value measurements for the purposes of lease classification and measurement (with certain exceptions). That is, the fair value of leased property, which is used in classifying a lease and to determine the maximum amount at which a lessee can record an asset leased under a capital lease, is not a fair value measurement under the framework set out in the current US GAAP guidance.

How we see it

- The 2013 ED did not define fair value of the underlying asset or propose consequential amendments to ASC 820 to remove the scope exception for leases. Because the FASB did not address this topic in redeliberations, we do not anticipate the Board will change the meaning of fair value in the context of leased assets in the new standard.
- It is unclear whether the new standard will contain a "fair value constraint" that would set a maximum amount that could be used when recording a right-of-use asset.

Key differences between US GAAP and IFRS
As discussed above, the definition of fair value in ASC 820 would not apply to fair value measurements for the purposes of lease classification and measurement under the FASB's new standard. However, the measurement and disclosure requirements of IFRS 13, *Fair Value Measurement,* would apply to lease transactions within the scope of the IASB's new standard. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Related party leasing transactions

The new standard would require lessees and lessors to account for related party leases on the basis of the legally enforceable terms and conditions of the lease. This would eliminate the current requirement under US GAAP for lessees and lessors to evaluate the economic substance of a lease to determine the appropriate accounting. Under the new standard, lessees and lessors would still be required to apply the disclosure requirements for related party transactions in accordance with ASC 850, *Related Party Disclosures*.

Key differences between US GAAP and IFRS
The IASB's new standard would not have guidance on the accounting for related party leasing transactions. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Lease classification (updated July 2015)

Under the new standard, lessees and lessors would classify all leases (with an optional exemption for short-term leases for lessees) using a principle similar to that of IAS 17. The principle in IAS 17 is similar to that of US GAAP but without today's bright lines. The new standard would eliminate ASC 840's real estate-specific guidance and would change its additional lessor classification criteria.

Lessees and lessors would classify leases using a principle similar to the one in IAS 17.

The new standard would require lessees to classify most leases as either Type A leases (generally today's capital leases) or Type B leases (generally today's operating leases). Lease classification would determine how and when a lessee would recognize lease expense.

Lessors would be required to classify all leases as either Type A leases or Type B leases (generally today's operating leases). There would be three categories of Type A leases: (1) those with selling profit that is recognized or deferred (generally today's sales-type leases), (2) those with no selling profit (generally today's direct financing leases), and (3) certain leases where collectibility of lease payments is not probable. Leases in the latter category would be recognized and measured in accordance with ASC 606 (i.e., a deferral of income similar to the new revenue standard). Refer to the lessor accounting section below for discussion of the recognition and measurement of lessors' leases.

Criteria for classification of leases (lessees and lessors)

At lease commencement, a lessee and a lessor would evaluate whether a lease meets any of the following criteria for purposes of lease classification: [6]

- The lease transfers ownership of the underlying asset to the lessee by the end of the lease term.
- The lessee is reasonably certain to exercise an option to purchase the underlying asset.
- The lease otherwise transfers substantially all the risks and rewards incidental to ownership of the underlying asset. Situations that individually or in combination would normally indicate this include:
  - The lease term is for a major part of the remaining economic life of the underlying asset.

- *For lessors* — The sum of the present value of the lease payments and any residual value guaranteed by any third party unrelated to the lessor (including the lessee) amounts to substantially all of the fair value of the underlying asset at lease commencement.
- *For lessees* — The sum of the present value of the lease payments and any residual value guaranteed by the lessee amounts to substantially all of the fair value of the underlying asset at lease commencement.
- The underlying asset is of such a specialized nature that it is expected to have no alternative use to the lessor at the end of the lease term.

A lease would be classified as a Type A lease by lessees if it meets any one of the criteria above. At its May 2015 meeting, the FASB decided that for leases that meet any of the above criteria, a lessor would also consider whether the collectibility of lease payments is probable for purposes of lease classification.

If a lease does not meet any of the criteria above, it would be classified as a Type B lease by lessees and lessors.

Additional lessor classification criterion

Under the new standard, lessors would also be required to evaluate the collectibility of lease payments to determine lease classification. This assessment would also affect a lessor's recognition and measurement of its leases. Refer to the lessor accounting section below.

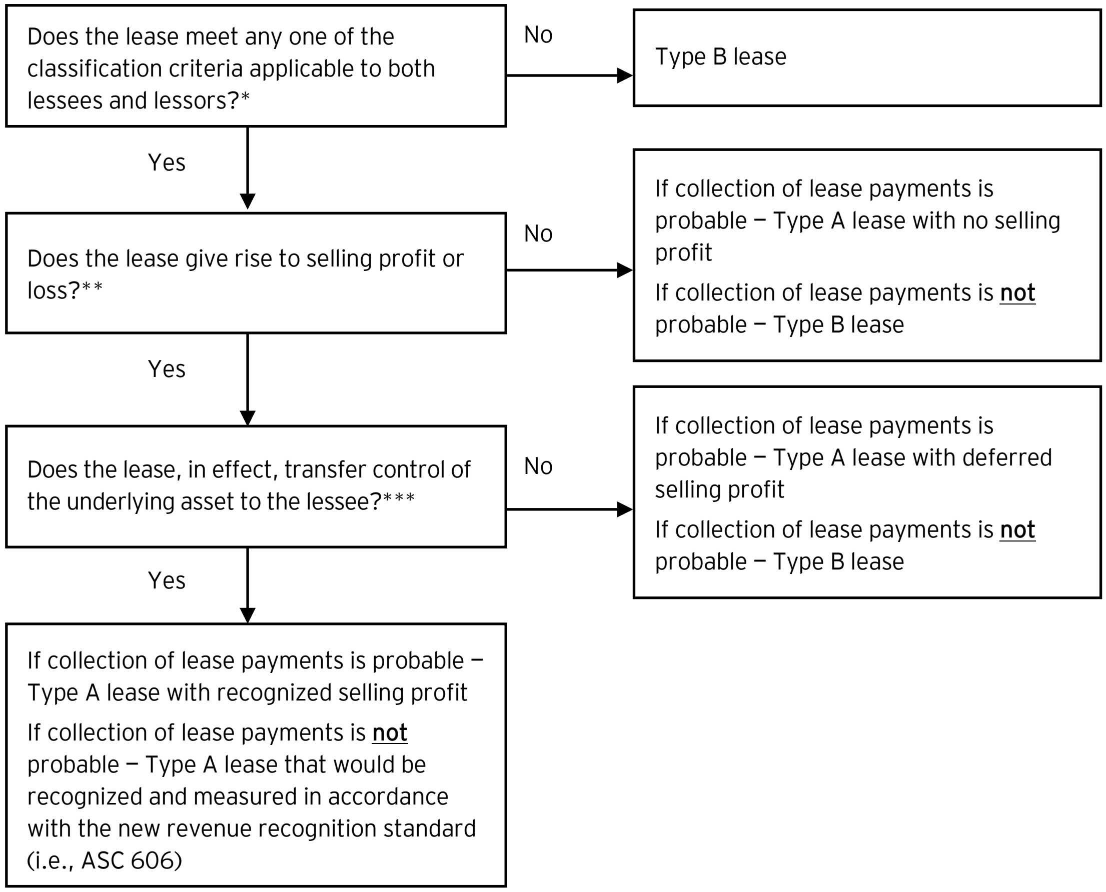
How we see it

Although the new standard's classification principle and criteria would be similar to that in IAS 17 today, there are three notable differences:

- The presence of any one of the IAS 17 classification indicators is not necessarily determinative of lease classification under IFRS today. However, it appears that the presence of any one of the new standard's classification criteria (described above) would result in a lease being classified as Type A for lessees and lessors (subject to the additional lessor collectibility criterion).
- Some of the classification indicators in IAS 17 today were not discussed in redeliberations or included in the new standard's criteria described above (e.g., a lessee's ability to continue the lease for a secondary period at a rent that is substantially lower than market rent, although this criterion may affect lease term and indirectly lease classification under the new standard).
- IAS 17 doesn't explicitly require lessors to assess the collectibility of lease payments for purposes of lease classification.

As a result, we believe the Board could further align the classification criteria with IAS 17 in the final standard.

The decision tree below summarizes the evaluation of lease classification for lessors, including the recognition and measurement alternatives for Type A leases, under the new standard. Note — the FASB could further clarify its decisions on lease classification, recognition and measurement for lessors in the final standard.



* See the criteria for classification of leases (lessees and lessors) section above.

** See the lessor accounting — selling profit or loss section below.

*** See the lessor accounting — determining whether to defer or recognize selling profit section below.

Other lease classification matters

Evaluating 'major part' and 'substantially all'

The terms "major part" and "substantially all" were not defined in the 2013 ED or during redeliberations. However, these terms are used to describe the indicators included today under IFRS to distinguish between finance and operating leases and were introduced into IFRS by borrowing from the bright-line tests used for lease classification in US GAAP.

Residual value guarantees included in the lease classification test

In evaluating the new standard's lease classification criteria, lessees would be required to include in the "substantially all" test the full amounts of residual value guarantees they provide. Lessors would be required to include in this test the full amounts of residual value guarantees provided by unrelated third parties, including the lessee.

Residual value guarantees would be treated differently when determining lease payments. Lessees would include amounts they expect to pay to lessors under residual value guarantees as lease payments. Lessors' lease payments receivable would generally exclude amounts under residual value guarantees (from either the lessee or a third party) unless the residual value guarantee is in-substance a fixed lease payment. Refer to the lease payments section above.

Lease component with the right to use more than one interrelated asset

If a lease component contains the right to use more than one interrelated asset, the primary asset in the component would be used to determine lease classification. The primary asset would be the predominant asset for which the lessee has contracted the right to use. Any other assets in that lease component would facilitate the lessee's use of the primary asset. Entities would also refer to the economic life of the primary asset when making lease classification assessments.

Reassessment of lease classification

At its May 2015 meeting, the FASB decided that lessors would reassess lease classification upon a modification to a Type A lease that does not result in a separate, new lease. Refer to the lease modifications section above.

If a modification to a contract results in a separate, new lease, that new lease would be classified using the criteria described above.

Refer to Appendix A for a summary of lessee and lessor reassessment requirements.

The Boards reached different conclusions on lease classification for lessees and lessors.

How we see it

- It is unclear how lessors would reassess lease classification upon a modification to a Type A lease that does not result in a separate, new lease. For example, the assessment could be made as of the original lease inception date (using the modified terms) or at the effective date of the modification. It is also unclear whether the FASB intends to require lessors to reassess lease classification upon a modification to a Type B lease that does not result in a separate, new lease.
- In addition, it is unclear whether the final standard would require lessees to reassess lease classification upon a modification to a Type A or a Type B lease that does not result in a separate, new lease.

Key differences between US GAAP and IFRS

The Boards reached different decisions that would result is similar transactions being accounted for differently under US GAAP and IFRS.

Lessees

Lessees applying the FASB's new standard would use a dual model to recognize and measure leases with an option not to recognize and measure short-term leases. However, lessees applying the IASB's new standard would use a single recognition and measurement model for all leases (i.e., all leases would be Type A), with options not to recognize and measure both short-term leases and leases of small assets.

The FASB members who favored the dual model indicated that the FASB's new standard would be less costly for preparers to apply and for users to understand because it would use a lease classification principle similar to the one in ASC 840. The IASB members who favored the single model indicated that it is more conceptually sound because they believe that all leases contain a financing element. However, in lieu of the dual model, they did incorporate a small asset exemption. Some IASB members also indicated that the single model would be less costly to apply because preparers would not have to consider a classification test.

Lessors
Both new standards would use a dual model for all leases (i.e., all leases would be Type A or Type B). However, under the FASB's new standard, lessors would consider an additional criterion based on the collectibility of lease payments to classify leases.

Reassessment of lease classification
Lessors applying the FASB's new standard would reassess lease classification upon a modification to a Type A lease that does not result in a separate, new lease. Under the IASB's new standard, lease classification would not be reassessed after lease commencement for any lease.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Lessee accounting

The new standard would require lessees to recognize all leases on the balance sheet, except for short-term leases if they choose to apply that exemption. At the commencement date of a lease, a lessee would recognize a liability to make lease payments (i.e., the lease liability) and an asset representing the right to use the underlying asset during the lease term (i.e., the right-of-use asset).

The initial recognition of the right-of-use asset and the lease liability would be the same for Type A and Type B leases, as would the subsequent measurement of the lease liability. However, the subsequent measurement of the right-of-use asset for Type A and Type B leases would differ.

Initial recognition and measurement

The lease liability would be initially measured based on the present value of the lease payments to be made over the lease term. Lessees would apply the concepts described above to identify the lease components and to determine the lease term, lease payments and discount rate as of the commencement date of the lease. See the key concepts section above.

The right-of-use asset would initially be measured at cost and would consist of all of the following:

- The amount of the initial measurement of the lease liability
- Any lease payments made to the lessor at or before the commencement date, less any lease incentives received from the lessor (see the section on other lessee matters below)
- Any initial direct costs incurred by the lessee (see the section on initial direct costs above)

Subsequent measurement

Lease liabilities — Type A leases

The FASB believes that a lease liability for Type A leases should be accounted for in a manner similar to other financial liabilities (i.e., on an amortized cost basis). Consequently, the lease liability for Type A leases would be accreted using an amount that produces a constant periodic discount rate on the remaining balance of the liability (i.e., the discount rate determined at commencement, as long as a reassessment and a change in the discount rate have not been triggered). Lease payments would reduce the lease liability when paid.

Right-of-use assets — Type A leases

Amortization of the right-of-use asset would be recognized in a manner consistent with existing standards for nonfinancial assets that are measured at cost. Lessees would amortize the right-of-use asset on a straight-line basis, unless another systematic basis better represents the pattern in which the lessee expects to consume the right-of-use asset's future economic benefits. The right-of-use asset would generally be amortized over the shorter of the lease term or the useful life of the right-of-use asset. The amortization period would be the remaining useful life of the underlying asset if the lessee is reasonably certain to exercise a purchase option or if the lease transfers ownership of the underlying asset to the lessee by the end of the lease term.

Illustration 8 — Lessee accounting for a Type A lease

Entity H (lessee) enters into a three-year lease of equipment and concludes that the agreement is a Type A lease because the lease term is for a major part of the remaining economic life of the underlying asset (also three years). Entity H agrees to make the following annual payments at the end of each year: $10,000 in year one, $12,000 in year two and $14,000 in year three. For simplicity, there are no other elements to the lease payments (e.g., purchase options), payments to the lessor before the lease commencement date, lease incentives from the lessor or initial direct costs. The initial measurement of the right-of-use asset and lease liability is $33,000 (present value of lease payments using a discount rate of approximately 4.235%). Entity H uses its incremental borrowing rate because the rate implicit in the lease cannot be readily determined. Entity H determines the right-of-use asset should be amortized on a straight-line basis over the lease term.

Analysis: At lease commencement, Entity H would recognize the lease-related asset and liability:

Right-of-use asset	$ 33,000	
Lease liability		$ 33,000

To initially recognize the lease-related asset and liability

The following journal entries would be recorded in the first year:

Interest expense	$ 1,398	
Lease liability		$ 1,398

To record interest expense and accrete the lease liability using the interest method ($33,000 x 4.235%)

Amortization expense	$ 11,000	
Right-of-use asset		$ 11,000

To record amortization expense on the right-of-use asset ($33,000 ÷ 3 years)

Lease liability	$ 10,000	
Cash		$ 10,000

To record lease payment

A summary of the lease contract's accounting (assuming no changes due to reassessment) is as follows:

	Initial	Year 1	Year 2	Year 3
Cash lease payments		$ 10,000	$ 12,000	$ 14,000
Lease expense recognized				
Interest expense		$ 1,398	$ 1,033	$ 569
Amortization expense		11,000	11,000	11,000
Total periodic expense		$ 12,398	$ 12,033	$ 11,569
Balance sheet				
Right-of-use asset	$ 33,000	$ 22,000	$ 11,000	$ –
Lease liability	$ (33,000)	$ (24,398)	$ (13,431)	$ –

The total periodic expense (i.e., the sum of interest and amortization expense) of a Type A lease would generally be higher in the early periods and lower in the later periods. Because a consistent interest rate would be applied to the lease liability, which decreases as cash payments are made during the lease term, more interest expense would be incurred in the early periods and less would be incurred in the later periods. This trend in the interest expense, combined with the straight-line amortization of the right-of-use asset, would generally result in a front-loaded expense recognition pattern for Type A leases, which is consistent with the subsequent measurement of capital leases under ASC 840.

The separate recognition of interest and amortization expense for Type A leases is consistent with a view that such leases are effectively installment purchases. That is, the lessee is paying to finance the acquisition of the underlying asset that will be consumed during the lease term.

Lease liabilities — Type B leases

Lessees would calculate the lease liability for Type B leases at any point in time as the present value of the remaining lease payments using the discount rate determined at lease commencement, as long as a reassessment and a change in the discount rate hasn't been triggered.

How we see it

While we expect the new standard to describe the subsequent measurement of a Type B lease liability differently from that of a Type A lease liability, from a practical perspective, we expect the result of the subsequent measurement to be the same.

Right-of-use assets — Type B leases

Lessees would subsequently measure the right-of-use asset (absent any impairment) for a Type B lease at the amount of the remeasured lease liability (i.e., the present value of the remaining lease payments), adjusted for any lease incentives received, any cumulative prepaid or accrued rent if the lease payments are uneven throughout the lease term and any lessee initial direct costs. The presence of uneven lease payments or lessee initial direct costs would cause the measurement of the right-of-use asset to differ from that of the lease liability at points throughout the lease term.

Lessees would recognize periodic lease expense for Type B leases on a straight-line basis, similar to today's accounting for operating leases. Throughout the lease term, the lessee would recognize periodic lease expense as ***the greater of*** the following:

(1) The remaining cost of the lease (calculated at the beginning of each period) allocated over the remaining lease term on a straight-line basis, or

(2) The periodic accretion on the lease liability (i.e., the difference between (a) the lease liability at the beginning of the period less payments made during the period and (b) the lease liability at the end of the period)

The remaining cost of the lease (item (1) above) would be calculated as:

- Lease payments (determined at the lease commencement date)
- Plus lessee initial direct costs (determined at the lease commencement date)
- Minus the periodic lease cost recognized in prior periods
- Minus any impairment of the right-of-use asset recognized in prior periods
- Plus or minus any adjustments to reflect changes that arise from the remeasurement of the lease liability not recognized in profit or loss at the date of remeasurement (e.g., the present value of the additional lease payments a lessee is obligated to pay if it exercises a renewal option that it originally was not reasonably certain to exercise)

The periodic accretion on the lease liability might be higher than the remaining cost of the lease allocated over the remaining lease term in the case of a significant impairment of the right-of-use asset.

Illustration 9 — Lessee accounting for a Type B lease

Entity L (lessee) enters into a three-year lease of office space and concludes that the agreement is a Type B lease. Entity L agrees to pay the following annual payments at the end of each year: $10,000 in year one, $12,000 in year two and $14,000 in year three. For simplicity, there are no other elements to the lease payments (e.g., purchase options), payments to the lessor before the lease commencement date, lease incentives from the lessor or initial direct costs. The initial measurement of the right-of-use asset and lease liability is $33,000 using a discount rate of approximately 4.235%. Entity L uses its incremental borrowing rate because the rate implicit in the lease cannot be readily determined. Entity L calculates that the annual straight-line lease expense is $12,000 per year [($10,000 + $12,000 + $14,000) ÷ 3].

Analysis: At lease commencement Entity L would recognize the lease-related asset and liability:

Right-of-use asset	$ 33,000	
Lease liability		$ 33,000

To initially recognize the lease-related asset and liability

The following journal entries would be recorded in the first year:

Lease expense	$ 12,000	
Right-of-use asset		$ 2,000
Cash		$ 10,000
Lease liability	$ 8,602	
Right-of-use asset		$ 8,602

To record lease expense and adjust the right-of-use asset for the difference between cash paid and straight-line lease expense (i.e., accrued rent). To adjust the lease liability to the present value of the remaining lease payments with an offset to the right-of-use asset. The adjustment of $8,602 is calculated as the initially recognized lease liability ($33,000) less the present value of remaining lease payments ($24,398) at the end of Year 1.

A summary of the lease contract's accounting (assuming no changes due to reassessment) is as follows:

	Initial	Year 1	Year 2	Year 3
Cash lease payments:		$ 10,000	$ 12,000	$ 14,000
Income statement:				
Periodic lease expense (straight-line)		12,000	12,000	12,000
Prepaid (accrued) rent for period		$ (2,000)	$ –	$ 2,000
Balance sheet:				
Lease liability	$ (33,000)	$ (24,398)	$ (13,431)	$ –
Right-of-use asset				
Lease liability	$ 33,000	$ 24,398	$ 13,431	$ –
Adjust: prepaid/(accrued) rent (cumulative)	–	(2,000)	(2,000)	–
Right-of-use asset	$ 33,000	$ 22,398	$ 11,431	$ –

Lease expense would be presented in a single line item in the income statement. This presentation is consistent with the concept of the lessee paying to use the asset during the lease term, rather than paying to finance the acquisition of the underlying asset in a Type A lease.

Illustration 10 — Comparing the two types of leases for lessees

This table illustrates the similarities and differences in accounting for the two types of leases discussed in Illustrations 8 and 9:

Type A lease:

Time	Lease liability	ROU asset	Interest expense	Amortization expense	Total expense
Initial	$ 33,000	$ 33,000			
Year 1	$ 24,398	$ 22,000	$ 1,398	$ 11,000	$ 12,398
Year 2	$ 13,431	$ 11,000	1,033	11,000	12,033
Year 3	$ –	$ –	569	11,000	11,569
			$ 3,000	$ 33,000	$ 36,000

Type B lease:

Time	Lease liability	Cumulative prepaid or (accrued) rent[1]	ROU asset	Lease expense
Initial	$ 33,000	$ –	$ 33,000	
Year 1	$ 24,398	$ (2,000)	$ 22,398	$ 12,000
Year 2	$ 13,431	$ (2,000)	$ 11,431	12,000
Year 3	$ –	$ –	$ –	12,000
				$ 36,000

[1] Prepaid and accrued rent amounts would not be presented separately on the balance sheet. Instead, the ROU asset would be presented on the balance sheet net of cumulative prepaid or accrued amounts (if any).

The initial measurement of the right-of-use asset and the lease liability would be the same for Type A and Type B leases. Also, the same total lease expense would be recognized over the life of the arrangement. However, a lessee would generally recognize higher periodic lease expense in the earlier periods of a Type A lease than it would for a Type B lease.

Type A leases would generally have a front-loaded expense recognition pattern.

Changes in foreign currency exchange rates

Lessees would apply ASC 830, *Foreign Currency Matters*, to leases denominated in a foreign currency. Lessees would remeasure the foreign currency-denominated lease liability using the exchange rate at each reporting date. Any changes to the lease liability due to exchange rate changes would be recognized in profit or loss. Because the right-of-use asset is a nonmonetary asset measured at historical cost, it would not be affected by changes in the exchange rate.

Other lessee matters

Impairment

Lessees' right-of-use assets, for both types of leases, would be subject to existing impairment guidance in ASC 360, *Property, Plant, and Equipment*.

ASC 360 requires an analysis of impairment indicators at each reporting period. If any indicators are present, a recoverability test using undiscounted cash flows is performed. If the recoverability test fails, the standard requires a fair value test. Under the new leases standard, if an impairment loss is recognized, the adjusted carrying amount of a right-of-use asset would be its new accounting basis. Consistent with ASC 360, the impairment test for right-of-use assets often would be performed at an asset-group level. The subsequent reversal of an impairment loss for an asset held for use would be prohibited.

How we see it

While lessees would apply existing impairment guidance in the same manner they currently do for assets held under capital leases (generally would be Type A leases), the analysis would be new for current operating leases (generally would be Type B leases). For leases that are not currently on the balance sheet, the requirement to test right-of-use assets for impairment could accelerate expense recognition (i.e., if an impairment occurs).

Lease incentives received or receivable at lease commencement

Lessees often receive incentives (e.g., an up-front cash payment for leasehold improvements or relocation expenses) for entering into a new lease. Today's operating lease accounting requires lessees to recognize lease incentives over the lease term as a reduction of lease expense.

Under the new standard, lease incentives that are receivable from the lessor at the commencement date (i.e., amounts are paid by the lessor after the lease commencement date) would be deducted from lease payments and the corresponding lease liability and right-of-use asset. Separately, lease incentives that a lessee receives from the lessor at or before lease commencement would reduce the initial measurement of the right-of-use asset. Similar to the result under current operating lease accounting, lease incentives would reduce lease expense for both types of leases over the lease term.

Lease incentives not received or receivable at lease commencement

The 2013 ED did not address lease incentives that are contingently receivable by the lessee at the lease commencement date (i.e., lease incentives that are not received or receivable until the occurrence of an event subsequent to lease commencement) nor were such incentives discussed during redeliberations. Examples include reimbursements for moving costs or leasehold improvements that become receivable by the lessee when the lessee incurs these costs.

How we see it

It remains unclear whether and, if so, how incentives that are not received or receivable at lease commencement would be considered in the recognition and measurement of lessees' lease-related assets and liabilities.

Purchase of a leased asset by the lessee during the lease term (updated July 2015)

The new standard would include ASC 840's existing guidance for the purchase of a leased asset by a lessee during the term of a capital lease for both Type A and Type B leases. A lessee would account for the purchase of the leased asset and the related lease termination as a single transaction. The difference between the purchase price and the carrying amount of the lease liability would be recorded as an adjustment to the carrying amount of the asset. No gain or loss would be recognized.

Key differences between US GAAP and IFRS
The IASB did not discuss a lessee's accounting for the purchase of a leased asset during the lease term. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Income tax accounting

The new standard would also affect lessees' accounting for income taxes. For lessees, the new standard would change the measurements of lease-related assets and liabilities, including the recognition of amounts that are not on the balance sheet today (i.e., amounts related to leases that are operating leases today), and the expense recognition pattern. These changes would affect many aspects of accounting for income taxes such as the following:

- Recognition and measurement of deferred tax assets and liabilities
- Assessment of the recoverability of deferred tax assets (i.e., the need for and measurement of a valuation allowance)

Presentation

While the new standard would change balance sheet presentation for lessees, the income statement and statement of cash flows presentation requirements for Type A leases and Type B leases would be similar to the current requirements for capital and operating leases, respectively.

The following table summarizes how lease-related amounts and activities would be presented in lessees' financial statements.

Financial statement	Lessee presentation
Balance sheet	▸ **Type A leases:** ▸ Right-of-use assets presented either: ▸ Separately from other assets (e.g., owned assets) ▸ Together with the corresponding underlying assets as if they were owned, with disclosures of the balance sheet line items that include Type A right-of-use assets and their amounts ▸ Lease liabilities presented either: ▸ Separately from other liabilities ▸ Together with other liabilities with disclosure of the balance sheet line items that include Type A lease liabilities and their amounts ▸ **Type B leases:** ▸ Right-of-use assets presented separately from Type A right-of-use assets with disclosure of the related balance sheet line items that include the Type B assets ▸ Lease liabilities presented separately from Type A lease liabilities ▸ The FASB decided not to otherwise specify how lessees would separately present Type B right-of-use assets and lease liabilities except to say the presentation should be rational and consistent with similar leases and appropriate based on the facts and circumstances
Income statement	▸ **Type A leases:** Lease-related amortization and lease-related interest expense would be presented separately (i.e., lease-related amortization and interest expense could not be combined) ▸ **Type B leases:** Lease-related expenses would be presented as a single line of lease or rent expense

<table>
<tr><th>Financial statement</th><th>Lessee presentation</th></tr>
<tr><td>Statement of cash flows</td><td>

Type A leases: Cash payments for the principal portion of the lease liability would be presented within financing activities and cash payments for the interest portion would be presented within operating activities in accordance with ASC 230, Statement of Cash Flows
Type B leases: Cash payments for lease payments would be presented within operating activities
Both types of leases:

Lease payments for short-term leases not recognized on the balance sheet and variable lease payments (not included in the lease liability) would be presented within operating activities
Noncash activity (e.g., the initial recognition of the lease at commencement) would be disclosed as a supplemental noncash item

</td></tr>
</table>

Key differences between US GAAP and IFRS
Under the IASB's new standard, cash paid for interest on Type A leases would be presented within operating or financing activities consistent with the entity's policy election under IAS 7, *Statement of Cash Flow*s. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Disclosure

The objective of lessee disclosures would be to enable financial statement users to assess the amount, timing and uncertainty of cash flows arising from leases. Lessees would exercise judgment to determine the appropriate level at which to aggregate, or disaggregate, disclosures so that meaningful information will not be obscured by insignificant details or by groupings of items with different characteristics. The disclosure requirements would apply to both public and nonpublic business entities.

Qualitative disclosures

Lessees would be required to disclose the following qualitative information:

- The nature of their leases (and subleases, as applicable), including:
    - A general description of those leases
    - The basis, and terms and conditions, on which variable lease payments are determined
    - The existence, and terms and conditions, of options to extend or terminate the lease (including descriptions of the options that are recognized as part of the right-of-use assets and lease liabilities and those that are not)
    - The existence, and terms and conditions, of lessee residual value guarantees
    - The restrictions or covenants imposed by leases (e.g., those related to dividends or incurring additional financial obligations)
- Information about leases that have not yet commenced but that create significant rights and obligations for the lessee

- Information about the significant judgments and assumptions made in accounting for leases, which might include:
  - The determination of whether a contract contains a lease
  - The allocation of contract consideration between lease and non-lease components
  - The determination of the discount rate
- The main terms and conditions of any sale and leaseback transactions
- Whether an accounting policy election was made for the short-term lease exemption

Lessees would be required to provide these qualitative disclosures in sufficient detail such that the lessee disclosure objective is met.

Quantitative disclosures

Lessees would be required to disclose the following quantitative information:

- Type A lease expense (with amortization of right-of-use assets disclosed separately from interest on lease liabilities)
- Type B lease expense
- Short-term lease expense for such leases with a lease term greater than one month
- Variable lease expense
- Sublease income
- Cash paid for amounts included in the measurement of lease liabilities separately by lease type (i.e., Type A , Type B) and segregated between operating and financing cash flows
- Supplemental noncash information on lease liabilities arising from obtaining right-of-use assets (e.g., for new leases) separately by lease type
- Weighted-average remaining lease term, separately by lease type
- Weighted-average discount rate as of the reporting date, separately by lease type
- Gains and losses arising from sale and leaseback transactions

The new standard would expand lessees' disclosures to include judgments made and assumptions used to account for leases.

Expense items disclosed would also include any amounts capitalized as part of the cost of another asset.

The new standard would not require a specific format for lessees' quantitative disclosures, but would include an example presenting quantitative disclosures in a tabular format.

Lessees would also be required to disclose a maturity analysis of lease liabilities. The maturity analysis would include undiscounted cash flows, on an annual basis, for a minimum of each of the five years after the balance sheet date and a total of the amounts for the remaining years (i.e., the total undiscounted cash flows beyond the fifth year). The analysis would also include a reconciliation of the undiscounted cash flows to the lease liabilities presented on the balance sheet.

Key differences between US GAAP and IFRS
The IASB's new standard would not require specific qualitative disclosures. Instead, lessees would be required to disclose qualitative information necessary to satisfy the lessee disclosure objective. The FASB and the IASB differ on specific lessee quantitative disclosure requirements mainly because of differences in the lessee accounting models. For example, the FASB's new standard would require the disclosure of Type B lease expense, which is not applicable under the IASB's new standard (under which all lessee leases would be Type A). In addition, the FASB would not require a specific format for lessee quantitative disclosures. However, the IASB would require the disclosure to be made in a tabular format unless another format is more appropriate. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Lessor accounting (updated July 2015)

As discussed in the lease classification section, lessors would classify all leases as Type A or Type B. There would be three categories of Type A leases, which would affect how those leases are recognized and measured:

- Type A leases with selling profit that is recognized or deferred (similar to ASC 840's sales-type leases)
- Type A leases with no selling profit (similar to ASC 840's direct-financing leases)
- Type A leases that would be recognized and measured in accordance with ASC 606 (also refer to the lease classification section above)

Under the new standard, lessors would account for a Type B lease using an approach similar to ASC 840's operating leases.

Lessors would account for Type A leases with and without selling profit using approaches similar to ASC 840's guidance for sales-type and direct financing leases, respectively. However, there would be two key differences. First, the initial recognition of selling profit (if any) on a Type A lease would be deferred if the lease does not, in effect, transfer control of the underlying asset to the lessee. Second, a lessor would follow the guidance in ASC 606 if a lease would otherwise be a Type A lease with recognized selling profit except that the collection of lease payments is not probable. These differences are discussed further in the lessor accounting concepts section below.

Under the new standard, leveraged lease accounting would be eliminated for new leases after the effective date. That is, lessors would account for new leases, including those that would qualify as leveraged leases under ASC 840, using the classifications discussed above. However, leveraged leases that exist at transition would be grandfathered. Refer to Appendix B for further discussion on leveraged lease accounting.

Lessor accounting concepts

At lease commencement, lessors would apply the key concepts described earlier in this publication to determine the initial direct costs, lease term, lease payments and discount rate. Lessors would also apply the following concepts to recognize and measure their Type A leases.

Net investment in the lease

A lessor's net investment in a Type A lease would consist of the lease receivable and any unguaranteed residual asset.

- Lease receivable — The lease receivable would be the total lease payments (see the lease payments section above) discounted using the rate implicit in the lease and any guaranteed residual asset. Initial direct costs incurred as part of Type A leases without recognized selling profit would be included in the lease receivable. However, initial direct costs related to Type A leases with initially recognized selling profit would be expensed at lease commencement.
- Unguaranteed residual asset — The unguaranteed residual asset would be the lessor's right to the expected unguaranteed value of the leased asset at the end of the lease.
- Deferred selling profit — Selling profit would be deferred and would reduce the lessor's net investment in the lease when the lessor does not, in effect, transfer control of the underlying asset to the lessee.

Selling profit or loss

Selling profit would be the difference (if any) between the fair value of the underlying asset and its carrying amount. Leases that give rise to a manufacturer's or dealer's profit or loss to the lessor normally result when a company uses leasing as a means of marketing its products. A loss upon sale would be recognized immediately, but a loss may indicate that the underlying asset was impaired prior to the transaction.

Determining whether to defer or recognize selling profit – Type A leases with selling profit

For purposes of determining whether selling profit should be initially recognized or deferred, the new standard would require a lessor to determine whether the lease, in effect, transfers control of the underlying asset to the lessee. This evaluation considers the lease classification criteria applicable to lessees and lessors (discussed above), except that the control evaluation would exclude any risks and rewards transferred to parties other than the lessee. For example, a lessor would exclude residual value guarantees or asset buyback commitments from a third party unrelated to the lessee when evaluating whether selling profit can be recognized. Under this evaluation, control would be deemed to have transferred if any one of those lease classification criteria is met and selling profit would be recognized assuming that collectibility of the lease payments is probable.

The new standard would include this additional condition for the recognition of initial selling profit to better align the leases guidance with the principles in the new revenue recognition standard (i.e., ASC 606). That is, a lessor would evaluate the transfer of control of the underlying asset from the **lessee's** perspective and consider the risks and rewards transferred to only the lessee, just as the new revenue recognition standard requires control to be evaluated from the customer's perspective. However, if the lessee does not obtain control of the underlying asset, the lessor would defer any initial selling profit and amortize it over the lease term in a manner that, when combined with the interest income on the lease receivable and the unguaranteed residual asset, would produce a constant periodic rate of return on the lease.

How we see it

A lessor's recognition of initial selling profit for leases of part of a real estate asset (e.g., a floor of a building) under the new standard would be a significant change from current practice.

Key differences between US GAAP and IFRS
Under the IASB's new standard, lessors would be permitted to initially recognize profit (if any) on all Type A leases including those with significant third-party residual value guarantees. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Collectibility

The new standard would require lessors to evaluate the collectibility of lease payments to determine lease classification. Refer to the lease classification section above. This assessment would also affect the recognition and measurement of leases. A lessor would follow the guidance in ASC 606 if a lease would otherwise be a Type A lease with recognized selling profit except that the collection of lease payments is not probable. A lessor would apply the recognition and measurement provisions for a Type B lease to a lease that would otherwise be a Type A lease with deferred selling profit or no selling profit except that the collection of lease payments is not probable.

Type B leases

Lessors' Type B leases would be similar to today's operating leases.

Lessors would account for Type B leases in a manner similar to today's operating leases. That is, they would continue to recognize the underlying asset. At lease commencement for Type B leases, lessors would not recognize a net investment in the lease (i.e., a lease receivable and any unguaranteed residual asset) on the balance sheet or initial profit (if any) on the income statement. The underlying asset would continue to be accounted for in accordance with applicable accounting standards (e.g., ASC 360).

Lessors would recognize lease payments from Type B leases over the lease term on either a straight-line basis or another systematic basis if that basis better represents the pattern in which income is earned from the underlying asset. Lessors in a Type B lease would recognize initial direct costs as an expense over the lease term on the same basis as lease income.

In some cases, another systematic basis of accounting might better represent the pattern in which the lessor earns income. For example, variable lease payments that do not depend on an index or rate would be recognized as they are earned (i.e., when the variable payments become receivable). Likewise, "stepped" rent increases that are intended to compensate a lessor for expected increases in market rental rates would be recognized based on the contractual cash flows (i.e., as the stepped payments become receivable). In both examples, revenue would be recognized on a basis other than straight line because it better reflects the pattern in which the revenue is earned.

If lease payments are uneven for reasons other than to compensate the lessor for expected increases in market rentals or changes in market conditions, the lease revenue would be recognized on a straight-line basis. For example, lease payments might be front-loaded or back-loaded or a lease might include a rent-free period. The uneven pattern of these lease payments generally would not be related to the way in which the lessor earns revenue. Therefore, they would not support revenue recognition on a basis other than straight line.

How we see it

Determining that lease payments in a Type B lease should be recognized on a basis other than straight line would likely require judgment. There might not be a clear distinction between increases in scheduled lease payments that reflect the pattern in which lease income is earned (e.g., "stepped" increases intended to compensate the lessor for changes in the market rentals or market conditions) and other scheduled increases that do not.

Type A leases with selling profit — recognized or deferred

Initial recognition and measurement

Upon commencement of a Type A lease with selling profit, lessors would:

- Derecognize the carrying amount of the underlying asset
- Recognize the net investment in the lease
- Recognize, in net income, selling profit on leases in which the lessee, in effect, obtains control of the underlying asset
- Defer selling profit on leases in which the lessee, in effect, does not obtain control of the underlying asset

Subsequent measurement

After lease commencement, lessors would account for a Type A lease with selling profit as follows:

- Recognize interest income (in profit or loss) over the lease term using the rate implicit in the lease on the components of the net investment in the lease, including:
  - Interest on the lease receivable
  - Accretion of the unguaranteed residual asset to its expected undiscounted value at the end of the lease
- Amortize any deferred selling profit as interest income over the lease term in a manner that, when combined with the interest income on the lease receivable and the unguaranteed residual asset, would produce a constant periodic rate of return on the lease — only applicable for Type A leases with selling profit for which control has not transferred to the lessee
- Reduce the net investment in the lease for lease payments received (net of interest income and recognized profit calculated above)
- Separately recognize income from variable lease payments that are not included in the net investment in the lease (e.g., performance- or usage-based variable payments) in the period in which that income is earned

Type A leases with no selling profit

Initial recognition and measurement

Upon commencement of a Type A lease with no selling profit, lessors would:

- Derecognize the carrying amount of the underlying asset
- Recognize the net investment in the lease

Subsequent measurement

After lease commencement, lessors would account for a Type A lease with no selling profit as follows:

- Recognize interest income (in profit or loss) over the lease term using the rate implicit in the lease on the components of the net investment in the lease, including:
  - Interest on the lease receivable
  - Accretion of the unguaranteed residual asset to its expected undiscounted value at the end of the lease

- Reduce the net investment in the lease for lease payments received (net of interest income calculated above)
- Separately recognize income from variable lease payments that are not included in the net investment in the lease (e.g., performance- or usage-based variable payments) in the period in which that income is earned

Type A leases that would be recognized and measured under ASC 606

A lessor would recognize and measure a lease with selling profit that, in effect, transfers control of the underlying asset to the lessee for which collectibility of lease payments is not probable in accordance with the new revenue recognition standard.

If collection of the lease payments for those leases is not probable, the lessor would defer income recognition (i.e., a deferral of income similar to the new revenue standard).

> **How we see it**
>
> Lessors should monitor the discussions of the FASB for any potential amendments to the new revenue recognition standard.

Reassessment

Lessors would not be required to reassess the lease term or lease payments after lease commencement. Refer to Appendix A for a summary of lessee and lessor reassessment requirements. If a lease is modified, refer to the lease modifications section above.

Other lessor matters in Type A leases

Sale of lease receivables

The new standard would require lessors to measure all lease receivables, including those held for sale, at amortized cost.

> **How we see it**
>
> We expect the Basis for Conclusions to indicate that it would be appropriate for lessors to apply the existing financial asset derecognition guidance in ASC 860, *Transfers and Servicing*, when they sell lease receivables, including any guaranteed residual values.

Impairment of the net investment in the lease

The new standard would require lessors to evaluate their entire net investment in the lease (when applicable) for impairment using the guidance in ASC 310. This is a change from the 2013 ED that would have required lessors to apply the impairment guidance in ASC 310 to lease receivables and ASC 360 to the unguaranteed residual asset.

Classification of the underlying asset at the end of a lease

At the end of the lease term, lessors may receive the underlying asset back from the lessee. Under the new standard, lessors would reclassify the carrying amount of the unguaranteed residual asset to the applicable category of assets (e.g., property, plant and equipment). Thereafter, lessors would account for the underlying asset using other applicable accounting guidance (e.g., ASC 360).

Income tax accounting

The new standard could affect lessors' accounting for income taxes. Applying the new standard could change the recognition of lease-related assets (i.e., lease receivables and any unguaranteed residual assets), the measurement of lease-related assets and the derecognition of underlying assets for certain leases that are subject to operating leases today. The new standard also would change the timing of recognition of lease income for some leases. In addition, the special accounting for leveraged leases would be eliminated, except for leveraged leases that exist at the transition date, which would be grandfathered.

These changes could affect many aspects of accounting for income taxes, such as the following:

- Recognition and measurement of deferred tax assets and liabilities
- Assessment of the recoverability of deferred tax assets (i.e., the need for and measurement of valuation allowances)

Presentation

The table below summarizes how lease-related amounts and activities would be presented in lessors' financial statements. The FASB has not addressed presentation of Type A leases that would be recognized and measured in accordance with the new revenue recognition standard.

Financial statement	Lessor presentation
Balance sheet	‣ **Type A leases:** ‣ Lease assets (i.e., lease receivables and unguaranteed residual assets) would be presented separately from other assets ‣ Lease receivables and unguaranteed residual assets could be presented separately from each other or, if presented together (i.e., the net investment in the lease), they would be separately disclosed in the notes ‣ **Type B leases:** Underlying assets would be presented in accordance with applicable guidance
Income statement	‣ **Both types of leases:** Income arising from leases would be presented separately from other activity, or disclosed in the notes (along with the corresponding line item(s) in the income statement), although when leasing activity is material, public business entities would be required to present such activity separately ‣ **Type A leases:** ‣ Profit or loss recognized at the commencement date would be presented on either a gross or net basis, based on the lessor's business model ‣ Lessors that use leasing as an alternative means of realizing value from goods they would otherwise sell would present lease revenue and cost of goods sold on a gross basis (i.e., revenue and costs in separate line items) ‣ Lessors that use leases for the purpose of providing finance would present the gain or loss on a net basis (i.e., in a single line item) ‣ Interest on the net investment in the lease would be presented as interest income
Statement of cash flows	‣ **Both types of leases:** Cash lease payments received would be presented within operating activities

Disclosure

The disclosures that would be required for lessors are intended to help financial statement users understand the amount, timing and uncertainty of lease-related cash flows. These disclosures would include the amounts of recognized lease-related assets and liabilities, significant judgments and assumptions about lease terms, payments, the existence of residual value guarantees and options to extend or terminate a lease. Lessors would exercise judgment to determine the level at which to aggregate, or disaggregate, the disclosures. Disclosures would need to be disaggregated or aggregated at an appropriate level so that the information is meaningful to the financial statement users and is not obscured by insignificant details or by grouping items with different characteristics. The FASB has not addressed disclosures for Type A leases that would be recognized and measured in accordance with the new revenue recognition standard.

General disclosure requirements

Lessors would be required to disclose information about the nature of leases, such as:

- A general description of the leases
- The basis, and terms and conditions, on which variable lease payments are determined
- The existence, and terms and conditions, of options to extend or terminate the lease
- The existence, and terms and conditions, of options for a lessee to purchase the underlying asset

Lessors would be required to disclose more information about how they manage the risks related to residual values of assets under lease.

As noted above, the new standard would also require lessors to disclose information about the significant judgments and assumptions made in accounting for leases. For example, a lessor might disclose information about its judgments and assumptions associated with:

- The determination of whether a contract contains a lease
- The identification of the lease and non-lease components of a contract
- The allocation of the consideration in a contract between the lease and non-lease components
- The initial measurement of the residual asset included in the net investment in the lease
- Any other means by which the lessor reduces its residual asset risk (e.g., buyback agreements, variable lease payments for lessee use in excess of specified limits)

Lessors would also disclose lease income recognized in the reporting period, in a tabular format. The disclosure would include:

- For Type A leases:
    - Profit or loss recognized at the commencement date (presented gross or net, consistently with the lessor's business model)
    - The interest income on net investments in leases (i.e., lease receivables and unguaranteed residual assets), either individually for each component of the net investment or in the aggregate
- For Type B leases, lease income relating to lease payments
- Lease income relating to variable lease payments not included in the measurement of net investments in Type A leases

Other quantitative and qualitative disclosures — Type A leases

Under the new standard, lessors would be required to qualitatively and quantitatively explain significant changes in residual values of assets under Type A leases. However, disclosure of significant changes in the lease receivable portion of the net investment would follow other US GAAP.

Key differences between US GAAP and IFRS
Under the IASB's new standard, lessors would be required to explain significant changes in the net investment in both qualitative and quantitative terms. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

To help financial statement users understand and evaluate liquidity risks of lease-related cash flows, lessors would be required to disclose a maturity analysis of undiscounted cash flows to be received, on an annual basis, for five years after the balance sheet date, and in total thereafter, that comprise Type A lease receivables and a reconciliation to lease receivables presented on the balance sheet (or in the notes).

Other quantitative disclosures — Type B leases

Lessors would be required to provide a separate maturity analysis of the undiscounted future lease payments to be received for Type B leases, as of the reporting date. The maturity analysis would include undiscounted cash flows to be received, on an annual basis, for five years after the balance sheet date, and in total thereafter.

For assets leased under Type B leases, lessors would be required to disclose the same information that is currently required under ASC 360 for property, plant and equipment (e.g., balances by major class, accumulated depreciation, a general description of method of computing depreciation).

Other considerations

Subleases

Lessees often enter into arrangements to sublease a leased asset to a third party while the original lease contract remains in effect. In these arrangements, one party acts as both the lessee and lessor of the same underlying asset. The original lease is often referred to as a head lease, the original lessee is often referred to as an intermediate lessor and the ultimate lessee is often referred to as the sub-lessee.

Intermediate lessor accounting

An intermediate lessor would assess sublease classification independently of the classification assessment that it makes as the lessee of the same asset. Under the new standard, an intermediate lessor would consider the lease classification criteria with reference to the underlying asset when classifying a sublease. See the lease classification section above.

Key differences between US GAAP and IFRS
Under the IASB's new standard, intermediate lessors would be required to consider the right-of-use asset when determining sublease classification. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

An intermediate lessor generally would account for a head lease (as a lessee) and a sublease (as a lessor) as two separate lease contracts. However, when contracts are entered into at or near the same time, an intermediate lessor would be required to consider the criteria for combining contracts (i.e., whether the contracts are negotiated as a package with a single commercial objective or the consideration to be paid in one contract depends on the price or performance of the other contract. See the contract combinations section above for more information. If either criterion is met, the intermediate lessor would account for the head lease and sublease as a single combined transaction.

Today's guidance for subleases that are loss contracts would be eliminated. Therefore, intermediate lessors would assess right-of-use-assets that are subject to a sublease for impairment under the long-lived asset impairment provisions of ASC 360. Refer to Appendix B for a summary of current US GAAP lease and lease-related accounting guidance that would be eliminated under the new standard and guidance that may be eliminated pending further FASB discussions.

Sub-lessee accounting

The FASB concluded that a sub-lessee would classify the sublease by referring to the underlying asset rather than by referring to the right-of-use asset arising from the head lease.

Presentation

Intermediate lessors would generally present sublease revenues on a gross basis.

Intermediate lessors would not be permitted to offset lease liabilities and lease assets that arise from a head lease and a sublease, respectively, unless those liabilities and assets meet the requirement of ASC 210-20, *Balance Sheet — Offsetting*, for offsetting financial instruments. Intermediate lessors would apply the principal-agent guidance from the new revenue recognition standard (refer to ASC 606-10-55-36 through 55-40) to determine whether sublease revenue should be presented on a gross or net basis (i.e., reduced for head lease expenses). The FASB expects that intermediate lessors would generally present sublease revenue on a gross basis.

How we see it

Various aspects of the new standard (e.g., the principal-agent considerations for sublease revenue) would align with the new revenue recognition standard (i.e., ASC 606). Lessors should familiarize themselves with the new revenue standard because it could also influence their accounting for leases. In addition, lessors should monitor developments as the Board considers amending the new revenue standard.

Disclosure

In addition to the lessee and lessor disclosure requirements discussed previously, the new standard would require an intermediate lessor to disclose the following information relating to its subleases:

- A general description of the leases
- The basis, and terms and conditions, on which variable lease payments are determined
- The existence, and terms and conditions, of options to extend or terminate the lease
- The existence, and terms and conditions, of residual value guarantees provided by the sub-lessee
- The restrictions or covenants imposed by leases (e.g., those related to dividends or incurring additional financial obligations)

Business combinations

Classification of acquired leases

The new standard would require an acquirer to classify acquired leases using the contractual terms and conditions at the commencement date of the lease. If the contractual terms and conditions of a lease are modified as part of the business combination, the acquirer would classify the new lease based on the contractual terms and conditions of that new lease.

How we see it

- Under the new standard, no lease assets and liabilities would be recognized for acquired leases that have a remaining term of 12 months or less. We believe the acquirer would generally recognize lease payments on a straight-line basis over the remaining lease term following the business combination.
- It is unclear whether the acquirer's accounting for leases with a remaining term of 12 months or less would preclude the recognition of assets and liabilities for off-market contract terms or in-place leases. Precluding the recognition of these assets and liabilities would be inconsistent with the principles in ASC 805, *Business Combinations*, that typically result in the recognition of assets and liabilities for both the in-place leases and related off-market terms of contracts.

Acquiree in a business combination is a lessee

Initial measurement of a lease

The acquirer would measure the acquired lease liability as if the lease contract were a new lease at the acquisition date. That is, the acquirer would apply the new standard's initial measurement provisions, using the present value of the remaining lease payments at the acquisition date. The acquirer would follow the guidance for determining the lease term, lease payments and discount rate. The right-of-use asset would be measured at an amount equal to the recognized liability, adjusted to reflect both of the following:

- Favorable or unfavorable terms of the lease, relative to market terms
- Any other intangible asset associated with the lease, which may be evidenced by market participants' willingness to pay for the lease even if it is at market terms (e.g., a lease of gates at an airport, a lease of retail space in a prime shopping area that provides entry to the market or other future economic benefits that qualify as an intangible asset)

Because the off-market nature of the lease would be captured in the right-of-use asset, the acquirer would not separately recognize an intangible asset or liability for favorable or unfavorable lease terms relative to market. The classification of the lease would not affect the initial measurement of the lease liability or the right-of-use asset.

Subsequent measurement of a lease

The subsequent measurement of an acquired lease liability and right-of-use asset would be determined using the subsequent measurement guidance for pre-existing lease arrangements (refer to the lessee accounting section above).

Acquiree in a business combination is a lessor

Initial measurement of a lease when the acquiree is a Type A lessor

The acquirer would measure a lease receivable as if the lease contract were a new lease at the acquisition date (i.e., measured at the present value of the remaining lease payments). The acquirer would use the key concepts described previously to determine the lease term, lease payments and discount rate. An unguaranteed residual asset would be initially measured as the difference between the acquisition date fair value of the underlying (acquired) asset and the initial measurement of the lease receivable portion of the net investment in the lease. The acquirer would take into consideration the terms and conditions of the lease (e.g., off-market terms) when calculating the acquisition date fair value of the underlying asset. An acquirer would not recognize a separate intangible asset or liability for favorable or unfavorable terms, relative to market.

Initial measurement of a lease when the acquiree is a Type B lessor

Underlying assets subject to Type B leases would remain on the lessor's balance sheet. Therefore, when an acquiree is a lessor, an underlying asset subject to a Type B lease would be recognized on the acquirer's balance sheet and initially measured at fair value. The acquirer would consider the terms and conditions of the lease (e.g., off-market terms) when measuring the fair value of the underlying asset (e.g., a building). No separate intangible asset or liability for favorable or unfavorable terms relative to market would be recognized.

Subsequent measurement of a lease

The subsequent measurement of the net investment in a Type A lease would be determined using the subsequent measurement guidance for pre-existing lease arrangements (see the lessor accounting section above). The subsequent measurement of the underlying asset subject to a Type B lease would be determined using other applicable accounting guidance (e.g., ASC 360).

To determine how to account for a sale and leaseback transaction, a seller-lessee would consider the control criteria in the new revenue standard.

How we see it

The FASB did not revisit its 2013 proposals on leases acquired in business combinations in redeliberations. The FASB may need to align the new guidance in the final standard to reflect its decisions on lease classification and lessee and lessor accounting.

Sale and leaseback transactions

Because lessees would recognize most leases on the balance sheet (i.e., all leases except for short-term leases depending on the lessee's accounting policy election), sale and leaseback transactions would no longer provide lessees with a source of off-balance sheet financing.

A seller-lessee would use the definition of a sale in the new revenue recognition standard (i.e., ASC 606), in conjunction with additional guidance described below, to determine whether a sale has occurred in a sale and leaseback transaction. The seller-lessee would assess whether the buyer-lessor has gained control of the underlying asset. Control of an underlying asset refers to the ability to direct the use of the asset and obtain substantially all of the remaining benefits from the asset.

If control of an underlying asset passes to the buyer-lessor, the transaction would be accounted for as a sale and a lease by the lessee. If not, the transaction would be accounted for as a financing.

The FASB decided to retain the guidance in the 2013 ED that a buyer-lessor would account for the purchase of the underlying asset consistent with the guidance that would apply to any other purchase of a nonfinancial asset (i.e., without the presence of the leaseback).

How we see it

We generally expect more transactions to be accounted for as sales and leasebacks under the new standard than under today's standard.

Ability to direct the use of an underlying asset

While the concepts of "control" in the new leases standard and the new revenue recognition standard (i.e., ASC 606) are similar, a key difference exists. Under the new leases standard, the right to control the use of an underlying asset would involve the right to direct how and for what purpose the asset is used throughout the period of its use. Under ASC 606, control will be based on a broader consideration of rights with respect to the asset over its entire useful life.

The presence of a leaseback, in and of itself, would not preclude a sale. However, the FASB decided that a sale and a purchase would not occur when a leaseback involves a Type A lease from the seller-lessee's perspective. The FASB believes that a lessee's Type A lease is effectively a financed purchase of the underlying asset. Therefore, it would be inappropriate for a seller-lessee to account for the sale of an underlying asset that it concurrently repurchases. Instead, these transactions would be accounted for as financings.

While a seller's repurchase option would generally preclude sale accounting under ASC 606, the new leases standard would specify that repurchase options would not preclude sale accounting when **all** of the following conditions are met:

- The option is exercisable only at the then-prevailing fair market value (i.e., at the time of exercise) of the underlying asset.
- The underlying asset is a non-specialized asset.
- The underlying asset is readily available in the marketplace.

The FASB believes that such a repurchase option is effectively non-substantive in the context of a sale and leaseback transaction and therefore should not preclude sale accounting in such a transaction. The FASB staff indicated that it believes real estate would not meet the non-specialized asset condition above.

How we see it

- During redeliberations, the FASB discussed an example of a leased automobile and appeared to agree that such an asset would generally be non-specialized and would be readily available in the marketplace. However, determining when an underlying asset is non-specialized and readily available in the marketplace could require judgment.
- In a sale and leaseback transaction, it is unclear whether options to extend a lease for the remaining economic life of the underlying asset would be evaluated in the same manner as purchase options under the new revenue standard (i.e., ASC 606).

Key differences between US GAAP and IFRS

Under the IASB's new standard, no sale would occur when the seller-lessee has a substantive repurchase option. The IASB does not plan to provide further guidance about when repurchase options would be considered substantive. Additionally, sale accounting is not prohibited for Type A leasebacks because all leases are Type A leases for lessees under the IASB's new standard.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Transactions in which the buyer-lessor obtains control of the underlying asset

Accounting for the sale

When the seller-lessee transfers control of the underlying asset to the buyer-lessor in a sale and leaseback transaction, the seller-lessee would do each of the following:

- Derecognize the underlying asset
- Recognize a lease liability and right-of-use asset for the leaseback (subject to the optional exemption for short-term leases)
- Recognize the gain or loss, if any, immediately (adjusted for off-market terms)

Key differences between US GAAP and IFRS
Under the IASB's new standard, gain recognition would be limited to the portion related to the buyer-lessor's residual asset. The remaining gain would be recognized as a reduction to the initial measurement of the seller-lessee's right-of-use asset and thus reflected as a reduction in amortization of the right-of-use asset over the term of the leaseback. Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Accounting for the leaseback

When a sale occurs, both the seller-lessee and the buyer-lessor would account for the leaseback in the same manner as any other lease (i.e., in accordance with the lessee and lessor guidance, respectively, with adjustments for any off-market terms).

Adjustment for off-market terms

The sale transaction and the ensuing lease are generally interdependent and negotiated as a package. Consequently, in some cases the transaction could be structured with a negotiated sales price above fair value and with lease payments for the ensuing lease above the then-current market rates, or vice-versa. Under either scenario, the off-market terms could distort the gain on sale (or disposition) and the recognition of lease expense for the ensuing lease. To ensure that the gain or loss on disposition and the lease-related assets and liabilities associated with such transactions are not understated or overstated, the FASB decided to require adjustments for any off-market elements of sale and leaseback transactions.

The off-market adjustments would be determined using the fair value of the underlying asset or the market lease payments, whichever provides the more readily determinable evidence. Entities would be expected to maximize the use of observable prices and information when determining which measure is the most appropriate to use.

When the sale price is (or the total lease payments are) less than the underlying asset's fair value (or the total market lease payments), a seller-lessee would increase the initial measurement of the right-of-use asset. This treatment would be similar to the accounting for lease prepayments under the new standard. When the sale price is (or the total lease payments are) greater than the underlying asset's fair value (or the total market lease payments), a seller-lessee would recognize an additional financial liability (i.e., additional financing received from the buyer-lessor) separately from the lease liability.

Buyer-lessors would also be required to adjust the purchase price of the underlying asset for any off-market terms. Such adjustments would be recognized as lease prepayments made by the seller-lessee or as additional financing provided to the seller-lessee.

Adjustments would not be made to reflect either the fair value of the purchase and sale or the current market rates for the lease in sale and leaseback transactions among related parties. Refer to the related party leasing transactions section above.

Disclosure

A seller-lessee in a sale and leaseback transaction would be required to disclose:

- The main terms and conditions of the transaction
- Any gains or losses arising from the transaction separately from gains or losses on disposal of other assets

Effective date and transition

Effective date

The FASB has not yet discussed an effective date but plans to address it in the fourth quarter of 2015.

How we see it

Given the current timeline, we believe an effective date of 1 January 2018 or later is likely.

A final standard is not likely to be effective before 1 January 2018.

Transition

The new standard's transition provisions would be applied as of the beginning of the earliest comparative period presented in the financial statements (date of initial application). For example, assuming an effective date of 1 January 2018, a calendar-year company that presents three-year comparative financial statements would apply the transition provisions on 1 January 2016 (i.e., the beginning of the earliest comparative period presented).

Lessees and lessors would be required to apply the new standard using a modified retrospective approach for all leases existing at, or entered into after, the date of initial application, with an option to use certain transition relief (discussed below).

Lessees and lessors would be prohibited from using a full retrospective transition approach.

Lessee transition — capital leases

For capital leases existing at, or entered into after, the date of initial application, a lessee would:

- Initially recognize a Type A right-of-use asset and lease liability at the later of (1) the date of initial application and (2) the date of initial recognition under ASC 840, measured at the carrying amount of the capital lease asset and capital lease obligation under ASC 840
- Recognize as part of the Type A right-of-use asset any unamortized initial direct costs not included in the capital lease asset under ASC 840 that would have qualified for capitalization under the new standard and write-off costs that would not have qualified for capitalization under the new standard as an adjustment to equity
- Subsequently measure the Type A right-of-use asset and lease liability in accordance with the subsequent measurement guidance in ASC 840 in the periods prior to the effective date

Beginning on the effective date, lessees would subsequently measure the Type A right-of-use asset and lease liability in accordance with the subsequent measurement guidance in the new standard, except that a lessee would not remeasure the Type A right-of-use asset or lease liability for changes in the amount the lessee expects to pay under residual value guarantees unless it remeasures the asset or liability for other reasons (e.g., because of a change in the lease term resulting from a reassessment). If a lease is modified after the effective date or the lease liability is remeasured for any reason, lessees would account for the lease under the new standard. For lease modifications, this would be the case, regardless of whether the modification results in a separate lease.

Lessee transition — operating leases

For operating leases existing at, or entered into after, the date of initial application, a lessee would:

- Initially recognize a Type B right-of-use asset and lease liability at the later of (1) the date of initial application and (2) lease commencement
- Initially and subsequently measure the lease liability at the present value of the sum of the following items unless the lease is modified or the lease liability is required to be remeasured on or after the effective date:
  - The remaining minimum rental payments (as described under ASC 840)
  - Any amounts the lessee expects to pay to satisfy a residual value guarantee
- Use a discount rate established in accordance with the new leases standard as of the later of (1) the date of initial application and (2) lease commencement
- Measure the Type B right-of-use asset throughout the lease at an amount equal to the lease liability, adjusted for any prepaid or accrued rent, lease incentives or unamortized initial direct costs that would have qualified for capitalization under the new leases standard
- Write off, as an adjustment to equity, any unamortized initial direct costs that would not have qualified for capitalization under the new leases standard

Beginning on the effective date, lessees would account for a lease modification or remeasurement of the lease liability under the new standard. For lease modifications, this would be the case, regardless of whether the modification results in a separate lease.

Lessor transition — sales-type and direct financing leases

For sales-type and direct financing leases existing at, or entered into after, the date of initial application, a lessor would:

- Not reassess whether a sales-type lease would have qualified for up-front selling profit recognition in accordance with the new leases standard
- Initially recognize a net investment in the lease at the later of (1) the date of initial application and (2) lease commencement, measured at the carrying amount of the net investment in the lease under ASC 840
- Include in the net investment in a direct financing lease any unamortized initial direct costs that were capitalized in accordance with ASC 840
- Subsequently measure the net investment in the lease in accordance with the subsequent measurement guidance in ASC 840 in the periods prior to the effective date

Beginning on the effective date, the lessor would subsequently measure the net investment in the lease in accordance with the subsequent measurement guidance in the new standard. If the lease is modified after the effective date, lessors would account for the lease under the new standard, regardless of whether the modification results in a separate lease.

Lessor transition — operating leases

For operating leases existing at, or entered into after, the date of initial application, the carrying amount of the underlying asset and any lease assets or liabilities (for example, prepaid or deferred rent) would be the same as that recognized under ASC 840 at the later of (1) the date of initial application and (2) lease commencement.

A lessor would recognize any initial direct costs that would have qualified for capitalization under the new leases standard as an expense over the lease term on the same basis as lease income. Those costs that would not have qualified for capitalization under the new standard would be written off as an adjustment to equity.

If a lessor had previously securitized receivables arising from leases that were classified as operating leases in accordance with ASC 840, the lessor would account for those transactions as secured borrowings in accordance with other GAAP.

Other considerations — transition relief (policy election)

Lessees and lessors would be permitted to make an accounting policy election to apply the following relief which must be elected as a package and must be consistently applied to all leases (i.e., an entity cannot choose which provisions to apply or which leases to apply them to). In addition, an entity that is both a lessee and a lessor must make the election regarding relief for all leases.

Lessees and lessors could elect not to reassess all of the following:

- Whether any expired or existing contracts are or contain leases
- Lease classification for any expired or existing leases
- Initial direct costs for any expired or existing leases (i.e., whether those costs would have qualified for capitalization under the new leases standard)

Lessees and lessors would also be permitted to make an accounting policy election to use hindsight with respect to lease renewals and purchase options when accounting for existing leases. This relief may be elected separately or in conjunction with the package of relief described above. An entity would have to make an accounting policy election (i.e., it could not elect this relief on a lease-by-lease basis).

How we see it

Because the current accounting for operating leases and service contracts is similar, determining whether an arrangement is a lease or service contract might not have been a focus for many entities. Given the consequences of the new standard, the effects of treating an arrangement as a service instead of a lease may be material when it may not have been material in the past. This may require some entities to revisit the assessment made under ASC 840.

Disclosures

Lessees and lessors would be required to provide transition disclosures in accordance with ASC 250, *Accounting Changes and Error Corrections*, without the disclosure of the effect of the change on income from continuing operations, net income, any other affected financial statement line item and any affected per-share amounts for the current period and any prior periods that are adjusted.

Sale and leaseback transition

A seller-lessee would reassess whether there was a sale in a sale and leaseback transaction only when the transaction is still being accounted for as a "failed sale" (i.e., a financing) under ASC 840, at the effective date of the new standard. Transactions previously determined to be sales by a seller-lessee would not be reassessed.

However, a seller-lessee would account for any deferred gain or loss on a transaction previously accounted for as a sale and leaseback as follows:

- For leasebacks classified as capital leases, the entity would continue amortizing the gain or loss in the same manner as under ASC 840.
- For leasebacks classified as operating leases, the entity would recognize any deferred gain or loss not resulting from off-market terms as an adjustment to equity. Any deferred amount that is the result of off-market terms would be recognized as an adjustment to the right-of-use asset if the amount is a loss or as a financial liability if it is a gain.

Seller-lessees would account for the leaseback in accordance with the lessee transition requirements.

Build-to-suit arrangement transition

As discussed in Appendix B, build-to-suit accounting would be eliminated under the new standard. As part of transition, lessees would be required to apply a modified retrospective transition approach for build-to-suit lease arrangements existing at, or entered into after, the date of initial application.

An entity that has recognized assets and liabilities as a result of the build-to-suit guidance in ASC 840 would derecognize those assets and liabilities at the later of (1) the date of initial application and (2) the date that the lessee is determined to be the accounting owner of the asset under existing build-to-suit guidance. Any difference between the amounts of the assets and the liabilities derecognized would be recorded as an adjustment to equity at that date. The lessee would then follow the general lessee transition guidance for the lease.

Key differences between US GAAP and IFRS

While the FASB's new standard would prohibit the use of a full-retrospective transition approach, the IASB's new standard would permit such an approach.

The FASB would require adoption of its new standard using a modified retrospective transition approach. The IASB would permit such a transition approach. However, the FASB and the IASB would require the modified retrospective approach to be applied differently and would provide different types of transition relief.

Refer to Appendix C for a summary of key differences between US GAAP and IFRS.

Endnotes:

[1] ASC 840-10-25-42 requires lessors to consider all four lease classification criteria in paragraph 840-10-25-1 and both of the following criteria: (a) collectibility of the minimum lease payments is reasonably predictable, and (b) no important uncertainties surround the amount of unreimbursable costs yet to be incurred by the lessor under the lease.

[2] See Proposed Accounting Standards Update (Revised), *Leases (Topic 842),* on the FASB's website.

[3] A service concession arrangement is an arrangement between a public-sector entity grantor and an operating entity under which the operating entity generally operates the grantor's infrastructure (e.g., an airport, road, bridge, tunnel) for a specified period of time. Refer to our Financial reporting developments publication, *Lease accounting*, for further information.

[5] See ASC Master Glossary for definition of public business entity.

[6] For lessees, see the Lessee Accounting Model March 2014 staff paper 3A paragraph 36. For lessors, see the Lessor Accounting Model March 2014 staff paper 3C paragraph 19.

Appendix A: Summary of lessee and lessor reassessment requirements (updated July 2015)

	Lessees	Lessors
Allocating contract consideration	Reallocate contract consideration upon either of the following events: ▸ A contract modification that is not accounted for as a separate, new lease. ▸ A reassessment of the lease term or whether the lessee is reasonably certain to exercise an option to purchase the underlying asset.	Reallocate contract consideration upon a contract modification that is not accounted for as a separate, new lease.
Lease term	Reassess upon the occurrence of significant events or changes in circumstances that are within the lessee's control (i.e., market-based events or changes would not trigger a reassessment).	No requirement to reassess after lease commencement.
Variable lease payments that depend on an index or rate	Reassess when the lease liability is remeasured for other reasons (e.g., due to a change in the lease term).	No requirement to reassess after lease commencement.
Amounts expected to be payable under residual value guarantees — lessees only	Remeasure the lease liability and adjust the right-of-use asset if the amounts expected to be payable under residual value guarantees change during the lease term. Recognize the remaining adjustment in profit or loss if the right-of-use asset is reduced to zero.	Not applicable for lessors because lease payments would generally exclude amounts receivable under residual value guarantees (from the lessee or a third party).
Discount rate	Reassess upon a lease modification, a change to the lease term or a change to the assessment of whether a lessee is reasonably certain to exercise an option to purchase the underlying asset.	Reassess upon a modification to a Type A lease that does not result in a separate, new lease when the modified lease remains a Type A lease (i.e., when lease classification does not change).
Lease classification	It is unclear whether lessees would reassess lease classification upon a modification to a Type A or Type B lease that does not result in a separate, new lease.	Reassess upon a modification to a Type A lease that does not result in a separate, new lease. It is unclear whether lessors would reassess lease classification upon a modification to a Type B lease that does not result in a separate, new lease.

Appendix B: US GAAP guidance that would be eliminated and guidance the FASB may eliminate (updated July 2015)

This appendix discusses accounting guidance that the FASB would eliminate under the new standard. This appendix also discusses interpretive guidance in ASC 840 that the FASB did not include in its 2013 ED. At its May 2015 meeting, the FASB indicated that its staff plans to revisit this guidance to determine whether to would be carried forward to the new standard.

Guidance that would be eliminated under the new standard

Lessee involvement in asset construction ('build-to-suit' transactions)

Build-to-suit lease transactions involve various forms of lessee involvement in the construction of an asset for the lessee's own use. Under ASC 840, a lessee is considered the owner of an asset during the construction period if it takes on substantially all of the construction-period risks. If the lessee is considered the owner of the asset during the construction period, a deemed sale and leaseback of the asset would occur when construction of the asset is completed and the lease term begins. The 2013 ED proposed eliminating this guidance. In the Basis for Conclusions in the 2013 ED, the FASB said entities would apply other existing guidance (e.g., ASC 360) when costs are incurred to construct or design an asset before that asset is ready for use. If the lessee controls the underlying asset before the lease commencement date, the lessee would apply the sale and leaseback provisions of the new standard.

How we see it

Absent additional guidance, it is not clear how lessees and lessors would determine what, if any, assets to record in certain arrangements (e.g., when leasehold improvements are constructed by or on behalf of the lessee). In many instances, judgment would be required to determine whether the lessee is constructing leasehold improvements or leasing fully built-out space.

Separate requirements for leases involving real estate

ASC 840 requires both lessees and lessors to account for leases involving real estate according to their classification as capital, sales-type, direct financing or operating using their respective criteria. However, certain additional tests are necessary, and the land, building and equipment components of a lease are accounted for separately in some instances. The unique treatment of real estate in lease transactions is consistent with the accounting recognition that real estate is different from equipment by its nature. Just as there are distinct rules for real estate sales transactions (until the effective date of ASC 606 and ASC 610), there are also distinct rules for leases involving real estate and sale and leaseback transactions involving real estate.

How we see it

The elimination of today's real estate-specific guidance, including the restrictions for sale and leaseback transactions, would be a major change. We would generally expect more sale and leaseback transactions involving real estate to be accounted for as sales and subsequent leasebacks under the new standard than under today's guidance. In addition, we would expect more leases of real estate to result in up-front selling profit recognition (i.e., for Type A leases).

Leveraged leases that are not grandfathered upon transition

Leveraged lease arrangements existing at transition would be grandfathered. Thus, we expect the new standard to retain the subsequent measurement guidance for leveraged leases currently in ASC 840.

After transition, entities would apply the new standard to all newly recognized leases, including those that would have been classified as leveraged leases under ASC 840 today. For such leases, entities would apply other relevant US GAAP (e.g., ASC 740, *Income taxes*, ASC 470, *Debt*) to account for the non-lease components of such transactions.

How we see it

It is unclear how modifications or extensions of leveraged leases that are grandfathered would be accounted for under the new standard.

Guidance that may be eliminated pending further FASB discussions

Sale of assets subject to a lease or intended to be leased by the purchaser to a third party

ASC 840 provides guidance for the sale of property subject to an operating lease, or property that is leased or intended to be leased by a third-party purchaser. Such transactions should not be treated as sales when the seller retains substantial risks of ownership, unless the seller is able to determine that the buyer will lease the asset to a third party under a sales-type or direct financing lease.

How we see it

If the FASB eliminates this guidance, we would generally expect lessors to look to the new revenue recognition standard (i.e., ASC 606) or ASC 610-20, *Other Income — Gains and Losses from the Derecognition of Nonfinancial Assets*, to determine whether a sale has occurred.

Lessee maintenance deposits

Under certain lease arrangements, a lessee may be contractually or legally responsible for repair and maintenance of the leased asset during the term of the lease arrangement. In addition, the lease arrangement may require the lessee to make deposits (also commonly referred to as maintenance reserves or supplemental rent) with the lessor to protect the lessor if the lessee does not properly maintain the leased asset (i.e., the lessor would use the funds to restore the leased asset to proper working order).

Under a typical maintenance deposit lease arrangement, the lessor is contractually required to reimburse the lessee a portion of the deposit as qualifying maintenance activities are performed and paid for by the lessee. If the deposits paid to the lessor exceed the costs incurred for maintenance activities, certain lease arrangements state that the lessor is entitled to retain such excess amounts at the expiration of the lease arrangements, whereas other lease arrangements require the lessor to refund such excess amounts to the lessee.

Today, ASC 840 provides guidance for maintenance deposits that are paid by the lessee and refunded only if the lessee performs specified maintenance activities. Such arrangements should be considered deposit assets (by the lessee) if it is probable that the deposits will be refunded. The cost of maintenance activities should be expensed or capitalized by the lessee, as appropriate, when the underlying maintenance is performed. If the likelihood of a maintenance deposit being refunded to the lessee is less than probable, the deposit should be recognized as additional rent expense. If it is probable at inception of the lease that a portion of the deposits will not be refunded, the lessee should recognize a pro-rata portion of the deposits as expense as they are paid.

The sale of tax benefits associated with a leased asset

Periodically, companies enter into transactions that are, in substance, sales of tax benefits through tax leases. These transactions are commonly referred to as "double-dip" transactions as their objective is to provide to more than one entity a deduction in separate tax jurisdictions (e.g., Switzerland, US). The transaction generally involves the sale of a depreciable asset or an interest in an asset (or through a sales-type lease — commonly referred to as a "head lease") to an investor in a foreign jurisdiction in consideration for cash proceeds and an obligation by the seller to lease back the asset under a capital or operating lease. ASC 840 provides guidance on identifying and accounting for sales of tax benefits.

Accounting for a loss on a sublease

An entity may enter into a sublease that will result in a loss. ASC 840 provides guidance on determining when and how a loss is recorded based the type of sublease (i.e., operating, direct financing or sale-type sublease).

If the FASB does not retain the existing guidance, under the new standard intermediate lessors would assess right-of-use-assets that are subject to a sublease for impairment under the long-lived asset impairment provisions of ASC 360.

Appendix C: Key differences between US GAAP and IFRS (updated July 2015)

	US GAAP (FASB)	IFRS (IASB)
Scope and scope exclusions	The scope of the new standard would not apply to leases of intangible assets.	The scope of the new standard would not apply to lessors' leases of intangible assets. However, lessees of intangible assets could apply the new standard but would not be required to.
Leases of small assets (IFRS-only)	No exemption for leases of small assets.	*For lessees only* — Recognition and measurement exemption for leases of certain low-value assets (i.e., small assets).
Lease modifications (updated July 2015)	The accounting for a modification to a Type A lease that does not result in a separate, new lease, would depend on whether lease classification changes. Refer to the lease modifications section.	The accounting for a modification to a Type A lease that does not result in a separate, new lease, would be in accordance with IFRS 9, *Financial Instruments*.
Portfolio approach	Guidance would be included in the non-authoritative Basis for Conclusions.	Guidance would be included in the authoritative paragraphs of the new standard.
Variable lease payments that depend on an index or rate — lessee reassessment	Reassess only when lease liability is remeasured for other reasons (e.g., due to a change in lease term).	Reassess upon remeasurement of lease liability for other reasons and upon a change in the cash flows resulting from a change in the reference index or rate (i.e., when an adjustment to the lease payments takes effect).
Discount rate — lessees	Accounting policy election for lessees that are not public business entities to use the risk-free rate to determine the present value of lease payments (for all leases).	No accounting policy election for lessees to use the risk-free rate for the initial and subsequent measurement of lease liabilities.
Reassessment of the discount rate (updated July 2015)	Reassess upon a modification to a Type A lease that does not result in a separate, new lease when the modified lease remains a Type A lease (i.e., when lease classification does not change).	No reassessment after lease commencement.
Fair value of the underlying asset	Definition of fair value in ASC 820 would not apply to fair value measurements for the purposes of lease classification and measurement (with certain exceptions).	The measurement and disclosure requirements of IFRS 13, would apply to lease transactions within the scope of the new standard.
Related party leasing transactions	Entities would be required to account for related party leasing transactions on the basis of the legally enforceable terms and conditions of the lease.	No guidance for related party leasing transactions.

<table>
<tr><th></th><th>US GAAP (FASB)</th><th>IFRS (IASB)</th></tr>
<tr><td>Lease classification — lessees</td><td>Leases (with an optional exemption for short-term leases) would be classified as Type A or Type B, and there would be no initial measurement difference between them.

Differences would result in the recognition, measurement and presentation of leases for lessees.</td><td>Leases (with optional exemptions for short-term leases and leases of small assets) would be Type A leases.</td></tr>
<tr><td>Lease classification — lessors</td><td>Leases would be classified as Type A or Type B. However, lessors would consider an additional criterion based on collectibility of lease payments.</td><td>Leases would be classified as Type A or Type B.</td></tr>
<tr><td>Determining whether to defer or recognize selling profit — Type A leases with selling profit</td><td>Recognize initial selling profit in a Type A lease only if lessee obtains control of the underlying asset, as that would be defined in the new standard, and collection of lease payments is probable.</td><td>Recognize initial selling profit for all Type A leases with selling profit.</td></tr>
<tr><td>Reassessment of lease classification — lessors</td><td>Reassess upon a modification to a Type A lease that does not result in a separate, new lease.</td><td>No reassessment after lease commencement.</td></tr>
<tr><td>Purchase of a leased asset by the lessee during the lease term (updated July 2015)</td><td>No gain or loss recognized. The difference between the purchase price and the carrying amount of the lease liability would be recorded as an adjustment to the carrying amount of the asset.</td><td>No guidance for the purchase a leased asset by the lessee during the lease term</td></tr>
<tr><td>Presentation — statement of cash flows — lessees</td><td>Cash paid for interest on Type A leases would be presented within operating activities.</td><td>Cash paid for interest on Type A leases would be presented within operating or financing activities consistent with the entity's policy election under IAS 7, Statement of Cash Flows.</td></tr>
<tr><td>Disclosure — qualitative disclosures — lessees</td><td>Would include a specific list of qualitative disclosure requirements.</td><td>Would not include specific qualitative disclosure requirement.</td></tr>
<tr><td>Disclosure — quantitative disclosures — lessees</td><td colspan="2">‣ The FASB and IASB differ on specific lessee quantitative disclosure requirements mainly because of differences in the lessee accounting models. For example, the FASB's new standard would require disclosure of Type B lease expense, which is not applicable under the IASB's new standard (under which all leases would be Type A leases).

‣ The FASB would not require a specific format for lessee quantitative disclosures. However, the IASB would require the disclosures to be made in a tabular format, unless another format is more appropriate, and presented in a single note or separate section of the notes to the financial statements.</td></tr>
<tr><td>Other quantitative and qualitative disclosures — Type A leases — lessors</td><td>Qualitative and quantitative disclosure of significant changes in the residual value component of the net investment.</td><td>Qualitative and quantitative disclosure of significant changes in the net investment.</td></tr>
</table>

	US GAAP (FASB)	IFRS (IASB)
Intermediate lessor accounting — classification of a sublease	For purposes of lease classification, the intermediate lessor would consider the underlying asset the leased asset.	For purposes of lease classification, the intermediate lessor would consider its right-of-use asset as the leased asset.
Sale and leaseback transactions — determining whether a sale has occurred	No sale occurs when either: ▸ Leaseback is a Type A lease. ▸ Seller-lessee has a substantive repurchase option. ▸ Fair value (date of exercise) repurchase options for non-specialized assets that are readily available in the marketplace would **not** preclude a sale (i.e., option would be non-substantive).	No sale occurs when the seller-lessee has a substantive repurchase option with no further guidance for non-specialized assets that are readily available in the marketplace. Sale accounting is not prohibited for Type A leasebacks because all leases are classified as Type A leases by lessees.
Sale and leaseback transactions — accounting for gains	Recognize gain in full.	Recognition of gain would be limited to the portion related to the residual asset. The remaining gain would be recognized as a reduction to the initial measurement of right-of-use asset, thus reflected as a reduction in amortization of the right-of-use asset over term of the leaseback.
Transition	▸ While the FASB's new standard would prohibit the use of a full retrospective transition approach, the IASB's new standard would permit such an approach. ▸ The FASB would require adoption of its new standard using a modified retrospective transition approach. The IASB would permit such a transition approach. However, the FASB and the IASB would require the modified retrospective approach to be applied differently and would provide different types of transition relief.	

No. 2014-23
28 August 2014

Technical Line

FASB — new guidance

The new revenue recognition standard — real estate

Revenue recognition practices of all real estate entities may be affected by the new standard.

What you need to know

- Real estate entities will need to exercise more judgment when applying the new revenue standard than they do today when measuring and recognizing gains and losses on property sales using ASC 360-20, *Real Estate Sales*.
- Entities that sell real estate subject to the revenue standard will generally be able to recognize revenue and associated profit when control of the property transfers. An evaluation of the buyer's initial and continuing investments or the seller's continuing involvement with the property will no longer be required. However, entities must still assess the collectibility of the transaction price using the principles of the new revenue standard.
- Fees for property management and other services may be recognized differently due to the new requirements to estimate variable consideration and to determine the number of performance obligations contained in the contract.
- The new standard is effective for public entities[1] for fiscal years beginning after 15 December 2016 and for interim periods therein. It is effective for nonpublic entities for fiscal years beginning after 15 December 2017 and interim periods within fiscal years beginning after 15 December 2018.

Overview

Real estate entities will need to evaluate their revenue recognition practices as a result of the new revenue recognition standard jointly issued by the Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB) (collectively, the Boards). The new revenue recognition standard will supersede virtually all revenue recognition guidance in US GAAP and IFRS, including industry-specific guidance that real estate entities use today.

EY
Building a better working world

The new standard provides guidance for accounting for all revenue arising from contracts with customers and affects all entities that enter into contracts to provide goods or services to customers (unless those contracts are in the scope of other US GAAP guidance such as the leasing literature).

The standard's consequential amendments provide a new model for measuring and recognizing gains and losses on the sale of certain nonfinancial assets (e.g., property and equipment, including real estate) to noncustomers that are otherwise not in the scope of the new revenue recognition guidance. Accounting for contracts that include the sale of a nonfinancial asset to a noncustomer or a customer generally will be consistent, except for financial statement presentation and disclosure. Entities that sell nonfinancial assets to noncustomers will follow guidance in Accounting Standards Codification (ASC) 360-10 for presenting a gain or loss on the sale of a long-lived asset.

The new revenue recognition model for the sale of real estate differs significantly from the prescriptive rules in ASC 360-20, *Real Estate Sales.* The new principles-based approach is largely based on the transfer of control. As a result, more transactions will likely qualify as sales of real estate, and revenue (i.e., gain on sale) will be recognized sooner than it is under today's accounting.

The accounting for management fees and other fees that vary based on performance (e.g., percentage of the property's revenues or net operating income) will also change. A property manager will have to estimate, at contract inception, the variable consideration to which it will be entitled and for which it is probable that a significant revenue reversal will not occur. This amount will then be recognized in the period as the performance obligation is satisfied.

This publication considers key implications for the real estate industry and provides an overview of the revenue recognition model with a focus on entities that:

- Own, operate and sell real estate assets
- Provide real estate property management services
- Engage in hospitality management activities
- Construct and sell single-family homes and residential developments (e.g., condominiums)

This publication supplements our Technical Line, *A closer look at the new revenue recognition standard* (SCORE No. BB2771), and should be read in conjunction with it.

Real estate entities also may want to monitor the discussions of both the Boards' Joint Transition Resource Group for Revenue Recognition (TRG) and a task force formed by the American Institute of Certified Public Accountants (AICPA) to focus on hospitality and time-sharing issues. The Boards created the TRG to help them determine whether more implementation guidance or education is needed. The TRG won't make formal recommendations to the Boards or issue guidance. The AICPA's hospitality and time-sharing industry task forces are two of 16 industry task forces the AICPA has formed to help develop a new Accounting Guide on Revenue Recognition and to aid industry stakeholders in implementing the standard. Any views discussed by the TRG or guidance produced by the AICPA are non-authoritative.

The views we express in this publication are preliminary. We may identify additional issues as we analyze the standard and entities begin to interpret it, and our views may evolve during that process. As our understanding of the standard evolves, we will issue updated guidance.

Contents

1 Summary of the new model

The new guidance in ASC 606, *Revenue from Contracts with Customers*, outlines the principles an entity must apply to measure and recognize revenue and the related cash flows. The core principle is that an entity will recognize revenue at an amount that reflects the consideration to which it expects to be entitled in exchange for transferring goods or services to a customer.

The principles in the new standard will be applied using the following five steps:

1. Identify the contract(s) with a customer
2. Identify the performance obligations in the contract
3. Determine the transaction price
4. Allocate the transaction price to the performance obligations in the contract
5. Recognize revenue when (or as) the entity satisfies a performance obligation

An entity will need to exercise judgment when considering the terms of the contract(s) and all of the facts and circumstances, including implied contract terms. An entity also will have to apply the requirements of the new standard consistently to contracts with similar characteristics and in similar circumstances.

On both an interim and annual basis, an entity generally will have to provide more disclosures than it does today and include qualitative and quantitative information about its transactions accounted for under the new standard and significant judgments made (and changes in those judgments). On an interim basis, US GAAP will require more disclosure than will be required under IFRS.

Transition and effective date

The new standard is effective for public entities for fiscal years beginning after 15 December 2016 and for interim periods therein. It is effective for nonpublic entities for fiscal years beginning after 15 December 2017 and interim periods within fiscal years beginning after 15 December 2018, and they may elect to adopt the guidance as early as the public entity effective date. Under US GAAP, early adoption is prohibited for public entities.

All entities will be required to apply the standard retrospectively, either using a full retrospective or a modified retrospective approach. The Boards provided certain practical expedients to make it easier for entities to use a full retrospective approach.

Under the modified retrospective approach, financial statements will be prepared for the year of adoption using the new standard, but prior periods won't be adjusted. Instead, an entity will recognize a cumulative catch-up adjustment to the opening balance of retained earnings (or other appropriate component of equity or net assets) at the date of initial application for contracts that still require performance by the entity (i.e., contracts that are not completed). Entities will need to provide certain disclosures in the year of adoption, such as the amount by which each financial statement line item is affected as a result of applying the new standard.

How we see it

Entities that are recognizing profit from the sale of a real estate property using one of the alternative recognition methods in ASC 360-20 (e.g., installment method, cost recovery method, deposit method) will need to carefully evaluate the transition approaches in the new standard.

Entities with deferred revenue balances or failed sales from real estate sales that predate their adoption of the new standard may experience "lost revenue." That's because the deferred amounts or previously unrecognized sales will be reflected in the recasted prior periods (under the full retrospective approach) or as part of the cumulative effect adjustment upon adoption (under the modified retrospective approach), but never reported as revenue in a current period within the financial statements.

The illustration below compares the application of the two transition approaches to a real estate sale for which profit was previously deferred under the installment method. Real estate entities that have previously deferred profit from a sale under another method in ASC 360-20 will need to consider specific transition issues that may arise from each respective method (e.g., interest expense and/or continued depreciation of the property under any of the financing, leasing, profit-sharing or deposit methods).

Illustration 1-1: Comparison of transition approaches

Developer A, a public entity with a 31 December fiscal year-end, sold a real estate property with a carrying value of $6 million for net proceeds of $11 million. The sale closed on 31 December 2014 but did not qualify for full accrual profit recognition because the terms of the four-year note receivable (i.e., seller financing) provided by Developer A did not meet the initial and continuing investment criteria in ASC 360-20. Under ASC 360-20, Developer A applied the installment method and determined that $1 million of profit should be recognized at the sale date, $1 million in 2015, $1 million in 2016, and $2 million in 2017 when the initial and continuing investment criteria were expected to be satisfied. Developer A will also recognize interest income from the note as it is received.

The new revenue standard is effective for Developer A for interim and annual periods beginning 1 January 2017. Management evaluates the new revenue standard and concludes that the terms of the seller financing would not have precluded the recognition of the $5 million of profit at the date of sale.

Full retrospective approach

Developer A presents three years of comparative financial information in its 2017 annual filings with the Securities and Exchange Commission (SEC). In accordance with ASC 250,[2] the full $5 million of profit from the sale that occurred on 31 December 2014 would be recorded as a cumulative catch-up to retained earnings as of 1 January 2015 in the recasted financial information. Deferred profit of $1 million that was previously recognized in both 2015 and 2016 would no longer be included in the income statements of each respective period.

Quarterly SEC filings of Developer A will also reflect this presentation beginning 31 March 2017.

Modified retrospective approach

The sale of the property by Developer A constitutes a completed contract as defined in the new standard[3] because control of all goods (i.e., the property) was transferred on 31 December 2014, before the date of initial application by the entity. Under the modified retrospective approach, the new standard is only applied to contracts that are in progress at the date of initial application (i.e., 1 January 2017). Therefore, Developer A would recognize the remaining $2 million of deferred revenue at 1 January 2017 as a cumulative catch-up to retained earnings at the beginning of the period. In contrast to what happens when the full retrospective approach is used, the $1 million of deferred revenue recognized in both 2015 and 2016 continues to be reflected in each respective comparative period.

Developer A also must disclose the $2 million of profit that would have been recognized in 2017 had ASC 360-20 remained in effect.

2 Scope

ASC 606 applies to all contracts with customers to provide goods or services in the ordinary course of business, except for contracts that are specifically excluded from the scope, which include:

- Lease contracts within the scope of ASC 840, *Leases*
- Insurance contracts with the scope of ASC 944, *Financial Services — Insurance*
- Financial instruments and other contractual rights or obligations (e.g., receivables, debt and equity securities, derivatives)[4]
- Guarantees (other than product or service warranties) within the scope of ASC 460, *Guarantees*
- Nonmonetary exchanges between entities in the same line of business to facilitate sales to customers other than the parties to the exchange within the scope of ASC 845, *Nonmonetary Transactions*

Entities may enter into transactions that are partially within the scope of the new revenue recognition guidance and partially within the scope of other guidance. In these situations, the new guidance requires an entity to first apply any separation and/or measurement principles in the other guidance before applying the revenue standard.

For example, in certain transactions, the seller of a real estate property may agree to support the operations of the property for a period of time or provide a guarantee of the buyer's return on investment. Under today's guidance, because these guarantees either prevent the guarantor from being able to account for the transaction as a sale or recognize in earnings the profit from the sale, these "seller support" guarantees are excluded from the scope of ASC 460 and are instead accounted for using ASC 360-20.

Under the new standard, the presence of the guarantee does not, on its own, affect whether an entity can recognize a sale and the associated profit from the transfer of the property. Instead, the fair value of the guarantee will first be separated from the transaction price and recorded as a liability in accordance with ASC 460[5]. The remainder of the estimated arrangement consideration is allocated among the other elements in the arrangement (e.g., other performance obligations, including the transfer of the asset). The entity then evaluates whether the other performance obligations have been satisfied without considering the guarantee.

In addition, the new standard may affect arrangements involving leases. While ASC 840 provides guidance on allocating an arrangement's consideration between a lease and lease-related executory costs, this guidance refers to ASC 606 for direction on allocating the total consideration between the deliverables subject to ASC 840 and those that are not within the scope of ASC 840. Accordingly, the estimated transaction price should be allocated between the deliverables within the scope of ASC 840 and any deliverables within the scope of the revenue guidance based on the relative standalone selling price of each deliverable (see Chapter 6).

How we see it

In its recent redeliberations of the proposed leases standard,[6] the FASB tentatively concluded that lessors would be required to apply the new revenue standard to allocate contract consideration between the lease and non-lease components of a contract.

The FASB staff also indicated that activities and costs, such as a lessor's promise to provide services (e.g., common area maintenance or CAM) or pay for utilities consumed by the lessee, would represent non-lease components. If this tentative decision is reflected in any final leasing standard, revenue from these non-lease components will be recognized in accordance with the new revenue standard.

2.1 Contracts with customers

The new revenue guidance defines a customer as "a party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration." The standard does not define the term "ordinary activities" because it was derived from existing guidance. Under today's guidance, CON 6[7] refers to ordinary activities as an entity's "ongoing major or central operations."

Property management services provided by real estate investment trusts (REITs) and companies in the hotel and hospitality industry are examples of services that are the output of an entity's ordinary activities. In addition, the sale of a home by a homebuilder or a residential condominium unit by a real estate developer would also represent ordinary activities.

In contrast, an entity that sells a commercial property that it had used as its corporate headquarters to a real estate entity would likely conclude that its decision to dispose of that asset is not an output of its ordinary activities and, therefore, does not represent a contract with a customer. However, as described in Section 2.2 below, the FASB also added derecognition guidance in its consequential amendments for the sale of nonfinancial assets and in substance nonfinancial assets (e.g., a legal entity that primarily holds nonfinancial assets) that are not the output of an entity's ordinary activities.

2.2 Sales of nonfinancial assets (including in substance nonfinancial assets)

Judgment will be required when determining whether to apply ASC 606, ASC 610-20 or ASC 810-10 to sales of real estate.

Nonfinancial assets are often sold in transactions that would not represent a contract with a customer because the sale of the asset is not an output of the entity's ordinary activities (e.g., the sale of a former corporate headquarters building by an electronics manufacturer). The Boards noted in the Basis for Conclusions[8] in the new standard that there is economically little difference between the sale of real estate that is, or is not, an output of the entity's ordinary activities and that the only difference in the accounting for these transactions should be the presentation in the statement of comprehensive income (i.e., revenue and expense when the sale is to a customer or gain or loss when the sale is to a noncustomer).

The FASB amended ASC 360-10, *Property, Plant, and Equipment*, to provide direction on applying the appropriate guidance when derecognizing a nonfinancial asset (e.g., real estate). The amended guidance states that sales of nonfinancial assets, including in substance nonfinancial assets, should be accounted for using new guidance in ASC 610-20, *Other Income — Gains and Losses from the Derecognition of Nonfinancial Assets*, unless the contract is with a customer (i.e., a party that has contracted with an entity to obtain goods or services that are an output of the entity's ordinary activities in exchange for consideration). If the contract is with a customer, ASC 606 will apply. However, ASC 610-20 does not contain incremental guidance to ASC 606 but rather instructs entities to apply certain control and measurement guidance from ASC 606, including guidance related to:

- Evaluating the existence of a contract (see Chapter 3)
- Measuring the consideration (i.e., determining the transaction price) in the contract (see Chapter 5)
- Determining when control of the nonfinancial asset has transferred (i.e., when a performance obligation is satisfied) (see Chapter 7)

Accounting for contracts that include the sale of a nonfinancial asset to a noncustomer or a customer generally will be consistent, except for financial statement presentation and disclosure. Entities that sell nonfinancial assets to noncustomers will follow guidance in ASC 360-10 for presenting a gain or loss on the sale of a long-lived asset.

The amended guidance in ASC 360-10 also indicates that there may be certain circumstances in which neither ASC 606 nor ASC 610-20 are applied when derecognizing a nonfinancial asset. The sale (deconsolidation) of real estate in a subsidiary or group of assets to noncustomers that meets both of the following requirements is accounted for in accordance with the derecognition guidance in ASC 810, *Consolidation:*

- It is a business
- It is not also an in substance nonfinancial asset (because the group of assets or subsidiary also contains significant financial assets)

It is important to note that, if both criteria are met, ASC 810 is applied whether or not the assets transferred are in a legal entity. The following table summarizes the application of the appropriate derecognition guidance for common real estate sales transactions:

ASC topic	When applied?	Possible transactions
ASC 606	Sales of real estate (i.e., nonfinancial assets or in substance nonfinancial assets, regardless of whether they also meet the definition of a "business") to customers	Sales of residences by homebuilders and real estate developers
ASC 610-20	Sales of real estate (i.e., nonfinancial assets or in substance nonfinancial assets, regardless of whether they also meet the definition of a "business") to noncustomers	Sales of commercial properties (e.g., office buildings, hotels, manufacturing facilities) by REITs, real estate funds and non-real estate entities
ASC 810-10	Sale (deconsolidation) of real estate in a subsidiary or group of assets that constitutes a "business" and is composed of both substantial financial and nonfinancial assets to noncustomers	Sales by any entity of real estate and substantial financial assets that together are a "business"

How we see it

The FASB did not define an "in substance nonfinancial asset" in the consequential amendments. As a result, entities may consider making judgments similar to those they make today when determining whether a group of assets or subsidiary is "in substance real estate" under ASC 360-20. [9]

An entity that derecognizes a subsidiary or group of assets that meet the definition of a business will need to exercise significant judgment to determine whether the transaction also constitutes the transfer of an in substance nonfinancial asset that will be subject to the guidance in ASC 610-20 rather than ASC 810-10.

The FASB currently has a project[10] on its agenda to clarify the definition of a business. In this project, it also hopes to clarify the accounting for the acquisition or disposal of an in substance nonfinancial asset. The timing and outcome of this project are unclear.

2.3 Sale-leaseback transactions

While the FASB made it clear that ASC 360-20 should no longer be applied to sales and transfers of real estate, the guidance on sale-leaseback transactions involving real estate that are within the scope of ASC 840-40, *Sale-Leaseback Transactions,* was retained. A number of amendments were made to narrow the scope of ASC 360-20, and the FASB specifically stated[11] that entities should not analogize to the retained guidance when evaluating any transaction that is not a sale-leaseback.

The Boards' current joint project on leases is expected to provide new guidance for sale-leaseback transactions that will eventually replace the guidance in ASC 360-20 and ASC 840-40. However, the timing of a new leases standard is unclear.

2.4 Nonmonetary transactions

As discussed in Section 5.3, the new standard provides guidance for contracts with customers involving the exchange of nonmonetary consideration. As a result, the FASB has excluded contracts that fall within the guidance of ASC 606 and ASC 610 from the scope of ASC 845. The specific guidance in ASC 845 for exchanges of real estate involving monetary consideration also has been eliminated. The FASB clarified that the exchange of a nonfinancial asset (including an in substance nonfinancial asset) for a noncontrolling ownership interest in the receiving entity is within the scope of ASC 845.

3 Identify the contract with the customer

To apply the new revenue guidance, an entity must first identify the contract, or contracts, to provide goods and services to customers. Such contracts may be written, oral or implied by the entity's customary business practice but must be enforceable by law and meet specified criteria. These criteria include approval of the contract by all parties and their commitment to perform their respective obligations, the ability to identify each party's rights regarding goods and services to be transferred and the associated payment terms, and whether the contract has commercial substance.

In addition, before an arrangement with a customer is considered a contract in the scope of the new revenue guidance, an entity must conclude that it is probable that it will collect the transaction price. The transaction price is the amount to which the entity expects to be entitled in exchange for the goods or services that will be transferred to the customer as opposed to the contract price. The term "probable" is defined as "the future event or events are likely to occur," consistent with the definition in ASC 450, *Contingencies*. To assess collectibility, an entity should evaluate the customer's ability and intent to pay the transaction price when due.

The prescriptive guidance in ASC 360-20 for evaluating a buyer's initial and continuing investment has been replaced by the collectibility assessment in the new standard.

The transaction price may be less than the stated contract price if an entity concludes that it has offered or is willing to accept a price concession or other discount. Such concessions or discounts are forms of variable consideration (see Section 5.2) that an entity would estimate at contract inception and reduce from the contract price to derive the transaction price. The estimated transaction price would then be evaluated for collectibility. The following table illustrates these concepts:

Stated contract price	$ 2,000,000
Price concession - amount entity estimates it will offer or accept as a reduction to the contractual price	($200,000)
Transaction price	$ 1,800,000

How we see it

In most real estate arrangements, a signed, written contract specifies the asset to be transferred or management services to be provided in exchange for a defined payment. This generally will result in a straightforward assessment of most of the contract criteria.

However, entities that sell real estate and provide financing to the buyer may find that more judgment is required to evaluate the collectibility of the transaction price. These entities may be used to applying the strict quantitative criteria in ASC 360-20 for determining whether a buyer's initial and continuing investment is sufficient to allow for sale and profit recognition, which has been eliminated. In contrast, there is little guidance in the new standard to help entities determine whether the terms of seller-provided financing, and the borrower's ability to fulfil those terms, still allow the collectibility threshold to be met.

The new standard provides guidance for entities to follow when an arrangement does not meet the criteria of a contract.

3.1 Contract modifications

A contract is modified when there is a change in the scope or price (or both). Changes to existing contracts, such as change orders or upgrades during the construction of a home or condominium, are examples of contract modifications.

An entity must determine whether the modification should be accounted for as a separate new contract or as part of the existing contract. Two criteria must be met for a modification to be treated as a separate new contract: (1) the additional goods and services are distinct from the goods and services in the original arrangement and (2) the amount of consideration expected for the added goods and services reflects the standalone selling price of those goods or services. In this respect, only modifications that *add* distinct goods and services to the arrangement can be treated as separate new contracts. In determining the standalone selling price for the new contract, entities have some flexibility, depending on the facts and circumstances.

Only contract modifications that add distinct goods or services can be treated as separate contracts.

A contract modification that does not meet the criteria to be accounted for as a separate new contract is considered a change to the original contract and is treated as either the termination of the original contract and the creation of a new contract or as a continuation of the original contract, depending on whether the goods or services to be provided after the contract modification are distinct. A modification is accounted for on a prospective basis (i.e., as a termination of the original contract and creation of a new contract) if the goods and services to be provided as a result of the modification are distinct from the goods and services in the original contract, but the consideration does not reflect the standalone selling price of the new goods or services. The remaining consideration is allocated to the remaining performance obligations. An entity should account for a modification as a continuation of the original contract if the remaining goods or services to be provided are not distinct from the goods and services already provided and therefore, form part of a single performance obligation that is partially satisfied at the date of the modification. Such modifications are accounted for on a cumulative catch-up basis. See Chapter 4 for further discussion of identifying performance obligations in the contract.

4 Identify the performance obligations in the contract

After identifying the contract, an entity will evaluate the contract terms and its customary business practices to identify all promised goods or services within the contract and determine which of those promised goods or services (or bundle of promised goods or services) should be accounted for as separate performance obligations (i.e., the unit of account for purposes of applying the standard). The revenue standard identifies several activities common to real estate entities that are considered promised goods and services, including the sale of goods produced or resale of goods purchased (e.g., real estate properties); the performance of a contractually agreed-upon task for a customer (e.g., property management); and the construction, manufacture or development of an asset on behalf of a customer.

Promised goods and services represent a performance obligation if (1) the goods or services are distinct (by themselves or as part of a bundle of goods and services) or (2) if the goods and services are part of a series of distinct goods and services that are substantially the same and have the same pattern of transfer to the customer.

4.1 Determination of distinct

The new standard outlines a two-step process for determining whether a promised good or service (or a bundle of goods and services) is distinct:

- Consideration at the level of the individual good or service (i.e., the goods or services are capable of being distinct)
- Consideration of whether the good or service is separately identifiable from other promises in the contract (i.e., the good or service is distinct within the context of the contract)

Both of these criteria must be met to conclude that the good or service is distinct. When the criteria are met, the individual units of account must be separated.

In many cases, goods or services are capable of being distinct but may not be distinct within the context of the contract. The standard provides factors to determine whether goods or services are not separately identifiable and should be combined as one performance obligation (i.e., they are not distinct in the context of the contract). These factors, if present, would indicate that goods and/or services should be combined:

- The entity integrates the good or service with other goods or services promised in the contract into a bundle that represents the combined output described in the contract.
- The good or service significantly modifies or customizes another good or service promised in the contract.
- The good or service is highly dependent on, or highly interrelated with, other goods or services promised in the contract.

If an entity determines that the promised good or service does not meet both criteria (i.e., capable of being distinct and distinct within the context of the contract), and thus is not distinct, the entity has to combine that good or service with other promised goods or services until a distinct bundle is formed. This distinct bundle is accounted for as a single performance obligation, illustrated in the following example:

Illustration 4-1: Construction of a residential home

Homebuilder B enters into a contract to build a new home for a customer on land owned by Homebuilder B. Ownership of the home and land are transferred to the customer when construction is completed. The homebuilder is responsible for the overall management of the project and identifies various goods and services to be provided, including design work, procurement of materials, site preparation and foundation pouring, framing and drywall, mechanical and electrical work, installation of fixtures (e.g., windows, doors, cabinetry) and finishing work.

Analysis: Homebuilder B first evaluates whether the customer can benefit from each of the various goods and services either on their own or together with other readily available resources. Homebuilder B determines that these goods and services are regularly sold separately to other customers by other contractors. Therefore, the customer could generate economic benefit from each of the goods and services either on their own or together with the other goods and services that are readily available to the customer, although they would have to be provided in the context of a different property. Consequently, Homebuilder B determines that the goods and services are capable of being distinct.

Homebuilder B then evaluates whether the goods and services are distinct within the context of the contract. Homebuilder B determines that the contract requires that it provide a significant service of integrating the various goods and services (the inputs) into the new home (the combined output). Therefore, Homebuilder B's promise to transfer the various individual goods and services in the contract are not separately identifiable from other promises in the contract. That is, the various goods and services are all conveyed via a completed home.

Because both criteria for identifying a distinct good or service are not met, Homebuilder B determines the goods and services are not distinct and accounts for all of the goods and services in the contract as a single performance obligation. See Chapter 7 for discussion of satisfaction of performance obligations.

It is unclear how amenities provided by a homebuilder or residential condominium developer will be accounted for under the new guidance. Often, amenities are sold or transferred in connection with the sale of individual units of a real estate project. In evaluating these transactions, entities should consider:

- The parties involved (e.g., customer and homeowner's association)
- Whether separate performance obligations exist and what they are (e.g., goods or services)
- To which parties the promises (potentially performance obligations) are made

How we see it

All real estate entities will need to determine whether separate performance obligations exist within their contracts. We expect these judgments may be more complex for homebuilders, developers of residential condominiums and entities that, in addition to property sales, provide property management services because the nature of these contracts requires the entity to perform multiple activities that may (or may not) represent separate performance obligations.

4.2 Series of distinct goods and services that are substantially the same and that have the same pattern of transfer

As mentioned above, goods and services that are part of a series of distinct goods and services that are substantially the same and have the same pattern of transfer to the customer must be accounted for as a single performance obligation to that customer if both of the following criteria are met:

- Each distinct good or service in the series that the entity promises to transfer consecutively represents a performance obligation that would be satisfied over time (see Section 7.1) if it were accounted for separately.
- The entity would measure its progress toward satisfaction of the performance obligation using the same measure of progress for each distinct good or service in the series (see Section 7.1.4).

Property management services (e.g., maintenance, janitorial, leasing, back office), would likely meet both criteria. However, because property management service contracts are usually composed of multiple underlying activities, significant judgment may be required to determine which activities within a services contract would meet both criteria. The following illustrates how a real estate entity might evaluate performance obligations in a property management contract:

Entities that provide property management services will need to determine which activities comprise a series of distinct services.

Illustration 4-2: Identifying performance obligations in a property management contract

Operator R enters into a five-year contract with Owner S to provide property management services for a regional mall. The contract stipulates that Operator R will perform the following functions:

- Manage day-to-day operations of the mall for a fee of 5% of the property's quarterly lease revenues
- Provide leasing services for a fee of $5 per square foot for new lease agreements and $3 per square foot for renewal lease agreements

Operator R evaluates each of the services provided in the contract to identify whether separate performance obligations are present. Operator R also considers the underlying activities that comprise each of the services to determine whether they meet the criteria to be accounted for as a single performance obligation (or whether the service may be several performance obligations).

Operator R also determines that the leasing services are distinct from the management services (i.e., the leasing and management services are not combined to form a single performance obligation). Both services are capable of being distinct and are distinct in the context of the contract because the services are not highly interrelated with one another. The activities that are necessary to perform the day-to-day management of the property are independent of those that are required to negotiate and execute leases with tenants.

Analysis of management services

Operator R first evaluates the activities that must be performed in order to manage the day-to-day operations of the property. Operator R identifies a number of activities that comprise the overall property management services, including maintenance, janitorial, security, landscaping, snow removal, tenant relationship management and back office support. While each of these activities are individually capable of being distinct, Operator R concludes that they are not distinct within the context of the contract because the ultimate objective of the management services is to perform any activities that are necessary to ensure the property is open and operating as intended.

In addition, Operator R determines that the management services represent a series of services that are substantially the same and have the same pattern of transfer to Owner S. While the specific activities that occur each day may vary slightly (e.g., landscaping may occur in the summer while snow removal occurs in the winter), the overall service of property management is substantially the same and has the same pattern of transfer (i.e., transfers daily) over the term of the contract. Further, each distinct service represents a performance obligation that would be satisfied over time (i.e., over the length of the contract, not at a point in time) and has the same measure of progress (e.g., time elapsed), thereby meeting the stated criteria.

Analysis of leasing services

Operator R then evaluates the activities that comprise the leasing services. Operator R identifies several activities that occur throughout the leasing process, including monitoring of upcoming vacancies, new tenant identification, proposal preparation, lease negotiation and document preparation. While certain of these activities may be capable of being distinct (i.e., document preparation could be outsourced), Operator R concludes they are not distinct within the context of the contract because the ultimate objective of the leasing services is to execute individual leases with tenants to maintain the overall occupancy of the property.

Operator R will need to define the leasing performance obligation by determining whether the leasing services are a single performance obligation or a number of performance obligations (i.e., the execution of each lease).

How we see it

As illustrated above, entities will need to first determine which services in the contract are distinct and therefore could represent separate performance obligations. Then, these services will need to be evaluated to determine whether they are substantially the same, have the same pattern of transfer and meet the two criteria discussed above and therefore must be combined into one performance obligation. This evaluation may require significant judgment when a property manager performs activities beyond day-to-day operation of the property.

For example, a retail property manager may be responsible for identifying and executing leases with seasonal tenants, attracting on-site events (e.g., automobile tent sales) or placing advertising or promotional signage around the property. If an entity determines that these activities represent separate performance obligations, and the contract does not specify separate revenues that reflect the standalone selling prices of these services, the base management fee must be allocated to each separate performance obligation (see Chapter 6).

5 Determine the transaction price

The transaction price is the amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer, excluding amounts collected on behalf of third parties. The entitled amount is meant to reflect the amount that the entity has rights to under the present contract and may differ from the contractual price (e.g., if the entity expects or intends to offer a price concession).

The consideration promised in a contract may include fixed or variable amounts. When determining the transaction price, entities must estimate the variable consideration expected to be received. The requirement to estimate variable consideration at contract inception in property management contracts and certain real estate sales agreements may represent a significant change for real estate entities. The transaction price also will include the fair value of any noncash consideration, the effect of a significant financing component (i.e., the time value of money) and the effect of any consideration payable to a customer.

5.1 Variable consideration

The transaction price may vary in amount and timing as a result of discounts, credits, price concessions, incentives or bonuses. In addition, consideration may be contingent on the occurrence or nonoccurrence of a future event or earned as a percentage of an underlying measure (e.g., sales, profits, operating performance).

An entity is required to estimate variable consideration using either the "expected value" approach (i.e., the sum of probability-weighted amounts) or the "most likely amount" approach (i.e., the single most likely outcome), whichever better predicts the amount of consideration to which it will be entitled. That is, the method selected is not meant to be a "free choice." The entity should apply the selected method consistently throughout the contract and update the estimated transaction price at each reporting date.

The Boards indicated[12] that the most likely amount approach may be the better predictor when the entity expects to be entitled to only one of two possible amounts (e.g., a contract in which an entity is entitled to receive all or none of a specified performance bonus but not a portion of that bonus). The following provides an illustration of a real estate entity estimating variable consideration resulting from future profit participation from a sale of real estate.

Illustration 5-1: Estimating variable consideration

Developer D sells a newly constructed commercial property with a cost basis of $1.9 million for $2 million, plus a right to receive 5% of future operating profit from the property for the first year. Developer D has no additional ongoing performance obligations. Developer D determines there are a number of possible outcomes of consideration to be received based on the performance of the property (i.e., the buyer's ability to secure tenants for the entire property at favorable rental rates). The buyer currently has executed leases or letters of intent from prospective tenants for 50% of the property.

Analysis: Developer D has to determine whether the "expected value" or "most likely amount" approach better predicts the variable consideration to be received. Developer D determines that the "expected value" approach is the better predictor of the variable consideration since multiple outcomes are possible.

Based on the buyer's current pre-leasing, Developer D estimates the following future profit participation:

Future profit	Probability
$ 50,000	10%
$ 25,000	70%
$ 0	20%

Assume for purposes of this illustration that the constraint, discussed further below, does not limit the amount that can be included in the transaction price at contract inception (i.e., assume it is probable that a significant revenue reversal will not occur). Using a probability-weighted estimate, Entity A would include $22,500 [($50,000 x 10%) + ($25,000 x 70%) + ($0 x 20%)] in the transaction price associated with this variable consideration. That is, the transaction price would be $2,022,500.

Developer D updates its estimate of the transaction price at the next reporting date, and after considering that the buyer now has letters of intent or executed leases for 75% of the property, determines it is now 75% likely to receive future profit participation of $50,000 and 25% likely to receive $25,000. As a result, Developer D's estimate of variable consideration is updated to $43,750 [($50,000 x 75%) + ($25,000 x 25%)] and additional revenue (i.e., gain on sale) of $21,250 ($2,043,750 — $2,022,500) is recognized.

5.1.1 *Constraining estimates of variable consideration*

The constraint may be applied to variable consideration resulting from the sale of real estate or property management arrangements.

To include variable consideration in the estimated transaction price, the entity has to first conclude that it is "probable" that a significant revenue reversal will not occur when the uncertainties related to the variability are resolved. For purposes of this analysis, "probable" is defined as "the future event or events are likely to occur," consistent with the existing definition in US GAAP. The Boards provided factors that may indicate that revenue is subject to a significant reversal:

- The amount of consideration is highly susceptible to factors outside the entity's influence (e.g., market volatility, judgment or actions of third parties, weather conditions).
- The uncertainty about the amount of consideration is not expected to be resolved for a long period of time.
- The entity's experience (or other evidence) with similar types of contracts is limited or that experience (or other evidence) has limited predictive value.
- The entity has a practice of either offering a broad range of price concessions or changing the payment terms and conditions of similar contracts in similar circumstances.
- The contract has a large number and broad range of possible consideration amounts.

The indicators provided by the Boards are not meant to be an all-inclusive list, and entities may note additional factors that are relevant in their evaluations. In addition, the presence of any one of these indicators does not necessarily mean that it is probable that a change in the estimate of variable consideration will result in a significant revenue reversal.

For example, when determining how the constraint affects the estimate of variable consideration, sellers of real estate and property managers will need to consider a variety of factors, including their experiences with similar arrangements, uncertainties that may exist in the latter years of a long-term contract, and market and other factors that may be outside of their control. All entities will want to make sure they sufficiently and contemporaneously document the reasons (including supporting and non-supporting evidence considered) for their conclusions.

When an entity is unable to conclude that it is probable that a change in the estimate of variable consideration that *would* result in a significant revenue reversal will not occur, the amount of variable consideration is limited. In addition, when an arrangement includes variable consideration, an entity should update both its estimate of the transaction price and its evaluation of the constraint throughout the term of the contract to depict conditions that exist at each reporting date.

The following provides an illustration of the application of the constraint to the estimation of variable consideration:

Illustration 5-2: Evaluating the constraint
Assume the same facts as in Illustration 5-1 except that the buyer of the property has just begun negotiations with prospective tenants and has not signed lease agreements for a significant amount of space. *Analysis:* Developer D uses the "expected value" approach and estimates it is 25% likely to receive future profit participation of $50,000, 50% likely to receive $25,000 and 25% likely to receive none. Using a probability-weighted estimate (prior to considering the constraint), Entity A would include $25,000 [($50,000 x 25%) + ($25,000 x 50%) + ($0 x 25%)] in the transaction price associated with this variable consideration. That is, the transaction price would be $2,025,000. Because the constraint would be set at $25,000 (i.e., the amount for which it's probable that a significant reversal will not occur), the full $25,000 may be recognized.

How we see it

While the Boards noted in the Basis for Conclusions[13] that entities should evaluate the magnitude of a potential revenue reversal relative to total consideration (i.e., fixed and variable), the Boards did not include any quantitative guidance for evaluating the significance of the amount. This will require entities to use significant judgment when making this assessment.

5.2 Price concessions

As discussed in Chapter 3, before determining that a contract is in the scope of the new standard, an entity has to assess whether it is probable that it will collect the consideration to which it expects to be entitled in exchange for transferring goods or services (i.e., the transaction price). When determining the transaction price, an entity must evaluate its intention or willingness at the outset of the contract to accept less than the stated contract price (i.e., offer or accept a price concession). A price concession is a form of variable consideration and, as such, must be considered when estimating the amount an entity expects to receive under the contract.

5.3 Noncash consideration

The new standard specifies that when an entity receives, or expects to receive, noncash consideration (e.g., in the form of goods or services), the fair value of the noncash consideration (measured in accordance with ASC 820, *Fair Value Measurement)* is included in the transaction price. If an entity cannot reasonably estimate the fair value of the noncash consideration, it should measure the noncash consideration indirectly by reference to the estimated standalone selling price of the promised goods or services to the customer.

5.4 Significant financing component

A significant financing component may exist when the receipt of consideration does not match the timing of the transfer of goods or services to the customer (i.e., the consideration is prepaid or is paid well after the services are provided). Entities will not be required to adjust the transaction price for this component if the financing is not significant to the contract. Further, an entity is not required to assess whether the arrangement contains a significant financing component unless the period between the customer's payment and the entity's transfer of the goods or services is greater than one year.

When an entity concludes that a financing component is significant to a contract, it determines the transaction price by discounting the amount of promised consideration. The entity uses the same discount rate that it would use if it were to enter into a separate financing transaction with the customer. The discount rate has to reflect the credit characteristics of the borrower in the arrangement; using a rate explicitly stated in the contract that does not correspond with market terms in a separate financing arrangement would not be acceptable. Subject to certain limitations, the transaction price will need to be accreted when there is a prepayment that is determined to be a significant financing component.

6 Allocate the transaction price to the performance obligations

Once the separate performance obligations are identified and the transaction price has been determined, the standard generally (with some exceptions) requires an entity to allocate the transaction price to the performance obligations in proportion to their standalone selling prices (i.e., on a relative standalone selling price basis).

To allocate the transaction price on a relative selling price basis, an entity must first determine the standalone selling price (i.e., the price at which an entity would sell a good or service on a standalone basis at contract inception) for each performance obligation. Generally, the observable price of a good or service sold separately provides the best evidence of standalone selling price. However, in many situations, standalone selling prices will not be readily observable. In those cases, the entity has to estimate the standalone selling price.

The standard discusses three estimation methods: (1) an adjusted market assessment approach, (2) an expected cost plus a margin approach and (3) a residual approach, but these are not the only estimation methods permitted. The standard allows an entity to use any reasonable estimation method (or combination of approaches), as long as it is consistent with the notion of a standalone selling price, maximizes the use of observable inputs and is applied on a consistent basis for similar goods and services and customers.

Under ASC 360-20, an entity that sold an asset and retained a management contract at a below market rate was required to use a prevailing rate to "impute" compensation for the management services. The new standard requires the seller to separately estimate the standalone selling prices of the real estate asset and the management services and allocate total consideration received in the contract on a relative basis.

How we see it

Entities that regularly provide third-party management services should already be equipped to make these estimates. However, entities that infrequently provide these services on a standalone basis, but elect to do so in connection with the sale of a real estate asset, may need to develop new processes to estimate the standalone selling price and retain sufficient documentation to support the reasonableness of their calculations.

Under the relative standalone selling price method, once an entity determines the standalone selling price for the performance obligations in an arrangement, the entity allocates the transaction price to those performance obligations based on the proportion of the standalone selling price of each performance obligation to the sum of the standalone selling prices of all of the performance obligations in the arrangement.

6.1 Exceptions to the relative standalone selling price method

The standard requires an entity to use the relative standalone selling price method to allocate the transaction price except in two circumstances. The first exception requires an entity to only allocate a discount in a contract to the specific goods or services to which it relates rather than proportionately to all of the separate performance obligations. To apply this exception, the entity must meet certain criteria[14] that are unlikely to be satisfied in most types of real estate contracts.

Property managers may allocate variable consideration to the period in which the related services were performed, if certain criteria are met.

The second exception requires variable consideration to be allocated entirely to a specific part of a contract, such as one or more (but not all) performance obligations or one or more (but not all) distinct goods or services promised in a series of distinct goods or services that forms part of a single performance obligation, if both of the following criteria are met:

- The terms of a variable payment relate specifically to the entity's efforts to satisfy the performance obligation or transfer the distinct good or service (or to a specific outcome from satisfying the performance obligation or transferring the distinct good or service).
- Allocating the variable amount of consideration entirely to the performance obligation or the distinct good or service is consistent with the standard's overall objective of allocating revenue in an amount that depicts the amount of consideration to which the entity expects to be entitled in exchange for transferring the promised goods or services to the customer.

In the Basis for Conclusions[15], the Boards discussed an example of a contract to provide hotel management services for one year (i.e., a single performance obligation that is a series of distinct goods or services that are substantially the same and that have the same pattern of transfer to the customer) for which the consideration is variable and based on the operating results of the property. In this example, the variable consideration (e.g., management fees) that relates specifically to an entity's efforts to transfer the services for a certain period within a contract (e.g., a month, a quarter), which are distinct from the services provided in other periods within the contract, are allocated to those distinct periods instead of being spread over the entire performance obligation.

The following illustration depicts the application of this exception by a property manager that determines that the services it is providing represent a single performance obligation:

Illustration 6-1: Property management fees

On 1 January 2018, Operator E enters into a one-year contract with a shopping center owner to provide property management services. Operator E receives a 5% management fee based on the shopping center's quarterly lease revenues, as defined in the agreement. This is a form of variable consideration.

Analysis: Operator E concludes that the management services represent a single performance obligation recognized over time because it determines that it is providing a series of distinct services that are substantially the same and have the same pattern of transfer (i.e., the services transfer to the customer over time and Operator E uses time elapsed to measure progress).

Operator E determines that the transaction price is allocated to each individual quarter because the quarterly management fee relates specifically to the entity's efforts to satisfy the performance obligation during each quarter, and the allocation is consistent with the objective of allocating an amount that depicts the consideration to which the entity expects to be entitled in exchange for transferring the promised services.

For example, if the revenue generated by the property was $2.0 million in the first quarter of 2018, Operator E would recognize revenue of $100,000 ($2.0 million x 5%) at 31 March 2018.

How we see it

Property managers will need to evaluate their contracts to determine whether the exception for allocating variable consideration will apply to contracts that are based on a percentage of the operating results of the underlying property, including contracts that an entity concludes contain only one performance obligation. Some entities will find that applying the exception and therefore recognizing management fees that relate specifically to the entity's efforts to transfer the service in a distinct period is relatively straightforward. However, certain contracts may contain multiple revenue streams that relate to a single performance obligation. For example, in addition to a variable fee, a contract could also include a fixed fee that would generally be recognized over the term of the contract using the entity's selected measure of progress (e.g., time elapsed).

Some property management contracts contain incentive fees that are based on the performance of the underlying property over a different period than the base management fees (e.g., annually versus quarterly). The following illustration depicts the complexity that entities may face and the significant judgment that may be required when recognizing revenues from these arrangements:

Illustration 6-2: Incentive-based fees

Assume the same facts as in Illustration 6-1 except that Operator E also receives a fee of 2% of the property's annual net operating income (NOI). The shopping center has stabilized occupancy, and no significant tenant vacancies are expected during the term of the agreement. The shopping center is located in a region that periodically receives significant snow accumulation from December through May, which results in extensive snow removal costs in certain years.

Analysis: Operator E evaluates variable consideration in the form of the incentive fee. While most of the property's operating costs are predictable, Operator E determines that the variability of snow removal costs can significantly affect NOI of the property. Because of the potential variability in NOI, Operator E uses the "expected value" approach and concludes that there is an equal (33.3%) likelihood of the property generating NOI of \$1.2 million, \$1.5 million and \$1.8 million. Based on this approach, Operator E initially estimates that it will earn \$30,000 [.02 x ((\$1.2 million x 33.3%) + (\$1.5 million x 33.3%) + (\$1.8 million x 33.3%))] from the incentive fee.

In this scenario, the incentive fee is based on the annual NOI of the property; however, Operator E must determine whether any of the variable consideration should be recognized in the distinct period (i.e., quarter) when the underlying services were performed. Operator E considers whether it is probable that a significant reversal in the incentive fees will not occur prior to the end of the annual period. This assessment requires consideration of the unique facts and circumstances of the arrangement.

Assume Operator E cannot conclude at contract inception that a significant reversal of revenue from the incentive fees is probable to not occur because NOI could be significantly affected by snow removal costs. Snow removal costs result from factors that are beyond its influence (e.g., future weather patterns). Therefore, Operator E applies the constraint to the annual incentive fee and only includes in the allocable transaction price the fees that would be earned from the estimated outcome of NOI for which it is probable that a significant reversal in incentive fees will not occur, or \$24,000 (\$1,200,000 x .02). Operator E would subsequently update its estimate of the transaction price (and its evaluation of the constraint on variable consideration) at each reporting period.

7 Satisfaction of performance obligations

Under the new standard, an entity recognizes revenue when (or as) it satisfies a performance obligation by transferring a promised good or service to a customer. A good or service is considered to be transferred when the customer obtains control. Control of the good or service refers to the ability to direct its use and to obtain substantially all of its remaining benefits (i.e., the right to cash inflows or reduction of cash outflows generated by the good or service). Control also means the ability to prevent other entities from directing the use of and receiving the benefit from a good or service.

The standard indicates that an entity has to determine at contract inception whether it will transfer control of a promised good or service over time. If an entity does not satisfy a performance obligation over time, the performance obligation is satisfied at a point in time. These concepts are explored further in the following sections.

7.1 Performance obligations satisfied over time

An entity transfers control of a good or service over time (rather than at a point in time) when any of the following criteria are met:

- The customer simultaneously receives and consumes the benefits provided by the entity's performance as the entity performs.
- The entity's performance creates or enhances an asset (e.g., work in process) that the customer controls as the asset is created or enhanced.
- The entity's performance does not create an asset with an alternative use to the entity, and the entity has an enforceable right to payment for performance completed to date.

7.1.1 Customer simultaneously receives and consumes benefits as the entity performs

In some instances, the assessment of whether a customer simultaneously receives and consumes the benefits of an entity's performance will be straightforward (e.g., daily cleaning services for which the simultaneous receipt and consumption by the customer is readily evident). However, in circumstances in which simultaneous receipt and consumption is less evident, the standard clarifies that revenue recognition over time is appropriate if "an entity determines that another entity would not need to substantially reperform the work that the entity completed to date if that other entity were to fulfill the remaining performance obligation to the customer." In making this determination, entities will not consider practical or contractual limitations that limit transfer of the remaining performance obligation.

Real estate entities that provide property management and other services will need to carefully evaluate their contracts to determine whether the services performed are simultaneously received and consumed by the customer (i.e., real estate owner). It may be apparent that services such as routine and recurring maintenance, cleaning and "back-office" functions meet the criteria for recognition of revenue over time. However, determining whether other services, such as leasing or development activities, are simultaneously received and consumed by the real estate owner, or that another entity would not need to substantially reperform activities completed to date, will require significant judgment. These judgments will also be affected by an entity's conclusion about the number of performance obligations (i.e., single or multiple) in the contract (see Chapter 4).

How we see it

As part of its redeliberations of the proposed leases standard, the FASB tentatively decided that services included in leasing contracts (e.g., CAM) may represent non-lease components that will be recognized in accordance with the new revenue standard. Real estate lessors should follow developments in this area as these decisions[6] are tentative and may change before the Boards complete the leases project. Real estate entities may need to consider whether these services are simultaneously received and consumed by their tenants to determine the appropriate recognition method to apply.

7.1.2 Customer controls asset as it is created or enhanced

The second criterion to determine that control of a good or service is transferred over time is that the customer controls the asset as it is being created or enhanced. For example, many construction contracts also contain clauses indicating that the customer owns any work-in-progress as the contracted item is being built.

We plan to discuss the application of this criterion to construction contracts in our upcoming Technical Line, *Revenue recognition — engineering and construction services*.

7.1.3 Asset with no alternative use and right to payment

The laws or legal precedent of a jurisdiction may affect an entity's conclusion of whether a present right to payment is enforceable.

The last criterion to determine that control is transferred over time has the following two requirements that must both be met:

- The entity's performance does not create an asset with alternative use to the entity.
- The entity has an enforceable right to payment for performance completed to date.

Asset with no alternative use

An asset created by an entity has no alternative use if the entity is either restricted contractually or practically from readily directing the asset to another use (e.g., selling to a different customer). An entity has to make this assessment at contract inception and does not update its assessment unless the parties approve a contract modification that substantively changes the performance obligation.

The Boards specified that a contractual restriction on an entity's ability to direct an asset for another use must be substantive (i.e., a buyer could enforce its rights to the promised asset if the entity sought to sell the unit to a different buyer). In contrast, a contractual restriction may not be substantive if the entity could instead sell a different unit to the buyer without breaching the contract or incurring significant additional costs.

Further, a practical limitation exists if an entity would incur significant economic losses to direct the unit for another use. A significant economic loss may arise when significant costs are incurred to redesign or modify a unit or when the unit is sold at a significantly reduced price.

Enforceable right to payment for performance completed to date

An entity has an enforceable right to payment for performance completed to date if, at any time during the contract term, the entity would be entitled to an amount that at least compensates it for work already performed. This right to payment must be present, even in instances in which the buyer can terminate the contract for reasons other than the entity's failure to perform as promised.

To meet this criterion, the amount to which an entity is entitled must approximate the selling price of the goods or services transferred to date, including a reasonable profit margin. Compensation for a reasonable profit margin doesn't have to equal the profit margin expected for complete fulfillment of the contract but must at least reflect either:

- A proportion of the expected profit margin in the contract that reasonably reflects the extent of the entity's performance under the contract before termination
- A reasonable return on the entity's cost of capital for similar contracts

The standard clarifies[16] that including a payment schedule in a contract does not, by itself, indicate that the entity has the right to payment for performance completed to date. The entity has to examine information that may contradict the payment schedule and may represent the entity's actual right to payment for performance completed to date (e.g., an entity's legal right to continue to perform and enforce payment by the buyer if a contract is terminated without cause).

7.1.4 *Measuring progress*

When a performance obligation is satisfied over time, the standard provides two methods for measuring progress under the contract: an input method or an output method. While the standard requires an entity to continuously update its estimates related to the measure of progress selected, it does not allow a change in methods. A performance obligation is accounted for under the method the entity selects (i.e., either the input or output method) until it has been fully satisfied.

Under an input method, revenue is recognized "on the basis of the entity's efforts or inputs to satisfy the performance obligation … relative to the total expected inputs to the satisfaction of that performance obligation." The standard includes resources consumed, labor hours expended, costs incurred and time elapsed as possible input methods. The standard also notes it may be appropriate to recognize evenly expended inputs on a straight-line basis.

Under an output method, revenue is recognized "on the basis of direct measurements of the value to the customer of the goods or services transferred to date relative to the remaining goods or services promised under the contract." Measurements of output may include surveys of performance completed to date, appraisals of results achieved, milestones reached and time elapsed.

The standard does not say either method is preferable, but it says an entity should apply the method it selects to similar arrangements in similar circumstances. If an entity does not have a reasonable basis to measure its progress, the Boards decided that too much uncertainty would exist and, therefore, revenue should not be recognized until progress can be measured.

7.2 Control transferred at a point in time

Control is transferred at a point in time if none of the criteria for a good or service to be transferred over time is met. In many situations, the determination of *when* that point in time occurs is relatively straightforward. However, in some circumstances, this determination is more complex.

The Boards provided indicators for entities to consider when determining whether control of a promised asset has been transferred:

- The entity has a present right to payment for the asset.
- The customer has legal title to the asset.
- The entity has transferred physical possession of the asset.

- The customer has the significant risks and rewards of ownership of the asset.
- The customer has accepted the asset.

None of these indicators are meant to be individually determinative. The Boards also clarified that the indicators are not meant to be a checklist, and not all of them must be present to determine that the customer has gained control. An entity has to consider all relevant facts and circumstances to determine whether control has transferred. For example, the presence of a repurchase option in a contract may indicate that the customer has not obtained control of the asset, even though it has physical possession.

How we see it

Entities that sell a real estate asset will generally be able to recognize revenue and associated profit when control of the property transfers (i.e., at a point in time) presuming all other requirements are met. In most real estate transactions, control will transfer when the buyer obtains legal title and physical possession of the asset. Sellers of real estate are no longer required to consider the initial and continuing investment and continuing involvement criteria in ASC 360-20, although they must conclude on the collectibility of the transaction price. Today, real estate sales are often structured to meet the restrictive criteria in ASC 360-20. For example, the criteria create a disincentive for selling a property with 100% seller financing.

8 Other measurement and recognition topics

The new revenue standard includes guidance for licenses and warranties that may result in changes in practice for certain real estate entities. The FASB also issued consequential amendments to ASC 970, *Real Estate — General,* which is commonly applied to real estate transactions.

8.1 Licenses of intellectual property

The standard provides guidance for recognizing revenue from distinct licenses of intellectual property, which includes licenses granted by hospitality entities, that differs slightly from the overall model.

When the license is the only promised item in the contract, the specific license guidance is applicable to that license. However, licenses of intellectual property are frequently included in multiple-element arrangements with promises for additional goods and services that may be explicit or implicit. For example, a hospitality entity may license its brand for use by a hotel owner and also provide marketing and reservation management services. If an entity determines that a license is not distinct from other promised goods or services in the contract, the promise to grant a license and (some or all) of the other promised goods or services should be accounted for as a single performance obligation and the specific guidance for recognizing revenue for distinct licenses is not applied.

For distinct licenses, entities need to determine whether they have provided their customers with either (1) the right to access the entity's intellectual property as it exists throughout the license period, including any changes to that intellectual property (i.e., right to access) or (2) the right to use the entity's intellectual property as it exists at the point in time when the license is granted (i.e., right to use). We generally expect that right-to-use licenses will be uncommon in the real estate industry; thus, the remainder of our discussion focuses on licenses that provide a right to access.

An entity provides the customer a right to access its intellectual property when it is required to undertake activities that significantly affect the licensed intellectual property and the customer is therefore exposed to positive or negative effects resulting from those changes. These activities can be part of an entity's ongoing and ordinary activities and customary business practices (i.e., they do not have to be activities the entity is undertaking specifically as a result of the contract with the customer).

License agreements between hospitality entities and hotel owners generally provide the hotel owner with the right to access the license. Hospitality entities regularly undertake activities that may positively or negatively affect the license and associated brand, rather than directly transfer other goods and services to the customer that should be considered separate performance obligations. Those activities may include analyzing the customer's changing preferences and implementing product and service improvements, pricing strategies, marketing campaigns and operational efficiencies to support the brand name.

The Boards concluded that a license that provides an entity with the right to access intellectual property is satisfied over time "because the customer simultaneously receives and consumes the benefit from the entity's performance of providing access," including the related activities undertaken by entity.

The standard also provides an exception for determining the transaction price when the arrangement includes sales- or usage-based royalties on licenses of intellectual property. The standard requires that this particular type of variable consideration not be included in the estimate of variable consideration, as discussed in Section 5.1. Instead, these amounts are recognized only upon the later of when the subsequent sale or usage occurs or the satisfaction (in whole or in part) of the performance obligation to which some or all of the sales- or usage-based royalty has been allocated.

8.2 Warranties

Warranties are commonly included in arrangements to sell goods or services, whether explicitly stated or implied based on the entity's customary business practices. The new standard identifies two types of warranties.

Warranties that promise the customer that the delivered product is as specified in the contract are called "assurance-type warranties." The Boards concluded that these warranties do not provide an additional good or service to the customer (i.e., they are not separate performance obligations). By providing this type of warranty, the selling entity has effectively provided a quality guarantee. For example, homebuilders and developers of residential condominiums often provide various warranties against construction defects and the failure of certain operating systems for a period of time. Under the standard, the estimated cost of satisfying these warranties is accrued in accordance with the current guidance in ASC 460-10 on guarantees.

Warranties that provide a service to the customer in addition to assurance that the delivered product is as specified in the contract are called "service-type warranties." If the customer has the option to purchase the warranty separately or if the warranty provides a service to the customer beyond fixing defects that existed at the time of sale, the entity is providing a service-type warranty. The Boards determined that this type of warranty represents a distinct service and is a separate performance obligation. Therefore, the entity allocates a portion of the transaction price to the warranty based on the estimated standalone selling price of the warranty. The entity then recognizes revenue allocated to the warranty over the period the warranty service is provided. Service-type warranties are infrequent in the real estate industry.

8.3 Real estate project costs

Today's guidance in ASC 970, *Real Estate — General*, addresses the costs incurred to sell real estate projects (e.g., model units, advertising, sales overhead) and rent real estate projects. It also prescribes the accounting for amenities such as golf courses, clubhouses, swimming pools and parking facilities. The FASB amended the guidance for costs incurred to *sell* real estate projects, and they will be accounted for under the new guidance for costs incurred in obtaining a contract that the FASB added in ASC 340-40, *Other Assets and Deferred Costs — Contracts with Customers*. Costs incurred to *rent* real estate projects and the accounting for amenities will continue to follow the guidance in ASC 970.

The new standard amends the guidance for costs incurred to sell real estate projects.

Under ASC 340-40, incremental costs of obtaining a contract (i.e., costs that would not have been incurred if the contract had not been obtained) are recognized as an asset if the entity expects to recover them. Recovery can be direct (i.e., through reimbursement under the contract) or indirect (i.e., through the margin inherent in the contract). As a practical expedient, the standard permits an entity to immediately expense contract acquisition costs when the asset that would have resulted from capitalizing such costs would have been amortized in one year or less.

The standard cites sales commissions as an example of an incremental cost that may require capitalization. For example, sales commissions that are directly related to sales achieved during a time period would likely represent incremental costs that would require capitalization. In contrast, some bonuses and other compensation that is based on other quantitative or qualitative metrics (e.g., profitability, EPS, performance evaluations) likely do not meet the criteria for capitalization because they are not directly related to obtaining a contract. In addition, costs incurred for model units, advertising and sales overhead may not qualify to be capitalized under ASC 340-40 because they are not incremental costs of obtaining a contract.

ASC 340-40 also includes guidance for recognizing costs incurred in fulfilling a contract that are not in the scope of another topic. For most real estate entities, costs incurred in fulfilling a contract (e.g., the costs to construct a building such as materials and labor) are already within the scope of another topic (e.g., ASC 360, *Plant, Property, and Equipment*) and therefore are excluded from the scope of ASC 340-40. ASC 340-40 also provides guidance on amortization and impairment.

Next steps

Real estate entities should perform a preliminary assessment on how they will be affected as soon as possible so they can determine how to prepare to implement the new standard. While the effect on entities will vary, some may face significant changes in revenue recognition. All entities will need to evaluate the requirements of the new standard and make sure they have processes and systems in place to collect the necessary information to implement the standard, even if their accounting results won't change significantly or at all.

Real estate entities also may want to monitor the discussions of the Boards, SEC staff, the TRG, and hospitality and time-shares industry working groups formed by the AICPA to discuss interpretations and application of the new standard to common transactions. These working groups may address issues that affect all real estate entities.

Public entities also should consider how they communicate the changes caused by the new standard with investors and other stakeholders, including their plan for disclosures about the effects of new accounting standards discussed in SEC Staff Accounting Bulletin (SAB) Topic 11.M. The SEC staff has indicated it expects an entity's disclosures to evolve in each reporting period as more information about the effects of the new standard becomes available, and the entity should disclose its transition method once it selects it.

Endnotes:

[1] The FASB defined public entity for purposes of this standard more broadly than just entities that have publicly traded equity or debt. The standard defines a public entity as one of the following: (1) a public business entity (PBE), (2) a not-for-profit entity that has issued, or is a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market, or (3) an employee benefit plan that files or furnishes financial statements with the SEC.

FASB and IASB to Propose Amendments to Principal-Agent Guidance in Revenue Standard

At their June 2015 joint meeting, the FASB and IASB decided to propose amendments to their respective revenue recognition standards to clarify how the principal versus agent guidance should be applied for determining whether revenue should be presented gross (as a principal) or net (as an agent).[1]

Key Facts

- This will be the FASB's **third exposure draft** to improve the understandability and operability of the revenue standard since its issuance in May 2014, although this will be the first proposed amendment to the principal-agent guidance. In addition, the FASB issued an exposure draft proposing to defer the standard's effective date by one year.[2]
- The FASB's proposal will not amend principal-agent guidance in existing U.S. GAAP.[3]
- The IASB intends to issue a single exposure draft containing all of its proposed amendments to its standard.

Key Impact

- The **Boards'** decisions aim to minimize diversity in practice while maintaining substantial convergence between U.S. GAAP and IFRS.

Gross versus Net Revenue Reporting

Gross versus net revenue reporting has been a complex issue for years. Arrangements that involve multiple parties providing goods or services to customers require a reporting entity to exercise significant judgment in evaluating whether it is a principal (presenting revenue gross) or an agent (presenting revenue net) in the transaction. Current U.S. GAAP includes indicators to be evaluated in making this determination. Applying these indicators has often been challenging for preparers, particularly in an evolving economic environment that now includes virtual goods and services.

The revenue standard supersedes existing principal-agent guidance and requires an entity to determine if the nature of its performance obligation is to provide specified goods or services to the customer (the entity is a principal) or to arrange for another party to provide those goods or services (the entity is an agent). The standard specifies that an entity is a principal if it controls the goods or services before transferring them to the customer. The standard also provides indicators of when an entity is acting as an agent.

Principal versus Agent Considerations

Questions have arisen about how the control principle in the implementation guidance interacts with the agency indicators. Some question whether the control principle should be applied independently of the indicators (e.g., based on how control is evaluated elsewhere in the revenue standard) or whether the agency indicators are part of the control assessment. Some have suggested that the indicators are confusing because they do not directly answer the question of whether an entity controls goods or services before transfer. Also, some have questioned whether, and if so how, some indicators should be weighted more heavily than others, particularly when indicators provide contradictory evidence.

Determining whether an entity controls goods or services is particularly difficult in contracts for the transfer of a nonphysical item (e.g., a software developer sells its app through another party's website) or the provision of some services (e.g., an entity arranges for its advertising to be placed on another party's website through a virtual advertising exchange). In those situations it may not be clear how the control principle interacts with the agency indicators. It also may not be clear which party is responsible for fulfilling the contract, what constitutes inventory risk, how to identify an entity's promise, or how to identify the customer.

The Boards decided to retain the control principle as the basis for determining whether an entity is a principal or an agent. To facilitate this determination, the Boards decided to propose four amendments to the revenue standard.

Entities Must Identify the Nature of the Specified Good or Service Provided to the Customer. This could include a right to goods or services (e.g., an airline ticket) or a bundle of goods or services that are not distinct from each other. This amendment's objective is to more clearly link the unit of account in the principal-agent analysis with the guidance on identifying performance obligations.

Clarify How an Entity Can Control a Service. The standard would state that an entity that is a principal controls a right to a service to be performed by a third party, which gives the entity the ability to direct the third party on the entity's behalf. For example, an entity enters into a maintenance services contract with a customer and engages a third party to perform those services under the entity's direction.

Re-frame Indicators to Provide Evidence of When an Entity Controls a Specified Good or Service. These indicators would be provided instead of indicators of when the entity is an agent. Although the amendment would not provide guidance on how to weight the indicators, it would clarify that certain indicators may be more or less persuasive based on facts and circumstances. The indicators are not intended to be all-inclusive.

Revise Examples. Some examples in the revenue standard would be revised and others would be added, specifically those focused on linking the principal-agent conclusion to the notion of control and illustrating how the indicators should be used to support the evaluation of control.

The joint staff paper included an example in which a retailer does not obtain title to its inventory, except momentarily at the point of sale (referred to as flash title). The Boards discussed the example and agreed that the retailer controls the products before they are transferred to the end customer and is therefore the principal in the transaction. However, the Boards expressed reluctance to include the example in the proposed amendments as they believe contracts are often unique, and changes in facts and circumstances could result in a different conclusion.

IASB Actions on Principal versus Agent Considerations

The IASB reaffirmed its prior decision to add examples to IFRS 15 to clarify the application of the principal versus agent guidance.[4] The IASB also agreed with the FASB's clarifications to the principal versus agent guidance and will propose similar amendments to IFRS 15.

Estimating Gross Revenue

In some arrangements in which another party is involved in making an entity's goods or services available to a customer, the entity may be the principal but does not know the price paid by the end customer to the other party. For example, an app developer sells its products through a social media intermediary. The intermediary pays the app developer a fixed amount for each product sold. However, the intermediary does not report to the app developer the amounts charged to the end customers.

In current practice, some companies report the amount received from the other party as revenue. Other companies report the estimated amount charged to the end customer as revenue and the difference between the estimated amount and the amount received as a cost.

The FASB directed the staff to perform additional outreach about whether an entity applying the amended principal versus agent guidance could reach a conclusion that it was a principal in a transaction with an end customer when the entity uses an intermediary and does not know the price (or will not know the price) charged by the intermediary (i.e., the intermediary is not the entity's customer). Once it has these results, the FASB will decide whether additional amendments to the standard are needed to achieve consistency in practice.

[4] IFRS 15, Revenue from Contracts with Customers.

IASB Actions on Estimating the Transaction Price

The IASB decided not to amend its standard to estimate the transaction price as a principal because the issue only affects a limited population of contracts. Feedback from constituents indicated that they were generally able to apply judgment and reach reasonable conclusions.

Next Steps

The FASB and IASB will issue separate exposure drafts on principal versus agent considerations with clarifications and additional examples. Prior to issuing its exposure draft, the FASB will discuss how to estimate gross revenue at a future Board meeting. The FASB and IASB expect to have joint redeliberations on their respective exposure drafts on principal-agent guidance.

FASB Balloons Balance Sheet with New Lease Accounting Standard

The FASB's new lease accounting standard ushers in a new era in which lessees will recognize most leases on-balance sheet.[1] This will increase their reported assets and liabilities – in some cases very significantly. Lessor accounting remains substantially similar to current U.S. GAAP but with some important changes.

Well before the new standard becomes effective, lessees and lessors will need to assess how widespread its effects will be so they can plan for necessary business and process changes.

Effective Dates and Transition

	The entity is ...	
Question	**... a public business entity[2]**	**... any other type of entity**
When does Topic 842 take effect?	Annual and interim periods in fiscal years beginning after **12/15/2018**	• Annual periods beginning after **12/15/2019** • Interim periods in fiscal years beginning after **12/15/2020**
Can entities early adopt?	Yes, all entities can adopt Topic 842 immediately	
What is the transition method?	Modified retrospective, with elective reliefs, which requires application of the new guidance for all periods presented	

---

[1] FASB ASC Topic 842, Leases, issued February 25, 2016. Topic 842 replaces ASC Topic 840, Leases (current U.S. GAAP). Both are available at www.fasb.org.

[2] This includes (a) not-for-profit entities that have issued or are conduit bond obligors for securities that are traded, listed, or quoted on an exchange or an over-the-counter market and (b) employee benefit plans that file or furnish financial statements with or to the U.S. Securities and Exchange Commission.

Modified Retrospective Transition

Lessees and lessors will apply the new guidance at the beginning of the earliest period presented in the financial statements in which they first apply the new standard. This may significantly change comparative period balance sheets from what was previously reported for many lessees.

The modified retrospective approach includes elective reliefs that all lessees and lessors may apply in transition. These include:

Must be elected as a package	• At the adoption date, the entity may elect not to reassess: – Whether expired or existing contracts contain leases under the new definition of a lease; – Lease classification for expired or existing leases; and – Whether previously capitalized initial direct costs would qualify for capitalization under the new standard
May be elected individually or with the other practical expedients	• The entity may use hindsight in determining the lease term and in assessing impairment of right-of-use (ROU) assets

An entity that elects to apply all of the practical expedients will, in effect, continue to account for leases that commence before the effective date in accordance with current U.S. GAAP unless the lease is modified (or remeasured) on or after the effective date, except that lessees are required to:

- Recognize a ROU asset and a lease liability for all operating leases at each reporting date based on the present value of the remaining minimum rental payments under current U.S. GAAP; and
- Apply the new requirements with respect to changes in estimates that affect lease accounting during the lease term (i.e., reassessments as discussed further below) beginning on the effective date.

The new standard also provides specific transition guidance for sale-leaseback transactions, build-to-suit leases, leveraged leases, and amounts previously recognized for leases in business combinations. This guidance will, for example, conform the determination of whether a lessee in a build-to-suit lease arrangement will recognize the entire underlying asset on its balance sheet to the requirements in the new standard.

Key Impacts to Lease Accounting

Lessees Will Recognize Most Leases on-Balance Sheet. All leases, including operating leases, will be recognized on-balance sheet via a *ROU asset* and *lease liability*, unless the lease is a short-term lease (i.e., one with an accounting lease term of *12 months or less*). This may require a substantial effort to identify all of the entity's leases and accumulate the lease data necessary to apply the new guidance. Lease classification will determine whether a lease is reported as a financing transaction in the income statement and statement of cash flows.

New Judgments Are Required to Identify a Lease. The definition of a lease is the new test for whether a transaction is on- or off-balance sheet. While the new definition is similar to current U.S. GAAP and will yield similar results in most cases, some arrangements that currently contain a lease no longer will. In addition, a new requirement to determine whether the customer has the right to direct the use of the identified asset will require significant new judgments.

Lessee Reassessments Will Require New Processes and Controls. Lessees will be required to reassess, and potentially change, aspects of their accounting for leases (e.g., assessments of the lease term, lessee purchase options, and lease classification) during the lease term, and remeasure lease assets and lease liabilities even if there is not a lease modification.

Accounting for Executory Costs. All (or a portion of) fixed payments by the lessee to cover lessor costs related to ownership of the underlying asset (e.g., property taxes or insurance – also referred to as executory costs) that do not represent payments for a good or service will be considered *lease payments* and reflected in the measurement of lease assets and lease liabilities by lessees (and in the lessor's net investment in the lease for sales-type and direct financing leases). Under current U.S. GAAP, payments for executory costs, including those to reimburse lessors for costs related to the underlying asset, are excluded from *minimum lease payments* and, therefore, from lease accounting.

Collectibility Considerations and Variable Payments Will Affect Lessors' Accounting in New Ways. While the new lessor accounting guidance is generally consistent with current U.S. GAAP, the new standard changes how lessors account for leases in which collectibility of the lease payments is uncertain. Lessors may now have to recognize some lease payments received as liabilities in those cases. The new standard also may affect leases for which there are significant variable payments because they no longer will be classified as operating leases solely due to the extent of variable payments. This may result in a negative implicit rate for the lease or loss recognition at lease commencement.

Fewer Lease Origination Costs Will Be Capitalizable. The new standard has a narrow definition of *initial direct costs* that will require lessors and lessees to recognize more lease origination costs as expenses when incurred. Only incremental costs incurred as a result of the lease being executed (e.g., commissions) meet the new definition and can be capitalized. Accordingly, costs incurred to negotiate and arrange a lease that are *not incurred only as a result of executing the lease* (e.g., legal fees and certain internal employee costs) – some of which are capitalized under current U.S. GAAP – will now be expensed when incurred. This could particularly affect lessors that incur significant costs in the lease origination process.

Expanded Quantitative and Qualitative Disclosures. The new standard requires lessees and lessors to disclose more qualitative and quantitative information about their leases than current U.S. GAAP does. Entities should consider whether they have appropriate systems, processes, and internal controls to capture completely and accurately the lease data necessary to provide those expanded disclosures.

Significant Changes to Sale-Leaseback Accounting Will Affect Seller-Lessees and Buyer-Lessors. The new standard essentially eliminates sale-leaseback accounting as an off-balance sheet financing proposition. This is because seller-lessees will recognize a ROU asset and lease liability in place of the underlying asset (and any asset financing repaid with the sale proceeds). In addition, under the new guidance:

- There likely will be fewer failed sales in sale-leaseback transactions involving real estate, but there may be more failed sales in equipment sale-leaseback transactions.
- Buyer-lessors will have to consider the same sale guidance in the new revenue recognition standard as seller-lessees to determine whether they have purchased the underlying asset, which may result in a failed purchase.[3] A buyer-lessor accounts for a failed purchase as a financing arrangement (i.e., a loan to the seller-lessee) rather than the acquisition of an asset and a lease.
- Seller-lessees will recognize the entire gain from the sale of the underlying asset (i.e., the difference between the selling price and the carrying amount of the underlying asset) at the time the sale is recognized rather than over the leaseback term.

Current Build-to-Suit Lease Guidance Replaced. The new guidance on determining when a lessee controls an underlying asset before lease commencement probably will result in fewer transactions where the lessee is considered the accounting owner of an asset during the construction period than current U.S. GAAP.[4] This means that fewer build-to-suit lease arrangements will become subject to the sale-leaseback accounting requirements. The changes to the sale-leaseback guidance also make it easier for lessees to remove real estate assets recognized during the construction period from their books. Finally, the transition provisions of the new standard will permit many entities to derecognize *build-to-suit* assets and liabilities that have remained on the balance sheet after the end of the construction period under current U.S. GAAP.

Tell Me More

This section provides more information about some of the key differences between the new lease accounting standard and current U.S. GAAP.

A lessee will recognize a ROU asset and a lease liability on its balance sheet for most leases, which is a significant change from current U.S. GAAP.

Most Leases on-Balance Sheet for Lessees

Under the new standard, a lessee will recognize a (financial) lease liability and a (nonfinancial) ROU asset for all leases, including operating leases, with a term greater than 12 months on its balance sheet.[5] This effectively means that lessees will appear more asset-rich, but also more heavily leveraged. On-balance sheet recognition for most leases shifts the critical accounting determination from lease classification under current U.S. GAAP to whether a contract is, or contains, a lease under the new standard.

The current accounting model for lessees distinguishes between capital leases, which are recognized on-balance sheet, and operating leases, which are not. The lease classification distinction continues to exist in the new standard, but it now affects how lessees measure and present lease expense and cash flows – not whether the lease is on- or off-balance sheet.

Changes Introduced by Topic 842			
Lease Classification	**Balance Sheet**	**Income Statement**	**Statement of Cash Flows**
Finance Leases	✔ Similar to capital lease accounting under current U.S. GAAP		
Operating Leases	⚠ **Recognized on-balance sheet under Topic 842**	✔ Similar to operating lease accounting under current U.S. GAAP	

KPMG Observation

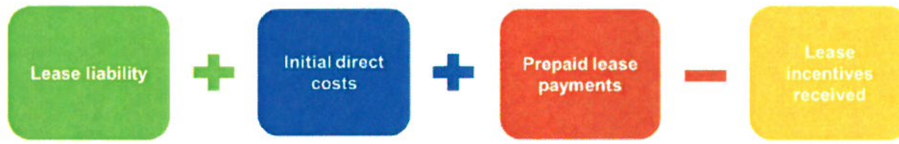
Recognizing ROU assets and lease liabilities for all leases other than short-term leases will enhance balance sheet transparency. Currently, many analysts adjust financial statements for off-balance sheet lease obligations. After the new requirements are applied, analysts will be able to see an entity's own assessment of its lease liabilities, calculated using a methodology that all entities reporting under U.S. GAAP must follow. However, because analysts do not all evaluate leases in the same way or for the same reasons, they may continue to make adjustments to lessee financial statements after the new standard becomes effective.

[5] Lessees may *elect*, by class of underlying asset, not to recognize short-term leases on the balance sheet and instead account for them in the same manner as current operating leases.

Measurement of the Lease Liability and the ROU Asset

Under the new standard, the lease liability at lease commencement and throughout the lease term (for both finance and operating leases) equals the present value (PV) of the unpaid *lease payments*, discounted at the *rate implicit in the lease* (if known) or the lessee's *incremental borrowing rate*. *Lease payments* exclude contingent payments other than in-substance fixed payments.

The ROU asset (for finance and operating leases) is initially measured as:



Subsequent measurement of the ROU asset (i.e., after lease commencement) depends on the classification of the lease. ROU assets, whether resulting from a finance lease or an operating lease, are subject to the long-lived asset impairment guidance.[6] After a ROU asset is impaired, it is measured in the manner depicted below for finance lease ROU assets, regardless of lease classification.

Finance Lease

The ROU asset is amortized generally on a straight-line basis over the lease term.

ROU assets that are impaired are measured in the same manner as finance lease ROU assets after the impairment, regardless of lease classification.

Operating Lease

The subsequent measurement of the ROU asset in an operating lease can be determined in either of two ways, which yield the same carrying amount.

- **Method 1 – Amortize the ROU Asset**

The amortization of the ROU asset each period equals the difference between the straight-line lease cost for the period (which is effectively the

---

[6] FASB ASC Topic 360, Property, Plant, and Equipment, available at www.fasb.org.

cost recognized for operating leases under current U.S. GAAP) and the periodic accretion of the lease liability using the effective interest method.

- **Method 2 – Derive the ROU Asset from the Lease Liability**

  The carrying amount of the ROU asset is derived from the carrying amount of the lease liability at the end of each reporting period as illustrated below.

  Method 2 is what a lessee would use if it does not want to recognize ROU assets and lease liabilities for operating leases until it closes its books during the financial reporting process. Under this method, at each reporting date, the lessee creates a journal entry to (1) credit a lease liability for the present value of the remaining unpaid lease payments, (2) reverse other accrual-based operating lease accounting balances reflected in the balance sheet (i.e., prepaid or accrued rent, unamortized initial direct costs, and unamortized lease incentives), and (3) debit a ROU asset for the balancing amount.

Example – Subsequent Measurement of Operating ROU Asset

Assume a 5-year operating lease with annual payments (in arrears) of $100 that increase by $5 per year and a discount rate of 6%. Also assume that the lessee incurs $10 of initial direct costs. At lease commencement the lease liability equals $461 and the ROU asset equals $471 (the lease liability plus the initial direct costs). The lessee will recognize straight-line lease cost of $112 each year of the lease, which includes $2 in amortization of initial direct costs.

Method 1

Year 1 amortization of the ROU asset is $84, calculated as the Year 1 lease cost – Year 1 accretion of the lease liability ($112 – [$461 × 6%]). The end of Year 1 carrying amount of the ROU asset is therefore $387 ($471 – $84).

Year 2 amortization of the ROU asset is $89, calculated as the Year 2 lease cost – Year 2 accretion of the lease liability ($112 – [$389 × 6%]). The end of Year 2 carrying amount of the ROU asset is therefore $298 ($387 – $89).

Method 2

At the end of Year 1 the lessee has an accrued rent balance of $10 ($110 lease cost excluding amortization of initial direct costs – $100 lease payment) and unamortized initial direct costs of $8 ($10 – $2 in Year 1 amortization). The carrying amount of the lease liability at the end of Year 1 is $389 (present value of remaining unpaid lease payments discounted at 6%). Therefore, at the end of Year 1 the carrying amount of the ROU asset is $387 ($389 – $10 + $8).

Example – Subsequent Measurement of Operating ROU Asset
At the end of Year 2 the lessee has an accrued rent balance of $15 ($110 lease cost excluding amortization of initial direct costs – $105 lease payment + previous accrued rent balance of $10) and unamortized initial direct costs of $6 ($10 – $2 in Year 1 amortization – $2 in Year 2 amortization). The carrying amount of the lease liability at the end of Year 2 is $307 (present value of remaining unpaid lease payments discounted at 6%). Therefore, at the end of Year 2 the carrying amount of the ROU asset is $298 ($307 – $15 + $6).

KPMG Observations

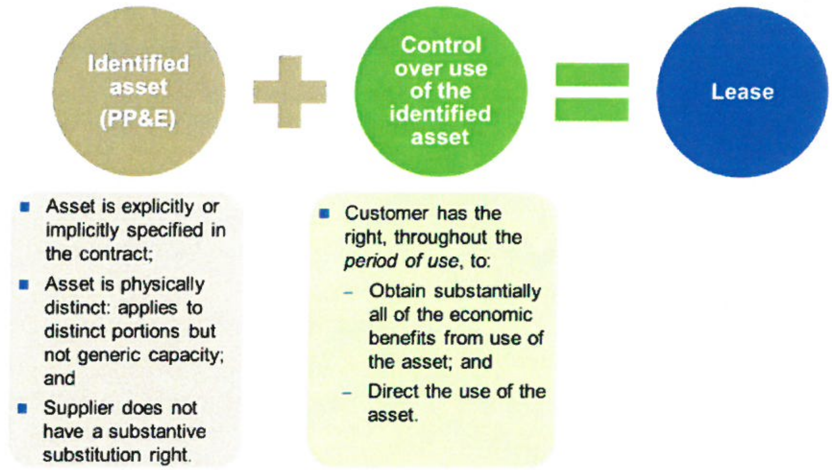
Method 2 is the only method described in the new standard. In the standard's Basis for Conclusions, the FASB indicated that this method will permit many entities to perform the new accounting for operating leases without significant changes to systems or processes. However, we believe Method 2 generally will not be practicable to apply for entities other than those with few leases that are relatively straightforward. Method 2 is inherently a manual process that likely will be unwieldy when applied to a large portfolio of leases, especially in the context of the more complex circumstances that will arise under the new standard (e.g., modifications, remeasurements, impairments, and issues related to foreign exchange).

We believe Method 1 will more readily enable a lessee to implement systems, processes, and internal controls where lease liabilities and ROU assets are tracked separately in a manner more consistent with other assets and liabilities. It is more likely to be effective for addressing the more complex circumstances outlined above that are likely to arise for many lessees.

Additional judgments will be required in determining whether a contract contains a lease. Correctly identifying leases will have a greater effect on financial reporting than under current U.S. GAAP because this is the new on- / off-balance sheet test.

Identifying a Lease

A lease exists under the new standard when a contract conveys to the customer the right to control the use of identified property, plant, or equipment for a period of time in exchange for consideration. The definition of a lease embodies two conditions that are familiar under current U.S. GAAP: (1) there is an identified asset in the contract that is land or a depreciable asset (i.e., property, plant, and equipment), and (2) the customer has the right to control the use of the identified asset.



While those two conditions appear similar to the requirements under current U.S. GAAP, important details have changed. Most notably, determining whether the customer has the right to control the use of an identified asset is now closely aligned with how control is defined and applied in the new revenue recognition standard. This is because there is now both a "benefits" element and a "power" element to the evaluation of control.

In most cases, a customer will have the right to direct the use of an identified asset if it can direct (and change) how and for what purpose the asset will be used throughout the period of use by controlling what, when, and/or how much output the asset produces. However, if the asset's use is predetermined before the beginning of the lease term (e.g., in the contract or by the asset's design), a customer is still deemed to direct the use of the asset if it (a) has operational control over the asset or (b) designed those aspects of the asset that predetermine how and for what purpose it will be used throughout the lease term.

KPMG Observations

In general, we believe that most arrangements that meet the definition of a lease under current U.S. GAAP will continue to meet the definition of a lease under the new standard. However, because of the new direct-the-use aspect of the definition, *some* contracts that were previously considered to be leases under current U.S. GAAP will not meet the new definition of a lease. This is most likely to be the case for arrangements that meet the current definition of a lease solely because the customer receives substantially all of the output or utility from the identified asset (e.g., some power purchase or outsourcing arrangements). Judgment will be required in applying the new definition, and companies will have to familiarize themselves with the changes from current U.S. GAAP, in particular the new guidance about directing the use of an identified asset.

Lease Accounting Requires Circumstance-Driven Reassessments by Lessees

Given the pervasive, and potentially material, effect that the lease reassessment guidance will have on a lessee's financial statements, lessees will need to implement new processes and controls to address the new risk points. This effort likely will need to involve cross-functional coordination to ensure timely identification of events requiring revisions to lease accounting.

The new standard requires a lessee to revise (or update) its lease accounting by remeasuring its lease liability in any of the following circumstances:

1. There is a change in the assessment of the lease term;
2. There is a change in the assessment of whether the lessee will exercise an option to purchase the underlying asset;
3. There is a change in the amount probable of being owed by the lessee to satisfy a residual value guarantee; or
4. A contingency is resolved that results in some or all of the variable lease payments that were to be paid over the remainder of the lease term becoming fixed. For example, if the payments for Years 2-10 of a retail store lease will be based on 10 percent of Year 1 retail store sales, at the end of Year 1, the lease payments for Years 2-10 become fixed payments.

A lessee reassesses the lease term (#1) or the likelihood that a purchase option will be exercised (#2) only when a significant event or a significant change in circumstances occurs that is within the lessee's control and directly affects whether the lessee is reasonably certain to exercise a renewal or a purchase option (i.e., a triggering event). The new standard identifies example triggering events, including a decision by the lessee to construct significant leasehold improvements that are expected to have substantial economic value at the end of the lease term or to enter into a sublease that effectively requires exercise of a renewal option.

The accounting steps a lessee must undertake depend on the circumstances.

	Circumstance			
Accounting Steps	**1**	**2**	**3**	**4**
Remeasure and reallocate the consideration in the contract to the remaining lease and non-lease components of the contract.	✔	✔	✔	✔
Remeasure the lease liability to reflect the revised lease payments, using a discount rate determined at the remeasurement date.[7]	✔	✔	✘	✘
Remeasure the lease liability to reflect the revised lease payments, using the original discount rate.[7]	✘	✘	✔	✔
Adjust the amount of the ROU asset by the amount of the remeasurement of the lease liability. However, once the ROU asset is reduced to zero, then the remaining amount of the lease liability remeasurement is recognized in the income statement.	✔	✔	✔	✔

[7] When the *lease payments* are remeasured, variable lease payments that depend on an index or a rate are remeasured using the index or rate as of the remeasurement date.

Accounting Steps	Circumstance			
	1	2	3	4
Reassess the lease classification at the remeasurement date based on the circumstances at that date (e.g., fair value and remaining economic life of the underlying asset at the remeasurement date).	✓	✓	✗	✗
If there is a change in lease classification, adjust the remaining lease cost recognition pattern and presentation in the income statement and statement of cash flows prospectively.	✓	✓	✗	✗

KPMG Observations

The reassessment and remeasurement guidance applicable to lessees is a significant change from current U.S. GAAP, which generally does not require revisions to lease accounting for lessees or lessors unless the terms and conditions of the contract are modified. Lessees will have to implement processes and controls to monitor for events or changes that require revisions to the accounting for a lease.

Some Executory Costs May Be Included in Lease Assets and Lease Liabilities

Payments to cover the lessor's costs of ownership, such as property taxes and insurance, are no longer excluded from lease accounting as they are under current U.S. GAAP.

The new standard only governs the accounting for leases. If there are lease and non-lease (e.g., service) components of a contract, lessors must apply the new standard to the lease component(s) and other GAAP to the non-lease component(s). Lessees have the option to either separately account for lease and non-lease components or account for any non-lease components as part of the lease component to which they relate. An entity separates lease and non-lease components of a contract and allocates the contract consideration to those components generally on a relative stand-alone price basis, which is broadly consistent with current U.S. GAAP. However, the guidance in the new standard may change how an entity identifies, separates, and allocates contract consideration to the components of a contract.

Specifically, the new standard states that lessee payments for lessor ownership costs of an underlying asset (e.g., property taxes or insurance) do not transfer a good or service to the lessee and, therefore, are not components of the contract. Therefore, none of the consideration in the contract is allocated to those items. Instead, payments for those items are allocated to the lease and non-lease components on the same basis as the remainder of the consideration in the contract (i.e., generally on a relative stand-alone price basis). If there are no non-lease components, fixed payments for those costs will be accounted for entirely as *lease payments*. This treatment represents a change from current U.S. GAAP, under which all executory costs are excluded from minimum lease payments.

Current U.S. GAAP	Topic 842
All executory costs excluded from minimum lease payments	Executory costs that do not represent payments for a good or service are allocated to the lease and non-lease components in the same manner as all other payments in the contract

KPMG Observations

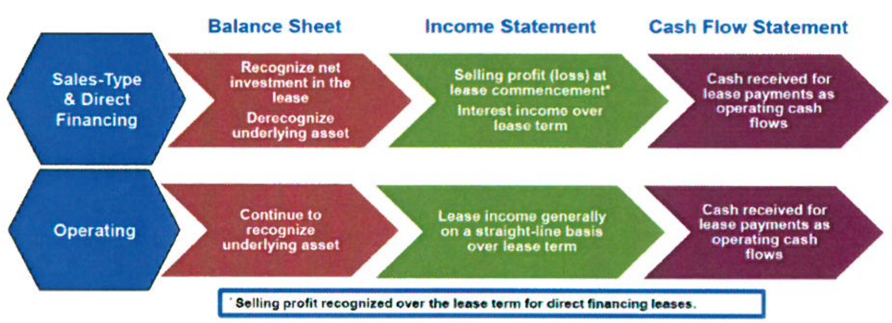
Lessees making fixed payments that cover the lessor's ownership costs for items like property taxes or insurance will recognize larger lease assets and lease liabilities than they would have if the new standard had retained the previous guidance that excluded all executory costs from lease payments. Maintenance services (e.g., common area maintenance) generally transfer a good or service to the lessee other than the right to use the underlying asset and are, therefore, a non-lease component of the contract. As a result, consideration is allocated to those services and that consideration generally is excluded from lease payments by lessees that elect to separately account for lease and non-lease components, and by lessors.

Because variable payments do not meet the new standard's definition of *lease payments*, lessees may account differently for economically similar leases based solely on how their payments are structured. All (or a portion of) payments that are structured as a direct pass-through of the lessor's actual costs are likely to meet the definition of variable lease payments, which a lessee will exclude from the measurement of its ROU asset and lease liability (and a lessor from its net investment in the lease), but be required to disclose. Conversely, all (or a portion of) fixed payments designed to cover lessor ownership costs will meet the definition of lease payments and be included in the measurement of the lessee's ROU asset and lease liability (and the lessor's net investment in the lease for sales-type and direct financing leases).

Although Topic 842 does not substantially change lessor accounting, there are some important changes lessors should take note of.

Changes to Lessor Accounting

The new standard does not substantially change lessor accounting from current U.S. GAAP as illustrated below.



In addition, most of the key definitions and concepts underlying the lessor accounting model are generally consistent with current U.S. GAAP (e.g., what is included in lease assets, the discount rate, and the lease classification test). However, there are some important changes that lessors should be aware of.

Collectibility

Under current U.S. GAAP, if collectibility of the *minimum lease payments* is not *reasonably predictable*, a lease is classified as an operating lease (i.e., it cannot be classified as a sales-type, direct financing, or leveraged lease). Topic 842 eliminates this reasonably predictable criterion and introduces new requirements with respect to collectibility.

- Uncertainty about the collectibility of the lease payments no longer will preclude a lease from being classified as a sales-type lease. However, if collectibility of the lease payments, plus any amount necessary to satisfy a residual value guarantee provided by the lessee, is not probable in a sales-type lease, the lessor will (a) continue to recognize the underlying asset and (b) recognize lease payments received as a deposit liability generally until the earliest date that:
  - Collectibility becomes probable;
  - The contract is terminated and the lease payments received are nonrefundable; or
  - The lessor has repossessed the underlying asset, has no further obligations to the lessee under the contract, and the lease payments received are nonrefundable.
- For leases that are not sales-type leases, if collectibility of the lease payments and any amount necessary to satisfy a residual value guarantee (provided by the lessee or a third party) is not probable, the lease must be classified as an operating lease. Cumulative lease income is then limited to the amount of the lease payments (including variable lease payments) that have been paid unless the assessment of collectibility changes during the lease term.

Significant Variable Lease Payments

Current U.S. GAAP contains conditions under which lessors often classify leases with predominantly variable payments as operating leases even if the lease meets one of the four primary criteria to be classified as a sales-type or direct financing lease (e.g., the lease term is more than 75 percent of the asset's estimated economic life).[8] Operating lease classification for these leases eliminates the potential for up-front loss recognition solely because the present value of the minimum (i.e., non-variable) lease payments and unguaranteed residual value is less than the asset's carrying amount at lease commencement. However, those conditions are eliminated by the new standard. As a result, these leases are likely to be classified as sales-type or direct financing leases under the new standard, creating the potential for loss recognition at lease commencement.

---

[8] The primary classification criteria are in FASB ASC paragraph 840-10-25-1 and the other conditions are in ASC paragraph 840-10-25-42.

KPMG Observations

For leases with significant variable lease payments (e.g., in some renewable energy arrangements), the undiscounted sum of (a) the lease payments and (b) the estimated residual value of the underlying asset at the end of the lease term may be less than the underlying asset's fair value and/or carrying amount at lease commencement. If so, sales-type lease classification for these leases will require loss recognition at lease commencement when the discount rate used in measuring the lessor's net investment in the lease is positive even if the lessor expects the lease to ultimately be profitable. This does not seem to best reflect the economics of these leases.

The new standard requires the lessor to use the *rate implicit in the lease* as its discount rate to measure its net investment. That rate is defined in a way that generally requires the present value of (a) the lease payments and (b) the estimated residual value of the underlying asset at the end of the lease term to be no less than the underlying asset's fair value at lease commencement. For leases with significant variable lease payments, following that definition could mean that the lessor would be required to use a negative discount rate. It also could mean that no loss would be recognized at lease commencement unless the fair value of the underlying asset was less than its carrying amount.

It is not clear whether the FASB considered the possibility (or expected) that discount rates might be negative under the new standard's requirements. In addition, it is not clear to what extent the fact that the Board's new revenue recognition standard may require up-front loss recognition in arrangements with significant variable (or contingent) consideration even if the seller expects the arrangement to ultimately be profitable factored into its consideration of these leases. We expect the accounting for these transactions to generate further debate given the interplay between sales-type lease accounting and the new revenue recognition standard, and the current ambiguity around the Board's intent about lessor discount rates in these leases.

A Narrower Definition of Initial Direct Costs

The new definition of *initial direct costs* includes only those "incremental costs of a lease that would not have been incurred if the lease had not been obtained" (e.g., commissions or payments made to existing tenants to obtain the lease), which is a more narrow definition than in current U.S. GAAP. Accordingly, costs that an entity is permitted to capitalize as initial direct costs under current U.S. GAAP, such as external legal fees incurred to negotiate a lease or draft lease documents or allocations of internal employee costs for time spent directly related to negotiating or arranging a lease, will now be expensed when incurred.

KPMG Observations

While this issue is expected to affect lessors more than lessees, the narrowed definition of initial direct costs also may affect lessees that previously capitalized or deferred costs that do not meet the new, narrower definition. For some lessors the new definition may result in recognizing more expenses at the start of a lease and higher margins over the lease term.

Leveraged Lease Accounting Eliminated Prospectively

The new standard eliminates leveraged lease accounting for all leases that commence on or after the effective date of the new guidance. A lessor with a leveraged lease that commences before the effective date of the new standard will continue to apply leveraged lease accounting to that lease unless it is modified on or after the effective date. A lessee's exercise of an option to renew or extend a leveraged lease when exercise previously was not considered reasonably assured is considered a lease modification for this purpose.

Expanded Quantitative and Qualitative Disclosures

Increased disclosure requirements may necessitate additional systems capabilities, processes, and controls for lessees and lessors.

The new standard's disclosure objective is to provide financial statement users sufficient information to assess the amount, timing, and uncertainty of cash flows arising from leases. To achieve that objective, lessees and lessors will disclose qualitative and quantitative information about lease transactions. This generally will result in increased information being disclosed compared to current U.S. GAAP. Accordingly, entities will need to evaluate whether they have appropriate systems, processes, and internal controls to capture complete and accurate lease data necessary to prepare the financial statement notes.

<table>
<tr><th>Lessees</th><th>Lessors</th></tr>
<tr><td colspan="2">Example Qualitative Disclosures
• Information about leases
– Nature of variable payment arrangements
– Termination, renewal, and purchase options
• Significant accounting judgments and estimates</td></tr>
<tr><td>• Leases that have not yet commenced, but that create significant rights and obligations for the lessee, including involvement in construction or design of the underlying asset</td><td>• Information about how the lessor manages residual asset risk, including information about residual value guarantees and other means of limiting that risk</td></tr>
<tr><td colspan="2">Example Quantitative Disclosures</td></tr>
<tr><td>• Amortization of ROU assets and interest on lease liabilities (including amounts capitalized) for finance leases
• Operating lease cost
• Variable lease cost
• Short-term lease cost</td><td>• Table of lease income:
– Selling profit (or loss) recognized at lease commencement for sales-type leases and interest income for sales-type and direct financing leases
– Operating lease income
– Variable lease income</td></tr>
</table>

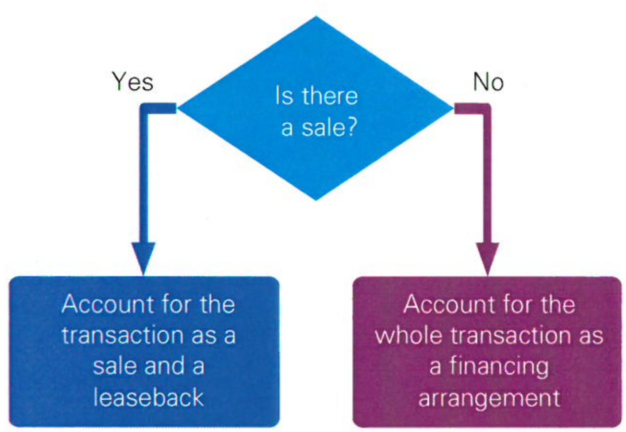
Lessees	Lessors
• Weighted-average remaining lease term, separately for finance and operating leases • Weighted-average discount rate as of the balance sheet date, separately for finance and operating leases • Maturity analysis of lease liabilities, reconciling undiscounted cash flows to the recognized lease liabilities, separately for finance leases and operating leases	• Maturity analysis of lease receivables, reconciling the undiscounted cash flows to the recognized lease receivables (for sales-type and direct financing leases), and of future lease payments (for operating leases) • For operating leases, general property, plant, and equipment disclosures by significant class of underlying asset separately from those disclosures for the lessor's other owned assets

Although Topic 842 eliminates sale-leaseback transactions as an off-balance-sheet financing proposition, sale-leaseback transactions still may attract interest because a seller-lessee generally will be able to recognize any gain on the sale in full at the sale date and the balance sheet effect of the leaseback may be less significant than that of the asset and related financing.

Sale-Leaseback Accounting Substantially Changed

Topic 842 essentially eliminates sale-leaseback accounting as an off-balance sheet financing proposition by requiring the seller-lessee to account for the leaseback in the same manner as other leases – i.e., on-balance sheet for most leases. However, some of the off-balance sheet benefits of sale-leaseback accounting are preserved as, in many cases, the amount of the ROU asset and the lease liability recognized may be substantially less than the previous carrying amounts of the underlying asset and any related financing.

If the transaction qualifies for sale accounting (i.e., the sale leg of the transaction meets the contract identification and transfer of control requirements for a sale in the new revenue recognition standard), a seller-lessee's balance sheet will reflect an asset that represents the seller-lessee's right to use the underlying asset and a liability to make the leaseback payments. However, if the sale-leaseback transaction does not qualify for sale accounting, the seller-lessee, *and* the buyer-lessor, will account for the whole arrangement as a financing transaction.



KPMG Observation

In a significant change from current U.S. GAAP, the buyer-lessor is required to evaluate whether a sale of the underlying asset has occurred based on the sale guidance in the new revenue recognition standard and, if a sale has not occurred, to account for the transaction as a financing arrangement. Under current U.S. GAAP, a failed sale for the seller-lessee is not accounted for as a failed purchase by the buyer-lessor. This may complicate the accounting by buyer-lessors, particularly for sale-leaseback transactions with significant variable payments that do not qualify for sale/purchase accounting.

Recognition of Gains on Sale No Longer Will Depend on the Rights Retained by the Seller-Lessee

Under current U.S. GAAP, the timing of gain recognition on the sale in a sale-leaseback transaction depends on the rights retained by the seller-lessee. In contrast, when a sale-leaseback transaction qualifies for sale accounting under the new standard, the seller-lessee is required to recognize the full amount of the gain (which will be adjusted for off-market terms, if any) when the buyer-lessor obtains control of the underlying asset. This is consistent with the guidance that will apply to the sale of any nonfinancial asset under either the new revenue recognition standard (if the sale is to a customer) or the other income accounting guidance (if the sale is to a non-customer).[9]

Different Sale-Leaseback Accounting Provisions for Real Estate and Assets Other Than Real Estate Eliminated

The new standard eliminates the different accounting for sale-leaseback transactions involving real estate versus other assets that exists in current U.S. GAAP. Under the new standard, the same guidance applies to all sale-leaseback transactions regardless of the type of underlying asset.

Sale-Leaseback Accounting Easier to Achieve for Real Estate Than under Current U.S. GAAP; More Difficult for Other Assets

The new standard stipulates that a sale is recognized in a sale-leaseback transaction when the transaction meets the contract identification and transfer of control requirements for the sale of goods in the new revenue recognition standard. It also includes additional guidance for recognizing a sale in a sale-leaseback transaction:

- The leaseback by itself does not preclude a sale-leaseback transaction from meeting the sale requirements in the new revenue recognition standard;
- A sale (purchase) is not recognized if the leaseback would be classified as a finance lease by the seller-lessee (sales-type lease by the buyer-lessor); and
- An option for the seller-lessee to repurchase the underlying asset results in a failed sale unless (a) the option strike price is the fair value of the asset at the option exercise date ***and*** (b) alternative assets that are substantially the same as the underlying asset are readily available in the marketplace.

---

[9] FASB Topic 610, Other Income, available at www.fasb.org.

KPMG Observations

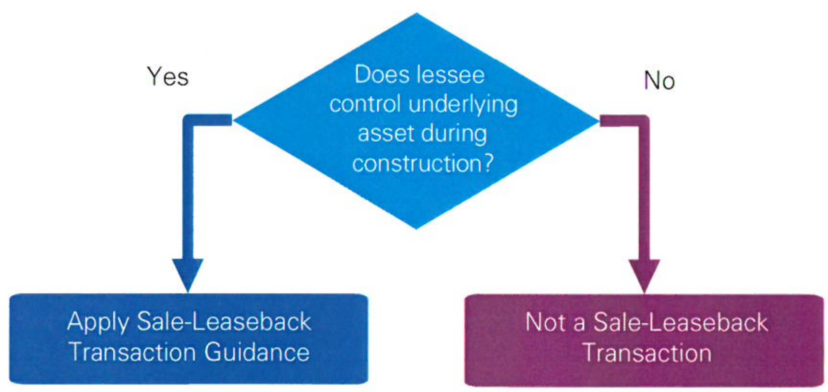
In the United States, equipment sale-leaseback transactions often include an option for the seller-lessee to repurchase the equipment. This does not result in a failed sale under current U.S. GAAP unless the option is a bargain repurchase option. Because most repurchase options will preclude a sale, the new standard will make it more difficult for many equipment sale-leaseback transactions to qualify for sale-leaseback accounting than under current U.S. GAAP.

Conversely, current U.S. GAAP requires failed sale accounting for real estate sale-leaseback transactions if the seller-lessee has any continuing involvement (including a repurchase option at any strike price) with the real estate other than a normal leaseback. As a result, failed sales are common in real estate sale-leaseback transactions. Because the new standard supersedes the continuing involvement provisions in current U.S. GAAP, and the sale requirements in the new revenue recognition standard are comparatively less difficult to meet, it generally will be easier for real estate sale-leaseback transactions to qualify for sale-leaseback accounting under the new standard than under current U.S. GAAP. However, a seller-lessee repurchase option generally will still preclude sale-leaseback accounting for a real estate sale-leaseback transaction, even if the strike price of the option is the fair value of the real estate on the exercise date. This is because two real estate assets typically will not be considered substantially the same.

Current Build-to-Suit Lease Accounting Guidance Replaced

Current U.S. GAAP addresses a lessee's involvement with the construction of an asset that the lessee will lease when construction is complete (i.e., build-to-suit lease accounting). Under that guidance, the transaction is subject to the sale-leaseback guidance if the lessee is deemed to be the accounting owner of the asset during the construction period because it has substantially all of the construction period risks (or meets other specified criteria).

The new standard supersedes the current build-to-suit lease accounting guidance and stipulates that a lessee is the accounting owner of an asset under construction when it *controls* that asset before the lease commencement date. The new standard includes implementation guidance to assist entities in determining whether the lessee controls an underlying asset that is under construction.



The new standard further specifies that payments made by a lessee for the right to use the underlying asset are not costs related to the construction or design of the underlying asset but are lease payments regardless of when the payments are made (e.g., before lease commencement) or how the payments are made (e.g., contribution of construction materials). When a lessee incurs costs related to the construction or design of an underlying asset for which it is not considered the accounting owner during the construction period, it will account for them as lease payments unless they relate to goods or services provided to the lessee (in which case it will account for them under other U.S. GAAP).[10]

KPMG Observations

The new guidance about when a lessee controls an asset under construction that it will lease is similar to the guidance in the new revenue recognition standard about when a customer controls an asset under construction (or that is being modified) that it will purchase.

We believe the new guidance will result in fewer instances where the lessee is deemed to be the accounting owner of an asset that is under construction, but those instances will still occur. However, importantly, when a lessee is deemed to be the accounting owner of an asset under construction, the changes to the sale-leaseback guidance in the new standard may make it easier for the lessee to derecognize the underlying asset at the end of the construction period.

Summary of Similarities and Differences between U.S. GAAP and IFRS

On January 13, 2016, the IASB issued IFRS 16, *Leases*, which requires lessees to recognize ROU assets and lease liabilities on-balance sheet for leases that are not short-term or of assets with a low value when new (e.g., $5,000 or less). IFRS 16 introduces a single, on-balance sheet lessee accounting model that is similar to the current accounting under IFRS for finance leases (and U.S. GAAP for capital leases). Lessor accounting will remain similar to current practice, (i.e., lessors will continue to classify leases as finance and operating leases).

IFRS 16 is effective for companies that apply IFRS for annual periods beginning on or after January 1, 2019. Earlier application is permitted for entities that apply IFRS 15, *Revenue from Contracts with Customers*, at or before the date of initial application of IFRS 16.

Although some key aspects of Topic 842 and IFRS 16 are converged (e.g., the definition of a lease and the recognition of most leases on-balance sheet), many are not, including the following:

- Lessee accounting model, including reassessment requirements for variable lease payments that depend on an index or rate;
- Lessor profit recognition for some leases;

[10] For example, FASB ASC Topic 330, Inventory, and Topic 360, Property, Plant and Equipment, available at www.fasb.org.

- Recognition and measurement exemption for leases of low-value assets under IFRS 16;
- Classification of subleases by the sublessor;
- Accounting for leases between related parties;
- Gain recognition on sale-leaseback transactions; and
- Transition requirements and alternatives.

Our summary table provides additional information about the similarities and differences between Topic 842 and IFRS 16.

Staying Informed

KPMG will host a CFO Financial Forum Webcast on March 7, 2016, to provide an overview of the new standard. This spring KPMG also will:

- Release an Issues In-Depth that provides a more comprehensive analysis of the new lease accounting standard.
- Host a series of CFO Financial Forum Webcasts to discuss specific aspects of the new standard in more detail.

FASB Completes Technical Redeliberations on Leases

The FASB met on October 7 to discuss comments received and related follow-up issues on the external review of its proposed leases standard. The Board will meet in early November to discuss effective date and cost-benefit considerations. The Board plans to issue a final leases standard by the end of 2015.

Key Facts

- Approximately 600 comments were received from external reviewers, though the FASB staff noted that many comments overlapped.
- The Board made decisions on three sweep issues to complete its technical decisions on the project.[1]
    - The lease modification guidance will be more closely aligned with the lease reassessment guidance.
    - Initial direct costs in sales-type leases will be deferred and recognized over the lease term if there is no selling profit (loss).
    - Lessors will present the net investment in sales-type and direct financing leases separate from other assets in the statement of financial position and will disclose the components of the net investment.
- The amount of expense recognized by lessees for operating leases will be measured like finance leases following an impairment of the lease.
- Private companies will not have additional reliefs other than the election to use a risk-free discount rate in measuring lease liabilities.

Key Impacts

- The standard setting on the leases project is almost over. Entities should begin planning their implementation efforts if they haven't done so already.
- Lease accounting for modifications that change the lease term will be consistent with the guidance on lease reassessments, which will reduce potential structuring opportunities.
- Lessor lease accounting will remain substantially consistent with current U.S. GAAP.[2]

---

[1] A sweep issue is a topic the FASB staff identifies for consideration or reconsideration by the Board.

[2] ASC Topic 840, Leases, available at www.fasb.org.

The guidance developed by the FASB staff to address impairment of operating leases suggests the staff likely had significant discretion in deciding how to respond to external review comments.

Summary of External Review Comments

In July 2015, the FASB distributed the leases external review draft to a select group of stakeholders with a deadline for comments of mid-August, 2015. The FASB staff received approximately 600 comments on the external review draft. At the October 7 FASB meeting, the FASB staff indicated that many of the comments were duplicative. In their view only three required further discussion by the Board, which the staff identified as sweep issues (see below). The staff noted that where comments expressed disagreement with Board decisions the staff generally took no action. For other comments, the staff indicated that revisions to the language in the external review draft would be made to clarify the guidance where necessary.

Lessee Accounting after Impairment of an Operating Lease. One issue that the staff indicated did not require further decision-making by the Board—although the staff plans to amend the draft standard—related to the accounting by lessees after impairment of an operating lease.[3] The staff noted that the guidance in the external review draft would have required the expense for an operating lease after an impairment charge to be determined in a way that would not result in balanced accounting entries. Consequently, the staff determined that the expense for operating leases following an impairment charge should be determined in the same way as it would be for finance leases.[4] Specifically, after an impairment of an operating lease right-of-use asset, the remaining balance of the right-of-use asset would be amortized generally on a straight-line basis over the remaining lease term and added to the periodic accretion of the lease liability to determine total lease expense each period. This is the same methodology that would be used for finance leases that are not impaired and would result in an uneven pattern of total expense that is front-loaded following the date of an operating lease impairment.

KPMG Observations

The FASB staff decided that the pattern of lease expense for an operating lease following an impairment of the lease should be consistent with the pattern of expense for an operating lease for which an onerous contract liability is recognized in accordance with ASC Topic 420, *Exit or Disposal Cost Obligations*. That guidance results in a pattern of expense for an operating lease that is essentially the same as the pattern of expense for a capital lease under current U.S. GAAP. Although this decision appears different than the Board's previous decision that the pattern of expense for an operating lease should generally be straight-line, even following an impairment, it seems consistent with the Board's more recent decision to make minimal changes to the way in which periodic expense would be measured for operating leases under the new guidance.

---

[3] Operating leases were referred to as Type B leases in the FASB's Proposed Accounting Standards Update (Revised), Leases, May 16, 2013 (the 2013 Exposure Draft), available at www.fasb.org.

[4] Finance leases were referred to as Type A leases in the 2013 Exposure Draft.

Sweep Issues Discussed

Lease Modifications That Extend the Lease Term

The Board discussed issues stemming from the proposed lease modification guidance that considered the right to use an underlying asset for an additional period of time as an additional right of use, separate from the original right to use the underlying asset. The Board also discussed peripheral issues related to the lessor lease modification guidance and lessee reassessment guidance.

Whether the Use of an Underlying Asset for an Additional Period of Time Is a Separate Right of Use. Under the proposed guidance, a lease modification granting a lessee the right to use the same underlying asset for an additional period of time would result in the lessee recognizing the additional lease liability and related right-of-use asset only when the additional period begins. That right of use would be considered separate from the original right of use whether or not the price for the additional period of use is commensurate with its stand-alone price. For example, assume a lessee originally entered into an agreement with a lessor to lease equipment for five years with no renewal options. At the end of Year 2, the lessee and lessor agree to modify the lease to extend its term for an additional five years from the original lease term expiration. Under the Board's previous decisions, the lease liability and related right-of-use asset for the extension period would not be recognized until the beginning of Year 6.

Conversely, the proposed guidance on lease reassessments would require lessees to revise the measurement of the right-of-use asset and lease liability when the lessee takes an action that changes the assessment of whether the exercise of a renewal option is reasonably certain to be exercised. Assume the example above was changed so that the lease included a five-year renewal option that was not included in the lease term for accounting purposes. If the lessee took an action at the end of Year 2 of the lease that made it reasonably certain that the lessee would exercise that renewal option, then the lessee's right-of-use asset and lease liability would be remeasured at the end of Year 2 to include the non-variable lease payments during the renewal period.

In addition, the Board previously decided that when a lease is modified and the additional right of use (in this case the right to use the underlying asset for an additional period of time) is commensurate with its stand-alone price, an entity would not reassess lease classification. Continuing with our original example, assume the equipment's remaining economic life is seven years at the modification date and rent during the 5-year extension period is commensurate with its stand-alone price. Because the additional period of use would be considered a separate lease, an entity would not reassess lease classification even though the lessee now benefits from the equipment's use for a major part of its remaining economic life. This indicates that the lease has become a finance lease rather than an operating lease.

To address these issues, the Board decided that the lease term is an *attribute* of the lease. Therefore, the Board concluded a lease modification that merely extends the term of the underlying asset's use would be recognized when the modification is executed.

Lessor's Lease Modification Guidance. As a result of considering the lease term an attribute of the lease, the Board discussed some of the potential asymmetries that may arise between the proposed lessor and lessee lease accounting guidance as well as the revenue guidance in ASC Topic 606.[5] However, the Board decided not to modify the lease accounting guidance for lessors, in part because it wants lessor accounting to remain substantially aligned with current U.S. GAAP.

Lessee Reassessment of Lease Classification. Under the proposed guidance, a lessee would reassess lease classification only if the lease is modified and the modification is not accounted for as a separate lease. A reassessment of the lease term would not cause a lessee to reassess lease classification. A reassessment could occur because the lessee elects to exercise a renewal option provided in the original lease or because the lessee constructs significant leasehold improvements that make it reasonably certain the lessee will exercise a renewal or purchase option.

The Board decided that when a lessee reassesses the lease term or a lessee option to purchase the underlying asset, it would be required to reassess lease classification. This requirement also would apply when the lease term or likelihood of purchase option exercise changes as a result of a lease modification. This issue was relevant only for lessees because lessors would not reassess the lease term or a lessee purchase option consistent with current U.S. GAAP.

KPMG Observations

The decisions by the Board to consider the lease term an attribute of the lease and to require a reassessment of lease classification in more situations than under the previously proposed guidance would remove the significant accounting differences between the lease modification and lease reassessment guidance that could have created structuring opportunities.

The Board's decision not to change the lessor lease modification guidance is consistent with feedback it received that the lessor accounting model under current U.S. GAAP essentially is not broken and should not be fundamentally changed. It is another example of the disconnect that will exist between lessee and lessor accounting under the new leases standard.

Recognition of Initial Direct Costs in Sales-Type Leases

At their May 2014 joint Board meeting, the FASB and IASB decided that initial direct costs should include only incremental costs that an entity would not have incurred if the lease had not been obtained (executed). This is a change from the current U.S. GAAP definition to conform to the contract cost deferral guidance in ASC Subtopic 340-40.[6] In addition, the FASB decided that a lessor would not capitalize initial direct costs for leases in which the customer effectively obtains

[5] ASC Topic 606, Revenue from Contracts with Customers, available at www.fasb.org.

[6] ASC Subtopic 340-40, Other Assets and Deferred Costs – Contracts with Customers, available at www.fasb.org.

control of the underlying asset through the lease (i.e., a sales-type lease).[7] Instead, a lessor would recognize as an expense initial direct costs associated with those leases at lease commencement.

Constituents that commented on the external review draft noted that the draft guidance on initial direct costs would change the timing of expense recognition for lessors such as banks that function as financing intermediaries. Under current U.S. GAAP those lessors classify leases in which the customer effectively obtains control of the underlying asset through the lease as direct financing leases or leveraged leases when the lease does not give rise to selling profit or loss. Under either classification, initial direct costs are deferred and amortized over the lease term. Some external reviewers questioned whether the external review draft guidance was consistent with the FASB's expressed intent not to significantly change lessor accounting.

At its October 7 meeting, the Board decided to require initial direct costs incurred as a result of entering into a sales-type lease to be deferred and recognized over the lease term *if there is no selling profit or selling loss* (excluding consideration of the initial direct costs) on the lease. This would result in recognition outcomes that are generally consistent with current U.S. GAAP.

KPMG Observations

The Board's revised decision on lessor accounting for initial direct costs is consistent with ASC Subtopic 340-40, which requires deferred contract costs to be recognized in the income statement on the same basis as the transfer to the customer of the goods or services to which the costs relate. This occurs because lessors that enter into sales-type leases in which there is no selling profit or loss in effect provide a financing service to the customer (lessee).

In addition, the Board's decision is consistent with its desire not to substantially change lessor accounting, and it would retain convergence in the accounting for initial direct costs with the forthcoming IFRS guidance on leases.

Lessor Presentation of Its Net Investment in the Lease

The FASB revisited its previous decision to permit lessors to separately present the components of the net investment in leases other than operating leases either in the statement of financial position or in the notes to the financial statements. Those components comprise the lease receivable, unguaranteed residual value, and deferred selling profit (if applicable). The FASB did not previously decide that lessors would be required to separately present the total net investment in leases other than operating leases in the statement of financial position. The Board's discussion was primarily in response to concerns expressed by external reviewers about complexities within the lessor

[7] The Board referred to these leases as sales-type leases, although they were referred to as Type A leases in the 2013 Exposure Draft.

presentation requirements and a potential lack of consistency with some of the Board's other lessor accounting decisions.

The Board decided to require lessors to separately present the net investment in leases other than operating leases on the face of the statement of financial position. The Board acknowledged that disaggregated information on the components of the net investment is beneficial for the financial statement users, and decided to require lessors to disclose the components of the net investment without specifying where that information should be provided in the financial statements. Consequently, lessors would have the flexibility to disclose the components of the net investment in the statement of financial position or the notes to the financial statements.

Private Company Council Considerations

At their July 2015 meeting, Private Company Council (PCC) members raised continuing concerns about the FASB's lease accounting proposals including:

- ***Recognition of Leases on the Balance Sheet and the Lessee Accounting Model.*** The PCC requested that nonpublic lessees be required to recognize lease assets and liabilities only when the lessee is expected to consume more than an insignificant portion of the underlying asset. For leases that do not qualify for on-balance sheet accounting, lessees would recognize lease expense generally on a straight-line basis, similar to the accounting for operating leases under current U.S. GAAP.
- ***Presentation of Lease Assets and Liabilities on the Balance Sheet.*** If the final leases standard will require lessees to recognize all leases (other than short-term leases) on the balance sheet, the PCC recommended that, for nonpublic lessees, the lease asset and liability be presented in a linked manner, or adjacent to each other, on the balance sheet. Therefore, only the net amount of the lease asset and liability would affect the lessee's assets or liabilities on the balance sheet.

At its October meeting, the FASB decided not to provide different recognition or presentation requirements for nonpublic companies. In the Board's view, all leases give rise to a lease asset and liability for lessees, and the new guidance should extend to both public and nonpublic companies. Additionally, the Board believes that allowing linked presentation is beyond the scope of the leases project, and would require significant time to sufficiently address.

Under the Board's previous decisions, a nonpublic company may elect to use a risk-free discount rate as the lessee's incremental borrowing rate. The Board decided that this is the only exception that will be provided solely for nonpublic companies in the final leases standard.

Next Steps

The Board will meet early in November to discuss effective date and cost-benefit considerations. Based on the outreach performed and feedback received by the FASB throughout this project, including financial statement users' expressed desire for better information in lessees' financial statements and the FASB's attempts to minimize process and system changes where possible, the Board expects to issue its final leases standard by the end of 2015.

Summary of Decisions Reached in Redeliberations

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td>Definition of a Lease</td><td colspan="2">• A contract will contain a lease if:
– Fulfillment of the contract depends on the use of an identified asset, and
– The contract conveys the right to control the use of the identified asset for a period of time in exchange for consideration, or neither the customer nor the supplier controls the use of the identified asset throughout the period of use, and
• The customer has the right to operate the asset (and the supplier has no right to change those operating instructions) throughout the period of use, or
• The customer designed the asset, or caused it to be designed, in a way that predetermines during the period of use how and for what purpose it will be used</td></tr>
<tr><td rowspan="2">Practical Expedients and Targeted Reliefs</td><td colspan="2">• Optional lessee exemption for short-term leases – i.e., leases with a lease term of ≤ 12 months
• Portfolio-level accounting will be permitted if it does not differ materially from applying the requirements to individual leases (e.g., discount rate or lease term)</td></tr>
<tr><td>• No exemption for leases of low-value assets</td><td>• Optional lessee exemption for leases of low-value assets (e.g., leases of assets with a value of $5,000 or less when new), even if material in aggregate</td></tr>
<tr><td>Lessee Accounting Model</td><td>• Dual-lease accounting model
• Lease classification test based on classification criteria under current IFRS on leases[8]
• All leases on-balance sheet: lessee will recognize a right-of-use (ROU) asset and lease liability
– Finance leases will be treated as the purchase of an asset on a financed basis
– Operating leases generally will have straight-line recognition of total lease cost</td><td>• Single lease accounting model
• No lease classification test
• All leases on-balance sheet: lessee will recognize a right-of-use (ROU) asset and lease liability
– Treated as the purchase of an asset on a financed basis</td></tr>
</table>

[8] IAS 17, Leases.

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td rowspan="4">Lessor Accounting Model</td><td colspan="2">• Dual lease accounting model
• Lease classification test based on IAS 17 classification criteria
• Operating lease accounting model based on current IFRS operating lease accounting[9]</td></tr>
<tr><td>• Sales-type and direct financing lease accounting model based on current U.S. GAAP accounting for sales-type and direct financing leases with recognition of net investment in lease comprising lease receivable and residual asset[10]</td><td>• Finance lease accounting model based on current IFRS finance lease accounting with recognition of net investment in lease comprising lease receivable and residual asset</td></tr>
<tr><td>– Selling profit will not be recognized on commencement of leases that qualify as direct financing leases, even if the carrying amount and fair value of the underlying asset are different</td><td>– There will be no restriction on recognizing selling profit on commencement for finance leases</td></tr>
<tr><td>• Existing leveraged leases will be grandfathered and exempt from applying the new standard</td><td>• N/A – leveraged lease accounting does not exist under IFRS</td></tr>
<tr><td>Related-Party Leasing Transactions</td><td>• Account for leases between related parties based on their contractual terms, even if they differ from the substance of the arrangement
• Disclose lease transactions between related parties</td><td>• N/A – the IASB did not address related-party leasing transactions in its proposals</td></tr>
<tr><td>Lease Term and Purchase Options</td><td colspan="2">• Payments for optional (e.g., renewal) periods and purchase options will be included in lease accounting if it is reasonably certain that the lessee will exercise those options, consistent with the high threshold in current U.S. GAAP
• Lessees will reassess renewal and purchase options if there is a significant event or change in circumstances that is within the control of the lessee – e.g., construction of significant leasehold improvements
• No reassessment of renewal and purchase options by lessors</td></tr>
</table>

[9] Operating leases were referred to as Type B leases in the 2013 Exposure Draft.

[10] Sales-type and direct financing leases were referred to as Type A leases in the 2013 Exposure Draft.

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td>Initial Direct Costs</td><td colspan="2">• Initial direct costs will include only incremental costs that an entity would not have incurred if it had not obtained the lease (e.g., commissions or payments made to existing tenants to obtain the lease)
• Lessees will include initial direct costs in the initial measurement of the ROU asset and amortize the costs over the lease term
• Initial direct costs will be included in determining the lessor's implicit rate unless the lease is a sales-type lease for which there is a selling profit or loss recognized at lease commencement (in which case initial direct costs will be expensed)
• Lessors will include initial direct costs for:
– Sales-type leases in the initial measurement of the lease receivable unless there is a selling profit (loss) on the lease, in which case initial direct costs will be expensed at lease commencement, and
– Direct financing leases in the initial measurement of the lease receivable
• Lessors will capitalize initial direct costs for operating leases and amortize the costs over the lease term in the same pattern as lease income</td></tr>
<tr><td rowspan="3">Discount Rate</td><td colspan="2">• The lessee's discount rate will be the lessor's implicit rate if available, otherwise, the lessee's incremental borrowing rate
– The value used to determine the lessee's incremental borrowing rate will be the cost of the ROU asset
• Lessees will reassess the discount rate when there is:
– A change in the lease term or the assessment of whether the lessee is, or is not, reasonably certain to exercise a purchase option, and
– A lease modification</td></tr>
<tr><td>• Nonpublic business entity lessees will be permitted to elect as an accounting policy to use a risk-free discount rate</td><td>• N/A – no unique guidance for nonpublic business entities</td></tr>
<tr><td colspan="2">• The lessor's discount rate will be the rate implicit in the lease (i.e., the implicit rate)
– Initial direct costs will be included in determining the implicit rate unless the lease is a sales-type lease for which a selling profit or loss is recognized at lease commencement
• Lessors will reassess the discount rate when there is a lease modification</td></tr>
</table>

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td rowspan="2">Variable Lease Payments</td><td colspan="2">• Lease payments used in the initial measurement of lease assets and liabilities will include:
– Variable payments based on an index or rate using prevailing (spot) rates or indices at lease commencement, and
– Variable payments that represent in-substance fixed payments (consistent with current practice)
• No reassessment of variable lease payments by lessors
• Variable payments that are not based on an index or rate and are not in-substance fixed payments will be excluded from the measurement of lease assets and liabilities and recognized as expense as incurred or income as earned</td></tr>
<tr><td>• Lessees will reassess variable lease payments based on an index or rate only when lease payments are remeasured for other reasons (e.g., a reassessment due to a change in the lease term)</td><td>• Lessees will reassess variable lease payments based on an index or rate when:
– Lease payments are remeasured for other reasons (e.g., a reassessment due to a change in the lease term)
– There is a contractual change in the cash flows (i.e., when an adjustment to the lease payments based on an index or rate takes effect under the terms of the lease)</td></tr>
<tr><td>Arrangements with Lease and Non-lease Components; Contract Combinations</td><td colspan="2">• Activities (or costs of the lessor) that do not transfer a good or service to the lessee (e.g., taxes and insurance on the property) will be considered part of the lease (i.e., not separate components in a contract)
• Lessors will always separate lease and non-lease components and allocate consideration using the new revenue standard's guidance (i.e., on a relative stand-alone selling-price basis)
– Reallocate consideration when there is a contract modification that is not accounted for as a separate, additional lease
• Lessees will choose an accounting policy by class of underlying asset to either:
– Separate lease and non-lease components and allocate consideration based on relative stand-alone prices of components, maximizing the use of observable information
• Reallocate consideration when: (a) there is a reassessment of either the lease term or whether exercise of a lessee purchase option is reasonably certain, or (b) there is a contract modification that is not accounted for as a separate, additional lease</td></tr>
</table>

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td></td><td colspan="2">– Account for lease and non-lease components together as a single lease component
• Two or more contracts entered into at or near the same time will be combined into a single transaction if:
– The contracts are negotiated as a package with a single commercial objective, or
– The amount of consideration to be paid in one contract depends on the price or performance of the other contract</td></tr>
<tr><td>Lease Modifications</td><td colspan="2">• Lease modifications will be defined as any change to the contractual terms and conditions of a lease that was not part of the original terms and conditions
• A modification will be considered a separate lease when it grants the lessee an additional ROU that was not included in the original lease and that ROU is priced commensurate with its stand-alone price in the context of that particular contract
• For lessees, when a modification is not considered a separate, additional lease:
– If the modification does not reduce the lessee's ROU (e.g., right to use the leased asset for an additional time period), the ROU asset will be adjusted by the amount of the adjustment to the lease liability
– If the modification reduces the lessee's ROU, the modification will be treated as a full or partial early termination of the lease with a resulting income statement effect
• For lessors, when a modification is not considered a separate, additional lease:
– Operating lease modifications will be treated as a new lease, and
• If the modified lease is a sales-type or direct financing lease, the lessor will adjust the discount rate so that the initial net investment in the modified lease is measured in accordance with the new standard, net of any prepaid or accrued rent
• If the modified lease is an operating lease, the lessor will consider prepaid or accrued rent as part of the lease payments for the new lease
– Finance lease modifications
• If the modified lease is a sales-type or direct financing lease, the lessor will adjust the discount rate so that the initial net investment in the modified lease equals the carrying amount of the net investment in the original lease[11]</td></tr>
</table>

[11] The new leases standard will include specific guidance for how to account for a lease modification if the original lease is a direct financing lease and the modified lease is a sales-type lease.

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td></td><td colspan="2">If the modified lease is an operating lease, the lessor will recognize the underlying asset at the carrying amount of the net investment in the original lease</td></tr>
<tr><td rowspan="2">Subleases</td><td colspan="2">A lessee-sublessor will account for the head lease and the sublease as two separate contracts unless those contracts meet the contract combinations guidance
The head lease will be accounted for in accordance with the requirements for lessee accounting
The sublease will be accounted for in accordance with the requirements for lessor accounting
A lessee-sublessor will not offset lease liabilities and assets arising from a head lease and sublease unless they meet the financial instruments requirements for offsetting in U.S. GAAP or IFRS as applicable
A lessee-sublessor will not offset lease income from a sublease and lease cost from a head lease unless it meets the requirements for offsetting in other U.S. GAAP or IFRS (e.g., the new revenue standard)[12]</td></tr>
<tr><td>A sublessor will consider the underlying asset rather than the ROU asset to be the leased asset in determining the classification of the sublease</td><td>A sublessor will consider the ROU asset to be the leased asset in determining the classification of the sublease</td></tr>
</table>

[12] Members of both Boards believe it is unlikely that sublease income and head lease cost will qualify to be offset if the sublease is classified as an operating lease.

<table>
<tr><th colspan="3">Redeliberations of 2013 Exposure Drafts</th></tr>
<tr><th>Topic</th><th>FASB Decisions</th><th>IASB Decisions</th></tr>
<tr><td rowspan="5">Sale-Leaseback Transactions</td><td colspan="2">Determining Whether a Sale Has Occurred
• A sale-leaseback of the underlying asset will be recognized if the requirements for sale recognition in the new revenue standard are met. The existence of the leaseback will not, on its own, result in a conclusion that control of the asset has not been conveyed to the buyer-lessor.</td></tr>
<tr><td>• If the leaseback would be classified as a sales-type lease, then sale recognition will be precluded
• A repurchase option held by the seller-lessee in a sale-leaseback transaction will preclude sale recognition unless:
– The strike price to repurchase the asset is its fair market value at the date of option exercise, and
– The underlying asset is readily available and non-specialized</td><td>• N/A – single model approach for lessee accounting
• If the seller-lessee has a substantive repurchase option with respect to the underlying asset, sale recognition will be precluded</td></tr>
<tr><td colspan="2">• Both the seller-lessee and the buyer-lessor will account for a sale-leaseback transaction that does not qualify for sale accounting as a financing transaction</td></tr>
<tr><td colspan="2">Accounting for a Sale/Purchase
• A buyer-lessor will account for the purchase of an asset in a sale-leaseback transaction that qualifies for sale accounting consistent with the guidance that applies to the purchase of a nonfinancial asset
• A seller-lessee will account for any loss on a sale-leaseback transaction that qualifies for sale accounting consistent with the guidance that applies to any other sale</td></tr>
<tr><td>• Any gain recognized by a seller-lessee on a sale-leaseback transaction that qualifies for sale accounting will be measured consistent with the guidance that applies to any other sale, subject to any adjustment for off-market terms</td><td>• Any gain recognized by a seller-lessee on a sale-leaseback transaction that qualifies for sale accounting will be restricted to the amount that relates to the buyer-lessor's residual interest in the underlying asset, subject to any adjustment for off-market terms</td></tr>
</table>

Redeliberations of 2013 Exposure Drafts		
Topic	**FASB Decisions**	**IASB Decisions**
	Accounting for the Leaseback • If a sale-leaseback transaction qualifies for sale accounting, the leaseback will be accounted for in the same manner as any other lease	
	Accounting for Off-market Terms • Any potential off-market adjustment will be measured as the more readily determinable of: – The difference between the fair value of the underlying asset and the sales price, or – The difference between the present value of fair market value lease payments and the present value of the contractual lease payments • A *deficiency* in the transaction terms versus market terms will be accounted for as a prepayment of rent • An *excess* in the transaction terms versus market terms will be accounted for as additional financing provided by the buyer-lessor to the seller-lessee	
Lessee Presentation – Balance Sheet	• Lessees will present finance lease ROU assets and lease liabilities either as separate line items on the balance sheet or disclose them separately in the notes to the financial statements – If not separately presented on the balance sheet, lessees will: • Present finance lease ROU assets on the balance sheet as if the underlying asset were owned • Disclose in the notes the line items on the balance sheet in which finance lease ROU assets and lease liabilities are included and their amounts	
	• Lessees will not include operating ROU assets and lease liabilities in the same line items as finance ROU assets and lease liabilities on the balance sheet – If not separately presented on the balance sheet, lessees will disclose in the notes the line items on the balance sheet in which operating ROU assets and lease liabilities are included and their amounts	• N/A – no operating lease classification

Redeliberations of 2013 Exposure Drafts		
Topic	**FASB Decisions**	**IASB Decisions**
Lessee Presentation – Statement of Cash Flows	• Lessees will classify cash paid for: – Principal on finance lease liabilities as financing activities – Interest on finance lease liabilities in accordance with the requirements relating to interest paid under U.S. GAAP guidance on cash flows[13] – Operating leases, variable lease payments, and leases that are not recognized on-balance sheet (e.g., some short-term leases) as operating activities	• Lessees will present cash paid for: – Principal on lease liabilities as financing activities – Interest on lease liabilities as either operating or financing activities based on the lessee's accounting policy choice under IFRS guidance on cash flows[14] – Variable lease payments and leases that are not recognized on-balance sheet (e.g., some short-term leases) as operating activities • Lessees will disclose total lease payments in the notes to the financial statements
Lessee Disclosures	• *Objective*: Enable financial statement users to understand the amount, timing, and uncertainty of cash flows arising from leases	
	• Lessees will disclose the following *qualitative* information: – Nature of leases (and subleases) – Leases that have not yet commenced, but that create significant rights/obligations – Significant lease accounting judgments and assumptions – Main terms and conditions of sale-leaseback transactions – Whether an accounting policy election was made for the short-term lease exemption	• Lessees will disclose other information, in addition to the quantitative disclosures, in sufficient detail to satisfy the lessee disclosure objective

FASB Finalizes One-Year Deferral of the Revenue Standard

At its July 9, 2015 meeting, the FASB agreed to defer by one year the mandatory effective date of its revenue recognition standard, but will also provide entities the option to adopt it as of the original effective date.[1]

Key Facts

The FASB agreed to the following mandatory effective dates for its revenue standard:

- Public business entities and certain not-for-profit entities[2] will be required to adopt the revenue recognition standard in annual reporting periods beginning after December 15, 2017, and interim periods within those annual periods.
- All other entities will be required to adopt the standard in annual reporting periods beginning after December 15, 2018, and interim reporting periods within annual reporting periods beginning after December 15, 2019.
- Early application will be permitted for all entities, but not before the original effective date for public business entities (i.e., annual reporting periods beginning after December 15, 2016).
- The option to use either a retrospective or cumulative-effect transition method will not change.

Key Impacts

Entities that elect to wait for the new effective date to adopt the standard will have an extra year to more effectively implement changes to their accounting systems, processes, and internal controls.

---

[1] FASB Accounting Standards Update No. 2014-09, Revenue from Contracts with Customers, available at www.fasb.org.

[2] This includes not-for-profit entities that have issued, or are conduit bond obligors for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market.

Background

In response to the FASB's exposure draft[3] and other outreach activities, many stakeholders indicated that additional time is needed to develop accounting policies, update information technology systems, and change processes and internal controls.[4] More time also is required to consider the effect on taxes, contracts, and debt covenants, and to train employees.

In addition to the systems and policy concerns, the FASB was influenced by its ongoing consideration of potential amendments to make the standard more operational and limit the potential for diversity to develop in practice.[5] In the February and March 2015 joint FASB/IASB meetings, the FASB agreed to propose several amendments to its standard.

The IASB issued an exposure draft on May 19, 2015 that also proposes a one-year deferral of its revenue recognition standard.[6] The comment period on that proposal ended on July 3, 2015. Based on comment letters received, the IASB's constituents generally support a one-year deferral. The IASB's final decision on whether to defer its standard is expected at its scheduled meeting during the week of July 20.

Deferral Decision

The FASB agreed to defer by one year the mandatory effective date of the standard despite requests by some constituents for a longer deferral. The Board concluded that a one-year deferral is sufficient, in part because it expects standard-setting to be substantially complete by the end of 2015. Also, the Board indicated that deferring for more than one year could delay the implementation process and decrease comparability from a convergence standpoint. A deferral period of more than one year also would result in a longer period of non-comparability among U.S. GAAP preparers between early adopters and those adopting at the mandatory date.

The following chart summarizes the effective date for public business entities and certain not-for-profit entities with calendar year-ends versus the effective date for other entities with calendar year-ends:

Year-end	Mandatory Adoption Date	Early Adoption Date
Public business entities and certain not-for-profit entities		
December 31	January 1, 2018 (including the quarter ending March 31, 2018)	January 1, 2017 (including the quarter ending March 31, 2017)

[3] FASB Proposed Accounting Standards Update, Revenue from Contracts with Customers: Deferral of the Effective Date, April 29, 2015, available at www.fasb.org.

[4] See KPMG's Defining Issues Nos. 15-12 and 15-25, available at www.kpmginstitutes.com.

[5] See KPMG's Defining Issues Nos. 15-5 and 15-11, available at www.kpmginstitutes.com.

[6] IFRS 15, Revenue from Contracts with Customers.

Year-end	Mandatory Adoption Date	Early Adoption Date
Nonpublic entities		
December 31	January 1, 2019 (with mandatory application for interim reporting for the first interim period ending after January 1, 2020 and the option to apply it to the first interim period ending after January 1, 2019)	January 1, 2017 (with the option to apply it in the first interim period ending after January 1, 2017 or the first interim period ending after January 1, 2018), or January 1, 2018 (with the option to apply it in the first interim period ending after January 1, 2018 or the first interim period ending after January 1, 2019)

Next Steps

SEC registrants with calendar year-ends that plan to adopt the standard on January 1, 2018 using the retrospective transition method will present 2016–2018 information under the new revenue recognition standard. Until the period of adoption, SEC registrants will need to update their disclosures regarding plans for adopting the standard including when they plan to adopt and how they plan to transition as their plans become more concrete.[7] Entities should use the additional time to ensure their information technology systems are appropriately capturing the information needed for reporting and disclosure purposes.

Many entities will need to make modifications to their accounting policies, information technology systems, business processes, and internal controls before the effective date. They should use the additional time provided by the deferral to continue their implementation efforts.

Entities should monitor future developments as the Boards continue to explore clarifying amendments for certain aspects of the standard. Entities also will need to consider issues identified in future meetings of the Transition Resource Group for Revenue Recognition.

FASB Proposes to Clarify the Definition of a Business

Responding to stakeholder feedback, the FASB is proposing a new framework to determine whether a set of assets and activities is a business, which would narrow the current definition.[1]

Key Facts

Under the proposed Accounting Standards Update (ASU), an integrated set of activities and assets (a set) is a business if it has, at a minimum, an input and a substantive process that together contribute to the ability to create outputs. The proposal includes an initial screening test (A) that reduces the population of potential businesses before an entity analyzes whether there is an input and a substantive process in the set (B). The following is an overview.

A **Is substantially all of the fair value of the gross assets acquired concentrated in a single (group of similar) identifiable asset(s)?**

If yes, the set is not a business. If no...

B **Evaluate whether an input and a substantive process exist... Does the set have outputs?**

If yes...	**If no...**
The set is a business if it includes: • Organized workforce with skills, knowledge, or experience critical to continue producing outputs; • Process that cannot be replaced without significant cost, effort, or delay; **or** • Process that is considered unique or scarce.	The set is a business if it includes: • Organized workforce with skills, knowledge, or experience to perform an acquired process (group of processes) that, when applied to other acquired input(s), is critical to the ability to develop or convert the acquired input(s) into outputs.

Key Impact

Industries that are likely to be most affected are real estate, life sciences, and extractive, with fewer transactions being identified as acquiring or selling a business.

[1] Proposed Accounting Standards Update, Clarifying the Definition of a Business, November 23, 2015, available at www.fasb.org.

Why Does the Definition of a Business Matter?

Some of the differences in accounting for the acquisition of a business versus a group of assets may be significant. Examples of these differences follow.

Scope Broader Than Acquisitions

Consideration of the proposal is likely to focus on the acquisition of a business.

However, the definition of a business affects many areas of accounting and financial reporting, including acquisitions and disposals, and the applicability of the variable interest entity consolidation requirements.

Asset	Business
Initial Measurement	
Purchase price allocated on a relative fair value basis. No goodwill or bargain purchase gain (see below) is recognized.	Identifiable assets and liabilities generally measured at fair value. Goodwill or bargain purchase gain may be recognized.
Direct Acquisition-Related Costs	
Capitalized and included in purchase price.	Generally expensed as incurred.
Bargain Purchase Amount	
Allocated to identifiable nonfinancial assets and liabilities on a relative fair value basis.	Recognized immediately in earnings as a gain.
Contingent Consideration	
Not recognized until contingency is resolved.	Recognized at the acquisition date fair value. Subsequent changes to the fair value of liability-classified contingent consideration are recognized in earnings.
In-Process R&D	
Purchase price allocated to in-process R&D and then expensed unless it has an alternative future use.	Capitalized at fair value and accounted for as an indefinite-lived intangible asset until completion or abandonment of the project.

Examples That Illustrate the Proposal

Some Assets Could Be Grouped in Applying the Screening Test

In applying the screening test (A), a single identifiable asset generally would include any identifiable asset or group of assets that could be recognized and measured as a single identifiable asset in a business combination (e.g., complementary intangible assets that have similar useful lives).

Examples of assets that generally would not be combined include tangible and intangible assets; identifiable intangible assets in different major intangible asset classes; financial and nonfinancial assets; different major classes of financial assets; and different major classes of tangible nonfinancial assets.

Example 1: Real Estate[2]

Facts

- REIT purchases all of the outstanding shares of Building Co. from Seller.
- Building Co. holds a multi-tenant corporate office park with six 10-story office buildings leased to maximum occupancy. Seller manages its properties centrally and manages the operations of Building Co. with its own employees.
- REIT acquires the land, buildings, and in-place leases (at market), and assumes vendor contracts for outsourced cleaning and security. Seller's employees that perform leasing (e.g., sales and underwriting), tenant management, financing, and other strategic management processes are not acquired.
- REIT plans to replace the property management and employees with its own internal resources.

Analysis

A REIT first considers whether substantially all of the fair value of the gross assets acquired is concentrated in a single (or group of similar) identifiable asset(s). Although the in-place leases are at market value, REIT concludes that their fair value is significant and that the fair value of the gross assets acquired is not concentrated in either the leases or the tangible assets.

B The set has continuing revenues through the in-place leases, and therefore, has outputs. REIT concludes that the processes performed through the cleaning and security contracts (the only processes acquired) are considered ancillary or minor in the context of all of the processes required to create outputs in the real estate industry (i.e., leasing, tenant management, financing, and management of building operations). REIT also concludes that the cleaning and security processes could easily be replaced with little cost, effort, or delay, and are not considered unique or scarce.

Conclusion

The acquired set does not include both an input and a substantive process and, therefore, would not be considered a business.

KPMG Observations

Fewer real estate transactions would qualify as business acquisitions (as illustrated in Example 1) under the proposal than qualify today, but it may be difficult to determine whether assets are combined or considered similar in applying the screening test (A). There is limited guidance in the proposal beyond the examples, and judgment would be required.

---

[2] Based on Case H in the Proposed ASU.

Outputs Do Not Automatically Mean That There Is a Business

In Example 2, no revenue (outputs) is currently being generated.

However, if the acquired set does have outputs, a continuation of revenues generated from an acquired set would not, on its own, indicate that a substantive process has been acquired (see Example 1). Therefore, assumed contractual arrangements that provide for the continuation of revenues (e.g., customer contracts, customer lists, and leases when the set is the lessor), would be excluded from determining whether there is a substantive process.

In addition, the definition of outputs would be amended to align better with the new revenue standard, focusing on providing "goods or services to customers, other revenues, or investment income, such as dividends or interest…"[4]

Example 2: Life Sciences[3]

Facts

- Pharma Co. buys all of the outstanding shares of Target Biotech.
- Target Biotech's operations include R&D activities on several preclinical compounds that it is developing (in-process R&D projects).
- Pharma Co. acquires the scientists who have the necessary skills, knowledge, or experience to perform R&D activities.
- Target Biotech has long-lived tangible assets such as corporate headquarters, a research lab, and testing equipment.
- Target Biotech does not yet have a marketable product and, therefore, has not generated revenues.

Analysis

A

Pharma Co. concludes that substantially all of the fair value of the gross assets acquired is not concentrated in a single (or group of similar) identifiable asset(s).

This is because the fair value of the gross assets is not concentrated but rather spread across a number of items, both tangible (the corporate headquarters, a research lab, and testing equipment) and intangible (the in-process R&D projects plus the acquired workforce). These assets are not similar for the purpose of applying the screening test.

B

Pharma Co. concludes that the scientists make up an organized workforce that has the necessary skills, knowledge, or experience to perform processes that, when applied to the in-process R&D inputs, are critical to the ability to develop those inputs into outputs.

Conclusion

The set includes both inputs and substantive processes and would be a business.

KPMG Observations

The proposal includes a number of examples to help constituents understand how the FASB intends its framework to be applied. The examples cover a variety of industries and transactions not covered in this *Defining Issues*, including oil and gas, manufacturing, and the acquisition of intellectual property and single-family homes.

[3] Based on Case E in the Proposed ASU.

[4] FASB Accounting Standards Update No. 2014-09, Revenue from Contracts with Customers, available at www.fasb.org.

Proposed Transition and Effective Date

An entity would apply the proposal prospectively to transactions that occur on or after the effective date. The Board will determine the effective date and consider whether to permit early adoption after it receives stakeholder feedback. No disclosures would be required at transition.

Convergence

The proposal would create a new difference between U.S. GAAP and IFRS because the current definition of a business under U.S. GAAP is converged with the IFRS definition. However, stakeholder feedback obtained by the FASB indicated that the definitions are applied differently under U.S. GAAP and IFRS, with the definition being applied more broadly under U.S. GAAP.

KPMG Observations

The IASB's recent post-implementation review of its standard on business combinations revealed stakeholder concerns about the challenges in applying the definition of a business.[5]

In October 2015, the IASB discussed the definition of a business and tentatively decided to propose changes to IFRS 3 that are the same as the amendments proposed by the FASB. In November 2015, the IFRS Interpretations Committee confirmed that issuing an amendment similar to the FASB's proposal would help resolve practical problems under IFRS.

Next Steps

Comments on the proposed ASU are due by January 22, 2016. The FASB will review the comments and determine whether to finalize the ASU as proposed.

The FASB's project to clarify the definition of a business includes two additional phases that remain under discussion, with no time frame for issuing exposure drafts. The first phase relates to partial sales or transfers of, and the corresponding acquisition of partial interests in, a nonfinancial asset or assets. The second phase relates to aligning the recognition and measurement guidance for assets versus businesses.

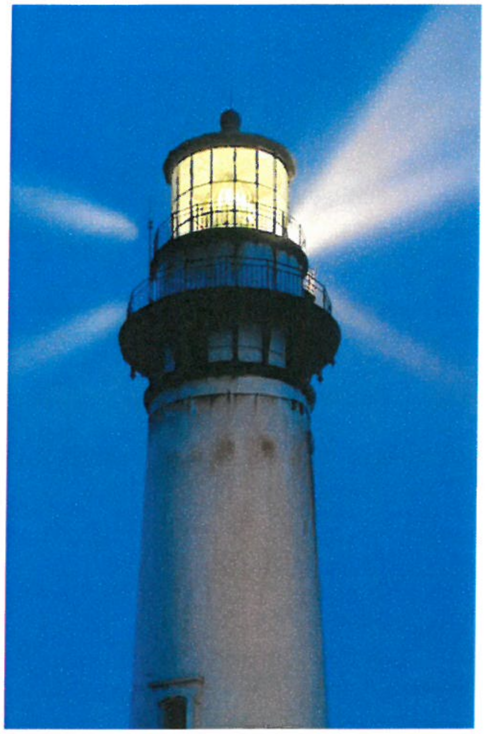
Defining Issues®

September 2015, No. 15-44



FASB Proposes Further Amendments to Revenue Standard

The FASB invited constituents to comment on a proposed Accounting Standards Update (ASU) intended to clarify the application of the new revenue standard with respect to the guidance on collectibility, the date to measure noncash consideration, presentation of sales taxes, and transition.[1] The comment deadline is November 16, 2015.

Key Facts

The FASB is proposing amendments to:

- Clarify when to recognize revenue for nonrefundable consideration received before collectibility of the entire amount to which the entity expects to be entitled is probable;
- Clarify the guidance on derecognition of an asset transferred to a customer;
- Specify for transition that a completed contract is one in which all (or substantially all) of the revenue has been recognized under current U.S. GAAP before the revenue recognition standard is adopted;
- Add a practical expedient that would not require the evaluation of each contract modification from contract inception through the date of adoption;
- Add a policy election to present taxes collected from customers on behalf of governmental authorities on a net basis; and
- Clarify that noncash consideration is measured at contract inception.

Key Impacts

- The FASB's objective with the proposed amendments is to make the standard more operational without significantly changing the underlying principles.
- The proposed FASB amendments are not expected to be considered by the IASB, which could result in differences between how the two Boards' revenue recognition standards are applied.[2]

Contents

[1] FASB Proposed Accounting Standards Update, Narrow-Scope Improvements and Practical Expedients, available at www.fasb.org.

[2] IFRS 15, Revenue from Contracts with Customers.

Collectibility

The proposals clarify when to recognize revenue when collectibility is not probable.

The revenue standard specifies that a contract does not exist for purposes of the revenue recognition model (Step 1) unless collectibility of the consideration to which the entity expects to be entitled is probable.[3] This determination is based on the customer's ability and intention to pay the amount when due. Because Step 1 is a gateway to the revenue recognition model, no revenue is recognized when an entity concludes that collectibility is not probable. This prohibition on revenue recognition also applies to any nonrefundable consideration received. If collectibility of the entire amount to which the entity expects to be entitled is never deemed probable of being collected, the entity does not recognize revenue until either (1) the entity has no remaining performance obligations and substantially all of the consideration has been received and is nonrefundable, or (2) the contract is terminated and all amounts received are nonrefundable. These criteria are referred to as the "alternate recognition model."

The FASB's proposed amendments would add a third event to the alternate recognition model. Under the proposed additional event, when collectibility of the entire amount to which the entity expects to be entitled is not probable, an entity would recognize revenue in the amount of nonrefundable consideration received when the entity has transferred control of the goods or services, the entity has stopped transferring additional goods or services and has no obligation to transfer additional goods or services, and the consideration received from the customer to date is nonrefundable.

The FASB's proposed amendments would include implementation guidance and examples to illustrate the objective and application of the collectibility threshold. The FASB also is proposing to amend Example 1 in the revenue standard to clarify that assets are derecognized when control of the asset transfers to the customer. This may precede the point when revenue is recognized. In that case, the entity would recognize a loss when the asset is derecognized.[4]

Completed Contracts at Transition

Completed contract is redefined for purposes of applying the transition requirements.

An entity that applies the cumulative-effect transition approach when adopting the revenue recognition standard will apply it to contracts that are not completed as of the initial application date. Additionally, the application of certain practical expedients available to an entity that applies the full retrospective approach is impacted by the definition of a completed contract for transition purposes.

The transition guidance currently states that a contract is completed if the entity has *transferred* all of the goods and services identified under current U.S. GAAP. While the transfer of goods and services is a new concept in the revenue standard, it differs from the earned and realized notion embedded in much of legacy U.S. GAAP. This difference in underlying concepts may create transition difficulties because an entity may have transferred all of the goods and services to the customer but not yet recognized all of the revenue. This might occur, for

[3] FASB Accounting Standards Update No. 2014-09, Revenue from Contracts with Customers, available at www.fasb.org. For additional examples on the proposed amendments and comparison to IASB's proposals, please see Defining Issues Nos.15-38, FASB to Clarify Revenue Standard's Collectibility and Completed Contracts Guidance, and 15-11, FASB and IASB to Propose Additional Revenue Clarifications, both available at www.kpmginstitutes.com.

[4] FASB ASC paragraphs 606-10-55-95 through 55-98, available at www.fasb.org.

example, when the amount due from the customer is not fixed or determinable at the date the goods and services were transferred to the customer.

The FASB's proposed amendments would redefine a completed contract for transition purposes as one for which all (or substantially all) of the revenue was recognized under legacy U.S. GAAP.

Example 1: Impact of Change in Definition of Completed Contract

A publicly traded, calendar year-end company sells products to distributors and regularly grants price concessions and accepts product returns. The company's accounting policy is to recognize revenue when the distributors sell the products to end customers (sell-through).

On December 15, 2017, the company delivers products to a distributor. On January 1, 2018, the company adopts the revenue standard using the cumulative-effect transition approach before the distributor has sold any products.

Absent the FASB's proposed amendments, the company likely would conclude that the contract is completed because control of the products has transferred to the distributor prior to the adoption date. As the distributor sells the products, the company receives cash. However, the standard is not clear on how the cash receipts should be accounted for. One interpretation would have required cash receipts to be recognized directly into equity.

Under the FASB's proposed amendments, the company concludes that the contract is not completed at the date of adoption because substantially all of the revenue had not been recognized under legacy U.S. GAAP. The company would apply the standard retrospectively to the contract. The new standard would result in revenue being recognized on December 15, 2017, after giving effect to the constraint on variable consideration. Therefore, the company would recognize a cumulative catch-up to equity on the date of adoption.

The FASB's proposed amendments also specify that an entity using the cumulative-effect transition approach would be permitted, but not required, to apply that transition approach to all contracts whether completed or not at the date of transition.

The IASB has not proposed similar amendments to IFRS 15. If the IASB and FASB do not remain converged on this transition topic, multi-national companies adopting the standard using the cumulative-effect approach could have different populations of contracts to which they apply the new standard. This could result in incremental efforts to adopt the standard for multi-national companies. Differences between a company's U.S. GAAP and IFRS financial statements could occur for a period of time even though the guidance in the standards is largely converged.

Practical Expedients upon Transition

The revenue standard requires that contract modifications are accounted for either prospectively or through a cumulative catch-up adjustment depending on the specific circumstances of the modification.

The FASB has proposed a practical expedient that would not require an evaluation of each contract modification from contract inception through the date of adoption. For an entity electing the practical expedient, modified contracts would be accounted for during transition by:

- Identifying all satisfied and unsatisfied performance obligations from inception of the original contract to the Contract Modification Adjustment Date (CMAD);
- Determining the transaction price based on the information available at the CMAD using total consideration to which the entity is entitled for all performance obligations (satisfied and unsatisfied) in the contract; and
- Allocating the transaction price to the performance obligations at the CMAD based on the historic stand-alone selling price of each good or service.

The beginning of the earliest period presented would be the CMAD under the retrospective transition approach. The date of initial application would be the CMAD under the cumulative-effect transition approach. Modifications occurring after the CMAD would be accounted for using the standard's contract modifications guidance.

The FASB's proposed amendments would not require an entity electing the retrospective transition approach to disclose the current period impacts of adopting the standard, which would have required an entity to account for contracts under both the standard and current U.S. GAAP in the period of adoption. This change would align the standard with IFRS.

Sales Tax Presentation: Gross versus Net

The standard supersedes current U.S. GAAP guidance that allows a policy election to present taxes collected from customers on behalf of governmental authorities either gross or net.[5] The standard requires a company to evaluate each tax in each jurisdiction in which it operates to determine whether taxes are amounts collected on behalf of third parties that would be excluded from the transaction price.

The FASB has proposed a practical expedient that would allow an entity to elect an accounting policy to present these taxes on a net basis. If the entity does not elect to apply the practical expedient, it would be required to analyze whether an individual tax should be included in the transaction price. An entity would be required to disclose its use of this practical expedient. The FASB decided to use the same scope that is in ASC paragraph 605-45-15-2(e), which includes sales, use, value added, and some excise taxes.

[5] FASB ASC paragraphs 605-45-50-3 and 50-4, available at www.fasb.org.

Noncash Consideration

The revenue standard requires that noncash consideration be measured at fair value. If an entity cannot reasonably estimate the fair value of noncash consideration, it is measured indirectly by reference to the selling price of the goods or services promised to the customer. However, the standard does not specify *when* to measure noncash consideration at fair value. This differs from current U.S. GAAP where the measurement date of equity-based consideration is the earlier of the vesting date or the performance commitment date.[6]

The FASB's proposed amendments specify that noncash consideration be measured at contract inception. This is generally consistent with the measurement of the transaction price when it consists of cash consideration. The FASB is proposing to update Example 31 in the standard to be consistent with its decision on the measurement date.[7]

The FASB is also proposing that the constraint applies only to variability caused by reasons other than the form of the consideration. Determining whether a change in fair value was caused by the form of the noncash consideration or other reasons and deciding how to allocate changes between these reasons may be challenging.

Example 2: Application of the Constraint to Noncash Consideration

On January 1, 2018, Company A enters into a contract to provide services to Customer Z for one year. In exchange, Company A will receive 1,000 common shares of Customer Z on December 31, 2018. If Company A achieves a performance milestone, it will be entitled to an additional 200 shares.

Company A considers the factors associated with the constraint on variable consideration in determining whether it expects to be entitled to the additional shares. However, changes in the share price subsequent to the measurement date of January 1, 2018, is not variable consideration. Therefore, the constraint is not applied to those changes (i.e., variation due to the form of noncash consideration).

Next Steps

Companies should evaluate the FASB's proposed amendments and consider submitting a comment letter by the November 16, 2015, deadline.

[6] FASB ASC paragraph 505-50-30-18, available at www.fasb.org.

[7] FASB ASC paragraph 606-10-55-247, available at www.fasb.org.

Separately, the FASB previously issued its exposure draft on principal versus agent guidance with comments due by October 15, 2015.[8]

The FASB is expected to discuss the comment letters on its exposure draft on licenses and performance obligations in early October.[9]

FASB Redeliberates Revenue Guidance on Licensing and Performance Obligations

On October 5, 2015, the FASB redeliberated and, in general, tentatively decided to adopt its proposed revenue guidance on accounting for licenses of intellectual property and identifying performance obligations.[1] The redeliberations were held in response to comment letters on the FASB's proposed Accounting Standards Update (ASU) and its staff's outreach efforts.

Key Facts

The Board tentatively decided to:

- Clarify the timing of recognition for revenue from licenses of intellectual property (IP), including the guidance for sales- and usage-based royalties;
- Amend the criteria for determining whether goods or services are performance obligations;
- Specify that an entity is not required to identify as a performance obligation goods or services that are immaterial in the context of the contract;
- Add a policy election to account for shipping and handling services provided after control of the goods transfers to the customer as a fulfillment activity; and
- Retain the requirement that goods and services that meet specified criteria be accounted for as a series (i.e., a single performance obligation).

Key Impacts

- The FASB's amendments are not fully converged with the IASB's proposed amendments. However, the Boards hope that the wording differences will not result in significantly different outcomes in practice, excluding areas where the FASB has provided additional practical expedients (e.g., shipping and handling).[2] The IASB is proposing more limited clarifications to its standard. The comment deadline on the IASB's exposure draft is October 28, 2015.
- For entities that license IP, the timing of revenue recognition may be significantly different from current practice.

---

[1] FASB Proposed Accounting Standards Update, Identifying Performance Obligations and Licensing, May 12, 2015, available at www.fasb.org.

[2] IASB Exposure Draft ED/2015/6, Clarifications to IFRS 15, available at www.ifrs.org.

The Board's clarifications to determining the nature of an IP license are consistent with the proposed ASU.

Determining the Nature of an Intellectual Property License

The revenue recognition standard provides implementation guidance on whether revenue related to a distinct IP license is recognized over time or at a point in time.[3] A license that provides a right to access the entity's IP as it exists throughout the license period is an over-time performance obligation. A license that provides a right to use the entity's IP as it exists when the license is granted to the customer is a point-in-time performance obligation.

The Board tentatively agreed to amend the implementation guidance on IP licenses to require an entity to classify IP into one of two categories.

- ***Functional IP.*** IP is functional if the customer derives a substantial portion of the overall benefit from the IP's stand-alone functionality. Functional IP would generally include software, biological compounds, drug formulas, and completed media content (e.g., films, television shows, and music). Consideration for functional IP would generally be recognized as revenue at the point in time when control of the IP transfers to the customer. However, if the functionality of the IP is expected to substantively change during the license period as a result of activities of the entity, and the customer is contractually or practically required to use the updated IP, then the consideration would be recognized as revenue over time.
- ***Symbolic IP.*** IP is symbolic if it does not have significant stand-alone functionality, and substantially all of the customer's benefit is derived from its association with the licensor's ongoing activities. Symbolic IP would generally include brands, trade names such as sports team logos, and franchise rights. Consideration for symbolic IP would generally be recognized as revenue over the license period using a measure of progress that reflects the licensor's pattern of performance.

KPMG Observations

Some comment letter respondents suggested eliminating the guidance on over-time recognition of revenue for functional IP. The Board decided to retain the guidance because the customer may not obtain substantially all of the remaining economic benefits of the IP at the beginning of the license term. The Board's decision will require an entity to first decide whether the licensed IP is functional or symbolic. If the IP is functional, an entity will then need to apply additional criteria to determine whether revenue related to functional IP is recognized over time. Although over-time revenue recognition for functional IP is not expected to occur frequently, application of the guidance will require judgment.

[3] FASB ASC paragraphs 606-10-55-59 to 55-64, available at www.fasb.org.

Other respondents pointed out that symbolic IP does not always involve ongoing activities to support the IP. In those cases, the customer is able to obtain substantially all of the remaining economic benefits of the IP at the beginning of the license term. Although the Board considered adding an exception to the guidance on symbolic IP, it decided not to do so because of concerns about complexity. Consequently, all symbolic IP would result in over-time revenue recognition.

Applying the Sales- and Usage-based Royalties Exception

The Board's clarifications to the royalties exception are consistent with the proposed ASU. The Board did not define predominant and did not expand the exception to sales or in-substance sales of IP.

The revenue recognition standard includes an exception to the guidance on estimating variable consideration for sales- and usage-based royalties on IP licenses. The standard prohibits an entity from estimating these forms of variable consideration. Instead, it specifies that an entity can only recognize revenue for a sales- or usage-based royalty for an IP license at the later of (a) when the subsequent sale or usage occurs, or (b) the performance obligation has been satisfied or partially satisfied. The FASB discussed the fact that the *later of* guidance was intended to ensure that revenue is not recognized prior to the satisfaction of the performance obligation.

When an IP license includes other goods or services, the Board agreed to clarify that an entity either applies, in its entirety, the royalties exception or the general guidance on variable consideration (including the constraint). The royalties exception must be applied when the royalty is given in exchange for a distinct IP license or when the IP license is the *predominant* item to which the royalty relates. The FASB has not proposed providing guidance on the definition of predominant, but has acknowledged that determining when a license is the predominant item may require significant judgment. For arrangements that contain both an IP license and other non-IP goods or services, this determination may give rise to significant judgments about the amount of the transaction price and timing for the recognition of variable consideration that relates to a sales- or usage-based royalty.

The Board discussed expanding the scope of the royalties exception to sales of intellectual property. However, the Board decided not to expand the royalties exception beyond the guidance discussed above. The Board decided that the royalties exception should apply to all licenses, even if in-substance it is a sale (e.g., a worldwide, perpetual, or exclusive license). The legal form of the arrangement will be the driving factor to determine whether the royalties exception applies.

Other Clarifications on Licenses

When to Determine the Nature of an Intellectual Property License

The Board reaffirmed its previous tentative decision that when an IP license is not distinct from other goods or services in a contract, it may be necessary to determine the nature of the license to determine whether the performance obligation (a bundle of goods or services including the license) is satisfied over time or at a point in time. For example, if a license is bundled with goods or services that are provided over a period shorter than the license term, an entity may need to consider the nature and term of the license when determining the pattern for revenue recognition of the bundled arrangement.

The Board's clarifications on when to determine the nature of an IP license are consistent with the proposed ASU.

KPMG Observations

The Board's tentative decision on when to apply the licensing guidance for a bundled performance obligation is based on the notion that an entity is always supposed to consider the nature of its promise when determining an appropriate method for measuring progress. The amendment clarifies the original revenue standard, which specified that the licensing guidance only applies to distinct licenses of intellectual property. The Basis for Conclusions in the original revenue standard, however, noted that in some cases the combined good or service may have a license as its primary or dominant component. Some believed that it is appropriate to apply the licensing guidance to bundled arrangements only when the license is the primary or dominant good or service in the contract. The amendments would make the licensing guidance for determining whether to recognize revenue at a point in time or over time more broadly applicable to arrangements where the license is not the primary or dominant good or service. An entity would not have to apply the licensing guidance to every performance obligation that includes IP. Rather, an entity would consider whether the licensing guidance is necessary to understand the nature of the entity's promise and the period over which the performance obligation is satisfied.

In addition, the guidance is different than the guidance on sales- or usage-based royalties, which is expected to be amended to specify that the royalties exception applies to bundled arrangements only if the royalty predominantly relates to an IP license.

Contractual Restrictions

The Board's clarifications to contractual restrictions are consistent with the proposed ASU.

The Board also tentatively agreed to clarify that contractual restrictions on time, geography, or a licensee's ability to use or access the underlying IP are attributes of the license and do not impact the number of performance obligations in the contract. These restrictions define the scope of the license rather than the number of distinct licenses in the arrangement. For example, a license that allows a television station to broadcast a movie on four specific dates during the license term would generally be a single performance obligation. However, some contractual restrictions are not restrictions on the licensee's ability to use or access the IP. For example, if the licensee has the right to use or access the IP for two distinct periods of time, the period between the license periods is substantive, and the licensor has the ability to grant the right to use or access the IP to another party during that intervening period, then the contract would include more than one performance obligation.

KPMG Observations

The Board acknowledged that there have been a number of questions raised about applying the guidance on contractual restrictions. Specifically, the questions have centered around which contractual restrictions are attributes of the license and which restrictions give rise to separate performance obligations. The Board decided that it would move forward with the amendments in the proposed ASU. However, it plans to discuss those amendments with the Transition Resource Group for Revenue Recognition (TRG) at the next TRG meeting on November 9, 2015. If the TRG members have significant concerns with the operability of the proposed guidance, then perhaps the Board would consider making further changes to this guidance. However, the Board plans to proceed with the other amendments and clarification even if further changes on contractual restrictions are deemed necessary.

The Board's clarifications to identifying promised goods or services are consistent with the proposed ASU. However, the Board will also provide cost guidance for services that are immaterial in the context of the contract.

Identifying Promised Goods or Services

The first step in identifying performance obligations is to identify the goods or services promised in the contract. The standard states that promised goods or services are not limited to the goods or services that are explicitly stated in the contract. Rather, the contract may include promises that are implied by an entity's customary business practices, published policies, or specific statements if, at the time of entering into the contract, those promises create a valid expectation of the customer that the entity will transfer goods or services to the customer. However, administrative tasks an entity must undertake to fulfill a contract that do not transfer goods or services to the customer are not performance obligations.[4]

[4] FASB ASC paragraphs 606-10-25-16 to 25-17, available at www.fasb.org.

The Board tentatively agreed to amend the standard to specify that an entity is not required to identify as a performance obligation those goods or services to be transferred to the customer that are immaterial in the context of the contract. This guidance was provided in an attempt to make implementation of the revenue standard less costly for some preparers.

The Board emphasized that immaterial in the context of the contract is a qualitative and quantitative assessment based on what may be important to the customer. This is a different concept than materiality that is applied to the financial statements as a whole, which focuses on information that is important to financial statement users.

KPMG Observations

Several comment letter respondents indicated that the term immaterial could lead to complexity when applying the guidance because it would introduce a new materiality concept. It is as yet unclear to what degree immaterial in the context of the contract includes other quantitatively small-dollar items that would not have been considered inconsequential or perfunctory, a commonly understood concept within legacy U.S. GAAP.[5]

The Board decided to provide guidance that will require costs associated with promises deemed to be immaterial in the context of the contract to be accrued when the goods or services are provided to the customer.

Distinct in the Context of the Contract

The Board's clarifications to distinct in the context of the contract are consistent with the proposed ASU.

The process of identifying performance obligations requires an entity to determine which goods and services are distinct. A good or service is distinct if the customer can benefit from it on its own or with other resources that are readily available to the customer *(capable of being distinct)* and the promise to transfer the good or service is separately identifiable *(distinct in the context of the contract)*. While the first criterion is similar to the stand-alone value notion that exists in current U.S. GAAP, the second criterion is new.[6]

The Board tentatively agreed to amend the guidance on distinct in the context of the contract, consistent with the proposed ASU.

- Explanatory language will be provided to better articulate the principle. The revised language will indicate that the objective when considering whether promised goods or services are separately identifiable is to determine whether the nature of the entity's overall promise in the contract is to transfer (a) each of those separate goods or services, or (b) a combined item (or items) to which the promised goods or services are inputs.

[5] SEC Staff Accounting Bulletin Topic 13.A.3.c, available at www.sec.gov.

[6] FASB ASC paragraph 605-25-25-5(a), available at www.fasb.org.

- The factors for determining what is distinct in the context of the contract will be revised to more closely relate to the separately identifiable principle. In addition, the factors will refer to the goods and services in the contract as a bundle to focus the analysis on when goods or services significantly affect each other.
- Examples will be added to demonstrate how the separation guidance should be applied.

KPMG Observations

In general, the rearticulated principle, related indicators, and additional examples represent an improvement to the revenue recognition standard. These changes should be helpful to stakeholders in determining whether goods or services are distinct within the context of the contract.

Series Guidance

The revenue standard requires that if promised goods or services are (1) distinct; (2) substantially the same; (3) transferred to the customer over time; and (4) the same measure of progress would be used for each individual good or service, then the aggregate promised goods or services in the contract *must* be accounted for as a single performance obligation (the series guidance).[7]

Applying the series guidance impacts the accounting related to the allocation of variable consideration, contract modifications, and changes in the transaction price. Some had previously informed the FASB that this guidance was overly complex for some arrangements.[8] In the proposed ASU, the Board asked constituents whether they believe the series guidance should be optional.

Although some respondents favored making the series guidance optional, others indicated this would result in lack of comparability. Additionally, the IASB is not currently considering making its series guidance optional. The Board decided that it would *not* make the series guidance optional. That is, if the criteria for applying the series guidance are met, an entity must treat the series as a single performance obligation. The Board also instructed the FASB staff to ensure appropriate education was provided for the series guidance because the Board believes that many of the questions arose because of a lack of understanding.

The revenue standard also requires that an entity disclose the aggregate amount of the transaction price allocated to performance obligations that are unsatisfied or partially satisfied at the end of the reporting period and provide an explanation about when the entity expects to recognize this amount as revenue.[9] The Board considered whether to exempt entities that are subject to the series guidance from this disclosure requirement. The Board determined that further analysis was needed before it could conclude that changes in the disclosure requirements are appropriate.

---

[7] FASB ASC paragraph 606-10-25-14b, available at www.fasb.org.

[8] See KPMG Defining Issues No. 15-13, Revenue Transition Group Discusses Consideration Payable to a Customer, Series Guidance, available at www.kpmg-institutes.com.

[9] FASB ASC paragraph 606-10-50-13, available at www.fasb.org.

KPMG Observations

Although entities *must* apply the series guidance if certain criteria are met, the Board is aware of the difficulties associated with disclosing the amount allocated to unsatisfied performance obligations when an entity's performance obligation is a series and the variable consideration is allocated entirely to each distinct good or service.

However, the Board decided not to provide an exemption from the disclosure requirements until it obtains a more comprehensive understanding of preparers' concerns and potentially about other disclosure requirements in the standard. The Board emphasized that it is not interested in reopening a broad discussion on the disclosure requirements of the revenue standard. However, it is aware that many companies are just beginning to develop an understanding of the standard's disclosure requirements. Entities should consider sharing other concerns about disclosures either formally or informally with the Board because it may consider making some limited exemptions.

Accounting for Shipping and Handling Services

The Board's clarifications to shipping and handling are consistent with the proposed ASU. However, the Board will also provide cost guidance for shipping and handling.

An entity may bill a customer for shipping and handling services in addition to the stated price of the goods or services. Unlike current U.S. GAAP, the revenue recognition standard does not provide specific guidance for the presentation of shipping and handling fees when an entity charges separately for them.[10] However, it defines the transaction price as the amount of consideration to which an entity expects to be entitled in exchange for transferring promised goods or services to a customer, which generally would include amounts charged for shipping and handling.

The more significant question is whether the entity is required to identify shipping and handling services as a performance obligation (whether or not it charges the customer for these services) when it concludes that it has transferred control of the goods to the customer before the product is shipped. The Board tentatively concluded that it will provide a policy election that would allow an entity to choose to account for shipping and handling either as a fulfillment cost or as a promised service when transfer of control of the goods occurs before the goods are shipped. The Board decided to provide guidance requiring costs associated with shipping and handling activities to be accrued when control of the related goods has transferred to the customer and the entity has determined that it will not account for shipping and handling as a separate performance obligation.

[10] FASB ASC paragraphs 605-45-45-19 to 45-21, available at www.fasb.org.

Example: Shipping and Handling Services

An entity sells a product to a customer and ships the product with FOB shipping point terms. The entity has a customary business practice of replacing products if they are damaged in transit (synthetic FOB destination). The entity must determine whether control transfers at the shipping point or if control does not transfer until it arrives at the customer's location. If the entity concludes that control of the goods transfers at the shipping point, the entity could treat the shipping as a separate performance obligation. This would result in recognizing revenue allocated to the goods when they are shipped, and revenue allocated to the shipping performance obligation would be recognized as shipping occurs.

Alternatively, the entity could elect to treat the shipping as a fulfillment cost. This would result in all of the revenue being recognized when the goods are shipped and accruing the cost of shipping.

If the entity concludes that control of the goods transfers when the goods arrive at the customer's location, then the entity would treat the shipping as a fulfillment cost, and recognize all of the revenue when the goods are delivered to the customer's location.

The FASB noted that the cost of shipping and handling that occurs *prior* to the customer obtaining control of the goods is a fulfillment cost rather than a performance obligation.

KPMG Observations

Under current U.S. GAAP entities may have arrangements with FOB shipping point terms that are accounted for as FOB destination arrangements (i.e., synthetic FOB destination) because the entity has determined that risks and rewards do not pass to the customer at shipping point (e.g., the entity has a business practice of covering damage to the product that occurs in the shipping process or providing the customer with a replacement product if the product is lost in transit). All entities will need to consider the indicators included in the revenue standard to determine when control transfers, which may require significant judgment and may lead to diversity in practice. In particular, entities that currently recognize revenue when the goods arrive at the customer location based on synthetic FOB destination terms may determine that under the revenue standard control transfers to the customer when the goods are shipped and will need to make a policy election to account for the shipping services as a fulfillment activity or a performance obligation. The IASB is not proposing a similar amendment. Consequently, this could be an area that results in divergent outcomes.

Next Steps

The FASB intends to issue an Accounting Standards Update covering these topics before the end of 2015.

The FASB recently issued an exposure draft on other narrow-scope improvements and practical expedients with comments due by November 16, 2015.[11] In addition, the FASB previously issued an exposure draft to amend the guidance on determining whether the entity is a principal or an agent with comments due by October 15, 2015.[12]

FASB Sets 2019 Effective Date for New Leases Standard

At its November 11 meeting, the FASB set the effective dates of the new leases standard and decided to permit early adoption. The FASB also discussed cost-benefit considerations and a follow-up issue related to lease classification to complete its due process. The FASB plans to issue a final leases standard in January 2016.

Key Facts

- Public business entities, certain not-for-profit entities, and certain employee benefit plans will be required to apply the new leases standard for interim and annual periods in fiscal years beginning after December 15, 2018.
- All other entities will be required to apply the new leases standard for fiscal years beginning after December 15, 2019, and interim periods in fiscal years beginning one year later.
- Early adoption will be permitted for all entities.
- Entities will not apply the lease-term criterion when evaluating classification of a lease that begins near the end of an asset's economic life.[1]

Key Impacts

- Issuance of the new leases standard is just around the corner. Entities should start assessing how it will affect them if they haven't already done so.
- Entities can elect to early adopt the leases standard beginning in 2016.
- Determining whether an asset is *near the end* of its economic life will involve judgment. Using the 25 percent threshold currently in U.S. GAAP to make that judgment will be considered a *reasonable approach.*[2]
- When the lease term begins near the end of an asset's economic life, entities will apply the other lease-classification criteria to determine whether the lessee obtains control of the underlying asset.

---

[1] The lease-term criterion: Is the lease term for the major part of the underlying asset's remaining economic life?

[2] ASC Topic 840, Leases, available at www.fasb.org.

Adoption Date Considerations

Except for early adoption, the FASB's decision on effective date for public business entities aligns with the IASB's recent decision for its leases standard.[3]

Because the leases standard can be early adopted on issuance, entities could decide to adopt it before they adopt the new revenue standard.[4]

The FASB decided not to align the effective date of the new leases standard with the revenue standard. Early adoption will allow entities to adopt the leases standard *before* the revenue standard.

KPMG Observations

The alignment of the effective dates for the FASB's and IASB's leases standards will make it easier for global entities to prepare their financial statements.

Given the interplay between the new leases and revenue standards, entities should consider their facts and circumstances and potential benefits of adopting the leases and revenue standards concurrently. Implementation challenges may arise when entities adopt the leases standard at the effective date. For example, current U.S. GAAP lease accounting guidance contains specific real estate sale-leaseback accounting guidance that was not carried forward to the new leases and revenue standards.

Lease Classification Issue

Current U.S. GAAP and the forthcoming leases standard include similar lease classification tests, including a lease-term criterion. However, current U.S. GAAP is more prescriptive than the leases standard will be.

The FASB received feedback that current operating leases with lease terms beginning near the end of an asset's economic life may be classified as finance leases under the proposed guidance solely based on the asset's age. Under current U.S. GAAP, when the lease term falls within the last 25 percent of an asset's total estimated economic life, the lease-term criterion is not applied.

The FASB decided to include a similar exception in the new standard without requiring the use of the bright line. While determining whether an asset is near the end of its economic life will require judgment, entities may apply the 25 percent threshold in current U.S. GAAP as a *reasonable approach* to make that judgment.

KPMG Observations

Interestingly, no concerns were raised about the fair value lease-classification criterion, although a similar exception exists for end-of-life leases when applying that criterion under current U.S. GAAP.

---

[3] IFRS 16, Leases, available at www.ifrs.org.

[4] ASC Topic 606, Revenue from Contracts with Customers, available at www.fasb.org.

Under the forthcoming standard, lease classification will be based on whether the lease gives the lessee control of the underlying asset. One criterion indicating control transfer is when the asset is so specialized that it is expected to have no alternative use to the lessor at lease expiration. With the FASB's decision, lease classification will now potentially be different from current guidance based solely on an asset's uniqueness.

Because this issue is specific to U.S. GAAP, it will create an additional difference with IFRS 16.

Cost-Benefit Considerations

The FASB concluded that the benefits of the new leases standard will outweigh implementation costs, and that financial statement users will receive better information under the new standard.

- For lessees, all leases (except short-term leases) will be recognized on balance sheet, which will improve comparability between entities and reduce differences related to how financial statement users adjust the financial reporting for leases.
- More information will be disclosed in the financial statement notes for both lessees and lessors to provide a more complete picture of their leasing activities and exposure (e.g., asset risk and, for lessors, credit risk).

The FASB believes implementation and ongoing compliance costs with the new standard will not be as significant as they would have been under the 2010 and 2013 exposure drafts. Through redeliberations, the FASB made decisions it believes will reduce the necessary changes to systems and processes for both lessees and lessors.

Staying Informed

The FASB expects to issue an Accounting Standards Update in January 2016. KPMG will issue a *Defining Issues®* about the new standard when it is issued followed by an *Issues In-Depth* with a more comprehensive analysis of the new standard.

Revenue Transition Resource Group Discusses Nine Issues

The Joint Transition Resource Group for Revenue Recognition (TRG) met for the fifth time on July 13, 2015, and discussed nine issues related to the joint FASB/IASB revenue recognition standard.[1] This edition of *Defining Issues* summarizes the key points discussed at the meeting.

Key Facts

- Fees charged by credit-card issuing banks to cardholders are generally outside the scope of the revenue standard under U.S. GAAP. Because IFRS does not have explicit guidance on the accounting for credit card fees, differences between IFRS and U.S. GAAP could arise.
- Depending upon the facts and circumstances of an arrangement, the standard's guidance related to allocating variable consideration to the distinct goods or services that constitute a series may be applied to many service contracts as a practical accommodation.
- Consideration payable to a customer that is a reduction of revenue generally will be accounted for as variable consideration. The guidance on the timing of the recognition of consideration payable to a customer would only apply in the limited circumstance that an entity does not have the intention or an established practice of providing a payment to its customers at contract inception.
- TRG members had differing views on how to define a completed contract when applying the transition guidance.[2] This will be discussed again at the next TRG meeting.

Key Impacts

- Applying the series guidance could simplify application of the revenue model for some IT outsourcers, transaction processors, and other long-term service providers.
- TRG members generally agreed with the FASB and IASB staff's views on most of the issues, which likely means that the Boards will not undertake standard setting on those issues.

[2] FASB ASC paragraph 606-10-65-1(c)(2), available at www.fasb.org, and IFRS.C2(b).

Consideration Payable to a Customer

This topic has been discussed at two previous meetings including the March 31, 2015, TRG meeting. However, technology issues prevented the U.S. and international TRG members from holding a joint discussion.

The standard states that consideration payable to a customer includes amounts that an entity pays, or expects to pay, to a customer or to other parties that purchase the entity's goods or services from the customer. An entity should treat consideration payable to a customer as a reduction of the transaction price, unless the payment is in exchange for a distinct good or service, and the entity can reasonably estimate the fair value of the good or service. The guidance on consideration payable to a customer states that it is recognized at the *later of* when the entity recognizes revenue or when the entity pays or promises to pay the consideration (later of guidance). However, because consideration payable to a customer can be included in the transaction price, it also can be a form of variable consideration.

Because the timing of recognition would differ if it is deemed to be variable consideration versus using the later of guidance, stakeholders have asked when the guidance on consideration payable to a customer and variable consideration should be applied.

Example 1: Variable Consideration versus Consideration Payable to a Customer

Manufacturer A sells its product to Distributor A for $100 on December 1 and recognizes revenue at that time. Manufacturer A has a history of offering a $25 cash-back rebate to end-consumers in the following February.

Under the variable consideration guidance, Manufacturer A would reflect the $25 rebate in its transaction price on December 1 based on its previous business practice and intent to continue to offer this incentive. Under the later of guidance, the transaction price would be reduced in February when Manufacturer A pays the rebate to the end consumer.

In the March meeting, TRG members had differing views on whether payments made to customers should be evaluated at the contract level or more broadly at the customer-relationship level. U.S. members noted that evaluating payments broadly at the customer-relationship level is consistent with current U.S. GAAP.[3] However, many believe that the new standard was not written in that way. Most TRG members indicated that something between the broad customer-relationship view and narrow customer contract level was appropriate.

In the July meeting, both U.S. and international TRG members observed that a reasonable application of either view should result in similar financial reporting outcomes. Members also had differing views about how broadly payments within the distribution chain should be evaluated. Some members stated that customers are only those parties that are within the direct distribution chain.

[3] FASB ASC Section 605-50-25, available at www.fasb.org.

Others thought a broader view of a customer's customer should be used, citing the reference in the Basis for Conclusions to situations where an entity is acting as a marketing agent.[4] These marketing companies view the principal as their customer, but they also may view the principal's end customer (i.e., customer's customer) as their customer and therefore believe this guidance should be applied to them.

TRG members generally agreed that an entity's customer might include a customer's customer that extends beyond the direct distribution chain, and that sometimes an entity may have more than one customer. As a consequence, judgment will be needed to evaluate a specific fact pattern to determine whether a payment is treated as a reduction of revenue.

Variable consideration is estimated and included in the transaction price at contract inception and at each subsequent financial reporting date, differing from the recognition timing under the later of guidance. TRG members generally agreed that the guidance can be reconciled because not all consideration payable to a customer is variable consideration. However, this discrepancy puts pressure on determining, at contract inception, whether the entity intends to provide an incentive. This evaluation will include an assessment of the entity's past practices and other activities that could give rise to an expectation at contract inception that the transaction price is variable. The later of guidance would only be used when the entity does not have this history and has no expectation of providing incentives, which the TRG expects will occur only in limited circumstances when an entity has not implicitly (including through its customary business practices) or explicitly promised a payment to the customer at contract inception.

Credit Card Fees and Loyalty Programs

The revenue standard excludes from its scope other contractual rights and obligations that are within the scope of certain ASC Topics, including receivables. Current U.S. GAAP includes guidance on accounting for credit-card fees as part of the receivables guidance.[5] Because credit card fees may entitle the cardholder to other services (e.g., airport lounge access or roadside assistance), some have questioned whether all services embedded within the credit-card fee arrangement are within the scope of the receivables guidance or whether some of those services should be separated from the credit card fee and included in the scope of the revenue standard.

Current U.S. GAAP states that credit card fees can cover many cardholder services.[6] To the extent a fee compensates the entity for a service provided during the loan commitment period, the separate components of a commitment fee are not identifiable and reliably measurable to allow for separate accounting recognition for each component part.[7]

[6] FASB ASC paragraphs, 310-20-05-03 and 25-15, available at www.fasb.org.

[7] FASB Statement No. 91, Accounting for Nonrefundable Fees and Costs Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases, paragraph BC48, available at www.fasb.org.

Instructions for submitting an issue to the TRG can be found on the FASB's Web site.

The next TRG meeting is scheduled for November 9, 2015.

The FASB staff's outreach showed that under current practice credit card fees are accounted for using the receivables guidance. In addition, constituents noted that the revenue standard scopes out transactions that are within the scope of the receivables guidance and pointed out that the revenue standard did not change the scope of the receivables guidance. Therefore, they believe that credit card fees continue to be within the scope of the receivables guidance and outside of the revenue standard's scope. While the FASB staff generally agreed with that view, it also noted that a credit card issuing bank should not assume that all of its arrangements are outside the scope of the revenue standard. In particular, the FASB staff was concerned about potential arrangements being labelled as credit-card lending arrangements, when the substance is clearly the sale of other goods or services. The TRG members generally agreed with the FASB staff's analysis.

Questions have also arisen about whether loyalty programs included in credit card arrangements are within the scope of the revenue standard. Similar to the analysis above, the determination is based on whether the credit card fee that gives the right to participate in the loyalty program falls within scope of the receivables guidance or the revenue standard. Therefore, the card-issuing bank should evaluate its specific facts and circumstances.

Under IFRS, arrangements within the scope of the financial instruments standard are scoped out of the revenue standard.[8] Because IFRS does not have explicit guidance on the accounting for credit card fees, TRG members noted that differences between IFRS and U.S. GAAP could arise.

Series Provision and Allocation of Variable Consideration

At contract inception an entity is required to account for each good or service or bundle of goods or services as a performance obligation if (a) they are distinct, or (b) they are a series of distinct goods or services that are substantially the same and have the same pattern of transfer to the customer (the series provision). The series provision was included in the standard to simplify the accounting for repetitive services and to promote consistency in identifying performance obligations.[9]

In a contract to provide a repetitive service, such as a monthly cleaning service, an entity would treat the promise to provide cleaning services as a single performance obligation rather than treating each increment of service (e.g., year, month, day, or hour) as a performance obligation. Based on previous TRG discussions, the FASB included a question in its recent exposure draft about whether the series guidance should be optional.[10]

[8] IFRS 9, Financial Instruments.

[9] ASU 2014-09, BC113, available at www.fasb.org, and IFRS 15.BC113.

[10] FASB Proposed Accounting Standards Update, Identifying Performance Obligations and Licensing, available at www.fasb.org.

Consideration of Whether Goods or Services Are Distinct and Substantially the Same

Stakeholders have questioned how to determine when more than one good or service is considered substantially the same. More specifically, the question is whether *all* of the tasks in each increment of service need to be substantially the same.

The FASB and IASB staff noted that an entity must first determine whether its promise is to provide goods or services or to stand ready to provide goods or services when requested by the customer.[11] If the nature of the promise is the delivery of a specified quantity of a service, the evaluation should consider whether each service is distinct and substantially the same. If the promise is to stand ready or to provide a single service for a period of time (i.e., there is not a specified quantity to be delivered), the evaluation would likely focus on whether each time increment, rather than the underlying activities, is distinct and substantially the same.

An entity also should consider which of the three criteria for concluding that a performance obligation is satisfied over time is met.[12] If a performance obligation is satisfied over time because the customer simultaneously receives and consumes the benefits of the services as the entity performs, that may indicate that each increment of service is capable of being distinct. If a promise is satisfied over time based on either of the other criteria, the nature of that promise could be for a single specified good or service and would not generally represent a series (e.g., a promise to provide a piece of equipment or a professional opinion).

TRG members generally agreed with the staff that a promise to perform an unspecified quantity of services for a fixed price represents an obligation to stand ready to perform the underlying services. Given the nature of the entity's promise to stand ready to perform, each day of service may be distinct because the customer can benefit from each one on its own and each day of service is separately identifiable. Even if the individual activities vary from day to day, the nature of the overall promise (e.g., hotel management services) is substantially the same. However, an entity will need to carefully evaluate specific facts and circumstances when its stand-ready obligation involves goods or services that are occasionally or sporadically provided and that do not align with the manner in which variable consideration is contractually determined.

Evaluating Whether Consideration Is Variable

TRG members agreed that the determination of whether an arrangement includes variable consideration depends on the evaluation of the entity's underlying promise. If the consideration to be received is based on the quantity of goods or services provided by the entity and the quantity is not specified in the arrangement, the transaction price is variable. TRG members agreed that an entity should consider all substantive contract terms, including contractual minimums, that could make all or a portion of the consideration fixed.

---

[11] TRG Paper 16 for the January 25, 2015, TRG meeting, available at www.fasb.org and www.ifrs.org.

[12] FASB ASC paragraph 606-10-25-27, available at www.fasb.org, and IFRS 15.35.

Additionally, some TRG members noted that the November 9, 2015, meeting is expected to include a discussion of optional goods and services, which might also affect this analysis.

Allocation of Transaction Price

The standard requires variable consideration to be allocated to one or more distinct goods or services in a series if specified criteria are met.[13] The TRG members discussed various fact patterns and agreed that allocating variable consideration entirely to a distinct good or service may be acceptable when (1) the fee is the same over the duration of the contract; (2) the fee declines in a manner commensurate with the decline in the entity's cost to deliver the goods or services; (3) the fee is commensurate with the entity's standard pricing practices with similar customers; or (4) the fee is commensurate with the value of the goods or services delivered to the customer.

Applying the series guidance to a broader population of service contracts is not explicitly required by the standard. However, if the guidance is applied in a reasonable way when supported by the fact pattern, it will allow revenue to be recognized for amounts billed and modifications accounted for prospectively. When this approach is not appropriate for a fact pattern, the entity will need to estimate prices and quantities for services to be performed in the future and account for modifications using a cumulative catch-up approach.

Example 2: Allocation of Transaction Price

A company agrees to provide outsourced IT services to a customer for five years. Unit pricing is specified in the contract and is billed based on the quantity of each service provided during the period.

The company determines that the services are not separately identifiable and therefore has a single performance obligation. The customer simultaneously receives and consumes the benefits of the service as the company performs, which means the performance obligation is satisfied over time. The volumes of each type of service are undefined. Each day of service could be viewed as a distinct service, leading the company to conclude that it is providing a series of distinct services.

Rather than forecasting service quantities to estimate the transaction price for a single performance obligation to deliver IT outsourcing services over a five-year period, the company allocates the variable consideration associated with services provided in a day to the distinct increment of service (the day). At the end of each month, assuming the company has determined the contractual pricing is representative of the value to the customer, the company recognizes revenue based on the amount billed. Modifications to the contract are likely to be accounted for prospectively because additional services are distinct from the services in the original contract.

If the entity concluded that the contract included multiple performance obligations satisfied over time (not a series), the entity would estimate the quantities of services to be provided to estimate the transaction price. The

[13] FASB ASC paragraphs 606-10-32-39 to 32-41, available at www.fasb.org, and IFRS 15.84 to 86.

Example 2: Allocation of Transaction Price

transaction price would be allocated to the performance obligations and recognized as each of those services is provided. As actual quantities are determined, the entity would update the transaction price and allocate to the performance obligations on the same basis as at contract inception. Modifications to the contract that add services that are not distinct from the services in the original contract would be accounted for on a cumulative catch-up basis.

Practical Expedient for Measuring Progress

For performance obligations that are satisfied over time, an entity should identify the method that most faithfully depicts the pattern of transfer of control of the goods or services to the customer. This may be either an input or output method depending on the specific facts and circumstances of an arrangement. As a practical expedient, an entity may recognize revenue using the amount it has the right to invoice, if the amount directly corresponds with the value delivered by the entity to the customer.[14] In addition, an entity may use a similar practical expedient when disclosing information about its remaining performance obligations.[15]

Similar to the discussion on the application of the series guidance, some stakeholders have questioned whether the practical expedient can be applied to contracts with rates that change during the contract term (such as rates based on forward market prices, rates with a contractual minimum, or contracts with volume discounts) or contracts that contain multiple goods and services. The TRG generally agreed that in order for an entity to apply the practical expedient one of the following circumstances must exist:

- The price needs to change during the contract period in response to changes in the value of the goods or services to the customer;
- All of the goods or services in the contract qualify for the practical expedient; or
- The existence of a contractual minimum is nonsubstantive (i.e., the entity expects that amounts will be exceeded).

An entity will need to use judgment to assess whether the right to consideration from a customer corresponds directly to the value to the customer for the performance completed to date. In addition, if a contract contains an upfront fee, rebates, or volume discounts, an entity will need to use judgment to determine whether the payments or future discounts relate to a specific good or service. The significance of the amount in relation to the contract also will need to be evaluated when determining whether the right to payments corresponds to the value to the customer. The more significant these amounts are when they do not relate to the transfer of a good or service, the more difficult it will be for the entity to conclude that the practical expedient applies to its arrangement.

---

[14] FASB ASC paragraph 606-10-55-18, available at www.fasb.org, and IFRS 15.B16.

[15] FASB ASC paragraph 606-10-50-14, available at www.fasb.org, and IFRS 15.121.

An entity will need to apply similar judgment to determine whether it can apply the practical expedient on the disclosure of remaining performance obligations.

Measuring Progress for Multiple Goods or Services in a Single Performance Obligation

If an entity satisfies a performance obligation over time, the standard requires it to recognize revenue by measuring its progress toward complete satisfaction of the performance obligation using a single method.[16] The objective when measuring progress is to depict an entity's performance in transferring control of goods or services to a customer.

Although stakeholders agree the guidance is clear that only one measure of progress can be used, some stakeholders have expressed concern that it could be challenging to select and apply a single method when the entity is transferring control of multiple goods or services over time that have been combined into a single performance obligation.

TRG members generally agreed that using multiple methods of measuring progress for the same performance obligation would not be appropriate. While acknowledging that selecting a single measure of progress will require significant judgment in some situations, the TRG members generally agreed that evaluating the nature of the entity's overall promise will help identify an appropriate measure of progress for the bundle of goods and services.

For example, in an arrangement where an entity promises to provide a software license (right to use intellectual property) and integration services that will customize the software to add significant new functionality, the entity likely would conclude that the software and installation services are not separately identifiable and should be combined into a single performance obligation. TRG members generally agreed that the measure of progress should be based on a method that reflects the entity's progress toward completion of the customized software solution. In other words, revenue would be recognized over the period that the integration services are performed.

In another example, assume a professional services entity provides a professional opinion to a customer, and it concludes that the arrangement meets the criteria for recognition of revenue over time (the fee is a fixed amount plus reimbursement of out-of-pocket expenses). Because a single method of revenue recognition is required, the entity may need to estimate the total consideration, including the reimbursement of out-of-pocket expenses, and then use a single attribution method such as direct labor hours for recognizing the estimated revenue over the period that the professional services are provided.

TRG members emphasized that difficulties in identifying a single measure of progress may mean that the entity needs to revisit its assessment of whether the goods or services are distinct.

[16] FASB ASC paragraph 606-10-25-32, available at www.fasb.org, and IFRS 15.40.

Determining When Control of a Commodity Transfers

When a commodity is not accounted for as a derivative (i.e., normal purchase normal sale exception is applied), stakeholders have questioned whether control of the commodity transfers to a customer over time or at a point in time. Specifically, when evaluating whether a customer simultaneously receives and consumes the benefits of a commodity as the seller produces the commodity, some believe the seller should evaluate only the inherent characteristics of the commodity. Others believe the seller should also consider other factors including the contract terms, infrastructure of the parties, and other delivery mechanisms.

For example, considering other factors beyond the inherent characteristics of the commodity might lead a gas producer to conclude that its performance obligation is satisfied over time if the gas is continuously fed into a customer's power plant and immediately consumed.

Conversely, the gas producer would conclude that its performance obligation is satisfied at a point in time if the gas is transferred into a storage facility. This is important because distinct goods or services that are substantially the same and that transfer over time are a series. This may allow companies to recognize the amounts billed as revenue. Distinct goods or services that transfer at a point in time are not eligible for the series guidance. These contracts require the entity to estimate the prices and quantities when determining the transaction price and to allocate the transaction price to the performance obligations perhaps based on the projected quantities to be delivered.

TRG members generally agreed with the staff that the entity should consider all relevant facts and circumstances when evaluating whether the promise to deliver a commodity is transferred over time or at a point in time. They emphasized that evaluating the overall nature of the promise will assist the entity in assessing whether the performance obligation is satisfied over time or at a point in time. The staff agreed to include in the minutes of the meeting examples to illustrate the different outcomes. It is possible that this issue may be reconsidered after additional examples are developed and significant differences in accounting outcomes are identified.

Accounting for Restocking Fees and Related Costs

An entity sometimes charges a customer a restocking fee when a product is returned. The restocking fee is intended to compensate the entity for costs associated with a product return or the reduced selling price an entity may charge when re-selling the product to another customer. TRG members agreed that restocking fees for products expected to be returned should be included as part of the estimated transaction price when control transfers. They said a returned product subject to a restocking fee is similar to a partial return right (i.e., the customer receives a partial refund).

TRG members agreed that the costs related to restocking should be reflected when control of the product transfers as a reduction in the carrying amount of the asset expected to be recovered. This is consistent with the guidance that specifies that any expected costs to recover returned products should be included by reducing the carrying amount of the asset recorded for the right to recover those products.[17]

Practical Expedient for Portfolio of Contracts

The revenue standard includes a practical expedient that allows an entity to account for a portfolio of contracts with similar characteristics as a single unit if the entity reasonably expects that the financial reporting impact would not be materially different from applying the standard to each individual contract. The standard also requires an entity to estimate variable consideration using either the expected value method or the most likely amount when determining the transaction price. The entity's estimate of variable consideration is further constrained to the extent that it is probable (highly probable under IFRS) that a significant reversal in the amount of cumulative revenue recognized will not occur when the uncertainty is resolved.

Stakeholders have questioned whether an entity is using the portfolio method when it considers evidence from similar contracts to develop an estimate using the expected value method. TRG members generally agreed that estimates using the expected value method are made at the contract level, not at the portfolio level. These estimates generally are developed using a portfolio of data when the entity has a sufficiently large number of similar transactions or other history, and that doing so is not using the portfolio practical expedient.

Because of this confusion, some stakeholders have also questioned whether the estimated transaction price under the expected value method can be an amount that is not a possible outcome of an individual contract. For example, an entity enters into contracts with similar terms with a large number of customers. The terms of the contract include a performance bonus related to the timing of completing the contract. Based on historical experience, the bonus amounts and the probabilities of achieving the bonus follow.

Bonus Amount	Probability of Occurrence
$0	15%
$50	40%
$100	45%

[17] FASB ASC paragraph 606-10-55-27, available at www.fasb.org, and IFRS 15.B25.

The estimated transaction price using an expected value method is $65 ([$0 x 15%] + [$50 x 40%] + [$100 x 45%]). The entity further concludes that the constraint does not apply because the entity is sufficiently confident in its estimate. Some believe that the transaction price is $65 because that is the estimate using the expected value method. The contract includes three possible outcomes of which $50 is the probable amount that can be achieved when viewed at a contract level (85 percent likely to achieve at least $50). Therefore, some believe the transaction price is $50 because the outcome could not be $65.

The TRG members generally agreed that when an entity has a sufficient population of similar transactions and uses this data to estimate the transaction price using the expected value method, the transaction price may be an amount that is not a possible outcome for an individual contract. TRG members emphasized that an entity would need to have a sufficiently large number of similar transactions to conclude that the expected value method is the best estimate of the transaction price.

An entity may need to use judgment to determine whether:

- Its contracts with customers are sufficiently similar;
- Contracts from customers in which the expected value is derived are expected to remain consistent with subsequent contracts; and
- The volume of similar contracts is sufficient to develop an expected value.

Completed Contracts at Transition

An entity that applies the modified retrospective approach when adopting the standard will apply it to contracts that are not completed as of the initial application date.

The transition guidance states that a contract is considered completed if the entity has transferred all of the goods and services identified under current U.S. GAAP/IFRS. The concept of transferring control of all goods and services is a new concept in the standard that differs from recognition concepts and rules embedded in legacy U.S. GAAP. This difference in underlying principles may create transition difficulties.

The TRG discussed whether an entity should define a completed contract as a contract in which the goods and services have been delivered, or a contract in which all revenue has been recognized under legacy U.S. GAAP. For contracts considered completed at the initial date of adoption, TRG members discussed whether it is permissible for an entity to recognize revenue based on legacy U.S. GAAP after the effective date of the revenue standard because doing so would result in mixed-GAAP. U.S. TRG members generally agreed that a mixed-GAAP approach would not be in accordance with the standard, but that following this approach could make some revenue disappear because the subsequent settlement or collections would not be reflected as revenue under either legacy U.S. GAAP or the revenue standard.

Example 3: Completed Contracts at Transition

A publicly traded, calendar year-end company sells its products to a distributor on December 15, 2017. The company's accounting policy is to recognize revenue subsequent to the delivery of the related goods when the amounts are due and payable from the distributor. These amounts are not considered fixed or determinable at the time the goods are delivered to the distributor so the entity is on a sell-through basis for revenue recognition under current U.S. GAAP.

The company adopts the revenue standard on January 1, 2018, using the cumulative-effect method of transition. The amounts for the sale of the products are not yet due and payable to the company. The company could conclude that its contract is completed at the date of adoption because it has transferred the goods prior to adoption, even though it has not yet recognized all the revenue from that transaction. Thus, the contract would be outside the scope of the revenue standard.

It is unclear whether subsequent cash collections would be recognized as revenue under legacy U.S. GAAP, or if the cash collections would be recognized as additions to beginning retained earnings.

Some FASB members noted that further consideration of the treatment of completed contracts at transition was warranted, and they requested the FASB staff to prepare further analyses and examples.

Next Steps

The FASB and IASB are working on potential changes to their standards.

- ***Effective Date.*** At its meeting on July 9, 2015, the FASB agreed to defer the effective date of its standard for one year.[18] The IASB is expected to consider the effective date of its standard at its July 22, 2015, meeting.
- ***Principal versus Agent Guidance.*** At their joint June meeting, the FASB and IASB agreed to propose amendments to their respective standards to clarify how the principal versus agent guidance should be applied for determining whether revenue should be presented gross (as a principal) or net (as an agent).[19] Before issuing its exposure draft, the FASB will discuss how to estimate gross revenue when the principal does not have visibility into the selling price to the end customer at a future Board meeting.

[18] See Defining Issues No. 15-30, FASB Finalizes One-Year Deferral of the Revenue Standard, available at www.kpmg-institutes.com.

[19] See Defining Issues No. 15-27, FASB and IASB to Propose Amendments to Principal-Agent Guidance in Revenue Standard, available at www.kpmg-institutes.com.

- ***Licenses of Intellectual Property and Identifying Performance Obligations.*** The comment letter period related to the FASB's exposure draft for identifying performance obligations and licensing of intellectual property ended on June 30, 2015. The FASB is in the process of evaluating comment letters and is expected to begin redeliberations soon.
- ***Transition Practical Expedients, Sales Tax Presentation, Measurement of Noncash Consideration, and Collectibility.*** The FASB expects to issue its exposure draft with a 45-day comment period by August 2015.
- ***IASB Plans.*** The IASB plans to issue a single exposure draft. The IASB exposure draft will propose less extensive changes to the standard than those addressed or to be addressed in the FASB exposure drafts. The IASB expects to issue its exposure draft in July 2015.
- ***Next TRG Meeting.*** The TRG's next meeting is scheduled for November 9, 2015.

Re: FASB File Reference No. 2013-270, *Leases (Topic 842)*, a revision of the 2010 proposed FASB Accounting Standards Update, *Leases (Topic 840)* & IASB Exposure Draft – *Leases* (ED/2013/6)

Dear Sir/Madam,

We are pleased to submit this letter on the International Accounting Standards Board's (IASB) and Financial Accounting Standards Board's (FASB) (collectively "the Boards") Exposure Draft: Leases. We are submitting these comments on behalf of the undersigned investors and property sector analysts. As major investors into property and investment property companies (including REITs) these financial statement users have a strong interest in ensuring that the reporting related to investment property is relevant and transparent.

Recognition of investment property and rental income in line with current IFRS

We are fully supportive of the conclusion reached by the Boards to allow lessors of investment property to continue to recognise the investment property on the lessor's Balance Sheet and full rental income on the lessor's Income Statement for the vast majority of leases. The proposed accounting provides decision-useful information on which to base our evaluation of the investment quality of investment properties and companies that own and operate portfolios of investment property. In addition, the proposed accounting is broadly consistent with current accounting guidance for most commercial real estate leases under both IFRS and U.S. GAAP.

As stated in our letter of November 2010, information regarding the full amount of rental income is fundamental to investors in assessing the performance and investment quality of investment property companies. That is why International Accounting Standard No 40 *Investment Property* (IAS 40) is well supported by industry financial statement preparers reporting under IFRS and industry financial statement users. It requires a property company to disclose the fair value of its property and reports full rental income in the profit and loss account.

We acknowledge the Boards' recognition of IAS 40 in the proposed guidance for accounting by lessees that control property through leasehold interests. Under the proposed accounting, companies that lease property that qualifies as investment property under IAS 40 would be accounted for as investment property. This would include the choice to report these properties at fair value.

Finally, we want to reiterate our previously expressed view that removing the visibility over the investment property, as well as the full rental income, would represent a step backward in terms of investment property companies communicating effectively the profitability and financial position of the company to investors, analysts, and other users.

The investors identified below would be pleased to meet with the Boards or staff to discuss in more detail the views of users of the financial statements of investment property companies.

If you would like to discuss this matter with us, please contact either Andrew Saunders at andrew.saunders@epra.com or George Yungmann at gyungmann@nareit.com.

We thank the FASB and IASB for the opportunity to comment on the Boards' Exposure Drafts with respect to this very important project.

Respectfully submitted,

Re: Proposed Accounting Standards Update—*Consolidation (Topic 810): Principal versus Agent Analysis*

Dear Ms. Cosper:

This letter is submitted in response to the request for public comment by the Financial Accounting Standards Board (FASB or the Board) with respect to its proposed Accounting Standards Updates on *Consolidation (Topic 810): Principal versus Agent Analysis* (the Proposed Update).

NAREIT is submitting these comments on behalf of the Real Estate Equity Securitization Alliance (REESA). This alliance includes the following organizations:

- Asia Pacific Real Estate Association, APREA
- British Property Federation, BPF
- European Public Real Estate Association, EPRA
- National Association of Real Estate Investment Trusts (United States), NAREIT
- Property Council of Australia, PCA
- Real Property Association of Canada, REALpac

The purpose and activities of REESA are discussed in Appendix I. Members of the organizations identified above would be pleased to meet with the Board or staff to discuss any questions regarding our comments on the Proposed Update.

Re: Proposed Accounting Standards Update—*Consolidation (Topic 810): Principal versus Agent Analysis*

Dear Sir/Madam:

REESA is made up of seven representative real estate organizations around the world grounded in one or more facets of securitized real estate equity. REESA's broad mission is to improve the opportunities for investment in securitized real estate equity around the globe.

REESA strongly supports the harmonization of global accounting and financial reporting and understands the importance of achieving a high quality universal set of accounting standards. We have been fully engaged in the Boards' discussions on major convergence projects and have actively participated in meetings with the Boards and their staff with respect to these projects. REESA greatly appreciates the opportunities to express our global views through these meetings and comment letters.

One of REESA's goals is to achieve consistent financial reporting by companies that own and operate real estate. REESA has achieved significant consensus on over a dozen accounting standards proposed by the FASB and the International Accounting Standards Board (IASB) (collectively, the Boards) and has submitted comment letters that reflect these global consensus.

REESA commends and supports the Boards' efforts to continue to develop high-quality accounting standards and particularly supports the FASB's efforts to converge U.S. Generally Accepted Accounting Principles (GAAP) with International Financial Reporting Standards (IFRS).

REESA recognizes that differences remain in the FASB's and IASB's consolidation models. However, REESA embraces the changes that the FASB has proposed to align the guidance in US GAAP on determining principal versus agent (and related disclosures) with the guidance in IFRS. We believe that the Proposed Update will improve the comparability of financial statements and disclosures prepared in accordance with U.S. GAAP and IFRS. Therefore, REESA believes that the Proposed Update is a step in the right direction in order to achieve ultimate convergence of U.S. GAAP with IFRS at some point in the future.

We very much appreciate the Board's focus on the Consolidation proposal and the opportunity to share our views with the Board. We welcome the Board's questions on our comments.

Appendix I

REESA – The Real Estate Equity Securitization Alliance

REESA is made up of seven real estate organizations around the world grounded in one or more facets of securitized real estate equity. REESA's broad mission is to improve the opportunities for investment in securitized real estate equity around the globe. The REESA member organizations are:

- Asia Pacific Real Estate Association, APREA
- Association for Real Estate Securitization in Japan, ARES
- British Property Federation, BPF
- European Public Real Estate Association, EPRA
- National Association of Real Estate Investment Trusts, NAREIT®
- Property Council of Australia, PCA
- Real Property Association of Canada, REALpac

REESA has responded positively to the challenges presented by the developments in the global economy and, in particular, the global real estate markets. The benefits of collaboration on a global scale are increasingly valuable on major industry issues such as the sustainability of the built environment, tax treaties, corporate governance and research.

The formation of REESA was, in part, a direct response to the challenge and opportunity presented by the harmonization of accounting and financial reporting standards around the world. Given the size and importance of the real estate industry, our view is that there are considerable benefits to be gained by both accounting standard setters and the industry in developing consensus views on accounting and financial reporting matters, as well as on the application of accounting standards.

Since its formation REESA members have exchanged views on a number of accounting and tax related projects and shared these views with regulators and standards setters. These projects include:

- FASB/IASB Lease Accounting
- FASB/IASB Financial Statement Presentation
- FASB/IASB Reporting Discontinued Operations
- FASB/IASB Revenue Recognition
- FASB/IASB Effective Dates and Transition Methods
- IASB Fair Value Measurement
- IASB Income Tax
- IASB Real Estate Sales – IFRIC D21
- IASB Capitalization of Borrowing Costs – IAS 23
- IASB Accounting for Joint Arrangements – ED 9
- IASB Consolidated Financial Statements – ED 10
- IASB 2007/2008/2009 Annual Improvements to IFRS
- OECD developments on cross border real estate flows and international tax treaties

Re: FASB File Reference No. 2013-270, *Leases (Topic 842)*, a revision of the 2010 proposed FASB Accounting Standards Update, *Leases (Topic 840)* & IASB Exposure Draft – *Leases* (ED/2013/6)

Dear Sir/Madam:

This letter is submitted in response to the request for public comment by the Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB) (collectively, the Boards) with respect to the FASB Proposed Accounting Standards Update (Revised) on *Leases (Topic 842) Leases* and the IASB Exposure Draft - *Leases* (ED/2013/6) (collectively, the Revised Proposed Updates).

NAREIT is submitting these comments on behalf of the following member organizations of the Real Estate Equity Securitization Alliance (REESA):

- Asia Pacific Real Estate Association (APREA)
- British Property Federation (BPF)
- European Public Real Estate Association (EPRA)
- National Association of Real Estate Investment Trusts in the United States (NAREIT®)
- Property Council of Australia (PCA)
- Real Property Association of Canada (REALpac)

REESA is a global alliance of representative real estate organizations and seeks to promote equity investment in real estate on a securitized basis. Together, the members of REESA represent the vast majority of constituent companies in the FTSE EPRA/NAREIT Global Real Estate Index. REESA focuses on cross-border investment, international taxation, financial reporting standards initiatives and education outreach to investors. REESA members represent major operating real estate companies (including REITs) – companies that acquire, develop, lease, manage and opportunistically sell investment property.[1]

Members of the organizations identified above would be pleased to meet with the Boards or staff to discuss any questions regarding our comments on the Revised Proposed Updates.

We thank the Boards for the opportunity to provide further input on the Revised Proposed Updates. If you would like to discuss our comments, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at 202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at 202-739-9442.

Respectfully submitted,

George Yungmann
Senior Vice President, Financial Standards

Christopher Drula
Vice President, Financial Standards

[1] REESA's broad mission is to improve the opportunities for investment in securitized real estate equity around the globe. The purpose and activities of REESA are discussed further in Appendix I.

REESA comments and recommendations on FASB File Reference No. 2013-270, *Leases (Topic 842)*, a revision of the 2010 proposed FASB Accounting Standards Update, *Leases (Topic 840)* & IASB Exposure Draft – *Leases* (ED/2013/6)

Preserve the Type B Lease Accounting Model for Property that Recognizes Lease Income on a Straight-line Basis

REESA commends the Boards for their extensive consultation and thoughtful response to our comments. We strongly support the Revised Proposed Updates to allow most lessors of property to continue to recognize the full rental income and underlying property. Total lease income and the visibility over the underlying property are fundamental for investors to be able to assess the performance and investment quality of property companies. This view has been communicated via a submission to the Boards from global real estate investors and industry analysts, and is included as Appendix II to this letter. Removing these metrics would adversely impact the information that property companies communicate to investors, financial analysts and other users of financial statements and would represent a major step backwards in the global industry's efforts to provide meaningful information to financial statement users. In this respect, the proposed model for property is a clear improvement on the model originally proposed in the first exposure draft.

The Revised Proposed Updates would provide financial statement users with information that faithfully represents the underlying economics of *most* property leases for lessors/landlords. As outlined in previous submissions[2] as well as discussions with the Boards and staff, we do not believe that the receivable and residual lessor accounting model is operational for investment property.

Our discussions with real estate analysts reveal that analysts would be forced to unwind the accounting results from the receivable and residual model to effectively evaluate the investment quality of our member companies. This is a significant concern, as analysts would be making buy or sell recommendations based on unaudited financial information provided by our member companies.

We therefore urge the Boards to collaborate on a converged accounting model for property that preserves:

- the property as a single unit of account on balance sheet;

- the recognition of lease income on the income statement generally on a straight-line basis; and,

- the option to present the fair value of right-of-use assets that meet the definition of investment property on the balance sheet in accordance with International Accounting Standard 40 *Investment Property*.

[2] http://www.reit.com/Portals/0/PDF/REESACommentLetter07112011.pdf

We understand that certain of the Boards' constituents may advocate that all leases be accounted for under a single approach. REESA would not object to this conclusion and would fully support it so long as the single approach mirrors the currently proposed approach for Property or Type B leases. In addition, we believe that the vast majority of financial statement preparers and users support the straight-line lease expense pattern yielded by the approach proposed for Type B leases.

We caution the Boards that a conclusion to provide only one approach to accounting for all leases that would require the proposed accounting for Type A leases would not be operational for lessors of multi-tenant investment property. The basis for this view is thoroughly discussed in REESA's July 11, 2011 submission to the Boards[3].

Additional Enhancements to the Revised Proposals

REESA recommends that the Boards consider the following enhancements to the Revised Proposals:

Clearly articulate the definition of "lease term"

REESA concurs with the Revised Proposal that defines the lease term as the non-cancellable period for which a lessee has the right to use the property.

However, we recommend that the current concept of 'reasonably certain' be retained because:

- the Board has acknowledged in BC 140 that the current concept works well in practice and the threshold is expected to be similar to the current concept of 'reasonably certain'; and,

- the definition of 'significant economic incentive' may be less clear than 'reasonably certain.'

We understand that the Boards are concerned that entities would structure shorter term leases with more renewals. However, there is an economic disincentive for lessees to do this as lessors would be able to reset rental payments to the then-current market rent, which would generally increase the fixed rental payments.

In addition, it is common for new lease incentives to be negotiated when the terms of a renewal are being negotiated. In our view, recognizing the lease incentive on a straight-line basis beyond the non-cancellable period of the lease is inappropriate.

Further, REESA is concerned about the continuous reassessment of the lease term. While the

[3]http://www.fasb.org/cs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1175822733314&blobheader=application%2Fpdf&blobcol=urldata&blobtable=MungoBlobs

Revised Proposals only require reassessment when a lessee has, or no longer has a significant economic incentive to renew, or terminate a lease, we question whether practically this is any different to requiring a reassessment at each reporting date.

Classify leases based on the comparison of lease term to the total economic life, rather than to the remaining economic life

REESA agrees with the Revised Proposal that would require the comparison of the lease term to the economic life of the property and the lease payments to the fair value of the property as an appropriate basis for determining whether or not a lessor should apply Type B accounting**.** However, the lease term should be compared to the total economic life, rather than the remaining economic life of the property.

While this scenario is unlikely to arise frequently in the real estate industry, it is not appropriate for a five year lease of property with a ten year remaining economic life to be recognized differently from a five year lease of property with a five year remaining economic life (where the total economic life of both properties was originally 50 years).

Rental payments made by the tenant to the landlord relate partly to the floor space being occupied, but also more significantly to the location of the property. This is demonstrated through different rates per square metre being charged for properties of the same quality in different locations. The value of the location continues to exist at the end of the building's economic life and the landlord holds the residual interest in the property. This enables redevelopment should the landlord choose which would further extend the economic life of the building.

It would therefore not be appropriate to reflect a five year lease of property with a five year remaining economic life (where the total economic life was originally 50 years) as a type A lease, unless the present value test is met.

Assessment of land and buildings together

We agree with paragraphs 842-10-25-9 (FASB exposure draft (FASB ED)) and 33 (IASB exposure draft (IASB ED)) that land and buildings should be assessed together for the purpose of determining the appropriate classification of a lease. However, we are concerned that the Revised Proposed Updates would require the economic life of the building would always be considered to be the economic life of the underlying asset for the purposes of classifying the lease. There are circumstances in which the land element is significantly more valuable than the building. In these cases, it is incorrect to default to the remaining economic life of the building because the land is the more valuable underlying asset and represents the primary asset.

Therefore, we recommend that the guidance in paragraphs 842-10-25-10 (FASB ED) and 33 (IASB ED) be deleted from the final standards. This would ensure that preparers are able to apply the principles in paragraphs 842-10-25-9 (FASB ED) and 33 (IASB ED) in making the determination of the primary asset when a lease contains multiple elements.

Consistently apply the consumption principle to long-term land leases

It is common for real estate companies to lease land under land-only leases, especially in central business districts and other areas where land is owned by local governments. Many of these long-term leases may meet the proposed criteria that define a Type A lease based on the relationship between the present value of the lease payments and the fair value of the land at the lease commencement date. Classifying these long-term land leases as Type A leases is clearly contrary to the overarching consumption principle in the Proposal.

The conclusion that a lease of land should invariably be classified as a Type B lease is also supported by the following discussion taken from the Snapshot: Leases published by IFRS in May 2013[4]:

> *A lessee that enters into a Type A lease, in effect, acquires the part of the underlying asset that it consumes, which is typically paid for over time in the form of lease payments. Accordingly, a lessee would present amortization of the right-of-use asset in the same line item as other similar expenses (for example, depreciation of property, plant, and equipment) and interest on the lease liability in the same line item as interest on other, similar financial liabilities.*
>
> *In contrast, the lease payments made in a Type B lease would represent amounts paid to provide the lessor with a return on its investment in the underlying asset, i.e., a charge for the use of the asset. That return or charge would be expected to be relatively even over the lease term. Accordingly, those payments for use are presented as one amount in a lessee's income statement and recognized on a straight-line basis.*
> *The presentation of cash outflows in the cash flow statement is consistent with the presentation of expenses in the income statement. For Type A leases, the principal portion of cash payments is presented within financing activities and the interest portion within operating or financing activities. Cash payments for Type B leases are presented as one.*

REESA believes that the accounting described above supports the conclusion that land leases represent Type B leases based on the consumption principle.

Further, under current US GAAP, land only leases are considered operating leases unless it is probable that a purchase option would be exercised. One indication that this would occur would be the existence of a bargain purchase option at the end of the lease term.

We understand that the Boards discussed the accounting for long-term land leases at some point in the process of developing a converged leases standard. We believe that the conclusion reached at that time was made prior to the Boards' conclusion to use the consumption principle to distinguish Type A and Type B leases. We urge the Boards to reconsider its conclusion with respect to accounting for land-only leases and strongly recommend that the final standard

---

[4] http://www.ifrs.org/Current-Projects/IASB-Projects/Leases/Exposure-Draft-May-2013/Documents/Snapshot-Leases-May-2013.pdf

require that all land leases be classified and accounted for as Type B leases consistent with the Proposal's consumption principle.

At the same time, REESA strongly supports the lessee requirement in the IASB ED for leases to be reported as investment property under IAS 40. Paragraph 35 of the IASB ED makes clear that a lessee shall not classify a lease as a Type A or a Type B lease if it chooses to measure the ROU asset in accordance with the fair value model in IAS 40.

REESA – The Real Estate Equity Securitization Alliance

REESA is made up of seven real estate organizations around the world grounded in one or more facets of securitized real estate equity. REESA's broad mission is to improve the opportunities for investment in securitized real estate equity around the globe. The REESA member organizations are:

- Association for Real Estate Securitization in Japan (ARES)
- Asia Pacific Real Estate Association (APREA)
- British Property Federation (BPF)
- European Public Real Estate Association (EPRA)
- National Association of Real Estate Investment Trusts in the United States (NAREIT®)
- Property Council of Australia (PCA)
- Real Property Association of Canada (REALpac)

REESA has responded positively to the challenges presented by the developments in the global economy and, in particular, the global real estate markets. The benefits of collaboration on a global scale are increasingly valuable on major industry issues such as the sustainability of the built environment, tax treaties, corporate governance and research.

The formation of REESA was, in part, a direct response to the challenge and opportunity presented by the harmonization of accounting and financial reporting standards around the world. Given the size and importance of the real estate industry, our view is that there are considerable benefits to be gained by both accounting standard setters and the industry in developing consensus views on accounting and financial reporting matters, as well as on the application of accounting standards.

Since its formation REESA members have exchanged views on a number of accounting and tax related projects and shared these views with regulators and standards setters. These projects include:

- FASB *Investment Companies*
- FASB *Investment Property Entities*
- IASB *Investment Entities*
- FASB *Consolidation: Principle versus Agent Analysis*
- IASB *Agenda Consultation 2011*
- FASB/IASB *Accounting for Leases*
- FASB/IASB *Financial Statement Presentation*
- FASB/IASB *Reporting Discontinued Operations*
- FASB/IASB *Revenue from Contracts with Customers*
- FASB/IASB *Effective Dates and Transition Methods*
- IASB *Fair Value Measurement*
- IASB *Income Tax*

♦

- IASB *Real Estate Sales – IFRIC D21*
- IASB *Capitalization of Borrowing Costs – IAS 23*
- IASB *Accounting for Joint Arrangements – ED 9*
- IASB *Consolidated Financial Statements – ED 10*
- IASB *2007/2008/2009 Annual Improvements to IFRS*
- OECD developments on cross border real estate flows and international tax treaties

Re: FASB File Reference No. 2013-270, *Leases (Topic 842)*, a revision of the 2010 proposed FASB Accounting Standards Update, *Leases (Topic 840)* & IASB Exposure Draft – *Leases* (ED/2013/6)

Dear Sir/Madam,

We are pleased to submit this letter on the International Accounting Standards Board's (IASB) and Financial Accounting Standards Board's (FASB) (collectively "the Boards") Exposure Draft: Leases. We are submitting these comments on behalf of the undersigned investors and property sector analysts. As major investors into property and investment property companies (including REITs) these financial statement users have a strong interest in ensuring that the reporting related to investment property is relevant and transparent.

Recognition of investment property and rental income in line with current IFRS

We are fully supportive of the conclusion reached by the Boards to allow lessors of investment property to continue to recognise the investment property on the lessor's Balance Sheet and full rental income on the lessor's Income Statement for the vast majority of leases. The proposed accounting provides decision-useful information on which to base our evaluation of the investment quality of investment properties and companies that own and operate portfolios of investment property. In addition, the proposed accounting is broadly consistent with current accounting guidance for most commercial real estate leases under both IFRS and U.S. GAAP.

As stated in our letter of November 2010, information regarding the full amount of rental income is fundamental to investors in assessing the performance and investment quality of investment property companies. That is why International Accounting Standard No 40 *Investment Property* (IAS 40) is well supported by industry financial statement preparers reporting under IFRS and industry financial statement users. It requires a property company to disclose the fair value of its property and reports full rental income in the profit and loss account.

We acknowledge the Boards' recognition of IAS 40 in the proposed guidance for accounting by lessees that control property through leasehold interests. Under the proposed accounting, companies that lease property that qualifies as investment property under IAS 40 would be accounted for as investment property. This would include the choice to report these properties at fair value.

Finally, we want to reiterate our previously expressed view that removing the visibility over the investment property, as well as the full rental income, would represent a step backward in terms of investment property companies communicating effectively the profitability and financial position of the company to investors, analysts, and other users.

The investors identified below would be pleased to meet with the Boards or staff to discuss in more detail the views of users of the financial statements of investment property companies.

If you would like to discuss this matter with us, please contact either Andrew Saunders at andrew.saunders@epra.com or George Yungmann at gyungmann@nareit.com.

We thank the FASB and IASB for the opportunity to comment on the Boards' Exposure Drafts with respect to this very important project.

Respectfully submitted,

Re: Proposed Accounting Standards Update *Revenue from Contracts with Customers (Topic 606) Identifying Performance Obligations and Licensing*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) to provide input on the Proposed Accounting Standards Update *Revenue from Contracts with Customers (Topic 606) Identifying Performance Obligations and Licensing* (the Proposal or ED). This letter provides comment only on the issue of clarifying the guidance on when promised goods and services are distinct for purposes of identifying performance obligations.

NAREIT agrees that the Financial Accounting Standards Board (FASB or Board) should clarify the guidance for identifying performance obligations. However, we do not believe that the proposed clarifications (or the original language in Topic 606) provide sufficient clarity on an issue of great importance to our member companies – whether commitments by the lessor/landlord to pay property taxes, maintain insurance, and provide common area maintenance related to leased real estate should be treated as being distinct from the obligation to provide the leased space to the lessee. We therefore request that the FASB clarify that such obligations are not distinct from the leased space either through an example or revised wording as it finalizes the amendments proposed in the ED, and make corresponding changes for the accounting guidance on separating lease and non-lease components that is included within the Proposed *Leases* standard.

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate. NAREIT's members play an important role in providing diversification, dividends, liquidity and transparency to investors through their businesses that operate in all facets of the real estate economy.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT U.S. All REITs Index which covers both Equity REITs and Mortgage REITs. This Index contained 221 companies representing an equity market capitalization of $926 billion at April 30, 2015. Of these companies, 180 were Equity REITs representing 93.3% of total U.S. stock exchange-listed REIT equity market capitalization (amounting to $864 billion)[1]. The remainder, as of April 30, 2015, is represented by 41 stock exchange-listed Mortgage REITs with a combined equity market capitalization of $62 billion.

NAREIT Comments

NAREIT concurs that the guidance in Topic 606 on determining whether promised goods or services are "distinct in the context of the contract" would benefit from additional clarity. NAREIT's main focus relating to the identification and separation of performance obligations has been voiced in previous comment letters submitted in response to both the *Revenue Recognition* and *Leases* Proposals. The issue that NAREIT identified deals with whether lessor commitments to pay property taxes, maintain insurance and perform common area maintenance should be bifurcated from revenue from space rent. Preparers and auditors have questioned whether this was the Board's intention when the Board deliberated the separation of performance obligations in the new *Revenue from Contracts with Customers* standard as well as the separation of lease and non-lease components in the new *Leases* proposal.

Based on our reading of the current *Leases* revised exposure draft, lease revenue may be required to be separated between lease and non-lease components. Lease components would be subject to the new *Leases* accounting guidance, while non-lease components would be subject to the new *Revenue from Contracts with Customers* standard. Because Topic 606 may require that revenue within its scope be presented separately from other revenue, separation would effectively result in a need to present lease revenue separately from revenue from the related tax, insurance and CAM services.

In our view, commitments to pay taxes, maintain insurance, and perform common area maintenance that are included in a lease agreement are highly interdependent and highly

[1] https://www.reit.com/sites/default/files/reitwatch/RW1505.pdf at page 21.

interrelated[2] with the use of the leased real estate. The lessee would not be able to use the leased space in an office building or a shopping center if the real estate:

- was subject to a tax lien,
- did not have an active insurance policy to satisfy its debt agreement on the property, or
- was not properly maintained.

The purpose of the transaction is to lease space in exchange for market rent. Lessees cannot go to the market and separately contract for tax collection services, separate insurance contracts for the structure of a specific office space on/within a floor of a building, or contract with cleaning and maintenance services to clean the common area contiguous to the tenant's space. Given the highly interrelated nature of the tenant reimbursements and the space rent, we believe that the income statement should reflect all of these payments in a single line item[3]. While we believe that the application of the principles of Topic 606, as issued, does not require that such promises be treated as performance obligations distinct from the leased space, some audit firms have espoused different views. As such, while we believe the language in the Proposal also would not require tax, insurance and CAM commitments to be treated separately, we are concerned that differing views will continue.

In order to ensure proper application of the new *Leases* and *Revenue from Contracts with Customers* standards, NAREIT recommends that the Board include an illustrative example that demonstrates how the standards would apply to lease agreements containing tenant reimbursements. NAREIT would be happy to assist the Board in developing an illustration consistent with market realities for inclusion in the final standards.

We thank the FASB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 202-739- 9442.

[2] http://www.fasb.org/jsp/FASB/Document_C/DocumentPage?cid=1176166005104&acceptedDisclaimer=true at paragraph 606-10-25-21(c).
[3] In order to meet the needs of investors, NAREIT believes that components of lease revenue that vary directly with related costs (as is often the case is a so-called "net lease", in which a fee is stated for the leased space, with allocations of applicable costs paid in addition to that stated fee) should be disclosed in the notes to the financial statements. To the extent that the lease agreement includes a single rental payment, with no additional amounts paid for allocation of common costs, NAREIT believes the needs of investors would be met with disclosure of the costs incurred for these items, as opposed to requiring an artificial bifurcation of revenue. In our view, these disclosures would adequately convey information about the risks either taken on by the lessor, or passed on to the lessee.

Respectfully submitted,

George L. Yungmann	Christopher T. Drula
Senior Vice President, Financial Standards	Vice President, Financial Standards

Re: File Reference No. 2013-270, *Leases (Topic 842)*, a revision of the 2010 proposed FASB Accounting Standards Update, *Leases (Topic 840)*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) in response to the Proposed Accounting Standards Update (Proposed ASU or the Proposal) from the Financial Accounting Standards Board (FASB) and International Accounting Standards Board (IASB) combined (the Boards) *Leases*.

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other businesses throughout the world that own, operate and finance income-producing real estate, as well as those firms and individuals who advise, study and service those businesses.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index, which covers both Equity REITs and Mortgage REITs. This Index contained 189 companies representing an equity market capitalization of $670.4 billion[1] at June 30, 2013. Of these companies, 150 were Equity REITs representing 90.7% of total U.S. listed REIT equity market capitalization (amounting to $608.3 billion). The remainder, as of June 30, 2013, was 39 publicly traded Mortgage REITs with a combined equity market capitalization of $62.1 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council (the Council). Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts. The financial executives representing Equity REITs are involved in all property sectors of the REIT industry – regional malls, shopping centers, multi-family residential, office, health care, lodging/resorts and industrial. These task force members have a working knowledge of leases related to all of these property types.

NAREIT is a member of the global Real Estate Equity Securitization Alliance (REESA) and supports the views expressed in this organization's comment letter submitted to the Boards.

Executive Summary

NAREIT and its global partners represented in REESA have been active in the Boards' process toward developing a high quality converged standard for accounting and reporting for leases. We have provided input to the Boards and staff on several occasions, through face-to-face meetings with the Boards, through meetings of the Boards, through participation on the Boards' leases working group and via comment letters on the Boards' various proposals. Additionally, NAREIT and REESA have provided support for the Boards' staff on tentative decisions during the Boards' re-deliberations process.

All of this input to the Boards has had one purpose – to achieve an accounting and reporting model that would provide enhanced decision-useful information to our industry's global financial statement users.

The Boards' Response to this Global Real Estate Industry Input

We acknowledge the Boards' thoughtful response to all of the input provided by NAREIT and REESA. While we have a number of suggested modifications to the proposed accounting and reporting model, we strongly support the Boards' conclusions with respect to the property, Type B, model. We believe that this model would provide financial statement users with information that faithfully represents the underlying economics of a landlord's economic position in the great majority of property leases.

[1] http://returns.reit.com/reitwatch/rw1307.pdf at page 21

The Possibility of One Approach to Lease Accounting

We understand that certain constituents of the Boards may advocate that all leases be accounted for under a single approach. NAREIT would not object to this conclusion and would fully support it so long as the single approach mirrors the currently proposed approach for Property or Type B leases. We believe that the vast majority of financial statement preparers and users support the straight-line lease expense pattern yielded by the approach proposed for Type B leases.

We caution the Boards that a conclusion to provide only one approach to accounting for all leases that would require the proposed accounting for Type A leases would not be operational for lessors of multi-tenant investment property. The basis for this view is thoroughly discussed in REESA's July 11, 2011 submission to the Boards[2].

Recommended Modifications to the Proposed ASU

Accounting for Land-Only Leases

It is common for real estate companies to lease land under land-only leases, especially in central business districts and other areas where land is owned by local governments. Then, real estate companies typically develop buildings and related improvements that they lease to third parties. Many of these long-term land-only leases may meet the proposed criteria that define a Type A lease based on the relationship between the present value of the lease payments and the fair value of the land at the lease commencement date. However, classifying these long-term land leases as Type A leases is clearly contrary to the overarching consumption principle in the Proposal.

A conclusion that a lease of land should be accounted in accordance with the guidance provided for Type B leases is fully supported by the following discussion taken from the *Snapshot: Leases* published by IFRS Foundation in May 2013 [3]:

> *A lessee that enters into a Type A lease, in effect, acquires the part of the underlying asset that it consumes, which is typically paid for over time in the form of lease payments. Accordingly, a lessee would present amortization of the right-of-use asset in the same line item as other similar expenses (for example, depreciation of property, plant, and equipment) and interest on the lease liability in the same line item as interest on other, similar financial liabilities.*
>
> *In contrast, the lease payments made in a Type B lease would represent amounts paid to provide the lessor with a return on its investment in the underlying asset, i.e. a charge for the use of the asset. That return or charge would be expected to be relatively even over the lease term. Accordingly, those payments for use are presented as one amount in a lessee's income statement and recognized on a straight-line basis.*

[2] http://www.fasb.org/cs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1175822733314&blobheader=application%2Fpdf&blobcol=urldata&blobtable=MungoBlobs

[3] http://www.ifrs.org/Current-Projects/IASB-Projects/Leases/Exposure-Draft-May-2013/Documents/Snapshot-Leases-May-2013.pdf

> *The presentation of cash outflows in the cash flow statement is consistent with the presentation of expenses in the income statement. For Type A leases, the principal portion of cash payments is presented within financing activities and the interest portion within operating or financing activities. Cash payments for Type B leases are presented as one.*

NAREIT believes that the accounting described in the IFRS Foundation *Snapshot: Leases* above supports the conclusion that land leases represent Type B leases based on the consumption principle.

Recommendation

NAREIT understands that the Boards discussed the accounting for long-term ground leases at some point in the process of developing a converged leases standard. We believe that the conclusion reached at that time was made prior to the Boards' conclusion to use the consumption principle to distinguish Type A and Type B leases. We urge the Boards to reconsider their conclusion with respect to accounting for land-only leases and strongly recommend that the final standard require that all ground leases be classified and accounted for as Type B leases consistent with the Proposal's consumption principle.

Accounting and Reporting for Tenant Reimbursements of Landlord Costs

A significant issue raised by the Proposed ASU is how the Proposal would impact the accounting for *tenant reimbursables* paid to a landlord for the landlord's costs of maintaining *landlord's property* – property required to allow tenants to benefit from space leased from landlord. These costs represent a portion of the tenant's total cost to occupy his/her specific space – the right-of-use asset. The Proposed ASU defines *lease payments* as *payments made by a lessee to a lessor relating to the right to use an underlying asset during the lease term.* Tenant reimbursements of landlord's costs to maintain the common elements of a commercial real estate property are directly related to the tenant's right to use the tenant's space. For example, a tenant could not achieve the economic benefits of his specific space in a retail center without the property's parking lot, common areas of the center, elevators and the like. None of these tenant reimbursables represent payments for services to the tenant or to the tenant's space – the asset underlying the ROU. NAREIT therefore believes that these tenant reimbursements of landlord's costs to maintain common elements of the property represent *lease payments* and should be reported as lease income.

These tenant reimbursables of landlord's costs to maintain the landlord's property would not include payments to the landlord for non-lease services. For example, payments by the tenant for landlord services to maintain *tenant's space* (the underlying asset) or to provide services that are not directly related to the tenant's occupancy of space would represent non-lease income and be accounted for under the Boards' revenue recognition standard.

Recommendation

There has been significant debate among industry participants and accounting firms as to the accounting for tenant reimbursables of landlord costs under the Proposed ASU. We, therefore, suggest that the Boards clarify the accounting for these reimbursements of *landlord's costs associated with landlord's property.*

Reporting under Both Type A and Type B Leases

While the great majority of property leases would qualify as Type B leases, a real estate company may lease some properties under leases that meet the definition of a Type A lease. This situation raises two significant issues.

First, the model of applying the receivable and residual approach to a simple multi-tenant office building, which we created and shared with the Boards' Leases staff, clearly illustrated to us and to the staff that this approach to lessor accounting would not be operational for multi-tenant properties. This situation would be exacerbated if the investment property is carried at fair value.

Second, the reporting for leases based on two lessor accounting models in a company's financial statements would be very confusing to financial statement users.

Recommendation

We recommend that the Boards eliminate this potential reporting issue by requiring that all leases of property be considered Type B leases.

Further Consider the Definition of Property

We believe the Boards have narrowed the definition of *property* to a significant extent. We recommend that the Boards further consider its definition in the Proposed ASU and clarify the Proposal's definition.

Under current U.S. GAAP, "integral equipment" that is subject to a lease is treated as real estate. The FASB Codification Manual Master Glossary defines integral equipment as "any physical structure or equipment attached to real estate that cannot be removed and used separately without incurring significant cost[4]." Therefore, structures such as cell towers are treated as real estate under current U.S. GAAP.

The Proposal introduces a new definition of *property* that would represent a fundamental change to the revenue recognition pattern for leases related to cell towers and similar property. Because these assets would not be considered "land, building, or parts of a building," leases of this property would be classified as Type A leases. In our view, leases of these types of assets should be accounted for as property – not equipment; they are long-lived permanent structures that are

[4] https://asc.fasb.org/glossary&letter=I

attached to the ground. We believe that clarifying the definition of "property" to include "integral equipment" would provide a more principles-based approach to lease classification.

NAREIT continues to support the Boards' efforts to develop a converged global standard for lease accounting and would welcome an opportunity to discuss our views on the Proposed ASU with the Boards. If there are questions regarding this comment letter, please contact either George Yungmann at 202-739-9432 or gyungmann@nareit.com or Christopher Drula at 202-739-9442 or cdrula@nareit.com.

RE: Proposed Accounting Standards Update – *Business Combinations (Topic 805) – Clarifying the Definition of a Business*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) to provide input on the Proposed Accounting Standards Update – *Business Combinations (Topic 805) – Clarifying the Definition of a Business* (the Proposal).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate. NAREIT's members play an important role in providing diversification, dividends, liquidity and transparency to investors through their businesses that operate in all facets of the real estate economy.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT All REITs Index which covers both Equity REITs and Mortgage REITs. This Index contained 225 companies representing an equity market capitalization of $935 billion at November 30, 2015. Of these companies, 184 were Equity REITs representing

1875 I Street, NW, Suite 600, Washington, DC 20006-5413
Phone 202-739-9400 Fax 202-739-9401 REIT.com

94.1% of total U.S. stock exchange-listed REIT equity market capitalization (amounting to $880 billion)[1]. The remainder, as of November 30, 2015, is represented by 41 stock exchange-listed Mortgage REITs with a combined equity market capitalization of $55 billion.

This letter has been developed by a task force of NAREIT members, including members of NAREIT's Best Financial Practices Council (the Council). Members of the task force include financial executives of both Equity and Mortgage REITs, representatives of major accounting firms, institutional investors and industry analysts.

NAREIT supports the Board's objective

NAREIT supports the Board's objective in addressing constituent concerns that the definition of a business in current U.S. GAAP is applied too broadly, resulting in many transactions qualifying as businesses while purchasers view them as asset acquisitions. This phenomenon has been pervasive in the real estate industry since the implementation of FAS 141(R) where the acquisition of even a single property by a REIT is generally required to be accounted for as a business combination. Further, preparers and auditors have struggled to understand why the acquisition of an investment property is accounted for as a business combination, but treated as an asset disposition upon sale of the investment property (a sale of real estate).

What adds further complexity to the asset versus business determination is the difference in application by companies that report pursuant to U.S. GAAP and International Financial Reporting Standards (IFRS). Despite the fact that the words in GAAP and IFRS are identical, real estate companies across the globe that report under IFRS generally account for acquisitions of investment properties as asset acquisitions, while companies that report under U.S. GAAP account for the same types of transactions as business combinations. NAREIT appreciates the Board's efforts to address this divergence in application.

NAREIT Recommendation – Align the accounting guidance for business combinations with existing asset acquisition guidance

While NAREIT appreciates the Board's efforts in pursuing clarified guidance to address what constitutes an asset versus a business, NAREIT believes that the Board could achieve its objective in a much simpler manner. Rather than redefining what would qualify as a business, NAREIT strongly believes that the board should align the accounting guidance for business combinations with existing asset acquisition guidance. A major difference between business combinations guidance and asset acquisition guidance under today's GAAP is whether acquisition transaction costs are capitalized or expensed. NAREIT believes that eliminating this difference by requiring the capitalization of acquisition costs whether a transaction is considered an asset acquisition or a business combination would provide the following benefits to both the preparer and user community alike:

[1] https://www.reit.com/sites/default/files/reitwatch/RW1512.pdf at page 21.

- Simplify accounting by eliminating a need for an evaluation of what constitutes an asset acquisition or a business combination;

- Help converge the accounting results for acquisitions of investment property as between IFRS and U.S. GAAP;

- Mirror the accounting for real estate acquisitions with economics of the transaction; and,

- Eliminate the need by financial statement users in the real estate industry to reverse the expensing of acquisition costs when evaluating the economic earnings prospects of real estate companies.

Other Comments

In the event that the Board decides to pursue the issuance of the Proposal, NAREIT recommends the following clarifications to the Proposal:

- Clarify the wording in paragraph 805-10-55-78 to include the italicized terms below:

    - Although the leases are at market *rates*, REIT concludes that the fair value of the in-place lease *intangible asset is* significant and that the fair value of the gross assets acquired is not concentrated in either the leases or the tangible assets.

        - Without these changes, the wording leads the reader to believe that the analysis would compare the fair value of in-place leases with the fair value of the operating property. This is a circular analysis, given that the fair value of the building is measured by the present value of cash flows to be received under in-place leases.

- Amend the criteria for the evaluation of similar asset types to include a comparison of the types of assets acquired with the acquirer's existing portfolio of assets.

    - For example, if a real estate company that owns and manages a portfolio of office buildings and, therefore has an operating platform focused on office buildings, acquires office properties to add to its portfolio, the acquisition should be accounted for as an asset purchase.

    - Further, some REITs do not own and operate a single asset type. NAREIT groups these REITs into the diversified sector (*e.g.,* a REIT that owns shopping malls, parking lots, and apartment buildings). Many times, these different types of properties are acquired together in single transactions. We believe that the acquisition of different types of assets should be accounted for as an asset acquisition to the extent that the transaction is consistent with the acquirer's business model. If the Board does not provide this clarification, the preparer may be left to debate with his or her auditor whether this acquisition represents similar assets or multiple assets which could provide an uneconomic result that the transaction should be accounted for as a business combination (particularly noting that if acquired separately, they would be asset acquisitions).

- Add guidance that clarifies that the acquisition of multiple properties that are in various stages of development would still be considered similar assets.

    - Along the same lines as the preceding bullet, REITs can acquire a group of assets that are in various stages of development (*e.g.*, buildings under construction, vacant buildings, and operating properties). NAREIT recommends that the Board clarify that a transaction that includes properties at different stages of development would be considered similar in nature. The business purpose of acquiring the group of assets serves the same purpose – to add investment property to the company's current portfolio of investment properties. In our view, the economics of the transaction is more akin to an asset acquisition than a business combination.

NAREIT continues to support the FASB's *Clarifying the Definition of a Business* Project. If there are questions regarding this comment letter, please contact either George Yungmann at 202-739-9432 or gyungmann@nareit.com or Christopher Drula at 202-739-9442 or cdrula@nareit.com.

Re: Proposed Accounting Standards Update *Revenue from Contracts with Customers (Topic 606) Deferral of Effective Date*

Dear Ms. Cosper:

This letter is submitted by the National Association of Real Estate Investment Trusts® (NAREIT) to provide support and input to the Proposed Accounting Standards Update *Revenue from Contracts with Customers (Topic 606) Deferral of Effective Date* (the Proposal). For reasons discussed further below, NAREIT agrees that the Financial Accounting Standards Board (FASB or Board) should defer the effective date of *Revenue from Contracts with Customers* Standard (the *Revenue Recognition* Standard).

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate. NAREIT's members play an important role in providing diversification, dividends, liquidity and transparency to investors through their businesses that operate in all facets of the real estate economy.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT U.S. All REITs Index, which covers both

Equity REITs and Mortgage REITs. This Index contained 220 companies representing an equity market capitalization of $966 billion at March 31, 2015 Of these companies 179 were equity REITs representing 93.6% of total U.S. stock exchange-listed REIT equity market capitalization (amounting to $904 billion)[1]. The remainder, as of March 31, 2015, is represented by 41 stock exchange-listed mortgage REITs with a combined equity market capitalization of $62 billion.

NAREIT Recommendation

NAREIT concurs with the Proposed Deferral of the *Revenue Recognition* Standard. While NAREIT does not have a strong preference for a one year or two year deferral, NAREIT recommends that the Board align the effective date with that of other standard setting on the Board's agenda that will impact the real estate industry (*i.e., Leases, Clarifying the Definition of a Business*, and *Revenue Recognition – Identifying Performance Obligations and Licenses* Projects).

Revenue Recognition and Leases Projects

Through our evaluation of exposure drafts and observing the Boards' ongoing re-deliberations, NAREIT has identified the following examples where the *Revenue Recognition* and *Leases* Projects are interrelated:

- Scope - The *Revenue Recognition* Standard clearly excludes leases from the scope of the standard. Similarly, if a contract does not meet the definition of a lease within the *Leases* Proposal, then the contract would probably be subject to the *Revenue Recognition* Standard for the party providing the service.

- Accounting for Sales-type Leases by Manufacture/Dealers – While leases are outside the scope of the new *Revenue Recognition* Standard, accounting for sales-type leases would be in scope. The timing of profit recognition will be determined by whether control has passed from the seller to the purchaser pursuant to the new *Revenue Recognition* Standard.

- Sale-leaseback transactions – While leases are outside the scope of the new *Revenue Recognition* Standard, accounting for sales would be in scope. Whether or not sales treatment is achieved will impact the ensuing treatment of the lease transaction.

- Collectability – Collectability of rent by the lessor assessed pursuant to the new *Revenue Recognition* Standard will affect the lessors' accounting (We note here in passing that both Type A lease receivables and residual values and Type B lease receivables will be subject to the new impairment guidance under development).

[1] https://www.reit.com/sites/default/files/reitwatch/RW1504.pdf at page 21.

Revenue Recognition – Identifying Performance Obligations and Licenses and *Leases* Projects

An area that continues to be of particular interest is the accounting treatment for tenant reimbursements by lessors. In a situation where a gross lease is negotiated between a landlord and tenant, the lease agreement will specify a single amount that the tenant will pay in rent. This amount will include other items beyond the payment to rent the space, including common area maintenance, taxes, insurance, and perhaps other services. Preparers and auditors alike continue to grapple with whether a portion of the rent payment should be allocated to these other embedded items. In our view, the answer to this question could have a significant impact on the financial statements. For example, this could impact the amount of the lease payables and receivables recognized on the balance sheet, income statement presentation, and footnote disclosure in the lease commitment table.

Revenue Recognition and *Accounting for Sales of Real Estate*

The determination of whether real estate meets the definition of a business under the FASB's *Clarifying the Definition of a Business* Project could have a significant impact on accounting for sales of real estate including, most notably, partial sales of real estate. If real estate does not meet the definition of a business, the accounting treatment of the sale will presumably follow the new *Revenue Recognition* Standard. If real estate meets the definition of a business, the accounting treatment for the sale may ultimately be outside the scope of the *Revenue Recognition* Standard, and be subject to Consolidation guidance. A complicating scenario that has not yet been addressed by the new *Revenue Recognition* Standard is the accounting treatment for partial sales of real estate. With the removal of sections of Accounting Standards Codification (ASC) 360 *Property, Plant, and Equipment* that deals with sales of real estate (formerly FAS 66 *Accounting for Sales of Real Estate*), questions surround how to account for partial sales of real estate.

Transition

Because of the significance of these other Projects and their interrelationship to the *Revenue Recognition* Standard, NAREIT does not support an option to early adopt the *Revenue Recognition* Standard. Further, NAREIT values comparability across the industry to be of utmost importance so that investors and analysts can readily compare the operating performance of NAREIT member companies.

We thank the FASB for the opportunity to comment on the Proposal. If you would like to discuss our views in greater detail, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 202-739-9432, or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 202-739- 9442.

Subject: Lease Accounting Project, Accounting for Initial Direct Leasing Costs

Dear Chairman Golden:

The National Association of Real Estate Investment Trusts (NAREIT®) is submitting this unsolicited comment letter to provide the Financial Accounting Standards Board (FASB) its views on the financial reporting implications of the proposed accounting for initial direct leasing costs on companies that own, operate and lease portfolios of investment property.

NAREIT is the worldwide representative voice for real estate investment trusts (REITs) and publicly traded real estate companies with an interest in U.S. real estate and capital markets. NAREIT's members are REITs and other real estate businesses throughout the world that own, operate and finance commercial and residential real estate. NAREIT's members play an important role in providing diversification, dividends, liquidity and transparency to investors through their businesses that operate in all facets of the real estate economy.

REITs are generally deemed to operate as either Equity REITs or Mortgage REITs. Our members that operate as Equity REITs acquire, develop, lease and operate income-producing real estate. Our members that operate as Mortgage REITs finance housing and commercial real estate, by originating mortgages or by purchasing whole loans or mortgage backed securities in the secondary market.

A useful way to look at the REIT industry is to consider an index of stock exchange-listed companies like the FTSE NAREIT U.S. Real Estate Index, which covers both Equity REITs and Mortgage REITs. This Index contained 209 companies representing an equity market capitalization of $804 billion at May 31, 2014. Of these companies, 169 were equity REITs representing 91.2% of total U.S. listed REIT equity market capitalization (amounting to $733 billion)[1]. The remainder, as

[1] http://www.reit.com/sites/default/files/reitwatch/RW1406.pdf at page 21.

of May 31, 2014, was 40 publicly traded mortgage REITs with a combined equity market capitalization of $71 billion.

Implications of Recent Tentative Decision on "Initial Direct Costs"

At the joint meeting held on May 21, 2014, the Boards tentatively decided that "initial direct costs" should include only incremental costs that an entity would not have incurred if the lease had not been obtained (executed) (for example, commissions or payments made to existing tenants to obtain the lease). These costs could include external and certain internal costs but would not include allocations of internal costs, for example, regular salaries of employees engaged in arranging and negotiating leases.

The decision to allow the capitalization of *only* incremental costs represents a major change from existing U.S. GAAP and, in practice, IFRS. Currently, many companies capitalize all internal direct leasing costs provided that they are able to clearly identify those costs as directly attributable to obtaining successful lease agreements. The costs capitalized are not required to be incremental. Under the proposed accounting, significant internal costs of leasing may not be considered *incremental*. In our view, there is no conceptual basis for, in effect, accounting for direct *internal* leasing costs related to signed leases differently than direct *external* leasing costs.

The implication of no longer permitting the capitalization of a major portion of *direct* costs of internal efforts in securing tenant leases would have a significant detrimental impact on the operating results of NAREIT's member companies and potentially their share prices. This divergence of accounting for direct leasing costs between internal and external costs would clearly result in the lack of comparable operating results between companies having similar substantive leasing efforts despite similarity in economics. In the event that the Board continues in the direction of its May 21 decision, NAREIT is concerned that the proposed accounting standard would create structuring opportunities by encouraging companies to outsource their leasing function to third parties to achieve the most advantageous accounting result. Investors would be harmed if issuers undertake non-economic steps merely to achieve better financial statement results.

The Critical Nature of Leasing Investment Property

Leases generate rental revenue, which is the most important element in generating earnings, cash flow and in the valuation of an investment property. The cash flow from an investment property is the basis on which the property is valued and this property value directly impacts the share price of real estate investment trusts. See Exhibit I *REIT Valuation; The NAV-based Pricing Model* for a full discussion of the relationship between property cash flows (driven primarily by lease revenue), property values and the evaluation of share price.

Generally, a company will develop a leasing plan for each project. These plans identify spaces in each property that are or that will become vacant. With the help of market research, management assigns target rents for each space. Similarly, before making a decision to acquire or develop a property, management will evaluate the market and develop a leasing plan as a critical part of evaluating whether the project's cash flows will generate an adequate economic return.

These leasing plans are typically executed by the internal leasing staff; in some cases supplemented by external leasing resources. Achieving the leasing targets underlies the growth in operating performance of an investment property. Internal leasing staff is generally compensated at a base salary often plus bonuses based on achievement of overall leasing targets. These costs support the same business function as external leasing resources and are generally less costly and more effective than external leasing agents.

The critical nature of leasing in the effort to maximize returns from investment property is evidenced by the significant disclosures made by companies about the impact of leasing on future operating performance. These disclosures are contained in a REIT's Management's Discussion and Analysis, as well as in the company's supplemental reporting materials. See Exhibit II, *Duke Realty Supplemental Information* first quarter 2014, particularly the *Property Information* section, for an illustration of lease and tenant information generally included in a REIT's supplemental materials.

Because of the critical nature of leasing, most of NAREIT's member companies maintain internal leasing staff. They are an integral part of the management team and not simply hired guns with no long-term stake in the company's success. It would be a step backward in reporting the economics of investment property operating performance if the direct costs of this critical internal leasing staff were accounted for differently from the costs of external leasing resources, which, may not be aligned with the company's long-term success.

Further, it would be a very unfortunate result if the proposed accounting forced companies to abandon the most effective leasing structure (internal leasing staff) for a structure external to the management of the company or to dramatically change their compensation arrangements with their leasing staff in order to achieve a desired accounting outcome with limited change in overall economics. There seems to be three possible alternatives for structuring the leasing function under the FASB's most recent decision:

- Maintain current internal structure and expense a significant portion of the cost of internal leasing staff, even when direct efforts result in signed lease agreements;

- Maintain an internal structure but modify the compensation structure to pay staff based on a minimal base salary plus a commission for signed leases (we assume this arrangement would meet the *incremental* criteria for capitalizing leasing costs); or,

- Engage external leasing services, which our industry firmly believes may be less effective and more expensive, and therefore an economic drag on operating results.

NAREIT believes strongly that the proposed Leases standard, which was not intended to change the general model for lessor accounting, should not provide impetus for restructuring a REIT's leasing function to be able to properly capitalize all direct leasing costs.

Current Accounting for Internal Leasing Costs

While practice is mixed in some IFRS jurisdictions, most investment property companies in North America have developed systems to capture the cost of internal leasing effort *directly* related to signed leases. These costs are capitalized and amortized over the term of the related lease in accordance with the guidance in Topic 840 of the U.S. GAAP Accounting Standards Codification (ASC) and, as applied in practice, paragraph 38 of IAS 17, *Leases*.

ASC 840-20-25-18 states "The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that lease and other costs related to those activities that would not have been incurred but for that lease."

IAS 17 paragraph 38 states that "(I)nitial direct costs are often incurred by lessors and include amounts such as commissions, legal fees and internal costs that are incremental and directly attributable to negotiating and arranging a lease."

In Agenda paper 11A of the March 22-23, 2011 meeting of the IASB/FASB, the staff recommendation was "that *initial direct costs* should be defined as: Costs that are directly attributable to negotiating and arranging a lease that would not have been incurred had the lease transaction not been made." It was also noted that "(V)ery little feedback about the definition of initial direct costs was received. The staff thinks that the definition in the ED is appropriate and **consistent with current lease guidance under Topic 840 and IAS 17. The staff notes that the proposed definition is not intended to change current practice for how initial direct costs are defined"** [emphasis added].

Absent the Board overturning its May 21, 2014 decision, it appears that the Boards will change current practice despite the intentions previously expressed by both the Boards and their respective staff. To emphasize, the current accounting practice that reflects the direct relationship between rental revenues and the cost to generate that revenue has been applied for decades and results in the most relevant measurement of operating performance of real estate companies and should be able to be continued.

The Boards' Due Process

NAREIT respectfully, but strongly, objects to the way in which the accounting for initial direct leasing costs was handled in the *Leases* project exposure drafts. The language used in the May 2013 Revised Exposure Draft (the Revised ED) was quite similar to the guidance in Topic 840, particularly when considering the implementation guidance. While Topic 840 did not use the word "incremental" to qualify leasing costs for capitalization, the definition of incremental was similar to the language in Topic 840, which allowed the capitalization of all direct internal costs related to signed leases.

In addition, some constituents were confused based on their view that the definition of initial direct costs in the Revised ED appeared to be inconsistent with the examples provided in the Implementation Guidance.

As a result, NAREIT believes that many constituents concluded that the standard would not change current accounting practice for initial direct leasing costs, and therefore, did not object to this guidance in the Revised ED. It seems as though the Boards have based a major decision on short-circuited constituent input.

IFRIC's Review of this Matter

NAREIT understands that the IFRS Interpretations Committee (IFRIC) discussed this matter in November 2013 and April 2014 and concluded, for a number of reasons, not to add the topic of accounting for *incremental costs* to its agenda. NAREIT is aware of two comment letters that discuss the practice of maintaining internal leasing staff and the basis for capitalizing the costs of all direct internal, as well as external, leasing resources. These letters are attached as Exhibit III (*i.e.*, Real Property Association of Canada (REALpac)) and Exhibit IV (*i.e.*, EY).

NAREIT's Recommendation: Develop a Comprehensive and Consistent Accounting Standard for Costs (both Direct and Indirect).

NAREIT understands that the accounting treatment for costs is an area that varies widely within U.S. GAAP. Costs come in varying types and definitions (*e.g.*, commitment fees, credit card fees and costs, loan syndication fees, loan origination fees and direct loan origination costs, interest costs, insurance acquisition costs, costs of acquiring non-financial assets, etc.) and U.S. GAAP permits capitalization of costs in certain circumstances.

Given the wide diversity of accounting treatment for cost within U.S. GAAP, NAREIT recommends that the FASB forgo further evaluation of accounting for initial direct cost within the *Leases* project. In our view, a robust and comprehensive analysis of cost accounting treatment that would cut across all GAAP literature should be added to the FASB's agenda. We believe that this project would provide a comprehensive cost accounting model and eliminate inconsistencies as a result of dealing with costs on a piece-meal basis in future standard setting.

We offer the following citations as examples of the spectrum of accounting models for capitalizing and expensing costs:

Costs that are Fully Capitalized

The following excerpt is taken from ASC *Property, Plant and Equipment*.

> ASC 360-10-30-1 Paragraph 835-20-05-1 states that the historical cost of acquiring an asset includes the costs necessarily incurred to bring it to the condition and location necessary for its intended use. As indicated in that paragraph, if an asset requires a period of time in which to carry out the activities

> necessary to bring it to that condition and location, **the interest cost incurred during that period as a result of expenditures for the asset is a part of the historical cost of acquiring the asset** [emphasis added].

The following excerpt is taken from the *Financial Instruments – Recognition and Measurement* 2013 Proposal. NAREIT observes that there is no proposed change from current GAAP for loan origination costs. We also note that it appears that the Boards are treating direct finance leases in a different manner when they are economically similar to a loan.

> Direct Loan Origination Costs
>
> Direct loan origination costs represent costs associated with originating a loan. Direct loan origination costs of a completed loan shall include only the following:
>
> a. Incremental direct costs of loan origination incurred in transactions with independent third parties for that loan
>
> b. Certain costs directly related to specified activities performed by the lender for that loan. Those activities include all of the following:
>
>   1. Evaluating the prospective borrower's financial condition
>   2. Evaluating and recording guarantees, collateral, and other security arrangements
>   3. Negotiating loan terms
>   4. Preparing and processing loan documents
>   5. Closing the transaction.
>
> The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that loan and other costs related to those activities that would not have been incurred but for that loan. See Section 310-20-55 for examples of items.

The following excerpt is taken from the *Insurance Contracts* Proposal.

> ASC 944-30-25-1 An insurance entity shall capitalize only the following as acquisition costs related directly to the successful acquisition of new or renewal insurance contracts:
>
> a. Incremental direct costs of contract acquisition

> b. The portion of the employee's total compensation (excluding any compensation that is capitalized as incremental direct costs of contract acquisition) and payroll-related fringe benefits related directly to time spent performing any of the following acquisition activities for a contract that actually has been acquired:
>
> 1. Underwriting
>
> 2. Policy issuance and processing
>
> 3. Medical and inspection
>
> 4. Sales force contract selling.
>
> c. Other costs related directly to the insurer's acquisition activities in (b) that would not have been incurred by the insurance entity had the acquisition contract transaction(s) not occurred.
>
> d. Advertising costs that meet the capitalization criteria in paragraph 340-20-25-4.

Costs that are Partially Capitalized

The following excerpt is taken from ASC *Receivables*.

> ASC 310-20-25-6 **Bonuses based on successful production of loans that are paid to employees involved in loan origination activities are partially deferrable as direct loan origination costs** under the definition of that term. Bonuses are part of an employee's total compensation. The portion of the employee's total compensation that may be deferred as direct loan origination costs is the portion that is directly related to time spent on the activities contemplated in the definition of that term and results in the origination of a loan [emphasis added].

The following excerpts are taken from the recently issued *Revenue from Contracts with Customers* Standard.

> ASC 340-40-55-1 Example 1 illustrates the guidance in paragraphs 340-40-25-1 through 25-4 on incremental costs of obtaining a contract, paragraphs 340-40- 25-5 through 25-8 on costs to fulfill a contract, and paragraphs 340-40-35-1 through 35-6 on amortization and impairment of contract costs.
>
> > > > Example 1—Incremental Costs of Obtaining a Contract
> 340-40-55-2 An entity, a provider of consulting services, wins a competitive bid to provide consulting services to a new customer. The entity incurred the following costs to obtain the contract:

External legal fees for due diligence	$15,000
Travel costs to deliver proposal	25,000
Commissions to sales employees	10,000
Total costs incurred	$50,000

> 340-40-55-3 In accordance with paragraph 340-40-25-1, the entity recognizes an asset for the $10,000 incremental costs of obtaining the contract arising from the commissions to sales employees because the entity expects to recover those costs through future fees for the consulting services. The entity also pays discretionary annual bonuses to sales supervisors based on annual sales targets, overall profitability of the entity, and individual performance evaluations. In accordance with paragraph 340-40-25-1, the entity does not recognize an asset for the bonuses paid to sales supervisors because the bonuses are not incremental to obtaining a contract. The amounts are discretionary and are based on other factors, including the profitability of the entity and the individuals' performance. The bonuses are not directly attributable to identifiable contracts.
>
> 340-40-55-4 The entity observes that the external legal fees and travel costs would have been incurred regardless of whether the contract was obtained. Therefore, in accordance with paragraph 340-40-25-3, those costs are recognized as expenses when incurred, unless they are within the scope of another Topic, in which case, the guidance in that Topic applies.

Costs that are Fully Expensed

The following excerpt is taken from ASC *Business Combinations*.

> ASC 805-10-25-23 Acquisition-related costs are costs the acquirer incurs to effect a business combination. These costs include finder's fees; advisory, legal, accounting, valuation, and other professional and consulting fees; general administrative costs, including the costs of maintaining an internal acquisitions department; and costs of registering and issuing debt and equity securities. **The acquirer shall account for acquisition-related costs as expenses in the periods in which the costs are incurred and the services are received**, with one exception. The costs to issue debt or equity securities shall be recognized in accordance with other applicable GAAP [emphasis added].

Conclusion

NAREIT objects to the Board's conclusion with respect to initial direct leasing costs, and respectfully requests that the Board reverse the decision in order to preserve current practice. On numerous occasions, the Board has asserted that the intention was not to change current lessor accounting; however, the Board's decision with respect to leasing costs would change the accounting by many lessors of investment property. As we have said in our previous letters to the Boards, we do not believe that current lessor accounting model is broken, and fail to see the reason to create inconsistent accounting results between significant direct internal and external leasing costs that do not reflect the underlying economics of obtaining successful lease agreements.

NAREIT would like to meet with the Board to discuss our views in greater detail. Please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at gyungmann@nareit.com or 202-739-9432 to arrange a time for this meeting. If you have questions regarding this letter, please contact George Yungmann or Christopher Drula, NAREIT's Vice President, Financial Standards, at cdrula@nareit.com or 202-739-9442.

Respectfully submitted,

George Yungmann
Senior Vice President, Financial Standards

Exhibit I

REIT Valuation
The NAV-based Pricing Model

Green Street Advisors

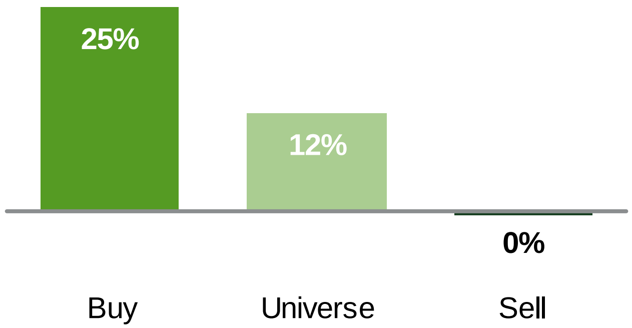
It's All Relative

Our NAV-based Pricing Model has served as the backbone of our stock selection process for over twenty years. The model is designed to assess relative valuations; i.e., it identifies the REITs that are most/least attractively valued.

The model combines NAV – a great starting point and high quality estimates are essential – with the factors that impact the premiums at which REITs should trade: franchise value, balance sheet risk, corporate governance, and overhead. The compartmentalized nature of the model forces discipline to consider all relevant valuation issues.

An Impressive Track Record

20+Yr Annualized Total Return of Green Street's Stock Recommendations*



* Past performance (as of 5/30/14) can not be used to predict future performance. Please see recommendation track record disclosure on page 20

Table of Contents

Sections

Executive Summary

Overview

- Our NAV-based pricing model has been a driver of our stock recomendations for over twenty years
- It has played an instrumental role in our successful recommendation track record
- The compartmentalized nature of the model forces discipline to consider all relevant valuation issues

The Basics

- NAV is the starting point - the value of a REIT is a function of the value of the assets it owns
- Warranted share price = NAV plus or minus a premium for future value added by management
- Franchise value, balance sheet risk, corporate governance and G&A impact the size of the premium
- It is a relative valuation model: roughly equal number of Buys and Sells at all times
- Relative approach anchors around average sector premiums at which REITs trade

The Components

- Franchise values are inherently subjective, but objective inputs help
  - Management Value Added (MVA) shines a bright light on performance attributable to mgm't
  - Total returns relative to peers are also important
  - Balance sheet acumen scores give credit for broad financing menus and low debt costs
- Balance sheets are important; less leverage is better
  - REITs with less leverage have delivered far better returns
  - Investors usually ascribe higher NAV premiums to REITs with low leverage
- Corporate Governance scoring system ranks REITs in a systematic fashion
- The impact of G&A is readily quantified and is dealt with apart from the other factors
  - Differences in G&A are large; they warrant large differences in unlevered asset value premiums

Overview: A Disciplined Approach Toward Stock Selection

A Key Driver of Success: The Green Street NAV-based pricing model is designed to assess the valuation of any REIT relative to sector-level peers. The discipline and rigor the model embodies have played a pivotal role in the two-decade-long success of our recommendation track record. While the model is designed to be neutral with regard to whether REITs in aggregate are cheap or expensive, investors can employ other Green Street analytic tools to help assess overall valuation and/or sector allocation issues.

Company Research

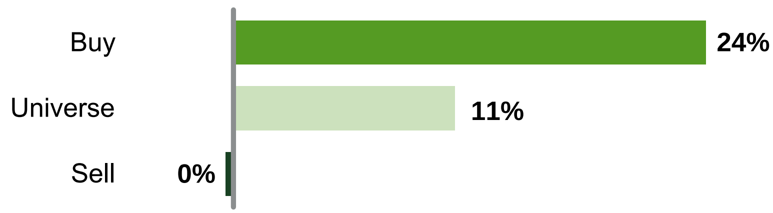
NAV-Based Pricing Model

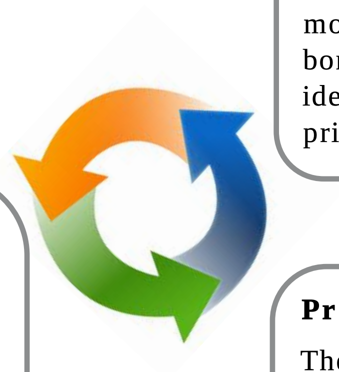
NAV
+ Warranted Premium to NAV
= Warranted Share Price

Stock Recomendations

The NAV-based Pricing Model, coupled with heavy analyst input, drives our stock recommendations. The recommendations are always market and sector neutral.

20+Yr Annualized Returns of Green Street's Recommendations*





Macro Research

Overall REIT Valuation

The ***RMZ Forecast Tool***, published monthly, assesses overall REIT valuation vs. bonds and stocks. Has proven very helpful in identifying periods when REITs are badly mis-priced.

Property Sector Allocation

The ***Commercial Property Outlook***, published quarterly, addresses sector-level valuation questions with a focus on the long term. It is based on extensive research we've published on long-term sector performance and cap-ex requirements.

* Past performance can not be used to predict future performance. Please see recommendation track record disclosure on page 20

Overview: Why Use NAV?

Because We Can: Most equity investors focus a great deal of attention on P/E multiples and/or yields, so it is fair to question why NAV should be the primary valuation benchmark for REITs. The short answer is that investors elsewhere would use NAV if they could, but the concept doesn't translate well to companies that are not in the business of owning hard assets. Because the value of a REIT is, first and foremost, a function of the value of the assets it owns, NAV is a great starting point for a valuation analysis.

Too Simplistic

~~Dividend Yield~~

~~FFO Yield or Multiple~~

~~AFFO Yield or Multiple~~

Far Better

Net Asset Value "NAV"

Good NAV estimates are critical and they require serious resources

Discounted Cash Flow "DCF"

We use DCF internally to double-check results

There is More to it Than Just NAV

Compartmentalized Analysis Looks at Relevant Factors

NAV: The Starting Point

+

The Warranted Premium to NAV

Warranted premiums are a function of:

– Premiums Ascribed by the Market to Other REITs
– Franchise Value
– Balance Sheet Risk
– Corporate Governance
– Overhead (G&A expenses)

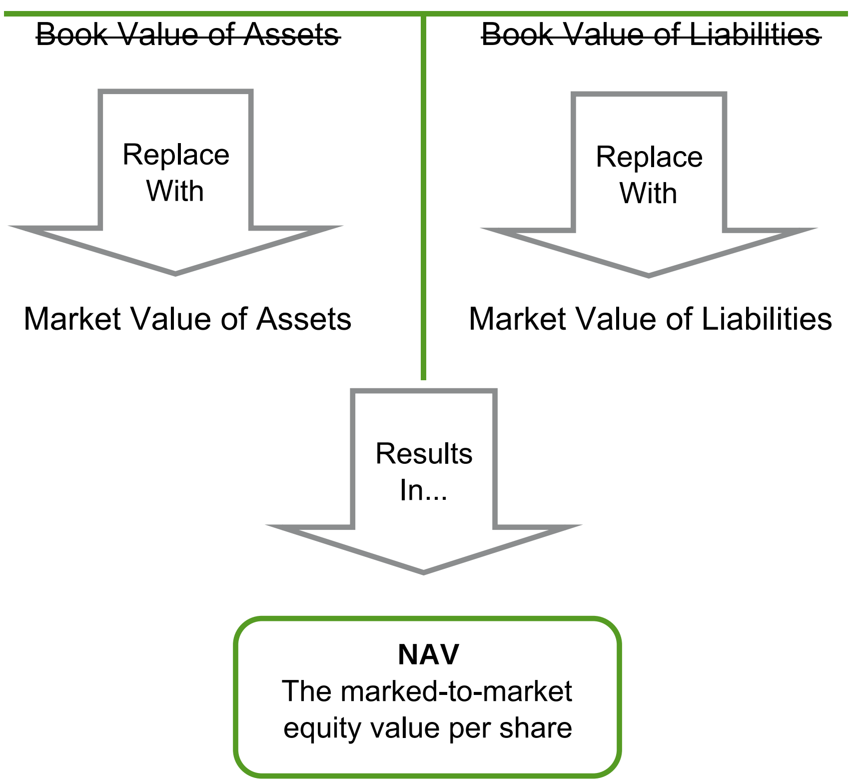
Warranted Share Price

Used to compare valuations *relative* to those of other REITs. It's fair to call it "relative intrinsic value."

Overview: What is NAV?

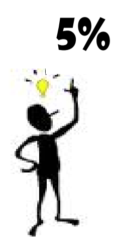
Mark It to Market: An NAV-based valuation methodology is only as good as the underlying estimate of NAV. High-quality estimates of marked-to-market asset value require a great deal of effort and resources, but the estimate can be reasonably precise when done properly. It is also important to mark-to-market the right-hand side of the balance sheet, as the cost of in-place debt can stray substantially from prevailing market. Many market participants skip this important step.

REIT Balance Sheet



Common Question: *Many REIT investors and analysts do not mark debt to market. Is it really necessary?*

Imagine: Two identical office buildings, except that one is encumbered by a 60% LTV mortgage carrying a 7% interest rate with another five years to run, while the other has an identical loan at a 5% rate. Which building will command the higher price?



The answer is obvious to any real estate market practitioner. Building prices are profoundly impacted by assumed debt, and a high-cost mortgage negatively impacts pricing. The same holds true when those buildings are held by a REIT and if the debt is unsecured rather than secured. Marking assets to market without doing the same for liabilities yields the wrong answer.

Overview: NAV - A Simplified Example

Calculating NAV - A Simplified Example

Balance Sheet for REIT XYZ (X's $1,000)

	Book Value	***Analyze Market Value and Replace***	***Current Value***
Real Estate Assets			
Operating Real Estate	$6,000,000	A	$9,350,000
			$2,250,000
Construction in Progress	$500,000	B	$550,000
Land	$200,000	C	$162,000
Equity in Unconsolidated JVs	$1,000,000	D	$0
		D	
Value of Fee Businesses	$0	E	$500,000
Other Assets	$100,000	F	$68,625
Total Assets	$7,800,000		$12,880,625
Liabilities	$5,000,000	G	$5,250,000
			$1,500,000
Preferred Stock	$500,000		$500,000
Shareholders Equity	$2,300,000		$5,630,625
Fully Diluted Shares	200,000	H	204,750
NAV	$11.50		$27.50

The Adjustments:

A. Operating Real Estate: The most important part of an NAV analysis, this step invloves calculating a 12-month forward estimate of NOI and applying an appropriate cap rate. The quality of the analysis rests on an in-depth knowledge of prevailing cap rates, the quality/location of the real estate, and other required industry- and company-specific adjustments.

B. Construction in Progress: Adjustments to the book value of CIP reflect the extent to which stabilized yields are likely to exceed an appropriately high risk-adjusted return bogey.

C. Land: Land values can be much higher or lower than book.

D. Joint Venture Accounting is a Mess: Because of that, we present a pro-rata allocation of JV assets and liabilities. There is no reliable way to otherwise value JV interests, as leverage within the JV typically renders more simplified approaches useless. A pro-rata allocation also does a much better job of showing leverage that may be embedded, but otherwise hidden, in JV investments.

E. Fee Income: Some REITs generate asset management/property management fees associated with JV structures. This fee income can be lucrative, and the range of appropriate multiples to apply is dependent on the quality of the fee stream. This value is not reflected on GAAP balance sheets.

F. Other Assets: REITs often have a material amount of intangible assets, which are deducted for this exercise.

G. Liabilities: Mark-to-market adjustments are necessary where: subsidized financing is present, or market interest rates are materially higher or lower than contract rates on the REIT's debt.

H. Fully Diluted Shares: All in-the-money options, converts, etc. need to be included in the share count.

This report is an excerpt from REIT Valuation: Version 3.0 of our Pricing Model

Overview: NAV - More on Operating Real Estate

Calculating NAV - More on Operating Real Estate

Income Statement for REIT XYZ (X's $1,000)

Three Months Ending XXX	
GAAP Net Operating Income (NOI)	$149,500
Adjustments	
Straight-Line Rent (A)	($1,250)
NOI of Properties Acquired During Quarter (B)	$1,750
Quarterly Pace of Net Operating Income	$150,000
Annual Pace NOI	$600,000
Estimated Growth Over Next 12 Months	$12,000
12-Month Look-Forward NOI Estimate	$612,000
Cap Rate (C)	6.5%
Value of Operating Real Estate	$9,350,000

The Adjustments:

A. Straight-Line Rent: GAAP requires that companies report average rental revenue over the term of the lease. For example, GAAP rent for a 10-yr lease with a starting rent of $50/sqft and 2% annual escalators is $55/sqft. Phantom income items like straight-line rent need to be deducted to arrive at "cash" NOI.

B. Acquisitions: Properties acquired during the quarter will contribute less to reported NOI than they would have had they been owned the full period. Reported NOI needs to be adjusted upward when this is the case.

C. Cap Rate: The convention in the real estate industry is to quote pricing in terms of the first-year yield on investment. This measure is known as the capitalization rate (cap rate). Cap rates are the most critical input in the NAV analysis. An in-depth understanding of the location, age, and general desirability of the real estate portfolio coupled with a good handle on prevailing cap rates is essential to coming up with good estimates. The cap rate for the entire porttfolio is shown here, but the analysis is typically done on a market-by-market basis.

Overview: Where Do Green Street NAVs Come From?

Hard Work: Green Street takes its NAVs very seriously. We devote a great deal of resources toward deriving the best possible estimates of NAV because it has always been the driver of our valuation conclusions.

Kicking the Tires

Extensive property visits
Deep market contacts - public & private
Lengthy coverage of most REITs

We take NAV seriously
It has always driven our Pricing Model

Real Estate Data Sources

Green Street's property databases are extensive
We also use other research vendors
Local leasing and sales brokers

Cap-ex: the 500-Pound Gorilla

Capitalized costs are big and they need to be considered
They vary a lot even among REITs in the same sector
Cap-ex is broadly misunderstood…we have studied extensively
Market participants underestimate cap-ex
Cap-ex policies influence the cap rate used

Overview: Warranted Premiums to NAV

NAV Plus or Minus? Prospective future total returns for any REIT are a function of how its real estate portfolio is likely to perform, as well as the value that its management team is likely to add or detract. Our Pricing Model provides a systematic assessment of the four key variables - franchise value, corporate governance, balance sheet risk, and overhead - that typically distinguish REITs that deliver "real estate plus" returns from those in the "real estate minus" camp.

Warranted Premium to NAV for a REIT is a Function of...

Prevailing Premiums for Sector Peers Based on Prevailing Share Prices

The *net* value that a management team is likely to add or detract in the future

Our Pricing Model tallies up a total score on the variables below and ranks each REIT relative to sector peers

Franchise Value
A gauge of management's propensity to add or detract value

Corporate Governance
Our governance scoring system provides an annual review

Balance Sheet Risk
Capital Structure plays a big role in how REITs are valued

Capitalized Value of Unusual G&A
This can be readily quantified and is dealt with apart from the other factors that impact premiums

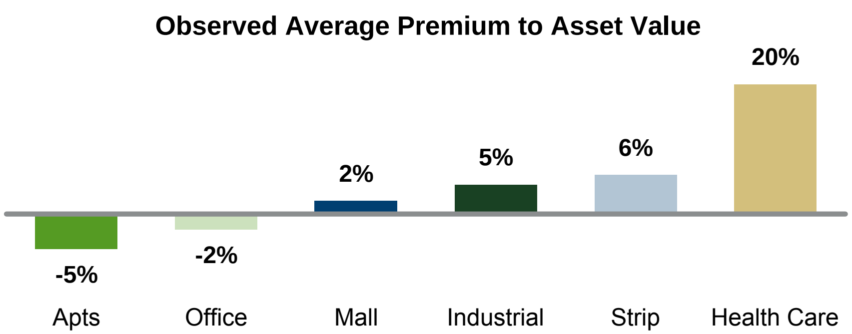
Which is it, NAV or UAV?

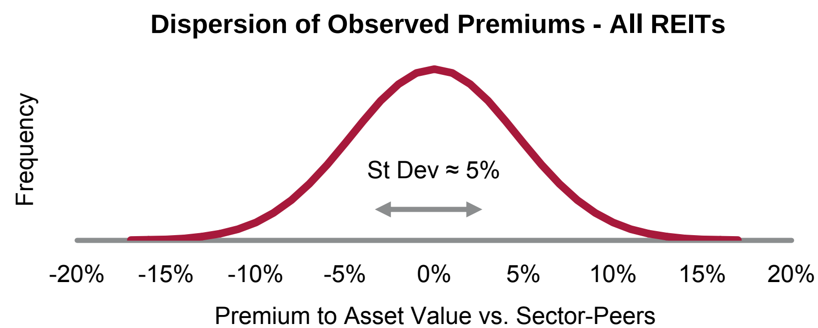
The investment world focuses on premiums to **NAV**, which are impacted by leverage, but the mechanics of our model strip out the distortions leverage can cause by focusing on premiums to **unlevered asset value (UAV)**. Even though the model is UAV-centric, the many references herein to NAV are employed to better speak the language most commonly used in our industry.

Overview: The Influence of Property Sectors

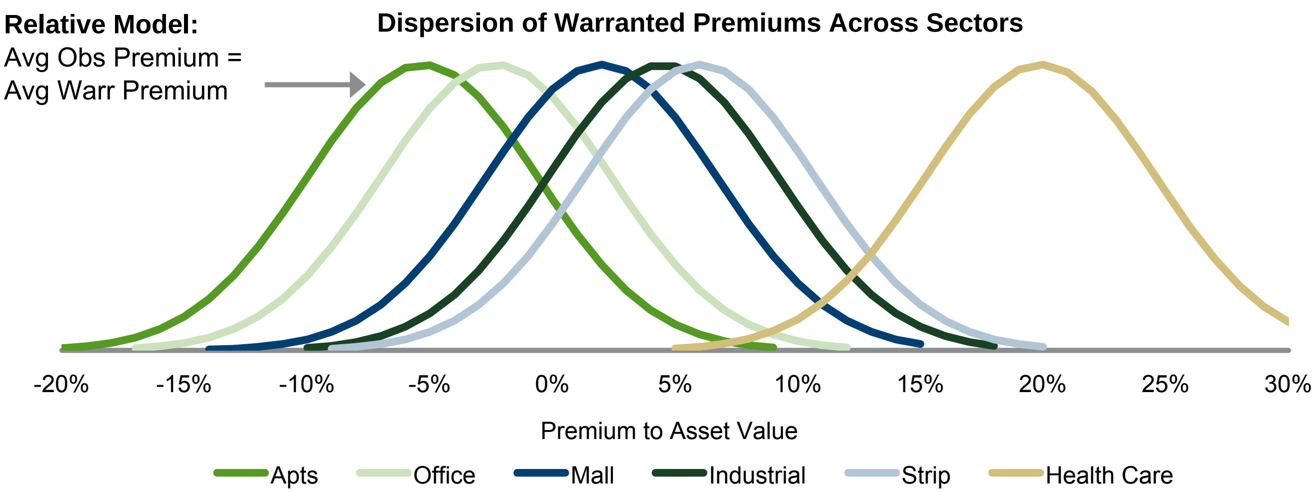
A Normal World: The starting point in calculating the warranted premium for any REIT is the sector-average premium ascribed by the market at current share prices. An assumption is made that the dispersion of observed premiums for the entirety of our coverage universe serves as a good indicator of how premiums should be dispersed in any given sector. REITs that stack up better in the Pricing Model relative to their sector peers are then ascribed better-than-average warranted premiums, and vice versa.

Each sector tends to march to its own drummer on average premiums… …to which the dispersion of premiums for all REITs can be applied





Relative Model:
Avg Obs Premium =
Avg Warr Premium



Why Sector Premiums Vary

There are three primary reasons:
1) REIT investors often disagree with private-market valuations
2) Some sectors may offer more lucrative growth opportunities.
3) A sector full of "A-students" should trade better

The model is neutral with regard to sector valuations.

Franchise Value: What is it?

An Important Assessment: Franchise value and G&A are the most important drivers of UAV premiums. Franchise value pertains to the value that a management team is likely to create in the future, which is a question best addressed by combining objective tools with subjective input from experienced analysts.

Franchise Value: a Forward-Looking Concept

Franchise value is an estimate of the relative value that a management team is likely to add or detract in coming years. Our analysts determine franchise value based on a wide variety of objective inputs and subjective assessments.

Subjective Factors

Lessons from REIT History

Simplicity is a virtue

Activity ≠ Value Added

Development is a tough business

Capital allocation skills are critical

Other Factors to Consider

Will past performance recur?

Has there been a strategy change?

Has management learned lessons?

Objective Metrics

Past Performance	Balance Sheet Management
Management Value Added (MVA)	Balance Sheet Acumen Score
Total Returns to Shareholders	Full Menu of Options is good
	Cheap debt → UAV Premium

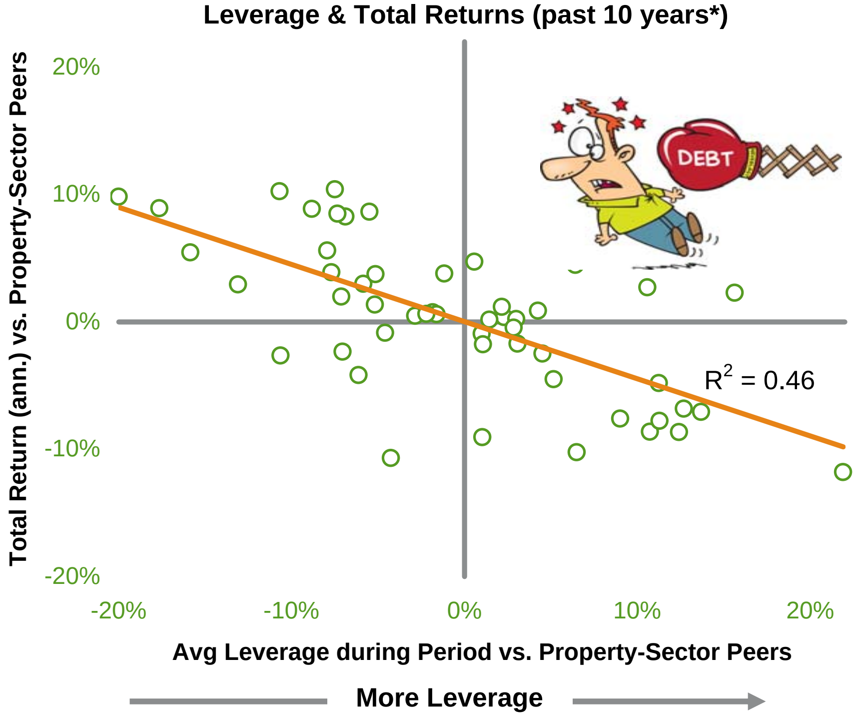
Franchise Score

The objective metrics help guide the analyst, but the ultimate score is entirely at his/her discretion.

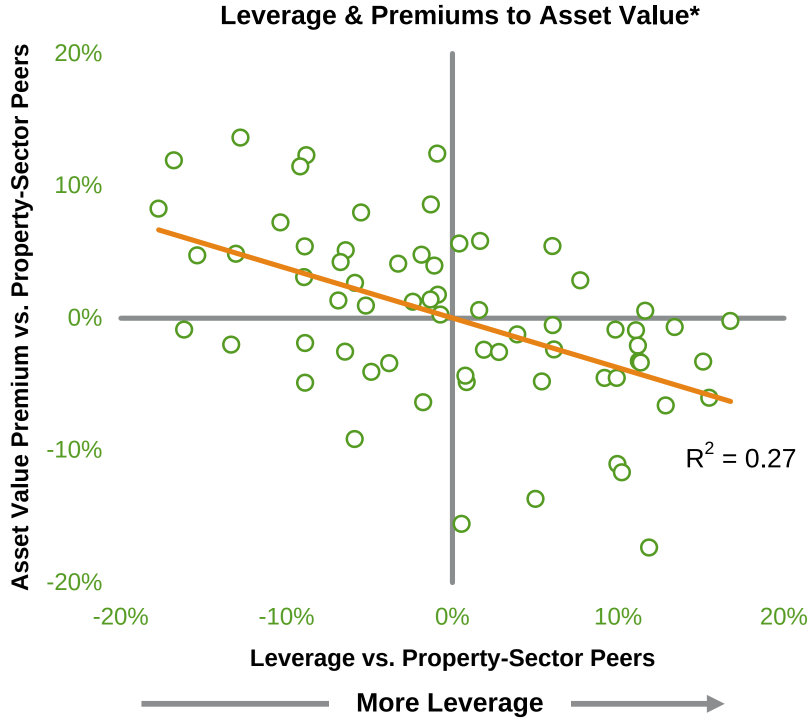
Balance Sheet Risk: Balance Sheets Matter

Low Leverage is Better: Even though property prices have risen more than 50% over the last ten years, REITs that have employed less leverage have delivered far better returns over that time period than REITs with higher leverage. The same statement has held true over the vast majority of ten-year periods since the Modern REIT era commenced in the early-'90s. Not surprisingly, investors are willing to ascribe much higher NAV premiums to REITs with low leverage.

Leverage has Impacted Total Returns
A 10% variance in the lev'g ratio has been associated with a 5% gap in total returns. Every year!



Leverage has a Big Impact on Pricing
A 10% variance in the lev'g ratio currently equates to a 4% variance in the UAV premiums at which REITs trade



* Charts are from Oct 2, 2012 Heard on the Beach. Left chart uses total returns from Aug '02 to Aug '12; right is based on stock pricing as of Sept '12.

Corporate Governance

Green Street's Governance Scoring System: Our governance ranking system, which is published annually, differs in two key respects from those provided by other evaluators: 1) our familiarity with the companies allows for subjective input; and 2) issues unique to REITs (e.g., the 5 or fewer rule) are ignored by others. Scoring is on a 100-point basis with the key inputs highlighted below. REITs with higher governance scores typically trade at larger premiums to asset value.

Category	Max Points	Ideal Structure
Board Rating:		
Non-staggered Board	20	Yes
Independent Board	5	80+%
Investment by Board Members	5	Large Investment by Numerous Members
Conduct	25	No Blemishes, Fair Comp, Leadership
Total	**55**	
Anti-Takeover Weapons:		
State Anti-takeover Provisions	12	Opt out/Shareholders Approve Change
Ownership Limits from 5/50 Rule	5	Limit Waived for Ownership by other REITs
Shareholder Rights Plan	10	Shareholders Must Approve Implementation
Insider Blocking Power	8	No Veto Power
Total	**35**	
Potential Conflicts of Interest:		
Business Dealings with Mgmt.	6	No Business Dealings
Divergent Tax Basis of Insiders	4	Basis Near Share Price
Total	**10**	
Perfect Score	**100**	

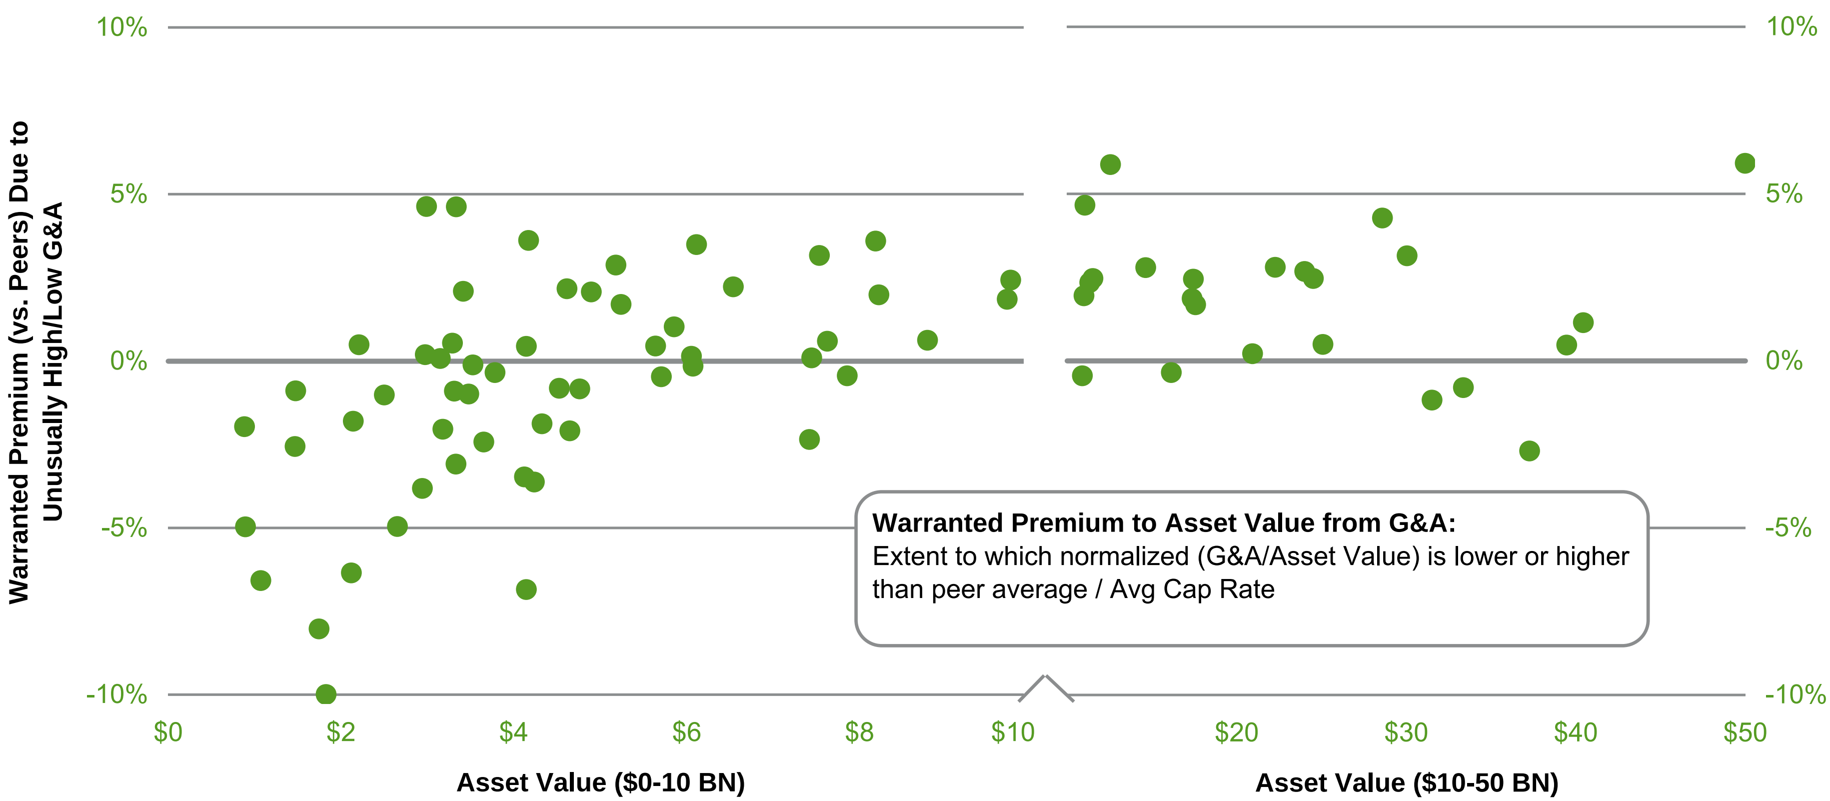
Anti-Takeover Weapons

There are only a handful of REITs where insiders hold a blocking position, but it's a big deal where it exists. Because of that, a cap is placed on how many points a REIT where blocking power is present can score on anti-takeover rankings. After all, the anti-takeover provisions don't matter much if insiders control the vote.

Overhead: A Strong Connection with Size

Big is Better: A dollar of cash flow devoted to G&A is worth the same as a dollar of cash flow at the property level, and efficiency differences between REITs can have a profound impact on share valuation. The impact on appropriate unlevered valuations can be calculated by capping those differences at the all-REIT cap rate and adding or subtracing that figure directly as a warranted premium to unlevered asset value. Not surprisingly, big REITs are more efficient when it comes to overhead, and this efficiency should translate into higher relative valuations.

Company Size and Warranted Premiums Attributable to G&A



This report is an excerpt from REIT Valuation: Version 3.0 of our Pricing Model

Frequently Asked Questions

Answers to Frequently Asked Questions

Q. Net Asset Value (NAV) estimates are far from precise. It's very common to see NAV estimates for a given REIT spanning a broad range, with some being as much as 30% higher than others. Why base a model on such an imprecise estimate?

A. NAV is admittedly an imprecise estimate of value. It may be best to consider NAV as the midpoint of a reasonable range in which a figure at least 5% higher or lower than the midpoint might be accurate. Reasonable minds can disagree within this range. However, this lack of precision should not be viewed as a serious shortcoming. Every valuation methodology lacks precision, and alternative methodologies are almost certainly less precise than NAV. For instance, where do appropriate Price/Earnings (P/E) multiples come from? EBITDA multiples? An NAV-based approach componentizes the valuation question into discrete pieces and incorporates private-market pricing information, attributes that should yield a higher level of precision than a broad-brush approach to entity valuation. When analyst estimates of NAV fall well outside a reasonable range, this probably reflects the quality of the analysis, as opposed to the metric's quality. In addition, most analysts only mark-to-market the left-hand side of the balance sheet; Green Street marks-to-market the right-hand side too. NAV calculations require a great deal of time, energy, and expertise to get right; big errors likely occur when shortcuts are taken.

Q. An NAV analysis is only as good as the cap rate applied to net operating income (NOI). Where does Green Street get its cap rates?

A. The choice of cap rates is the most important input in our model. Our analysts spend a great deal of time talking to market participants (e.g., REIT executives, private real estate participants, brokers, etc.), compiling databases of comparable transactions, reading trade publications, reviewing findings of providers of transaction information, and understanding the extent to which contractual rents are above or below market.

Q. As the REIT industry continues to mature, analysts and investors will inevitably value these stocks the same way the vast majority of other stocks are valued. Approaches based on P/E multiples, EBITDA multiples, or discounted cash flow models will take the place of a REIT-centric concept like NAV. After all, no one tries to figure out the NAV of General Motors or Microsoft, so why bother to do so with REITs?

A. The simple answer to this question is that investors in other sectors would use NAV if they could. However, their inability to do so relegates them to using generally inferior metrics. Thoughtfully applied alternative approaches to valuation should result in similar answers to an NAV-based approach, but these other methods must be used with caution.

Frequently Asked Questions (continued)

Q. REITs are more than just a collection of assets. Management matters a lot, and an NAV-based approach can't possibly factor that in.

A. Contrary to a widespread misperception, the use of an NAV-based model is consistent with a view that management is important. As long as an NAV-based model provides output with a sizable variance in company-specific warranted premiums/discounts, that model is implicitly acknowledging that management matters significantly. Capital allocation and balance sheet management are by far the key differentiators of management capabilities.

Q. Many REITs own hundreds of properties spread across the U.S., and an asset-by-asset appraisal would take an enormous amount of time. How can an analyst know the value of any given portfolio?

A. A reasonable NAV estimate can be derived if disclosure at the portfolio level is sufficient to allow for a comparison of the characteristics of a given portfolio with the characteristics of properties that have traded hands. No two portfolios are exactly the same, but plenty of pricing benchmarks exist to allow for adjustments based on portfolio location, quality, lease structure, growth prospects, etc.

Q. REITs have broad latitude in how they expense many operating costs. Can an NAV-based approach be fooled if a REIT inflates NOI by moving costs to the General & Administrative (G&A) expense line?

A. Yes. This is why an explicit valuation adjustment for G&A expense is included in our pricing model. It identifies companies that shift expenses in ways that are inconsistent with those of its peers.

Q. An NAV analysis derived from real estate NOI seemingly ignores capital expenditures (cap-ex). How does cap-ex factor into the analysis?

A. One of the easiest ways to make big mistakes in an NAV analysis is to utilize simple rules of thumb with regard to cap-ex. Most rules of thumb undercount the magnitude of cap-ex. In addition, the range of appropriate reserves varies hugely by property sector, property quality, and accounting practices. Each factor needs to be addressed before choosing the cap-ex reserve to utilize for a particular portfolio. The real estate portfolios in any sector that offer the highest quality, best growth, and lowest risk should be accorded the highest valuation multiples (lowest cap rates), and vice versa. Thus, it is important to rank the portfolios relative to each other and to then ensure "economic" cap rates (based on NOI less a cap-ex reserve) line up in this manner. An analysis that does not back out cap-ex costs, and is instead based off of nominal cap rates, will generate misleading relative conclusions.

Frequently Asked Questions (continued)

Q. NAV is a backward looking metric.

A. Real estate markets are active and liquid, and when buyers and sellers agree on deal terms (e.g., cap rates, price/square foot, etc.), those terms reflect their views of future prospects. When prevailing cap rates are applied to a REIT's forward-looking NOI estimate, the result is an estimate of value that is as forward looking as any other approach toward valuing stocks.

Green Street's Disclosure Information

Management of Conflicts of Interest: Conflicts of interest can seriously impinge the ability of analysts to do their job, and investors should demand unbiased research. In that spirit, Green Street adheres to the following policies regarding conflicts of interest:

- Green Street employees are prohibited from owning the shares of any company in our coverage universe.
- Green Street employees do not serve as officers or directors of any of our subject companies.
- Green Street does not commit capital or make markets in any securities.
- Neither Green Street nor its employees/analysts receives any compensation from subject companies for inclusion in our research.
- Green Street does not directly engage in investment banking or underwriting work with any subject companies.

Please also have regard to the Affiliate Disclosures listed below when considering the extent to which you place reliance on this research presentation and any research recommendations made herein.

A number of companies covered by Green Street research reports pay an annual fee to receive Green Street's research reports. Green Street may periodically solicit this business from the subject companies. In the aggregate, annual fees for GSA (US) and GSA (UK) research reports received from subject companies represent approximately 3% of each of GSA (US)'s and GSA (UK)'s respective total revenues.

Green Street publishes research reports covering issuers that may offer and sell securities in an initial or secondary offering. Broker-dealers involved with selling the issuer's securities or their affiliates may pay compensation to GSA upon their own initiative, or at the request of Green Street's clients in the form of "soft dollars," for receiving research reports published by Green Street.

The information contained in this presentation is based on data obtained from sources we deem to be reliable; it is not guaranteed as to accuracy and does not purport to be complete. This presentation is produced solely for informational purposes and is not intended to be used as the primary basis of investment decisions. Because of individual client requirements, it is not, and it should not be construed as, advice designed to meet the particular investment needs of any investor. This presentation is not an offer or the solicitation of an offer to sell or buy any security.

Green Street Advisors is an accredited member of the Investorside® Research Association, whose mission is to increase investor and pensioner trust in the U.S. capital markets system through the promotion and use of investment research that is financially aligned with investor interests.

Green Street generally prohibits research analysts from sending draft research reports to subject companies. However, it should be presumed that the analyst(s) who authored this presentation has(/have) had discussions with the subject company to ensure factual accuracy prior to publication, and has(/have) had assistance from the company in conducting due diligence, including visits to company sites and meetings with company management and other representatives.

References to "Green Street" in Disclosures in this section and in the Other Important Information section apply to:
- **GSA (US) to the extent that this presentation has been disseminated in the USA; or**
- **GSA (UK) to the extent that this presentation has been disseminated in the EEA.**

Green Street Advisors US is exempt from the requirement to hold an Australian financial services license under the Act in respect of the financial services; and is regulated by the SEC under US laws, which differ from Australian laws.

Green Street Advisors UK Ltd. is exempt from the requirement to hold an Australian financial services license under the Act in respect of the financial services; and is regulated by the FCA under UK laws, which differ from Australian laws.

Green Street reserves the right to update the disclosures and policies set out in this document at any time. We encourage a careful comparison of these disclosures and policies with those of other research providers, and welcome the opportunity to discuss them.

For Green Street's advisory customers, this research presentation is for informational purposes only and the firm is not responsible for implementation. Nor can the firm be liable for suitability obligations.

Affiliate Disclosures: Green Street does not directly engage in investment banking, underwriting or advisory work with any of the companies in our coverage universe. However, the following are potential conflicts regarding our affiliates that should be considered:
- Green Street is affiliated with, and at times assists, Eastdil Secured, a real estate brokerage and investment bank, when Eastdil Secured provides investment banking services to companies in Green Street's coverage universe. Green Street is never part of the underwriting syndicate, selling group or marketing effort but Green Street may receive compensation from Eastdil Secured for consulting services that Green Street provides to Eastdil Secured related to Eastdil Secured's investment banking services. Green Street does not control, have ownership in, or make any business or investment decisions for, Eastdil Secured.
- Green Street has an advisory practice servicing investors seeking to acquire interests in publicly-traded companies. Green Street may provide such valuation services to prospective acquirers of companies which are the subject(s) of Green Street's research reports.
- An affiliate of Green Street is the investment manager of an equity securities portfolio on behalf of a single client. The portfolio contains securities of issuers covered by Green Street's research department. The affiliate also acts as a sub adviser to an outside Investment Management firm. The sub-advisor will develop and provide a suggested asset allocation model based on published research that is received from the research department. The affiliate is located in a separate office, employs an investment strategy based on Green Street's published research, and does not trade with Green Street's trading desk.

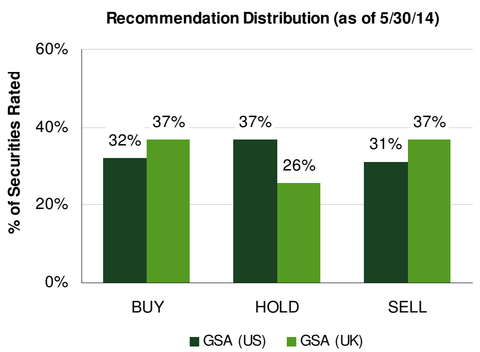
<u>Review of Recommendations:</u>
- Unless otherwise indicated, Green Street reviews all investment recommendations on at least a monthly basis.
- The research recommendation contained in this report was first released for distribution on the date identified on the cover of this report.
- Green Street will furnish upon request available investment information supporting the recommendation(s) contained in this report.

At any given time, Green Street publishes roughly the same number of "BUY" recommendations that it does "SELL" recommendations.



Green Street's "BUYs" have historically achieved far higher total returns than its "HOLDs", which, in turn, have outperformed its "SELLs".

Year	Buy	Hold	Sell	Universe[3]

Annualized	**24 5%**	**11 2%**	**0 1%**	**11 7%**

The results shown in the table in the upper right corner are hypothetical; they do not represent the actual trading of securities. Actual performance will vary from this hypothetical performance due to, but not limited to 1) advisory fees and other expenses that one would pay; 2) transaction costs; 3) the inability to execute trades at the last published price (the hypothetical returns assume execution at the last closing price); 4) the inability to maintain an equally-weighted portfolio in size (the hypothetical returns assume an equal weighting); and 5) market and economic factors will almost certainly cause one to invest differently than projected by the model that simulated the above returns. All returns include the reinvestment of dividends. Past performance, particularly hypothetical performance, can not be used to predict future performance.

(1) Results are for recommendations made by Green Street's North American Research Team only (includes securities in the US, Canada, and Australia). Uses recommendations given in Green Street's "Real Estate Securities Monthly" from January 28, 1993 through May 23, 2014. Historical results from January 28, 1993 through October 1, 2013 were independently verified by an international "Big 4" accounting firm. The accounting firm did not verify the stated results subsequent to October 1, 2013. As of October 1, 2013, the annualized total return of Green Street's recommendations since January 28, 1993 was: Buy +24.5%, Hold +10.9%, Sell -0.3%, Universe +11.5%.

(2) Company inclusion in the calculation of total return has been based on whether the companies were listed in the primary exhibit of Green Street's "Real Estate Securities Monthly". Beginning April 28, 2000, Gaming C-Corps and Hotel C-Corps, with the exception of Starwood Hotels and Homestead Village, were no longer included in the primary exhibit and therefore no longer included in the calculation of total return. Beginning March 3, 2003, the remaining Hotel companies were excluded.

(3) All securities covered by Green Street with a published rating that were included in the calculation of total return. Excludes "not rated" securities.

Per NASD rule 2711, "Buy" = Most attractively valued stocks. We recommend overweight position; "Hold" = Fairly valued stocks. We recommend market-weighting; "Sell" = Least attractively valued stocks. We recommend underweight position.

Green Street will furnish upon request available investment information regarding the recommendation

Duke Realty Corporation

About Duke Realty

Duke Realty Corporation ("Duke Realty") specializes in the ownership, management and development of bulk industrial, suburban office and medical office real estate. Duke Realty is the largest publicly traded, vertically integrated office/industrial/medical office real estate company in the United States. The company owns, maintains an interest in or has under development approximately 154.1 million rentable square feet in 22 major U.S. metropolitan areas. Duke Realty is publicly traded on the NYSE under the symbol DRE and is listed on the S&P MidCap 400 Index.

Duke Realty's Mission Statement

Our mission is to build, own, lease and manage industrial, office and healthcare properties with a focus on customer satisfaction while maximizing shareholder value.

Structure of the Company

Duke Realty has elected to be taxed as a Real Estate Investment Trust (REIT) under the Internal Revenue Code. To qualify as a REIT, we must meet a number of organizational and operational requirements, including a requirement to distribute at least 90% of our adjusted taxable income to our shareholders. Management intends to continue to adhere to these requirements and to maintain our REIT status. As a REIT, we are entitled to a tax deduction for some or all of the dividends we pay to shareholders. Accordingly, we generally will not be subject to federal income taxes as long as we distribute an amount equal to or in excess of our taxable income to shareholders. We are also generally subject to federal income taxes on any taxable income that is not distributed to our shareholders. Our property operations are conducted through a partnership in which Duke Realty is the sole general partner owning a 99 percent interest at March 31, 2014. This structure is commonly referred to as an "UPREIT." The limited partnership ownership interests in this partnership (referred to as Units) are exchangeable for shares of common stock of Duke Realty. Duke Realty is also the sole general partner in another partnership which conducts our service operations.

Exhibit II

Product Review

Bulk Distribution Industrial Properties: Duke Realty owns interests in 503 bulk distribution industrial properties encompassing more than 127.8 million square feet (83 percent of total square feet). These properties are primarily warehouse facilities with clear ceiling heights of 28 feet or more. This also includes 37 light industrial buildings, also known as flex buildings, totaling 2.3 million square feet.

Suburban Office Properties: Duke Realty owns interests in 167 suburban office buildings totaling more than 19.6 million square feet (12 percent of total square feet).

Medical Office Properties: Duke Realty owns interests in 72 medical office buildings totaling more than 5.7 million square feet (4 percent of total square feet).

Retail Properties: Duke Realty owns interests in 5 retail buildings encompassing more than 936,000 square feet (1 percent of total square feet).

Land: Duke Realty owns or controls through options or joint ventures more than 5,600 acres of land located primarily in its existing business parks. The land is ready for immediate use and is primarily unencumbered by debt. More than 86 million square feet of additional space can be developed on these sites and all of the land is fully entitled for either office, industrial, or medical office.

Service Operations: As a fully integrated company, Duke Realty provides property and asset management, development, leasing and construction services to third party owners in addition to its own properties. Our current property management base for third parties includes more than 4.3 million square feet.

FFO and AFFO Reporting Definitions

Funds from Operations ("FFO"): FFO is computed in accordance with standards established by the National Association of Real Estate Investment Trusts ("NAREIT"). NAREIT defines FFO as net income (loss) excluding gains (losses) on sales of depreciable property, impairment charges related to depreciable real estate assets, and extraordinary items (computed in accordance with generally accepted accounting principles ("GAAP")); plus real estate related depreciation and amortization, and after similar adjustments for unconsolidated joint ventures. We believe FFO to be most directly comparable to net income as defined by GAAP. We believe that FFO should be examined in conjunction with net income (as defined by GAAP) as presented in the financial statements accompanying this release. FFO does not represent a measure of liquidity, nor is it indicative of funds available for our cash needs, including our ability to make cash distributions to shareholders.

Core Funds from Operations ("Core FFO"): Core FFO is computed as FFO adjusted for certain items that are generally non-cash in nature and that materially distort the comparative measurement of company performance over time. The adjustments include gains on sale of undeveloped land, impairment charges not related to depreciable real estate assets, tax expenses or benefit related to (i) changes in deferred tax asset valuation allowances, (ii) changes in tax exposure accruals that were established as the result of the previous adoption of new accounting principles, or (iii) taxable income (loss) related to other items excluded from FFO or Core FFO (collectively referred to as "other income tax items"), gains (losses) on debt transactions, adjustments on the repurchase or redemption of preferred stock, gains (losses) on and related costs of acquisitions, and severance charges related to major overhead restructuring activities. Although our calculation of Core FFO differs from NAREIT's definition of FFO and may not be comparable to that of other REITs and real estate companies, we believe it provides a meaningful supplemental measure of our operating performance.

Adjusted Funds from Operations ("AFFO"): AFFO is defined by the company as Core FFO (as defined above), less recurring building improvements and total second generation capital expenditures (the leasing of vacant space that had previously been under lease by the company is referred to as second generation lease activity) related to leases commencing during the reporting period, and adjusted for certain non-cash items including straight line rental income and expense, non-cash components of interest expense and stock compensation expense, and after similar adjustments for unconsolidated partnerships and joint ventures.

Exhibit II

Discontinued Operations Disclosure

(unaudited and in thousands)

	Three Months Ended	
	March 31, 2014	March 31, 2013
Properties Comprising Discontinued Operations (1):		
Income Statement:		
Revenues	**$1,368**	$16,404
Operating expenses	**(913)**	(5,986)
Depreciation and amortization	**(205)**	(6,787)
Operating income	**250**	3,631
Interest expense	**(382)**	(4,260)
Gain on sale of depreciable properties	**19,752**	8,954
Income from discontinued operations before income taxes	**19,620**	8,325
Income tax expense (2)	**(2,977)**	0
Income from discontinued operations	**$16,643**	$8,325

(1) The amounts classified in discontinued operations for the periods ended March 31, 2014 and March 31, 2013 are comprised of three properties that are currently held for sale, ten properties sold in the three months ended March 31, 2014 and 25 properties sold during the year ended December 31, 2013.

Excluded from the above is one property that was sold during the three months ended March 31, 2014 and 13 properties that were sold during the year ended December 31, 2013 and, as a result of our maintaining varying forms of continuing involvement after the sale, did not meet the criteria to be classified in discontinued operations.

(2) The income tax expense included in discontinued operations during the three months ended March 31, 2014 was triggered by the sale of one property during that time period, which was partially owned by our taxable REIT subsidiary.

	x 4	
Annualized proforma Core EBITDA, including share of joint ventures	$688,624	
Total debt	$4,323,210	
Less cash	(19,474)	
Share of JV debt	307,484	
Net Debt	$4,611,220	
Plus remaining costs to spend for properties in development pipeline	331,004	(3)
Proforma Net Debt	$4,942,224	
Proforma Net Debt to EBITDA	**7.2**	
Proforma Net Debt	$4,942,224	
Preferred stock	428,926	
Proforma Net Debt plus Preferred	$5,371,150	
Proforma Net Debt plus Preferred to EBITDA	**7.8**	

Notes to Proforma Calculations:

(1) Current quarter acquisition consists of one industrial building that is 100% leased, totaling approximately 407,000 square feet. Adjustment is to reflect a full quarter of operations for this property.

(2) Current quarter developments placed in service consist of one office and three medical office buildings that are 100% leased, totaling more than 392,000 square feet. Adjustment is to reflect a full quarter of operations for such properties.

(3) There are 15 industrial, eight medical office and two office properties in our development pipeline as of March 31, 2014, totaling more than 7.5 million square feet (including two industrial properties, totaling approximately 1.8 million square feet, within one of our unconsolidated joint ventures). These properties have projected stabilized costs of more than $607.2 million (with the joint venture development costs reflected at our ownership percentage) and are 86% pre-leased in the aggregate. The proforma EBITDA is calculated based on the projected stabilized yield of 7.6% for these properties. The remaining costs to spend for these properties represent the total projected stabilized costs less the costs funded through March 31, 2014.

(4) Current quarter properties sold consist of nine industrial and two medical office buildings, totaling approximately 620,000 square feet. Adjustment is to remove the pre-sale operations of these properties from Core EBITDA for the quarter.

Exhibit II

Summary of Unsecured Public Debt Covenants

Covenant	Threshold	First Quarter '14	Fourth Quarter '13	Third Quarter '13	Second Quarter '13
Total Debt to Undepreciated Assets	<60%	48%	47%	49%	48%
Debt Service Coverage	>1.5x	2.5	2.5	2.4	2.3
Secured Debt to Undepreciated Assets	<40%	14%	14%	14%	15%
Undepreciated Unencumbered Assets to Unsecured Debt	>150%	217%	221%	215%	216%

Note: The ratios are based upon the results of Duke Realty Limited Partnership, the partnership through which Duke Realty conducts its operations, using calculations that are defined in the trust indenture.

	Three Months Ended		
Unencumbered Consolidated Assets	**March 31, 2014**		**March 31, 2013**
Number of properties	468	(1)	460
Total square feet (in thousands)	85,796	(1)	78,495
Gross book value (in thousands)	$6,091,021	(1)	$5,624,287
Annual stabilized NOI (in thousands)	$538,407	(1)	$517,895

(1) Excludes 23 wholly owned properties under development at March 31, 2014 which will be unencumbered upon completion. These properties totaled approximately 5.8 million square feet with total anticipated stabilized project costs of more than $568.3 million and anticipated stabilized NOI of more than $43.5 million.

Number of properties	486	165	63	5	719	(7)
Total square footage at 100%	120,576	19,172	5,255	937	145,939	(7)
Total square footage at economic ownership %	109,472	15,976	4,732	718	130,897	(7)
Average commencement occupancy for the three months ended 3/31/14	92.9%	86.4%	90.2%	84.9%	91.9%	(8)
Ending lease up occupancy at 3/31/14	95.0%	88.1%	93.6%	87.6%	94.0%	(9)

Note: **NOI information is for the three months ended March 31, 2014 and includes only wholly owned and joint venture in-service properties as of March 31,2014. Joint venture property NOI is shown at economic ownership percentage. Sold properties and projects designated as held for sale have been excluded.**

Note: **See page 19 for further detail regarding the composition of our in-service portfolio.**

Note: **Three properties are classified as held for sale, and treated as discontinued operations, at March 31, 2014 and, as such, are not included in the schedule above. These properties generated $729 of NOI during the three months ended March 31, 2014 and had a gross basis of $39,339 as of March 31, 2014.**

(1) Rental revenues from continuing operations as included in the segment reporting disclosures in the notes to our consolidated financial statements. Revenues not allocated to reportable segments, which are not included above, totaled $979 for the three months ended March 31, 2014.

(2) Represents adjustments for straight line rental income and expense, amortization of above and below market rents, amortization of lease concessions, intercompany rents and lease termination fees.

(3) Represents properties that were sold but not included in discontinued operations due primarily to ongoing property management agreements.

(4) Rental and real estate taxes as used in the computation of PNOI from the segment reporting disclosures in the notes to our consolidated financial statements.
Rental expenses and real estate taxes not allocated to reportable segments, which are not included above, totaled $1,671 for the three months ended March 31,2014.

(5) NOI is adjusted to reflect a full quarter of operations for properties that were placed in service or acquired during the quarter.

(6) NOI for joint venture properties is presented at Duke's effective ownership percentage.

(7) Number of properties, total square footage at 100% and total square footage at economic ownership % exclude two industrial buildings (563,000 SF) and one medical office building (57,000 SF) that are held for sale and included in discontinued operations.

(8) Commencement occupancy represents the percentage of total square feet where the leases have commenced.

(9) Lease up occupancy represents the percentage of total square feet based on executed leases without regard to whether the leases have commenced.

Note: NOI information is for the three months ended March 31, 2014 and includes only wholly owned and joint venture in-service properties as of March 31, 2014. Joint venture property NOI is shown at economic ownership percentage. Sold properties and projects designated as held for sale have been excluded.

Note: This schedule provides supplemental information for the same population of properties presented on page 17 and 18.

Note: Three properties are classified as held for sale and treated as discontinued operations, at March 31, 2014 and, as such, are not included in the schedule above. These properties generated $729 of NOI during the three months ended March 31, 2014 and had a gross basis of $39,339 as of March 31, 2014.

(1) Represents buildings that have reached 90% occupancy and/or been in service for at least one year and that have positive NOI for the current reporting period.

(2) Represents buildings that have reached 90% lease-up occupancy and have negative NOI for the current reporting period.

(3) Represents buildings that have been in service for less than one year and have not reached 90% occupancy.

(4) Joint ventures are included at ownership percentage.

(1) Includes all wholly owned and joint venture projects shown at 100% as of report date.

(2) Annualized rental revenue represents average annual base rental payments, on a straight-line basis for the term of each lease, from space leased to tenants at the end of the most recent reporting period. Annualized rental revenue excludes additional amounts paid by tenants as reimbursement for operating expenses and real estate taxes, as well as percentage rents. Joint venture properties are included at the Company's economic ownership percentage.

(3) Represents properties not located in the company's primary markets.

(1) Represents average annual gross effective rents due from tenants in service as of March 31, 2014. Average annual gross effective rent equals the average annual rental property revenue over the terms of the respective leases including landlord operating expense allowance and excluding additional rent due as operating expense reimbursements and percentage rents.

Note: Joint ventures are included at the Company's economic ownership percentage.

Note: All information for joint venture properties is presented at Duke's effective ownership percentage.

(1) Commencement occupancy represents the percentage of total square feet where the leases have commenced.

(2) Net Operating Income (NOI) is equal to FFO excluding the effects of straight-line rent, concession amortization and market lease amortization.

(3) The population for determining same property performance includes both consolidated and joint venture properties. In order not to distort trends due to non-operating events, properties with termination fees over $250,000 have been excluded from both periods shown. The population, for both periods shown, consists of the 722 in-service properties that we own or jointly control, as of March 31, 2014, less (i) 47 in-service buildings that were acquired within the last 24 months, (ii) 26 in-service buildings we developed that were placed in service within the last 24 months, (iii) 15 in-service buildings that have recognized income from a lease termination fee of greater than $250,000 within the last 24 months and (iv) 3 in-service buildings that are under contract to sell at March 31, 2014 and are classified as held-for-sale for accounting purposes.

(1) Annualized rental revenue represents average annual base rental payments, on a straight-line basis for the term of each lease, from space leased to tenants at the end of the most recent reporting period. Annualized rental revenue excludes additional amounts paid by tenants as reimbursement for operating expenses and real estate taxes, as well as percentage rents. Joint venture properties are included at the Company's economic ownership percentage.

(2) Lease up basis occupancy represents the percentage of total square feet based on executed leases without regard to whether the leases have commenced.

(1) The percentage renewed is calculated by dividing the square feet of leases renewed by the square feet of leases up for renewal. The square feet of leases up for renewal is defined as the square feet of leases renewed plus the square feet of space vacated due to lease expirations. Excludes temporary leases of space. Joint venture properties are included at 100%.

(2) Represents the percentage change in net effective rent between the original leases and the renewal leases. Net effective rent represents average annual base rental payments, on a straight-line basis for the term of each lease excluding operating expense reimbursements.

Note: Excludes temporary leases of space.

Note: Joint Ventures are shown at 100%.

(1) Represents tenants who did not renew their leases upon expiration due to the closing of their local operations, relocation to another property not owned or built by the Company, or the exercising of a termination option.

(2) Represents space with termination fees required to allow the tenants to vacate their space prior to the normal expiration of their lease term.

(3) Represents tenants who vacated their space and relocated to another property owned or built by the Company or moved out to accommodate another Duke tenant expansion.

(4) Represents tenants who have downsized prior to expiration of their lease term.

(A) Balance sheet information is reported at 100% of joint venture. (B) Reported at Duke's share of joint venture. (C) Interest rate is fixed, except as noted.

Notes in (000's)

(1) The outstanding debt consists of nine separate loans: i) $22,587 at a fixed rate of 6.4% maturing August 2014, ii) $6,384 at a fixed rate of 8.2% maturing December of 2015, iii) $11,916 at a fixed rate of 6.0% maturing March 2016, iv) $27,765 at a fixed rate of 6.2% maturing June 2016, v) $131,250 at a fixed rate of 5.4% maturing March 2017, vi) $203,250 at a fixed rate of 5.4% maturing March 2017 , vii) $15,128 at a fixed rate of 5.6% maturing December 2019, viii) $33,879 at a fixed rate of 5.9% maturing January 2020 and ix) $6,782 at a fixed rate of 8.3% maturing November 2023.

(2) Debt consists of three separate loans: i) $13,653 at a fixed rate of 5.0% maturing September 2021, ii) $10,535 at a fixed rate of 4.4% maturing September 2021, and iii) $55,221 at a fixed rate of 5.2% maturing October 2021.

(3) Our share of in-service property revenue, unlevered NOI, EBITDA and interest expense for this joint venture is computed based on the operating cash flow distributions we would receive pursuant to our accumulated preferred return in this joint venture, which equates to our share being 89%. The debt consists of two separate loans: i) a variable rate land loan of LIBOR + 1.5% maturing September 2014, with a current amount outstanding of $14,400 and ii) a construction line of credit at LIBOR + 1.5% maturing September 2014, with a current amount outstanding of $85,000. Amounts charged by Duke to the joint venture are not included in share of interest expense above.

(4) This joint venture currently has 45.3 acres of land in Linden, New Jersey, anticipated for use to develop 450,000 square feet of retail buildings.

(5) Consists of 8 separate joint ventures that own and operate buildings and hold undeveloped land. Debt balance consists of three separate loans: i) $250 at a variable rate of LIBOR + 3.0% maturing June 2014, ii) $24,000 at a fixed rate of 8.0% maturing October 2015 and iii) $40,233 at a variable rate of LIBOR + 1.4% maturing December 2016.

Note: Sales of joint venture properties are included at ownership share.

(1) In-place cap rates of completed dispositions are calculated as current annualized net operating income, from space leased to tenants at the date of sale, divided by the sale price of the real estate. Annualized net operating income is comprised of base rental payments, excluding reimbursement of operating expenses, less current annualized operating expenses not recovered through tenant reimbursements.

(2) Occupancy represents the percentage of total square feet based on executed leases where the leases have commenced.

(3) Represents projected stabilized investment of real estate assets acquired after stabilization costs (such as applicable closing costs, lease up costs of any vacant space acquired, and deferred maintenance costs) are added to the acquisition price.

(4) Includes real estate assets and net acquired lease-related intangible assets but excludes other acquired working capital assets and liabilities.

(5) Occupancy represents the percentage of total square feet based on executed leases without regard to whether the leases have commenced.

(6) In-place yields of completed acquisitions are calculated as the current annualized net operating income, from space leased to tenants at the date of acquisition, divided by the acquisition price of the acquired real estate. Annualized net operating income is comprised of base rental payments, excluding reimbursement of operating expenses, less current annualized operating expenses not recovered through tenant reimbursements.

(7) Price, Investment, Yield, & Occ % includes one or more acquisitions in which Duke Realty purchased a partner's interest in a joint venture.

Subject: Tentative agenda decision – IAS 17 Leases – Meaning of incremental costs

Dear IFRS Interpretations Committee members,

This letter is submitted by the Real Property Association of Canada (REALpac) in response to the tentative agenda decision from the November 2013 discussion on IAS 17 Leases, Meaning of Incremental costs.

REALpac is Canada's senior national industry association for owners and managers of investment real estate. Our Members include publicly traded real estate companies, real estate investment trusts (REITs), private companies, pension funds, banks and life insurance companies. The association is further supported by large owner/occupiers and pension fund advisers as well as individually selected investment dealers and real estate brokerages. Members of REALpac currently own in excess of $180 Billion CAD in real estate assets located in the major centers across Canada

REALpac's Comments

The Interpretations Committee received a request for clarification about IAS 17 *Leases* related to the meaning of "incremental costs" within the context of IAS 17, and in particular, whether salary costs of permanent staff involved in negotiating and arranging new leases as a lessor qualify as "incremental costs".

We do not support the Interpretations Committee's tentative decision that internal salary costs do not qualify as incremental costs. In addition, we would assert that there is diversity in practice on this issue.

IAS 17 paragraph 38 states that "(I)nitial direct costs are often incurred by lessors and include amounts such as commissions, legal fees and internal costs that are incremental and directly attributable to negotiating and arranging a lease. They exclude general overheads such as those incurred by a sales and marketing team." In Canada, we consider certain internal costs as incremental and variable costs, not fixed. These costs are directly related to specific activities performed by the lessor that would not have occurred but for that successfully executed lease. Those activities may include: evaluating a prospective lessee's financial condition, evaluating and recording security arrangements, negotiating lease terms, preparing and processing lease documents and closing the lease transaction. These activities are initiated upon the prospective lessee's desire to enter into a lease, on behalf of the lessor and they relate directly to entering into the successfully executed lease. Therefore, they are integral to leasing. Among other examples, these companies typically have systems in place to track the number of successful leases completed by each internal leasing staff or time spent on successful deals in order to allocate costs (and time) to a specific lease arrangement and capitalize certain internal costs that relate to successful leases. Furthermore, these companies typically make reference to market-based rates for specific leasing activities which would establish an upper limit of what could be capitalized. Companies who make the rational business decision to minimize cost through employment of internal leasing personnel, opposed to hiring external leasing brokers should not be impacted by the accounting treatment. To make the issue even worse, some companies use both internal and external leasing. This will result in inconsistent accounting within the same company, which would make evaluating the results very difficult.

By our interpretation of paragraph 38, these internal costs meet the requirements of being both incremental and directly attributable to negotiating and arranging a lease.

In the Staff Paper (Agenda ref 7) from the November 2013 IFRIC meeting, points 21 – 26, reference is made to IAS 39, whereby an incremental cost is one that would not have been incurred if the entity had not acquired, issued or disposed of the financial instrument." While we agree that incremental costs should be interpreted as costs that would not have been incurred if the entity had not negotiated or initiated leases, we disagree with the conclusion in points 26 and 27 that salaried employees are "permanent" and that these salaries are "fixed" costs that are "unavoidable". Particularly where companies use time-tracking systems to allocate time and costs, our viewpoint is that these costs are variable, and do fluctuate with the volume of leases that are written. If the volume of leases written decreases, so do the number of employees employed for this work, and vice versa; therefore these costs are variable and are not "unavoidable".

Based on our discussions with our counterparts in the United States, it is our understanding that our accounting for similar costs is consistent with treatment under U.S. GAAP. ASC 840-20-25-18 states:

REALpac Real Property Association of Canada | Association des biens immobiliers du Canada

"The costs directly related to those activities shall include only that portion of the employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that lease and other costs related to those activities that would not have been incurred but for that lease. Initial direct costs shall not include costs related to any of the following activities performed by the lessor:
a. Advertising
b. Soliciting potential lessees
c. Servicing existing leases
d. Other ancillary activities related to establishing and monitoring credit policies, supervision, and administration."

As active observers in the joint IASB/FASB Leases project, it is our understanding that the definition of initial direct costs under IFRS in IAS 17 and U.S. GAAP in ASC 840 is not intended to differ from current practice or from one another.

In Agenda paper 11A of the March 22-23, 2011 meeting of the IASB/FASB, the staff recommendation is "that *initial direct costs* should be defined as: Costs that are directly attributable to negotiating and arranging a lease that would not have been incurred had the lease transaction not been made." It was also noted that "(V)ery little feedback about the definition of initial direct costs was received. The staff thinks that the definition in the ED is appropriate and ***consistent with current lease guidance under Topic 840 and IAS 17. The staff notes that the proposed definition is not intended to change current practice for how initial direct costs are defined*** (emphasis added) (see Appendix A for current guidance)." Appendix A of that Agenda paper notes that:

"Under the guidance in Topic 840, initial directs costs include only those costs incurred by the lessor that are:
(a) Costs to originate a lease incurred in transactions with independent third parties that:
(i) Result directly from and are essential to acquire that lease.
(ii) Would not have been incurred had that leasing transaction not occurred.
(b) Directly related to only the following activities performed by the lessor for that lease:
(i) Evaluating the prospective lessee's financial condition
(ii) Evaluating and recording guarantees, collateral, and other security arrangements
(iii) Negotiating lease terms
(iv) Preparing and processing lease documents
(v) Closing the transaction"

Exhibit III

REALpac
Real Property Association of Canada | Association des biens immobiliers du Canada

It is our understanding that the capitalization of initial direct costs related to certain salaried employees engaged in arranging and negotiating leases for commercial real estate transactions is consistent across Canada and the U.S. We therefore do not agree with the Interpretation Committee's conclusion that predominant practice is to expense employee salary costs.

Overall, we believe that IAS 17 is clear that certain internal costs do qualify as incremental costs and are directly attributable to negotiating and arranging a lease. We further believe that this accounting treatment is consistent with both IFRS under IAS 17 and U.S. GAAP under ASC 840.

We thank the IFRIC for considering our comments on the tentative decision regarding the meaning of incremental costs within the context of IAS 17 Leases. Please contact Nancy Anderson, REALpac's Vice President Financial Reporting & Chief Financial Officer at nanderson@realpac.ca or at 1-416-642-2700 ext. 226 if you would like to discuss our comments.

Respectfully submitted,

NAnderson

20 January 2014

Dear IFRS Interpretations Committee members,

Tentative agenda decision – *IAS 17 Leases – Meaning of incremental costs*

Ernst & Young Global Limited, the central coordinating entity of the global EY organisation, welcomes the opportunity to offer its views on the above tentative agenda decision, as published in the November 2013 *IFRIC Update*.

The Interpretations Committee received a request for clarification of the meaning of 'incremental costs' within the context of IAS 17 *Leases*.

"The submitter asks whether the salary costs of permanent staff involved in negotiating and arranging new leases (and loans) qualify as 'incremental costs' within the context of IAS 17 and should therefore be included as initial direct costs in the initial measurement of a finance lease receivable."

We do not support the Interpretations Committee's tentative decision not to add this issue to its agenda, as we believe preparers would benefit from additional guidance related to capitalising certain internal costs as incremental costs. IAS 17.38 clearly indicates that some internal costs are incremental and directly attributable to negotiating and arranging a lease. Without additional clarification, preparers of financial statements may find it difficult to distinguish between certain internal costs that are incremental and internal costs that are not incremental.

The IASB and FASB staffs issued agenda paper 11A for the 21-23 March 2011 joint meeting addressing the definition of initial direct costs for the joint project on leasing. On page 4, paragraph 14 of this agenda paper, the staffs note that the definition proposed for the joint exposure draft *Leases* is not intended to change current practice for how initial direct costs are defined. ASC 840-20-25-18 permits "that portion of employees' total compensation and payroll-related fringe benefits directly related to time spent performing those activities for that lease…" to be included in initial direct costs of a lease. We believe the staffs' paper suggests there is no difference between IFRS and US GAAP currently, which is consistent with our observations in practice. Therefore, we believe the Interpretations Committee's tentative agenda decision as drafted would create an IFRS/US GAAP difference.

We believe the tentative agenda decision is inconsistent with the decision published in the September 2008 *IFRIC Update* on IAS 32 in which "… the IFRIC also noted that the terms 'incremental' and 'directly attributable' are used with similar but not identical meanings in many Standards and Interpretations. The IFRIC recommended that common definitions should be developed for both terms and added to the Glossary as part of the Board's annual improvements project." These definitions were not added to the Glossary and new standards are being developed that rely on these concepts, for example, the proposed new revenue and insurance standards. For standards developed jointly by the IASB and FASB, consistent definitions become more important. For example, the joint revenue standard, which is expected to be issued in Q1 2014, will not only create another standard that uses the term 'incremental costs', but also will provide a converged definition of incremental costs for the purpose of a single standard. A common definition of 'incremental costs' that would apply to all the standards that use the concept of 'incremental costs' would result in greater consistency in the application of its meaning among IFRS standards and among lessors reporting under IFRS and US GAAP.

Paragraph 38 of IAS 17 indicates that some internal costs are incremental and directly attributable to negotiating and arranging a lease: "Initial direct costs are often incurred by lessors and include amounts such as commissions, legal fees and *internal costs* (emphasis added) that are incremental and directly attributable to negotiating and arranging a lease. They exclude general overheads such as those incurred by a sales and marketing team." Some preparers consider certain internal costs as incremental or variable costs (not as fixed costs). These costs are directly related to specific activities performed by the lessor that would not have occurred but for that successfully executed lease. Those activities may include: evaluating a prospective lessee's financial condition, evaluating and recording security arrangements, negotiating lease terms, preparing and processing lease documents and closing the lease transaction. These activities are initiated upon the prospective lessee's desire to enter into a lease, on behalf of the lessor and they relate directly to entering into the successfully executed lease. Therefore, they are integral to leasing. These companies typically have a time-tracking system in place to allocate time (and costs) to a specific lease arrangement and capitalise certain internal costs that relate to successful leases.

In its tentative agenda decision, the Interpretations Committee noted that "… internal fixed costs do not qualify as 'incremental costs'. Only costs that would not have been incurred if the entity had not negotiated and arranged a lease should be included in the initial measurement of a finance lease receivable" and "… in the light of the existing IFRS requirements, neither an Interpretation nor an amendment to IFRSs was necessary." However, the Interpretations Committee does not indicate where in existing IFRS it is stated that internal fixed costs do not qualify as 'incremental costs' and, in turn, how this reconciles to the language in paragraph 38 of IAS 17, quoted above. Therefore, it is not clear why the Interpretations Committee concluded that the issue is clear in IFRS. It appears the Interpretations Committee may have reached such conclusion based, in part, on a perceived lack of diversity as indicating that it believes IFRS is clear on the issue when it noted that, "… there does not appear to be diversity in practice on this issue." However, we have observed diversity spanning multiple geographic areas (i.e., Australia, Europe and North America).

Without further explanation as to why certain internal fixed costs do not qualify as 'incremental costs', it would appear that the application of the agenda decision by these companies would be treated as a correction of an error in accordance with IAS 8.

In summary, we do not agree with the Interpretations Committee's tentative agenda decision. We do not believe IAS 17 is clear that certain internal fixed costs do not qualify as incremental costs as paragraph 38 clearly indicates that some internal costs are incremental and directly attributable to negotiating and arranging a lease. Clarification is needed to provide guidance on what costs the Board had in mind, as we believe a reasonable interpretation of paragraph 38 is that capitalising certain internal costs would be appropriate. In addition, the IASB has not acted upon the Interpretations Committee's September 2008 recommendation that common definitions of 'incremental' and 'directly attributable' be developed. Because the Interpretations Committee previously has been asked to clarify the definition of 'incremental', we recommend that the Interpretations Committee add the issue to its agenda. However, if the Interpretations Committee decides to uphold its November 2013 tentative agenda decision, we recommend that it clarify why it made its decision and how the application of that decision should be treated under IAS 8.

Should you wish to discuss the contents of this letter with us, please contact Leo van der Tas at the above address or on +44 (0)20 7951 3152.

Yours faithfully

Subject: Lease Accounting Project, Lessee Accounting

Dear Sirs:

The National Association of Real Estate Investment Trusts (NAREIT®) is submitting this unsolicited comment letter to provide the Financial Accounting Standards Board (FASB) and the International Accounting Standards Board (IASB, and collectively, the Boards) its views on the relative financial reporting impacts of accounting for Type A and Type B leases. We recognize that there are a number of constituents that believe that the income statement impact of these two approaches to accounting for leases results in only minimal differences in charges to net income of lessees. We do not agree with this assessment and wish to provide the Boards our views with respect to broader considerations regarding the differences between Type A and Type B lease accounting and financial reporting. These considerations include conceptual differences between lease types and the usefulness to investors and other financial statement users of reported information.

Based on these broader considerations, as well as the quantitative differences between the proposed Type A and Type B accounting, NAREIT agrees with the FASB's view that a dual approach to accounting for leases is necessary in order to provide investors and other financial statement users with the most relevant information with respect to leases.

We support the Boards' decision to continue the reconsideration of accounting for leases, and we agree that lessees should reflect an asset and a liability for substantially all leases. We also continue to support the global convergence of a high quality set of financial reporting standards.

Conceptual Considerations

We agree with the FASB's decision to adopt Type B accounting for leases that do not transfer control over the asset to the lessee and that the criteria in International

Accounting Standard (IAS) 17 *Leases* should be used in making that distinction. Because IAS 17 is well understood by financial statement preparers that currently report under IFRS, as well as auditors and regulators, we do not believe the dual model approach would increase complexity in applying the standard. Those leases that transfer control over substantially all of the future economic benefits of an asset to the lessee would be classified as a Type A lease and accounted for effectively as a purchase. Leases that do not transfer substantially all of the future economic benefits of the leased asset would be accounted for as Type B leases.

We also believe that the IASB's reference to the lessee model as a "single model" is a misnomer. The IASB has previously agreed to a scope exception for "short term" leases, as well as a practicability exception for "small ticket" leases. In our view, this amounts to a lessee accounting model that has three alternatives. In essence, the IASB is trading existing IFRS (*i.e.*, finance leases and operating leases) for a new model that will now have three types of leases: finance-type leases (*i.e.*, Type A leases), "short term" leases, and "small ticket" leases. We fail to see the simplification that the IASB's current decisions would provide over existing IFRS.

For Type B leases, there is clearly a linkage between the rights to use the asset and the lessee's obligation to make payments under the lease. Considering this linkage, we believe that the lessee should allocate the total cost of the lease over the term of the lease. We believe that the Type B accounting approach adopted by the FASB recognizes the linkage between the rights to use the asset and the lessee's obligation to make payments under the lease and more appropriately accounts for the economic differences between arrangements that simply provide a right to use an asset and those that are in-substance purchases of assets.

Quantitative Considerations

As indicated above, we understand that certain constituents are of the view that the income statement impacts of the two approaches to accounting for leases results in only minimal differences in charges to net income of lessees. Our experience indicates that this may generally not be the case. For example, a large global retailer developed pro forma financial impacts on the company's 2013 operating results that would result from applying the accelerated expense recognition patterns consistent with the proposed Type A accounting approach to all of the company's leases. The resulting pro forma net income was $46 million, $0.16 per share, less than net income reported for 2013. Applying the company's multiple to the $0.16 decrease in net income would negatively impact the company's stock price by $2-3 or about 10%.

Simply put, we do not consider this 10% negative impact to be "minimal."

In addition to the negative impact on earnings of applying the Type A approach to all leases, we agree with the analyses and conclusions reached with respect to the impacts on the balance sheets of a number of large global companies described in the June 25, 2014 unsolicited comment letter submitted to the Boards by the Equipment Leasing and Finance Association[1].

[1]http://www.fasb.org/cs/BlobServer?blobkey=id&blobnocache=true&blobwhere=1175828960081&blobheader=application%2Fpdf&blobheadername2=Content-Length&blobheadername1=Content Disposition&blobheadervalue2=831047&blobheadervalue1=filename%3DLEASES-14.UNS.0009.ELFA_WILLIAM_G._SUTTON.pdf&blobcol=urldata&blobtable=MungoBlobs

Usefulness of Reported Financial Information

The Boards have consistently indicated that financial standards should primarily serve the needs of investors and other financial statement users. NAREIT strongly agrees with this principle and believes that the presentation of financial information must provide relevant information to financial statement users. If information is not relevant, there is no need to debate the conceptual merits of the accounting.

An important standing committee of NAREIT is its Best Financial Practices Council. This Council reviews all financial reporting proposals that may impact the real estate industry's financial reporting, including proposals from the FASB, IASB and Securities and Exchange Commission (SEC). The Council currently includes 27 members representing a broad cross section of NAREIT's membership, including six investors/sell-side analysts. These financial statement users (and other investors and analysts who are NAREIT members) have been very clear in their position that, to be relevant, payments made by lessees pursuant to a lease of property should be reported as rent expense and not bifurcated as interest and amortization. Further, investors/sell-side analysts on the Council have consistently stated that, should the new Leases standard result in the elimination of rent expense, they would then ask companies to assist them in unwinding the proposed accounting. This would lead to analysts making capital allocation decisions based on unaudited/non-GAAP financial information, which in our view would not provide users with the most reliable decision-useful information.

If you would like to discuss our comments, please contact George Yungmann, NAREIT's Senior Vice President, Financial Standards, at 202-739-9432 or gyungmann@nareit.com, or Christopher Drula, NAREIT's Vice President, Financial Standards, at 202-739-9442 or cdrula@nareit.com.

Respectfully submitted,

George L. Yungmann

March 30 - April 1

2016

Fixing a Hole Where the REIT Fell In

March 30-April 1, 2016

- **Moderator**
  - Craig Stern, Vornado Realty Trust

- **Panelists**
  - Peter Genz, King & Spalding
  - Leslie Honig, IRS
  - David Silber, IRS
  - Dianne Umberger, EY

Overview of Topics

- Statutory Relief Provisions — Dianne Umberger
- Reasonable Cause — Peter Genz
- IRS Comments — David Silber, Leslie Honig
- Tax Opinions — Peter Genz

Failure to meet gross income requirements — reasonable cause exception

- Relief under § 856(c)(6), if meet safe harbor:
  - Report violation-causing income (requirements in Treas. Reg. § 1.856-7(b))
  - Show reasonable cause and that violation not due to willful neglect
- Additional tax due under § 857(b)(5) in the amount of the product of:
  - the amount of income that caused the REIT to fail the 75% or 95% gross income test; and
  - a fraction meant to approximate the profitability of the REIT

Failure to meet gross asset requirements — 30-day cure

For any gross asset requirement violation (under § 856(c)(4)), 30-day cure period after the end of each quarter:

- Usually for 10% asset tests — stock or securities of an issuer
- Within 30 days of close of quarter, may cure violation caused by the acquired asset in such quarter
- No need to cure if failure merely due to valuation fluctuation of assets
- May cure by either disposing of asset that causes violation or by increasing gross asset base
- No need to show reasonable cause
- No penalty
- Generally believed to not be available for first quarter of REIT's first year

Failure to meet gross asset requirements — de minimis exception

Relief under § 856(c)(7)(B) for de minimis violation of 5% or 10% securities tests:*

- Applies when the excess asset that caused the violation of a 5% or 10% securities test is less than the *lesser* of:
  - $10,000,000; or
  - 1% of the REIT's gross asset value at the end of the tested quarter
- Usually for 10% asset test (small loans or stock interests)
- Must cure within six months of the end of the quarter in which the REIT *discovers* the violation (not the quarter in which the violation occurred)
- May cure either by disposing of assets that cause the violation or other means (e.g., making a TRS election, issuer modifying security (into mortgage or straight debt), REIT increasing gross asset value, contribute security to a TRS (which means paying corporate-level tax on income from security))
- No need to show reasonable cause
- No penalty

----

* The PATH Act failed to update the cross reference to the 5% and 10% securities tests, which are now located at § 856(c)(4)(B)(iv).

Failure to meet gross asset requirements — other exceptions

Relief under § 856(c)(7)(A) for any violation of the gross asset requirements *other than* a de minimis violation of the 5% and 10% securities tests:

- Requirements to meet safe harbor:
  - Report violation-causing assets to IRS
  - Show reasonable cause and that violation not due to willful neglect
  - Cure within six months of the end of the quarter in which the REIT *discovers* the violation (not the quarter in which the violation occurred)
- Under § 856(c)(7)(C), additional tax imposed in the amount of the *greater* of:
  - $50,000; or
  - the product of (i) the net income generated by the “excess assets”; and (ii) the highest rate under § 11
- May cure either by disposing of assets that cause the violation or other means (e.g., making a TRS election, issuer modifying security, REIT increasing gross asset value)
- Query whether $50,000 must be paid for each year the violation occurred

Failure to meet requirements other than income and asset requirements — omnibus exception

Under § 856(g)(1) and (5), a REIT may be relieved from a failure to meet a requirement other than an income or asset requirement:

- The safe harbor relief applies if:
  - the failure was due to reasonable cause and not willful neglect; and
  - the REIT pays a $50,000 penalty per violation
- Helpful for issues such as “transferable shares,” “managed by directors,“ five or fewer, 100 shareholders, undistributed C corp. E&P
- Query whether $50,000 must be paid for each year the violation occurred

Failure to meet distribution requirements — deficiency dividend

- Under § 860, if, within 90 days of a "determination" that a REIT did not distribute sufficient dividends to meet the 90% dividend distribution requirement, the REIT may make such a dividend distribution with respect to the taxable year in which it failed to meet the requirement (and cure the failure)
- For relief, the REIT must also:
  - File a claim within 120 days of the determination
  - Pay an interest charge, calculated as if the amount of the deficiency dividend was additional tax due in the year with respect to which such distribution was paid
- A determination, for these purposes, means:
  - a judicial determination;
  - "a closing agreement made under section 7121"; or
  - "a statement by the taxpayer attached to its amendment or supplement to a return of tax for the relevant tax year" (Form 8927)

Reasonable Cause

- With respect to relief under § 856(c)(6) (for gross income requirements):
  - "Reasonable cause" if the REIT "exercised ordinary business care and prudence in attempting to satisfy the requirements" under Treas. Reg. § 1.856-7(c)(1)
  - Per Treas. Reg. § 1.856-7(c)(2)(i), "reasonable reliance on a reasoned, written opinion as to the characterization for purposes of section 856 of gross income to be derived (or being derived) from a transaction generally constitutes 'reasonable cause'"
  - Same principles apply for relief under § 856(g)(4) (the provision that permits a waiver of the four-year prohibition on re-electing REIT status after a termination year if reasonable cause can be shown, discussed later)
- With respect to other relief, not clear how a REIT shows reasonable cause; REIT's case is bolstered if REIT has a history of good compliance and due diligence policies

Reasonable Cause

- REIT tax advisors sometimes asked for tax opinions on reasonable cause when required for statutory relief, such as where a prior tax advisor provided an opinion or memorandum analyzing an issue and the REIT opinion giver is asked to opine that the REIT's reliance on the prior advisor's advice constituted reasonable cause
- Tax advisors are often unwilling to do this, particularly at the “will” level, as:
  - The REIT, the tax advisor, and the IRS may all have differing opinions on what constitutes reasonable cause
  - Difficult to opine on fact-specific issues
- Without a tax opinion, REIT may have to seek IRS ruling (if the failure is of recent origin) or a closing agreement
- It would be helpful if IRS were to issue rulings on reasonable cause under the REIT savings provisions, even if the returns in question have already been filed (as this system has worked well in the 9100 relief context)

Preferential Dividends

The PATH Act changes to preferential dividend rules:

- *For tax years beginning after Dec. 31, 2014*, the prohibition on "preferential" dividends (per § 562(c)(1)) now only applies to private REITs (that is, the prohibition no longer applies to public REITs)
- *For tax years beginning after Dec. 31, 2015*, new § 562(e)(2) permits the Secretary to "provide an appropriate remedy" for a REIT's distribution of a preferential dividend, where either:
  - "the Secretary determines that such failure is inadvertent or is due to reasonable cause and not due to willful neglect"; or
  - "such failure is of a type of failure which the Secretary has identified" as due to reasonable cause and not willful neglect
- Statutory language suggests PLR would be appropriate path to resolve preferential dividend issue for private REITs

Closing Agreements

- REIT may have concern regarding time-barred tax years, as years could still cause issues with respect to:
  - built-in gains tax exposure resulting from loss of REIT status; or
  - § 856(g)(3) four-year prohibition on re-election of REIT status
- Per Treas. Reg. § 301.7121-1(a), a closing agreement under § 7121 can "permanently and conclusively" resolve issues lurking from both time-barred and open tax years
- Closing agreements are handled by National Office or by the geographic LB&I Practice Area with exam authority. The Program Manager in the Practice Area is a contact.
- REIT should act swiftly after discovering issue and demonstrate prompt corrective actions
- REIT will typically have to pay a "toll charge" for the closing agreement, generally equal to the statutory relief provision penalty (toll charge will also apply to time-barred tax years)

9100 Relief (Late TRS Election)

- Often for overlooked securities that failed the 10% test
- TRS securities are not subject to 5% and 10% tests
- Private letter ruling under Treas. Reg. § 301.9100-3
- With permission from IRS, elect to treat certain securities as TRS securities, after the standard election period
- TRS securities not subject to 5% and 10% tests of § 856(c)(4)(A)(iv)
- *However*, TRS securities are subject to the general 75% asset test (§ 856(c)(4)(A)), as well as the 25% TRS securities test (§ 856(c)(4)(B)(i)*)
- Must show reasonable cause (although not technically required, some party accepts blame for failure)
- No penalty

----

* As of Jan. 1, 2018, the 25% TRS securities test will be reduced to 20%

Protective TRS Elections

Elect TRS treatment in the case of:

- Subsidiary REIT (to mitigate concern the subsidiary may not qualify as a REIT)
- Interests in associations (e.g., property owners' association) organized as corporations (to mitigate concern that such interests are not real estate assets)
- Protects status of Parent REIT

Failsafe Asset Trusts

- As outlined in Rev. Proc. proposed by NAREIT in 2004:
  - Concept based on protective excess shares trust
  - Any assets that cause violation of asset requirements are automatically transferred to a trust in which a TRS or unrelated person is the beneficiary
- PLR 200234054 ruled favorably with respect to such an arrangement in the context of a 10% securities test violation
- In case of TRS beneficiary, violations may incur corporate-level tax (which may still be preferable to costs associated with curing violation)
- Can the REIT receive or rely on a tax opinion that the asset trust is valid?
  - Will the IRS respect?
- Query whether charitable trust must be named in advance of failure in order for transfer to be effective

Re-electing “REIT Status” after a violation

- Under § 856(g)(1), if an entity fails to meet the REIT requirements (and does not cure), its REIT status is terminated in the year the failure(s) occurred
- Under § 856(g)(3), if an entity terminates or has revoked its REIT status, neither that entity nor a successor entity may re-elect REIT status for the four taxable years subsequent to the year of failure
- However, § 856(g)(4) provides an exception to the four-year re-election rule (that is, the REIT is only busted with respect to the year of failure) if:
  - the entity did not “willfully fail to [timely] file” its return in the year of failure
  - the inclusion of any incorrect information was not fraudulent; and
  - the REIT establishes to the satisfaction of the Secretary that the failure was due to reasonable cause and not willful neglect (per Treas. Reg. § 1.856-8(d), made with reference to such standard in gross income requirements)
- This relief rarely if ever seen in PLRs since REIT status has been preserved through other means (e.g., relief provisions, closing agreements)

Successor Entities

- The four-year prohibition on re-electing REIT status applies to successor entities as well as to de-REITed entity
- Under Treas. Reg. § 1.856-8(c)(2), for these purposes, "successor" means an entity that meets the following requirements with respect to the de-REITed entity:
  - the "continuity of ownership requirement," meaning the same persons own directly or indirectly 50% or more of value of the potential successor and 50% or more of value of de-REITed entity at any time during the termination year; and
  - the "continuity of assets requirement," meaning that a "substantial portion" of the potential successor's assets were assets of the de-REITed entity or the successor acquired a substantial portion of the assets of the de-REITed entity

Successor Entities

- If Parent REIT acquires then liquidates Target REIT, and Target REIT has blown its REIT status, Parent REIT:
  - likely a successor;
  - inherits corporate tax liability; and
  - inherits built-in gain period for Target REIT's assets
- If de-REITed entity drops assets down to Target REIT in a § 351 transaction, then sells Target REIT, Target REIT may be successor

Tax Opinions

- Tax opinion is part of acquisition due diligence
- A REIT opinion for an open (or closed) tax year can be interpreted to subsume an opinion for the previous five tax years, even if time barred (that is, REIT cannot be a good REIT today if busted in the last five years)
- Although IRS cannot assert corporate tax for closed years, it may still question REIT status in time-barred years (as it may affect open years)
- Tax opinion needs to consider status of successor entities

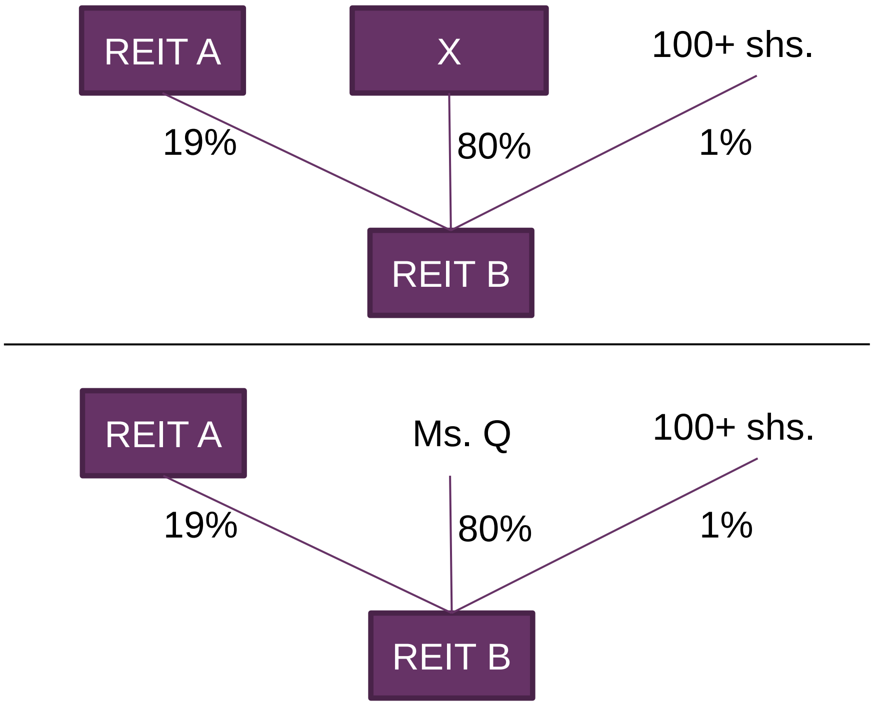
Relief for:	Requirements	Penalty Payment
De minimis asset test failure for 5% and 10% asset tests § 856(c)(7)(B)	• Failure is due to ownership of assets which have total value equal to or less than the lesser of (x) 1% of total value of REIT's assets that quarter and (y) $10 million. • Dispose of such assets (or otherwise pass asset tests) within six months after end of identification quarter • No requirement to show that failure to due reasonable cause and not willful neglect	• None
Asset test failure *other than* de minimis failure of 5% and 10% asset tests § 856(c)(7)(A)	• File schedule with description of each asset causing failure, following identification of failure by REIT. • Failure is due to reasonable cause and not to willful neglect. • Dispose of such assets (or otherwise pass asset tests) within 6 months.	• Pay tax equal to greater of (i) $50,000 or (ii) highest corporate tax rate times net income generated by assets that caused failure [for period beginning on first date of failure and ending on date REIT disposed of assets or otherwise passed asset test].

Relief for:	Requirements	Penalty Payment
Gross income test failure for 95% or 75% gross income tests § 856(c)(6)	• File schedule with description of each item of REIT's gross income for taxable year following identification of failure by REIT. • Failure is due to reasonable cause and not to willful neglect.	• Pay tax equal to the product of (x) the greater of (i) the amount by which 95% of the REIT's gross income exceeds the amount of items qualifying under the 95% income test, or (ii) the amount by which 75% of the REIT's gross income exceeded the amount of items qualifying under the 75% income test, multiplied by (y) a fraction, the numerator of which is generally the REIT's taxable income for the taxable year divided by the REIT's gross income for the taxable year. See section 857(b)(5).
Failure to meet 90% distribution requirement § 860	• Within 90 days of a "determination," pay a "deficiency dividend" • File a claim within 120 days of determination	• Pay interest computed on additional tax in the amount of the deficiency dividend as if such amount was tax in the year for which the deficiency dividend is paid
Any disqualification other than due to the gross income tests and asset tests § 856(g)(5)	• Failure is due to reasonable cause and not to willful neglect.	• REIT must pay $50,000 for each failure.

Example 1 — Asset Test Failure

- X [in violation of a shareholders' agreement] transfers its 80% interest in REIT B to Ms. Q, an individual, on December 1 of year 2. Although REIT B fulfills all other REIT requirements, as five or fewer individuals now own more than 50% of REIT B, REIT B is disqualified as a REIT for the entire year.

- REIT A owns 20% of REIT B, which is now a taxable C corp. REIT A discovers that it has an asset test issue:
  - Before it files its return
  - After it files its return



Example 2 — Income Test Failure

In violation of operating procedure guidelines, a property manager of REIT C enters into a lease that provides for rents based on net income. The rent from the lease causes REIT C to fail the 75% gross income test. REIT C discovers the issue:

- Before it files its return
- After it files its return

Example 3 — Other Requirements Failure

In its second year of existence, REIT D admits 100 shareholders on July 1 (prior, REIT D had fewer than 100 shareholders). REIT D discovers the issue:

- Before it files its second-year return
- After it files its second-year return

FIXING A HOLE WHERE THE REIT FELL IN[1]

Peter J. Genz
King & Spalding LLP
Atlanta, Georgia
March 16, 2016

I. RELIEF PROVISIONS FOR ASSET TEST VIOLATIONS

A. 30-Day Cure Period Following Quarter-End

1. A REIT that meets the asset tests at the end of a calendar quarter will not fail them "because of a discrepancy during a subsequent quarter between the value of its various investments and the [asset test] requirements … unless such discrepancy exists immediately after the acquisition of any security or other property and is wholly or partly the result of such acquisition." Section 856(c)(4) (flush language). In other words, mere fluctuations in value that are beyond the REIT's control can't create an asset test violation. But acquisitions of securities or other property can, if they wholly or partly contribute to a violation at the end of the next quarter.

2. A REIT has 30 days (not a month) following the end of the calendar quarter to eliminate an asset test discrepancy at quarter-end, such as by disposing of assets or securities that caused the discrepancy. Section 856(c)(4) (flush language). This is a get-out-of-jail free card; no proof of reasonable cause required, no penalty. And the REIT can re-acquire the offending asset (at least after the 30-day cure period, and maybe even during the 30-day cure period) in the next quarter without causing a problem as long as the REIT meets the tests at the end of the next quarter.

a. Example. Investments in commercial paper may create a REIT bust if the REIT invests a substantial amount in the commercial paper of a single corporate issuer and thus violates the 5% asset test. Some bank accounts are set up to do overnight sweeps of the end-of-day account balance into commercial paper issued by a holding company affiliated with the bank. The IRS takes the position that commercial paper is a security and not a "cash-equivalent" (a cash-equivalent is a "good" asset, i.e., not a "security"). To avoid this problem, some REITs have instructed their bank not to sweep to commercial paper on the last day of the quarter. This should eliminate the tax issue, even if the sweep resumes the following day.

3. During the 30-day cure period the REIT can sell the offending securities or otherwise cure the asset test violation, such as by increasing its gross asset base so that a 5% securities test violation disappears.

4. What happens if the REIT disposes of the offending asset within the 30-day period and then reacquires it (or a similar asset) before the end of the 30-day period? Under a literal interpretation of the statute, this ought not affect the validity of the cure, but there is no authority on point and tax advisors generally prefer to see the cure last until the 30-day period is over.

5. Because of the introductory language of the 30-day cure provision ("A REIT that meets the asset tests at the end of a calendar quarter.."), it is generally thought that the 30-day cure cannot

[1] Sadly, no one will understand this title except another aging Beatles fan (Fixing a Hole from the Sgt. Pepper's album) or perhaps a really hip young person.

be relied on to cure a discrepancy relating to the end of the REIT's initial calendar quarter for its first REIT taxable year.

B. Protective TRS Elections and Failsafe Asset Trusts

1. Consider implementing self-help for a potential asset test violation. For example, a REIT might make a protective TRS election for a REIT subsidiary of a parent REIT, in the event that the IRS determines that the REIT subsidiary is not a qualified REIT. Another example might be a protective TRS election for a property owner's association that is organized as a corporation if there is a concern that such interest might be viewed as a "security" and not a "real estate asset." It does not appear that the IRS has ruled on the efficacy of such a protective election.

2. In 2004 NAREIT submitted to the IRS a proposed revenue procedure setting out the details for a protective or "failsafe" asset trust whose purpose would be to cure one or more identified types of asset test violations by automatically causing the offending asset to be placed in a trust whose beneficiary is a TRS of the REIT (or a person unrelated to the REIT). The concept was similar to the protective excess shares trust. The deemed transfer occurs on the day immediately prior to the last day of the calendar quarter on which the violation otherwise would have occurred. The IRS has not acted on this recommendation.

a. In PLR 200234054 (May 21, 2002), the IRS ruled that such a failsafe trust would be effective to prevent any future violation of the 10% securities test that might occur. The REIT represented that it had been advised by counsel that the trust would be enforceable under state law and that it would use its best efforts to give effect to all transfers required by the trust agreement. This concept is similar to the IRS rulings that have approved the so-called "excess shares" transfer restrictions that are widely used and are intended to preclude a REIT from violating the five-or-fewer stock ownership test due to subsequent transfers or non-transfer events. See, e.g., PLR 9552047 (Sept. 29, 1995) (IRS required the REIT to represent that the excess shares restriction was enforceable under state law).

b. Some REITs have adopted such protective asset trusts, but the REIT has to carefully consider (i) whether tax counsel will be willing to opine on the efficacy of the trust arrangement should an asset test violation occurs, and (ii) whether the REIT is prepared to accept the resulting corporate-level tax incurred by the TRS beneficiary on the income from the offending asset. Given the alternative of self-determining reasonable cause and paying the tax required by section 856(c)(7)(C) (discussed later in this outline) or a painful closing agreement process, such a trust may be a more appealing alternative, particularly if a ruling is obtained as to its efficacy.

c. What happens if a failsafe trust is put in place and later there is a potential asset test violation but not a crystal clear violation? The REIT might take the position that there is no deemed transfer to the trust until the IRS or a court determines that the asset test was violated, at which time a retroactive transfer to the trust is deemed to occur that automatically cures (if it works) the potential violation. The TRS's tax returns would have to be amended to report the additional income.

C. 9100 Relief for Late TRS Elections

1. One way to cure a 5% or 10% securities test bust with respect to securities of a subsidiary corporation (or non-corporate entity that has checked the box to be treated as a corporation) is to seek 9100 relief to make a late TRS election for such corporation so that the REIT's ownership of non-mortgage debt or stock of the corporation is exempt from the 5% and 10% securities tests by reason of the flush language of section 856(c)(4)(B)(iv) (but remains subject to the 75% asset test of section

856(c)(4)(A) and the mirror image 25% TRS securities test (which will shrink to a 20% TRS securities limit starting in 2018) of section 856(c)(4)(B)(ii)). See Treas. Reg. § 301.9100-1; Section 5.03, Rev. Proc. 2016-1, 2016-1 I.R.B. 1, 12 ("An Associate office will consider a request for an extension of time for making an election or other application for relief under § 301.9100-3 of the Treasury Regulations, even if submitted after the return covering the issue presented in the § 301.9100 request has been filed, an examination of the return has begun, or the issues in the return are being considered by Appeals or a Federal court").

2. A number of REITs have received private letter rulings permitting such a late election in order to cure a 10% securities test violation with respect to an overlooked corporate subsidiary. See, e.g., PLR 201452013 (Sept. 29, 2014) (a REIT-owned partnership acquired a hotel and leased it to a wholly owned LLC; the plan, as set out in the LLC's operating agreement, was to have the LLC make a check-the-box election to be taxed as a corporation and to make a TRS election for the LLC, but both were initially overlooked; then 9100 relief was sought and received to make a late check-the-box election but somehow the late TRS election was apparently overlooked a second time; despite what appears to have been a comedy of errors, the IRS permitted a late TRS election to be filed by the REIT and the LLC retroactive to the date the hotel lease was put in place); PLR 201144007 (Aug. 5, 2011) (IRS granted 9100 relief for a late TRS election for an LLC that had made a timely check-the-box election to be taxed as a corporation and that was organized to operate a cafeteria in an office building in which the REIT owned an interest; the REIT intended to make a TRS election for the LLC to insulate the REIT from impermissible tenant service income but screwed up); PLR 201002020 (Sept. 30, 2009) (permission granted to make late check-the-box and TRS elections for an LLC subsidiary of a REIT).

a. The regulations provide that the taxpayer, in order to get discretionary 9100 relief, must establish that it acted reasonably and in good faith, and that the grant of relief does not prejudice the government's interests. Treas. Reg. § 301.9100-3(b)(3)(iii). See PLR 200607016 (Feb. 17, 2006) (taxpayer transferred appreciated property to a foreign corporation with the intent of selling the property tax-free, unaware that section 367 rendered the initial contribution a fully taxable sale; when the taxpayer realized its mistake of law, it requested 9100 relief to file a late check-the-box election to treat the foreign entity as a disregarded entity; IRS refused, stating that the taxpayer failed to prove it had acted reasonably and in good faith). The IRS also wants to see that the taxpayer took prompt action when it discovered the failure to make the election.

3. It is always helpful to have an advisor fall on his or her sword and take the heat for the blown election deadline, which is typically documented with an affidavit submitted as part of the ruling request submission. Sometimes, though, the fault is the client's alone, or sometimes it is the fault of a third party. One 9100 ruling involved a REIT ("REIT A") that owned an interest in a joint venture. The other joint venture partner was also a REIT ("REIT B"). REIT B caused the joint venture to form a corporation and made a timely TRS election as to that corporation, but neglected to tell REIT A about the corporate subsidiary so that REIT A could also make a TRS election. It is understood that REIT B provided an affidavit taking the blame for failing to notify its partner.

4. In general, the IRS has been pretty forgiving in 9100 relief situations. One extreme example involved a REIT that was doing a public offering years ago and discovered at the last minute that a corporation that had been formed three years before to hold an interest in a limited partnership as part of a financing transaction was indirectly more than 10%-owned by the REIT, and yet no TRS election had been made. It is understood that the REIT got a 9100 relief private letter ruling one day after the 9100 ruling request was filed. An interesting aspect to this story is that tax counsel to the REIT reportedly gave an opinion, at the closing of the offering, that the IRS would grant the 9100 relief because (i) the REIT, in its view, met the IRS's announced requirements for the discretionary 9100 relief and (ii) the IRS had granted similar relief to other REITs. This opinion may have been rendered on the strength of oral assurances from the IRS that the relief would be forthcoming, but this obviously had to be white knuckle time for the REIT and its law firm.

5. As an aside, the IRS has also granted 9100 relief to file a corrected consent dividend election. In PLR 201045004 (Aug. 3, 2010), a private REIT whose sole shareholder was a listed property trust (presumably Australian) was granted 9100 relief to increase the amount of a consent dividend election. The REIT made an error in computing the section 163(j) earnings stripping limitation on its interest deduction and also failed to take into account a property dividend from a TRS of the REIT, thus resulting in an understatement of its REIT taxable income for year 1. This meant its original consent dividend was not sufficient to zero out REIT taxable income as adjusted.

a. Treas. Reg. § 1.565-1(b)(3) provides that a consent may be filed not later than the due date (including extensions) of the REIT's tax return for the taxable year for which the consent dividend deduction is claimed.

b. The IRS concluded that the taxpayer's failure to make a proper consent dividend election was due to inadvertent errors and communications failures on the part of employees of the REIT's shareholder, and that the REIT was not using hindsight to request relief and acted before the IRS discovered the failure. Thus, it determined that the REIT acted reasonably and in good faith under Treas. Reg. § 301.9100-3(b)(1)(i), and thus granted the taxpayer 45 days from the date of the ruling to file a consent dividend election with an amended return.

D. <u>De Minimis Failures of 5% or 10% Securities Tests</u>

1. Under a relief provision that is intended to be applicable to de minimis failures of the 5% and 10% securities tests set forth in section 856(c)(4)(B)(iv), a REIT that owns securities in excess of the 5% or 10% securities test limits at the end of a quarter is nevertheless considered to meet such test if:

a. The "failure is due to the ownership of assets the total value of which" does not exceed the <u>lesser of</u> 1% of the total value of the REIT's assets at the end of the quarter for which the failure occurred or $10 million, <u>and</u>

b. within six months after the last day of the quarter in which the REIT identifies the failure (not the quarter in which the failure occurred), the REIT either (i) "disposes of assets in order to meet the requirements" of the 5% or 10% securities tests, or (ii) otherwise meets such requirements within such time frame (such as by making a TRS election to cure a 10% violation as to an overlooked C corporation subsidiary). Section 856(c)(7)(B).

2. Note: section 317(a)(3) of the Protect Americans from Tax Hikes Act of 2015 ("PATH Act") added a new 25% securities asset test limitation relating to a REIT's holdings of "nonqualified publicly offered debt instruments" in subparagraph (iii) of section 856(c)(4)(B), which resulted in the 5% and 10% tests being redesignated as new subparagraph (iv). However, the asset test relief provisions in section 856(c)(7) continue to refer to subparagraph (iii) – so under a literal reading of the statute as it currently exists, there is no de minimis exception for the 5% and 10% securities test. This presumably will be fixed by a technical correction.

3. Unlike the other REIT savings provisions, the de minimis securities tests savings provision requires only identification of the failure and prompt corrective action following identification. <u>It does not require the REIT to prove reasonable cause and does not impose a monetary sanction</u>.

4. For REITs with $1 billion or more of gross asset value, the applicable de minimis cap is $10 million. For REITs with less than $1 billion of assets, the applicable cap is 1% of gross (e.g., a REIT with $100 million of gross assets has a $1 million cap).

5. The statute also provides that, in lieu of the six-month disposition period, the disposition can occur within "such other time period prescribed by the Secretary and in the manner prescribed by the Secretary." Section 856(c)(7)(B)(ii)(I).

6. The legislative history states that a REIT might "otherwise" meet such requirements (i.e., without a "disposition") in the case of the 5% test, by increasing its gross asset denominator, or in the case of the 10% test, by the issuer modifying the amount or value of its total securities. See H.R. Rep. (Conf.) No. 755, 108th Cong., 2d Sess. at 321, n. 147 (the "2004 Act Conference Report").

7. It seems logical that the de minimis threshold should be applied by reference to the amount by which the value of the security in question exceeds the 5% or 10% value limitations, as the case may be, and if the violation is a 10% voting power violation, by reference to the value of a portion of the shares corresponding to the excess voting power. On the other hand, the use of the word "total" in the phrase "failure is due to the ownership of assets the total value of which" might suggest that the entire value of the issuer's securities held by the REIT is taken into account. However, such an interpretation would mean that there is no de minimis relief for a 5% asset test violation caused by one security, because the offending security would by definition exceed 1% of the REIT's total assets. The 2004 Act Conference Report (p. 321) makes it clear that this relief was intended to apply for purposes of the 5% securities test.

8. The instructions to the 2015 Form 1120-REIT (p. 15) state as follows with respect to the de minimis savings provision:

> "**Note**. There is no tax imposed and you are not required to attach a schedule of assets to Form 1120-REIT for the de minimis relief provision under section 856(c)(7)(B)."

9. The de minimis securities test savings provision is not often helpful because of the size constraints. However, it may provide immunity for small loans that don't meet a safe harbor and might otherwise cause a 10% securities test violation, or for a REIT's ownership of stock of a largely dormant non-QRS corporation (e.g., a corporation owned by a partnership in which the REIT is a partner) for which no TRS election was made and the stock of which has little value because the TRS has little or no assets and operations.

E. Other Asset Test Failures

1. A second asset test relief provision is provided in section 856(c)(7)(A). It has a broader scope than the de minimis savings provision in that it applies to failures to satisfy any of the asset tests in section 856(c)(4) (not just the 5% and 10% securities tests). Unlike the de minimis exception, though, the subparagraph (A) exception requires proof of reasonable cause and imposes a tax sanction.

2. The subparagraph (A) exception applies if the failure to meet the asset tests for a particular quarter involves the "ownership of assets the total value of which" exceeds the 1%/$10 million de minimis threshold described above. Section 856(c)(7)(A). In that event, the failure is excused – that is, "is nevertheless considered to have satisfied the requirements of [section 856(c)(4)]" if all three of the following conditions are met:

a. The REIT, after identifying a failure for a particular quarter, files a schedule with the IRS in accordance with regulations prescribed by the Secretary that sets forth a description of each asset that caused the REIT to fail to satisfy the asset tests at the close of any quarter. Section 856(c)(7)(A)(i).

b. The failure to meet the asset test requirements at the end of a particular quarter is due to reasonable cause and not to willful neglect. Section 856(c)(7)(A)(ii). ("Reasonable cause" is discussed later in this outline.)

c. The REIT disposes of the assets set forth on the schedule within six months after the last day of the calendar quarter in which the REIT first identified the failure "or such other time period prescribed by the Secretary and in the manner prescribed by the Secretary," or otherwise meets such requirements during such time period. Section 856(c)(7)(A)(iii).

d. The instructions to the 2015 Form 1120-REIT (p. 15) describe the filing of the schedule as follows:

> "The REIT sets forth a description of each asset that causes the REIT to fail to satisfy the requirements of the asset test at the close of a quarter in a statement for the quarter attached to its timely filed Form 1120-REIT;"

e. Because of the reference to a "timely filed" return, it would appear that the schedule is attached to the Form 1120-REIT filed for the current taxable year in which the failure is identified, even if failures are identified for calendar quarters in prior taxable years for which returns have already been filed. Attaching the schedule to an amended return for a prior year in which the failure occurred should also be sufficient.

3. If the subparagraph (A) exception "applies [to a REIT] for any taxable year," it must pay an excise tax equal to the <u>greater of</u> (a) $50,000 or (b) an amount (determined under as-yet unissued regulations) equal to the product of (i) the net income generated by the assets described in the schedule for the period beginning on the first date that the failure occurred (i.e., the end of the calendar quarter for which the problem first arose) and ending on the earlier of the date the REIT disposed of the assets or the end of the first quarter when there is no longer an asset test failure, and (ii) the highest rate of tax specified in section 11 for corporations, currently 35%. Section 856(c)(7)(C).

a. Note that this tax (unlike the "penalty" imposed under section 856(g)(5)) is technically not a condition to obtaining the safe harbor relief. Thus, if there is a later dispute over the determination of the proper penalty, the fact that an incorrect amount was initially remitted by the REIT does not invalidate the safe harbor relief if the three requirements (filing of schedule, timely cure and reasonable cause) are otherwise met.

b. The section 856(c)(7)(C) tax is deductible in computing REIT taxable income. Section 857(b)(2)(E).

4. Because section 856(c)(7)(C)(i) refers to the subparagraph (A) exception applying "for any taxable year" instead of "any calendar quarter" (and the instructions to the 2015 Form 1120-REIT discussing the tax do the same thing), the tax should be determined without regard to the number or type of asset test failures that occur during the year -- that is, failures occurring at the end of one, two, three or four quarters, failures involving different asset tests or different assets, etc., should all be lumped together so that only one $50,000 tax applies (assuming that amount is less than a tax on the income from the problematic assets).

a. By contrast, the omnibus savings provision in section 856(g)(5) for other REIT failures imposes a $50,000 "penalty" -- not a "tax" -- "for each failure to satisfy a provision of this part."

b. It is unclear what happens if a particular asset test failure crosses over one taxable year and into the next. The tax-on-net-income component of the section 856(c)(7)(C) tax does not reference taxable years; it merely focuses on the period during which the failure persisted. Arguably the $50,000 tax should be imposed (if it is the lesser of the two amounts) only once, even if the asset test failure related to calendar quarters occurring in more than one taxable year. Under this view, the penalty presumably would be determined after the failure was cured and would be remitted with the tax return for the taxable year of the cure. The IRS may assert, however, that the penalty is determined on a year-by-year basis once a failure persists in successive taxable years, since subparagraph (C) begins with the language "If subparagraph (A) applies [to a REIT] for any taxable year,…"

c. Although the statutory language is not entirely clear, the "net income based" component of the tax should be imposed only on the portion of the asset that caused the failure -- e.g., if a REIT owns securities of a corporation that equal 7% of its gross assets and thus violates the 5% securities test, the tax should be imposed only on the net income attributable to the 2% excess portion.

II. SAVINGS PROVISION FOR GROSS INCOME TEST FAILURES

A. <u>Section 856(c)(6)</u>

1. Section 856(c)(6) provides that if a REIT fails the 95% or 75% gross income tests for any taxable year, it is nevertheless considered to have satisfied such tests if, following the identification of the failure by the REIT, the REIT files with the IRS a schedule setting forth "a description of each item of its gross income that is described in [sections 856(c)(2) or section 856(c)(3)]" for such taxable year. The schedule must be filed in accordance with regulations prescribed by the Secretary, which have not been issued. In addition, the failure must be due to reasonable cause and not to willful neglect.

a. Prior to amendment by the 2004 Jobs Act, section 856(c)(6) provided that the relief from disqualification applied if the REIT attached to its tax return for the taxable year a schedule setting forth "the nature and amount of each item of gross income described in [sections 856(c)(2) and (c)(3)]," and any error in the schedule was not due to fraud.

b. Note that section 856(c)(6) relief provision did not apply to the former 30% gross income test, which was repealed for taxable years beginning on or after August 5, 1997.

2. The regulations under such provision require disclosure of the totals of each type of gross income derived by the REIT from sources described in sections 856(c)(2) (95% test) and 856(c)(3) (75% test), but not separate lease-by-lease or loan-by-loan amounts. Treas. Reg. § 1.856-7(b). However, the REIT is required to maintain adequate records to substantiate the total amounts.

3. Under amended section 856(c)(6), the schedule is not filed with the IRS until a gross income test failure has been identified by the REIT. The instructions to the Form 1120-REIT say little about this schedule. Part III of Form 1120-REIT provides for the calculation of the section 857(b)(5) tax, but it is not clear that simply filling out Part III constitutes a sufficient disclosure of the sources and amounts of qualifying gross income. Therefore, a separate schedule should be attached to the return (or to an amended return if the failure relates to a prior taxable year).

B. Section 857(b)(5) Tax

1. The gross income test failure savings provision in section 856(c)(6) is tantalizing because it appears to have no sanction, but one must read on -- a special tax is imposed by section 857(b)(5).

2. In a nutshell, if the relief afforded by section 856(c)(6) applies to a REIT for any taxable year, section 857(b)(5) imposes a 100% "tax" equal to the product of the amount by which the nonqualifying gross income caused the REIT to fail the 95% or 75% gross income tests for such year, multiplied by a fraction intended to reflect the REIT's overall profitability (in effect, converting the tax base to which the 100% tax applies from gross excess bad income to net excess bad income).

3. Part III of the Form 1120-REIT lays out the complex mechanics for computing this tax. The fact that the form provides for self-assessment indicates that the IRS expects that taxpayers will make their own reasonable cause determination.

4. The section 857(b)(5) tax is deductible in computing REIT taxable income. Section 857(b)(2)(E).

III. OMNIBUS REASONABLE CAUSE EXCEPTION FOR FAILURES OTHER THAN INCOME TEST AND ASSET TEST FAILURES

A. Section 856(g)(5)

1. Section 243(f)(3) of the 2004 Jobs Act enacted section 856(g)(5), along with a corresponding amendment to section 856(g)(1).

2. If a REIT's election terminates for a taxable year due to one or more failures to comply with the provisions of sections 856-860 other than a failure to comply with the income tests in section 856(c)(2) and (c)(3) or the asset tests in section 856(c)(4), then sections 856(g)(1) and (5) collectively provide that the REIT's election does not terminate if:

a. The failures are due to reasonable cause and not willful neglect, and

b. The REIT pays a "penalty" of $50,000 "for each failure to satisfy a provision of this part" that is due to reasonable cause and not willful neglect. (Emphasis added.)

3. The penalty is paid in the manner prescribed by regulations and in the same manner as a tax. Section 856(g)(5)(C).

a. The section 856(g)(5) penalty is deductible in computing REIT taxable income. Section 857(b)(2)(E).

b. Unlike the taxes imposed by section 856(c)(7)(C) and 857(b)(5), the payment of the penalty is a condition precedent to obtaining the safe harbor relief.

c. Schedule J, line 2(f) of the Form 1120-REIT provides for the payment of this penalty (as well as the tax imposed as a result of non-de minimis asset test failures under section 856(c)(7)) and again contemplates self-assessment based on the taxpayer REIT's own determination that it had reasonable cause for the failure. The instructions to the 2015 Form 1120-REIT (p. 15) state as follows regarding the section 856(g)(5) relief:

> "Under section 856(g)(5), a REIT that fails to meet the REIT qualification requirements under sections 856–859, except for section 856(c)(2), 856(c)(3), and 856(c)(4), may avoid loss of its REIT status if the failure is due to reasonable cause and not due to willful neglect. In addition, the REIT must pay (as prescribed by regulations and in the same manner as tax) a penalty of $50,000 for each failure to satisfy a provision of sections 856-859. See section 856(g)(5)."

4. This relief provision potentially can help a REIT in remediating an organizational or structural failure, such as issues relating to "transferable shares," "managed by directors," the five or fewer test, 100-shareholder requirement, undistributed C earnings and profits, etc.

B. Application of Savings Provisions to Time-Barred Years

1. The effective date provisions of Section 243(g) of the 2004 Jobs Act relating to the savings provisions were amended by Section 403(d) of the Gulf Opportunity Zone Act of 2005 ("GO Zone Act") to provide that they apply with respect to failures that are satisfied after the date of enactment, and the legislative history of the Go Zone Act makes it clear that the two asset test savings provisions, the omnibus savings provision, and the amendment to the deficiency dividend procedures (discussed later in this outline) apply to "failures occurring in taxable years beginning on, before, or after the date of enactment" of the 2004 Jobs Act. The Joint Committee Explanation states as follows:

> "*REIT provisions (Act sec. 243).* -- The REIT may cure de minimis failures of asset requirements (other than the requirement that the REIT may not hold more than 10 percent (five percent for certain prior years) of the value of securities of a single issuer, for which failure-specific procedures are provided) by using the same procedures as the REIT may use for larger failures of asset tests.
>
> The provision clarifies that the new rules that permit the curing of certain REIT failures apply to failures with respect to which the requirements of the new rules are satisfied in taxable years of the REIT beginning after the date of enactment. Similarly, the provision clarifies that the new rules governing deficiency dividends that allow the taxpayer to make a determination by filing a statement with the IRS apply to statements filed in taxable years of the REIT beginning after the date of enactment.
>
> It is intended that the provisions of the Act that allow a REIT to correct failures of REIT qualification without losing its REIT status apply to corrections of failures for which the requirements for correction are satisfied after the date of enactment, <u>regardless of whether such failures occurred in taxable years beginning on, before, or after the date of enactment</u>. Similarly, it is intended that the provisions of the Act that allow deficiency dividends under section 860 to correct distribution failures, provided the deficiency is identified in a statement filed after the date of enactment in accordance with the provisions of the Act, <u>apply to failures occurring in taxable years beginning on, before, or after the date of enactment</u>." (Emphasis added.)

<u>See</u> Staff of Joint Committee on Taxation, <u>General Explanation of Tax Legislation Enacted in the 109th Congress</u>, p. 242 (Comm. Print. Jan. 17, 2007).

2. There is no specific guidance as to how the savings provisions discussed above for income test, asset test and other REIT failures apply to failures that occurred in taxable years that are, at the time of identification, time-barred.

3. It is often important to have finality if an issue is discovered in a time-barred year as well as open years because of the section 856(g)(3) four-year prohibition on re-election after a termination year and the 10-year BIG tax hangover that arises when a corporation goes from REIT status to C status and back to REIT status (provided the corporation meets the REIT requirements in the re-election year, such as no C earnings and profits). Further, no matter now theoretical or remote the risk of a barred-year REIT bust may be, it can still hold up a merger transaction or public offering until it is finally resolved.

4. A REIT could file an amended return for a barred year, attach the required schedules relating to the failure, explain the basis for reasonable cause, and pay the required tax or penalty. But without any assurance that the IRS will see reasonable cause through the same rose-colored glasses that the taxpayer and its advisors may be wearing may propel the REIT to seek a closing agreement. As will be discussed, in the closing agreement process the IRS generally seeks a penalty for barred year relief as well as open year relief, usually insisting on the same tax or penalty that applies to an open year.

C. <u>No Savings Provisions Apply to the Prohibited Transactions Tax</u>

1. There is no relief under the prohibited transaction tax provisions comparable to that provided by section 856(c)(6), section 857(b)(5) and Treas. Reg. § 1.856-7 (reasonable cause waiver of gross income test violation with a net income tax penalty on the excess bad income) where the taxpayer proceeds with a sale of property on the basis of a reasoned opinion of counsel, either to the effect that a sale was not a dealer sale or that the prohibited transactions tax safe harbor applied, and the IRS later prevails with a dealer challenge. Similarly, the section 856(g)(5) omnibus relief for REIT disqualification screw-ups also does not extend to the prohibited transactions tax.

2. T.D. 7767, 1981-1 C.B. 82, added Treas. Reg. § 1.857-5 (Net income and loss from prohibited transactions) and made major revisions and additions to the REIT regulations in 1981 to give effect to changes to the REIT laws made by the Tax Reform Act of 1976. In the preamble to the regulations, the IRS stated that commentators had requested a reasonable cause exception for REITs that sell foreclosure property without using an independent contractor in the belief that the foreclosure property was not held primarily for sale to customers in the ordinary course of a trade or business. The commentators asked for a reasonable cause exception to be provided if the REIT believed it was not holding the property primarily for such purpose (other than in the case of readily identifiable dealer activity such as condominium sales or sales of subdivided parcels). The IRS rejected this comment, stating that "to adopt a reasonable cause test would be tantamount to exempting property from the rules of section 856(e)(4)(C) if a favorable opinion had been received with respect to its character in the hands of the REIT." <u>See</u> T.D. 7767 (Information Supplementary), 1981-1 C.B. 82, 86.

3. Note that, because dealer gain is nonqualifying gross income and is excluded from the gross income test denominator (sections 856(c)(2) and (c)(3), flush language), characterizing real estate gains as dealer gain could indirectly create a gross income test failure by shrinking the 5% basket.

IV. PROHIBITION ON RE-ELECTION OF REIT STATUS AFTER TERMINATION OF STATUS

A. <u>Overview of Section 856(g)</u>

1. Section 856(g)(1), captioned "Failure to Qualify," provides as follows:

> "An election under subsection (c)(1) made by a corporation, trust, or association shall terminate if the corporation, trust, or association is not a [REIT] to which the provisions of this part apply for

the taxable year with respect to which the election is made, or for any succeeding taxable year unless paragraph (5) applies. Such termination shall be effective for the taxable year for which the corporation, trust, or association is not a [REIT] to which the provisions of this part apply, and for all succeeding taxable years."

2. This means that an entity that has elected to be taxed as a REIT loses its status automatically if it fails to qualify to be taxed as a REIT for a taxable year (and none of the savings provisions described above apply). The termination is effective for that taxable year and all subsequent taxable years, subject to the corporation's right to re-elect REIT status when permitted by section 856(g)(3). Section 856(g)(1).

3. Section 856(g)(3) provides that if the election to be treated as a REIT is revoked or terminated for a taxable year, the entity (and any "successor" to that entity within the meaning of Treas. Reg. § 1.856-8(c)(2)) generally may not again elect to be treated as a REIT until the fifth taxable year after the first taxable year for which the revocation or termination is effective.

4. It can be argued that a REIT election for the first REIT taxable year cannot "terminate" if the corporation had a REIT failure in that same taxable year, and therefore the initial election is simply a nullity and the corporation should not be prohibited from re-electing in the succeeding taxable year. However, the regulations seem to say otherwise. Treas. Reg. § 1.856-8(b) provides that an election of a corporation under section 856(c)(1) to be a REIT "shall terminate if the corporation … is not a qualified [REIT] for any taxable year (including the taxable year with respect to which the election is made)." Based on the parenthetical language, a corporation with a blown initial REIT election for year 1 apparently will not be permitted to elect REIT status again until year 6 unless either (i) the section 856(g)(3) reasonable cause exception applies, in which case the REIT is disqualified for year 1 but is not subject to the four-year wait on re-election, or (ii) the section 856(g)(5) omnibus exception for REIT failures (other than income and asset test failures) applies, in which case it appears the REIT election never terminates (not even for the first failure year).

5. An entity that has elected to be taxed as a REIT for a taxable year may revoke the election for any subsequent taxable year, provided that the revocation must be made within the first 90 days of the taxable year for which the revocation is to be effective. Section 856(g)(2).

6. The "successor" rules are potentially broad in scope and should be evaluated whenever a REIT acquires the assets of another REIT, by merger, liquidation or otherwise. Among other things, a REIT's status as a "successor" to another REIT can significantly expand the scope of an opinion-giver's due diligence when opining on the successor's REIT status -- in effect forcing the tax advisor to consider the qualified REIT status of the predecessor as well. This can happen even if the acquiring REIT immediately liquidates the target REIT and does not own the stock of the target REIT at the end of any calendar quarter.

B. <u>Reasonable Cause Exception in Section 856(g)(4)</u>

1. Section 856(g)(4) provides that if a REIT's election is terminated under paragraph (g)(1), "paragraph (3) shall not apply" -- meaning the four-year prohibition on re-election after the year of termination does not apply -- if (i) the REIT does not willfully fail to file a timely income tax return for the year in which the termination of the REIT election occurs, (ii) the inclusion of any incorrect information on the return is not due to fraud with intent to evade tax, and (iii) the REIT establishes "to the satisfaction of the Secretary" that its failure to qualify as a REIT is due to reasonable clause and not willful neglect.

2. The statement that "paragraph (3) shall not apply" means that establishing reasonable cause only prevents the four-year prohibition on re-election after a termination year from applying. By its terms, section 856(g)(4) does not prevent the termination of REIT status in the year of the REIT bust. (By contrast, the omnibus relief provision in paragraph (g)(5) for failures other than income test and asset test failures seems to apply to the initial REIT termination year as well as subsequent years.)

3. Unlike the savings provisions previously discussed, which merely require that the failure "be due to reasonable cause and not due to willful neglect," section 856(g)(4) requires that reasonable cause be established "to the satisfaction of the Secretary." This language has been interpreted by the courts in the context of other provisions of the Code to mean that "some amount of deference be given to the conclusion of the Commissioner … [t]o conclude otherwise would render the phrase superfluous." R.E. Deitz Corp. v. United States, 939 F.2d 1 (9th Cir. 1991). The Ninth Circuit also stated that "the appropriate amount of deference is embodied in the arbitrary and capricious standard, which allows for the exercise of discretion, although not unbounded discretion." See also Schoneberger v. Commissioner, 74 T.C. 1016 (1980) (establishing bona fide residency under section 911 to the satisfaction of the Secretary requires strong proof).

4. The regulations require that the REIT establish reasonable cause to the satisfaction of the District Director for the internal revenue district in which the REIT maintains its principal place of business or principal office or agency. Treas. Reg. § 1.856-8(d). Today, the reference to "District Director" should be construed to mean the Director of Field Operations for the Large Business & International Division ("LB&I").

5. Such regulation further provides that the principles of Treas. Reg. § 1.856-7(c) (including the principles relating to expert advice) will apply in determining reasonable cause for purposes of section 856(g)(4). Treas. Reg. § 1.856-7(c) sets forth the standards for determining reasonable cause for purposes of section 856(c)(6) (note that the regulation refers to former section 856(c)(7) and does not reflect changes to the Code since the regulation was issued.)

V. ESTABLISHING REASONABLE CAUSE

A. Failure Must be Due to Reasonable Cause and Not Willful Neglect

1. The most critical part of obtaining relief under the new savings provisions (other than the relief for de minimis asset test failures) is establishing reasonable cause.

2. The regulations that were issued under the pre-2004 Jobs Act version of section 856(c)(6) (and which are still in effect) state that a REIT meets the reasonable cause/no willful neglect standard by exercising ordinary business care and prudence in attempting to satisfy the requirements at the time the REIT enters into each transaction.

3. If the REIT enters into a transaction after exercising ordinary business care and prudence and then later determines that the transaction produces nonqualifying gross income that can reasonably be expected to violate the 95% or 75% gross income tests, the regulations state that the REIT must use ordinary business care and prudence to renegotiate or restructure the transaction or dispose of the offending property or lease. Treas. Reg. § 1.856-7(c)(1).

4. It is not clear how the taxpayer establishes reasonable cause for purposes of the savings provisions. Seeking a private letter ruling on reasonable cause for a prior REIT taxable year where the return has been filed generally is not a viable option. Section 2.01 of Revenue Procedure 2016-

1, 2016-1 I.R.B. 1, states that a "letter ruling" is a written determination "issued to a taxpayer by an Associate office in response to the taxpayer's written inquiry, filed prior to the filing of returns or reports that are required by the tax laws, about its status for tax purposes or the tax effects of its acts or transactions." Section 5.01 of Revenue Procedure 2016-1 also states that the IRS will not rule on transactions or issues relating to tax returns that have already been filed:

> "In income and gift tax matters, an Associate office generally issues a letter ruling on a proposed transaction or on a completed transaction if the letter ruling request is submitted before the return is filed for the year in which the transaction is completed. An Associate office will not ordinarily issue a letter ruling on a completed transaction if the letter ruling request is submitted after the return is filed for the year in which the transaction is completed. "Not ordinarily" means that unique and compelling reasons must be demonstrated to justify the issuance of a letter ruling submitted after the return is filed for the year in which the transaction is completed. The taxpayer must contact the Field office having audit jurisdiction over their return and obtain the Field's consent to the issuance of such a letter ruling."

5. In addition, while the issue of whether a REIT had reasonable cause for an income test, asset test or other REIT failure is not specifically identified as a "no rule" or "will not ordinarily rule" issue by the IRS (see Rev. Proc. 2016-3, 2016-1 I.R.B. 126), Section 3.02(5) of the Revenue Procedure states that a "general area" in which the IRS will not issue a ruling (as opposed to will not ordinarily issue a ruling) is "[w]hether under Subtitle F (Procedure and Administration) reasonable cause, due diligence, good faith, clear and convincing evidence, or other similar terms that require a factual determination exist." In addition, section 4.02(1) states that an area in which the IRS will not ordinarily issue a ruling is "[a]ny matter in which the determination requested is primarily one of fact, e.g., market value of property, or whether an interest in a corporation is to be treated as stock or indebtedness."

a. It appears that the only private letter ruling where the IRS ruled on reasonable cause for a REIT failure is PLR 9550019 (Sept. 15, 1995). There, the IRS ruled that certain gross income test failures were excused under the former section 856(c)(7) exception (now located in section 856(c)(6)).

b. The failures included (i) the failure to identify that the provision of meals, maid service and transportation service to the residents of two senior citizen projects raised a customary services problem and tainted the rents, and (ii) the failure to treat cost reimbursements received by certain management partnerships in which the REIT was an indirect partner as gross income for purposes of the gross income tests.

c. The facts of the ruling state that when the REIT went public in 1994, it obtained the opinion of a nationally recognized law firm with REIT experience that the REIT's "organization and proposed method of operation would enable it to meet the requirements for REIT qualification" and provided the law firm with "due diligence reports and other detailed accounts of its operations" that disclosed information pertaining to these two issues. An accounting firm later spotted the tax issues (tax lawyers and their opinions must often endure a post-opinion review from sharp-eyed due diligence teams from the major accounting firms) and the REIT voluntarily approached the IRS regarding the issues and sought the reasonable cause ruling. With respect to the senior citizens properties, the REIT represented that similar properties in the area provided the same services. The actual text of the ruling issued by the National Office is as follows:

> "Company's failure to satisfy the requirements of section 856(c)(2) of the Code for Period-A and Period-B is due to reasonable cause and not to willful neglect (within the meaning of section

856(c)(7)(C)) to the extent that such failure is caused by (i) the failure of the income from Project-A and Project-B to qualify as rents from real property due to the provision of meal, maid and transportation services, and/or (ii) the inclusion in gross income of the reimbursements paid by the unrelated owners under their agreements with the Managing Partnerships."

d. The ruling gives no analysis as to the facts on which the IRS based its reasonable cause determination. The IRS may have viewed the law firm's clean REIT opinion delivered at the time of the IPO as the grounds for reasonable cause. However, that opinion presumably was a standard short-form REIT opinion that did not specifically address the two issues subsequently identified. As such, it would not appear to be a "reasoned, written opinion" within the meaning of Treas. Reg. § 1.856-7(c)(2)(iii) (discussed further below). However, such regulation clearly leaves open the possibility that a lesser form of opinion and/or other facts showing reasonable cause could satisfy the statutory requirement.

e. The ruling states that the REIT agreed to restructure its operations to cure the two tax issues, to treat the rents derived from the two senior citizen projects as bad income until the problematic services were restructured, and to pay the tax imposed by section 857(b)(5) on such income. It agreed to take similar action on the reimbursements issue but reserved the right to seek a ruling to the effect that such reimbursements were not gross income.

6. REIT tax advisors are sometimes asked by their clients to opine on reasonable cause for a REIT failure where there is a reasonable-cause-based escape hatch. That may be wishful thinking in many cases because, as further discussed below, reasonable cause (as a REIT specialist at another law firm once said to me) is in the eye of the beholder, and while the client may be beholding one thing, the law firm may be beholding another, and the IRS might behold something else if it were to behold. The law firm may be opposed on principle to rendering an opinion on such a nebulous factual issue no matter what the facts may be, except perhaps where the REIT previously obtained and relied upon a written opinion from a tax advisor on the problematic position. As will be discussed, the regulations contain specific guidance as to when reliance on an advisor's opinion constitutes reasonable cause. If the tax advisor is unwilling to opine on reasonable cause, or will only do so at an unacceptably low comfort level, the only solution may be to seek an IRS ruling (if the failure is of very recent origin) or a closing agreement (discussed later in this outline).

7. It goes without saying that reasonable cause opinions are not something that lawyers typically do, especially at the "will" level of assurance that is customary for REIT qualification opinions. Everybody wants to transfer all risks to the lawyers and accountants, but there are limits. What REITs and their advisors desperately need is for the IRS to revise its policies and to entertain ruling requests on reasonable cause under the REIT savings provisions, even if the returns in question have already been filed. This would give REITs another way to achieve finality on issues that arise with greater speed without having to initiate a painful and possibly protracted closing agreement process. It would also ensure that the request is considered by persons in the National Office who have considerable experience with REIT issues. The IRS, after all, routinely grants 9100 relief to REITs in a variety of screw-up contexts, and does so fairly expeditiously; it would seem that giving reasonable cause rulings would not involve that much more administrative work and would be in keeping with its generally benign approach to REIT busts.

8. The REIT's reasonable cause defense will be bolstered if it can show that it had good REIT compliance and due diligence policies in place when the failure occurred.

9. The Instructions to the 2015 Form 1120-REIT (p. 14) require a statement to be attached to the REIT's return with respect to the REIT's reliance on the section 856(c)(6) gross income test savings provision and the two asset test savings provisions. This statement must explain why the REIT failed the particular REIT test and provide the reason why the failure was due to reasonable cause:

> "Taxes are imposed for the failure to meet the requirements of the asset test and/ or gross income test. To qualify for relief from the failure to meet these requirements, attach an explanation of why the REIT failed to meet the asset test and/ or gross income test. Attach supporting schedules and a statement showing the computation of the amount of tax. Also, include a reason why the failure was due to reasonable cause and not willful neglect. See sections 856(c)(2), 856(c)(3), and 856(c)(4).
>
> The statement for reasonable cause should be attached to Form 1120-REIT at the time it is filed."

B. Reliance on an Advisor's Written Opinion

1. Reasonable reliance on a "reasoned, written opinion" by a tax advisor (including in-house counsel) as to the favorable characterization of a particular gross income item that later turns out to be nonqualifying gross income "generally" constitutes reasonable cause. Treas. Reg. § 1.856-7(c)(2)(i). However, the absence of such an opinion, by itself, does not give rise to any inference that the gross income test failure was without reasonable cause. Id.

2. The opinion is a "reasoned" opinion, even if subsequently determined to be incorrect, provided it is based on a full disclosure of the facts by the REIT and addresses the facts and law that the opinion giver believes to be applicable.

3. An opinion that does nothing more than "recite the facts and express a conclusion" is not considered to be "reasoned." Treas. Reg. § 1.856-7(c)(2)(iii).

4. A written opinion is considered "reasoned" even if it reaches a conclusion which is subsequently determined be incorrect, so long as opinion is based on a full disclosure of the facts by the REIT and is addressed to the facts and law which the opinion-giver believes to be applicable. Treas. Reg. § 1.856-7(c)(2)(iii).

5. As an example where the REIT does not have reasonable cause, the regulations posit a situation where the REIT entered into a lease "knowing that it will produce nonqualified income which reasonably can be expected to cause a source-of-income requirement to be failed," even if the REIT had a legitimate business purpose for entering into the lease. Treas. Reg. § 1.856-7(c)(1).

6. Obtaining a reasoned opinion prior to sale from a tax advisor to the effect that a sale is not a prohibited transaction and that the gain is qualifying gross income will not avoid the prohibited transactions tax if the sale is later determined to be a dealer sale, but it should help to avoid a potential REIT disqualification issue if removing such tainted gain from the gross income denominator (as section 856 requires) causes the 5% basket to shrink and overflow with bad income.

7. Under this regulation, even a "should" or "more likely than not" comfort level should suffice, although a more-likely-than-not opinion might cause an IRS agent to question whether it was reasonable for the REIT to rely on the opinion. A disagreement between tax advisors over the merits of the position might also raise concerns on the reasonableness of the REIT's reliance.

8. If the REIT foul-up originated in a joint venture between the REIT and a third party, the IRS may want to see evidence that the REIT took measures to ensure that the third party manager/general partner was advised of the REIT's special tax status and the various REIT compliance tests. The REIT may want to consider expanding the typical joint venture REIT protection covenant so that it spells out more clearly the actions that might cause a REIT tax problem (such as acquiring a loan or other security or entering into a net profits lease) and ensure that management is informed of the issues. Another approach is to have the REIT's tax advisors document the venture's current business plan, operations and assets, have the venture partner acknowledge that it is accurate and complete, and prohibit the partner from deviating from that plan without the REIT's approval.

9. The extent to which the REIT can point the finger at its accountants and tax lawyers will also be relevant, of course. To be able to point the finger and establish reasonable reliance on an advisor, the REIT will need to bring tax advisors into the loop as transactions occur, leases are signed, and operations change. Formal written tax advice is increasingly being obtained by REITs, but some still take a penny-pinching approach and keep tax advisors at bay, or only involve an accounting firm on a sporadic basis and not the lawyer who will someday end up giving the REIT opinion.

10. Delivering a legal opinion after-the-fact to the effect that there was reasonable cause for a REIT bust, as part of a REIT qualification opinion, may be difficult because the issue is so fact-sensitive. However, some law firms have done so, most commonly where they (or another law or accounting firm tax advisor) previously provided the client with a contemporaneous memorandum or opinion on the issue and concluded (perhaps incorrectly in the eyes of the current opinion giver) that the REIT's position on the issue was sound.

C. Reasonable Cause In Other Contexts

1. Other than Treas. Reg. § 1.856-7, there is almost no guidance interpreting "reasonable cause and not willful neglect" in the context of a REIT failure.

2. In United States v. Boyle, 469 U.S. 241, 245 (1985), the Supreme Court, in interpreting the "due to reasonable cause and not willful neglect" language of the penalty provisions in sections 6651(a)(1) and (2) and 6656(a), stated that the taxpayer bears the "heavy burden of proving both (1) that the failure did not result from 'willful neglect' and (2) that the failure was 'due to reasonable cause.'" The Court stated that willful neglect is "conscious, intentional failure or reckless indifference." 469 U.S. at 245. "Reasonable cause" means the exercise of "ordinary business care and prudence." Treas. Reg. § 301.6651-1(c)(1); Boyle, 469 U.S. at 246.

3. There are countless provisions of the Code that employ a "reasonable cause and not willful neglect" standard, and there is a lot of interpretive authority under those provisions which is beyond the scope of this outline. (For example, TAM 200919032 (Jan. 29, 2009) contains an interesting discussion of reasonable cause under section 367, including Boyle and other authorities interpreting reasonable cause under other Code provisions.)

VI. PATH ACT RELIEF MEASURES RELATING TO PREFERENTIAL DIVIDEND RULE

A. Repeal of Section 562(c) for Public REITs

1. Section 314 of the PATH Act amends section 562(c) so that it no longer applies to a "publicly offered REIT," just as it previously did not apply to a publicly offered RIC. See Section 562(c)(1), as amended by the PATH Act.

2. New section 562(c)(2) defines a publicly offered REIT as a REIT which is required to file annual and periodic reports with the SEC under the Securities Exchange Act of 1934.

3. The repeal of the preferential dividend rule for publicly offered REITs is effective for distributions in taxable years beginning after December 31, 2014. Section 314(c) of the PATH Act.

4. This idiotic rule should have been repealed for private REITs also. For years, section 562(c) has accomplished absolutely nothing from a policy standpoint except to create yet another opportunity for well-meaning REITs to experience a go-to-pieces.

B. <u>IRS Authority to Provide Appropriate Remedy for Private REIT Section 562(c) Busts</u>

1. Section 315(a) of the PATH Act adds new section 562(e)(2), which provides that if a distribution by a REIT fails to comply with section 562(c), "the Secretary may provide an appropriate remedy to cure such failure in lieu of not considering the distribution to be a dividend for purposes of computing the dividends paid deduction."

2. One of two requirements must be met:

a. Either the Secretary determines that the failure is due to reasonable cause and not to willful neglect (section 562(e)(2)(A)), or

b. The failure is of a type which the Secretary has identified for purposes of section 562(e)(2) as being described in section 562(e)(2)(A) (i.e., reasonable cause failures). Section 562(e)(2)(B). This second criteria is interesting. The intent appears to be to permit the IRS to publicly identify preferential dividend "failures," or perhaps potential failures, where reasonableness is presumed to exist and, one would expect, an appropriate remedy is specified – perhaps paving the way for self-help if a taxpayer's facts clearly fall within an identified failure situation. <u>See</u> Staff of Joint Committee on Taxation, Technical Explanation of the Protecting Americans from Tax Hikes Act of 2015, House Amendment #2 to the Senate Amendment to H.R. 2029 (Rules Committee Print 114-40), p. 173, JCX-144-15 (December 17, 2015) (the "PATH Act JCT Explanation"); Joint Committee on Taxation, <u>General Explanation of Tax Legislation Enacted in 2015</u>, JCS-1-16, p. 267 (March 2016) (the "JCT 2015 Bluebook").

3. The new private REIT relief provision for section 562(c) busts is effective for distributions in taxable years beginning after December 31, 2015.

a. Thus, unlike the one-year retroactivity of the public REIT preferential dividend repeal, this relief provision is only effective starting in 2016.

b. Would it have killed Congress to make this relief fully retroactive for all REITs (public and private)?

4. Once again, we have a relief provision that is contingent on the IRS making a reasonable cause determination (unless it is a section 562(e)(2)(B) "identified failure"), and yet tax counsel will generally not opine on whether the IRS will or won't perceive a failure as due to reasonable cause. If the REIT is not under examination, there is currently no procedure in place for the REIT to seek such a reasonable cause determination other than by way of a closing agreement.

a. The IRS could decide to put out a revenue procedure with useful pre-determined reasonable cause situations that could allow REITs and their tax counsel to opine over the bust and avoid a closing agreement mess. But this could take years.

b. A prime candidate for intervention would be an issue that is plaguing the fund industry, which is when separate classes of REIT stock will be respected as such for purposes of applying section 562(c). A negative ruling recently issued by the IRS on a two-class stock structure has caused much turmoil. It is predicated on the idea that the IRS has the right to declare unilaterally that what corporate tax lawyers clearly perceive as separate classes of stock should be amalgamated and treated as one for purposes of applying section 562(c) in order to manufacture a preferential dividend problem.

c. Better yet, why not open up the ruling process for such reasonable cause determinations and process them rapidly like the IRS already does for busted REIT elections and TRS elections?

5. What sorts of "appropriate remedies" are contemplated?

a. The statutory language seems to preclude a remedy that would treat the dividend as nondeductible for purposes of determining a REIT's tax liability only, but not for purposes of determining whether the REIT met the 90% distribution requirement of section 857(a)(1) (which goes to REIT qualification). This is good news, since paying a corporate-level tax liability can be a catastrophic "remedy."

b. That seems to leave monetary fines or penalties as the logical remedy. How much? $50,000 per bust? How do you define each failure? What about section 562(c) failures that are of a recurring nature and potentially disqualify multiple distributions in multiple years?

VII. DEFICIENCY DIVIDEND RELIEF PROCEDURES

A. <u>Deficiency Dividends Defined</u>

1. Section 860(a) provides that if there is a "determination" with respect to any REIT that results in any "adjustment" for a taxable year, a deduction is allowed to the REIT for the amount of "deficiency dividends" for purposes of determining the deduction for dividends paid under section 857 for such taxable year.

2. The deficiency dividend procedures are important, for example, if the IRS audits a prior REIT taxable year and determines that the REIT had additional unreported income that, if not distributed through a deficiency dividend, would cause the REIT to pay tax on such income or possibly lose its REIT status by failing to meet the 90% dividend distribution requirement. More typically, deficiency dividend procedures are used to "replace" a prior dividend that the REIT thought was deductible but which is later determined to have been nondeductible because, for example, it was preferential under section 562(c).

3. The term "adjustment" means any increase in REIT taxable income (determined without regard to the dividends paid deduction and excluding capital gains), any increase in the excess of capital gains over the deduction for capital gains dividends, and any decrease in the deduction for dividends paid under section 561 (determined without regard to capital gain dividends).

4. A "determination" means a court decision, a section 7121 closing agreement, an agreement signed by the Secretary by or on behalf of the REIT relating to the liability of such entity for tax, or "a statement by the taxpayer attached to its amendment or supplement to a return of tax for the relevant tax year." Section 860(e)(4).

a. The quoted language was added by the 2004 Jobs Act to permit a REIT to make a unilateral determination of an "adjustment" and engage in self-help.

b. Under prior law, a deficiency dividend could only be paid after a determination resulting from a judicial decision, closing agreement or other IRS agreement relating to the REIT's tax liability.

5. The term "deficiency dividend" means a distribution of property made by the REIT on or within 90 days after the determination and as to which a claim for deduction thereof is filed within 120 days after the date of the determination, provided the distribution would have been deductible by the REIT if actually paid in the taxable year to which the determination relates. Section 860(f)(1).

a. Deficiency dividends are not deductible for the taxable year in which they are paid, but they are included in the income of the REIT's shareholders in the year actually paid under the normal dividend rules. Section 860(f)(3).

b. Because of the timing mismatch created by the shareholders picking up the income inclusion in the year of distribution while the REIT gets the deduction for the adjustment year, the REIT must pay an interest charge (and penalties) that is determined by treating the amount of the deficiency dividend deduction as an additional tax due for the adjustment year which is not treated as paid until the claim for the deficiency dividend deduction is filed.

6. Treating the entire deficiency dividend as a tax substantially overstates the interest charge that would apply to the shareholders' aggregate unpaid tax liability on the dividends, had the dividends been timely paid in the adjustment year. This punitive aspect is intended to encourage timely distribution.

B. <u>Relationship Between Section 860 and Section 856(g)(5)</u>

1. Section 856(g)(5) applies to a corporation "which is not a real estate investment trust to which the provisions of the part apply due to one or more failures to comply with the provisions of this part." The 90% distribution requirement in section 857(b)(1) is a provision of subpart M. Thus, a failure to meet the 90% distribution requirement due to, for example, an improperly executed consent dividend under section 565, or a nondeductible preferential dividend under section 562(c), would seem to be within the scope of section 856(g)(5). The issue is how this provision syncs up with the deficiency dividend procedures of section 860.

2. If reasonable cause exists for the failure to meet the distribution requirement (say, due to a preferential dividend issue) and the REIT pays the $50,000 penalty, section 856(g)(5) should apply to cure the failure to meet the 90% distribution requirement and allow REIT status to be preserved. However, it does not appear to eliminate the corporate-level tax liability associated with the disallowance of the deduction for the dividends originally paid.

3. Using the deficiency dividend procedures to solve the corporate-level tax problem entails two costs: an economic outlay in the form of a current year dividend that the REIT did not expect to pay and an interest charge on the amount of such dividends.

a. If a REIT preferential dividend issue is caught early and only affects say, one taxable year, deficiency dividends may be the answer.

b. If the failure is chronic and affects numerous prior taxable years, deficiency dividends often are not feasible or tolerable as a business matter -- the cash has to come from somewhere and the interest charge can be prohibitive. Thus, a closing agreement process may be the only practical solution. In such a case, the REIT's toll charge does not necessarily require the payment of the full deficiency dividend that might otherwise be required to zero out REIT taxable income. This is not only because the deficiency dividend solution might bankrupt the company, but also because such failures or potential failures are usually not cut-and-dried from a tax law perspective. There may be good arguments that a problematic distribution was not preferential, and even if it was, the extent to which other dividends were tainted thereby and therefore rendered nondeductible may be unclear.

VIII. CLOSING AGREEMENTS
