

REIT Watch

A Monthly Statistical Report on the Real Estate Investment Trust Industry

AUGUST 2000

Market Snapshot

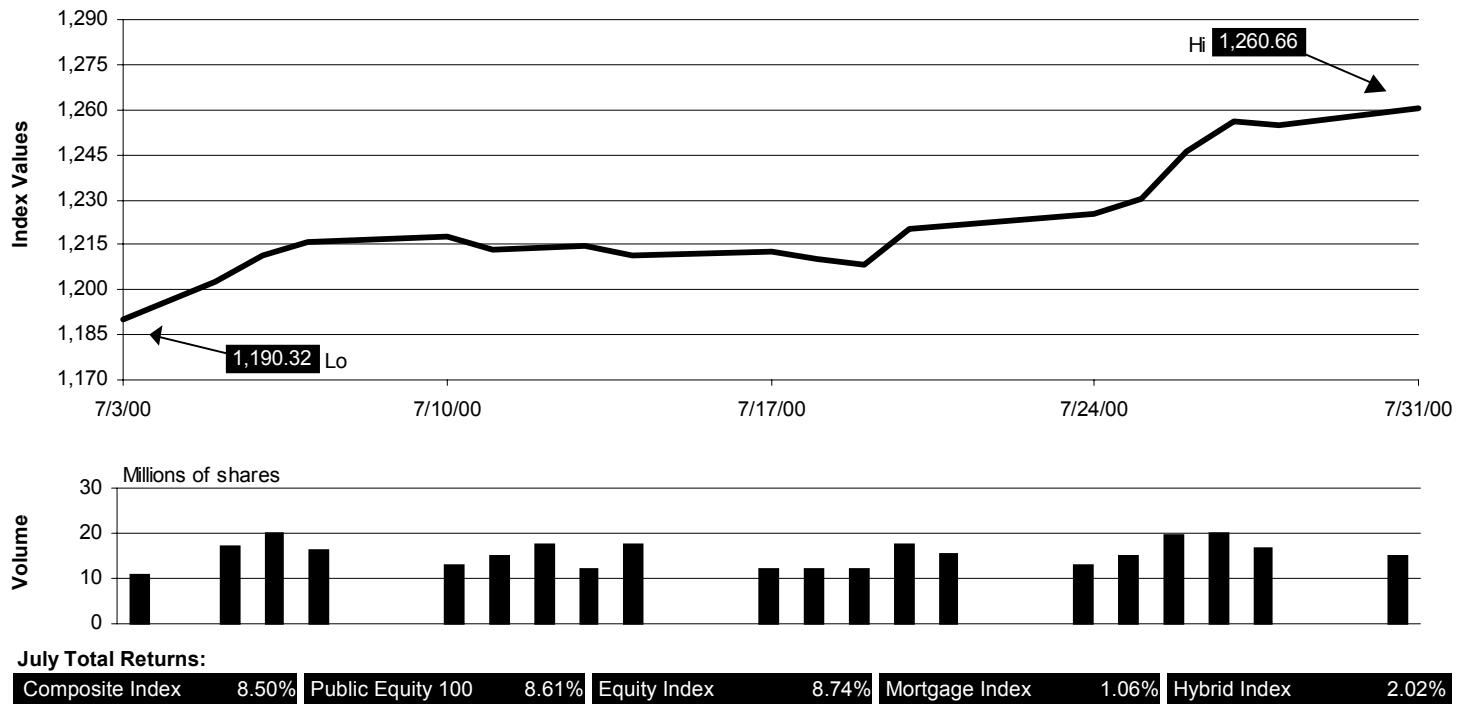

REIT stock prices in July turned in their strongest performance of the year and the largest upward move since April of 1999. The NAREIT Composite total return index jumped 8.5 percent in July, including a price appreciation component of 8.0 percent. The new Public Equity 100 index, introduced at the beginning of the year, registered an 8.6 percent total return. Uncertainty over market volatility, interest rate policy and corporate earnings has to some degree shifted investor attention back to measures of cash flow, value and income, investment themes that have been out of favor in recent years but that play to the core strengths of REIT stocks. The strong July performance also likely owed in part to relatively favorable earnings reports that have been announced so far for the second quarter.

For the first seven months of the year, the NAREIT Composite REIT Index posted a total return

of 22.6 percent while the S&P Utilities Index posted a price return of 20.4 percent (Exhibit 1). Over the same period, the Dow Jones Industrials fell 8.5 percent, the NASDAQ Composite declined 7.4 percent and the S&P 500 lost 2.6 percent (all without dividends reinvested). The Russell 2000 edged down 0.3 percent, including reinvested dividends, an overall result that belies the underlying tension between its growth and value components. While the Russell 2000 Value component rose 9.4 percent through July, the Russell 2000 Growth component sank 7.5 percent.

The relative performance of REIT stocks since the REIT market bottomed on December 16, 1999 is even more impressive (Exhibit 2). From December 16 through July 31, the Dow fell 6.4 percent, the S&P 500 edged up 0.9 percent, and the NASDAQ Composite moved up 1.4 percent. Over the same period, the Russell 2000 rose 8.3 percent, with the

Russell 2000 Value component rising 14.8 percent compared with the 2.8 percent increase of the Russell 2000 Growth index. Meanwhile, the S&P Utilities index jumped 26.0 percent, and the NAREIT Composite index soared 32.4 percent.

Relative Performance

The year-to-date 22.6 percent total return registered by the Composite REIT index was driven in large part by the heavily weighted Industrial/Office and Residential sectors, which posted returns of 26.6 and 25.8 percent, respectively (Exhibit 11). Both sectors continue to benefit from a strong economy, while the apartment sector, in particular, also has benefited from higher mortgage interest rates, which have damped demand for single family housing. All property sectors posted positive year-to-date returns, with the Lodging/Resorts sector continuing its turn-around from 1999, surging another 13.9 percent in July to bring its leading seven month performance to 36.3 percent. However, despite the strong performance, the Lodging/Resorts sector still offers an above average dividend yield of 9.9 percent, standing 386 basis points above the 10-year Treasury (Exhibit 3), suggesting that

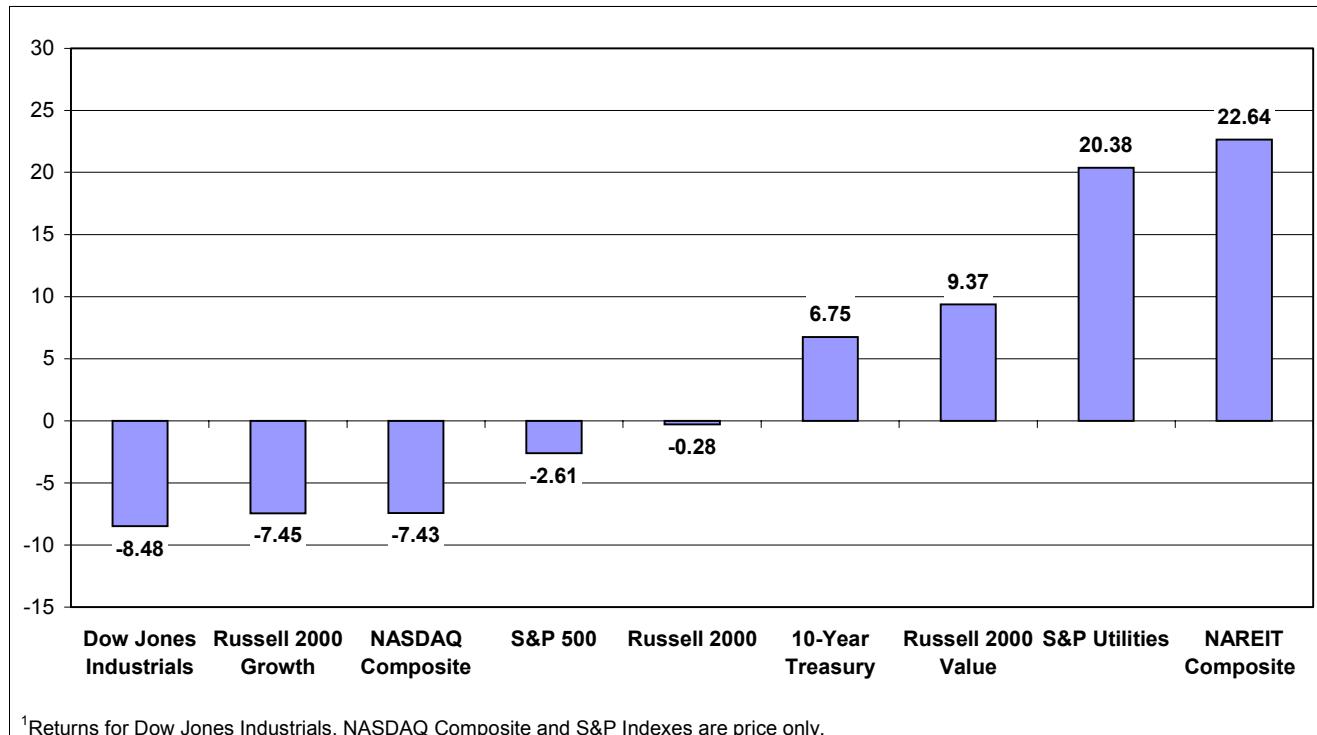

the market may have substantially undervalued the sector in 1999.

Exhibit 3 also shows that while REIT share prices have rebounded, growing dividend payouts continue supporting dividend yields in most property sectors that remain above the 10-Year Treasury yield. Exhibit 7 provides a historical perspective and shows that the Composite REIT Index dividend yield spread narrowed from its December 1999 peak of 319 basis points to 115 basis points at the end of July.

Contemporaneous Correlation of Returns

When market risk events from time to time affect estimates of the correlation of investment returns, it may be inappropriate to conclude that the expected benefits of diversification have appreciably changed. Rather, such events may simply bias traditional estimates of correlation and result in misleading conclusions. For example, Exhibit 4 highlights some of these events in the history of the S&P 500 index and their concomitant effect on the 60-month rolling correlation of returns. The most notable of these events was the stock market crash of October 1987, which caused the correlation between equity REIT returns and

Exhibit 1
2000 Year-to-Date Performance of Equity Markets
(Investment returns in percent, through July 31, 2000)¹

those of the S&P 500 to jump by nearly 15 basis points. Five years later, when that observation dropped out of the sample, the correlation dropped by a nearly equal amount.

To eliminate such misleading results, we adjusted our estimates of the correlation of returns between equity REITs and the S&P 500 by removing such market risk events over the 1972-2000 period. We excluded returns from each 5-year sample period when the monthly return for both the S&P 500 and the NAREIT Equity exceeded two standard deviations. Using that criterion, 13 observations were excluded from a total of 343 observations over the entire period. Exhibit 5a compares the two correlation series, both unadjusted and adjusted for market risk events. As expected, removing market risk events reduces on average the level of correlation of returns. It also eliminates the abrupt and misleading shifts in the level of correlation and indicates that the correlation of returns between equity REITs and the S&P 500 remains at a historically low level.

As shown in Exhibit 5b, we applied the same criteria to the returns of Equity REITs and the Russell 2000. Because the Russell data begin in 1978, we examined the 259 observations and found that during the 1978 - 2000 period, the same market risk events affected the series, and we eliminated the 8 observations that were eliminated from the S&P 500 series over the same period.

As the broader markets continue to lag REIT returns year-to-date, Equity REIT correlations with the S&P 500 and the Russell 2000 fell further in July. Exhibit 6 shows that the 60-month rolling Equity REIT correlation with the S&P 500 and the Russell 2000 edged down 4 and 5 basis points respectively from the end of June to the end of July. However, turning again to Exhibits 5a and 5b, when adjusted for market shocks, the correlations are even lower for the 60-month period ended July 2000, falling from an unadjusted .31 and .44 to an adjusted .16 and .32 for the S&P 500 and Russell 2000, respectively

Glossary of REITWatch terms:

REIT Name:	Abbreviated name of company.
Type:	Indicates Equity (E), Mortgage (M), or Hybrid (H) REIT.
Exchange Listing:	Indicates whether stock is listed on the New York Stock Exchange (N), American Stock Exchange (A), or NASDAQ National Market System (1) along with the company's stock exchange symbol.
Share Price:	The closing price per share on the date noted.
52 Week Share Price:	The high and low closing prices for the shares over the previous 52 weeks.
<u>FFO:</u>	
Price/FFO Multiples:	Price on the date indicated divided by the First Call FFO consensus estimates for both 2000 and 2001. Estimates are compiled from First Call on the pricing date.
FFO Growth:	The percentage change between the First Call 2000 FFO estimate and the First Call 2001 FFO estimate. FFO growth is stated in percent.
FFO Estimates:	First Call annual FFO consensus estimates for 2000 and 2001. FFO estimates are displayed in dollars per share.
<u>Dividends:</u>	
Dividend Yield:	The current indicated dividend rate annualized and divided by the current stock price.
Dividend Spread:	The change between the current daily REIT dividend yield and the daily 10-year constant maturity treasury. The dividend spread is stated in percentage points.
<u>Total Returns:</u>	
Month:	The total return for the month is calculated by taking the closing price for the current month end adding any dividends with an ex-dividend date in that month and then subtracting the closing price for the previous month. Divide the result by the closing price of the previous month. All total returns are displayed in percent.
Year to Date:	The total return for the calendar year through the latest month end. The returns are calculated with dividends reinvested on a daily basis as of the ex-dividend date.
One Year:	The total return for the previous four quarters.
Two Year:	The annualized total return for the previous eight quarters.
Three Year:	The annualized total return for the previous 12 quarters.
Five Year:	The annualized total return for the previous 20 quarters.
<u>Market Capitalization:</u>	
Equity Market Capitalization:	Price on the date indicated times the number of common shares outstanding. Presented in millions of dollars.
Implied Market Capitalization:	Price on the date indicated times the number of shares outstanding including Operating Partnership Units. Presented in millions of dollars.
<u>Leverage:</u>	
Debt ratio:	A leverage ratio that is calculated by taking the REITs total debt and dividing it by the total market capitalization. Total capitalization includes the sum of both the implied market capitalization and total debt. Total debt data are as of second quarter 2000 for companies for which data are available, and first quarter 2000 for all other companies.
<u>Volume:</u>	
Average Share Volume:	The average number of shares traded daily over the past month.
Average Daily \$ Volume:	The average of the daily value of shares traded over the past month. Daily value is computed by multiplying shares traded by the closing price on that date. Data is presented in thousands of dollars.
Relative Liquidity:	Average daily dollar volume divided by equity market capitalization.
